Since the last time this code family was surveyed, a large array of technical advancements have been made which have fundamentally changed the standard of care for endovascular procedures. The advent of drug eluting technology has been shown to deliver improved long-term vessel patentcy. An expanded array of atherectomy devices are now available that can target specific plaque morphologies for patient specific treatments. Finally, we now have smaller devices that can treat more distal vessels than previously possible, included below the ankle.

Lower extremity arterial revascularization procedures are being performed both in the facility and nonfacility setting. Since the last time this family was surveyed, we know have an expanded compendium of data supporting the safety and efficacy of performing complex revascularization procedures in a nonfacility setting, allowing for the migration of elective revascularization procdures

from the hospital outpatient setting to the nonfacility setting. The nonfacility setting allows for expanded patient access to revascularization procedures without compromising quality of care.

Finally, as both techniques and technology have developed over the years, the shift of procedures from open surgical bypass to endovascular has continued. In addition, patients who were previously thought to be poor candidates for revascularization (either through surgical or endovascular methods) are now being routinely treated with documented safety. Advanced age, extensive arterial occlusive disease and advanced limb ischemia are no longer exclusion criteria for endovascular revascularization and for that reason the patient population has significantly changed.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

PreService Period
Standard for 000-day global periods
0 minutes
Specialty societies recommending are recommending the following

Pre Service Period
CA001 Complete pre-service diagnostic and referral forms: 3 minutes
A clinically trained individual (RN,/LPN/MA) will review and complete all referral forms for the various insurance entities and ensure that the indication has met medical necessity for the planned procedure.

CA002 Coordinate pre-surgery services: 3 minutes
Clinical staff member ensures that all appropriate labs are drawn and results are acceptable.

CA005 Complete pre-procedure phone calls and prescriptions: 3 minutes

Clinical staff will contact the patient prior to the procedure to ensure that they will be NPO, answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies and call the pharmacy with any prescription if needed, such as medication for contrast allergy or poor renal function.

CA006 Confirm availability of prior images/studies: 6 minutes
Clinical staff review prior imaging studies, typically more than one imaging modality to plan surgical approach and anatomical extent of disease. Studies reviewed will often include cross-sectional imaging, ultrasound and physiologic studies.

Service Period
CA013 Prepare room, equipment, supplies
Standard 2 min, Recommending 7 minutes

Interventional technologist checks imaging equipment to make sure that it is turned on, warmed up, functioning properly, enters the patient demographics, opens the sterile tray and sets it up, goes to the storage room to pull all the supplies that will be used for the procedure, and brings them to the procedure room. The standard for prepare room is 2 minutes and the standard for prepare scope is 5 minutes. The specialties are essentially accepting two standards on one line. The specialties are 'preparing imaging equipment' as the second part of the prepare room, equipment and supplies line. The reference code includes 7 minutes for the same activities.

This concept of 2 (standard room prep) + 5 (prepare imaging equipment) = 7 is included in several of the interventional code families including:

Renal	36251-36254	Apr-11
IVC	37191-37193	Apr-11
Foreign Body	37197	Sep-11
Carotids	36222-36228	Apr-12
Stents	37236-37239	Apr-13
Embo	37241-37244	Apr-13
PercVeterbroplasty	22510-22515	Apr-14
	36147	
	36870	

CA016 Prepare, set-up and start IV, initial positioning and monitoring of patient
Standard is 2, Specialty recommending 5

Once the patient is brought into the procedure room, time is taken to ensure appropriate position of the patient on the procedure table. Care is taken to ensure the patient's comfort as they will be required to remain still for a long period of time. As well as time is taken to ensure an unobstructed the field of view over the targeted areas of interest; this involves making sure that

nursing monitoring and other equipment that could obstruct the images is clear. The area around the angiographic imaging equipment is clear to allow for manipulation of the equipment throughout the procedure. The specialties are recommending 5 minutes, the same as the reference codes.

CA030 Technologist QC's images in PACS, checking for all images, reformats, and dose page Baseline time for this activity is 2 minutes stands, Specialty recommending 5

Post procedure, the tech annotates the images, processes them, and then sends digital images to PACS and ensures they are received.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

At the time the reference code was presented, there was a clinical activity that read "*Check dressings & wound/ home care instructions /coordinate office visits /prescriptions*". Today, those activities are broken into (1) *CA029 check dressings, catheters, wounds* and (2) *CA035 Review home care instructions, coordinate visits/prescriptions*. The current LER codes were also presented at the time CA035 and CA029 were combined.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

The reference code and the existing LER codes both have 5 minutes allocated for CA010 *obtain vital signs.* The specialties are recommending 5 minutes for vitals in the new '000 LER services as well. It is standard to obtain Blood Pressure, Heart Rate, Oxygen Saturation, Height, Weight, Temperature prior to any procedure.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

A clinically trained individual (RN,/LPN/MA) will review and complete all referral forms for the various insurance entities and ensure that the indication has met medical necessity for the planned procedure and forward the approved forms to the appropriate personnel including by fax if necessary. The clinical staff member ensures that all appropriate labs are drawn and results are acceptable. The clinical staff will contact the patient prior to the procedure to ensure that they will be NPO, answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies and call the pharmacy with any prescription if needed, such as medication for contrast allergy or poor renal function. The technologist, prior to the patient's arrival, will retrieve any prior imaging exams, provide these exams for the physician to review, verify orders, review the chart to incorporate any relative clinical information and confirm contrast protocol.

    b. Service period (includes pre, intra and post):

Greet patient, provide gowning, and ensure appropriate medical records are available: Patient is greeted by the clinical staff, escorted to the intake area, provided with gowning and given

assistance with changing into the gown if needed. Obtain vital signs: blood pressure, heart rate, respiratory rate, temperature, rhythm strip and pulse oximetry, are all obtained. Provide pre-service education/obtain consent: the clinical staff educates the patient regarding the procedure, what to expect in the procedure room, reviews the risk of contrast and radiation, and obtains consent for the above. Prepare room, equipment, supplies: technologist checks imaging equipment to make sure that it is turned on, warmed up, functioning properly, enters the patient demographics, opens the sterile tray and sets it up, goes to the storage room to pull all the supplies that will be used for the procedure, and brings them to the procedure room. Prepare and position patient/Monitor patient/Setup IV. Intra-service time of varying clinical personnel: the tech is scrubbed next to the physician the entire case, an additional individual who is not scrubbed will assist with the imaging equipment and opening supplies. Monitor patient following service/Check tubes, monitors, drains. The standard recommendation of CMS is that patients are recovered at a ratio of 1 nurse for 4 patients. Check dressings and wound/home care instructions/coordinated office visits/prescriptions. In addition to checking the dressings and evaluating the access site for hematoma, the clinical staff will also discuss pain prescriptions for the patients and review the medications with them. Other clinical activities: The angiography tech post procedure annotates the images, processes them, and sends digital images to PACS and ensures they are received. A patient radiation exposure report must be prepared as well and sent to PACS for documentation.

c. Post-service period:

The clinical staff calls the patient the day after the procedure to make sure that there are no complications, answers any questions, ensures that pain control is adequate, and calls in additional prescriptions if needed.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

As above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The specialty societies are requesting the new LER codes include the 'blended staff' (75% angio tech/25% RN/LPN/MTA) be included in the inputs. The blended staff is typically included for endovascular procedures performed in the angio suite. The 75% represents an additional individual who is not scrubbed in and assists with the imaging equipment and opening supplies. The 25% is a floater to assist during the procedure. The reference code as well as the existing inputs include this blended staff person.

This "blended staff" concept was introduced by the PE subcommittee around 2010 and has been in place for the interventional services.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

CPT CODE(S): 37254-37299
SPECIALTY SOCIETY(IES): ACC, ACR, ACS, OEIS, SCAI, SIR, SVS
PRESENTER(S): Curtis Anderson, MD (OEIS), Robert Kennedy, MD (SIR), Andy Moriarity, MD (ACR), Gerald Niedzwiecki, MD (OEIS), Matthew Sideman, MD (SVS), Afnan Tariq, MD (SCAI), Richard Wright, MD (ACC)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

The specialty societies are recommending six new supply items, to be included on CMS' direct PE medical supplies list. The invoice summary spreadsheet is attached.

NEW	drug eluting stent, tibial
NEW	Iliac IVL Catheter
NEW	FemPop IVL Catheter
NEW	Drug coated balloon
NEW	Drug eluting stent
NEW	Embolic protection for atherectomy

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

The recommendations include three established packs:
- SA048 pack, minimum multi-specialty visit
- SA019 kit, iv starter
- SA071 kit, AccuStick II Introducer System with RO Marker

Details included in Question #19 & #23.

The specialties are also recommending the creation of a new pack:
"Angio Pack". Angio packs are commercially available for purchase.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

pack, minimum multi-specialty visit	***SA048***	***pack***	
paper, exam table		*foot*	*7*
gloves, non-sterile		*pair*	*2*
gown, patient		*item*	*1*
pillow case		*item*	*1*

kit, AccuStick II Introducer System with RO Marker	***SA071***	***kit***		
21 gauge diagnostic needle		*1*	*item*	
0.018" wire		*1*	*item*	
RO Sheath Marker		*1*	*item*	
4Fr Dilator		*1*	*item*	
6Fr Sheath		*1*	*item*	
0.038" wire		*1*	*item*	

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

The specialty societies are recommending one new piece of equipment included on CMS' direct PE medical equipment list. The invoice summary spreadsheet is attached.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life of the new equipment is estimated to be 5 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EQ088	contrast media warmer	Highly Technical	
EQ032	IV infusion pump	Monitoring	
EQ011	ECG, 3-channel (with SpO2, NIBP, temp, resp)	Monitoring	
EL011	room, angiography	Highly Technical	
EF027	table, instrument, mobile	Monitoring	
ED053	Professional PACS Workstation	Other Formula	The specialties followed the instructions for computing professional PACs workstation times for therapeutic codes – CMS is assigning equipment minutes equal to *half the pre-service physician work time and half the post-service physician work time* for the second group. The 000 day LER services have 38 minutes of pre time and 30 minutes of post time. So, the PE Professional PACs times included in the spreadsheet is (38/2)+(30/2)=34
ED050	Technologist PACS workstation	PACS	
New	IVL generator	Default	The specialties followed the instructions for computing time with the default formula.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Clinical Labor

The dollar for existing LER codes 37221, 37223, 37225, 37228 having rounding margins in the spreadsheet vs the DPEI files.

The specialty societies are requesting the new LER codes include the 'blended staff' (75% angio tech/25% RN/LPN/MTA) be included in the inputs. The blended staff is typically included for endovascular procedures performed in the angio suite. The 75% represents an additional individual who is not scrubbed in and assists with the imaging equipment and opening supplies. The 25% is a floater to assist during the procedure. The reference code as well as the existing inputs include this blended staff person.

Post procedure monitoring: All arterial access procedures have a minimum four hours post procedure recovery time as per standard national protocol. The first hour of post procedure recovery/monitoring is now reported with the conscious sedation codes and cannot be counted in these procedure codes (post-procedure moderate sedation monitoring time). Forty-five minutes of RN time will be allocated to "post-procedure [other] monitoring time" for the 2nd through 4th hour of recovery. (2013/2014 RUC PE CS workgroup).

Supplies

General Supplies – For all '000 procedures
Below is a summary of the general supplies used in the new LER '000 procedures:

Patient Arrives

SA048	pack, minimum multi-specialty visit	1

pack, minimum multi-specialty visit	***SA048***	***pack***

Room/Table sterile supplies

SB008	drape, sterile, c-arm, fluoro	1	To cover c-arm image intensifier/flat panel
SB044	underpad 2ft x 3ft (Chux)	1	For under the patient to absorb blood/bodily fluids.
SD171	guidewire bowl w-lid, sterile	1	Standard wire storage during procedure to soak hydrophilic wires in heparinized saline when not in use.
SC051	syringe 10-12ml	4	One syringe for lidocaine, one for dilute nitroglycerin, two for iodinated contrast for injection intraarterially.
SC053	syringe 20ml	4	For heparinized Saline flush
SD249	Sterile Radio-opaque ruler (le Maitre, documentation available)	1	For measuring length of lesions/calibration of imaging software
SG035	dressing, 3in x 4in (Telfa, Release)	2	For wiping hydrophilic wires.
SG055	gauze, sterile 4in x 4in	20	For cleaning and wiping operative field, devices, etc during procedure
SH096	nitroglycerin injection USP 5 mg/mL (10ml uou vial)	1	For intraarterial administration to prevent/treat arteriospasm.
SB014	drape, sterile, three-quarter sheet	1	To create sterile field on back table for all supplies.
SD120	styrofoam block, high density (3in-12in-12in)	1	Hold needles/blades while working (then dispose)
SJ079	basin, sterile 500cc	1	for sterile heparinized saline
SA027	Kit, scissors and clamp	1	Clamp/hemostat used to blunt dissect subcutaneous tissues prior to sheath placement. Also used to clamp wires. Scissors used to trim drapes, etc.
SL157	Cup, sterile, 8 oz	1	To hold and Dilute nitroglycerin
SL198	Label, vial	9	To label all syringes

CPT CODE(S): 37254-37299

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Prepare patient for procedure

SA067	tray, shave prep	1	To shave groin
SK075	Skin marking pen, sterile (SkinSkribe)	1	Mark bottom of femoral head as a landmark prior to access.

Universal Protection

SB001	cap, surgical	4	MD, HipHip, Img, Floater
SB028	gown, surgical, sterile	2	MD, HipHip
SB034	mask, surgical, with face shield	4	MD, HipHip, Img, Floater
SB039	shoe covers, surgical	4	MD, HipHip, Img, Floater
SB024	gloves, sterile	2	MD, HipHip

Scrub Prep Drape

SJ041	povidone soln (Betadine)	60	
SJ009	basin, irrigation	1	For Betadine
SG009	applicator, sponge-tipped	4	
SB009	drape, sterile, femoral	1	
SB019	drape-towel, sterile 18in x 26in	4	To frame sterile field
SD208	Towel clamp, plastic	1	Clipping drapes together

Numb

SC051	syringe 10-12ml	1	
SH047	lidocaine 1%-2% inj (Xylocaine)	10	
SC027	needle, 18-19g, filter	1	For drawing up lidocaine
SC028	needle, 18-26g 1.5-3.5in, spinal	1	For injecting lidocaine in skin

Imaging Exam

SC008	catheter, angiographic, pig-tail	1	Initial catheter for power injection diagnostic angiography
SC010	closed flush system, angiography	1	Manifold system for sheath flush, contrast injection
SD140	bag system, 1000ml (for angiography waste fluids)	1	System for fluid waste disposal during procedure.

Gain Access

SD136	vascular sheath	1	Initial sheath for access
SF007	Blade, surgical (Bard-Parker)	1	Skin incision
SA071	kit, AccuStick II Introducer System with RO Marker	1	Coaxial exchange dilator for access
SH039	heparin 1,000 units-ml inj	5	Heparin for anticoagulation during procedure. Standard is 80-100Units/kg. This volume is typical for a 62.5kg female.

SD252	guidewire, Amplatz wire 260 cm	1	Stiff support wire for advancing sheath in heavily calcified vessels.

kit, AccuStick II Introducer System with RO Marker	***SA071***	***kit***	
21 gauge diagnostic needle		*1 item*	
0.018" wire		*1 item*	
RO Sheath Marker		*1 item*	
4Fr Dilator		*1 item*	
6Fr Catheter		*1 item*	
0.038" wire		*1 item*	

Closure/Dressing

SG074	steri-strip (6 strip uou)	1	For approximating skin edges at incision
SH095	protamine sulfate 10 mg/ml (5ml uou vial)	1	For reversal of anticoagulation prior to access closure
SD207	suture device for vessel closure (Perclose A-T)	1	Arteriotomy closure
SG037	dressing, 4in x 4.75in (Tegaderm)	1	Transparent sterile dressing that allows for evaluation for access site bleeding postoperatively

Clean Room

SM013	disinfectant, surface (Envirocide, Sanizide)	1	Cleaning surfaces and C-arm

Procedure Specific Supplies

Below is a summary of the procedure specific supplies used in the new LER codes:

Initial Diagnostic Angiography and steps to intervention:

Once femoral access is gained and a vascular sheath is in place, the diagnostic angiogram can be performed. Using a Bentson wire (SD172) and the glide catheter (SD147) the abdominal aorta is catheterized. The glide catheter is exchanged over the Amplatz wire (SD252) for the flush pigtail catheter (SC008). An aortogram is performed. The pigtail is retracted to the aortic bifurcation and a pelvic is performed to image the iliac vessels. The pigtail is exchanged for the Simmons catheter (SD148) to navigate to the contralateral common femoral artery. An extremity arteriogram is then performed. The Amplatz wire is advanced into the common femoral artery. The vascular sheath is removed and replaced with the Ansel introducer sheath (SD250). Initial distal catheterization and disease crossing is performed using the hydrophilic wire (SD089) and the glide catheter (SD147) unless additional crossing catheters and microwires are needed. Since angioplasty is a component of all codes, all of the base codes include a balloon inflation device (SD149) which is used to inflate the balloon catheters and monitor balloon pressure during angioplasty.

Iliac Family

CPT CODE(S): 37254-37299
SPECIALTY SOCIETY(IES): ACC, ACR, ACS, OEIS, SCAI, SIR, SVS
PRESENTER(S): Curtis Anderson, MD (OEIS), Robert Kennedy, MD (SIR), Andy Moriarity, MD (ACR), Gerald Niedzwiecki, MD (OEIS), Matthew Sideman, MD (SVS), Afnan Tariq, MD (SCAI), Richard Wright, MD (ACC)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

37254-08 - For procedures in which angioplasty and stent placement is performed (37258 and 37260), a distal protection device is typically used to prevent embolization of fibrofatty plaque and thrombus down the lower extremity arterial system. In complex cases where a total occlusion is being treated with angioplasty and stent placement (37260 and 37261), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion. Due to the high risk of rupture/perforation during these revascularization procedures for total occlusions, it is standard to use a covered stent to treat these vessels. In addition, covered stents have been shown to have improved patency over bare metal stents in this vascular distribution.
37262 Iliac IVL – Only include the IVL balloon catheter in the supply inputs. A single balloon is typical. The IVL catheter is only available from one vendor and is by definition necessary for the performance of this work. There are no alternatives to this product available at this time.

Fem-Pop Family
37263-13 Femoropopliteal angioplasty – The standard of care for the treatment of this vascular distribution with angioplasty is with drug coated balloons which deliver paclitaxel to the intima of the vessel wall to inhibit the proliferation of smooth muscle and neointimal hyperplasia. The vessel must be pre-dilated with a standard low-profile ballon (SD151) prior to use of the drug-coated balloon. Drug coated balloons can only be used on one segment of vessel (single inflation) and the treatment of a typical femoropopliteal diseased segment requires two Drug coated balloons (37263 and 37265) whereas in the add on codes which will be more typically used for common femoral or profunda femoris interventions, one balloon would suffice. In complex total occlusions (37265 and 37266), the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. A stiff, small caliber support wire (SD173) is also typical once the lesion is crossed for delivering the angioplasty balloon through complex occlusions in 37265. In complex occlusions in which angioplasty is performed (37265), it is typical to use a distal protection device to prevent embolization of fibrofatty plaque and thrombus.

37267-17 Femoropopliteal angioplasty and stent – The standard of care for treatment of this vascular distribution remains the use of drug delivering technologies for short to moderate length diseased segments when appropriate. For the "straight-forward" procedure in which angioplasty and stent is performed (37267), angioplasty with a low-profile balloon is performed followed by treatment with a drug coated balloon throughout the diseased segment. A stent is required to treat a portion of the treated area which has elastic recoil or dissection and the standard of care in this situation would be a drug-coated balloon. In 37268 and 37270, a covered stent (SD254) is more appropriate as these codes more frequently will be used to describe treatments in the common femoral or profunda femoris arteries where flexion limits the durability of traditional self-expanding stents. In these cases, the treated vessel is short and can typically be treated with one stent. In complex cases where a total occlusion is being treated with angioplasty and stent placement (37269), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion. In these long segment chronic total occlusions, it is typical to use covered stents (SD254) due to improved patency over uncovered metal stents for long segment of disease. Given the typical length of chronic total occlusions in the femoropopliteal segment, two covered stents are typically used since the invoiced covered stent is 5 or 10 cm long and typical lesions are 15cm – 25cm in length. In complex total occlusions (37269), the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. A stiff, small caliber support wire (SD173) is also typical once the lesion is crossed for delivering the angioplasty balloon and stent through complex occlusions in 37269. In addition, it is typical to use a distal protection device to prevent embolization of fibrofatty plaque and thrombus in these cases.

CPT CODE(S): 37254-37299
SPECIALTY SOCIETY(IES): ACC, ACR, ACS, OEIS, SCAI, SIR, SVS
PRESENTER(S): Curtis Anderson, MD (OEIS), Robert Kennedy, MD (SIR), Andy Moriarity, MD (ACR), Gerald Niedzwiecki, MD (OEIS), Matthew Sideman, MD (SVS), Afnan Tariq, MD (SCAI), Richard Wright, MD (ACC)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

37271-21 Femoropopliteal atherectomy and angioplasty – The standard of care for the treatment of this vascular distribution with angioplasty is with drug coated balloons which deliver paclitaxel to the intima of the vessel wall to inhibit the proliferation of smooth muscle and neointimal hyperplasia. Once atherectomy has been performed, the vessel must be pre-dilated with a standard low-profile ballon (SD151) prior to use of the drug-coated balloon. Drug coated balloons can only be used on one segment of vessel (single inflation) and the treatment of a typical femoropopliteal diseased segment requires two Drug coated balloons (37271 and 37273) whereas in the add on codes which will be more typically used for common femoral or profunda femoris interventions, one balloon would suffice. In complex total occlusions (37273 and 37274), the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. Atherectomy is performed using one of a number of different atherectomy devices (SD253) which are designed with different treatment modalities that are specific to plaque morphology, plaque composition and vessel size. One device can be used for both the 000 Global base codes and on the ZZZ add on codes and therefore, the add-on codes do not have an additional device included. When atherectomy and angioplasty is performed (37271 and 37273), it is typical (and described in the IFU) to use a distal protection device to prevent embolization of fibrofatty plaque, calcified debris and/or thrombus. When performing atherectomy, proprietary wires are typically used which can accommodate rapid rotations the devices often utilize. In most cases, the support wire represents a proprietary wire which is associated with each product but is best represented by SD173 which is included in the codes 37271 and 37273. In those cases, the Spider FX Embolic Protection device (SD256) cannot be used. For this reason, a new product which can be used with the proprietary wires for various atherectomy devices is more appropriate (see Embolic protection device for atherectomy).

37275-25 Femoropopliteal atherectomy, angioplasty and stent – The standard of care for treatment of this vascular distribution remains the use of drug delivering technologies for short to moderate length diseased segments when appropriate. For the "straight-forward" procedure in which atherectomy, angioplasty and stent is performed (37275), angioplasty with a low-profile balloon is performed after atherectomy followed by treatment with a drug coated balloon throughout the diseased segment. A stent is required to treat a portion of the treated area which has elastic recoil or dissection and the standard of care in this situation would be a drug-eluting stent. In 37276 and 37278, a covered stent (SD254) is more appropriate as these codes more frequently will be used to describe treatments in the common femoral or profunda femoris arteries where flexion limits the durability of traditional self-expanding stents. In these cases, the treated vessel is short and can typically be treated with one stent. In complex cases where a total occlusion is being treated with atherectomy, angioplasty and stent placement (37277), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion. In these long segment chronic total occlusions, it is typical to use covered stents (SD254) due to improved patency over uncovered metal stents for long segment of disease. Given the typical length of chronic total occlusions in the femoropopliteal segment, two covered stents are typically used since the invoiced covered stent is 5 or 10 cm long and typical lesions are 15cm – 25cm in length.. Atherectomy is performed using one of a number of different atherectomy devices (SD253) which are designed with different treatment modalities that are specific to plaque morphology, plaque composition and vessel size. One device can be used for both the 000 Global base codes and on the ZZZ add on codes and therefore, the add-on codes do not have an additional device included. When atherectomy, angioplasty and stent placement is performed (37275 and 37277), it is typical (and described in the IFU) to use a distal protection device to prevent embolization of fibrofatty plaque, calcified debris and/or thrombus. When performing atherectomy, proprietary wires are typically used which can accommodate

rapid rotations the devices often utilize. In most cases, the support wire represents a proprietary wire which is associated with each product but is best represented by SD173 which is included in the codes 37271 and 37273. In those cases, the Spider FX Embolic Protection device (SD256) cannot be used. For this reason, a new product which can be used with the proprietary wires for various atherectomy devices is more appropriate (see Embolic protection device for atherectomy). In complex total occlusions (37277 and 37278), the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical.

37279 Femoropopliteal IVL – Only include the IVL balloon catheter in the supply inputs. A single balloon is typical. The IVL catheter is only available from one vendor and is by definition necessary for the performance of this work. There are no alternatives to this product available at this time.

Tibial Family
37280-30 Tibial Angioplasty – In all tibial interventions, the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. An additional steerable microware (SD175) is needed for the add-on codes (37281 and 37283) due to damage typically inflicted during lesion crossing for the base code rendering the wire (SD175) not usable for the additional tibial vessels. A stiff, small caliber support wire (SD173) is also typical once the lesion is crossed for delivering the angioplasty balloon through calcified, diseased vessels. Typically if more than one tibial vessels are treated during the same procedure, the stiff wires (SD173) are placed in each vessel prior to performing angioplasty. The current standard of care for the treatment of this vascular distribution with angioplasty is with a low-profile ballon (SD151). In complex cases where a total occlusion is being treated with angioplasty (37282), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion. In addition, it is typical to use a distal protection device (SD256) to prevent embolization of fibrofatty plaque and thrombus in these cases.

37284-34 Tibial Angioplasty and stent – In all tibial interventions, the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. An additional steerable microware (SD175) is needed for the add-on codes (37285 and 37287) due to damage typically inflicted during lesion crossing for the base code rendering the wire (SD175) not usable for the additional tibial vessels. A stiff, small caliber support wire (SD173) is also typical once the lesion is crossed for delivering the angioplasty balloon and stent through calcified, diseased vessels. Typically if more than one tibial vessels are treated during the same procedure, the stiff wires (SD173) are placed in each vessel prior to performing angioplasty and stent placement. Once angioplasty is performed with the low profile balloon (SD151) the decision is made to place stents where needed. The previous input for tibial stents in the supply database is no longer used and is not typical. The new supply input represents a tibial specific drug-eluting stent which is FDA approved for use in this vascular distribution. This stent has a maximum length of 38mm, similar to coronary drug eluting stents. Given the typical length and heavy calcification of chronic total occlusions in the tibial segment in complex cases (37286 and 37287), two drug-eluting stents are typically used whereas in "straight-forward" cases (37284 and 37285) one would be more typical. In complex cases where a total occlusion is being treated with angioplasty (37282), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion. In addition, it is typical to use a distal protection device (SD256) to prevent embolization of fibrofatty plaque and thrombus during the performance of 37284 and 37286.

37288-38 Tibial Atherectomy and angioplasty – In all tibial interventions, the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. An additional steerable microware

(SD175) is needed for the add-on codes (37289 and 37291) due to damage typically inflicted during lesion crossing for the base code rendering the wire (SD175) not usable for the additional tibial vessels. The current standard of care for the treatment of this vascular distribution with angioplasty is with a low-profile ballon (SD151). Atherectomy is performed using one of a number of different atherectomy devices (SD253) which are designed with different treatment modalities that are specific to plaque morphology, plaque composition and vessel size. One device can be used for both the 000 Global base codes and on the ZZZ add on codes and therefore, the add-on codes do not have an additional device included. When atherectomy and angioplasty is performed (37288 and 37290), it is typical (and described in the IFU) to use a distal protection device to prevent embolization of fibrofatty plaque, calcified debris and/or thrombus. When performing atherectomy, proprietary wires are typically used which can accommodate rapid rotations the devices often utilize. In most cases, the support wire represents a proprietary wire which is associated with each product but is best represented by SD173 which is included in the four codes tibial atherectomy and angioplasty (37288-38). Typically, if more than one tibial vessels are treated during the same procedure, the stiff wires (SD173) are placed in each vessel prior to performing angioplasty and atherectomy. In those cases, the Spider FX Embolic Protection device (SD256) cannot be used. For this reason, a new product which can be used with the proprietary wires for various atherectomy devices is more appropriate (see Embolic protection device for atherectomy). In complex cases where a total occlusion is being treated with angioplasty (37290), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion.

37292-42 Tibial Atherectomy, angioplasty and stent - In all tibial interventions, the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. An additional steerable microware (SD175) is needed for the add-on codes (37293 and 37295) due to damage typically inflicted during lesion crossing for the base code rendering the wire (SD175) not usable for the additional tibial vessels. Once atherectomy and angioplasty is performed with the low-profile balloon (SD151) the decision is made to place stents where needed. The previous input for tibial stents in the supply database is no longer used and is not typical. The new supply input represents a tibial specific drug-eluting stent which is FDA approved for use in this vascular distribution. This stent has a maximum length of 38mm, similar to coronary drug eluting stents. Given the typical length and heavy calcification of chronic total occlusions in the tibial segment in complex cases (37294 and 37295), two drug-eluting stents are typically used whereas in "straight-forward" cases (37292 and 37293) one would be more typical. In complex cases where a total occlusion is being treated with atherectomy and angioplasty (37294), it is typical to enter the subintimal space and require a reentry device to gain wire access to the true lumen across the occlusion. Atherectomy is performed using one of a number of different atherectomy devices (SD253) which are designed with different treatment modalities that are specific to plaque morphology, plaque composition and vessel size. One device can be used for both the 000 Global base codes and on the ZZZ add on codes and therefore, the add-on codes do not have an additional device included. When atherectomy, angioplasty and stent placement is performed (37292 and 37294), it is typical (and described in the IFU) to use a distal protection device to prevent embolization of fibrofatty plaque, calcified debris and/or thrombus. When performing atherectomy, proprietary wires are typically used which can accommodate rapid rotations the devices often utilize. In most cases, the support wire represents a proprietary wire which is associated with each product but is best represented by SD173 which is included in the four codes tibial atherectomy, angioplasty and stent placement (37292-42). Typically, if more than one tibial vessels are treated during the same procedure, the stiff wires (SD173) are placed in each vessel prior to performing angioplasty and atherectomy. In those cases, the Spider

FX Embolic Protection device (SD256) cannot be used. For this reason, a new product which can be used with the proprietary wires for various atherectomy devices is more appropriate (see Embolic protection device for atherectomy).

Infra Family
37296-46 - In all inframalleolar interventions, the use of a crossing catheter (SC096) and steerable microwire (SD175) is typical. An additional steerable microware (SD175) is needed for the add-on codes (37285 and 37287) due to damage typically inflicted during lesion crossing for the base code rendering the wire (SD175) not usable for the additional inframalleolar vessels. For complex inframalleolar total occlusions (37298), multiple wires are typically used including hydrophilic wires and heavy weighted CTO wires in order to achieve a successful cross of the occlusion, therefore two SD175 are requested for this code only. A stiff, small caliber support wire (SD173) is also typical once the lesion is crossed for delivering the angioplasty balloon through calcified, diseased vessels. Typically if more than one inframalleolar vessels are treated during the same procedure, the stiff wires (SD173) are placed in each vessel prior to performing angioplasty. In complex occlusions, 37298 the use of multiple microwires to cross the occlusion in this territory would be typical and for that reason we requested two steerable microwires (SD175). The current standard of care for the treatment of this vascular distribution with angioplasty is with a low-profile ballon (SD151).

Creation of New Pack – Angio Pack
The specialty societies are recommending the PE Subcommittee consider creating an angio pack with the following items. An angio pack will facilitate the PE process and ensure consistency within the vascular/interventional procedures.

Angio Pack Contents		**Corresponding Supply list components**				**$ 68.26**
10 cc syringe	SC051	syringe 10-12ml	item	0.21	4	$ 0.84
Bowl, sterile	SJ079	basin, sterile 500cc	item	3.51	2	$ 7.02
gauze	SG055	gauze, sterile 4in x 4in	item	0.19	20	$ 3.80
marker, regular tip	SK075	skin marking pen, sterile (Skin Skribe)	item	1.62	1	$ 1.62
dome cover	SB008	drape, sterile, c-arm, fluoro	item	5.38	1	$ 5.38
blue towels	SB019	drape-towel, sterile 18in x 26in	item	0.47	4	$ 1.88
scalpel	SF007	blade, surgical (Bard-Parker)	item	0.68	1	$ 0.68
back table cover	SB014	drape, sterile, three-quarter sheet	item	3.46	1	$ 3.46
20cc syringe	SC053	syringe 20ml	item	0.83	4	$ 3.32
drape, femoral	SB009	drape, sterile, femoral	item	9.15	1	$ 9.15

medicine cup	SL157	cup, sterile, 8 oz	item	0.58	1	$ 0.58
label sheet	SL198	label, vial	item	0.02	9	$ 0.18
control syringe (lidocaine)	SC051	syringe 10-12ml	item	0.21	1	$ 0.21
scissor	SA027	kit, scissors and clamp	kit	0.82	1	$ 0.82
surgical gowns x 2	SB028	gown, surgical, sterile	item	5.13	2	$ 10.26
18 G needle	SC027	needle, 18-19g, filter	item	0.21	1	$ 0.21
25 G needle	SC028	needle, 18-26g 1.5-3.5in, spinal	item	9.96	1	$ 9.96
needle counter	SD120	styrofoam block, high density (3in-12in-12in)	item	1.86	1	$ 1.86
towel clamps (plastic disposable)	SD208	towel clamp, plastic	item	0.76	4	$ 3.04
Guidewire bowl	SD171	guidewire bowl w-lid, sterile	Item	3.99	1	$ 3.99

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

The PE subcommittee removed the following items:

- SC001 angiocatheter 14g-24g
- SG037 dressing, 4in x 4.75in (Tegaderm)
- SC018 iv infusion set
- SA019 kit, iv starter

The items, listed above, are included in the direct practice expense inputs for the moderate sedation CPT codes and thus, would be a duplication of items when moderate sedations is reported (which is typical for these services).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Endoscopic Sleeve Gastroplasty – Tab 07

In September 2024, the CPT Editorial Panel approved the addition of a new Category I code to report transoral gastric restrictive procedures through an endosurgical approach. The specialties surveyed Endoscopic Sleeve Gastroplasty (ESG) for the January 2025 RUC meeting.

43889 ***Gastric restrictive procedure, transoral, endoscopic sleeve gastroplasty (ESG), including argon plasma coagulation, when performed***
The RUC reviewed the survey results from 107 gastroenterologists, bariatric surgeons, and gastrointestinal and endoscopic surgeons and concurred that the survey respondents overstated the physician work involved in performing this service. The RUC determined that a direct work RVU crosswalk to CPT code 36832 *Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)* (work RVU = 13.50, 90 minutes intra-service time and 276 minutes total time) falls below the survey 25th percentile and appropriately accounts for the physician work involved in this service. The crosswalk code was surveyed in 2013 and has identical intra-service time as 43889 and similar total time and intensity.

The RUC recommends the following physician time components: 40 minutes pre-service evaluation, 3 minutes pre-service positioning, 10 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, and 43 minutes immediate post-service time, 0.5-99238 discharge visit and 3-99213 office visits for 274 minutes total time, as supported by the survey. Pre-time package 4 was selected with adjustments to the evaluation and positioning times. For the post-operative office visits, the RUC recommends the survey median response of three level-3 office visits. Patients undergoing ESG typically have three follow-up-visits occurring at weeks 1, 5, and 12 post ESG. The RUC discussed the components of the post-op visits in detail and concurred with the recommendation.

The RUC discussed the CMS 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy as it relates to the post-service time for the surveyed code. CMS labels surgical services that are typically performed in the outpatient setting and require an overnight hospital stay of less than 24 hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to bundle subsequent hospital visits (e.g., 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intra-service portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure. Per the CMS policy, the intra-service time is reallocated from the same-day E/M code 99232 to the immediate post-service time of the outpatient service (adding 20 minutes of intra-service time from 99232). Though the median survey immediate post-service time was 23 minutes, the CMS 23-hour stay policy was applied resulting in 43 minutes. The RUC recommends post-service time package 9B and, following the CMS 23-hour policy, the E/M same day visit is not shown and instead, the intra-service time of 20 minutes has been added to the median survey post time of 23 minutes (total = 43 minutes).

To justify a work RVU of 13.50, the RUC compared CPT code 43889 to the top key reference service code 43771 *Laparoscopy, surgical, gastric restrictive procedure; revision of adjustable gastric restrictive device component only* (work RVU = 20.79, 120 minutes intra-service time and 377 minutes total time) and noted that the intra-service time and total time is much greater than the surveyed code and the reference code is also much

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

more intense, justifying the higher work value. The RUC also compared CPT code 43889 to the second key reference service code 43180 *Esophagoscopy, rigid, transoral with diverticulectomy of hypopharynx or cervical esophagus (eg, Zenker's diverticulum), with cricopharyngeal myotomy, includes use of telescope or operating microscope and repair, when performed* (work RVU = 9.03, 60 minutes intra-service time and 201 minutes total time) and noted that the reference service has less intra-service and total time and is appropriately valued lower than 43889. The RUC noted that the crosswalk value is appropriately bracketed by the two key reference service codes.

For additional support, the RUC compared CPT code 43889 to MPC code 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time and 283 minutes total time) and noted that the surveyed code has identical intra-service time and slightly less total time. Mastectomy is an open surgical dissection that requires skill to ensure complete tissue removal and manage postoperative risks. ESG, on the other hand, requires advanced endoscopic techniques and surgery with an endoscope to avoid complications like gastric perforation or suture failure and massive or overt intraluminal or extraluminal hemorrhage. Thus, the comparison code is slightly more intense, justifying the higher work value. The RUC also offered CPT code 37218 *Transcatheter placement of intravascular stent(s), intrathoracic common carotid artery or innominate artery, open or percutaneous antegrade approach, including angioplasty, when performed, and radiological supervision and interpretation* (work RVU = 14.75, 90 minutes intra-service time and 255 minutes total time) for comparison. Both services are minimally invasive procedures where 37218 requires vascular access, stent placement, and the use of advanced imaging for guidance. ESG requires endoscopic access and modification of stomach structure through suturing without image guidance. The RUC noted, similarly, that the surveyed code has identical intra-service time, yet the comparator code is more intense, justifying the higher work value. The RUC further compared 43889 to CPT code 50080 *Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy, stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; simple (eg, stone[s] up to 2 cm in single location of kidney or renal pelvis, nonbranching stones)* (work RVU = 12.41, 90 minutes intra-service time and 244 minutes total time) and noted that the surveyed code has identical intra-service time, yet more total time. CPT code 50080 is performed to remove obstructions in the urinary tract, utilizing energy to fragment and remove. ESG is performed entirely endoscopically and is reliant on internal suturing with no external incisions. ESG is clinically more complex to perform and manage complications when compared to the more standardized and image-supported approaches of PCNL/lithotripsy, therefore 50080 is appropriately valued lower than 43889. The RUC noted that the crosswalk value is appropriately bracketed by these comparison codes.

The RUC concluded that CPT code 43889 should be valued based on a direct work RVU crosswalk to CPT code 36832, noting that both services involve an identical amount of intra-service time and similar total time, and agreed the crosswalk value below the survey 25th percentile is appropriate. **The RUC recommends a work RVU of 13.50 for CPT code 43889.**

Practice Expense

The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

New Technology
CPT code 43889 will be placed on the New Technology list and will be re-reviewed by the RUC in three years.

Presented Recommended RVU: **15.00**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **13.50**

CPT Descriptor: Gastric restrictive procedure, transoral, sleeve gastroplasty (ie, endoscopic sleeve gastroplasty [ESG]), including argon plasma coagulation, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: a 67-year-old female presents with history of obesity and diet history that confirms class ii obesity (bmi 35-39.9) and confirmed diagnosis of type 2 diabetes mellitus and hypertension.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 73% , In the ASC 25%, In the office 1%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 47% , Overnight stay-less than 24 hours 40% , Overnight stay-more than 24 hours 13%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 95%

Description of Pre-Service Work: Review history, physical and preadmission work-up, paying particular attention to past abdominal surgery, which could make ESG more difficult to perform. Reexamine patient to make sure that physical findings have not changed and update H&P. Review any available imaging reports (endoscopy exams , radiology tests), relevant diagnostic tests (ECG) and laboratory studies, especially as they relate to coagulation status, CBC, H. pylori status, and basic metabolic panel. Review the patient's allergies and medications noting use of antiplatelets or anticoagulants. Determine the need for timing of preprocedure anti-nausea medication and antibiotics. Perform a preprocedural examination, including vitals, body mass index (BMI), airway assessment, cardiopulmonary assessment, and abdominal examination. Counsel the patient regarding typical procedure length, intraprocedure and post procedure adverse events and typical outcomes and follow-up. Document preprocedural history and physical. Review the logistics of the planned procedure and the postoperative management. Document informed consent. Review the length and type of anesthesia with the anesthesiologist and discuss the need for aspiration precaution measures. Plan the technical aspects of the procedure. Verify that all required instruments and supplies are available, including endoscopic tools. Assist in transfer of patient from gurney to operating table. Monitor and assist in positioning of patient. Position the endoscopic, imaging, electrocautery, and monitoring equipment to provide access for the procedure. Apply appropriate protective attire and shielding to all in the suite, including the patient. Perform a pre-procedure time out.

Description of Intra-Service Work: Under general anesthesia, place a bite-block in the patient's mouth. Confirm with anesthesiology that an adequate level of anesthesia is in place to begin intubation of the esophagus. Insert a flexible upper endoscope through the mouth into the oropharynx and into the esophagus to assess for esophageal anatomy. Advance the endoscope through the lower esophageal sphincter into the proximal stomach. Insufflate the stomach with CO2. Perform an examination of the entire stomach in the forward and retroflexed position. Advance the endoscope through the pylorus into the duodenal bulb. Perform circumferential inspection of the duodenum after insufflation. Once initial examination confirms that there are no contraindications to proceeding, The endoscopic is pulled back into the stomach and the stomach is again distended by carbon dioxide insufflation. An electrosurgical coagulation device or argon plasma may be used to mark mucosa of the stomach denoting the anterior and posterior limits of the suture line. After completion of the marks, the endoscope is withdrawn. An esophageal overtube may be placed to ease the passage of the endoscopic suturing device into the distal esophagus and stomach. The suturing device is attached to the endoscope and its function assured. The

suturing device is inserted into the esophagus and passed into the stomach. Beginning distal to the incisura, full thickness gastric bites are taken with retraction of the tissue into the suture device with the tissue helix. The tissue helix is a corkscrew-like device is inserted into the muscularis mucosa and then retracted into the device to bring the full thickness stomach tissue into the suturing system. A U-shaped suturing pattern is performed starting by placing full thickness bites at the anterior wall, through the greater curvature, to the posterior wall then back through the greater curvature to finish at the anterior wall just proximal to the initial bite. The U pattern requires 6-10 bites of stomach wall with the suturing device. This pattern is followed by an interrupted reinforcing suture with 2-3 bites. The (U shaped + reinforcing) is repeated 4-7 times. Then the anchor is dropped, the suture is tightened, the cinch is secured and the suture is cut. The pattern is followed an additional 4-7 times until the desired tubular shape and foreshortening of the stomach is achieved. The upper fundus is spared from plication. Upon completion of the gastroplasty, the stomach lumen is reduced approximately 70-80%. Following completion of the procedure, a second endoscopy (not separately reportable) is carried out to ensure the final tubular configuration of the gastroplasty is present, to examine any defects requiring supplemental closure, and to rule out potential bleeding.

Description of Post-Service Work: Hospital: Monitor the patient during reversal of anesthesia, paying particular attention to hypercapnia issues and aspiration risk. Monitor the transport of the patient from the operating area to the recovery room. Complete post procedure orders. Discuss the patient's postoperative recovery with the anesthesia and nursing staff. Discuss the procedure and outcome with the patient's family. Dictate post-op report. Dictate procedure outcome and expected recovery letter for primary care physician and / or insurance company. Examine patient and check wounds and patient progress. Review nursing/staff chart notes. Answer patient and family questions. Answer nursing/staff questions. Write and summarize orders for floor nurse. Check fluid and electrolyte status. Write orders for following labs, films, medications, diet, and patient activity. A confirmatory contrast upper gastrointestinal radiograph is ordered and reviewed to exclude gastric prolapse, perforation, or obstruction. When the contrast study and patient's status are acceptable, a clear liquid diet is instituted and the patient is discharged. Home restrictions (ie, diet, activity, bathing, return visits) are discussed with the patient, nutritionist and family members. All appropriate medical records are completed, including day of discharge progress notes, discharge summary, and discharge instructions, prescriptions, and insurance forms. Post-procedure work in-office: The patient is evaluated and vital signs are assessed including blood pressure, heart rate, weight and a physical examination of the heart, lungs, abdomen and extremities are performed.

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	25%	73%
Physical effort required	8%	17%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	36%	51%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	15%	31%	38%	16%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	46%	46%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	45%	47%
Physical effort required	0%	62%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	46%	46%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The ACG, AGA, ASGE, ASMBS and SAGES conducted a survey of new CPT code 43889 (*Gastric restrictive procedure, transoral, sleeve gastroplasty (ie, endoscopic sleeve gastroplasty [ESG]), including argon plasma coagulation, when performed* for the January 2025 RUC meeting. Our multi-specialty consensus panel reviewed the survey data for code 43889, comparing the data and work RVUs (wRVUs) to the current data for similar 90-day global codes that were recently approved by the RUC. The consensus panel agreed with the overall survey data.

43889 – Discussion and Recommendation

Code 43889 is a new code approved by the CPT Editorial Panel at its September 2024 CPT meeting.
For this survey, ACG, AGA, ASGE, ASMBS and SAGES collected responses from both an industry provided list (approved by the research subcommittee) and random society sampling.

We recommend assigning a work wRVU of 15.00. This proposed value falls below the 25th percentile of the combined survey data, providing a conservative yet equitable assessment for the procedure in question. The wRVU value of 15.00 is benchmarked through a crosswalk to CPT code 19303, which corresponds to a simple, complete mastectomy.

Additionally, this value is situated within a logical range when compared to related CPT codes. Specifically, it is bracketed by CPT code 37218, which involves the transcatheter placement of intravascular stent(s) in the intrathoracic common carotid artery or innominate artery using an open or percutaneous antegrade approach, including angioplasty (when performed) and radiological supervision and interpretation, and CPT code 19303. This alignment ensures the proposed value is consistent with the intensity, complexity, and physician work required for comparable procedures.

Pre-time Package 4 (*Difficult Patient/Difficult Procedure*) is appropriate for 43889 with a reduction of 5 minutes of evaluation time from 45 minutes in survey to the 40 minutes in the package. Additionally, a reduction of 12 minutes of positioning time to reflect the Package 4 positioning time of 3 minutes rather than the survey time of 15 minutes and there is a 5-minute decrease from the package time, which represents the scrub dress and wait time from the survey.

Pre-service evaluation time: 40 minutes
Pre-service positioning time: 3 minutes
Pre-service scrub, dress, wait time: 10 minutes

Post-time Package 9B (*General Anesthesia or Complex Regional Block/Complex Procedure*) of 33 minutes minus 10 minutes based on the survey time of 23 minutes.

Key Reference Services

There were 107 surveys completed by a combined industry provided list and random sample of members from ACG, AGA, ASGE, ASMBS and SAGES. Two reference services were selected more often than others:

> 43771- Laparoscopy, surgical, gastric restrictive procedure in their intensity/complexity comparison, the; revision of adjustable gastric restrictive device component only (77 selected /107 respondents)
>
> 43180-Esophagoscopy, rigid, transoral with diverticulectomy of hypopharynx or cervical esophagus (eg, Zenker's diverticulum), with cricopharyngeal myotomy, includes use of telescope or operating microscope and repair, when performed (13 of 107 respondents).

Survey respondents indicated that the survey code was similar or somewhat more complex than 43771 for most of the intensity/complexity measures. For the second KRS code 43180 survey respondents indicated that the survey code was more or somewhat more complex for all of the intensity/complexity measures.

Discussion of Intra-service Time

The survey data for code 43889 (Gastric restrictive procedure, transoral, sleeve gastroplasty [e.g., endoscopic sleeve gastroplasty (ESG)], including argon plasma coagulation, when performed) indicates a median intra-operative time of 90 minutes. The Expert Panel concluded that the survey accurately reflects the global services and discharge day management requirements. Additionally, the survey supports four routine office visits after patient discharge, occurring at 1 week, 3 weeks, 6 weeks, and 3 months.

The Expert Panel recommends a crosswalk work RVU (wRVU) of 15.00, which is below the survey's 25th percentile wRVU of 16.82 for this code. This recommendation places the proposed wRVU between the wRVUs of the first (20.79) and second (9.03) Key Reference Services (KRS) codes.

For code 43889, the panel suggests a crosswalk to CPT code 19303 – Mastectomy, simple, complete. In addition, several time input adjustments have been made based on feedback from the AMA pre-facilitation discussion:

- **23-Hour Outpatient Stay:** Reflecting the nature of this procedure, CPT code 99232 (subsequent hospital inpatient or observation care) has been removed.
- **Immediate Post-Service Time:** An additional 20 minutes has been added to account for the removal of CPT code 99232, resulting in a total immediate post-service time of 43 minutes (23 minutes from the survey plus 20 minutes).
- **Pre-Service Time:** Pre-time package 4 was selected, with adjustments to the evaluation and positioning times, yielding a total pre-service time of 53 minutes.
- **Total Time:** The revised time inputs result in a median intra-service time of 90 minutes and a total service time of 309 minutes.

These modifications support the recommendation of a work RVU of 15.00, ensuring consistency with procedural complexity, time requirements, and related physician work.

Comparison to Other RUC-Reviewed Codes with Similar Time and Post-Operative Visits:

CPT Code	Long Desc	Global	Work RVU	Total Time	Pre	Intra	Imm Post	Office Post-op Visit Count	IWPUT
37218	Transcatheter placement of intravascular stent(s), intrathoracic common carotid artery or innominate artery, open or percutaneous antegrade approach, including angioplasty, when performed, and radiological supervision and interpretation	090	14.75	255	33	90	28	2	0.1053
4XX04	Gastric restrictive procedure, transoral, sleeve gastroplasty (ie, endoscopic sleeve gastroplasty [ESG]), including argon plasma coagulation, when performed	090	15.00	309	53	90	43	3	0.092
19303	Mastectomy, simple, complete	090	15.00	283	58	90	30	3	0.1018
58571	Laparoscopy, surgical, with total hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)	090	15.00	241	56	90	30	2	0.119

Discussion of Post Op Visits

Discharge Management Review nursing notes; discuss status and progress with nursing staff. Review case manager discharge plan notes; discuss status and progress with case management. Review notes from other physicians and discuss as appropriate. Review vital signs, I/O, labs and other related data. Interview patient and obtain interval history. Assess pain control and response to current medications. Assess gastrointestinal and urinary function. Examine site; changing dressing as needed. Write prescriptions for medications and devices / equipment check narcotic prescription registries. Complete medication reconciliation. Write order for discharge. Coordinate postoperative appointment with patient and/or family and office staff.

Post discharge, patients undergoing ESG typically have three follow up visits. The visits occur at weeks 1, 5, and 12 post ESG. At the week one follow-up visit the provider looks for signs of complications, such as infection. This is determined by history and physical. Patients are asked about any symptoms, such as nausea, abdominal pain, or abdominal cramping. Patients are also asked about their diet and at this point should be on a liquid diet. Diet non-compliance places patients at risk for perigastric fluid collections, which can become infected. Adequate protein intake is also calculated by the provider, since if inadequate patients experience fatigue. Adequate fluid intake is also discussed to prevent dehydration. Discuss with patients about continuing their proton pump inhibitor to allow gastric wall healing at the sites of the sutures creating the sleeve and managing acid reflux. For patients on anti-hypertensive medications or diabetes medications that were held at the time of the procedure, an assessment is made in conjunction with the patient's primary care provider to determine if these medications need to be restarted Lastly, patient will have a weight check to see if there is any weight loss.

The second follow up visit is at post procedure week 5. There is still a chance for patients to develop infection at this point, so detailed history and physical are done to rule out any signs of infection. Determine if patient is having any symptoms, such as abdominal pian, nausea, or acid reflux. If no reflux symptoms can start to wean proton pump inhibitor, which would be complete at the end of week 6 post ESG. Diet advancement is discussed stressing the importance of eating slowly to prevent abdominal pain. Protein intake is calculated to make adequate intake is occurring to minimize fatigue. Making sure the patient had adequate fluid intake to prevent dehydration. Unlike surgical sleeve gastrectomy, ESG caused delayed gastric emptying. A weight check is done, since the expectation is a 5%-7% of total body weight loss (TBWL) is an early predictor of ESG success. If the patient has not lost this amount of weight the provider may order an upper GI series to make sure there are no signs of suture failure. Reinforce the importance of healthy diet choices and exercise. For patients on anti-hypertensive medications or diabetes medications that were held at the time of the procedure, an assessment is made in conjunction with the patient's primary care provider to determine if these medications need to be restarted.

The third follow up visit is at week twelve post ESG. At this point patient should be on a regular, low caloriediet. Again, protein intake is calculated to make sure adequate levels are in the patient's diet. The importance of exercise is again emphasized to the patient. A weight check is done to see if the patient has >10% TBWL. If the patient is not on target an upper GI series is ordered to assess ESG. A discussion about starting obesity weight loss medicines are discussed if weight loss goals are not achieved, and stressing importance of diet and exercise. For patients on anti-hypertensive medications or diabetes medications that were held at the time of the procedure, an assessment is made in conjunction with the patient's primary care provider to determine if these medications need to be restarted.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 43499

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Gastroenterology How often? Sometimes

Specialty Bariatric Surgery How often? Sometimes

Specialty Gastrointestinal Surgery How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 4587
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Feedback from both Metabolic and Bariatric Surgery Accreditation and Quality Improvement Program (MBSAQIP) database and Boston Scientific (manufacturer

Specialty Gastroenterology Frequency 2294 Percentage 50.01 %

Specialty Bariatric Surgery Frequency 1147 Percentage 25.00 %

Specialty Gastrointestinal Surgery Frequency 1146 Percentage 24.98 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,376
If this is a recommendation from multiple specialties please estimate frequency <u>and percentage</u> for each specialty. Please explain the rationale for this estimate. SG is performed more commonly in the non-Medicare population. Per the CCA, it is estimates that it is performed 70% in the commercial patient population (3,211) and 30% in the Medicare population (1,376)

Specialty Gastroenterology Frequency 688 Percentage %

Specialty Bariatric Surger Frequency 344 Percentage 25.00 %

Specialty Gastrointestinal Surgery Frequency 344 Percentage 25.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 43497

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
43889	Gastric restrictive procedure, transoral, sleeve gastroplasty (ie, endoscopic sleeve gastroplasty [ESG]), including argon plasma coagulation, when performed	90

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
43889	A 67-year-old female presents with history of obesity and diet history that confirms class ii obesity (bmi 35-39.9) and confirmed diagnosis of type 2 diabetes mellitus and hypertension

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The ACG, AGA, ASGE, ASMBS and SAGES convened an RVS expert panel of the surveying specialty societies to review practice expense data for code 43889. The panel included both sub-specialists and generalists from within the specialties of a variety of settings across the United States. They also received input from practice managers and clinical staff familiar with the direct expense inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   We selected 43497 (*Lower esophageal myotomy, transoral (ie, peroral endoscopic myotomy [POEM])*) as the comparison code because it has similar clinical staff activities.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No. This is a new surgical procedure that will not be reported with an E/M service.

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   Not applicable

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Not applicable. We are not recommending more minutes than the PE Subcommittee standards for clinical activities.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

Not applicable

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms = 5 minutes (CA001) Coordinate pre-surgery services (including test results) = 20 minutes (CA002) Schedule space and equipment in facility = 8 minutes (CA003) Provide pre-service education/obtain consent = 20 minutes (CA004) Complete pre-procedure phone calls and prescription = 7 minutes (CA005)

   b. Service period (includes pre, intra and post):

None

   c. Post-service period:

Discharge day management = 6 minutes (CA036)

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

Not applicable

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

Not applicable

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

14. Are you recommending a PE supply pack for this recommendation? **Yes** or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
We recommend SA048 (pack, minimum multi-specialty visit).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

Unit price = $5.02 per pack

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Not applicable

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Not applicable

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

Not applicable

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment please explain here:

EF023 (table, exam) Office Visits formula
EQ168 (light, exam) Office Visits formula

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

Not applicable

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Not applicable

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Irreversible Electroporation of Tumors – Tab 08

In September 2024, the CPT Editorial Panel approved the addition of two new Category I codes to report percutaneous irreversible electroporation ablation of one or more tumors in the liver and prostate respectively, and the revision of a Category III code to specify ablation in organs other than the liver or prostate.

47384 ***Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous***
The RUC reviewed the survey results from 36 radiologists and interventional radiologists and determined that the survey 25th percentile work RVU of 9.41 appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, and 30 minutes immediate post-service time for 190 minutes total time as supported by the survey. The RUC noted that surgical oncologists or hepatologists typically provide the patient's follow-up care.

The RUC recommends pre-service time package 4 (Facility, Difficult Patient/Difficult Procedure) with the following adjustments:

> Evaluation: Pre-service evaluation time of 40 minutes is recommended, which is 10 minutes less than the median survey time, but matches the package time. As a difficult patient, typically the patient has cirrhosis, portal hypertension, is not a surgical candidate and may have thrombocytopenia and coagulopathies, 40 minutes is appropriate to complete this work.
>
> Positioning: The median survey time of 15 minutes, which is 12 minutes more than the package time is recommended. This is warranted due to set up of monitoring devices, lines, tubes and anesthesia equipment within a CT room and ensuring that all devices attached to the patient are able to clear and slide in and out of the CT gantry to maintain sterility and procedural success.
>
> Scrub, dress, and wait: The median survey time of 15 minutes, which is 5 minutes less than the package time and supported by the survey data is recommended.

To justify a work RVU of 9.41, the RUC compared the surveyed code to the top key reference service code 32994 *Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation* (work RVU = 9.03, 90 minutes intra-service time and 168 minutes total time) and noted that the intra-service time is identical, yet total time is slightly higher for the surveyed code, justifying a slightly higher value. Moreover, over 80% of the survey respondents who selected the first key reference service rated 47384 as overall more intense and complex relative to the reference code. The RUC also compared the surveyed code to the second key reference service code 20982 *Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

imaging guidance when performed; radiofrequency (work RVU = 7.02, 80 minutes intra-service time and 148 minutes total time) and noted that the reference service has less intra-service and total time, thus, is appropriately valued less than 47384.

For additional support, the RUC compared CPT code 47384 to MPC code 36905 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty* (work RVU = 9.00, 75 minutes intra-service time and 126 minutes total time) and noted that the surveyed code has more intra-service time and is therefore appropriately valued higher than the comparator code. The RUC also compared 47384 to MPC code 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (work RVU = 10.42, 90 minutes intra-service time and 141 minutes total time) and noted that the intra-service time is identical, yet the reference code is more intense and is therefore appropriately valued higher than the surveyed code. The RUC noted that the survey 25th percentile value is appropriately bracketed by the two MPC codes.

The RUC concluded that CPT code 47384 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 9.41 for CPT code 47384.**

55877 ***Ablation, irreversible electroporation, prostate, 1 or more tumors, including imaging guidance, percutaneous***
The RUC reviewed the survey results from 33 urologists and concurred that the survey respondents overstated the physician work involved in performing this service. The RUC determined that a direct work RVU crosswalk to CPT code 15730 *Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)* (work RVU = 13.50, 90 minutes intra-service time and 255.5 minutes total time), which falls below the survey 25th percentile and has identical intra-service time, appropriately accounts for the physician work involved in this service. The RUC recommends 45 minutes pre-service evaluation time, 10 minutes pre-service positioning time, 7 minutes of pre-service scrub/dress/wait time, 90 minutes intra-service time, 20 minutes immediate post-service time, 0.5-99238 discharge visit, and 1-99213 and 1-99214 office visits for 254 minutes total time as supported by the survey. The RUC noted that the urologist performing the procedure typically provides the patient's follow-up care.

CPT code 55877 is a complex procedure to focally ablate a prostate tumor. The probes must be carefully positioned to avoid damage to surrounding structures including the bladder, rectum, urethra, external urethral sphincter, and neurovascular bundles. Throughout the ablation procedure, the physician is carefully monitoring the electroporation process to ensure appropriate tissue destruction takes place. Given that the procedure is being done for cancer treatment, confirming adequate ablation is imperative throughout the treatment.

To justify a work RVU of 13.50, the RUC compared CPT code 55877 to the top key reference service code 55880 *Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (HIFU), including ultrasound guidance* (work RVU = 17.73, 180 minutes intra-service time and 373 minutes total time) and noted that the intra-service time of the key reference service is twice as much as the surveyed code,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

justifying the higher work value for the reference service. The RUC also compared CPT code 55877 to the second key reference service code 50250 *Ablation, open, 1 or more renal mass lesion(s), cryosurgical, including intraoperative ultrasound guidance and monitoring, if performed* (work RVU = 22.22, 145 minutes intra-service time and 541 minutes total time) and noted that the reference service has more intra-service and total time and is appropriately valued higher than 55877.

For additional support, the RUC noted a strong comparison for CPT code 47384 with MPC code 53440 *Sling operation for correction of male urinary incontinence (eg, fascia or synthetic)* (work RVU = 13.36, 90 minutes intra-service time and 248 minutes total time) which is a urology code with identical intra-service time and similar total time.

The RUC concluded that CPT code 55877 should be valued based on a direct work RVU crosswalk to MPC code 15730, noting that both services involve an identical amount of intra-service time and nearly identical total time, and agreed the crosswalk value below the survey 25th percentile was appropriate. **The RUC recommends a work RVU of 13.50 for CPT code 55877.**

Practice Expense
For CPT code 47384, the Practice Expense Subcommittee reviewed the direct practice expense inputs and acknowledged that the pre-service clinical activity time for 000- and 010-day global codes is presumed to be zero. The Subcommittee agreed with the specialties' argument that the pre-service time of setting up the procedure is equivalent to a 090-day global code and the site of service would be in the facility setting only. The PE Subcommittee made no modifications to the standard inputs and agreed with the specialties' use of the pre-service time package for "Comprehensive Use of Clinical Staff" in the facility for a 000-day global code. For CPT code 55877, the PE Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology/New Services
CPT code 55877 will be placed on the New Technology list and will be re-reviewed by the RUC in three years. However, CPT code 47384, the procedure for irreversible electroporation of the liver, is not considered new technology.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Digestive System **Liver** **Other Procedures**				
47383		*Ablation, 1 or more liver tumor(s), percutaneous, cryoablation* *(For imaging guidance and monitoring, see 76940, 77013, 77022)*

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:47384 Tracking Number R1 Original Specialty Recommended RVU: **10.00**
Presented Recommended RVU: **9.41**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **9.41**

CPT Descriptor: Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male presents with hepatic lesions confirmed by imaging as AJCC (American Joint Committee on Cancer) stage 2 that are near or adjacent to the main portal vein, hepatic artery, hepatic veins, common bile or cystic ducts, gall bladder, stomach or colon.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 97% , In the ASC 3%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 49% , Overnight stay-less than 24 hours 51% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 50%

Description of Pre-Service Work: Pre-service activities include obtaining and reviewing pertinent lab results and imaging studies with the patient along with answering questions regarding the expected outcomes, risks, benefits, and alternatives of the procedure with the patient. The patient is given an opportunity to ask questions and discuss concerns. Informed written consent is obtained after questions have been answered. On the day of the procedure, the operative approach and clinical plan is discussed with all members of the care team including nursing staff and imaging technologists. Equipment supplies and instruments are checked for safety and accuracy. The patient is prepped and draped in sterile fashion, additional care made to ensure the multiple tubes and cables are positioned appropriately to allow and account for the movement of the patient in and out of the CT scanner.

Description of Intra-Service Work: Scout images with skin markers are obtained, after which the plan for skin entry and angles of approach for the IRE probes is determined. The lesion is then localized and confirmed with imaging. Local anesthesia is administered at the planned probe entry sites and small incisions are made for IRE probe insertion. Using iterative imaging feedback, the IRE probes are placed around the lesion. Once positioning is confirmed, a pre-determined number of pulses are administered per electrode pair. Maximum and minimum voltages are recorded and after satisfactory necrosis, the probes are sequentially removed. Additional images are obtained throughout the ablation procedure as necessary for monitoring and review for any necessary repositioning of the ablation probes. When applicable, contrast enhanced scans are obtained to confirm adequate coverage of the lesion by the ablation zone. Hemoststsis at access site is achieved and dry dressing applied. The patient is then sent to the post-procedural care unit under continuous nurse monitoring.

Description of Post-Service Work: The physician discusses results and any complications with the family members of the patient and oversees recovery to baseline. The procedure is reviewed and dictated, and the report is finalized as part of the electronic medical record.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Based on data per SEER and the American Cancer Society, the annual prevalence of disease such as liver cancer, early stage, near critical structures for which IRE may be a treatment option is n=13,322. At September 2024 CPT Editorial Panel meeting a request by the vendor, AngioDynamics, to delete percutaneous irreversible electroporation ablation Category III code 0600T and establish Category I code 47384 for reporting percutaneous multiprobe irreversible electroporation ablation was presented.

CPT code (47384) was approved. A request was made to the Research Subcommittee by the societies, SIR and ACR, to approve the surgical global period of 090 days approved at the recent CPT meeting be adjusted to 000 day global, this was approved.

CPT 47384 represents the Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous. The procedure for irreversible electroporation, liver is not considered new technology and site of service would be in the facility setting only.

Methodology

A multi-disciplinary survey conducted by ACR and SIR was distributed to randomly selected members of the representative societies. The results within the summary file and within this SOR reflect the outcomes of the total survey responses (36).

Work RVU Recommendation for 47384

We are recommending a value of 9.41 work RVUs, which represents the 25th percentile of the survey responses.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 4 (Facility, Difficult Patient/Difficult Procedure) with a pre-service evaluation of 40 minutes, pre-service positioning time of 3 minutes, and pre-service scrub, dress, wait time of 20 minutes. We also selected a post-service package 9B (General Anes or Complex Regional Blk/Cmplx Proc) with a time of 33 minutes.

The specialties recommend the following times

1. Evaluation: We recommend a pre-service evaluation time of 40 minutes, which is 10 minutes less than median survey time, but matches the package time. We believe as a difficult patient, typically the patient has cirrhosis, portal hypertension, is not a surgical candidate and may have thrombocytopenia and coagulopathies, 40 minutes is appropriate to complete this work.

2. Positioning: We recommend the median survey time of 15 minutes, which is 12 minutes more than the package time. We believe this is warranted due to set up of monitoring devices, lines, tubes, anesthesia equipment within a CT room and ensuring that all devices attached to the patient are able to clear and slide in and out of the CT gantry in order to maintain sterility and procedural success.

3. Scrub, dress, and wait: We recommend the median survey time of 15 minutes, which is 5 minutes less than the package time and supported by the survey data.

4. Post: We recommend a median survey time of 30 minutes, which is 3 minutes less than the post package time.

Comparison with Key Reference Services

We are recommending a value of 9.41 work RVUs, which represents the 25th percentile of the survey responses. This results in 47384 matching KRS 1 in IWPUT. As a difficult patient/difficult procedure, we believe this is appropriately supported.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST
47384	Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous	9.41	0.082	190	40	15	15	90	30
KRS 1 32994	Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation	9.03	0.082	168	33	10	5	90	30
KRS 2 20982	Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency	7.02	0.070	148	13	15	10	80	30

Comparison to MPC codes

The surveyed code compares well and is bracketed by 2 MPC codes, 36905 and 36906 with the recommended work RVUs of 9.41. We are recommending a value of 9.41 work RVUs, which represents the 25th percentile of the survey responses.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST
MPC 36905	Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty	9.00	0.1057	126	22	4	5	75	20
47384	Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous	9.41	0.082	190	40	15	15	90	30
MPC 36906	Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter	10.42	0.1039	141	22	4	5	90	20

	placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit								

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0600T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 400
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Current billing is Category III code 0600T, 2022 data supports a volume of 60, but there is no indication of diagnosis. Code 0600T is used to report IRE for multiple anatomical areas and the sales data from the vendor included in the CPT CCA does not differentiate between diagnoses for which the probes may have been purcahsed. Vendor data suggests this is widely performed in 30 states, with active services in 41 states. Additonal data post pandemic indicates sales data of 1,750, 1400 in last 2 years and 800 in last 3 years. Based on ultilzation data of 60 cases in 2022 and accounting for prostate IRE which is the other code represented by AUA in this tab, we believe our estimate is fair for code 47384.

Specialty Radiology Frequency 100 Percentage 25.00 %

Specialty Interventional Radiology Frequency 300 Percentage 75.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 300
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current billing is Category III code 0600T, 2022 data supports a volume of 60, but there is no indication of diagnosis. Code 0600T is used to report IRE for multiple anatomical areas and the sales data from the vendor included in the CPT CCA does not differentiate between diagnoses for which the probes may have been purcahsed. Vendor data suggests this is widely performed in 30 states, with active services in 41 states. Additonal data post pandemic indicates sales data of 1,750, 1400 in last 2 years and 800 in last 3 years. Based on ultilzation data of 60 cases in 2022 and accounting for prostate IRE which is the other code represented by AUA in this tab, we believe our estimate is fair for code 47384.

Specialty Radiology Frequency 75 Percentage 25.00 %

Specialty Interventional Radiology Frequency 225 Percentage 75.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

CPT Code:55877 Tracking Number R2 Original Specialty Recommended RVU: **15.00**
Presented Recommended RVU: **13.50**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **13.50**

CPT Descriptor: Ablation, irreversible electroporation, prostate, 1 or more tumors, including imaging guidance, percutaneous

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male presents with intermediate/gleason 7 or radiorecurrent disease with lesions confirmed by biopsy or imaging, that are near or adjacent to the urethra, the neurovascular bundle, external urinary sphincter or rectum.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 60% , In the ASC 39.39%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 80% , Overnight stay-less than 24 hours 20% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review results of preadmission testing including laboratory tests and imaging. Review and update H&P. Write orders for preoperative medications including antibiotics and prophylactic deep vein thrombosis (DVT) medication. Meet with anesthesiologist, radiology technician, and other qualified health care professionals to review planned procedure. Meet with patient and family to review procedure and postoperative management. Review and complete informed consent with patient. Verify all required equipment, instruments and supplies are available. Wait for the anesthesiologist to complete the induction of general anesthesia. Position the patient in dorsal lithotomy. Position the MRI fusion adapter over the patient. Prepare genitalia in standard fashion. Scrub and gown. Perform time-out with operating surgical team.

Description of Intra-Service Work: A foley catheter is inserted. An ultrasound probe is placed per rectum and complete transrectal ultrasound is performed in the sagittal and transverse planes to ensure that treatment would be technically feasible (eg, the anterior gland is accessible and there is no acoustic shadowing). Ultrasound sweep is performed to obtain images suitable for fusion with MRI fusion software. The target lesion is identified on ultrasound using MRI fusion. Under ultrasound gudiance, five irreversible electroporation (IRE) probes are placed to bracket intended ablation area. Probes are placed parallel to each other at least 1cm apart, with attention to urethra, the neurovascular bundle, urinary sphincter and rectum. Following proble placement, ultrasound imaging is again utilized to verify appropriate probe placement and verifying the safety of the urethra, sphincter, neurovascular bundles, and rectum. Electroporation is then initiated with energy cycling between the probe pairs until 90 pulses per probe pair are achieved. During the ablation, the physician monitors the resistance changes between probesand real time imaging of the ablation zone to confirm appropriate tissue destruction. Following completion of 90 pulses per probe pair the probes are removed. Surgical site dressings are placed.

Description of Post-Service Work: Remove surgical drapes and return the patient to the supine position. Wait for the anesthesiologist to awaken the patient. Transfer the patient from the OR table to a stretcher. Review the procedure and expected care with recovery room nursing staff. Discuss the procedure with the patient in the recovery room when awake. Conduct a postoperative pain assessment and ensure proper drainage of the catheter. Prepare postoperative orders and brief operative notes. Prior to discharge, examine the patient. Conduct postoperative pain assessment and irrigate the catheter by

hand to remove any accumulated blood clots. Review patient medical record notes, such as nursing, pharmacy, and discharge planning. Answer patient and family questions. Give a postoperative handout to both the patient and care provider that includes catheter care, precautions related to bowel movements, and side-effect management. Dictate an operative report and record the procedure in the patient record. Send a note to the referring physician regarding the outcome of the procedure.

During the initial post-operative office visit, examine the patient. Check vital signs and inspect the perineal incisions. Remove the urinary catheter. Review usage of pain medications, including discontinuance of any narcotic analgesic medications and focus discussion on utilization of non-narcotic analgesic medications as additional options for any persistent discomfort. Discuss expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises. Discuss penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, and write prescriptions for chosen medications, inclusive of phosphodiesterase 5 (PDE5) inhibitors. Answer questions from the patient and/or family. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

At the second post-operative office visit, review bladder control and continence. Review bladder control exercises and additional therapies. Review erectile function and determine if additional alterations should be made to the previously prescribed therapies; consider changing PDE5 inhibitor prescription medication and/or dosage. Discuss utility of obtaining PSA blood tests in monitoring the prostate cancer disease state. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
Irreversible electroporation is a novel technology utilizing pulsatile electrical current to ablate tissue. The technology has been used in the treatment of prostate cancer for patients who are candidates for focal therapy. The service was previously reported with the category III CPT code 0600T. A code change application was accepted to create a new category I CPT code for irreversible electroporation of the prostate, 55877. 55877 was surveyed as a 90 day global code, consistent with how this service is provided by urologists.

Recommendation:
We recommend a crosswalk to 15730 with an RVW of 13.50 below the survey 25th percentile recommendation of 18.00. We had a strong survey with 33 respondents. Median survey experience was 6, with a maximum procedure number of 100. The most common KRS selected was 55880.

Median intraservice time from the survey was 90 minutes, a total time of 254 minutes. The 90 day global period includes one half discharge day 99238, one level four office visit, and one level three office visit.

A RUC database search (RUC review yes, RUC review >/= to 2014, Global=90, Intaservice time =90, Total time between 230 and 260) is included below.

CPT	DESC	GLOBAL	WORK RVU	TIME SOURCE	PRE TIME	INTRA TIME	POST TIME	TOTAL TIME	IWPUT	RUC DATE	MPC	UTILIZATION
58571	TLH W/T/O 250 G OR LESS	090	15.00	RUC	56	90	95	241	0.1190	2014-04		22,155

57283	COLPOPEXY INTRAPERITONEAL	090	11.66	RUC	51	90	90	231	0.0836	2020-01		4,959
33270	INS/REP SUBQ DEFIBRILLATOR	090	9.10	RUC	39	90	103	232	0.0551	2014-04		865

55877 is a complex procedure to focally ablate a prostate tumor. The probes must be carefully positioned to avoid damage to surrounding structures including the bladder, rectum, urethra, external urethral sphincter, and neurovascular bundles. Throughout the ablation procedure the physician is carefully monitoring the electroporation process to ensure appropriate tissue destruction takes place. Given that the procedure is being done for cancer treatment, confirming adequate ablation is imperative throughout the treatment. Given our strong survey results with a recommended 25th percentile RVW of 18.00 we feel a crosswalk to 58571 with an RVW of 15.00, the same intraservice time and a total time 13 minutes less than the proposed code is well supported by both the fee schedule and our survey results.

Pre-time package 3 and Post-time package 9A are selected with times adjusted based on survey results. Pre-service evaluation time is increased based on survey results. During the pre-service time, the physician evaluates the previously obtained MRI to confirm the location of the tumor and suitability for treatment with irreversible electroporation. PSA values are reviewed. Previously obtained biopsy results are reviewed to confirm that no prostate cancer has been identified on prior biopsy outside of the area planned for focal therapy. Urine culture results are reviewed to confirm the appropriateness of proceeding with the procedure. Positioning time is increased to match survey results. The patient is positioned in dorsal lithotomy and following dorsal lithotomy positioning the MRI adapter must be appropriately position over the patient's perineum prior to prepping the patient. Scrub, dress, wait and post-service time are decreased based on survey results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0600T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on claims for 55880.

Specialty Urology Frequency 1000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on claims for 55880.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 55880

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 1/2025

CPT Code	Long Descriptor	Global Period
47384	Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
47384	A 58-year-old male presents with hepatic lesions confirmed by imaging as AJCC (American Joint Committee on Cancer) stage 2 that are near or adjacent to the main portal vein, hepatic artery, hepatic veins, common bile or cystic ducts, gall bladder, stomach or colon.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   ACR and SIR convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for the new code for liver irreversible electroporation (IRE).

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   The existing code 0600T is Category 3 and does not have any assigned value. The societies selected 000-day global code 33361, which has a similar clinical activity for the pre-service period and mirrors the same work as part of the other code in Tab 08, 55877 presented by AUA, which is also recommending the same pre-service clinical times.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   No
   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A
   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, new CPT codes

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

- Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from the referring physician and ensuring all appropriate preoperative imaging has been performed.
- Coordinate pre-surgery services (including test results) (20) - During this portion the RN/LPN/MTA is coordinating the multiple specialists who are involved in the procedure, arranging any additional testing necessary prior to the procedure and the necessary preoperative medical clearance and ensuring all of the necessary results and tests have been completed prior to the procedure.
- Schedule space and equipment in facility (8) – RN/LPN/MTA will ensure the surgical suite is available, including the specialized room and equipment and schedule the necessary time for the ablation procedure
- Provide pre-service education/obtain consent (20) – RN/LPN/MTA will review with the patient and their family education about the procedure, the necessary care and limitations post ablation procedure, and obtaining any consent not yet completed. This time is also used for any question the patient or family has.
- Complete pre-procedure phone calls and prescription (7) - RN/LPN/MTA coordinate with the patient regarding any information related to scheduling of procedure along with reminder of the prep for the procedure. Prescribe preoperative lab work if any is missing.

   b. Service period (includes pre, intra and post):

N/A

   c. Post-service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
   N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    No

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

CPT 47384 is one code assigned to this tab. The other for prostate, 55877, was surveyed and recommendations compiled by AUA. These 2 codes are part of Tab 08, but each was prepared independently and presented independently for the meeting.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
55877	Ablation, irreversible electroporation, prostate, 1 or more tumors, including imaging guidance, percutaneous	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55877	A 58-year-old male presents with intermediate/gleason 7 or radiorecurrent disease with lesions confirmed by biopsy or imaging, that are near or adjacent to the urethra, the neurovascular bundle, external urinary sphincter or rectum.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The expert panel considered current inputs for prostate cancer procedures and discussed the new code 55877 to determine appropriate PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   55880

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   No

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

   c. Post-service period:

The clinical staff work includes the standard activities involved in any E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instruction.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

SA048	pack, minimum multi-specialty visit	5.02	pack

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SA048	pack, minimum multi-specialty visit
	paper, exam table
	gloves, non-sterile
	gown, patient
	pillow case
	cover, thermometer probe

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EQ168	light, exam	1232.887	Office Visits
EF031	table, power	5906.76	Office Visits

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Cystourethroscopy – Tab 9

In September 2019, the CPT Editorial Panel created a new Category III code, 0619T, for reporting placement of a medication-coated balloon to deliver medication to the prostate following the completion of an anterior commissurotomy. In September 2024, a CPT code change application (CCA) was submitted to the CPT Editorial Panel to delete Category III code 0619T and create a new Category I code, CPT code 52443, to describe this procedure. CPT code 52443 was surveyed for the January 2025 RUC Meeting.

52443 ***Cystourethroscopy with initial transurethral anterior prostate commissurotomy with a nondrug-coated balloon catheter followed by therapeutic drug delivery into the prostate by a drug-coated balloon catheter, including transrectal ultrasound and fluoroscopy, when performed***

The RUC reviewed survey results from 47 urologists and recommends the survey 25th percentile work RVU of 3.62, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 30 minutes pre-service evaluation time, 8 minutes pre-service positioning time, 9 minutes scrub/dress/wait time, 30 minutes intra-service time and 15 minutes immediate post-service time, which equals 92 minutes of total time. The specialty society selected pre-service package time *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *8A IV Sedation/Simple Procedure*, which were modified to reflect pre-service and post-service time more accurately.

This cystourethroscopy code describes an endoscopic procedure for the management of benign prostatic enlargement that entails using both a non-medication-coated and a medication-coated balloon to open the prostatic urethra. The physician begins by performing a transrectal ultrasound to evaluate and measure the prostate and determine the appropriately sized drug-coated balloon for prostatic treatment. Following measurements, the cystoscope is introduced, and the initial non-medication coated balloon is introduced and appropriately placed under both direct cystoscopic and fluoroscopic visualization to confirm proper placement. . The initial balloon is then inflated to create an anterior commissurotomy to split the anterior prostate, separate the lateral lobes, and allow for drug delivery with the secondary balloon in this area that is split apart. The initial dilation balloon is removed, and the drug-coated double-lobed balloon of appropriate length is then placed again under both cystoscopic and fluoroscopic guidance. The initial dilation typically leads to significant bleeding, making appropriate placement of the medication-coated balloon challenging.

Avoiding damage to the external urethral sphincter and trigone of the bladder is important. Improper placement can cause urinary incontinence and urethral damage, necessitating prolonged catheter drainage leading to significant procedural intensity. The medication-coated balloon is left in place within the prostatic channel for one minute to allow hydration of the drug coating and is then inflated for at least five minutes to allow the drug to penetrate the interstitium of the prostate. After the drug delivery is complete, the cystoscope and catheter are withdrawn, and a catheter is placed into the bladder as the catheter balloon is filled. Overall, this procedure is relatively more intense than many other balloon dilation procedures.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To support the recommended work RVU of 3.62, the RUC compared the surveyed code to top key reference code 52334 *Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde* (work RVU = 3.37, 30 minutes intra-service time, 75 minutes total time) and second key reference code 37248 *Transluminal balloon angioplasty (except dialysis circuit), open or percutaneous, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty within the same vein; initial vein* (work RVU = 6.00, 60 minutes intra-service time, 119 minutes total time). The RUC recognizes that the two key reference services bracket the survey 25th percentile work RVU and total time. The surveyed code has identical intra-service time compared to code 52334 and the physician work required has nearly identical intensity and complexity when compared to both key reference services.

For additional support, the RUC referenced CPT code 58558 *Hysteroscopy, surgical; with sampling (biopsy) of endometrium and/or polypectomy, with or without D & C* (work RVU = 4.17, 60 minutes intra-service time, 106 minutes total time), based on identical intra-service time. Moreover, CPT code 58558 has greater total time and slightly higher intensity than CPT code 52443, thus making it appropriate that it also has a higher work RVU. The RUC also referenced CPT code 52214 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands* (work RVU = 3.50, 30 minutes intra-service time, 79 minutes total time), which requires identical intra-service time and slightly less total time, which is appropriate considering the surveyed code has a slightly higher work RVU. **The RUC recommends a work RVU of 3.62 for CPT code 52443.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for CPT code 52443 and made a single modification to remove EL018 *room, mobile c-ARM* and include only ER031 *fluoroscopic system, mobile C-Arm*, not both equipment items. The portable c-ARM fluoroscopy system utilizes low-dose radiation and requires the operator to be shielded but not a shielded room, while the shielded room has a high-energy C-Arm fluoroscopy system that requires the entire room to be shielded. The specialty society agreed that a urology practice would be using the low-dose portable C-Arm fluoroscopy system, not the C-Arm fluoroscopy room, and agreed that EL018 should be removed. The PE Subcommittee also acknowledged that the pre-service clinical staff time for 000- and 10-day global codes is presumed to be zero and agreed with the specialty's use of the pre-service time package for "Use of Clinical Staff for Endoscopy".

The PE Subcommittee acknowledged the new high-cost supply input, *Optilume BPH Prostatic Dilation Kit*, as recommended for CPT code 52443. The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology
CPT code 52443 will be placed on the New Technology list to be reviewed by the RUC in three years.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:52443 Tracking Number S1 Original Specialty Recommended RVU: **4.50**
Presented Recommended RVU: **4.50**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **3.62**

CPT Descriptor: Cystourethroscopy with initial transurethral anterior prostate commissurotomy with a non-drug-coated balloon catheter followed by therapeutic drug delivery into the prostate by a drug-coated balloon catheter, including transrectal ultrasound and fluoroscopy, when performed.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male presents with a three-year history of increasing lower urinary tract symptoms with an International Prostate Symptom Score of 28. He is refractory to maximum medication therapy with a 40-gram prostate, lateral lobe hyperplasia and no median lobe obstruction. The patient elects to undergo a minimally invasive mechanical dilation with therapeutic drug delivery into the prostate.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 48% , In the ASC 44%, In the office 6%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 73% , Overnight stay-less than 24 hours 26.09% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Review laboratory and imaging studies. Confirm the availability of ultrasound equipment and cystoscopy equipment. Verify appropriate prophylactic antibiotics were ordered. Confirm the patient is not taking anticoagulants and nonsteroidal anti-inflammatory medications. Discuss the planned procedure and postoperative management with the patient. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Anesthesia is induced. Provide assistance in placing the patient in dorsal-lithotomy position. Place padding at elbows, knees, and ankles. Prep and drape the penis and perineal area. Scrub and gown. Perform a surgical time-out.

Description of Intra-Service Work: An ultrasound proble is placed per rectum. A transrectal ultrasound is performed to measure prostatic length, height and volume and the corresponding sized balloon diameter and length is selected. A non-drug-coated pre-dilation catheter is passed transurethrally and tracked with fluoroscopy until it is positioned in the prostatic urethra. A cystoscope is then passed next to the catheter and the balloon is adjusted so that it is seen proximal to the external sphincter. The prostatic urethra is then dilated using an inflation device to approximately one atmosphere pressure per 30 seconds while maintaining traction to seal the balloon at the bladder neck. Inflation is continued until the anterior commissure is separated. After pre-dilation, the non-drug-coated balloon is removed and cystoscopy is performed to confirm adequate anterior commissurotomy. Once verified, the appropriate sized drug eluting balloon catheter is passed into the prostatic channel. The balloon in left in place for one minute to allow hydration of the drug coating. The drug-coated balloon catheter is then inflated for at least five minutes to allow the drug to penetrate into the interstitium of the prostate. After drug delivery is complete, the cystoscope and catheter are withdrawn. A catheter is placed into the bladder and the catheter balloon is filled.

Description of Post-Service Work: Assist the patient in transfer from the procedural table. Review recovery area care and medication with clinical staff. Check postprocedure vital signs and manage any immediate complications. Write a brief operative note. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned

postoperative care are discussed with the patient and family. Assess postoperative pain. Write post-operative orders including discharge instructions and discharge medications. Dictate a full operative note and send a letter to the refering phsyician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52443 describes a procedure in which a medication coated balloon is used to deliver medication to the prostate following completion of an anterior commissurotomy. This procedure was previously reported with the Category III code 0619T. A code change application was submitted through the CPT process to transition the service to a category I code.

Recommendation:
We recommend an RVW of 4.50, at the 25th percentile of the survey respondents with procedural experience. We received 47 survey responses with 23 responses coming from providers with procedural experience. The overall median performance rate was 0 but the median rate was 4 among providers with procedural experience. The 25th percentile RVW and pre-service evaluation time were both significantly higher among survey respondents with experience. This procedure requires initial transrectal ultrasound to appropriately determine prostatic urethral length. An appropriately

sized balloon must then be selected and deployed, first to create an anterior commissurotomy and ultimately to deliver paclitaxel to the prostate. This is more intense than other balloon dilation procedures which do not typically involved bilobed balloons in the prostate.

Pre-service package 3 and post-service package 8A are selected. Positioning time is increased from the package to account for positioning in dorsal lithotomy. Other times are adjusted based on survey medians.

Results of a RUC database search are included below. The parameters were RUC review yes, RUC review >/= to 2014, global 000, Intraservice time = 30 minutes, total time between 75 and 110 minutes.

52443 would be within the top quartile of these 19 codes with the recommended 25th percentile value of 4.50. The anterior commissurotomy can lead to significant bleeding making placement of the drug coated balloon very challenging even with cystoscopic and fluoroscopic assistance. The balloon must be carefully placed to avoid damage to the external urethral sphincter and trigone of the bladder. Improper placement can cause urinary incontinence and ureteral damage increasing the procedural intensity of 52443. We recommend an RVW of 4.50, at the 25th percentile of the survey respondents with procedural experience.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0619T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1500

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. based on current utilization

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 750
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. based on current utilization

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 52284

FACILITY DIRECT PE INPUTS **CPT CODE(S): 52443**
SPECIALTY SOCIETY(IES): American Urological Association
PRESENTER(S): Dr. Seth Cohen, Dr. Jonathan Kiechle

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
52443	Cystourethroscopy with initial transurethral anterior prostate commissurotomy with a non-drug-coated balloon catheter followed by therapeutic drug delivery into the prostate by a drug-coated balloon catheter, including transrectal ultrasound and fluoroscopy, when performed	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
52443	A 75-year-old male presents with a three-year history of increasing lower urinary tract symptoms with an International Prostate Symptom Score of 28. He is refractory to maximum medication therapy with a 40-gram prostate, lateral lobe hyperplasia and no median lobe obstruction. The patient elects to undergo a minimally invasive mechanical dilation with therapeutic drug delivery into the prostate.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AUA's RUC Expert Panel discussed the new code 52443 to determine appropriate inputs for PE.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   52441
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   No
   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   No
   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Clinical staff complete pre-service forms and coordinate pre-surgery services, schedule space in the facility to perform the procedure, provide pre-procedural education, and complete pre-procedure phone calls and prescriptions.

   b. Service period (includes pre, intra and post):

N/A

   c. Post-service period:

Clinical staff call the patient to assess the patient post-operatively and answer patient questions.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?
    N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:
    N/A

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?
    N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:
    N/A

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:
    N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S): 52443**
SPECIALTY SOCIETY(IES): American Urological Association
PRESENTER(S): Dr. Seth Cohen, Dr. Jonathan Kiechle

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
52443X	Cystourethroscopy with initial transurethral anterior prostate commissurotomy with a non-drug-coated balloon catheter followed by therapeutic drug delivery into the prostate by a drug-coated balloon catheter, including transrectal ultrasound and fluoroscopy, when performed	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
52443	A 75-year-old male presents with a three-year history of increasing lower urinary tract symptoms with an International Prostate Symptom Score of 28. He is refractory to maximum medication therapy with a 40-gram prostate, lateral lobe hyperplasia and no median lobe obstruction. The patient elects to undergo a minimally invasive mechanical dilation with therapeutic drug delivery into the prostate.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AUA's RUC Expert Panel discussed the new code 52443 to determine appropriate inputs for PE.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   52441
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Urology, 6%
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

Yes

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

5 minutes. This procedure is complex with risks of post-operative bleeding and sepsis. A complete set of vital signs including heart rate, temperature, respiratory rate, blood pressure, and oxygen saturation is necessary prior to beginning the procedure.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Staff complete pre-service diagnostic and referral forms, coordinate pre-surgery services, ensure availability of equipment and space. Clinical staff also provide pre-service education on procedure, obtain consent and complete pre-procedure phone calls and prescriptions.

    b. Service period (includes pre, intra and post):

Staff provide gown for patient, ensure appropriate medical records are available, obtain vital signs and provide education on procedure and obtain consent. Staff prepare room with equipment and appropriate supplies, setup scope, position and sedate patient. Staff assist physician or QHP.

c. Post-service period:

Clinical staff monitor patient while cleaning room and equipment, including scope. Staff also reviews examination with MD/DO, scans documents into PACS. Technologist reviews images in PACS. Staff reviews home care instructions and coordinates future visits and prescriptions.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

The staff assists the performing provider throughout the procedure. Equipment is handed to the provider maintaining appropriate sterility throughout. The dilating balloons and balloon inflation device are prepared. The staff also acts as a chaperone throughout the intra-service period and must be present for the entirety of the procedure.

The radiology technologist assists the provider with the utilization of radiologic imaging equipment throughout the procedure. Ultrasound imaging is required to determine appropriate prostatic urethral length at the beginning of the intraservice period. During balloon inflation with both the dilating balloon and the drug coated balloon fluoroscopy is used to ensure appropriate placement of the balloon.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Removed EL018 *room, mobile c-ARM* from the PE spreadsheet and included only ER031 fluoroscopic system, mobile C-Arm, not both equipment items.

The portable C-arm fluoro is low dose radiation and requires the operator to be shielded but not a shielded room, while the shielded room has a high energy C-arm fluoro that requires the entire room be shielded. The advisors agreed that a urology practice would be using the low dose portable C-arm fluoro and not the C-arm fluoro room.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Percutaneous Interlaminar Lumbar Decompression – Tab 10

At the September 2024 CPT Editorial Panel meeting two new Category I codes, 62330 and 62331, were created to report percutaneous interlaminar lumbar decompression with partial removal of the ligamentum flavum. These two new codes replace the existing Category III code, 0275T, to report this service. The code family was surveyed for the January 2025 RUC meeting.

62287 ***Decompression percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle-based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar***
The specialty societies noted that the utilization of CPT code 62287 has always been low and continues to decline, with only 100 claims in the 2023 Medicare data. Given the low volume of 62287, the code could not be surveyed and properly valued within the code family. **Therefore, the specialty societies will submit a CPT code change application (CCA) requesting the deletion of CPT code 62287 for the CPT 2026 cycle.**

62330 ***Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (ie, CT or fluoroscopy), bilateral; one interspace, lumbar***
The RUC reviewed the survey results from 106 anesthesiologists and pain medicine specialists and recommends a work RVU of 8.00 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 40 minutes of pre-service evaluation time, 10 minutes positioning time, 10 minutes scrub/dress/wait time, 45 minutes intra-service time, 15 minutes immediate post-service time, 0.5-99238, 3-99213, and 208 minutes total time. The RUC concurred that the 0.5-day discharge is appropriate given that this service is primarily performed in the facility setting.

It is important to note that for the initial interspace, all imaging guidance is included, and the procedure is performed on one side and then the contralateral side; this code describes a bilateral procedure.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 22869 *Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level* (work RVU = 7.03, 45 minutes intra-service, 175 minutes total time) and 22867 *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level* (work RVU = 15.00, 90 minutes intra-service, 271 minutes total time). The surveyed code is performed directly within the vertebral canal, however, in comparison the interspinous spacer procedure (code 22869) is not. The work of code 22869 is performed between the spinous processes of vertebrae rather than in proximity to the spinal cord like the surveyed code. The proximity to the spinal cord and vertebral canal increases the intensity and complexity of the surveyed code given that there are additional risks. This is due to the ligamentum flavum's intimate position relative to the spinal cord, nerve roots, and subarachnoid space. The space between spinous processes, as

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

described by code 22869, is generally more removed from sensitive neurological tissues. Reference code 22867 describes the insert of an interspinous spacer between the spinous processes of vertebrae in the spine, however, different from code 22869 the procedure includes an open decompression. A procedure with an open decompression typically takes more time compared to a procedure without. The surveyed code does not include open decompression and has the same intra-service time as reference code 22869, albeit a higher total time supported the RUC recommended work RVU.

For additional support, the RUC reference MPC code 21556 *Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm* (work RVU = 7.66, 60 minutes intra-service, and 234 minutes total time) and 15823 *Blepharoplasty, upper eyelid; with excessive skin weighting down lid* (work RVU = 6.81, 45 minutes intra-service, and 161 minutes total time). The surveyed code work RVU is appropriately bracketed by the MPC codes. **The RUC recommends a work RVU of 8.00 for CPT code 62330.**

62331 ***Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (ie, CT or fluoroscopy), bilateral; additional interspace(s), lumbar (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 105 anesthesiologists and pain medicine specialists and recommends a work RVU of 4.25 based on a direct crosswalk to CPT code 60661 *Ablation of 1 or more thyroid nodule(s), additional lobe, percutaneous, including imaging guidance, radiofrequency (List separately in addition to code for primary procedure)* (work RVU = 4.25, 45 minutes intra-service and total time), which maintains relativity within the family for this code. The RUC recommends 43 minutes of intra-service and total time for this add-on code.

It is important to note that for the add-on service, the initial interspace is complete, and then a new incision is made for an additional interspace. For the additional interspace, all imaging guidance is done again, and the procedure is performed on one side and then the contralateral side; this code describes a bilateral procedure. It is typical for only one additional interspace to be performed.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 22634 *Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar; each additional interspace (List separately in addition to code for primary procedure)* (work RVU = 7.96, 65 minutes intra-service and total time) and 22552 *Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure)* (work RVU = 6.50, 45 minutes intra-service and total time). Reference code 22634 describes the work to treat each additional interspace during spinal fusion surgery using a posterolateral technique with a posterior interbody technique. Code 22634 is a procedure that involves the vertebral canal similar to the surveyed code. Survey respondents who selected 22643 as their key reference indicated that the surveyed code was identical (42%) or more intense/complex (26%) overall when compared to reference code 22643. Survey respondents who selected 22552 as their key reference indicated that the surveyed code was identical (42%) or more intense/complex (19%) when compared to the second reference code 22552. The surveyed code recommended work RVU is appropriately relative to the key reference services.

For additional support, the RUC reference MPC code 34812 *Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 4.13, 40 minutes intra-service and total time) and

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

22632 *Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace, lumbar; each additional interspace (List separately in addition to code for primary procedure)* (work RVU = 5.22, 60 minutes intra-service and total time). The surveyed code work RVU is appropriately bracketed by the MPC codes. **The RUC recommends a work RVU of 4.25 for CPT code 62331.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology
CPT codes 62330 and 62331 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years.

October 2, 2024

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
American Medical Association
330 N. Wabash Avenue, Suite 39300
Chicago, IL 60611

Subject: Percutaneous Interlaminar Lumbar Decompression

Dear Dr. Silva:

The American Society of Anesthesiologists (ASA) and American Society of Regional Anesthesia and Pain Medicine (ASRA) are preparing survey recommendations for Percutaneous Interlaminar Lumbar Decompression, including CPT codes 62XX0, 62XX1 and 62287, for consideration at the January 2025 RUC meeting. When preparing for the survey, the societies realized that utilization for CPT code 62287 was very low. The current RUC database shows low and steadily decreasing usage of CPT code 62287 over the last ten years from a high of 487 services in 2012 to only 103 services in 2022 – a nearly 80 percent decrease. An analysis of the Medicare Physician & Other Practitioners by Geography and Service analytic files shows only a limited number of unique providers reporting this service annually over the last five years from a high of 92 in 2018 to a low of 76 in 2022. Utilization and rendering provider data for CPT code 62287 is summarized below in Table/Graph 1 and Table/Graph 2, respectively.

Given the low and declining utilization of CPT code 62287 and the limited number of providers reporting this service, the societies do not believe it will be possible to obtain an adequate survey and properly value CPT code 62287 within the code family for the January 2025 RUC meeting. In addition, the societies will be submitting a code change application requesting the deletion of CPT code 62287 for consideration at the February 2025 CPT meeting. Therefore, the societies recommend that CPT code 62287 not be surveyed for the January 2025 RUC meeting and that it be sent to CPT for deletion in CY 2027.

Should you have any questions, please contact Helen Olkaba at h.olkaba@asahq.org. Thank you for your consideration of this matter.

Sincerely,

Richard W. Rosenquist, M.D., FASRA
ASA RUC Advisor

Trent Emerick, MD, MBA
ASRA RUC Advisor

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva,

The American Academy of Pain Medicine (AAPM) appreciates the opportunity to comment on the relative value recommendations for Tab 10: Percutaneous Interlaminar Lumbar Decompression (62287, 62XX0, 62XX1).

This is a service performed by a subset of our members and the recommendations have been reviewed by our Coding and Reimbursement Committee. Our committee concludes that the survey data is robust in the number of responses and the types of respondents. The survey was sent to a targeted vendor list and a random sample of members of the five specialty societies involved with the survey. The survey results at the 25th percentile are consistent between the two groups and when the results are combined. Further, the key reference services used in the survey are familiar to physicians performing the procedure and are reasonable comparisons that support an appropriate rank order.

In conclusion, AAPM supports the specialty societies' recommendations for the 25th percentile survey data for 62XX0 and 62XX1.

Sincerely,

Gregory Polston

Gregory Polston, MD

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:62330 Tracking Number T2 Original Specialty Recommended RVU: **8.00**
Presented Recommended RVU: **8.00**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **8.00**

CPT Descriptor: Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (ie, CT or fluoroscopy), bilateral; one interspace, lumbar

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male is diagnosed with symptomatic lumbar spinal stenosis with neurogenic claudication unresponsive to conservative therapy. Imaging demonstrates thickened ligamentum flavum with resultant stenosis of the spinal canal at L3-L4. The patient does not require immediate open decompression. The patient undergoes a percutaneous thinning of the ligamentum flavum.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 27% , In the ASC 67%, In the office 6%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 97% , Overnight stay-less than 24 hours 3% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Perform a targeted history and physical examination. Review the patient's medical record. Pay particular attention to any evidence of infection, anticoagulation and bleeding disorders as these increase the risk of severe complications from the procedure. Meet with patient and family and/or caregiver to review planned procedure and postoperative management. Review and obtain informed consent from patient. Verify that all required instruments and supplies are available in the operating suite. Review imaging and select and display appropriate images. Review the type and duration of anesthesia with the anesthesiologist. Assist with turning the patient to the prone position and placing a ventral bolster under the lower abdomen to flex the spine forward to adequately decrease the lumbar lordosis. Adjust the patient's position, including repositioning the upper extremities as needed to allow unimpeded use of fluoroscopy. Scrub and gown, including lead apron. Prepare and drape the patient in sterile fashion. Perform a surgical time-out to confirm the patient and the procedure with the OR staff. Identify the correct level with fluoroscopic guidance.

Description of Intra-Service Work: An access point to the interlaminar epidural space of the appropriate level (eg, L3-L4) is identified as close as possible to the midline and marked. The overlying skin and subcutaneous tissues are anesthetized with a local anesthetic. An 18G Touhy needle is directed under fluoroscopic guidance into the epidural space, contrast dye is injected to confirm epidural spread, and baseline epidurogram images are taken. An 1 cm incision is made at the medial pedicular line approximately 1.5 vertebral levels below the target treatment level. The trocar and portal are inserted and advanced under fluoroscopic guidance to the interlaminar space. Local anesthesia is injected to anesthetize the track and treatment area. The trocar is advanced to the interlaminar space under fluoroscopic guidance, and a portal stabilizer device is locked into the device. The trocar is removed, and the depth guide is attached to the portal. A small bone rongeur is used to remove small bony fragments of the superior and inferior laminae under fluoroscopic guidance to allow further advancement of the working portal. A tissue sculptor is used to remove small sections of ligamentum flavum under fluoroscopic guidance with insertion and removal of the tissue sculptor as each section is removed. In a typical case, the instruments are used to resect between 20 and 50 fragments of bone and ligamentous tissue per single hemilaminar segment, with each tissue fragment measuring between 0.5 and 3.0 mm in greatest. Under fluoroscopic guidance repeat refreshing of the epidural contrast is performed and epidurogram views are obtained to confirm decompression of the

spinal canal. The portal is removed from the first side. The exact same procedure is then repeated on the contralateral side. After completing the contralateral side, images are taken and compared to baseline images. The portal and epidural needle are removed, hemostasis is achieved, and the skin incision(s) are closed.

Description of Post-Service Work: Facility: Sterile dressings are applied. The patient is monitored during resolution of anesthesia. The patient is assisted in transfer from the operating table to the gurney. Transport of the patient from the OR to the recovery room is monitored. Postoperative recovery care is discussed with the anesthesia and nursing staff. A brief operative note is written, and a postoperative note is written while in the recovery room. The patient's stabilization is monitored in the recovery room. An operative report is dictated, and a copy is sent to the referring physician(s) if needed. The procedure and outcome are discussed with the family and/or caregiver in the waiting area. Physical therapy for the use of crutches or walker is ordered. Questions from the patient and family and/or caregiver are answered. Orders for follow-up and post-discharge laboratory tests, X rays, prescriptions for medications and physical therapy, as needed post-discharge, are written. Home restrictions (ie, diet, activity, bathing) are discussed with the patient and family and/or caregiver, and discharge nurse. Completed forms for handicap parking are provided. The patient is discharged after they have recovered from anesthesia and when there is return of adequate nutrition intake, adequate pain control with oral analgesics, and independent ambulation. All appropriate medical records, including day-of-discharge progress notes, discharge summary, discharge instructions, and insurance forms, are completed. All hospital visits and post-discharge office visits for care throughout the global period are considered part of the post-operative work for this procedure.

Office visits: The patient is examined, and discussion takes place. Questions from the patient and family and/or caregiver are answered. The wound is assessed. Sutures/staples are removed if placed. An exam is performed to confirm normal strength, reflexes and sensation. Activity and/or restrictions are reviewed. Questions from the patient and family and/or caregiver are answered. Physical therapy is ordered, rehabilitation is supervised, and physical therapy is monitored. Progress is discussed (verbal and written) with the primary care physician. A prescription for pain management is written. Progress notes are entered into the medical record. All post-discharge office visits for care throughout the global period are considered part of the post-operative work for this procedure.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2025
Presenter(s):	Richard Rosenquist, MD Gordon H. Morewood, MD Trent Emerick, MD, MBA Esther Yoon, MD Graham Wagner, MD
Specialty Society(ies):	American Society of Anesthesiologists (ASA), American Society of Regional Anesthesia and Pain Medicine (ASRA-PM); American Academy of Physical Medicine and Rehabilitation (AAPM&R); International Pain and Spine Intervention Society (IPSIS); North American Neuromodulation Society (NANS)
CPT Code:	62330
Sample Size: 7895	**Resp N:** 106
Description of Sample:	ASA: Random sample of 1,943 members. ASRA-PM: Random sample of 1,182 members. AAPM&R: Random sample of 1,367 members who are part of the society's interventional pain member community. IPSIS: Random sample of 750 members. NANS: Random sample of 933 members. Vendor list: A targeted vendor list of 1,720 physicians who have furnished the procedure at least once since January 1, 2023.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	9%	44%	38%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	62%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	49%	42%
Physical effort required	11%	51%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	42%	40%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	44%	48%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	56%	32%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	40%	52%
Physical effort required	12%	36%	52%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	52%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Survey: Five societies (ASA, ASRA-PM, AAPM&R, IPSIS, NANS) surveyed both codes 62330 and 62331 using a single survey instrument. Each society sent the survey instrument to a random sample of their membership. The survey was also sent to a targeted vendor list ("vendor list"), which was approved by the Research Subcommittee. The societies obtained the vendor list from the sole vendor of the FDA-cleared devices that are used for the percutaneous interlaminar lumbar decompression (PILD) procedure. The vendor list included active contact information for 1,720 physician who have performed at least one PILD procedure since January 1, 2023.

For this January 2025 RUC meeting, only work was surveyed. An expert panel of RUC advisors from each of the five surveying societies was convened to review the survey data and inform the work recommendations. The expert panel also developed the practice expense (PE) recommendations.

Recommendations: For code 62330, the societies recommend the survey 25th percentile RVW of 8.00, and the survey median times of 60 minutes total pre-service, 45 minutes intra-service, and 15 minutes immediate post-service for a total time of 208 minutes. The societies offer the following rationale for these recommendations.

Pre-time: Package 4 (difficult patient / difficult procedure), with the following modifications:

- *Positioning:* Add 7 minutes to the standard package time of 3 minutes, consistent with the survey median. The additional 7 minutes is spent (1) turning the patient to the prone position, (2) placing a ventral bolster under the lower abdomen to flex the spine forward to adequately decrease the lumbar lordosis, and (3) further adjusting the patient's position, including repositioning the upper extremities, as needed, to allow unimpeded use of fluoroscopy.
- *Scrub, dress, wait (SDW):* Subtract 10 minutes from the standard package time of 20 minutes, consistent with the survey median.
- *Total pre-service time:* Subtract 3 minutes from the standard package time of 63 minutes to reflect the adjusted positioning (+7 minutes) and SDW (-10 minutes) times, and consistent with the survey median.

	Package 4 Standard Time	62330 Survey Median Time	62330 Recommended Time
EVAL	40	40	40
POSIT	3	10	10
SDW	20	10	10
TOTAL	63	60	60

Immediate post-time: Package 8b (IV sedation / complex procedure) adjusted to subtract 13 minutes from the standard package time of 28 minutes, for a total of 15 minutes, consistent with the survey median.

Post-op visits – DISCHARGE: One half-day (0.5) discharge day management visit code 99238. The survey median number of discharge day management visits is zero. However, the societies recommend one half-day (0.5) discharge day management visit code 99238, which is typical for this service and consistent with other similar 90-day global services, including both key reference service (KRS) codes. Most (97%) survey respondents said the typical patient for this procedure is discharged on the same day as the procedure. A discharge day management visit is appropriate and

necessary to perform a final evaluation, discuss the procedure, provide instructions for post-operative care, and prepare discharge paperwork. Most (86%) 90-day global services include at least one discharge day management visit (either code 99238 or code 99239). The top KRS codes for code 62330 (codes 22869 and 22867) each include the same half-day (0.5) discharge day management visit code 99238 that the societies recommend for code 62330.

Post-op visits – OFFICE: Survey median of three (3) level two office/outpatient E/M visits for an established patient (code 99213).

RVW: Survey 25th percentile RVW of 8.00.

IST: Survey median IST of 45 minutes.

The 25th percentile RVW and median IST are well supported by the strong survey data, which reflect a robust response rate (n=106) that exceeds the 30-response minimum for codes with annual Medicare utilization less than 100,000. The 25th percentile RVW and median IST values were the same when respondents were stratified by vendor list (n=30), society affiliation (n=76), and respondents with experience (n=94).

IWPUT: 0.065 based on the recommended survey 25th percentile RVW of 8.00 and survey median pre-, intra-, and post-service times. An IWPUT of 0.065 is conservative relative to top KRS codes 22869 and 22867, which have IWPUTs of 0.077 and 0.106, respectively.

Reference service list (RSL): Anesthesiology and pain medicine specialists furnish a relatively small number of 90-day global services. Because our members do not report many 90-day global services, we were limited when selecting RSL codes that would be both (1) appropriate and consistent with RUC guidelines / requirements, and (2) familiar enough to survey respondents for the purposes of rating code 62330. The final RSL for code 62330 included 22 90-day global services. Three of these services (codes 22867, 22869, 63655) describe spine procedures that anesthesiology and pain medicine specialist commonly furnish; the other 19 RSL codes are rarely, if ever, reported by anesthesiology and pain medicine specialists. RVWs for the 22 RSL codes were well-distributed and ranged from 6.68 to 15.00. The RSL included six (6) MPC codes, and most codes were RUC reviewed in the last 10 (n=12) or 15 (n=9) years; one code (code 53445, an MPC code) was RUC reviewed in 2008.

Key Reference Service (KRS) Comparison: Nearly all survey respondents (87%) chose the three spine procedures that anesthesiology and pain medicine specialists commonly furnish as the KRS codes for rating code 62330, including when respondents were stratified by vendor list (83%), society affiliation (88%), and with (88%) and without (75%) experience. Code 22869 was the 1st KRS code for all survey respondents (42%), and when respondents were stratified by vendor list (40%), society affiliation (43%), and respondents with (44%) and without (33%) experience. Code 22867 was the 2nd KRS code for all survey respondents (24%), and when respondents were stratified by vendor list (33%), and respondents with experience (24%). Code 63655 was the 2nd KRS code when respondents were stratified by society affiliation (25%) and those without experience (25%). Although the RVW range for the selected KRS codes is somewhat wide (7.03; 10.92; 15.00), it appropriately bounds the recommended survey 25th percentile RVW of 8.00 and is consistent with how respondents rated code 62330 relative to the KRS codes for each intensity / complexity sub-measure.

TOP KEY REFERENCE SERVICE SELECTION – 62330

CODE	RVW	ALL	VENDOR LIST	SOCIETY AFFILIATION	WITH EXPERIENCE	WITHOUT EXPERIENCE
22869	7.03	42%	40%	43%	44%	33%
22867	15.00	24%	33%	20%	24%	17%
63655	10.92	21%	10%	25%	20%	25%
TOTAL		*87%*	*83%*	*88%*	*88%*	*75%*

1st KRS: Code 22869 was most recently reviewed at the April 2021 RUC meeting. The RUC reviewed the survey results from 75 physicians and determined that a value between the survey 25th percentile of 6.75 and survey median of 8.00 would most accurately reflect the typical physician work necessary to perform this service. The RUC recommended a RVW of 7.03 and times of 55 / 45 / 17 / 175 for code 22869. The survey 25th percentile RVW of 8.00 for code 62330 is appropriate relative to code 22869 and well-supported by the survey data.

The PILD procedure (code 62330) is performed directly within the vertebral canal; the interspinous spacer procedure (code 22869) is not – the work is performed between the spinous processes of vertebrae rather than in proximity to the spinal cord for code 62330. This is a key distinction for the purposes of assessing the relative intensity / complexity because procedures within the vertebral canal, like code 62330, can carry additional risks compared to procedures performed between spinous processes, like code 22869. This is due to the ligamentum flavum's intimate position relative to the spinal cord, nerve roots, and subarachnoid space. The space between spinous processes is generally more removed from sensitive neurological tissues.

The increased intensity / complexity of a procedure within the vertebral canal (code 62330) relative to a procedure where the work is performed between the vertebrae (code 22869) is well supported by the survey data. While the median IST for the two procedures is the same (45 minutes), survey respondents rated code 62330 as identical or more intense for each intensity / complexity sub-measure, including:

- overall intensity and complexity (44% identical; 47% more)
- mental effort and judgement (62% identical; 27% more)
- technical skill (49% identical; 42% more)
- physical effort (51% identical; 38% more)
- psychological stress (42% identical; 40% more)

The increased intensity / complexity of code 62330 relative to other spine procedures, like code 22869 can also be explained by differences in patient population. Patients who undergo the PILD procedure (code 62330) tend to be older and more medically complex compared to patients who undergo other lumbar decompression procedures, like interspinous spacers (code 22869) or laminectomy. This is supported by the literature. In a prospective longitudinal study comparing outcomes between Medicare beneficiaries who underwent the PILD procedure (n=2,229) and a control group of patients receiving interspinous spacers (code 22869; n = 3,401) for the treatment of LSS with neurogenic claudication, patients in the PILD group were significantly older than patients in the interspinous spacer cohort. (Staats, 2024) Symptomatic LSS patients frequently suffer from multiple medical comorbidities that make them unattractive candidates for more invasive decompression procedures that carry a higher risk of significant procedural morbidity, including due to the need for general anesthesia and longer hospital stays. In one retrospective observational cohort study of 50 patients (mean age = 73 years) who underwent the PILD procedure, most were overweight (36%) or obese (40%) with medical comorbidities that included, among others, hypertension (78%), diabetes type 1 and 2 (34%), depression (20%), coronary artery disease (30%), hypercholesterolemia (54%), rheumatoid arthritis (12%), peripheral vascular disease (8%); 68% were documented as class 3 according to the physical status classification system of the American Society of Anesthesiologists (ASA); 24% and 8% were graded ASA class 2 and 4, respectively. (Durkin, 2013) The survey data support the increased intensity and complexity of the PILD procedure (code 62330), which requires the same IST (45 minutes) as the interspinous spacer procedure (code 22869) but has a higher survey 25th percentile (8.00) and median (10.00) RVW compared to the survey 25th percentile (6.75) and median (8.00) RVW for code 22869 when surveyed for the April 2021 RUC meeting where the RUC ultimately recommended an RVW of 7.03.

For code 62330, the recommended survey 25th percentile RVW of 8.00 and median IST of 45 minutes results in an IWPUT of 0.065, which is lower than the IWPUT of 0.077 for code 22869.

2nd KRS: Code 22867 was most recently reviewed at the January 2016 RUC meeting. The RUC reviewed the survey results from 58 physicians and recommends a RVW of 15.00, based on a direct crosswalk to code 29915 *Arthroscopy, hip, surgical; with acetabuloplasty (ie, treatment of pincer lesion).* The RUC recommended a RVW of 15.00 and times of 63 / 90 / 30 / 271 for code 22867. The survey 25th percentile RVW of 8.00 for code 62330 is appropriate relative to code 22867 and well-supported by the survey data.

Like code 22869 (1st KRS), code 22867 describes a procedure to insert an interspinous spacer between the spinous processes of vertebrae in the spine. They key difference between these services is that code 22867 includes an open decompression whereas code 22869 does not. A procedure with an open decompression takes more time compared to a procedure without, which is reflected in the higher IST for code 22867 (90 minutes) than code 22869 (45 minutes). Code 62330 does not include an open decompression (as stated in the vignette) and has the same survey median IST as code 22869 (45 minutes), which also does not include an open decompression. The recommended survey median IST of 45 minutes for code 62330 is appropriate relative to the survey median IST of 90 minutes for code 22867 due to the difference in intra-service work for a procedure that includes open decompression compared to one that does not. In addition to requiring more IST, open decompression procedures can be more intense compared to procedures without open decompression. This is reflected in the slightly higher IWPUT for code 22867 (0.106) compared to code 22869 (0.077).

The increased intensity / complexity of a percutaneous procedure in the vertebral canal relative to a procedure where the work is performed between the vertebrae is well supported by the survey data. Respondents rated code 62330 as identical or more intense compared to code 22867 for each intensity / complexity sub-measure, including:

- overall intensity and complexity (44% identical; 56% more)
- mental effort and judgement (56% identical; 32% more)
- technical skill (52% identical; 40% more)
- physical effort (52% identical; 36% more)
- psychological stress (40% identical; 52% more)

For code 62330, the recommended survey 25th percentile RVW of 8.00 and median IST of 45 minutes results in an IWPUT of 0.065, which is lower than the IWPUT of 0.106 for code 22867.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0275T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pain Management How often? Sometimes

Specialty Anesthesiology How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 18200
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate national, one-year utilization of approximately 18,200 for code 62330. This estimate is based on 2022 sales data provided by the sole vendor of the FDA-cleared devices for this procedure (previously reported with Category III code 0275T) and reflects combined utilization for both Medicare and non-Medicare patients. The vendor sales data does not include the frequency and percentage data for each specialty. We used the 2022 Medicare specialty mix for code 0275T (as shown in the RUC database) to estimate the frequnecy and percentage for each specialty nationally in a one-year period for both Medicare and non-Medicare patients. [Note: The societies obtained the 2022 sales data from the sole vendor of the FDA-cleared devices for this procedure as part of the CPT code change application submission process; this same vendor also provided the societies with a targeted vendor list for the purposes of this survey.]

Specialty Pain Management Frequency 5533 Percentage 30.40 %

Specialty Anesthesiology Frequency 5460 Percentage 30.00 %

Specialty Interventional Pain Management Frequency 3986 Percentage 21.90 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,052 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate national, one-year utilization for Medicare patients of

approximately 10,052 for code 62330. This estimate is based on 2022 Medicare claims data for Category III code 0275T, as shown in the RUC database. To estimate the frequency for each specialty, we extrapolated based on the RUC database 2022 specialty percentages for all sites.

Specialty Pain Management Frequency 3056 Percentage 30.40 %

Specialty Anesthesiology Frequency 3019 Percentage 30.00 %

Specialty Interventional Pain Management Frequency 2201 Percentage 21.90 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 0275T

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:62331 Tracking Number T3 Original Specialty Recommended RVU: **5.00**
Presented Recommended RVU: **5.00**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **4.25**

CPT Descriptor: Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (ie, CT or fluoroscopy), bilateral; additional interspace(s), lumbar (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old female is diagnosed with symptomatic lumbar spinal stenosis with neurogenic claudication unresponsive to conservative therapy. Imaging demonstrates thickened ligamentum flavum with resultant stenosis of the spinal canal at L3-L4 and L4-L5. The patient does not require immediate open decompression. After performing thinning of the L3-L4 ligamentum flavum (separately reported), an additional thinning of the L4-5 ligamentum flavum is performed. [Note: This is an add-on service. Only consider the additional work related to treatment of one additional interspace.]

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital , In the ASC , In the office

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day , Overnight stay-less than 24 hours , Overnight stay-more than 24 hours

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day

Description of Pre-Service Work:

Description of Intra-Service Work: The patient has undergone a percutaneous interlaminar decompressive procedure at one level (eg, L3-L4). Immediately following this decompression, the exact same procedure is repeated at an additional symptomatic level.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**

Overall intensity/complexity	0%	32%	42%	19%	6%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	52%	20%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	26%	52%	23%
Physical effort required	16%	58%	26%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	23%	52%	26%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	4%	33%	41%	15%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	30%	59%	11%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	37%	48%	15%
Physical effort required	33%	48%	19%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	37%	37%	26%

- Estimated risk of malpractice suit with poor outcome

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendations: For code 62331, the societies recommend the survey 25th percentile RVW of 5.00, and the survey median times of 0 minutes total pre-service, 43 minutes intra-service, and 0 minutes immediate post-service for a total time of 43 minutes. The societies offer the following rationale for these recommendations.

RVW: Survey 25th percentile RVW of 5.00.

IST: Survey median IST of 43 minutes.

The survey 25th percentile RVW and median IST are well supported by the survey data, which reflect a robust response rate (n=105) that exceed the 30-response minimum for codes with annual Medicare utilization less than 100,000. The survey 25th percentile RVW is similar when respondents are stratified by vendor list (5.05), society affiliation (5.16), and respondents with experience (5.00). The survey median IST is also similar when respondents are stratified by society affiliation (45 minutes) and respondents with and without experience (both 43 minutes). The median IST for vendor list respondents is slightly lower at 33 minutes, however this is due to the relatively small number of vendor list responses (n=30), which are distributed bi-modally. There are several more vendor list responses at the lower end of the IST range, which results in a median IST for vendor list respondents that is not representative of the overall distribution. The survey mean IST is more consistent, including when stratified by vendor list and society affiliation. Specifically, for all 105 respondents for code 62331 the mean IST is 51 minutes versus 48 minutes for the 30 vendor list respondents and 52 minutes for the 75 society affiliation respondents. While using a vendor list can help collect survey data from physicians who have firsthand experience furnishing a procedure—particularly for newer services that have not been as widely adopted—nearly all (85%) of the 105 survey respondents for code 62331 reported some experience with the PILD procedure. Accordingly, we believe it is most appropriate to consider the survey data for all 105 respondents for code 62331 versus only one subset of respondents, as these data provide greater statistical power and more adequately represent data from the physicians who are currently furnishing the procedure.

The recommended survey median IST of 43 minutes for code 62331 is appropriate relative recommended survey median IST of 45 minutes for code 62330 because the intra-service work for the two procedures is identical and therefore requires the identical amount of IST. This is well-supported by the survey data which show similar median IST for codes 62330 and 62331, including when the survey data are stratified by each type of respondent. This is also well-supported by other base service and add-on service code pairs, including for other percutaneous spine procedures and injection procedures commonly furnished by anesthesiology and pain medicine specialists.

Reference service list (RSL): The RSL for code 62331 included 19 codes. RSL code RVWs were well-distributed and ranged from 4.25 to 14.14. The RSL included four spine procedure services (codes 22552, 22634, 22858, 22840) that are commonly furnished by anesthesiology and pain medicine specialists. Two of these services (codes 22634, 22552) were selected as KRS codes by most (55%) respondents, including when respondents were stratified by vendor list (47%), society affiliation (59%), and with (57%) and without (42%) experience. Both KRS codes were well-distributed in terms of RVW (6.50 and 7.96) and IST (45 and 65) and appropriately bound the recommended survey 25th percentile RVW of 5.00 and survey median IST of 43 minutes for code 62331, which is well-supported by the survey data from 105 respondents.

Key Reference Service (KRS) Comparison: All respondents selected the same two services as either 1st or 2nd KRS codes, including when the survey data were stratified by each type of respondent.

TOP KEY REFERENCE SERVICE SELECTION – 62331

CODE	RVW	ALL	VENDOR LIST	SOCIETY AFFILIATION	WITH EXPERIENCE	WITHOUT EXPERIENCE
22552	6.50	26%	39%	24%	28%	8%
22634	7.96	30%	17%	35%	29%	33%
TOTAL		*55%*	*47%*	*59%*	*57%*	*42%*

1st KRS: Code 22634 was most recently reviewed at the April 2021 RUC meeting; it is also an MPC code. The RUC reviewed the survey results from 111 physicians and determined that the survey 25th percentile RVW of 7.96 appropriately accounts for the physician work involved in this add-on service. The RUC recommended a RVW of 7.96 and times of 0 / 65 / 0 / 65 for code 22634.

Code 22634 describes the work to treat each additional interspace(s) during spinal fusion surgery using a posterolateral technique with posterior interbody technique. Code 22634 is a procedure which involves the vertebral canal, like code 62331. For each intensity / complexity sub-measure, approximately half of respondents rated code 62331 as identical to code 22634; the other half were generally split between those who said code 62331 is more versus less intense, including:

- overall intensity and complexity (42% identical; 26% more; 32% less)
- mental effort and judgement (52% identical; 19% more; 29% less)
- technical skill (52% identical; 23% more; 26% less)
- physical effort (58% identical; 36% more; 16% less)
- psychological stress (52% identical; 26% more; 23% less)

For code 62331, the recommended survey 25th percentile RVW of 5.00 and median IST of 43 minutes results in an IWPUT of 0.116, which is lower than the IWPUT of 0.122 for code 22634.

2nd KRS: Code 22552 was most recently reviewed at the February 2010 RUC meeting. The RUC reviewed survey results from 109 physicians and determined that the survey 25th percentile RVW of 6.50 appropriately valued this service. The RUC recommended a RVW of 6.50 and times of 5 / 45 / 0 / 50 for code 22552. For each intensity / complexity sub-measure most respondents rated code 62331 as identical or less intense compared to code 22552, including:

- overall intensity and complexity (41% identical; 22% more; 37% less)
- mental effort and judgement (59% identical; 11% more; 30% less)
- technical skill (48% identical; 15% more; 37% less)
- physical effort (48% identical; 19% more; 33% less)
- psychological stress (37% identical; 26% more; 37% less)

For code 62331, the recommended survey 25th percentile RVW of 5.00 and median IST of 43 minutes results in an IWPUT of 0.116, which is lower than the IWPUT of 0.142 for code 22552.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0275T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pain Management How often? Sometimes

Specialty Anesthesiology How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 7280
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate national, one-year utilization of approximately 7,280 for code 62331. This estimate reflects approximately 40% of the 2022 sales data provided by the sole vendor of the FDA-cleared devices for this procedure (previously reported with Category III code 0275T) and reflects combined utilization for both Medicare and non-Medicare patients. We estimate that approximately 40% of patients who undergo the PILD procedure will be treated at more than one level. This estimate is based a review of the relevant literature.The vendor sales data does not include the frequency and percentage data for each specialty. We used the 2022 Medicare specialty mix for code 0275T (as shown in the RUC database) to estimate the frequnecy and percentage for each specialty nationally in a one-year period for both Medicare and non-Medicare patients. [Note: The societies obtained the 2022 sales data from the sole vendor of the FDA-cleared devices for this procedure as part of the CPT code change application submission process; this same vendor also provided the societies with a targeted vendor list for the purposes of this survey.]

Specialty Pain Management Frequency 2213 Percentage 30.40 %

Specialty Anesthesiology Frequency 2184 Percentage 30.00 %

Specialty Interventional Pain Management Frequency 1594 Percentage 21.90 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4021
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please

explain the rationale for this estimate. We estimate national, one-year utilization for Medicare patients of approximately 4,021 for code 62331. This estimate reflects approximately 40% of the 2022 Medicare fee-for-service claims for CPT code 0275T (n=10,052), as shown in the RUC database. We estimate that approximately 40% of patients who undergo the PILD procedure will be treated at more than one level. This estimate is based a review of the relevant literature.

Specialty Pain Management Frequency 1222 Percentage 30.40 %

Specialty Anesthesiology Frequency 1206 Percentage 30.00 %

Specialty Interventional Pain Management Frequency 881 Percentage 21.90 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 0275T

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SS Rec Summary

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
62330	Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (ie, CT or fluoroscopy), bilateral; one interspace, lumbar	090
62331	Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (ie, CT or fluoroscopy), bilateral; additional interspace(s), lumbar (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
62330	A 67-year-old male is diagnosed with symptomatic lumbar spinal stenosis with neurogenic claudication unresponsive to conservative therapy. Imaging demonstrates thickened ligamentum flavum with resultant stenosis of the spinal canal at L3-L4. The patient does not require immediate open decompression. The patient undergoes a percutaneous thinning of the ligamentum flavum.
62331	A 70-year-old female is diagnosed with symptomatic lumbar spinal stenosis with neurogenic claudication unresponsive to conservative therapy. Imaging demonstrates thickened ligamentum flavum with resultant stenosis of the spinal canal at L3-L4 and L4-L5. The patient does not require immediate open decompression. After performing thinning of the L3-L4 ligamentum flavum (separately reported), an additional thinning of the L4-5 ligamentum flavum is performed. [Note: This is an add-on service. Only consider the additional work related to treatment of one additional interspace.]

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel consisting of RUC advisors and subject matter experts from each of the surveying societies communicated via email and zoom to develop PE recommendations. The expert panel reviewed (1) survey times, (2) existing inputs for key reference service codes, and (3) PE standards.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The societies recommend the following PE reference codes:

   <u>62330</u>
   PE Reference code #1: Code 22869 was the 1st KRS selected by 42% of survey respondents (n=45). Codes 22869 and 62330 both describe surgical procedures of the lumbar spine without open decompression or fusion and including imaging guidance when performed. Codes 22869 and 62330 are 90-global services with similar facility PE inputs for clinical staff activities, supplies, equipment.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

PE Reference code #2: Code 22867 was the 2nd KRS selected by 24% of survey respondents (n=25). Codes 22867 and 62330 both describe surgical procedures of the lumbar spine including imaging guidance when performed. Codes 22867 and 62330 are 90-global services with similar facility PE inputs for clinical staff activities, supplies, equipment.

62331
PE Reference code #1: Code 22634 was the 1st KRS selected by 30% of survey respondents (n=31). Codes 22634 and 62331 both describe each additional interspace treated during a primary surgical procedure of the lumbar spine. Codes 22634 and 62331 are ZZZ global services with no facility PE inputs for clinical staff activities, supplies, equipment.

PE Reference code #2: Code 22552 was the 2nd KRS selected by 26% of survey respondents (n=27). Codes 22552 and 62331 both describe each additional interspace treated during a primary surgical procedure of the spine (cervical for code 22552, lumbar for code 62331). Codes 22552 and 62331 are ZZZ global services with no facility PE inputs for clinical staff activities, supplies, equipment.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

Codes 62330 and 62331 are new Category I codes. The procedures described by codes 62330 and 62331 were previously reported with Category III code 0275T. Since both codes 62330 and 62331 are new, the global periods have not transitioned.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Pre-service clinical staff activities for code 62330 include the following:

Complete pre-service diagnostic and referral forms	**5 minutes (standard)** Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	**20 minutes (standard)** Staff coordinates collection and documentation of imaging and lab results, patient specific information and other relevant patient information for the procedure, including conducting requisite pre-procedure assessment. All clinical updates are entered and recorded in the EHR.
Schedule space and equipment in facility	**8 minutes (standard)** Staff interacts with the facility to schedule space, supplies, equipment, and review checklists.
Provide pre-service education/obtain consent	**20 minutes (standard)** Staff reviews procedure, complication risk, recovery process, and answers patient and family questions.
Complete pre-procedure phone calls and prescription	**7 minutes (standard)** Staff reviews pre-operative medication changes and patient medical status, and answers final pre-admission questions.

    b. Service period (includes pre, intra and post):

Service period clinical staff activities for code 62330 include the following:

6 minutes (standard)
Prior to discharge, clinical staff assist with necessary post-discharge care coordination, including:

- Respond to patient and family questions about home activity restrictions
- Confirm discharge medications, if needed
- Coordinate with other physicians and QHPs involved in the patient's care for records transfer
- Transition discharge information to the physician's office medical record, including medication list, correspondence, and imaging and lab results pending at discharge

c. Post-service period:

Post-service period clinical staff activities for code 62330 include the following:

108 minutes – standard clinical staff time for current office E/M visits (three 99213 visits)
The clinical staff work includes the standard activities involved in any E/M visit, such as:

- Greet the patient and provide gowning
- Ensure all appropriate medical records are available including interval imaging and labs, physical therapy reports, and chart notes from other physicians
- Review current medications and allergies in the EHR
- Obtain vital signs
- Prepare room, including all necessary equipment and supplies
- Assist with patient positioning for exam
- Assist with wound care, as needed
- Clean room and equipment
- Answer patient and family questions about home care, including activity limitations and reinforcement of physical therapy activities
- Assist physician with orders for medication and physical therapy changes
- Assist with answering patient, family/caregiver, therapist, other clinician questions and processing changes in care

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, we recommend two supply packs: SA048 and SA054.
These supply packs are both established packs as defined by CMS.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, post-op incision care (suture)	**SA054**	**pack**	
kit, suture removal		kit	1
povidone soln (Betadine)		ml	10
gauze, sterile 4in x 4in		item	2
gloves, sterile		pair	1
steri-strip (6 strip uou)		item	2
swab-pad, alcohol		item	2
tape, surgical paper 1in (Micropore)		inch	12
tincture of benzoin, swab		item	1

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Equipment Code	Equipment	Equipment Formula	Facility Minutes
EF031	table, power	Office visits	108
EQ168	light, exam	Office visits	108

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

The societies recommend a PLI crosswalk to code 22869 for code 62330 and code 22870 for code 62331 based on a similar specialty mix. The societies reviewed 2023 utilization data (published with the calendar year 2025 Physician Fee Schedule final rule) for all CPT codes to identify appropriate PLI crosswalks for codes 62330 and 62331. Our analysis focused on codes that (1) are predominantly provided in the facility setting, and (2) have a similar specialty mix to code 0275T. codes 22869 and 22870 are furnished in a facility setting 99% of the time by a similar mix of specialties as code 0275T.

Code	Crosswalk	Descriptor	PLI RVU
62330	22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	0.70
62331	22870	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)	0.23

	2022 Medicare Percentages for Global Medicare Specialty (All Sites), Specialty %		
Specialty	**0275T**	**22869**	**22870**
Pain Management	30.4%	30.3%	31.0%
Anesthesiology	30.0%	31.5%	31.9%
Interventional Pain Management	21.9%	22.1%	23.6%

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Laminotomy – Repair of Disc Defect – Tab 11

At the September 2024 CPT Editorial Panel meeting, one new Category I add-on code was created to report repair of an annular defect by implantation of a bone anchored annular closure device after a laminotomy (hemilaminectomy) with decompression was performed. The new add-on code was surveyed for the January 2025 RUC meeting.

Code Family
The specialty societies indicated that CPT codes 63020, 63030, 63035, 63040, 63042, 63043, and 63044 are not a code family. First, code 63020 is for laminotomy with decompression for a cervical interspace and new code 63032 is for a lumbar interspace. Second, codes 63040-63044 are for re-exploration laminotomy with decompression and new code 63032 cannot be reported for re-exploration procedures. Further, the new add-on code 63032 can only be reported with primary code 63030 and only for a single interspace. Add-on code 63035 can also be reported with 63030 if an additional interspace laminotomy with decompression is performed, however, code 63032 cannot be reported for an additional level. Therefore, no other codes have had a change in physician work or practice expense as a result of the establishment of this new add-on code. **The RUC agreed that codes 63020, 63040, 63042, 63043, and 63044 do not need to be reviewed with 63032.**

63030 ***Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar***
63035 ***Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure)***
The new code, 63032, is only to be reported with CPT codes 63030. Although code 63035 can also be reported with 63030, it would be for an additional interspace and not related to the new code 63032 which cannot be reported for an additional interspace as instructed in the parenthetical to report 63032 only once per operative session. In addition, the specialties stated that 63030 and 63035 were surveyed in 2022 and the work for these procedures is unchanged and distinct from the work of the new code. **The RUC agreed with the specialty societies and recommends affirmation of the current work RVU of 12.00 for CPT code 63030 and 3.86 for CPT code 63035.**

63032 ***Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; with repair of annular defect by implantation of bone anchored annular closure device, including all imaging guidance, 1 interspace, lumbar (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 90 spine surgeons and recommends a work RVU of 2.50 based on a direct crosswalk to CPT code 33370 *Transcatheter placement and subsequent removal of cerebral embolic protection device(s), including arterial access, catheterization, imaging, and radiological supervision and interpretation, percutaneous (List separately in addition to code for primary procedure)* (work RVU =2.50, 20 minutes intra-service and total time), which maintains relativity within the family for this code. The RUC recommends 21 minutes intra-service time and total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The purpose of this procedure is to close an annular defect in the outer portion of the intervertebral disc after a discectomy. This helps seal the annulus to prevent the leakage of disc material (nucleus pulposus) and recurrence of a herniation. The primary objective is to preserve the disc's natural function by preventing fluid and nucleus pulposus leakage and reducing the likelihood of re-herniation.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 22853 *Insertion of interbody biomechanical device(s) (eg, synthetic cage, mesh) with integral anterior instrumentation for device anchoring (eg, screws, flanges), when performed, to intervertebral disc space in conjunction with interbody arthrodesis, each interspace (List separately in addition to code for primary procedure)* (work RVU = 4.25, 45 minutes intra-service and total time) and second key reference code 22868 *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; second level (List separately in addition to code for primary procedure)* (work RVU = 4.00, 45 minutes intra-service and total time). Both reference codes involve the placement of a device similar to the surveyed code, however, each procedure provides different approaches for treating intravertebral disc degeneration or spinal instability. Reference code 22853 is to provide scaffolding for bone grafting to restore disc height and alignment after a spinal fusion procedure allowing bone growth to fuse two vertebrae over time. Reference code 22853 is less intense and complex to perform when compared to the surveyed code since the procedure is not intended to preserve the disc's natural function. Reference code 22868 is similar to the surveyed code in that the implant placement is meant to improve functional outcomes for patients with certain types of spinal conditions while avoiding the need for a more invasive fusion procedure. However, reference code 22868 is not an add-on code for the same level and space as the primary procedure, but instead is reported for an additional level. This includes exposure and closure of the additional level which is generally considered less intense work than measuring and precise placement of the device itself. Therefore, the intensity/complexity of reference 22868 is less than the surveyed code.

For additional support, the RUC referenced MPC codes 36227 *Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)* (work RVU = 2.09, 15 minutes intra-service and total time) and 34812 *Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 4.13, 40 minutes intra-service and total time). The surveyed code work RVU is appropriately bracketed by the MPC codes. **The RUC recommends a work RVU of 2.50 for CPT code 63032.**

Practice Expense
The RUC recommends no direct practice expense inputs as CPT code 63032 is a facility only add-on service.

New Technology
CPT code 63032 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chicago, IL 60611

RE: Tab 11, CPT codes 63020, 63030, 63032, 63035, 63040, 63042, 63043, 63044

Dear Dr. Silva,

At the September 2024 CPT Panel meeting, the Panel accepted a request to: (1) establish add-on code 63032 to report repair of an annular defect of the vertebral body via implantation of a bone anchored annular closure device; and (2) addition of an instructional parenthetical note. The new code 63032 was referred to the RUC for survey of physician work. Codes 63020, 63030, 63035, 63040, 63042, 63043, 63044 were added as family codes. The undersigned societies have surveyed the new code 63032, but did not survey the codes added as family codes. This letter provides the justification for this decision.

The table below outlines the changes to the CPT codeset with the addition of new code 63032. This code is solely associated with the primary code 63030 and cannot be used with any other code. No other codes have been affected by the addition of this new add-on code, either editorially or otherwise. As a result, we believe that the only relevant family code is 63030. As code 63030 was reviewed by the RUC in 2022 and CMS made a final determination in the CY 2023 final rule, a new survey for 63030 is not necessary. The work associated with 63030 has remained unchanged since 2022, and the work related to the new add-on code 63032 is distinct and does not overlap with the work included in 63030.

(f)63020	U1	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, cervical (For bilateral procedure, report 63020 with modifier 50)	090
(f)63030	U2	1 interspace, lumbar (For bilateral procedure, report 63030 with modifier 50)	090
+63032	U3	with repair of annular defect by implantation of bone anchored annular closure device, including all image guidance, 1 interspace, lumbar (List separately in addition to code for primary procedure) (Use 63032 in conjunction with 63030) (Report 63032 only once per operative session) (Do not report 63032 in conjunction with 63042)	ZZZ
(f)63035	U4	each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure) (Use 63035 in conjunction with 63020-63030) (Do not report 63030, 63035 in conjunction with 22630, 22632, 22633, 22634, for laminotomy performed to prepare the interspace for fusion on the same interspace[s] and vertebral segment[s]) (For decompression performed on the same interspace[s] and vertebral segment[s] as posterior interbody fusion that includes laminectomy, removal of facets, and/or opening/widening of the foramen for decompression of nerves or spinal components, such as spinal cord, cauda equina, or nerve roots, see 63052, 63053) (For bilateral procedure, report 63035 twice. Do not report modifier 50 in	ZZZ

		conjunction with 63035) (For percutaneous endoscopic approach, see 0274T, 0275T)	
(f)63040	U5	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc, reexploration, single interspace; cervical (For bilateral procedure, report 63040 with modifier 50)	090
(f)63042	U6	lumbar (For bilateral procedure, report 63042 with modifier 50) **(Do not report 63042 in conjunction with 63032)**	090
(f)63043	U7	each additional cervical interspace (List separately in addition to code for primary procedure) (Use 63043 in conjunction with 63040) (For bilateral procedure, report 63043 twice. Do not report modifier 50 in conjunction with 63043)	ZZZ
(f)63044	U8	each additional lumbar interspace (List separately in addition to code for primary procedure) (Use 63044 in conjunction with 63042) (Do not report 63040, 63042, 63043, 63044 in conjunction with 22630, 22632, 22633, 22634, for laminotomy to prepare the interspace for fusion on the same interspace[s] and vertebral segment[s]) (For decompression performed on the same interspace[s] and vertebral segment[s] as posterior interbody fusion that includes laminectomy, removal of facets, and/or opening/widening of the foramen for decompression of nerves or spinal components, such as spinal cord, cauda equina, or nerve roots, see 63052, 63053) (For bilateral procedure, report 63044 twice. Do not report modifier 50 in conjunction with 63044)	ZZZ

We also note that new code 63032 is a facility-only add-on code and will have no related direct practice expense input.

Thank you for your consideration of this information. We look forward to presenting the work RVU recommendation for 63032 and responding to any questions at the January 2025 RUC meeting.

Sincerely,

American Association of Neurological Surgeons (AANS)

Congress of Neurological Surgeons (CNS)

North American Spine Society (NASS)

American Academy of Orthopaedic Surgeons (AAOS)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:63032 Tracking Number U3 Original Specialty Recommended RVU: **3.00**
Presented Recommended RVU: **3.00**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **2.50**

CPT Descriptor: Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; with repair of annular defect by implantation of bone anchored annular closure device, including all image guidance, 1 interspace, lumbar (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During a laminotomy with excision of an L4-L5 herniated intervertebral disc, a 53-year-old male is found to have a large annular defect that is 4-6 mm tall and 6-10 mm wide that is repaired with a bone-anchored annular closure device. [Note: This is an add-on service. Only consider the additional work related to the repair of the annular defect.]

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: After a laminotomy for discectomy to decompress the nerve root at L4/L5 is performed (reported separately), the size of the annular defect is measured to confirm that the patient is a candidate for repair of the defect with the bone-anchored annular closure device. Fluoroscopic guidance is used to confirm that the defect in the annulus extends completely to the nucleus. Under fluoroscopic guidance, an alignment trial instrument is inserted into the annular defect to confirm there is adequate bony removal for implantation of the bone-anchored annular closure device, and to determine the appropriate angle and final placement of the device. If required additional bone is removed from the lamina (out toward the medial aspect of the facet and/or undercutting the spinous process medially), in order to gain appropriate access and orientation. Under fluoroscopic guidance, the annular closure device is implanted and anchored in position. The bone-anchored device can be implanted into either the superior or the inferior endplate and will be implanted centrally (left to right) in the defect. The strike cap is then tapped until the deployment depth indicator on the tool indicates that the implant is properly deployed and countersunk 2 mm into the vertebral body. The final position of the implant is confirmed.

Description of Post-Service Work: n/a

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	36%	54%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	32%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	32%	57%
Physical effort required	11%	61%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	25%	71%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	33%	47%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	40%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	20%	73%
Physical effort required	7%	40%	53%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	40%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation

The society advisors reviewed the survey data and had two observations:

1. The survey respondents overestimated physician work. This is based on a comparison to the key reference codes.

2. Responses by providers without experience influenced the median intraoperative time downward. This is based on the fact that the median intraoperative time is 25 minutes for both the vendor list survey data (all had experience) and the survey data from the 58 responses from experienced providers from both the vendor and random survey pools. We believe that if the survey required completion of the survey only by experienced providers, the median intraservice time would have been 25 minutes, instead of the overall time of 21 minutes that included estimates by providers without experience. This information helped to inform our choice of a crosswalk code that has 2 minutes more intraoperative time than the overall survey median time of 21 minutes, instead of choosing to crosswalk to a code with less intraoperative time (eg, 20 minutes) as we believe the overall survey median time is underestimated.

Based on the above information, **we are recommending an RVW of 3.00** that is crosswalked from code 67320. This recommendation is less than the survey 25th percentile.

Key Reference Code Comparison

Both reference codes involve placement of a device similar to 63032, however, they each serve different roles in spinal surgery, particularly in the context of treating intervertebral disc degeneration or spinal instability.

The purpose of 63032 is to close an annular defect in the outer portion of the intervertebral disc after a discectomy to help seal the annulus to prevent the leakage of disc material (nucleus pulposus) and to prevent the recurrence of a herniation. The goal of 63032 is to preserve the disc's natural function by preventing fluid and nucleus pulposus leakage and reducing the likelihood of reherniation.

The purpose of 22853 is to act as a spacer to restore disc height and alignment after a spinal fusion procedure while allowing bone growth to unite (fuse) the two vertebrae over time. The goal of 22853 is to support vertebral fusion by providing a scaffold for bone grafting, ultimately leading to the stabilization and healing of the spine. The intensity of 22853 is less than 63032 since the goal is not to preserve the disc's natural function which requires precise measurements and device placement.

The purpose of 22868 is similar to 63032 in that the implant placement is meant to improve functional outcomes for patients with certain types of spinal conditions, while avoiding the need for a more invasive fusion procedure. However, 22868 is not an add-on code for the same level and space as the primary procedure, but instead is reported for an additional level. This includes exposure and closure of the additional level which is generally considered less intense work than measuring and precise placement of the device itself. Therefore, the intensity of 22868 would be less than 63032.

This discussion of intensity is confirmed by the intensity/complexity measures for 63032 in comparison to the reference codes and supports the greater intensity of 63032 when compared with 22853 and 22868.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	INTRA Time
22853	Insertion of interbody biomechanical device(s) (eg, synthetic cage, mesh) with integral anterior instrumentation for device anchoring (eg, screws, flanges), when performed, to intervertebral disc space in conjunction with interbody arthrodesis, each interspace (List separately in addition to code for primary procedure)	4.25	0.094	45	45
22868	Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; second level (List separately in addition to code for primary procedure)	4.00	0.089	45	45
63032	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; with repair of annular defect by implantation of bone anchored annular closure device, including all image guidance, 1 interspace, lumbar (List separately in addition to code for primary procedure)	3.00	0.143	21	21

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 63032 in conjunction with 63030)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 22899

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopeadic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1100
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Device sales data

Specialty neurosurgery Frequency 620 Percentage 56.36 %

Specialty orthopeadic surgery Frequency 480 Percentage 43.63 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. specialty estimate

Specialty neurosurgery Frequency 300 Percentage 60.00 %

Specialty orthopeadic surgery Frequency 200 Percentage 40.00 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

December 5, 2024

To: Scott Manaker, MD
Chair, AMA/RUC PE Subcommittee

From the RUC Advisors for:
American Association of Neurological Surgeons (AANS)
Congress of Neurological Surgeons (CNS)
North American Spine Society (NASS)
American Academy of Orthopaedic Surgeons (AAOS)
North American Neuromodulation Society (NANS)

Subject: Tab 11

At the September 2024 CPT Panel meeting, the Panel accepted a request to: (1) establish add-on code 63032 to report repair of an annular defect of the vertebral body via implantation of a bone anchored annular closure device; and (2) addition of an instructional parenthetical note. The new code 63032 was referred to the RUC for survey of physician work. The table below outlines the changes to the CPT codeset with the addition of new code 63032. This code is solely associated with the primary code 63030 and cannot be used with any other code. No other codes have been affected by the addition of this new add-on code, either editorially or otherwise. The additional codes were added by AMA staff and have nothing clinical or otherwise to do with the new add-on code. The new code is not for a cervical interspace, an additional lumbar space, or for re-exploration. As a result, we believe that the only relevant family code is 63030. As code 63030 was reviewed by the RUC in 2022 and CMS made a final determination in the CY 2023 final rule, a review of practice expense for 63030 is not necessary.

New code 63032 is a facility-only add-on code and will have no related direct practice expense input.

Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service Anomaly – 2018*

January 2022

Lumbar Laminotomy with Decompression – Tab 17

In October 2018, AMA Staff reviewed services with anomalous sites of service when compared to Medicare utilization data. One service was identified, CPT code 63030 *Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar*, in which the Medicare data from 2014-2017 indicated that it was performed less than 50% of the time in the inpatient setting, yet included inpatient hospital Evaluation and Management services within the global period. The Relativity Assessment Workgroup requested an action plan for January 2019. In January 2019, the RUC recommended that this code be reviewed in two years (January 2021) to determine if the CPT 2017 changes to differentiate percutaneous, endoscopic, and open spine procedures were effective to for correct reporting of this service. In December 2020, the Workgroup noted that CPT code 63030 continues to be primarily reported in the outpatient setting yet still includes inpatient hospital visits. The specialty society indicated that there is still confusion, and 63030 is inappropriately being reported in the outpatient setting. The RUC recommended that CPT code 63030 be referred to the CPT Editorial Panel to revise the descriptor to exclude the types of procedures that are thought to be causing the incorrect reporting in the outpatient setting, such as explicitly stating the types of situations for which CPT code 63030 should not be used. The RUC understood that this service would be surveyed after the CPT revisions and reviewed by the RUC. At the September 2021 CPT meeting, the CPT Editorial Panel did not accept the changes to the descriptors specifying hospitalization as presented by the specialty societies. Since this is a site of service issue, CPT code 63030 was surveyed with the code family for the January 2022 RUC meeting.

Compelling Evidence
The RUC agreed with the specialty societies that flawed methodology was used in the previous valuation of this service. CPT code 63035 is a Harvard-based code and the methodology that Harvard used in developing the work and times was flawed. The Harvard study method for reviewing "secondary codes" (ie, add-on codes) was to survey the primary code as a global code and the add-on code as a multiple of the primary code and then subtract one from the other to determine the additional work related to the secondary code.[1] For example, the data for CPT code 63030 surveyed as a 090-day global code was compared with the data for CPT code 63035 surveyed as a 090-day global code for two levels. The Harvard study used two different panels of neurosurgeons to survey each code resulting in data that did not make sense; some elements of work were lower for 63035 even though a hemilaminectomy of two levels was performed. Further, the difference in total time between the two surveys was 51 minutes, but the final Harvard dataset indicated 49 minutes of intra-service time for 63035. The specialty societies indicated that this was a flawed methodology to determine both the physician time and relative value for 63035, resulting in an underestimation of time and work required, which meets compelling evidence. Secondly, the Harvard study solicited responses only from neurosurgeons (n=17) even though an almost equal number of orthopaedic surgeons perform this service. **The RUC agreed there was compelling evidence that the previous methodology establishing the value for CPT code 63035 was flawed.**

[1] Appendix D4.1 of the Harvard Phase III Final Report

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

63020 ***Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, cervical***
The RUC reviewed the survey results from 79 neurosurgeons, orthopaedic surgeons and spine surgeons and determined that the survey 25th percentile work RVU of 15.95 appropriately accounts for the physician work required to perform this service. The RUC recommends 40 minutes pre-service evaluation, 20 minutes positioning, 15 minutes scrub/dress/wait time, 90 minutes intra-service time, 30 minutes immediate post-service time, 1-99232, 1-99231, 1-99238, 1-99214 and 2-99213 visits. This service is typically performed in the hospital inpatient setting. The RUC noted that the current physician time for CPT code 63020 was not determined via a typical RUC survey but was based on operative logs and Harvard data which was validated during the 1995 Five-Year Review.

The specialty societies indicated that the first post-operative office visit will typically be level 99214 and includes a discussion with the patient of the preop presentation, review of the operative note and comparison of subjective and objective preop versus postop elements of function. Dressings will be removed. The wound will be assessed and sutures removed. The surgeon will verify the pathology report is consistent with disc material and no other concerning pathology and reassure the patient with that information. Medication management is performed including a prescription drug monitoring program (PDMP) check and to verify use as appropriate with postop instructions and no adverse events. The surgeon will also discuss safely weaning the patient from narcotics and muscle relaxants and discussing how the medication use might impact the patient's ability to work, drive, study, and provide childcare safely. The surgeon will further discuss appropriate use of NSAIDs (prescribed or over the counter (OTC)) and/or other analgesics to switch to as the patient is transitioned from narcotics and muscle relaxants. Orders for changes in medication will be made based on the patient's response to pain experience and medication adverse events. The surgeon will discuss activity guidance, advancing activities, and potential medication-impact on activity. The surgeon will review activity levels and discuss physical and occupation therapy needs and goals, including order therapy. The surgeon will also assess the need for bracing (eg, for foot droop). Shared decision making and assessment of the patient will be required to determine if further imaging or testing is needed, including whether an X-ray should be ordered if there are concerns for iatrogenic instability; whether an MRI should be ordered if there are concerns for incomplete decompression or recurrent herniation of the nucleus pulposus (HNP); and whether a urinalysis and/or post-void residual is needed if there are concerns for urologic dysfunction. Functional needs are assessed that may require coordination with physical medicine and rehabilitation for a debilitated patient. In addition, return to work/school forms will be completed, including guidance on advancing activities toward full return to work/school after review of the patient's view of their work needs in context of their human resource (HR) specified work needs.

The second and third post-operative office visits will typically be level 99213 and include interval update of medical history, physical examination, medication management, PT/OT progress review, order revision, interval imaging as needed, and continued assessment of patient progress watching for recurrent HNP.

The RUC compared the surveyed code to the top key reference service 63047 *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar* (work RVU = 15.37, 90 minutes intra-service time, and 362 minutes total time) and noted that both require similar physician work and the same intra-service time, however 63047 has an appropriately slightly lower work RVU to account for the difference in physician work intensity between lumbar and cervical spine surgery. The RUC noted that 72% of the survey respondents that selected the top key reference code had

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

indicated that the survey code is more intense and complex. The RUC compared the surveyed code to the second top key reference service 63075 *Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace* (work RVU = 19.60, 90 minutes intra-service time and 355 minutes total time). Although codes 63075 and 63020 are both cervical spine operations, code 63075 has a higher work RVU compared with 63020 to appropriately account for the added intensity and complexity of an anterior cervical approach to the spine that includes dissection and protection of the trachea, esophagus and vessels including the carotid.

For additional support, the RUC referenced MPC code 37215 *Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection* (work RVU = 17.75, 103 minutes intra-service time and 337 minutes total time). **The RUC recommends a work RVU of 15.95 for CPT code 63020.**

63030 ***Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar***
The RUC reviewed the survey results from 90 neurosurgeons, orthopaedic surgeons, and spine surgeons and determined that the current work RVU of 13.18, which is below the survey 25th work RVU, appropriately accounts for the work required to perform this service. The RUC recommends 40 minutes pre-service evaluation, 15 minutes positioning, 15 minutes scrub/dress/wait time, 90 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238, 1-99214 and 2-99213 visits. The RUC noted that the current pre-service time was established prior to the establishment of pre-time packages and the intra-service and immediate post-service time has not changed.

This service is typically performed in the outpatient hospital setting. However, of the 82% of survey respondents who indicated that they typically perform this service in the hospital, 52% indicated that patients stay overnight (40% less than 24 hours and 12% more than 24 hours) and all respondents indicated a hospital visit occurs. Therefore, a total of 40 minutes post-service time includes the survey median time of 30 minutes plus the intra-time of 10 minutes for current code 99231. Additionally, half a 99238 discharge visit is included even though this patient will not typically be discharged on the same day and complete discharge day management work will be performed on the day after surgery.

The first post-operative office visit will typically be level 99214 and includes a discussion with the patient of the preop presentation, review of the operative note, and comparison of subjective and objective preop versus postop elements of function. Dressings will be removed. The wound will be assessed and sutures removed. The surgeon will verify the pathology report is consistent with disc material and no other concerning pathology and reassure the patient with that information. Medication management is performed including a prescription drug monitoring program (PDMP) check and to verify use as appropriate with postop instructions and no adverse events. The surgeon will also discuss safely weaning the patient from narcotics and muscle relaxants and discuss how the medication use might impact the patient's ability to work, drive, study, and provide childcare safely. The surgeon will further discuss appropriate use of NSAIDs (prescribed or OTC) and/or the use of other analgesics as the patient is transitioned from narcotics and muscle relaxants. Orders for changes in medication will be made based on the patient's response to pain experience and medication adverse events. The surgeon will discuss activity guidance, advancing activities, and potential medication-impact on activity. The surgeon will review activity levels and discuss physical and occupation therapy needs and goals. Shared decision making and assessment of the patient will be required to determine if further imaging or testing is needed, including whether an X-ray should be ordered if there are concerns for iatrogenic instability; whether an MRI should be ordered if there are concerns for incomplete decompression or recurrent

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

herniation of the nucleus pulposus (HNP); and whether a urinalysis and/or post-void residual is needed if there are concerns for urologic dysfunction. Functional needs are assessed that may require coordination with pain management and rehabilitation (PM&R) for a debilitated patient. In addition, return to work/school forms will be completed, including guidance on advancing activities toward full return to work/school after review of the patient's view of their work needs in context of their HR specified work needs.

The second and third post-operative office visits will typically be level 99213 and include interval update of medical history, physical examination, medication management, PT/OT progress review, order revision, interval imaging as needed, and continued assessment of patient progress watching for recurrent HNP.

The RUC compared the surveyed code to the top key reference service 63047 *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar* (work RVU = 15.37, 90 minutes intra-service time, and 362 minutes total time) and noted that although both services typically involve an identical amount of intra-service time and similar intensity, the reference code involves much more total time as it is typically performed in the inpatient setting. The RUC compared the surveyed code to the second top key reference service 22867 *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level* (work RVU = 15.00, 90 minutes intra-service time, and 271 minutes total time) and noted that code 22867 is more intense and complex than code 63030 due to bilateral decompression as well as placement of an interlaminar/interspinous process stabilization/distraction device and therefore is appropriately valued higher even though it has a somewhat lower total time.

For additional support, the RUC referenced MPC codes 52601 *Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)* (work RVU = 13.16 and 75 minutes intra-service time), 53440 *Sling operation for correction of male urinary incontinence (eg, fascia or synthetic)* (work RVU = 13.36 and 90 minutes intra-service time) and 15730 *Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)* (work RVU = 13.50 and 90 minutes intra-service time). The RUC concluded that the value of CPT code 63030 should be maintained at 13.18 work RVUs, below the survey 25th percentile. **The RUC recommends a work RVU of 13.18 for CPT code 63030.**

63035 ***Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 81 neurosurgeons, orthopaedic surgeons and spine surgeons and determined that the survey median work RVU of 4.00 appropriately accounts for the work required to perform this service. The RUC recommends 60 minutes intra-service and total time.

The RUC noted that this service was never surveyed via the RUC process and the current value and time is based on the flawed Harvard methodology as indicated in the compelling evidence.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the top key reference service 63048 *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)* (work RVU = 3.47 and 45 minutes intra-service time) and noted that the surveyed code requires more physician time and work to perform. CPT code 63048 describes the work of extending a laminectomy to an additional level. In 63048, the skin incision is extended either higher or lower, followed by additional fascial incision and dissection of paraspinal muscles to expose the next level of the spine. Radiographic localization is not necessary since the work is routinely performed at an adjacent level. Hence the exposure in 63048 builds off the exposure used for the base code. For CPT code 63035, especially when using a tubular retractor system, the exposure is completed de novo. A new, unique fascial incision is made remotely from the fascial incision (described by the base code), followed by new dissection of paraspinal musculature and new placement of a retractor. For a tubular retractor, new radiographs are required for docking the retractor safely upon the lamina and ensuring appropriate retractor position. The exposure of CPT code 63035 is unique and does not directly build off the exposure of the base code and therefore requires more time and work when compared to CPT code 63048.

The RUC compared the surveyed code to the second top key reference service 22552 *Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure)* (work RVU = 6.50 and 45 minutes of intra-service time) and noted that the surveyed service requires less physician work and is less intense.

For additional support, the RUC referenced MPC code 34812 *Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 4.13 and 40 minutes intra-service time) and CPT code 63621 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional spinal lesion (List separately in addition to code for primary procedure)* (work RVU = 4.00 and 60 minutes intra-service time). The RUC concluded CPT code 63035 should have a work RVU of 4.00 which appropriately accounts for the work required to perform this service. **The RUC recommends a work RVU of 4.00 for CPT code 63035.**

Practice Expense

The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
63020 (f)	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, cervical	090	15.95
63030	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar	090	13.18 (No Change)
63035 (f)	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure)	ZZZ	4.00

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female presents with intractable left arm pain unresponsive to conservative therapy. Imaging identified a left C5-6 foraminal disc herniation. She undergoes a left C5-6 laminoforaminotomy.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 97% , In the ASC 3%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 19% , Overnight stay-less than 24 hours 26% , Overnight stay-more than 24 hours 55%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 84%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis, as required, are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The patient is reexamined to confirm that physical findings have not changed; the patient's medication regimen has remained the same; the patient has no new allergies; and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The site of the proposed skin incision is marked. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available. Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all imaging equipment. Coordinate antibiotic choice and timing. Transfer of the patient from gurney to operating table, and position the patient prone on an OR table: Prior to the flip, prepare the operating table for the patient's pressure points to the size of the patient, adjust the chest support, the iliac crest support, and support over the proximal part of each thigh. Place any helmet or head fixation device on the patient after anesthesia agrees the patient is ready for it. Gently rotate the patient from the gurney to the prepared operative table, protecting the head and neck. Position and hold the head using a protective helmet, Mayfield skull traction or a horseshoe head holder, secured to the table. The head of the patient is placed in gentle flexion to decrease the cervical lordosis. Flexion is achieved by maintaining the chest pads low on the chest to allow for natural flexion of the neck. Protective pads and restraints are placed, and the table is placed in a reverse Trendelenburg position to help with intraoperative bleeding. Surgical tape is applied to the shoulders and bed to provide traction of the skin and to facilitate imaging of cervical levels. The lower hairline may need to be shaved with an electric razor. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. A lateral cervical radiograph with a metallic marker is taken to confirm the correct operative level, and to mark the final plan for the surgical incision. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team. Standard sterile preparation and draping of the surgical site is completed.

Description of Intra-Service Work: An incision is made adjacent to the spinous process on the side of the abnormality over the operative level. Use lateral fluoroscopy to confirm the level. Release the deep cervical fascia with a knife or Bovie electrocautery to enable further dissection. Reflect muscular attachments off of the vertebral lamina and medial facet

complex. Secure retractors and achieve hemostasis. If using tubular dilators, instead of releasing the deep fascia through an open incision, introduce the initial dilator through the skin incision and advance to the inferomedial edge of the rostral lateral mass at the operative level. Use sequential dilators to create a working portal within the soft tissues. Center the final working tube over the lateral aspect of the lamina and medial facet joint of the appropriate operative level. Secure the working tube to a sterile arm that is attached to the bed. Use lateral fluoroscopy to confirm the level. Complete unilateral laminoforaminotomy using a high-speed burr. Perform the laminoforaminotomy with the use of a high-speed drill and a Kerrison rongeur to create a working window into the foramen. A laminotomy is performed in the caudal lamina can be used to improve visualization of the nerve root. Once the high-speed burr has been used to thin the lamina and the epidural space is accessible, a Kerrison punch is used to continue the osseous resection from medial to lateral. Use a nerve hook to superiorly retract the nerve root, and perform a discectomy and decompression; Use a curet or nerve hook to identify the proximal border of the caudal pedicle. In order to perform a complete foraminal decompression, the nerve must be decompressed fully from the medial to lateral border of the caudal pedicle. Once the top of the pedicle is identified, use a nerve hook to assess the foramen. Use a 1- or 2-mm Kerrison punch to remove bone until the amount of osseous resection and the room available to the nerve are satisfactory After the laminotomy has been completed, a nerve hook can be used to gently retract the nerve root in a cephalad direction to inspect for any disc fragments. Remove any visible, loose disc fragments with a micro-pituitary rongeur. Control bleeding with powdered Gelfoam and bipolar cautery. Copiously irrigate the wound with normal saline solution. Obtain hemostasis with electrocautery or hemostatic foam. Close the wound in layers.

Description of Post-Service Work:
Immediate postoperative care [through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with nursing staff.

Later same day hospital care visit after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Examine patient, check wound(s) and patient progress, and monitor for abnormal neurological findings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Subsequent hospital care: Each day, review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Examine patient, check wound(s) and patient progress, and monitor for abnormal neurological findings. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Discharge day management: Review interval nursing/other staff chart notes. Evaluate vital signs and intake/output. Examine patient, check wound(s) and patient progress, and assess neurological findings. Assess pain scores and adequacy of analgesia. Review postdischarge wound care and activity limitations, including planned physical therapy. Answer questions from patient and/or family, nursing, and other provider(s). Write orders for post-discharge films, medications, and therapy. Chart patient discharge notes.

Office: Examine patient and perform periodic neurological exams. Write orders for medications. Order and review follow-up films. Monitor wounds and remove staples, when appropriate. Assess pain scores and adequacy of analgesia. Check PMP registry and discuss decreasing or discontinuing opioid medications, muscle relaxants, and other analgesic management. Discuss advancing activities, including return to work/school, provide appropriate documentation when needed for return to work/school; discuss safe return to driving when appropriate. Review physical therapy progress and revise orders as needed. Dictate patient progress notes for medical chart. Answer questions from patient and/or family, and insurance staff. Discuss (oral and written) patient progress with referring physician.

Technical skill required	0%	50%	50%
Physical effort required	13%	46%	42%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	58%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2018, AMA Staff reviewed services with anomalous sites of service when compared to Medicare utilization data. Code 63030 was identified with Medicare data from 2014-2017e indicated that it was performed less than 50% of

the time with inpatient status, yet included inpatient hospital Evaluation and Management services within the global period. In January 2019, the RUC reviewed an action plan and recommended that code 63030 be reviewed in two years (January 2021) to determine if the CPT 2017 changes were effective to ensure correct reporting of this service. In December 2020, the RAW noted that 63030 continued to have outpatient status more than 50% of the time. The specialty society indicated that there was still coding confusion and the RUC recommended that CPT code 63030 be referred to CPT to revise the descriptor to exclude the types of procedures that are thought to be causing the incorrect reporting in the outpatient setting, such as explicitly stating the types of situations for which CPT code 63030 should not be used. The CPT code change application to differentiate inpatient (63030) versus outpatient (630X0) was rejected by the CPT Panel. In rejection the application, the Panel noted that the proposed descriptor changes "were not unique, well-defined, and described a procedure or service which is clearly identified and distinguished from existing procedures and services already in CPT." This resulted in code 63030 (lumbar) reverting back to the RUC for survey. The societies added code 63020 (cervical) and +63035 (additional level) as family codes for review.

Recommendation - 63020

We recommend the survey 25th percentile work RVU of 15.95. Using magnitude estimation, a value of 15.95 accounts for both the decrease in intraoperative time and increase in postoperative work. This value also compares well with the key reference code 63047 which has slight less total time, but the same intensity.

Pre-time Package 4

Evaluation time: Standard package time of 40 minutes which is less than the survey median.

Positioning time: The survey median time of 20 minutes is recommended. This is less than the time allowed for supine positioning followed by prone positioning for posterior neck surgery package SS2.

Scrub, dress, wait time: The survey median time of 15 minutes is recommended which is less than package 4 time.

Post-time Package 9B

The survey median time of 30 minutes is recommended.

Postop Office Visits

The first visit will typically be level 99214 and includes a discussion with the patient of the preop presentation, review of the operative note and comparison of subjective and objective preop versus postop elements of function. Dressings will be removed, the wound will be assessed and sutures removed. The surgeon will verify the pathology report is consistent with disc material and no other concerning pathology, and reassure the patient with that information. Medication management is performed including a PDMP check and to verify use as appropriate with postop instructions and no adverse events. The surgeon will also discuss safely weaning the patient from narcotics and muscle relaxants, and discussing how the medication use might impact the patient's ability to work, drive, study, provide child care safely. The surgeon will further discuss appropriate use of NSAIDs (prescribed or OTC) and/or other analgesics to switch to as the patient is transitioned from narcotics and muscle relaxants. Orders for changes in medication will be made based on the patient's response to pain experience and medication adverse events. The surgeon will discuss activity guidance, advancing activities, and potential medication-impact on activity. The surgeon will review activity levels and discuss physical and occupation therapy needs and goals, including order therapy. The surgeon will also assess the need for bracing (eg, for foot droop). Shared decision making and assessment of the patient will be required to determine if further imaging or testing is needed, including whether an X-ray should be ordered if there are concerns for iatrogenic instability; whether an MRI should be ordered if there are concerns for incomplete decompression or recurrent HNP; and whether a UA and/or post-void residual is needed if there are concerns for urologic dysfunction. Functional needs are assessed that may require coordination with PM&R for a debilitated patient. In addition, return to work/school forms will be completed, including guidance on advancing activities toward full return to work/school after review of the patient's view of their work needs in context of their HR specified work needs.

The second and third visit will typically be level 99213 and include interval update of H&P, medication management, PT/OT progress review and order revision, interval imaging order as needed, and continued assessment of patient progress watching for recurrent HNP.

Key Reference Codes

KRS1 code 63047 is similar to 63020, but appropriately has a slightly lower RVW to account for the difference between lumbar and cervical spine surgery. Although KRS2 code 63075 and 63020 are both cervical spine operations, code 63075 has a higher RVW compared with 63020 to appropriately account for the added intensity and complexity of an

anterior cervical approach to the spine that includes dissection and protection of the trachea, esophagus and vessels including the carotid.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 63020

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 63020

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:63030 Tracking Number Original Specialty Recommended RVU: **13.18**
Presented Recommended RVU: **13.18**
Global Period: 090 Current Work RVU: **13.18** RUC Recommended RVU: **13.18**

CPT Descriptor: Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male presents with a 6-week history of progressive right leg pain unresponsive to conservative therapy. Imaging identified a right L5-S1 paracentral disc herniation resulting in right lateral recess stenosis. He undergoes a right L5-S1 discectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 82% , In the ASC 18%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 48% , Overnight stay-less than 24 hours 40% , Overnight stay-more than 24 hours 12%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 86%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis, as required, are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The patient is reexamined to confirm that physical findings have not changed; the patient's medication regimen has remained the same; the patient has no new allergies; and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The site of the proposed skin incision is marked. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available. Transfer of the patient from gurney to operating table, and position the patient prone on an OR table: Prior to the flip, prepare the operating table for the patient's pressure points to the size of the patient, adjust the chest support, the iliac crest support, and support over the proximal part of each thigh. Protective pads and restraints are placed, and the table is placed in a reverse Trendelenburg position to help with intraoperative bleeding. Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all imaging equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. A lateral radiograph with a metallic marker is taken to confirm the correct operative level and to mark the final plan for the surgical incision. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team. Standard sterile preparation and draping of the surgical site is completed.

Description of Intra-Service Work: An incision is made adjacent to the spinous process on the side of the abnormality over the operative level. Use lateral fluoroscopy to confirm the level. Release the deep lumbar fascia with a knife or Bovie electrocautery Reflect muscular attachments off of the vertebral lamina and medial facet complex. Secure retractors and achieve hemostasis. If using tubular dilators, instead of releasing the deep fascia through an open incision, introduce the initial dilator through the skin incision and advance to the inferomedial edge of the rostral lamina at the operative level. Use sequential dilators to create a working portal within the soft tissues. Center the final working tube over the lateral aspect of the lamina and medial facet joint of the appropriate operative level. Secure the working tube to a sterile arm that is attached to the bed. Perform the laminoforaminotomy with the use of a high-speed drill and a Kerrison rongeur to create a working window into the foramen. Once the high-speed burr has been used to thin the lamina and the epidural space is accessible, a

Kerrison punch is used to continue the osseous resection from medial to lateral. Address epidural bleeding. Use a nerve hook or Penfield 4 to dissect and retract the nerve root. Secure the traversing nerve root with a nerve root retractor. Perform a discectomy and decompression. Remove any evident free fragments of disc. Incise annulus of disc, remove any visible, loose disc fragments with a micro-pituitary rongeur. Contained disc fragments require incision of the posterior longitudinal ligament. Control bleeding with powdered Gelfoam and bipolar cautery. Copiously irrigate the wound with normal saline solution. Obtain hemostasis with electrocautery or hemostatic foam. Close the wound in layers.

Description of Post-Service Work:
Immediate postoperative care [through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with nursing staff.

Later same day hospital care visit after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Examine patient, check wound(s) and patient progress, and monitor for abnormal neurological findings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Next day subsequent hospital care and discharge management Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Examine patient, check wound(s) and patient progress, and monitor for abnormal neurological findings. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. When it is safe to discharge the patient, review postdischarge wound care and activity limitations, including planned physical therapy. Answer questions from patient and/or family, nursing, and other provider(s). Write orders for post-discharge films, medications, and therapy. Chart patient discharge notes.

Office: Examine patient and perform periodic neurological exams. Write orders for medications. Order and review follow-up films. Monitor wounds and remove staples, when appropriate. Assess pain scores and adequacy of analgesia. Check PMP registry and discuss decreasing or discontinuing opioid medications, muscle relaxants, and other analgesic management. Discuss advancing activities, including return to work/school, provide appropriate documentation when needed for return to work/school; discuss safe return to driving when appropriate. Review physical therapy progress and revise orders as needed. Dictate patient progress notes for medical chart. Answer questions from patient and/or family, and insurance staff. Discuss (oral and written) patient progress with referring physician.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	14%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2018, AMA Staff reviewed services with anomalous sites of service when compared to Medicare utilization data. Code 63030 was identified with Medicare data from 2014-2017e indicated that it was performed less than 50% of the time with inpatient status, yet included inpatient hospital Evaluation and Management services within the global period. In January 2019, the RUC reviewed an action plan and recommended that code 63030 be reviewed in two years (January 2021) to determine if the CPT 2017 changes were effective to ensure correct reporting of this service. In December 2020, the RAW noted that 63030 continued to have outpatient status more than 50% of the time. The specialty society indicated that there was still coding confusion and the RUC recommended that CPT code 63030 be referred to CPT to revise the descriptor to exclude the types of procedures that are thought to be causing the incorrect reporting in the outpatient setting, such as explicitly stating the types of situations for which CPT code 63030 should not be used. The CPT code change application to differentiate inpatient (63030) versus outpatient (630X0) was rejected by the CPT Panel. In rejection the application, the Panel noted that the proposed descriptor changes "were not unique, well-defined, and described a procedure or service which is clearly identified and distinguished from existing procedures and services already in CPT." This resulted in code 63030 (lumbar) reverting back to the RUC for survey. The societies added code 63020 (cervical) and +63035 (additional level) as family codes for review.

Important additional discussion about postoperative facility work

Many years ago, the RUC developed a policy for work and time inputs for codes where a patient went home the same day after a procedure and there was overlap in immediate post-work/time and later same day discharge work/time. The resolution by the RUC, with concurrence by CMS when proposed, was to indicate one-half discharge code (0.5 x99238) as a proxy for overlapping work on the same date. In fact, to accurately determine this, the RUC developed a new survey question to differentiate between same day discharge and next day discharge. The 0.5 x 99238 proxy initially was only applied to same day services. This reduction in discharge work was similar to E/M codes established for same day admit and discharge, where discharge did not get full value. On the other hand, a full discharge service code was allowed in global codes if the patient stayed one or more midnights, similar to E/M codes established for a facility visit on day 1 and a full discharge code on a subsequent date.

The facility status (observation versus inpatient) for patients who are placed in a hospital bed on a surgical floor postoperatively and stay overnight has been extensively discussed for more than 10 years. The early years of this discussion led to the "two-midnight rule." Unfortunately, CMS mixed facility status with physician work in developing a 23-hour outpatient stay policy about what E/M codes can and cannot be associated with a global code by assuming all claims with an outpatient facility status should be treated the same in terms of physician work independent of whether the work was performed on the same day as a procedure or the next day.

Surgical societies responded to the 23-hour outpatient stay policy when proposed by indicating that a patient can be admitted as inpatient and discharged the next day and maintain inpatient status if all the requirements for assignment of status were met in newly developed programs such as InterQual which are based on criteria of facility resource utilization. For example, if a patient came into the hospital with a diagnosis of acute renal failure with a creatinine of 6, used a vein light for IV access and was placed on IV fluids at 75cc/hour, the patient would not qualify for inpatient status. However, if the fluids ran at 100cc/hour or greater, the same patient would qualify for inpatient status. The physician work to order 75cc/hr versus 100cc/hr of fluids may not be different, but the resources used by the facility would be different and result in different payments to the facility. All of this is to say that physician work is judged by MDM or time and not by facility resources used.

In 2023, the inpatient versus observation (outpatient) reporting paradigm will change since there will be a single code to report on the date of admission and a single code to report on the subsequent discharge day that is independent of whether the patient's facility status is inpatient or observation. The establishment of a single combined inpatient/observation E/M code for each level of physician work is consistent with what surgeons have been saying since 2007 – an E/M visit for a patient in a hospital bed on the surgical floor is not dependent on the final facility status for the patient, but instead on the MDM (or total time) required. Any difference in patient acuity would result in more or less medical decision making and/or time and be reported appropriately.

In fact, at the October 2021 RUC meeting, the Research Subcommittee and the RUC agreed that postoperative physician E/M work should accurately be accounted for in global codes:

The Research Subcommittee recommends for the RUC Chair and the AMA to meet to advocate for CMS to change its policy for discharge day visits in the surgical global period, where the ½ day discharge proxy would only be applicable to services that typically involve a same-day discharge. Similarly, the Research Subcommittee recommends for the RUC Chair and the AMA to meet to advocate for CMS to eliminate its 23-hour stay policy of allocating the intra-service portion of the typically performed subsequent hospital visit to the immediate post-service time of an outpatient

procedure. The Research Subcommittee also recommends for an update on this meeting to be provided to the RUC after it takes place.**[Approved]**

All of the discussion above is meant to emphasize that reason needs to prevail in the discussion about accounting for "perceived" changes in physician work for patients who are not ambulatory and do not leave a hospital on the day of a procedure, but instead are admitted to the surgical ward, and—if medically able and appropriate—leave the next day. Although we will follow the 23-hour policy for code 63030 in this agenda tab, we emphasize that in 2023, there will no longer be different codes for hospital inpatient or observation care services and that movement of time and reduction of claims to "0.5" is counter to the RUC recommendation made at the October 2021 meeting .

Recommendation - 63030

We recommend maintaining the current work RVU of 13.18. Using magnitude estimation, a value of 13.18 accounts for both the decrease in postoperative facility work and increase in postoperative office work. As presented in the "Important additional discussion about postoperative facility work" above, we believe (and the RUC agrees) that full work should be accounted for in global codes. An E/M facility visit should not be decreased for surgical postop work in global codes and discharge day management work on the day after surgery. This is not less work than for medical patient on the day of and after admission for observation (ie, surgeons should not get credit for 0.5 x 99238 while physicians caring for medical patients are allowed to report 1.0 x 99238 for the same work). If the arbitrary discounting of global code E/M work was not implemented, the total time per the survey would be the same as current time, with only a shift of work from facility to office. Fundamentally, the total work for 63030 has not changed.

Pre-time Package 4

Evaluation time: Standard package time of 40 minutes which is less than the survey median.

Positioning time: The survey median time of 15 minutes is recommended. This is less than the time allowed for supine positioning followed by prone positioning for posterior thoracic/lumbar surgery package SS3.

Scrub, dress, wait time: The survey median time of 15 minutes is recommended which is less than package 4 time.

Post-time

A total of 40 minutes is shown which includes the survey median time of 30 minutes plus the intra-time of 10 minutes for current code 99231 per the CMS 23-hour outpatient policy—keeping in mind that in 2023, code 99231 will be revised to reflect both inpatient and observation (outpatient) E/M work. Additionally, 99238 has been shown as 0.5 x 99238 even though this patient will not typically be discharge on the same day and complete discharge day management work will be performed on the day after surgery.

Postop Office Visits

The first visit will typically be level 99214 and includes a discussion with the patient of the preop presentation, review of the operative note and comparison of subjective and objective preop versus postop elements of function. Dressings will be removed, the wound will be assessed and sutures removed. The surgeon will verify the pathology report is consistent with disc material and no other concerning pathology, and reassure the patient with that information. Medication management is performed including a PDMP check and to verify use as appropriate with postop instructions and no adverse events. The surgeon will also discuss safely weaning the patient from narcotics and muscle relaxants, and discussing how the medication use might impact the patient's ability to work, drive, study, provide child care safely. The surgeon will further discuss appropriate use of NSAIDs (prescribed or OTC) and/or other analgesics to switch to as the patient is transitioned from narcotics and muscle relaxants. Orders for changes in medication will be made based on the patient's response to pain experience and medication adverse events. The surgeon will discuss activity guidance, advancing activities, and potential medication-impact on activity. The surgeon will review activity levels and discuss physical and occupation therapy needs and goals, including order therapy. Shared decision making and assessment of the patient will be required to determine if further imaging or testing is needed, including whether an X-ray should be ordered if there are concerns for iatrogenic instability; whether an MRI should be ordered if there are concerns for incomplete decompression or recurrent HNP; and whether a UA and/or post-void residual is needed if there are concerns for urologic dysfunction. Functional needs are assessed that may require coordination with PM&R for a debilitated patient. In addition, return to work/school forms will be completed, including guidance on advancing activities toward full return to work/school after review of the patient's view of their work needs in context of their HR specified work needs.

The second and third visit will typically be level 99213 and include interval update of H&P, medication management, PT/OT progress review and order revision, interval imaging order as needed, and continued assessment of patient progress watching for recurrent HNP.

Key Reference Codes

KRS1 code 63047 is similar to 63020, but appropriately has a higher RVW to account for additional postop work. KRS2 code 22867 is more intense and complex than 63030 due to bilateral decompression as well as placement of an interlaminar/interspinous process stabilization/distraction device and therefore is appropriately valued higher.

CPT	DESCRIPTOR	Glob	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 63030

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

SUMMARY OF RECOMMENDATION

CPT Code:63035 Tracking Number Original Specialty Recommended RVU: **4.00**
Presented Recommended RVU: **4.00**
Global Period: ZZZ Current Work RVU: **3.15** RUC Recommended RVU: **4.00**

CPT Descriptor: Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: After performing a L5-S1 discectomy (separately reported) on a 50-year-old male with a 6-week history of progressive right leg pain unresponsive to conservative therapy and imaging studies that identified right-sided disc herniations at two levels, an additional level right L4-5 discectomy is performed. Note: This is an add-on service which only includes the work of the additional level discectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The incision is extended as necessary to facilitate exposure of the spinous process on the side of the abnormality over the next operative level. Use lateral fluoroscopy to confirm the level. Release the deep lumbar fascia with a knife or Bovie electrocautery Reflect muscular attachments off of the vertebral lamina and medial facet complex. Secure retractors and achieve hemostasis. If using tubular dilators, complete a second cycle of introducing and docking the tubular dilator over the involved disc space. Instead of releasing the deep fascia through an open incision, introduce the initial dilator through the skin incision and advance to the inferomedial edge of the rostral lamina at the operative level. Use sequential dilators to create a working portal within the soft tissues. Center the final working tube over the lateral aspect of the lamina and medial facet joint of the appropriate operative level. Secure the working tube to a sterile arm that is attached to the bed. Use lateral fluoroscopy to confirm the new level. Perform the laminoforaminotomy with the use of a high-speed drill and a Kerrison rongeur to create a working window into the foramen. Once the high-speed burr has been used to thin the lamina and the epidural space is accessible, a Kerrison punch is used to continue the osseous resection from medial to lateral. Address epidural bleeding. Use a nerve hook or Penfield 4 to dissect and retract the nerve root. Secure the traversing nerve root with a nerve root retractor. Perform a discectomy and decompression. Remove any evident free fragments of disc. Incise annulus of disc, remove any visible, loose disc fragments with a micro-pituitary rongeur. Contained disc fragments require incision of the posterior longitudinal ligament. Control bleeding with powdered Gelfoam and bipolar cautery. Copiously irrigate the wound with normal saline solution. Obtain hemostasis with electrocautery or hemostatic foam. The wound extension is closed in layers.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	69%	24%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	64%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	66%	31%
Physical effort required	7%	73%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	69%	27%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	71%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	71%	29%
Physical effort required	0%	57%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	71%	29%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2018, AMA Staff reviewed services with anomalous sites of service when compared to Medicare utilization data. Code 63030 was identified with Medicare data from 2014-2017e indicated that it was performed less than 50% of the time with inpatient status, yet included inpatient hospital Evaluation and Management services within the global period. In January 2019, the RUC reviewed an action plan and recommended that code 63030 be reviewed in two years (January 2021) to determine if the CPT 2017 changes were effective to ensure correct reporting of this service. In December 2020, the RAW noted that 63030 continued to have outpatient status more than 50% of the time. The specialty society indicated that there was still coding confusion and the RUC recommended that CPT code 63030 be referred to CPT to revise the descriptor to exclude the types of procedures that are thought to be causing the incorrect reporting in the outpatient setting, such as explicitly stating the types of situations for which CPT code 63030 should not be used. The CPT code change application to differentiate inpatient (63030) versus outpatient (630X0) was rejected by the CPT Panel. In rejection the application, the Panel noted that the proposed descriptor changes "were not unique, well-defined, and described a procedure or service which is clearly identified and distinguished from existing procedures and services already in CPT." This resulted in code 63030 (lumbar) reverting back to the RUC for survey. The societies added code 63020 (cervical) and +63035 (additional level) as family codes for review.

Compelling Evidence - flawed mechanism or methodology used in the previous valuation

1. Code 63035 is a Harvard-based code. The Harvard study method for reviewing "secondary codes" (ie, add-on codes) was to survey the primary code as a global code and the add-on code as a multiple of the primary code and then subtract one from the other to determine the additional work related to the secondary code.[1] So, for example, the data for code 63030 surveyed as a 90-day global code was compared with the data for code 63035 surveyed as a 90-day global code for 2 levels. Although this sounds like a good idea, the Harvard study used two different panels of neurosurgeons to survey each code resulting in data that did not make sense; some elements of work were lower for 63035even though a hemilaminectomy of 2 levels was performed. Further, the difference in total time between the two surveys was 51 minutes, but the final Harvard dataset indicated 49 minutes of intra-time for 63035. We believe this was a flaw methodology to determine both an absolute and relative value for 63035, resulting in an underestimation of time and work required, which meets compelling evidence.

2. The Harvard study solicited responses only from neurosurgeons (n=17) even though an almost equal number of orthopaedic surgeons perform this service. This also meets compelling evidence.

Recommendation - 63035

We recommend the survey median work RVU of 4.00.

Key Reference Codes

Code 63035 requires more time than KRS1 63048, supporting a higher value for 63035 and justifying the median survey value for this code. Code 63048 describes the work of extending a laminectomy to an additional level. In 63048, the skin incision is extended either higher or lower, followed by additional fascial incision and dissection of paraspinal muscles to expose the next level of the spine. Radiographic localization is not necessary, since the work is routinely performed at an adjacent level. Hence the exposure in 63048 builds off of the exposure used for the base code. For 63035, especially when using a tubular retractor system, the exposure is completed de novo. A new, unique fascial incision is made remotely from the base code fascial incision, followed by new dissection of paraspinal musculature and new placement of a retractor. For a tubular retractor, new radiographs are required for docking the retractor safely upon the lamina and ensuring appropriate retractor position. The exposure of 63035 is unique and does not directly build of the exposure of the base code and therefore requires more time and work when compared to 63048.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 63035 in conjunction with 63020-63030)

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2022

CPT Code	Long Descriptor	Global Period
63020	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, cervical	90
63030	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar	90
63035	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
63020	A 45-year-old female presents with intractable left arm pain unresponsive to conservative therapy. Imaging identified a left C5-6 foraminal disc herniation. She undergoes a left C5-6 laminoforaminotomy.
63030	A 50-year-old male presents with a 6-week history of progressive right leg pain unresponsive to conservative therapy. Imaging identified a right L5-S1 paracentral disc herniation resulting in right lateral recess stenosis. He undergoes a right L5-S1 discectomy.
63035	After performing a L5-S1 discectomy (separately reported) on a 50-year-old male with a 6-week history of progressive right leg pain unresponsive to conservative therapy and imaging studies that identified right-sided disc herniations at two levels, an additional level right L4-5 discectomy is performed. Note: This is an add-on service which only includes the work of the additional level discectomy.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The society advisors reviewed the current PE inputs for these facility only codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   current codes

3. Is this code(s) typically reported with an E/M service?

   no

PRESENTER(S): John Ratliff, MD (AANS); Karin Swartz, MD (NASS); Clemens Schirmer, MD (CNS); Hussein Elkousy, MD (AAOS): William Creevy, MD (AAOS)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

Increase in cost is due to increases in clinical labor rate, increased postop visit level; and addition of exam light for postop visits. The exam light is needed to assess the wound and remove staples and is a standard piece of equipment in a neurosurgeon and orthopaedic exam room.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

no

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

na

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

na

8. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Activity	Clinical Staff Work	TIME
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.	5
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.	20
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.	8
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.	20

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.	7

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions. Confirmation of discharge antibiotics if needed, and pain medication. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge.

c. Post-service period:

The clinical staff work includes the standard activities involved in any E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, and cleaning of the room.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

na

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

na

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

na

14. Are you recommending a PE supply pack for this recommendation? Yes
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

pack, post-op incision care (staple) SA052

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if

available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

pack, post-op incision care (staple)	SA052	pack	
kit, staple removal		kit	1
povidone soln (Betadine)		ml	10
gauze, sterile 4in x 4in		item	2
gloves, sterile		pair	1
steri-strip (6 strip uou)		item	2
swab-pad, alcohol		item	2
tape, surgical paper 1in (Micropore)		inch	12
tincture of benzoin, swab		item	1

16. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

na

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

na

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

no

19. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Office Visits
EQ168	light, exam	Office Visits

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Baroreflex Activation Therapy – Tab 12

Baroreflex activation therapy (BAT) treats heart failure symptoms and resistant hypertension by electrically stimulating carotid baroreceptors within the carotid artery. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways, reducing the heart's workload and helping it pump efficiently to relieve the often-debilitating symptoms of heart failure. The BAT modulation system received FDA approval in August 2019, and the CPT Editorial Panel approved conversion from a Category III code set to a Category I code set at the September 2024 CPT Panel meeting. This code family describes the implantation, replacement, revision, removal and interrogation/programming of a BAT modulation system and was surveyed for the January 2025 RUC meeting. The specialties initially surveyed using both a targeted sample from a vendor list and a random sample of the specialty societies' membership. Ultimately, the entire specialty society membership was surveyed.

64654 ***Initial open implantation of baroreflex activation therapy (BAT) modulation system, including lead placement onto the carotid sinus, lead tunnelling, connection to a pulse generator placed in a distant subcutaneous pocket (ie, total system), and intraoperative interrogation and programming***

The RUC reviewed survey results from 33 vascular surgeons and recommends the survey 25th percentile work RVU of 11.00, which appropriately accounts for the physician work required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 50 minutes immediate post-service time, 0.5-99238 and 1-99213 visit, which equals 252 minutes of total time.

The specialty society selected pre-service package time *4-FAC Difficult Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Proc* The selected time packages were modified to more accurately reflect pre-service and post-service time. The RUC agreed that a level three post-op visit (99213) is required to assess all incisions, perform wound care, perform a neurologic assessment and coordinate care for these medically labile patients. Moreover, the survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty society added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of this procedure, increasing it from 30 minutes to 50 minutes. The RUC agreed this was an appropriate allocation of post-service time considering the conventions of this policy.

The most complex part of this procedure involves dissecting around the carotid bulb. These patients have atherosclerotic risk factors, increasing their likelihood of concomitant carotid disease. Meticulous and careful dissection is required to minimize the risk of plaque embolization. Stroke is a real possibility, particularly with these patients who already have an elevated risk of stroke based on their co-morbidities. Additionally, the vagus

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

nerve, hypoglossal nerve, and occasionally a recurrent laryngeal nerve must be identified and preserved to avoid significant complications. Finally, sutures are placed into the adventitia and outer media of the arterial wall to ensure the leads are secured. A suture too deep could cause hematoma and even a dissection; a suture too superficial could result in lead disruption and failure of the implant.

To support the recommended work RVU of 11.00, the RUC compared the surveyed code to top key reference code 64582 *Open implantation of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array* (work RVU = 14.00, 140 minutes intra-service time, 294 minutes total time) and second key reference code 64568 *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator* (work RVU = 9.00, 90 minutes intra-service time, 275 minutes total time). The RUC recognized that the surveyed code is appropriately compared to the two key reference services in terms of intra-service and total time, as well as relative intensity and complexity. The second top key reference service CPT code 64568 has identical intra-service time compared to the surveyed code time, but the surveyed code requires significantly higher intensity for the physician to perform. Notably, the two key reference services chosen by survey respondents bracket the survey 25th percentile work RVU.

For additional support, the RUC referenced MPC code 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time, 283 minutes total time), noting that it is a strong comparator based on it having identical intra-service time as the surveyed code. Moreover, CPT code 19303 requires more total time and has a greater intensity to perform for the physician than CPT 64654, thus making it appropriate that code 64654 also has a higher work RVU. **The RUC recommends a work RVU of 11.00 for CPT code 64654.**

64655 ***Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; lead only***

The RUC reviewed survey results from 21 vascular surgeons and noted that the required minimum number of survey responses was not achieved. The RUC recommends the survey 25th percentile work RVU of 11.30, which accounts for the physician work required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238 and 1-99213 visit, which equals 242 minutes of total time.

The specialty society selected pre-service package time *4-FAC Difficult Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Proc* The selected time packages were modified to more accurately reflect pre-service and post-service time. The RUC agreed that a level three post-op visit (99213) is required to assess all incisions, perform wound care, perform a neurologic assessment and coordinate care for these medically labile patients. Moreover, the survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty society added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of this procedure, increasing it from 20 minutes to 40 minutes. The RUC agreed this was an appropriate allocation of post-service time considering the conventions of this policy.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

The most complex part of this procedure involves dissecting around the carotid bulb. This will be a redo field with scar tissue and is a greater risk for vessel wall injury and nerve injury. Meticulous and careful dissection is required to minimize the risk of plaque embolization. Tissue planes are more challenging given scar tissue formation. Stroke is a real possibility, particularly for these patients who typically already have an elevated risk of stroke based on their co-morbidities. Additionally, the vagus nerve, hypoglossal nerve, and occasionally a recurrent laryngeal nerve must be identified and preserved to avoid significant complications. In scared operative planes, this is even more challenging. Finally, sutures are placed into the adventitia and outer media of the arterial wall to ensure the leads are secured. In re-operative fields, the vessel wall can be stripped of the adventitia creating a challenge when securing the leads.

To support the recommended work RVU, the RUC compared the surveyed code to key reference code 64569 *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator* (work RVU = 11.00, 120 minutes intra-service time, 312 minutes total time) and second key reference code 64583 *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator* (work RVU = 14.50, 150 minutes intra-service time, 309 minutes total time). The RUC recognized that the surveyed code is appropriately compared to the two key reference services and maintains relativity within the code family. The surveyed code requires less intra-service and total time but requires significantly higher intensity for the physician to perform. The RUC noted that the overall time for BAT revision in CPT code 64655 compared to the implantation of CPT code 64654 is comparable to and consistent with the intensity differences between similar procedures that involve implantation versus revision of epidural and spinal cord implants. As is the case with CPT code 64655, the overall physician work and intensity involved with the revision of these types of implants is nearly the same or slightly higher than that of the original implant. The RUC agreed that the relative value between CPT codes 64654 and 64655 is appropriate based on magnitude estimation. The specialty society mentioned that most vascular surgeons have minimal experience with generator replacement or revision compared to other specialties. The physician work involved with this service is related to troubleshooting connections and ensuring a functioning device, which is different from a simple battery exchange common in most electrocardiology procedures. Given the technical nuance necessary for performing this procedure, in addition to the high-risk nature of the typical patient, the RUC agreed that the surveyed code requires greater intensity than the survey comparator services.

For additional support, the RUC referenced MPC codes 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time, 283 minutes total time) and 33207 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular* (work RVU = 7.80, 60 minutes intra-service time, 233.5 minutes total time), noting that these two services bracket the survey 25th percentile work RVU, total time and intensity despite both requiring intra-service time. **The RUC recommends a work RVU of 11.30 for CPT code 64655.**

64656 Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; pulse generator only

The RUC reviewed survey results from 22 vascular surgeons and noted that the required minimum number of survey responses was not achieved. The RUC recommends the survey 25th percentile work RVU of 8.01, which accounts for the physician work required to perform this service. The RUC recommends 18 minutes pre-service evaluation time, 1 minute pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 71 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238 and 1-99213 visit, which equals 187 minutes of total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty society selected pre-service package time *2-FACE Diff Pat/Straightfor Proc(no sedation/anes)* and post-service package *8A IV Sedation/Simple Procedure*. The selected time packages were modified to more accurately reflect pre-service and post-service time. The RUC agreed that a level three post-op visit (99213) is required to assess all incisions, perform wound care, perform a neurologic assessment and coordinate care for these medically labile patients. Moreover, the survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty society added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of this procedure, increasing it from 20 minutes to 40 minutes. The RUC agreed this was an appropriate allocation of post-service time considering the conventions of this policy.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 64583 *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator* (work RVU = 14.50, 150 minutes intra-service time, 309 minutes total time) and second key reference code 64569 *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator* (work RVU = 11.00, 120 minutes intra-service time, 312 minutes total time). The RUC recognizes that the surveyed code is appropriately compared to the two key reference services and maintains relativity within the code family. The surveyed code requires significantly less intra-service and total time but has a higher intensity for the physician and is a greater risk to perform. The specialty society mentioned that most vascular surgeons have minimal experience with generator replacement or revision compared to other specialties. The physician work involved with this service is related to troubleshooting connections and ensuring a functioning device, which is different from a simple battery exchange common in most electrocardiology procedures. The RUC agreed that the technical nuance and skill necessary for performing this procedure, in addition to the high-risk nature of the typical patient, justifies the recommended intra-service time for the surveyed code.

For additional support, the RUC referenced CPT code 33725 *Transcatheter removal of permanent leadless pacemaker, right ventricular, including imaging guidance (eg, fluoroscopy, venous ultrasound, ventriculography, femoral venography), when performed* (work RVU = 8.59, 75 minutes intra-service time, 188 minutes total time), noting that it is a strong comparator based on it similar intra-service and total time as the surveyed code. Moreover, CPT code 33275 requires a greater intensity to perform for the physician than CPT 64656, thus making it appropriate that it also has a higher work RVU. **The RUC recommends a work RVU of 8.01 for CPT code 64656.**

64657 ***Removal of baroreflex activation therapy (BAT) modulation system; total system, including lead and pulse generator***
The RUC reviewed survey results from 22 vascular surgeons and noted that the required minimum number of survey responses was not achieved. The RUC recommends the survey 25th percentile work RVU of 12.13, which accounts for the physician work required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 115 minutes intra-service time, 50 minutes immediate post-service time, 0.5-99238 and 1-99213 visit, which equals 277 minutes of total time.

The specialty society selected pre-service package time *4-FAC Difficult Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Proc* The selected time packages were modified to more accurately reflect pre-service and post-service time. The RUC agreed that a level three post-op visit (99213) is required to assess all incisions, perform wound care, perform a neurologic

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

assessment and coordinate care for these medically labile patients. Moreover, the survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty society added 30 minutes of intra-service time from CPT code 99233 to the immediate post-service time of this procedure, increasing it from 20 minutes to 50 minutes. The RUC agreed this was an appropriate allocation of post-service time considering the conventions of this policy.

This procedure is the most complicated procedure with regard to time and intensity in this code family. The typical patient has a complete explant of the lead and generator for infection. The system may be functioning properly, and the explant may have intra-operative complications including cardiovascular instability from sympathetic/parasympathetic dysregulation and/or a Systemic Inflammatory Response Syndrome (SIRS)/Sepsis response in the setting of infection, which is typical. Like the other revision codes in this code set, this procedure is always in non-virgin tissue planes and scar tissue can increase the risk of vessel damage and stroke. Additionally, infection can make the tissue planes inflamed and difficult to determine. Nerve identification can be challenging. Patients are at risk for vagus, hypoglossal, or recurrent laryngeal nerve injury. All implants must be removed in their entirety and wound care is performed. Incisions may not be closed, depending on the clinical situation.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 64584 *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array* (work RVU = 12.00, 120 minutes intra-service time, 275 minutes total time) and second key reference code 64570 *Removal of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator* (work RVU = 9.10, 90 minutes intra-service time, 259 minutes total time). The RUC recognizes that the surveyed code is appropriately compared to the two key reference services in terms of intra-service and total time, as well as relative intensity and complexity. The top key reference service CPT code 64584 has nearly identical intra-service and total time, but the surveyed code requires a slightly higher intensity for the physician to perform. The surveyed code is more intense than the top key reference code 64584, removal of hypoglossal nerve neurostimulator array, as removal of this device for the typical patient for 64584 is not performed due to infection.

For additional support, the RUC referenced CPT codes 64584 *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array* (work RVU = 12.00, 120 minutes intra-service time, 275 minutes total time) and 64581 *Open implantation of neurostimulator electrode array; sacral nerve (transforaminal placement)* (work RVU = 12.20, 120 minutes intra-service time, 269 minutes total time), noting that both codes are strong comparators based on similar intra-service and total time to the surveyed code. While CPT code 64657 has slightly less intra-service time, it requires greater intensity for the physician to perform, as well as slightly more total time. **The RUC recommends a work RVU of 12.13 for CPT code 64657.**

64658 ***Removal of baroreflex activation therapy (BAT) modulation system; total system, including lead and pulse generator; lead only***
The RUC reviewed survey results from 20 vascular surgeons and noted that the required minimum number of survey responses was not achieved. recommends the survey 25th percentile work RVU of 8.95, which accounts for the physician work required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238 and 1-99213 visit, which equals 242 minutes of total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty society selected pre-service package time *4-FAC Difficult Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Proc* The selected time packages were modified to more accurately reflect pre-service and post-service time. The RUC agreed that a level three post-op visit (99213) is required to assess all incisions, perform wound care, perform a neurologic assessment and coordinate care for these medically labile patients. Moreover, the survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty society added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of this procedure, increasing it from 20 minutes to 40 minutes. The RUC agreed this was an appropriate allocation of post-service time considering the conventions of this policy.

Similar to 64657, this procedure is typically performed in the setting of infection. Similar to the other revision codes in this code set, this procedure is always in non-virgin tissue planes and scar tissue can increase the risk of vessel damage and stroke. Additionally, infection can make the tissue planes inflamed difficult to determine. Nerve identification can be challenging. Patients are at risk for vagus, hypoglossal, or recurrent laryngeal nerve injury. All implants must be removed in their entirety and wound care is performed. Incisions may not be closed, depending on the clinical situation.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 64584 *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array* (work RVU = 12.00, 120 minutes intra-service time, 275 minutes total time) and second key reference code 64570 *Removal of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator* (work RVU = 9.10, 90 minutes intra-service time, 259 minutes total time). The RUC recognizes that the surveyed code is appropriately compared to the two key reference services in terms of intra-service and total time, as well as relative intensity and complexity. The surveyed code is more intense than in 64584, removal of hypoglossal nerve neurostimulator array, as removal of this device for the typical patient for 64584 is not performed due to infection. The second key reference service CPT code 64570 has identical intra-service and less total time overall; thus, the surveyed code is valued slightly less despite it requiring slightly higher intensity for the physician to perform. The specialty society mentioned that most vascular surgeons have minimal experience with generator replacement or revision compared to other specialties.

For additional support, the RUC referenced MPC codes 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time, 283 minutes total time) and 33207 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular* (work RVU = 7.80, 60 minutes intra-service time, 233.5 minutes total time), noting that these two services bracket the survey 25th percentile work RVU, total time and overall intensity despite both requiring less intra-service time. **The RUC recommends a work RVU of 8.95 for CPT code 64658.**

64659 ***Removal of baroreflex activation therapy (BAT) modulation system; total system, including lead and pulse generator; pulse generator only***

The RUC reviewed survey results from 20 vascular surgeons and noted that the required minimum number of survey responses was not achieved. The RUC recommends the survey 25th percentile work RVU of 8.23, which accounts for the physician work required to perform this service. The RUC recommends 18 minutes pre-service evaluation time, 1 minute pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 76 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238 and 1-99213 visit, which equals 192 minutes of total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty society selected pre-service package time *2-FACE Diff Pat/Straightfor Proc(no sedation/anes)* and post-service package *8A IV Sedation/Simple Procedure*. The selected time packages were modified to more accurately reflect pre-service and post-service time. The RUC agreed that a level three post-op visit (99213) is required to assess all incisions, perform wound care, perform a neurologic assessment and coordinate care for these medically labile patients. Moreover, the survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty society added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of this procedure, increasing it from 20 minutes to 40 minutes. The RUC agreed this was an appropriate allocation of post-service time considering the conventions of this policy.

Similar to 64657 and 64658, this procedure is typically performed in the setting of infection. Given the infectious nature, the additional time relative to 64656 is likely related to dealing with the infection including providing intra-operative wound care. The system may be functioning properly, and the explant may have intra-operative complications including cardiovascular instability from sympathetic/parasympathetic dysregulation and/or a Systemic Inflammatory Response Syndrome (SIRS)/Sepsis response.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 64584 *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array* (work RVU = 12.00, 120 minutes intra-service time, 275 minutes total time) and second key reference code 33262 *Removal of implantable defibrillator pulse generator with replacement of implantable defibrillator pulse generator; single lead system* (work RVU = 5.81, 60 minutes intra-service time, 150 minutes total time). The RUC recognized that the surveyed code is appropriately compared to the two key reference services and maintains relativity within the code family. Compared to the top key reference code 64584, the surveyed code requires significantly less intra-service and total time but requires greater intensity for the physician to perform. Compared to the second key reference code 33262, the surveyed code requires more intra-service and total time, as well as greater intensity to perform. The surveyed code 25th percentile is appropriately bracketed by the two reference codes based on work RVU.

For additional support, the RUC referenced MPC codes 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time, 283 minutes total time) and 33207 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular* (work RVU = 7.80, 60 minutes intra-service time, 233.5 minutes total time), noting that these two services bracket the survey 25th percentile work RVU, total time and intensity despite both requiring intra-service time. **The RUC recommends a work RVU of 8.23 for CPT code 64659.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

93145 ***Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (BAT) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); without programming***

The RUC reviewed survey results from 27 cardiologists and cardiac electrophysiologists and noted that the required minimum number of survey responses was not achieved. The RUC recommends the survey 25th percentile work RVU of 0.79, which accounts for the physician work required to perform this service. The RUC recommends 7 minutes pre-service evaluation time, 10 minutes intra-service time and 5 minutes immediate post-service time, which equals 22 minutes of total time.

The physician work involved with this service describes the reporting of the interrogation of the BAT modulation system to monitor device diagnostics and programmed therapy values with interpretation and report without programming.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 93279 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system or leadless pacemaker system in one cardiac chamber* (work RVU = 0.65, 10 minutes intra-service time, 22 minutes total time) and second key reference code 93281 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system* (work RVU = 0.85, 15 minutes intra-service time, 32 minutes total time). The RUC recognizes that the surveyed code is appropriately compared to the two key reference services in terms of intra-service and total time, as well as relative intensity and complexity. The top key reference service CPT code 93279 has identical intra-service time and nearly identical total time as the surveyed code. Notably, the surveyed code has a higher estimated intensity and complexity measure than the two key reference services, which is appropriate based on these codes' relative values.

For additional support, the RUC referenced MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time, 26 minutes total time) and 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93, 15 minutes intra-service time, 20 minutes total time). The RUC recognized that the survey 25th percentile work RVU is bracketed by the two MPC codes in terms of work RVU and intensity. **The RUC recommends a work RVU of 0.79 for CPT code 93145.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

93146 ***Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (BAT) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); with programming, including optimization of tolerated therapeutic level setting***

The RUC reviewed survey results from 28 cardiologists and cardiac electrophysiologists and noted that the required minimum number of survey responses was not achieved. The RUC recommends the survey 25th percentile work RVU of 0.90, which accounts for the physician work required to perform this service. The RUC recommends 8 minutes pre-service evaluation time, 15 minutes intra-service time and 7 minutes immediate post-service time, which equals 30 minutes of total time.

The physician work involved with this service describes the reporting of the interrogation of the BAT modulation system to monitor device diagnostics and programmed therapy values with interpretation, report, and programming. Unlike CPT code 93145, this also includes optimization of tolerated therapeutic level setting.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 93281 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system* (work RVU = 0.85, 15 minutes intra-service time, 32 minutes total time) and second key reference code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.92, 30 minutes intra-service time, 47 minutes total time). The RUC recognizes that the surveyed code is appropriately compared to the two key reference services in terms of intra-service and total time, as well as relative intensity and complexity. The top key reference service CPT code 93281 has identical intra-service time compared to the surveyed code time, but the surveyed code is slightly more intense and complex to perform Notably, the two key reference services bracket the survey 25th percentile.

For additional support, the RUC referenced MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time, 26 minutes total time) and 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time, 26 minutes total time) noting that these two services bracket the survey 25th percentile work RVU, total time and intensity. **The RUC recommends a work RVU of 0.90 for CPT code 93146.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. For CPT code 93146, when considering the minutes included in CA021 *Perform procedure/service---NOT directly related to physician work time*, the PE Subcommittee discussed whether a six-minute walk test is included; it is not as CPT code 94618 *Pulmonary stress testing (eg, 6-minute walk test), including measurement of heart rate, oximetry, and oxygen titration, when performed* can be reported separately. The PE Subcommittee recommends that the specialty societies request a CPT parenthetical edit to clarify this point. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology
CPT codes 64654, 64655, 64656, 64657, 64658, 64659, 93145 and 93146 will be placed on the New Technology list to be reviewed by the RUC in three years.

RUC Database Flag
The RUC recommends that this entire code family be flagged for "Do Not Use to Validate Physician Work-Low Survey Response" in the RUC database. This entire code family after three years of data for this flag and new technology.

Autonomic Nervous System Modulation

Codes 64654, 64655, 64656, 64657, 64658, 64659 describe treatment of resistant hypertension or heart failure using a baroreflex activation therapy (BAT) modulation system comprised of a lead implanted onto the carotid sinus that is then tunneled and connected to a pulse generator placed in a subcutaneous pocket created in the pectoral region.

Code 64654 describes implantation of the BAT modulation system, including the pulse generator and lead.

Codes 64655, 64656 describe revision or replacement of one of the components of a BAT modulation system. Code 64655 describes revision or replacement of only the lead, and 64656 describes the revision or replacement of only the pulse generator.

Codes 64657, 64658, 64659 describe removal of one or both components of a BAT modulation system. Code 64657 describes removal of the total BAT system (ie, both the lead and pulse generator). Code 64658 describes the removal of only the lead. Code 64659 describes removal of only the pulse generator.

Interrogation and programming of the BAT system, when performed during the same session as system component implantation, replacement, or revision, is considered inherent to the procedure and not separately reported. Interrogation including programming when performed, of the BAT system on a separate date is reported with 93145, 93146.

●64654	V1	Initial open implantation of baroreflex activation therapy (BAT) modulation system, including lead placement onto the carotid sinus, lead tunnelling, connection to a pulse generator placed in a distant subcutaneous pocket (ie, total system), and intraoperative interrogation and programming Do not report 64654 in conjunction with 35701, 64655, 64656, 64657, 64658, 64659) (Do not report 64654 in conjunction with 93145, 93146, during the same operative session)	090	11.00
●64655	V2	Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; lead only (Do not report 64655 in conjunction with 35701, 64654, 64656, 64657, 64658, 64659)	090	11.30

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

●64656	V3	pulse generator only (Do not report 64656 in conjunction with 35701, 64654, 64655, 64657, 64658, 64659) (Do not report 64655, 64656 in conjunction with 93145, 93146, during the same operative session)	090	8.01
●64657	V4	Removal of baroreflex activation therapy (BAT) modulation system; total system, including lead and pulse generator (Do not report 64657 in conjunction with 35701, 64654, 64655, 64656, 64658, 64659)	090	12.13
●64658	V5	lead only (Do not report 64658 in conjunction with 35701, 64654, 64655, 64656, 64657, 64659)	090	8.95
●64659	V6	pulse generator only (Do not report 64659 in conjunction with 35701, 64654, 64655, 64656, 64657, 64658) (For interrogation and/or programming of the BAT modulation system at a session separate from implantation, replacement, or revision, see 93145, 93146)	090	8.23

Medicine
Cardiovascular
Implantable, Insertable, and Wearable Cardiac Device Evaluations

93297 *Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional*

(For heart rhythm derived data elements, use 93295)

(Do not report 93297 in conjunction with 93264, 93290, 93298, 99091, 99454)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(Report 93297 only once per 30 days)

93298 *subcutaneous cardiac rhythm monitor system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional*

(Do not report 93298 in conjunction with 33285, 93291, 93297, 99091, 99454)

(Report 93298 only once per 30 days)

(For remote monitoring of an implantable wireless pulmonary artery pressure sensor, use 93264)

Implantable Cardiovascular Autonomic Nervous System Device Evaluation (Blue Subheading)

Device evaluation of a baroreflex activation therapy (BAT) modulation system comprised of a lead implanted onto the carotid sinus that is connected to a pulse generator placed in a subcutaneous pocket is reported with 93145 (without programming) and 93146 (with programming). Code 93146 includes the work of 93145. Codes 93145, 93146 may only be reported once per day.

Interrogation with or without programming of the BAT system, when performed during the same session as system component implantation, replacement, or revision, is considered inherent to the procedure and not separately reported.

●93145	V7	Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (BAT) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); without programming	XXX	0.79
●93146	V8	with programming, including optimization of tolerated therapeutic level setting (Do not report 93146 in conjunction with 93145) (Do not report 93145, 93146 in conjunction with 64654, 64655, 64656, 64657)	XXX	0.90

Category III Codes

~~0266T Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

~~0267T lead only, unilateral (includes intra-operative interrogation, programming, and repositioning, when performed)~~

~~(For bilateral lead implantation or replacement, use 0267T with modifier 50)~~

~~0268T pulse generator only (includes intra-operative interrogation, programming, and repositioning, when performed)~~

~~(Do not report 0267T, 0268T in conjunction with 0266T, 0269T-0273T)~~

(0266T, 0267T, 0268T have been deleted)

(For open implantation of BAT modulation system, including lead placement onto the carotid sinus, with lead tunnelling and connection to a pulse generator placed in a distant subcutaneous pocket [ie, total system], use 64654)

(For revision or replacement of BAT modulation system lead, use 64655)

(For revision or replacement of BAT modulation system pulse generator, use 64656)

~~0269T Revision or removal of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)~~

~~(Do not report 0269T in conjunction with 0266T-0268T, 0270T-0273T)~~

~~0270T lead only, unilateral (includes intra-operative interrogation, programming, and repositioning, when performed)~~

~~(Do not report 0270T in conjunction with 0266T-0269T, 0271T-0273T)~~

~~(For bilateral lead removal, use 0270T with modifier 50)~~

~~(For removal of total carotid sinus baroreflex activation device, use 0269T)~~

~~0271T pulse generator only (includes intra-operative interrogation, programming, and repositioning, when performed)~~

~~(Do not report 0271T in conjunction with 0266T-0270T, 0272T, 0273T)~~

~~(For removal and replacement, see 0266T, 0267T, 0268T)~~

(0269T, 0270T, 0271T have been deleted)

(For removal of BAT modulation system pulse generator, use 64659)

(For revision or replacement of BAT modulation system lead, use 64655. For removal of BAT modulation system lead, use 64658)

(For revision or replacement of BAT modulation system pulse generator, use 64656. For removal of BAT modulation system pulse generator, use 64659)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64654 Tracking Number V1 Original Specialty Recommended RVU: **11.00**
Presented Recommended RVU: **11.00**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **11.00**

CPT Descriptor: Initial open implantation of baroreflex activation therapy (BAT) modulation system, including lead placement onto the carotid sinus, lead tunnelling, connection to a pulse generator placed in a distant subcutaneous pocket (ie, total system), and intraoperative interrogation and programming

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male suffers from dyspnea on exertion, fatigue, and edema. He has failed guideline-directed medical therapy, has NYHA Classification of Level III and CRT therapy is not an option due to a narrow QRS. He continues to have shortness of breath while walking one block. His heart failure status is progressively worsening indicating a need for additional treatment. He is referred for implantation of a baroreflex activation therapy modulation system.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 21% , Overnight stay-less than 24 hours 55% , Overnight stay-more than 24 hours 24%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Preservice work includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. A history of prior neck or chest surgeries and a history of prior radiation is specifically reviewed with the patient. Careful final review of imaging is performed. This includes review of neck cross-sectional imaging and ultrasound imaging. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The surgeon ensures availability of all instruments and implants necessary for the procedure. Adequate personnel support for barostimulator localization is ensured. The surgeon supervises appropriate patient positioning on the OR table, marks the carotid bifurcation, and marks the planned incisions. The surgeon supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: An incision is made over the carotid bulb. After surgical exposure and mobilization of the right carotid sinus, mapping of the optimal location for placement of the baroreflex activation therapy (BAT) modulation system carotid sinus lead is performed. The BAT system is checked and the blood pressure response is assessed, to confirm correct placement of the lead. The lead is then implanted over the mapped location of the baroreceptors with 6 circumferential sutures, securing the lead to the adventia layer of the carotid wall. Next, attention is turned to creating a subcutaneous pocket in the pectoral region for placement of the implantable BAT pulse generator. A strain-relief loop in the lead is created and the lead is tunneled supraclavicularly and subcutaneously to connect to the pulse generator. The BAT system is checked. The pulse generator is then placed into the pocket. All wounds are irrigated, hemostasis is obtained, and incisions are closed in routine fashion with absorbable and/or non-absorbable sutures and/or staples.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit. Assessment of neurologic function takes place in the operating room with a comprehensive neurological exam. Stability of the neurologic exam compared to baseline is ensured prior to leaving the operating room. Postoperative orders for medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is written. An operative report is dictated which includes a detailed description of all radiographic images. A copy is sent to the referring physician. Cardiology is notified of the patient's admission. Patients are assessed daily for hemodynamic stability, surgical site complications, and any neurological changes. Hematoma formation is a common complication given most patients are on antiplatelet and anticoagulant medications. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily. Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office:
At the office visit, an interval history is solicited for ongoing or new symptoms; the chest is examined for infection, tenderness, complications of hematoma or seroma. The neck incision is assessed for inflammation, drainage, and wound infection. A full neurologic exam is performed. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary. Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart. Follow-up with provider performing programing of the device is ensured.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	45%	55%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	45%	45%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	64%	36%
Physical effort required	0%	82%	18%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	45%	55%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	27%	73%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	36%	64%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	55%	45%
Physical effort required	0%	73%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	36%	64%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With the increased utilization and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation, replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT works by electrically stimulating carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often debilitating symptoms of heart failure.

Survey Methodology

The Society for Vascular Surgery (SVS) surveyed all codes related to implantation, replacement, revision, and removal (64654-64659). Originally SVS conducted the survey using both a targeted sample (vendor list) and a random sample of the SVS membership. However, due to the low response rate, the SVS ended up surveying the entire SVS membership.

Pre-Service Time

64654, 64655, 64657, and 64658
Pre-service package 4 is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

Pre service evaluation – Package 4 has 40 minutes. The survey median pre service evaluation time is 60 minutes (64654/64655=59). The specialties recommend deleting 20 minutes (19 minutes for 54 & 55) to achieve the package evaluation time.

Positioning – Package 4 has 3 minutes. An additional 12 minutes of positioning time is requested for these codes given the positioning related to the neck incision. This is consistent with the results of our survey. The patient is placed in the "beach chair" position. A shoulder role is typically placed. The neck is extended and rotated away from the side of surgery. This is done in concert with anesthesia to ensure the endotracheal tube is not dislodged and is secure so it does not become dislodged over the course of surgery. The endotracheal tube is secured appropriately under the observation of the surgeon to ensure an appropriate field for skin preparation. The carotid bifurcation is marked and all planned incisions are marked. This extra positioning time is consistent with other vascular codes involving carotid dissection: carotid endarterectomy (35301), carotid-carotid bypass with vein (35501), Retrograde carotid stent (37217). Extra positioning time is externally similar to other procedures in the neck region: total thyroidectomy (60240) and excision of carotid body tumor (60605)

Scrub/Dress/Wait – Package 4 has 20 minutes. The survey median time is 15 min. The specialties are recommending deleting 5 min from the "observe (wait anesthesia care)" portion to achieve 15 minutes of SDW time.

Immediate Post-Service Time

64654, 64655, 64657, and 64658
Post-service package 9B is appropriate for BAT procedures which involve dissection at the carotid bulb.

64654 – Package 9B is 33 minutes. The survey median time is 30 minutes. The societies recommend deleting 3 minutes from the "monitor patient recovery/stabilization" to achieve the surveyed time of 30 minutes

Post Operative Hospital Care

23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy

> *Excerpt from: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations*
>
> *CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to include bundle subsequent hospital visits (eg 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intraservice portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure.*
>
> *If the survey results indicate that a 23-hour stay with a subsequent hospital visit is typical and the Medicare claims data (if available) show that the service is typically performed in the outpatient setting, then the surveying specialties may add the post-operative visit intra-service time to the immediate post-operative physician time and not list a subsequent hospital visit in the recommendation. For example, if the survey data for a 23-hour stay code includes 15 minutes of immediate post-service time and one 99232 post-operative visit*

(20 minutes of intra-service time), then the recommendation could include 35 minutes of immediate post-service time and no subsequent hospital visit.

The survey results indicated that these procedures were typically performed in the hospital setting. The survey data results also indicated that patients were not typically discharged on the same day as the procedure (range 14%-29%). The survey results indicated that at least a 23-hour stay with a subsequent hospital visit was typical. As such, the specialty society has added 20 minutes of intra-service time (intra time for a 99232) to the immediate post-service time of procedures 64654, 64655, 64656, 64658 and 64659 and is not recommending a subsequent hospital visit.

Post Operative Office Visits

The survey results were varied for number and complexity of all post-operative visits. The expert panel suggests one level 3 visit for all codes. A low complexity visit of at least 20 minutes is required to assess all incisions and perform wound care, perform a neurologic assessment, and coordinate care for these medically labile patients.

Comparison with Key Reference Services

There were 4 codes that were chosen most often as key reference services for 64654-64659

- 64568, *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator*
- 64569, *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*
- 64583, *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator*
- 64584, *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array*

The following table incorporates our recommended RVW for 64654-64659 along with the key reference services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64568 KRS	9.00	0.069	275	33	3	15	90	30	31, 38	13x2
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64569 KRS	11.00	0.044	312	40	3	15	120	30	31, 38	13x2
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64584 KRS	12.00	0.063	275	40	15	15	120	20	0.5x38	13x2
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
64583 KRS	14.50	0.067	309	40	20	14	150	20	0.5x38	13x2

Comparison to MPC codes

The following MPC codes bracket our recommendations for BAT

- 33207, *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular*
- 19303, *Mastectomy, simple, complete*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33207 MPC	7.80	0.047	234	10	13	20	60	30	32, 38	13
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
19303 MPC	15.00	0.102	283	40	3	15	90	30	0.5x38	13x2, 14

For CPT code 64654, the society recommends the 25th percentile survey value of 11.00 RVW.

This code represents the base for all following codes and had the highest response rate in our survey with median experience of 4 procedures. Without this procedure done first, none of the other procedures in this set would be possible.

The most complex part of this procedure involves dissecting around the carotid bulb. These patients have atherosclerotic risk factors, increasing their likelihood for concomitant carotid disease. Meticulous and careful dissection is required to minimize risk of plaque embolization. Stroke is a real possibility, particularly with these patients who already have an elevated risk of stroke based on their co-morbidities. Additionally, the vagus nerve, hypoglossal nerve, and occasionally a recurrent laryngeal nerve must be identified and preserved to avoid untoward and even devastating complications. Finally, sutures are placed into the adventia and outer media of the arterial wall to ensure the leads are secured. Suture too deep could cause hematoma and even a dissection. Suture too superficial could result in lead disruption and failure of the implant. An intensity of 0.077 seems to the society to fit nicely between carotid endartectomy (35301 IWPUT 0.104) which involves clamping of the carotid and open implantation of cranial nerve neurostimulator (64569, IWPUT 0.069, KRS) which does not require carotid wall sutures.

For post-procedure work, survey median time was 30 minutes. A 99232 hospital visit of 20 minutes, from our survey, was added to the post-time, totaling 50 minutes of immediate post time.

Summary

The new family of CPT codes for BAT represent a set of codes for this new technology. The base code 64654, will be the most commonly performed procedure in this code set. The other 5 codes, 64655-64659, represent replacement, revision, or removal. The Society for Vascular Surgery believes these codes will be infrequently used. Given the patient population with heart failure refractory to medical management and the proximity to the carotid arteries, the overall intensity of these procedures reflects these factors.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0266T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

CPT Descriptor: Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; lead only

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. At a recent device check, the lead was found to have fractured and is no longer functioning requiring replacement with a new lead to restore normal system function.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 19% , Overnight stay-less than 24 hours 48% , Overnight stay-more than 24 hours 33%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Preservice work includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. A history of prior neck or chest surgeries and a history of prior radiation is specifically reviewed with the patient. Careful final review of imaging is performed. This includes review of neck cross-sectional imaging and ultrasound imaging. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The surgeon ensures availability of all instruments and implants necessary for the procedure. Adequate personnel support for barostimulator localization is ensured. The surgeon supervises appropriate patient positioning on the OR table, marks the carotid bifurcation, and marks the planned incision. The surgeon supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: An incision is made over the carotid bulb. After surgical exposure and mobilization of the right carotid sinus, the baroreflex activation therapy (BAT) modulation system carotid sinus existing lead is detached from the carotid wall. Next, the subcutaneous pocket is opened and the fractured lead is disconnected and the lead is carefully extracted, possibly from both the neck incision and the subcutaneous pocket. After lead extraction, mapping of the optimal location for replacement of the lead is performed. The new lead is then implanted over the mapped location of the baroreceptors with 6 circumferential sutures, securing the lead to the adventia layer of the carotid wall. The lead is then tunneled and connected with the BAT pulse generator in the pectoral region. The BAT system is checked. The pulse generator is then placed back into the pocket. All wounds are irrigated, hemostasis is obtained, and incisions are closed in routine fashion with absorbable and/or non-absorbable sutures and/or staples.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit. Assessment of neurologic function takes place in the operating room with a comprehensive neurological exam. Stability of the neurologic exam compared to baseline is ensured prior to leaving the operating room. Postoperative orders for medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is written. An

operative report is dictated which includes a detailed description of all radiographic images. A copy is sent to the referring physician. Cardiology is notified of the patient's admission.

Patients are assessed daily for hemodynamic stability, surgical site complications, and any neurological changes. Hematoma formation is a common complication given most patients are on antiplatelet and anticoagulant medications. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily. Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office:
At the office visit, an interval history is solicited for ongoing or new symptoms; the chest is examined for infection, tenderness, complications of hematoma or seroma. The neck incision is assessed for inflammation, drainage, and wound infection. A full neurologic exam is performed. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary. Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart. Follow-up with provider performing programing of the device is ensured.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	38%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	50%	38%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	13%	50%	38%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	57%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	43%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	29%	71%
Physical effort required	0%	71%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	29%	71%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With the increased utilization and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation, replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT works by electrically stimulating carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often debilitating symptoms of heart failure.

Survey Methodology

The Society for Vascular Surgery (SVS) surveyed all codes related to implantation, replacement, revision, and removal (64654-64659). Originally SVS conducted the survey using both a targeted sample (vendor list) and a random sample of the SVS membership. However, due to the low response rate, the SVS ended up surveying the entire SVS membership.

Low Survey Responses

The Code Change Application indicated that less than 33 total 64655-64659s were performed in 2023. The RUC database indicates that less than 13 64655-64659s were reported in 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

After surveying the entire SVS membership, including several reminders, the specialty was not able to collect 30 completed surveys for 64655-64659. The specialty society recommends the RUC make recommendations to CMS for 64655-64659 based on the collected survey data/specialty society recommendations. The specialty also recommends the RUC flag 64655-64659 as *do not use to validate physician work* in the RUC database and review the codes in three years.

Pre-Service Time

64654, 64655, 64657, and 64658

Pre-service package 4 is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

Evaluation - package time is 40 minutes. Survey median evaluation time is 60 minutes (59 minutes for 64654 and 64655). The specialties recommend deleting 20 minutes (19 minutes for 64654 and 64655) to achieve the package evaluation time.

Positioning – package time is 3 minutes. An additional 12 minutes of positioning time is requested for these codes given the positioning related to the neck incision. This is consistent with the results of our survey.The patient is placed in the "beach chair" position. A shoulder role is typically placed. The neck is extended and rotated away from the side of surgery. This is done in concert with anesthesia to ensure the endotracheal tube is not dislodged and is secure so it does not become dislodged over the course of surgery. The endotracheal tube is secured appropriately under the observation of the surgeon to ensure an appropriate field for skin preparation. The carotid bifurcation is marked and all planned incisions are marked. This extra positioning time is consistent with other vascular codes involving carotid dissection: carotid endarterectomy (35301), carotid-carotid bypass with vein (35501), Retrograde carotid stent (37217). Extra positioning time is externally similar to other procedures in the neck region: total thyroidectomy (60240) and excision of carotid body tumor (60605)

SDW – package time is 20 minutes. Survey median time is 15 min. The specialties are recommending deleting 5 min from the "observe (wait anesthesia care)" portion to achieve 15 minutes of SDW time.

Immediate Post-Service Time

64654, 64655, 64657, and 64658

Post-service package 9B is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

64655, 64657, and 64658 - package time is 33 minutes. Survey median time is 20 minutes. The societies recommend deleting 13 minutes to achieve the surveyed time of 20 minutes.

Post Operative Hospital Care

23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy

> *Excerpt from: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations*
>
> *CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to include bundle subsequent hospital visits (eg 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intraservice portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure.*
>
> *If the survey results indicate that a 23-hour stay with a subsequent hospital visit is typical and the Medicare claims data (if available) show that the service is typically performed in the outpatient setting, then the surveying specialties may add the post-operative visit intra-service time to the immediate post-operative physician time and not list a subsequent hospital visit in the recommendation. For example, if the survey data for a 23-hour stay code includes 15 minutes of immediate post-service time and one 99232 post-operative visit (20 minutes of intra-service time), then the recommendation could include 35 minutes of immediate post-service time and no subsequent hospital visit.*

The survey results indicated that these procedures were typically performed in the hospital setting. The survey data results also indicated that patients were not typically discharged on the same day as the procedure (range 14%-29%). The survey results indicated that at least a 23-hour stay with a subsequent hospital visit was typical. As such, the specialty society has added 20 minutes of intra-service time (intra time for a 99232) to the immediate post-service time of procedures 64654, 64655, 64656, 64658 and 64659 and is not recommending a subsequent hospital visit. Similarly, the specialty society has added 30 minutes of intra-service time (intra time for a 99233) to the immediate post-service time of the procedure 64657 and is not recommending a subsequent hospital visit.

Post Operative Office Visits

The survey results were varied for number and complexity of all post-operative visits. The expert panel suggests one level 3 visit for all codes. A low complexity visit of at least 20 minutes is required to assess all incisions and perform wound care, perform a neurologic assessment, and coordinate care for these medically labile patients.

Comparison with Key Reference Services

There were 4 codes that were chosen most often as key reference services for 64654-64659

- 64568, *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator*
- 64569, *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*
- 64583, *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator*
- 64584, *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array*

The following table incorporates our recommended RVW for 64654-64659 along with the key reference services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office

Comparison to MPC codes

The following MPC codes bracket our recommendations for BAT

- 33207, *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular*
- 19303, *Mastectomy, simple, complete*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33207 MPC	7.80	0.047	234	10	13	20	60	30	32, 38	13
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
19303 MPC	15.00	0.102	283	40	3	15	90	30	0.5x38	13x2, 14

For CPT code 64655, the society recommends the 25th percentile survey value of 11.30 RVW.

This procedure will be performed generally for lead malfunction or fracture. This will be a low utilization procedure. Most of our survey respondents had not performed the procedure. The ones who had, felt it was more complex than those who had not. Regardless, the RVW and IWPUT for the 25th percentile of all respondents seemed to align well with other codes in the family.

The most complex part of this procedure involves dissecting around the carotid bulb. This will be a redo field with scar tissue and greater risk for vessel wall injury and nerve injury. Meticulous and careful dissection is required to minimize risk of plaque embolization. Tissue planes are more challenging given scar tissue formation. Stroke is a real possibility. Additionally, the vagus nerve, hypoglossal nerve, and occasionally a recurrent laryngeal nerve must be identified and preserved to avoid untoward and even devastating complications. In scared operative planes, this is even more challenging. Finally, sutures are placed into the adventia and outer media of the arterial wall to ensure the leads are secured. In reoperative fields, the vessel wall can be striped of the adventia creating a challenge when securing the

leads. An intensity of 0.083 seems to the society to fit nicely between carotid endartectomy (35301 IWPUT 0.104) which involves clamping of the carotid and Revision or replacement of cranial nerve neurostimulator (64568, IWPUT 0.069, KRS) which does not require carotid wall sutures.

For post-procedure work, survey median time was 20 minutes. A 99232 hospital visit of 20 minutes, from our survey, was added to the post-time, totaling 40 minutes of immediate post time.

Summary

The new family of CPT codes for BAT represent a set of codes for this new technology. The base code 64654, will be the most commonly performed procedure in this code set. The other 5 codes, 64655-64659, represent replacement, revision, or removal. The Society for Vascular Surgery believes these codes will be infrequently used. Given the patient population with heart failure refractory to medical management and the proximity to the carotid arteries, the overall intensity of these procedures reflects these factors.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0267T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Vascular Surgery How often? Sometimes

Specialty How often?

Specialty How often?

CPT Descriptor: Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; pulse generator only

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male returns five years after implantation of an implanted baroreflex activation therapy (BAT) modulation system for routine replacement of the BAT pulse generator.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 95% , In the ASC 5%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 29% , Overnight stay-less than 24 hours 52% , Overnight stay-more than 24 hours 19%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Preservice work includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. A history of prior chest is specifically reviewed with the patient. Careful final review of any pertinent imaging is performed. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The surgeon ensures availability of all instruments and implants necessary for the procedure. Adequate personnel support for barostimulator programing is ensured. The surgeon supervises appropriate patient positioning on the OR table and marks the planned incision. The surgeon supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: The subcutaneous pocket in the pectoral region containing an implantable baroreflex activation therapy (BAT) modulation system pulse generator is incised with removal and replacement of the generator. The BAT system is checked to ensure the leads are functioning correctly. The new pulse generator is then placed into the pocket. All wounds are irrigated, hemostasis is obtained, and incisions are closed in routine fashion with absorbable and/or non-absorbable sutures and/or staples.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit. Postoperative orders for medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is written. An operative report is dictated which includes a detailed description of all radiographic images. A copy is sent to the referring physician.

Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office:
At the office visit, an interval history is solicited for ongoing or new symptoms; the chest is examined for infection, tenderness, complications of hematoma or seroma. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary. Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart. Follow-up with provider performing programing of the device is ensured as needed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	40%	60%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	0%	60%	40%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	75%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	100%	0%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With the increased utilization and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation, replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT works by electrically stimulating carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often debilitating symptoms of heart failure.

Survey Methodology

The Society for Vascular Surgery (SVS) surveyed all codes related to implantation, replacement, revision, and removal (64654-64659). Originally SVS conducted the survey using both a targeted sample (vendor list) and a random sample of the SVS membership. However, due to the low response rate, the SVS ended up surveying the entire SVS membership.

Low Survey Responses

The Code Change Application indicated that less than 33 total 64655-64659s were performed in 2023. The RUC database indicates that less than 13 64655-64659s were reported in 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

After surveying the entire SVS membership, including several reminders, the specialty was not able to collect 30 completed surveys for 64655-64659. The specialty society recommends the RUC make recommendations to CMS for 64655-64659 based on the collected survey data/specialty society recommendations. The specialty also recommends the RUC flag 64655-64659 as *do not use to validate physician work* in the RUC database and review the codes in three years.

Pre-Service Time

64656 and 64659

Pre-service package 2 is appropriate for codes related to generator replacement or removal (64656 and 64659).

Evaluation - package time is 18 minutes. Survey median evaluation time is 60 minutes. The specialties recommend deleting 42 minutes to achieve the package evaluation time.

Positioning – package time is 1 minute. With a chest wall incision, no additional positioning time is requested. Our survey median for positioning time is between 14 and 15 minutes. The specialties recommend deleting the additional time to achieve the package evaluation time.

SDW – package time is 6 minutes. Survey median time is 15 min. These procedures are typically done under general anesthesia. The specialties are recommending deleting 1 min for local anesthesia administration and adding 10 min from the "observe (wait anesthesia care)" portion to achieve 15 minutes of SDW time.

Immediate Post-Service Time

64656 and 64659

Post-service package 9A is appropriate for codes related to generator replacement or removal (64656 and 64659).

64656 and 64659 – package time is 30 minutes. Survey median time is 20 minutes. The societies recommend deleting 10 minutes to achieve the surveyed time of 20 minutes.

Post Operative Hospital Care

23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy

> *Excerpt from: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations*

CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to include bundle subsequent hospital visits (eg 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intraservice portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure.

If the survey results indicate that a 23-hour stay with a subsequent hospital visit is typical and the Medicare claims data (if available) show that the service is typically performed in the outpatient setting, then the surveying specialties may add the post-operative visit intra-service time to the immediate post-operative physician time and not list a subsequent hospital visit in the recommendation. For example, if the survey data for a 23-hour stay code includes 15 minutes of immediate post-service time and one 99232 post-operative visit (20 minutes of intra-service time), then the recommendation could include 35 minutes of immediate post-service time and no subsequent hospital visit.

The survey results indicated that these procedures were typically performed in the hospital setting. The survey data results also indicated that patients were not typically discharged on the same day as the procedure (range 14%-29%). The survey results indicated that at least a 23-hour stay with a subsequent hospital visit was typical. As such, the specialty society has added 20 minutes of intra-service time (intra time for a 99232) to the immediate post-service time of procedures 64654, 64655, 64656, 64658 and 64659 and is not recommending a subsequent hospital visit. Similarly, the specialty society has added 30 minutes of intra-service time (intra time for a 99233) to the immediate post-service time of the procedure 64657 and is not recommending a subsequent hospital visit.

Post Operative Office Visits

The survey results were varied for number and complexity of all post-operative visits. The expert panel suggests one level 3 visit for all codes. A low complexity visit of at least 20 minutes is required to assess all incisions and perform wound care, perform a neurologic assessment, and coordinate care for these medically labile patients.

Comparison with Key Reference Services

There were 4 codes that were chosen most often as key reference services for 64654-64659

- 64568, *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator*
- 64569, *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*
- 64583, *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator*
- 64584, *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array*

The following table incorporates our recommended RVW for 64654-64659 along with the key reference services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**

Comparison to MPC codes

The following MPC codes bracket our recommendations for BAT

- 33207, *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular*
- 19303, *Mastectomy, simple, complete*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33207 MPC	7.80	0.047	234	10	13	20	60	30	32, 38	13
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
19303 MPC	15.00	0.102	283	40	3	15	90	30	0.5x38	13x2, 14

For CPT code 64656, the society recommends the 25th percentile survey value of 8.01 RVW.

This procedure is one unfamiliar to most vascular surgeons who have minimal experience with generator replacement or revision compared to other specialties. Survey response was low at 22 with a median experience of 1 procedure. The society suspects the intra-procedure time is related to troubleshooting connections and ensuring a functioning device. This is different work from a simple battery exchange common in most electrocardiology procedures. In a patient population with heart failure, any anesthetic time should be minimized. The societies do not believe these times are over-estimated.

For post-procedure work, survey median time was 20 minutes. A 99232 hospital visit of 20 minutes, from our survey, was added to the post-time, totaling 40 minutes of immediate post time.

Summary

The new family of CPT codes for BAT represent a set of codes for this new technology. The base code 64654, will be the most commonly performed procedure in this code set. The other 5 codes, 64655-64659, represent replacement, revision, or removal. The Society for Vascular Surgery believes these codes will be infrequently used. Given the patient population with heart failure refractory to medical management and the proximity to the carotid arteries, the overall intensity of these procedures reflects these factors.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0268T and 0271T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Vascular Surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2023 utilization)

CPT Descriptor: Removal of baroreflex activation therapy (BAT) modulation system; total system, including lead and pulse generator

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. One year ago, the patient underwent elective replacement of the pulse generator and developed an inflammatory response (suspect infection) of the pulse generator pocket lead system. After several months of antibiotic therapy, he continues to have recurrence of low-grade fevers, erythema, effusion of the pulse generator pocket, and positive blood cultures. It is determined that the BAT system is infected, and extraction of the total system is required.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 14% , Overnight stay-less than 24 hours 46% , Overnight stay-more than 24 hours 41%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Preservice work includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. A history of prior neck or chest surgeries and a history of prior radiation is specifically reviewed with the patient. Careful final review of imaging is performed. This includes review of neck cross-sectional imaging and ultrasound imaging. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The surgeon ensures availability of all instruments and implants necessary for the procedure. The surgeon supervises appropriate patient positioning on the OR table, marks the carotid bifurcation,and marks the planned incisions. The surgeon supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: After surgical exposure and mobilization of the right carotid sinus, the baroreflex activation therapy (BAT) modulation system carotid sinus lead is detached from the carotid wall. This is a re-operative field with inflamed and infected tissues, so care is taken to ensure structures are correctly identified, including the vagus nerve and hypoglossal nerve. Hemostasis of the carotid wall is ensured. Doppler is uses to ensure there are no dissections or abnormal flow characteristics after removing the leads from the carotid wall. Next, the subcutaneous pocket is opened and the lead is disconnected. The lead is extracted and the pulse generator is removed. All wounds are copiously irrigated, hemostasis is obtained. Incisions may be left open and packed if severe infection is suspected. Incisions are loosely closed if there is no gross purulence.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit. Assessment of neurologic function takes place in the operating room with a comprehensive neurological exam. Stability of the neurologic exam compared to baseline is ensured prior to leaving the operating room. Postoperative orders for wound care, medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is

written. An operative report is dictated which includes a detailed description of all radiographic images. A copy is sent to the referring physician. Cardiology is notified of the patient's admission.

Patients are assessed daily for hemodynamic stability, surgical site complications, and any neurological changes. Hematoma formation is a common complication given most patients are on antiplatelet and anticoagulant medications. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily. Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office:
At the office visit, an interval history is solicited for ongoing or new symptoms; the chest is examined for infection, tenderness, complications of hematoma or seroma. The neck incision is assessed for inflammation, drainage, and wound infection. A full neurologic exam is performed. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary. Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart. Follow-up with provider performing programing of the device is ensured.

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	22%	78%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With the increased utilization and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation, replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT works by electrically stimulating carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often debilitating symptoms of heart failure.

Survey Methodology

The Society for Vascular Surgery (SVS) surveyed all codes related to implantation, replacement, revision, and removal (64654-64659). Originally SVS conducted the survey using both a targeted sample (vendor list) and a random sample of the SVS membership. However, due to the low response rate, the SVS ended up surveying the entire SVS membership.

Low Survey Responses

The Code Change Application indicated that less than 33 total 64655-64659s were performed in 2023. The RUC database indicates that less than 13 64655-64659s were reported in 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

After surveying the entire SVS membership, including several reminders, the specialty was not able to collect 30 completed surveys for 64655-64659. The specialty society recommends the RUC make recommendations to CMS for 64655-64659 based on the collected survey data/specialty society recommendations. The specialty also recommends the RUC flag 64655-64659 as *do not use to validate physician work* in the RUC database and review the codes in three years.

Pre-Service Time

64654, 64655, 64657, and 64658

Pre-service package 4 is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

Evaluation - package time is 40 minutes. Survey median evaluation time is 60 minutes. The specialties recommend deleting 20 minutes to achieve the package evaluation time.

Positioning – package time is 3 minutes. An additional 12 minutes of positioning time is requested for these codes given the positioning related to the neck incision. This is consistent with the results of our survey.The patient is placed in the "beach chair" position. A shoulder role is typically placed. The neck is extended and rotated away from the side of surgery. This is done in concert with anesthesia to ensure the endotracheal tube is not dislodged and is secure so it does not become dislodged over the course of surgery. The endotracheal tube is secured appropriately under the observation of the surgeon to ensure an appropriate field for skin preparation. The carotid bifurcation is marked and all planned incisions are marked. This extra positioning time is consistent with other vascular codes involving carotid dissection: carotid endarterectomy (35301), carotid-carotid bypass with vein (35501), Retrograde carotid stent (37217). Extra positioning time is externally similar to other procedures in the neck region: total thyroidectomy (60240) and excision of carotid body tumor (60605)

SDW – package time is 20 minutes. Survey median time is 15 min. The specialties are recommending deleting 5 min from the "observe (wait anesthesia care)" portion to achieve 15 minutes of SDW time.

Immediate Post-Service Time

64654, 64655, 64657, and 64658

Post-service package 9B is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

64655, 64657, and 64658 - package time is 33 minutes. Survey median time is 20 minutes. The societies recommend deleting 13 minutes to achieve the surveyed time of 20 minutes.

Post Operative Hospital Care

23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy

> *Excerpt from: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations*
>
> *CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to include bundle subsequent hospital visits (eg 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intraservice portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure.*
>
> *If the survey results indicate that a 23-hour stay with a subsequent hospital visit is typical and the Medicare claims data (if available) show that the service is typically performed in the outpatient setting, then the surveying specialties may add the post-operative visit intra-service time to the immediate post-operative physician time and not list a subsequent hospital visit in the recommendation. For example, if the survey data for a 23-hour stay code includes 15 minutes of immediate post-service time and one 99232 post-operative visit (20 minutes of intra-service time), then the recommendation could include 35 minutes of immediate post-service time and no subsequent hospital visit.*

The survey results indicated that these procedures were typically performed in the hospital setting. The survey data results also indicated that patients were not typically discharged on the same day as the procedure (range 14%-29%). The survey results indicated that at least a 23-hour stay with a subsequent hospital visit was typical. As such, the specialty society has added 20 minutes of intra-service time (intra time for a 99232) to the immediate post-service time of procedures 64654, 64655, 64656, 64658 and 64659 and is not recommending a subsequent hospital visit. Similarly, the specialty society has added 30 minutes of intra-service time (intra time for a 99233) to the immediate post-service time of the procedure 64657 and is not recommending a subsequent hospital visit.

Post Operative Office Visits

The survey results were varied for number and complexity of all post-operative visits. The expert panel suggests one level 3 visit for all codes. A low complexity visit of at least 20 minutes is required to assess all incisions and perform wound care, perform a neurologic assessment, and coordinate care for these medically labile patients.

Comparison with Key Reference Services

There were 4 codes that were chosen most often as key reference services for 64654-64659

- 64568, *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator*
- 64569, *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*
- 64583, *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator*
- 64584, *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array*

The following table incorporates our recommended RVW for 64654-64659 along with the key reference services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**

64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
64583 KRS	14.50	0.067	309	40	20	14	150	20	0.5x38	13x2

Comparison to MPC codes

The following MPC codes bracket our recommendations for BAT

- 33207, *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular*
- 19303, *Mastectomy, simple, complete*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33207 MPC	7.80	0.047	234	10	13	20	60	30	32, 38	13
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
19303 MPC	15.00	0.102	283	40	3	15	90	30	0.5x38	13x2, 14

For CPT code 64657, the society recommends the 25th percentile survey value of 12.13 RVW.

This is the most complicated procedure with regards to time and intensity. The typical patient has complete explant of the lead and generator for infection. The system may be functioning properly and explant may have intra-operative complications including cardiovascular instability from sympathetic/parasympathetic dysregulation and/or an SIRS/Sepsis response in the setting of infection, which is typical. Like the other revision codes in this code set, this procedure is always in non-virgin tissue planes and scar tissue can increase the risk for vessel damage and stroke.

Additionally, infection can make the tissue planes inflamed difficult to determine. Nerve identification can be challenging. Patients are at risk for vagus, hypoglossal, or recurrent laryngeal nerve injury. All implants must be removed in their entirety and wound care is performed. Incisions may not be closed, depending on the clinical situation. This procedure is more intense than the KRS 64584 (IWPUT 0.063), removal of hypoglossal nerve neurostimulator array, as removal of this device for the typical patient for 64584 was not done for infection.

For post-procedure work, survey median time was 20 minutes. A 99233 hospital visit of 30 minutes, from our survey, was added to the post-time, totaling 50 minutes of immediate post time. This extra complexity is likely due to wound care and other hemodynamic monitoring following explanation.

Summary

The new family of CPT codes for BAT represent a set of codes for this new technology. The base code 64654, will be the most commonly performed procedure in this code set. The other 5 codes, 64655-64659, represent replacement, revision, or removal. The Society for Vascular Surgery believes these codes will be infrequently used. Given the patient population with heart failure refractory to medical management and the proximity to the carotid arteries, the overall intensity of these procedures reflects these factors.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0269T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Vascular Surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2023 utilization)

Specialty Vascular Surgery Frequency 1 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Removal of baroreflex activation therapy (BAT) modulation system; lead only

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. He has recently developed fever and tenderness near the lead placement site on the carotid sinus. Aspiration cultures were positive for staphylococcus epidermitis and gram-negative bacilli. It is determined that the lead is infected, and removal is required.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 20% , Overnight stay-less than 24 hours 40% , Overnight stay-more than 24 hours 40%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Preservice work includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. A history of prior neck surgeries and a history of prior radiation is specifically reviewed with the patient. Careful final review of imaging is performed. This includes review of neck cross-sectional imaging and ultrasound imaging. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The surgeon ensures availability of all instruments and implants necessary for the procedure. The surgeon supervises appropriate patient positioning on the OR table, marks the carotid bifurcation, and marks the planned incisions. The surgeon supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: After surgical exposure and mobilization of the right carotid sinus, the baroreflex activation therapy (BAT) modulation system carotid sinus lead is detached from the carotid wall. This is a re-operative field with inflamed and infected tissues, so care is taken to ensure structures are correctly identified, including the vagus nerve and hypoglossal nerve. Hemostasis of the carotid wall is ensured. Doppler is uses to ensure there are no dissections or abnormal flow characteristics after removing the leads from the carotid wall. Next, the subcutaneous pocket is opened and the lead is disconnected. The lead is carefully extracted from the neck incision. After lead extraction, all wounds are copiously irrigated, hemostasis is obtained. Incisions may be left open and packed if severe infection is suspected. Incisions are loosely closed if there is no gross purulence.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit. Assessment of neurologic function takes place in the operating room with a comprehensive neurological exam. Stability of the neurologic exam compared to baseline is ensured prior to leaving the operating room. Postoperative orders for wound care, medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is written. An operative report is dictated which includes a detailed description of all radiographic images. A copy is sent to the referring physician. Cardiology is notified of the patient's admission.

Patients are assessed daily for hemodynamic stability, surgical site complications, and any neurological changes. Hematoma formation is a common complication given most patients are on antiplatelet and anticoagulant medications. Progress notes are recorded daily. Patient and family questions are answered. Orders are updated daily. Rounds with nursing staff and other consultants are performed daily. Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office:
At the office visit, an interval history is solicited for ongoing or new symptoms; the chest is examined for infection, tenderness, complications of hematoma or seroma. The neck incision is assessed for inflammation, drainage, and wound infection. A full neurologic exam is performed. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary. Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart. Follow-up with provider performing programing of the device is ensured.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	25%	0%	50%	25%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	0%	75%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	25%	25%	50%
Physical effort required	25%	25%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	25%	50%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	33%	33%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	33%	33%
Physical effort required	33%	33%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	33%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With the increased utilization and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation, replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT works by electrically stimulating carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often debilitating symptoms of heart failure.

Survey Methodology

The Society for Vascular Surgery (SVS) surveyed all codes related to implantation, replacement, revision, and removal (64654-64659). Originally SVS conducted the survey using both a targeted sample (vendor list) and a random sample of the SVS membership. However, due to the low response rate, the SVS ended up surveying the entire SVS membership.

Low Survey Responses

The Code Change Application indicated that less than 33 total 64655-64659s were performed in 2023. The RUC database indicates that less than 13 64655-64659s were reported in 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

After surveying the entire SVS membership, including several reminders, the specialty was not able to collect 30 completed surveys for 64655-64659. The specialty society recommends the RUC make recommendations to CMS for 64655-64659 based on the collected survey data/specialty society recommendations. The specialty also recommends the RUC flag 64655-64659 as *do not use to validate physician work* in the RUC database and review the codes in three years.

Pre-Service Time

64654, 64655, 64657, and 64658

Pre-service package 4 is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

Evaluation - package time is 40 minutes. Survey median evaluation time is 60 minutes. The specialties recommend deleting 20 minutes to achieve the package evaluation time.

Positioning – package time is 3 minutes. An additional 12 minutes of positioning time is requested for these codes given the positioning related to the neck incision. This is consistent with the results of our survey.The patient is placed in the "beach chair" position. A shoulder role is typically placed. The neck is extended and rotated away from the side of surgery. This is done in concert with anesthesia to ensure the endotracheal tube is not dislodged and is secure so it does not become dislodged over the course of surgery. The endotracheal tube is secured appropriately under the observation of the surgeon to ensure an appropriate field for skin preparation. The carotid bifurcation is marked and all planned incisions are marked. This extra positioning time is consistent with other vascular codes involving carotid dissection: carotid endarterectomy (35301), carotid-carotid bypass with vein (35501), Retrograde carotid stent (37217). Extra positioning time is externally similar to other procedures in the neck region: total thyroidectomy (60240) and excision of carotid body tumor (60605)

SDW – package time is 20 minutes. Survey median time is 15 min. The specialties are recommending deleting 5 min from the "observe (wait anesthesia care)" portion to achieve 15 minutes of SDW time.

Immediate Post-Service Time

64654, 64655, 64657, and 64658

Post-service package 9B is appropriate for BAT procedures which involve dissection at the carotid bulb (64654, 64655, 64657, and 64658).

64655, 64657, and 64658 - package time is 33 minutes. Survey median time is 20 minutes. The societies recommend deleting 13 minutes to achieve the surveyed time of 20 minutes.

Post Operative Hospital Care

23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy

> *Excerpt from: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations*
>
> *CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to include bundle subsequent hospital visits (eg 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intraservice portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure.*
>
> *If the survey results indicate that a 23-hour stay with a subsequent hospital visit is typical and the Medicare claims data (if available) show that the service is typically performed in the outpatient setting, then the surveying specialties may add the post-operative visit intra-service time to the immediate post-operative physician time and not list a subsequent hospital visit in the recommendation. For example, if the survey data for a 23-hour stay code includes 15 minutes of immediate post-service time and one 99232 post-operative visit (20 minutes of intra-service time), then the recommendation could include 35 minutes of immediate post-service time and no subsequent hospital visit.*

The survey results indicated that these procedures were typically performed in the hospital setting. The survey data results also indicated that patients were not typically discharged on the same day as the procedure (range 14%-29%). The survey results indicated that at least a 23-hour stay with a subsequent hospital visit was typical. As such, the specialty society has added 20 minutes of intra-service time (intra time for a 99232) to the immediate post-service time of procedures 64654, 64655, 64656, 64658 and 64659 and is not recommending a subsequent hospital visit. Similarly, the specialty society has added 30 minutes of intra-service time (intra time for a 99233) to the immediate post-service time of the procedure 64657 and is not recommending a subsequent hospital visit.

Post Operative Office Visits

The survey results were varied for number and complexity of all post-operative visits. The expert panel suggests one level 3 visit for all codes. A low complexity visit of at least 20 minutes is required to assess all incisions and perform wound care, perform a neurologic assessment, and coordinate care for these medically labile patients.

Comparison with Key Reference Services

There were 4 codes that were chosen most often as key reference services for 64654-64659

- 64568, *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator*
- 64569, *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*
- 64583, *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator*
- 64584, *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array*

The following table incorporates our recommended RVW for 64654-64659 along with the key reference services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office

Comparison to MPC codes

The following MPC codes bracket our recommendations for BAT

- 33207, *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular*
- 19303, *Mastectomy, simple, complete*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33207 MPC	7.80	0.047	234	10	13	20	60	30	32, 38	13
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
19303 MPC	15.00	0.102	283	40	3	15	90	30	0.5x38	13x2, 14

For CPT Code 64658, the society recommends a crosswalk to CPT Code 63655. We believe the 25th percentile for the survey did not accurately reflect the work. The 50th percentile result from the survey did not accurately reflect the intensity for this procedure. Given our low survey response for this procedure, 20 total responses, the survey data is varied. Additionally, only 7 of the 20 respondents have a performance rate greater than zero, indicating this is a very rare procedure. A crosswalk seems to be the most appropriate in this particularly scenario.

Similar to 64657, this procedure is typically performed in the setting of infection. Similar to the other revision codes in this code set, this procedure is always in non-virgin tissue planes and scar tissue can increase the risk for vessel damage and stroke. Additionally, infection can make the tissue planes inflamed difficult to determine. Nerve identification can be challenging. Patients are at risk for vagus, hypoglossal, or recurrent laryngeal nerve injury. All implants must be removed in their entirety and wound care is performed. Incisions may not be closed, depending on the clinical situation. This procedure is more intense than the KRS 64584 (IWPUT 0.063), removal of hypoglossal nerve neurostimulator array, as removal of this device for the typical patient for 64584 was not done for infection.

Summary

The new family of CPT codes for BAT represent a set of codes for this new technology. The base code 64654, will be the most commonly performed procedure in this code set. The other 5 codes, 64655-64659, represent replacement,

revision, or removal. The Society for Vascular Surgery believes these codes will be infrequently used. Given the patient population with heart failure refractory to medical management and the proximity to the carotid arteries, the overall intensity of these procedures reflects these factors.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0270T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Vascular Surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available.

CPT Descriptor: Removal of baroreflex activation therapy (BAT) modulation system; pulse generator only

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. He has recently developed erythema and an effusion within the pulse generator pocket. Aspiration cultures were positive for staphylococcus epidermitis and gram-negative bacilli requiring removal of the pulse generator.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 95% , In the ASC 5%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 21% , Overnight stay-less than 24 hours 47% , Overnight stay-more than 24 hours 32%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Preservice work includes review of surgical indication, physical exam findings, current medications, and all laboratory test results. A history of prior chest is specifically reviewed with the patient. Careful final review of any pertinent imaging is performed. The proposed procedure is discussed with the patient and family, including risks and expected recovery. Final informed consent is obtained. The physical exam, procedural plan, and consent are documented in the medical record. The access site(s) is marked. The surgeon ensures availability of all instruments and implants necessary for the procedure. The surgeon supervises appropriate patient positioning on the OR table and marks the planned incision. The surgeon supervises sterile preparation of access site(s) and subsequent draping. The surgeon leads the preprocedural time-out.

Description of Intra-Service Work: The subcutaneous pocket in the pectoral region containing an implantable baroreflex activation therapy (BAT) modulation system pulse generator is incised. The BAT pulse generator is disconnected from the lead and extracted. All wounds are copiously irrigated, hemostasis is obtained. Incisions may be left open and packed if severe infection is suspected. Incisions are loosely closed if there is no gross purulence.

Description of Post-Service Work: Hospital: Sterile dressings are applied. The patient is assisted with transfer from the operating table to the gurney. The patient is monitored for hemodynamic stability in transit. Postoperative orders for wound care, medications, imaging, and laboratories are written. The procedure and outcome are discussed with family. A brief operative note is written. An operative report is dictated which includes a detailed description of all radiographic images. A copy is sent to the referring physician. Cardiology is notified of the patient's admission.

Discharge day management includes communicating with all support services, such as visiting nurses and referring physicians, reviewing interval chart notes, answering patient and family questions, evaluating all predischarge laboratory results, evaluating and redressing the incisions, assessing pain score, and performing medication reconciliation. Surgeon discusses home restrictions (ie, diet, activity, bathing) with patient and family members; writes orders for home care, discharge medications and supplies; and completes all appropriate medical records, including day of discharge progress notes and final discharge instructions.

Office:

At the office visit, an interval history is solicited for ongoing or new symptoms; the chest is examined for infection, tenderness, complications of hematoma or seroma. Wound care is provided, as needed. Staples and sutures are removed as indicated. Patient and family questions are answered. Prescriptions for medication and therapy are written, as necessary. Progress is discussed with the referring physician (verbal and written). Progress notes are dictated/typed for the medical chart. Follow-up with provider performing programing of the device is ensured as needed.

Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	75%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With the increased utilization and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation, replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT works by electrically stimulating carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often debilitating symptoms of heart failure.

Survey Methodology
The Society for Vascular Surgery (SVS) surveyed all codes related to implantation, replacement, revision, and removal (64654-64659). Originally SVS conducted the survey using both a targeted sample (vendor list) and a random sample of the SVS membership. However, due to the low response rate, the SVS ended up surveying the entire SVS membership.

Low Survey Responses
The Code Change Application indicated that less than 33 total 64655-64659s were performed in 2023. The RUC database indicates that less than 13 64655-64659s were reported in 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

After surveying the entire SVS membership, including several reminders, the specialty was not able to collect 30 completed surveys for 64655-64659. The specialty society recommends the RUC make recommendations to CMS for 64655-64659 based on the collected survey data/specialty society recommendations. The specialty also recommends the RUC flag 64655-64659 as *do not use to validate physician work* in the RUC database and review the codes in three years.

Pre-Service Time

64656 and 64659
Pre-service package 2 is appropriate for codes related to generator replacement or removal (64656 and 64659).

Evaluation - package time is 18 minutes. Survey median evaluation time is 60 minutes. The specialties recommend deleting 42 minutes to achieve the package evaluation time.

Positioning – package time is 1 minute. With a chest wall incision, no additional positioning time is requested. Our survey median for positioning time is between 14 and 15 minutes. The specialties recommend deleting the additional time to achieve the package evaluation time.

SDW – package time is 6 minutes. Survey median time is 15 min. These procedures are typically done under general anesthesia. The specialties are recommending deleting 1 min for local anesthesia administration and adding 10 min from the "observe (wait anesthesia care)" portion to achieve 15 minutes of SDW time.

Immediate Post-Service Time

64656 and 64659
Post-service package 9A is appropriate for codes related to generator replacement or removal (64656 and 64659).

64656 and 64659 – package time is 30 minutes. Survey median time is 20 minutes. The societies recommend deleting 10 minutes to achieve the surveyed time of 20 minutes.

Post Operative Hospital Care

23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy

> *Excerpt from: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations*

CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow these codes to include bundle subsequent hospital visits (eg 99231-99233) into the surgical global period. Instead, the Agency permits the allocation of the intraservice portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure.

If the survey results indicate that a 23-hour stay with a subsequent hospital visit is typical and the Medicare claims data (if available) show that the service is typically performed in the outpatient setting, then the surveying specialties may add the post-operative visit intra-service time to the immediate post-operative physician time and not list a subsequent hospital visit in the recommendation. For example, if the survey data for a 23-hour stay code includes 15 minutes of immediate post-service time and one 99232 post-operative visit (20 minutes of intra-service time), then the recommendation could include 35 minutes of immediate post-service time and no subsequent hospital visit.

The survey results indicated that these procedures were typically performed in the hospital setting. The survey data results also indicated that patients were not typically discharged on the same day as the procedure (range 14%-29%). The survey results indicated that at least a 23-hour stay with a subsequent hospital visit was typical. As such, the specialty society has added 20 minutes of intra-service time (intra time for a 99232) to the immediate post-service time of procedures 64654, 64655, 64656, 64658 and 64659 and is not recommending a subsequent hospital visit. Similarly, the specialty society has added 30 minutes of intra-service time (intra time for a 99233) to the immediate post-service time of the procedure 64657 and is not recommending a subsequent hospital visit.

Post Operative Office Visits

The survey results were varied for number and complexity of all post-operative visits. The expert panel suggests one level 3 visit for all codes. A low complexity visit of at least 20 minutes is required to assess all incisions and perform wound care, perform a neurologic assessment, and coordinate care for these medically labile patients.

Comparison with Key Reference Services

There were 4 codes that were chosen most often as key reference services for 64654-64659

- 64568, *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator*
- 64569, *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*
- 64583, *Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator*
- 64584, *Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array*

The following table incorporates our recommended RVW for 64654-64659 along with the key reference services identified for these codes arranged in ascending order of values.

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**

Comparison to MPC codes

The following MPC codes bracket our recommendations for BAT

- 33207, *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular*
- 19303, *Mastectomy, simple, complete*

	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post	Hosp	Office
33207 MPC	7.80	0.047	234	10	13	20	60	30	32, 38	13
64656	**8.01**	**0.070**	**187**	**18**	**1**	**15**	**71**	**40**	**0.5x38**	**13**
64659	**8.23**	**0.068**	**192**	**18**	**1**	**15**	**76**	**40**	**0.5x38**	**13**
64658 Crosswalk	**10.92**	**0.078**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64654	**11.00**	**0.077**	**252**	**40**	**15**	**15**	**90**	**50**	**0.5x38**	**13**
64655	**11.30**	**0.083**	**242**	**40**	**15**	**15**	**90**	**40**	**0.5x38**	**13**
64657	**14.25**	**0.088**	**277**	**40**	**15**	**15**	**115**	**50**	**0.5x38**	**13**
19303 MPC	15.00	0.102	283	40	3	15	90	30	0.5x38	13x2, 14

For CPT code 64659, the society recommends the 25th percentile survey value of 8.23 RVW.

Similar to 64657 and 64658, this procedure is typically performed in the setting of infection. Given the infectious nature, the additional time relative to 64656 is likely related to dealing with the infection including providing intra-operative wound care. The system may be functioning properly and explant may have intra-operative complications including cardiovascular instability from sympathetic/parasympathetic dysregulation and/or an SIRS/Sepsis response.

For post-procedure work, survey median time was 20 minutes. A 99232 hospital visit of 20 minutes, from our survey, was added to the post-time, totaling 40 minutes of immediate post time.

Summary

The new family of CPT codes for BAT represent a set of codes for this new technology. The base code 64654, will be the most commonly performed procedure in this code set. The other 5 codes, 64655-64659, represent replacement, revision, or removal. The Society for Vascular Surgery believes these codes will be infrequently used. Given the patient population with heart failure refractory to medical management and the proximity to the carotid arteries, the overall intensity of these procedures reflects these factors.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0271T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Vascular Surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 60600

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93145 Tracking Number V7 Original Specialty Recommended RVU: **0.79**
Presented Recommended RVU: **0.79**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **0.79**

CPT Descriptor: Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (bat) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); without programming

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents for evaluation of an implanted baroreflex activation therapy (bat) modulation system. the device is working properly, and he does not require adjustment to his program therapy values.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: History for stimulator indications and changes in symptoms or development of new symptoms are reviewed. Prior records of the implanted stimulator, lead hardware, programmed parameters, prior assessments of capture thresholds, sensing thresholds, and stimulator dependency are reviewed.

Description of Intra-Service Work: A telemetry communication link between the baroreflex activation therapy (BAT) modulation system implanted pulse generator and the programming software system is established. Data is retrieved regarding the expected longevity of the IPG battery, the integrity of the implanted leads and the full set of the therapy programmed parameters including pulse amplitude, pulse frequency, pulse width, therapy pathway, time(s) of day for therapy start and stop, and additional information. Based on the results, the physician determines no additional action is necessary; in this case, the procedure is concluded by discontinuing communication and removing the programmer head. .

Description of Post-Service Work: The data retrieved is documented in the patient medical record including interpretation of the data by the physician. The patient's clinical status is assessed for interim health changes. Results of the device interrogation are discussed. A final report is prepared and signed.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	56%	44%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	89%	11%
Physical effort required	11%	89%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	67%	22%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	43%	43%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	29%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	43%	43%
Physical effort required	14%	43%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	29%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With utilization deemed adequate and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation,

replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT electrically stimulates carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often-debilitating symptoms of heart failure.

Low Survey Responses

The Baroreflex Activation Therapy system is a relatively new technology. The most recent full year of manufacturer data indicates that the system was implanted less than 1,000 times in the United States in 2023. This yielded just a few thousand uses of these new interrogation and programming services in 2023 per the code change application and just 150 such services per the RUC data base for 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The surveying societies utilized a vendor list of known operators for a targeted survey of these services as well as a random sample of ACC and HRS membership comprised of those indicating subspecialities in electrophysiology, interventional cardiology and heart failure care. Numerous reminder messages were sent and the deadline for the survey was extended to obtain the required 30 responses. However, at the conclusion of our survey we fell just short of the threshold with 27 responses for 93145 and 28 for 93146. As such, the societies recommend the RUC make recommendations to CMS for 93145 and 93146 based on the collected survey data/specialty society recommendations. The societies also recommend the RUC flag 93145-93146 as *do not use to validate physician work* in the RUC database and review of the codes in three years by the RAW.

93145

The societies convened a panel of physicians to review the survey data. Code 93145 will be used o report the interrogation of the BAT modulation system to monitor device diagnostics and programmed therapy values with interpretation and report without programming. The survey median pre-service time was 7 minutes, intra-service time was 10 minutes, and post-service time was 5 minutes.

The key reference service is 93279, programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system or leadless pacemaker system in one cardiac chamber.

The societies **recommend the survey 25th percentile wRVU of 0.79 with times of 7/10/5**. Surveys show a significant portion of respondents choosing 93279 as the KRS found this service to be more intense/complex than 93279 while the services have the same total time. The same was true of those choosing 93281 as the KRS regarding overall intensity/complexity, while this group also found 93145 to require more mental effort and judgement and psychological stress than 93281. However, 93281 has a notable longer time than 93145. The 25th percentile of 0.79 places this code between the top two KRS codes with greater intensity than each but lower time than 93281. This recommendation can be further supported by comparison to codes 76770 for retroperitoneal ultrasound (0.74 RVUs, 5/10/5) and 93289 for interrogation of implantable defibrillator system

(0.75 RVU, 5/10/8.5)

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0272T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Electrophysiologist How often? Sometimes

Specialty Cardiologist How often? Rarely

Specialty Interventional Cardiologist How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 2436
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate arrived at by extrapolating the number of procedures performed as of 4/30/2024 (812) to a full year.

Specialty Electrophysiologist Frequency 1218 Percentage 50.00 %

Specialty Cardiologist Frequency 609 Percentage 25.00 %

Specialty Interventional Cardiologist Frequency 609 Percentage 25.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,218
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate arrived at by extrapolating the number of procedures performed as of

4/30/2024 (812) to a full year and then divded by two, presuming half of the population for the service would be on Medicare.

Specialty Electrophysiologist Frequency 609 Percentage 50.00 %

Specialty Cardiologist Frequency 305 Percentage 25.04 %

Specialty Interventional Cardiologist Frequency 304 Percentage 24.95 %

Do many physicians perform this service across the United States? No

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93279

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93146 Tracking Number V8 Original Specialty Recommended RVU: **0.90**
Presented Recommended RVU: **0.90**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **0.90**

CPT Descriptor: Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (bat) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); with programming, including optimization of tolerated therapeutic level setting

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: a 65-year-old male presents for evaluation of an implanted baroreflex activation therapy (bat) modulation system. the device is working properly but requires additional device programming in an effort to continue to increase stimulation levels in order to achieve his optimal therapeutic levels.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: History for stimulator indications and changes in symptoms or development of new symptoms are reviewed. Prior records of the implanted stimulator, lead hardware, programmed parameters, prior assessments of capture thresholds, sensing thresholds, and stimulator dependency are reviewed. Interim remote monitoring results, if available, are reviewed.

Description of Intra-Service Work: A telemetry communication link between the baroreflex activation therapy (BAT) modulation system implanted pulse generator and the programming software system is established. Data is retrieved regarding the expected longevity of the IPG battery, the integrity of the implanted leads and the full set of the therapy programmed parameters including pulse amplitude, pulse frequency, pulse width, therapy pathway, time(s) of day for therapy start and stop, and additional information. Based on the results, determination is made by the physician that programming changes are indicated. Commands issued through the programming software are made to deliver a new selected test therapy level including pulse amplitude, pulse frequency, pulse width, therapy pathway, time(s) of day for therapy start and stop, and additional information. The patient’s blood pressure and heart rate response to the test therapy are noted. The patient’s tolerance for the new level of therapy is noted. If fully tolerated, the physician may elect to issue additional commands to a higher selected test therapy level. Typically, multiple increases of the therapy are performed in the session to reach maximum tolerated level. Typically, multiple programming visits are needed to reach the patient tolerated optimal therapy levels.

Description of Post-Service Work: At each visit the data retrieved is documented in the patient medical record including interpretation of the data by the physician. The patient's clinical status is assessed for interim health changes. Results of the device interrogation are discussed, and any programming changes to the device are explained. Medication review and titration of medication. A final report is prepared and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Baroreflex Activation Therapy (BAT) modulation system received FDA approval in August 2019. With utilization deemed adequate and the supporting literature, the CPT Panel approved conversion from a Category III code to a Category I code at the September 2024 meeting. This code set describes the implantation,

replacement, revision, removal, and interrogation/programming for a baroreflex activation therapy (BAT) modulation system.

BAT electrically stimulates carotid baroreceptors and, in turn, the baroreflex. This triggers the autonomic nervous system to regulate heart, kidney and vascular function through both sympathetic and parasympathetic pathways. These effects reduce the heart's workload and help it pump more efficiently, to relieve the often-debilitating symptoms of heart failure.

Low Survey Responses

The Baroreflex Activation Therapy system is a relatively new technology. The most recent full year of manufacturer data indicates that the system was implanted less than 1,000 times in the United States in 2023. This yielded just a few thousand uses of these new interrogation and programming services in 2023 per the code change application and just 150 such services per the RUC data base for 2022.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the Relativity Assessment Workgroup. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The surveying societies utilized a vendor list of known operators for a targeted survey of these services as well as a random sample of ACC and HRS membership comprised of those indicating subspecialities in electrophysiology, interventional cardiology and heart failure care. Numerous reminder messages were sent and the deadline for the survey was extended to obtain the required 30 responses. However, at the conclusion of our survey we fell just short of the threshold with 27 responses for 93145 and 28 for 93146. As such, the societies recommend the RUC make recommendations to CMS for 93145 and 93146 based on the collected survey data/specialty society recommendations. The societies also recommend the RUC flag 93145-93146 as *do not use to validate physician work* in the RUC database and review of the codes in three years by the RAW.

93146

The societies convened a panel of physicians to review the survey data. Code 93146 will be used to report the interrogation of the BAT modulation system to monitor device diagnostics and programmed therapy values with interpretation, report, and programming, including optimization of tolerated therapeutic level setting. The survey median pre-service time was 8 minutes, intra-service time was 15 minutes, and the post-service time was 7 minutes.

The key reference service is 93281, programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system. This comparison is helpful as it is also programming of an implanted device. 80% of key reference respondents found the surveyed code 93146 to be somewhat or much more intense/complex than 93281. 70% found 93146 to require more mental effort and judgement than 93281. 80% responded that 93146 cause more psychological stress than KRS 93281.

The societies **recommend the survey 25th percentile wRVU of 0.90 with times of 8/15/7.** While 93146 has an identical intra-service time to KRS 93281 and slightly lower total time, the clear survey consensus that 93146 is more intense, complex, psychologically stressful and requires more mental effort and judgement justifies the slightly higher wRVU. This recommendation can be further supported by comparison codes 92012 for

ophthalmological exam with diagnostic and treatment program (0.92 RVU, 5/15/5) and 99202 for a straightforward new patient E/M (0.93 RVU, 2/15/3)

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0273T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Electrophysiologist How often? Sometimes

Specialty Cardiologist How often? Rarely

Specialty Interventional Cardiologist How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 4872
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate arrived at by extrapolating the number of procedures performed as of 4/30/2024 (1624) to a full year.

Specialty Electrophysiologist Frequency 2436 Percentage 50.00 %

Specialty Cardiologist Frequency 1218 Percentage 25.00 %

Specialty Interventional Cardiologist Frequency 1218 Percentage 25.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,436
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate arrived at by extrapolating the number of procedures performed as of 4/30/2024 (1624) to a full year and then divded by two, presuming half of the population for the service would be on Medicare.

Specialty Electrophysiologist Frequency 1218 Percentage 50.00 %

Specialty Cardiologist Frequency 609 Percentage 25.00 %

Specialty Interventional Cardiologist Frequency 609 Percentage 25.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93281

SS Rec Summary

ISSUE: Baroreflex Activation Therapy

FACILITY DIRECT PE INPUTS

CPT CODE(S):64654-64659
SPECIALTY SOCIETY(IES): SVS
PRESENTER(S): Jonathon Thompson, MD & Matthew Sideman, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
64654	Initial open implantation of baroreflex activation therapy (BAT) modulation system, including lead placement onto the carotid sinus, lead tunnelling, connection to a pulse generator placed in a distant subcutaneous pocket (ie, total system), and intraoperative interrogation and programming	090
64655	Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; lead only	090
64656	Revision or replacement of baroreflex activation therapy (BAT) modulation system, with intraoperative interrogation and programming; pulse generator only	090
64657	Removal of baroreflex activation therapy (BAT) modulation system; total system, including lead and pulse generator	090
64658	Removal of baroreflex activation therapy (BAT) modulation system; lead only	090
64659	Removal of baroreflex activation therapy (BAT) modulation system; pulse generator only	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64654	A 65-year-old male suffers from dyspnea on exertion, fatigue, and edema. He has failed guideline-directed medical therapy, has NYHA Classification of Level III and CRT therapy is not an option due to a narrow QRS. He continues to have shortness of breath while walking one block. His heart failure status is progressively worsening indicating a need for additional treatment. He is referred for implantation of a baroreflex activation therapy modulation system.
64655	A 68-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. At a recent device check, the lead was found to have fractured and is no longer functioning requiring replacement with a new lead to restore normal system function.
64656	A 70-year-old male returns five years after implantation of an implanted baroreflex activation therapy (BAT) modulation system for routine replacement of the BAT pulse generator.
64657	A 72-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. One year ago, the patient underwent elective replacement of the pulse generator and developed an inflammatory response (suspect infection) of the pulse generator pocket lead system. After several months of antibiotic therapy, he continues to have recurrence of low-grade fevers, erythema, effusion of the pulse generator pocket, and positive blood

	cultures. It is determined that the BAT system is infected, and extraction of the total system is required.
64658	A 72-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. He has recently developed fever and tenderness near the lead placement site on the carotid sinus. Aspiration cultures were positive for staphylococcus epidermitis and gram-negative bacilli. It is determined that the lead is infected, and removal is required.
64659	A 72-year-old male has an implanted baroreflex activation therapy (BAT) modulation system. He has recently developed erythema and an effusion within the pulse generator pocket. Aspiration cultures were positive for staphylococcus epidermitis and gram-negative bacilli requiring removal of the pulse generator.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened a consensus panel and developed the PE recommendations based on best practices and RUC guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The specialty societies included CPT Code 64569 *Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator* as a reference code for the BAT services. CPT Code 64569 is a RUC reviewed, facility only service, 90 day global period service performed by vascular surgery.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and

has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Clinical staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included. Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for a surgical procedure. Clinical staff coordinates schedules. Clinical staff enters and records all clinical updates in EHR. Clinical staff interacts with facility to schedule space, supplies, equipment, and review checklists. Clinical staff reviews procedure, complication risk, process of recovery, and answers patient/family questions. Clinical staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon office medical record, including medication list, correspondence and imaging or lab results pending at discharge.

   c. Post-service period:

The clinical staff work includes the standard activities involved in the E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, and cleaning of the room.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

CPT CODE(S):64654-64659
SPECIALTY SOCIETY(IES): SVS
PRESENTER(S): Jonathon Thompson, MD & Matthew Sideman, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

SA048 pack, minimum multi-specialty visit SA053 pack, post-op incision care (suture & staple)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, post-op incision care (suture & staple)	**SA053**	**pack**	
kit, staple removal		kit	1
kit, suture removal		kit	1
povidone soln (Betadine)		ml	10
gauze, sterile 4in x 4in		item	2
gloves, sterile		pair	1
steri-strip (6 strip uou)		item	2
swab-pad, alcohol		item	2
tape, surgical paper 1in (Micropore)		inch	12
tincture of benzoin, swab		item	1

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S):93145, 93146_**
SPECIALTY SOCIETY(IES): ACC, HRS_
PRESENTER(S):_Dr. Richard Wright, Dr. Ed Tuohy, Dr. David Slotwiner, Dr. Mark Schoenfeld_

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: Jan. 2025

CPT Code	Long Descriptor	Global Period
93145	Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (bat) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); without programming	XXX
93146	Interrogation device evaluation (in person), carotid sinus baroreflex activation therapy (bat) modulation system including telemetric iterative communication with the implantable device to monitor device diagnostics and programmed therapy values, with interpretation and report (eg, battery status, lead impedance, pulse amplitude, pulse width, therapy frequency, pathway mode, burst mode, therapy start/stop times each day); with programming, including optimization of tolerated therapeutic level setting	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
93145	A 65-year-old male presents for evaluation of an implanted baroreflex activation therapy (bat) modulation system. the device is working properly, and he does not require adjustment to his program therapy values.
93146	A 65-year-old male presents for evaluation of an implanted baroreflex activation therapy (bat) modulation system. the device is working properly but requires additional device programming in an effort to continue to increase stimulation levels in order to achieve his optimal therapeutic levels.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   93145: Key reference service from the survey, 93279, was used as the refence code.
   93146: Key reference service from the survey, 93281, was used as the reference code.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

No.

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Unknown. New codes with very low Category III utilization

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A. New Category I codes

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Weight, height, pulse, blood pressure are obtained for these heart failure patients.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

93145: Call patient the day before to remind them not to take HF meds so they are not hypotensive. 93146: Call patient the day before to remind them not to take HF meds so they are not hypotensive.

    b. Service period (includes pre, intra and post):

93145: Prepares room, reviews charts, greets patient, obtains vitals, obtains consent, interrogates device (battery and output, impedance and looking for lead integrity and vital signs) Cleans room, Document battery longevity, level of stimulation, response of patient (change in HR, BP, walk) in EHR. 93146: Prepares room, reviews charts, greets patient, obtains vitals, obtains consent, interrogates device (battery and output, impedance and looking for lead integrity and vital signs). Titrates level of stimulation; increasing output every 2-5 minutes and follow BP (4 BPs in 5-minute intervals for 20 minutes of titration, generally 1 level of the 9 device levels); conduct 6-minute walk test on patient to see improvement. Cleans room, Document battery longevity, level of stimulation, response of patient (change in HR, BP, walk) in EHR.

    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

93145: Prepares room, reviews charts, greets patient, obtains vitals, obtains consent, interrogates device (battery and output, impedance and looking for lead integrity and vital signs) Cleans room, Document battery longevity, level of stimulation, response of patient (change in HR, BP, walk) in EHR. 93146: Prepares room, reviews charts, greets patient, obtains vitals, obtains consent, interrogates device (battery and output, impedance and looking for lead integrity and vital signs). Titrates level of stimulation; increasing output every 2-5 minutes and follow BP (4 BPs in 5-minute intervals for 20 minutes of titration, generally 1 level of the 9 device levels); conduct 6-minute walk test on patient to see improvement. Cleans room, Document battery longevity, level of stimulation, response of patient (change in HR, BP, walk) in EHR.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Percutaneous Electrical Nerve Field Stimulation – Tab 13

At the September 2024 CPT Editorial Panel meeting, one new Category I code was created to report percutaneous electrical nerve field stimulation of cranial nerves and the existing Category III code, 0720T, was deleted. This procedure provides patients with a non-opioid therapy for the treatment and management of abdominal pain. This treatment typically lasts four weeks where patients return to the office for device placement each week. The new code was surveyed for the January 2025 RUC meeting.

64567 ***Percutaneous electrical nerve field stimulation, cranial nerves, without implantation***
The RUC reviewed the survey results from 51 pediatric gastroenterologists and recommends a work RVU of 1.50 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 11 minutes of pre-service time, 20 minutes intra-service time, 8 minutes immediate post-service time, and 39 minutes total time. The specialties and RUC agreed to recommend the pre- and post-time from the targeted industry sample which received 39 responses. It is not typical to report an E/M in conjunction with the surveyed code.

For this procedure, The physician examines the skin behind the ear. Transillumination of the ventral and dorsal aspects of the external ear is performed to visualize the cranial and occipital neurovascular bundles. The area is then cleaned with alcohol wipes and marked with a surgical pen. The needle arrays are placed on the ventral/dorsal side of the ear lobe. The electrical nerve field stimulator is positioned behind the patient's ear, activated, re-positioned as needed, and secured in final placement with adhesives.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.92, 47 minutes total time) and second key reference code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30, 30 minutes total time). The key reference services appropriately bracket the surveyed code work RVU. Further, when compared to the two key reference services and other codes with a similar work RVU, intra-service time, and total time, the surveyed code falls appropriately in the middle of those services supporting the relativity of the recommendation.

For additional support, the RUC referenced MPC codes 95805 *Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness* (work RVU = 1.20, 20 minutes intra-service time, 50 minutes total time) and 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

qualified health care professional (work RVU = 1.75, 20 minutes intra-service time, 40 minutes total time). The surveyed code is appropriately bracketed by the MPC reference codes and supports the relativity of the recommended work RVU. **The RUC recommends a work RVU of 1.50 for CPT code 64567.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. The PE Subcommittee acknowledged the new high-cost supply input, *IB-Stim Device Kit,* as recommended for CPT code 64567. The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology/New Services
CPT code 64567 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Nervous System** **Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System** **Neurostimulators (Peripheral Nerve)** *For electronic analysis with programming…* *…* *Codes 64590, 64596 describe two different approaches to placing a neurostimulator pulse generator or receiver. Code 64590 is used in conjunction with 64555, 64561 for permanent placement. Codes 64555, 64561 are used to report electrode array placement for a trial and for the permanent placement of the electrode array. Code 64590 is used to report the insertion of a neurostimulator pulse generator or receiver that requires creation of a pocket and connection between the electrode array and the neurostimulator pulse generator or receiver. Code 64596 is used to report the permanent placement of an integrated system, including the electrode array and receiver.* <u>In contrast to other stimulator services such as 64553 which target a specific cranial nerve through invasive stimulator placement, code 64567 is used to report stimulation of cranial nerve field branches through the percutaneous periauricular placement of a non-implanted electrical nerve field stimulator (PENFS).</u> *(For transcutaneous nerve stimulation [TENS], use 97014 for electrical stimulation requiring supervision only or use 97032 for electrical stimulation requiring constant attendance)* *64553 Percutaneous implantation of neurostimulator electrode array; cranial nerve*				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

	(For open implantation of vagus nerve integrated neurostimulation system, see 0908T, 0909T) <u>(For percutaneous electrical nerve field stimulation utilizing noninvasive, non-implanted stimulation of a cranial nerve field [ie, PENFS], use 64567)</u> *(For percutaneous electrical stimulation of a cranial nerve using needle(s) or needle electrode(s) [eg, PENS, PNT], use 64999)* *(For open placement of cranial nerve [eg, vagus, trigeminal] neurostimulator pulse generator or receiver, see 61885, 61886, as appropriate)*			
64566	*Posterior tibial neurostimulation, percutaneous needle electrode, single treatment, includes programming* *(Do not report 64566 in conjunction with 64555, 95970-95972)* *(For peripheral nerve transcutaneous magnetic stimulation, see 0766T, 0767T)*			
●64567	W1	Percutaneous electrical nerve field stimulation, cranial nerves, without implantation	XXX	1.50
64568	*Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator* *(For open implantation of vagus nerve integrated neurostimulation system, see 0908T, 0909T)*			
64596	*Insertion or replacement of percutaneous electrode array, peripheral nerve, with integrated neurostimulator, including imaging guidance, when performed; initial electrode array*			
✚*64597*	*each additional electrode array (List separately in addition to code for primary procedure)* *(Use 64597 in conjunction with 64596)* *(Do not report 64596, 64597 in conjunction with 64555, 64561, 64590, 64595)* <u>(For percutaneous electrical nerve field stimulation utilizing noninvasive, non-implanted stimulation of a cranial nerve field, use 64567)</u> *(For percutaneous implantation of electrode array only, peripheral nerve, use 64555)* *(For implantation of trial or permanent electrode arrays or pulse generators for peripheral subcutaneous field stimulation, use 64999)* *(For neurostimulators without a named target nerve [eg, field stimulation], use 64999)* *(For percutaneous implantation or replacement of integrated neurostimulation system for bladder dysfunction, posterior tibial nerve, use 0587T)*

CPT Descriptor: Percutaneous electrical nerve field stimulation, cranial nerves, without implantation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 16-year-old female with a two-year history of chronic abdominal pain associated with irritable bowel syndrome who has failed to respond to changes in diet, lifestyle, over-the-counter therapies, and off-label medications is referred for placement of a percutaneous electrical nerve field stimulator.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review relevant clinical notes and labs in medical record. Check to ensure no patient contraindications to device placement (e.g., ear infection, pregnancy, pacemaker, hemophilia, psoriasis). Discuss ear preference, sleep position(s), cosmetic concerns, needle phobia, adhesive reactions and/or prior device experience and tolerance with patient and guardian. Check patient symptomatology, including level of pain and nausea.

Description of Intra-Service Work: The physician clips patient's hair out of the way and examines the skin behind the ear. Transillumination of the ventral and dorsal aspects of the external ear is performed to visualize peripheral branches of cranial and occipital neurovascular bundles. These specific areas are cleaned with alcohol wipes, coated with topical adhesive, and marked with a surgical pen. The physician connects the electrode harness to the electrical nerve field generator and attaches the generator behind the ear using a double-sided adhesive. The 3 active electrodes are then placed near the marked neurovascular bundles at the level of the tragus, anterior scaphoid fossa, and posterior aspect of the helix. The ground electrode is placed on the lobule. Each electrode is secured to the skin with a round bandage. The physician observes the patient after initial placement assessing for allodynia and other side effects; leads are repositioned as indicated. Throughout the procedure, the physician provides ongoing guidance and reassurance about activities being performed to reduce patient's level of anxiety. Once final position is confirmed, wires are hidden from view and secured with adhesive.

Description of Post-Service Work: The physician provides discharge instructions to patient including written instructions on the date and time for them to remove the device at home. Physician provides extra adhesives needed to maintain device placement. Follow-up plan discussed, including timing of next placement and length of treatment plans. The physician answers patient's and parent/guardian's questions. Physician documents procedure in the medical record and sends communications to care team as needed.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	4%	56%	36%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	40%	52%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	12%	0%	88%
Physical effort required	12%	40%	84%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	16%	76%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	70%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	30%	40%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	10%	80%
Physical effort required	0%	20%	80%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	50%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
At the September 2024 CPT Editorial Panel Meeting, Category III code 0720T for reporting percutaneous electrical nerve field stimulation of the cranial nerves without implantation was converted to Category I code 64567. This FDA approved device is used to treat chronic abdominal pain in children who have typically failed prior treatments such as diet modification, lifestyle changes, over-the-counter options and prescription medications. It consists of a battery-activated generator and 4 electrode wires. Three of the wires contain a sterile 2-mm titanium needle and 1 wire contains 4 microneedles that serve as a ground lead. Using transillumination, physicians identify and place leads near specific neurovascular bundles. While microneedles pierce the preauricular skin, they are not implanted and remain closer to the surface of the skin. Preset electrical stimulation protocols are then delivered over the course of 5 days at which time patients and/or caregivers remove the device at home. Treatment typically lasts 4 weeks where patients return to the clinic for a new device placement each week. Over time, the stimulation protocol leads to downregulation of pain processing pathways thus improving chronic abdominal pain.

Survey Process
The ACG, AGA, ASGE and AAP conducted a survey for the January 2025 RUC meeting including a random sample of applicable subsets of society members plus a targeted sample using vendor-provided list of all trained US providers. A total of 51 responses were received. The surveying societies convened an expert panel that evaluated survey results and developed the following recommendations.

Recommendations
We recommend the survey 25th percentile **wRVU of 1.50**.

Pre- time: 11 minutes of pre-service evaluation time, reflecting the survey median of the "Industry" sample.

Post-time: 8 minutes of immediate post-service time, reflecting the survey median of the "Industry" sample.

Intra-service time: 20 minutes of intra-service time, reflecting the survey median of the "SVY – All" and "Industry" samples.

Key Reference Services
The top Key Reference Service code 99214 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded*) was selected by 49% of survey respondents. The second top Key Reference Service code 99213 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded)* was selected by 19.6% of respondents. Given the unique nature of this clinic-performed percutaneous nerve stimulation for both gastroenterology and pediatrics, it is not surprising that clinicians gravitated towards the more familiar outpatient E/M codes.

Comparison to XXX-day global codes with similar intra-service time and total time:

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Intra Time	Immed Post Time	Total Time	Time Source	Most Recent RUC Review	IWPUT	MPC	2022 Medicare Utilization

64567	Percutaneous electrical nerve field stimulation, cranial nerves, without implantation	XXX	1.5	11	20	8	39			0.054		
99382	Initial comprehensive preventive medicine evaluation and management	XXX	1.6	7	20	5	32	RUC	2010-10	0.0666		
78452	Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction,	XXX	1.62	10	20	10	40	RUC	2009-02	0.0586		1326697
93351	Echocardiography, transthoracic, real-time with image documentation (2D),	XXX	1.75	10	20	10	40	RUC	2016-10	0.0651	Yes	180025
78492	Myocardial imaging, positron emission tomography (PET), perfusion study (including	XXX	1.8	8	20	10	38	RUC	2019-01	0.0698		113774
76987	Intraoperative epicardial cardiac ultrasound (ie, echocardiography) for	XXX	1.9	10	20	10	40	RUC	2022-09	0.0726		
99214	Office or other outpatient visit for the evaluation and management of an established	XXX	1.92	7	30	10	47	RUC-CMS Revised	2019-04	0.0513	Yes	98487922

These examples illustrate that the recommended value and time for code 64567 are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion
For code 64567, *Percutaneous electrical nerve field stimulation, cranial nerves, without implantation,* the societies recommend the survey 25th percentile **work RVU of 1.50 with a pre-service time of 11 minutes, intra-service time of 20 minutes, and post-service time of 8 minutes for a total time of 39 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0720T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty General Pediatrics How often? Rarely

Specialty Pediatric Gastroenterology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3400
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Internal sales data from NeurAxis CRM (device manufacturer) for past 3 years

Specialty General Pediatrics Frequency 170 Percentage 5.00 %

Specialty Pediatric Gastroenterology Frequency 3230 Percentage 95.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please

explain the rationale for this estimate. The device is currently only approved for use in pediatric patients. Typical patient does not have a diagnosis that makes them eligible for Medicare.

Specialty General Pediatrics Frequency 0 Percentage 0.00 %

Specialty Gastroenterology Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 91110

PRESENTER(S):Dr. Steven Krug, Dr. Patricia Garcia, Dr. Seth Gross, Dr. R. Bruce Cameron, Dr. Katja Karrento, Dr. Jonathan Teitelbaum

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
64567	Percutaneous electrical nerve field stimulation, cranial nerves, without implantation	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64567	A 16-year-old female with a two-year history of chronic abdominal pain associated with irritable bowel syndrome who has failed to respond to changes in diet, lifestyle, over-the-counter therapies, and off-label medications is referred for placement of a percutaneous electrical nerve field stimulator.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The AAP, ACG, AGA, and ASGE convened an RVS expert panel of the surveying specialty societies to review practice expense data for code 64567. The panel included both sub-specialists and generalists from within the specialties of a variety of settings across the United States. They also received input from practice managers and clinical staff familiar with the direct expense inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The reference code for comparison of new code 64567 is 93005 (*Electrocardiogram, routine ECG with at least 12 leads; tracing only, without interpretation and report*) because it has similar clinical staff work.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   No, code 64567 is a new procedure code that we expect will be reported with an E/M code with only the first procedure of the typical 4 procedure treatment duration; therefore, we only expect an E/M code to be reported 25% of the time for all 64567 volume.
   When code 64567 is reported with an E/M code, it will typically be in the non-facility.

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they

must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Pediatric gastroenterology is the dominant provider in the non-facility. We anticipate that the dominant provider will provide this service 90% of time in the non-facility. We do not anticipate that the dominant provider in the non-facility will be different than for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Not applicable. This is a new code.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

Not applicable. This is a new code.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre-Service Period Clinical Labor Activities = L037D (RN/LPN/MTA)
3 minutes to complete pre-procedure phone calls & prescriptions (CA005)
We are recommending **3** minutes of pre-service period time: 3 minutes to complete pre-procedure phone calls & prescriptions.

Service Period – Pre-service Clinical Labor Activities = L037D (RN/LPN/MTA)
3 minutes to greet patient, gowning, ensure appropriate medical records are available (CA009)
2 minutes to prepare room, equipment and supplies (CA013)
We are recommending 5 minutes of service period pre-service activities: 2 minutes to prepare the room, equipment and supplies and 3 minutes to greet and gown patient and ensure appropriate medical records are available.

Service Period – Post-service Clinical Labor Activities = L037D (RN/LPN/MTA)
1 minute to clean room/equipment by clinical staff (CA024)
We are recommending 1 minute to clean the room.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

Not applicable

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Not applicable

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Pre-Service Period Clinical Labor Activities = L037D (RN/LPN/MTA) 3 minutes to complete pre-procedure phone calls & prescriptions (CA005). During these calls, staff ensure that the child does not have any acute illnesses that would preclude stimulator placement, remind them to bring their devices for placement and/or disposal if applicable, encourage patients to arrive with their hair pulled or clipped back, and suggest taking a more thorough shower or bath as that can be harder after device placement.

    b. Service period (includes pre, intra and post):

Service Period – Pre-service Clinical Labor Activities = L037D (RN/LPN/MTA) 2 minutes to prepare room, equipment and supplies (CA013) 3 minutes to greet patient, gowning and ensure appropriate medical records are available (CA009) **Service Period – Pre-service Clinical Labor Activities = L037D (RN/LPN/MTA)** No staff work **Service Period – Post-service Clinical Labor Activities = L037D (RN/LPN/MTA)** 1 minute to clean room/equipment by clinical staff (CA024)

    c. Post-service period:

No post-procedure clinical staff work is requested.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

No intra-service clinical activity is requested because clinical staff do not assist with or perform the intra-service work.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

Not applicable

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

Not applicable

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

Not applicable

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

The IB-Stim device kit is required to perform the procedure - https://ibstim.com/information/ In terms of round bandages, the kit come with 12; of those 4 are used for the electrodes and 4 are used to gather the wires which are then secured behind the ear with additional tape. That leaves 4 round bandages to send home with the patients. Patients typically have the device on for 120 hours continuously which includes while sleeping, exercising, playing sports, bathing, brushing their hair etc so even though extra efforts are made to adhere the device during placement it is common for the adhesives attaching the generator, the leads and hiding the excess wires to become loose or get tangled. The bandages themselves come in sheets of 4 so typically the patient is sent home with the 4 remaining bandages from the kit and an additional sheet of 4 which gives them 8 bandages to use as replacements or supplements as needed throughout the treatment period. Paid invoices for the IB-Stim device kit and adhesive dot bandages, 10mm, provided by the company are included in the 64567 invoice summary document with the submission package.

18. Are you recommending a PE supply pack for this recommendation? No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

IB-stim device kit supplies: • IB-Stim stimulator with inserted but not activated batteries • Sterile Wire Harness for use with IB-Stim stimulator only

- Round Bandages to fasten the appliance leads (12), Stimulator adhesive (2), Compound Benzoin Tincture, Alcohol swab (2), Sureprep®, Tegaderm™, Bio-Hazard Bag and Patient ID Card
- Tweezers
- Surgical Marker
- Transilluminator
- Instruction manual

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Not applicable

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Not applicable

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

Not applicable

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EF023 table, exam – default equipment formula; however, because clinical staff does not assist in performing the procedure (e.g., CA018-CA021) we added "+20" reflecting the 20 minutes of physician intra-service time to the default equipment formula because the patient sits on the exam table throughout the entire procedure.
EQ168 light, exam – default equipment formula; however, because clinical staff does not assist in performing the procedure (e.g., CA018-CA021) we added "+20" reflecting the 20 minutes of physician intra-service time to the default equipment formula because the exam light is required throughout the entire procedure.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:
    Not applicable

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:
    Not applicable

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Percutaneous Decompression of Median Nerve – Tab 14

At the September 2024 CPT Editorial Panel meeting, one new Category I code was created to report percutaneous decompression of the median nerve at the carpal tunnel using ultrasound guidance and a balloon dilation device while transecting the transcarpal ligament. This new technology procedure was previously reported with unlisted code 64999. The new code was surveyed for the January 2025 RUC meeting as a 000-day global service given that postoperative care is not required for a majority of patients. For example, sutures are not used, so suture removal is not necessary; the patient is instructed to remove the bandage and steri-strips within two days, and physical therapy is not needed.

64728 ***Decompression; median nerve at the carpal tunnel, percutaneous, with intracarpal tunnel balloon dilation, including ultrasound guidance***
The RUC reviewed the survey results from 60 physicians from multiple specialties, including surgeons (hand, orthopaedic, plastic, neurosurgery), sports medicine, physical medicine and rehabilitation, and radiology. The RUC determined that the survey respondents may have overestimated work relative to the key reference services and recommends a work RVU of 2.70 based on a direct crosswalk to MPC code 51102 *Aspiration of bladder; with insertion of suprapubic catheter* (work RVU = 2.70, 20 minutes intra-service, 60 minutes total time), to maintain relativity within the payment schedule for this code. The RUC recommends 18 minutes of pre-service evaluation time, 3 minutes positioning time, 6 minutes scrub/dress/wait time, 20 minutes intra-service time, 10 minutes immediate post-service time, and 57 minutes total time.

For this procedure, a 0.5 cm incision is made through the skin and distal forearm fascia in the proximal wrist crease. This service is performed under continuous ultrasound guidance to monitor balloon inflation which pushes the soft tissue and surrounding vital anatomy (eg, median nerve and ulnar artery) to create space for the anticipated transection pathway. The complexity of this service involves ensuring that the nerve and nerve branches are kept intact while the surgeon is going from the longitudinal plane to the transverse plane back and at multiple levels to transect the transverse carpal ligament (TCL) and any remaining fibers.

To support the RUC recommended work RVU, the RUC referenced other codes with a 000-day global period, a similar work RVU, and similar intra-service and total time. CPT codes 43249 *Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic balloon dilation of esophagus (less than 30 mm diameter)* (work RVU = 2.67, 20 minutes intra-service time, 57 minutes total time) and 31295 *Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); maxillary sinus ostium, transnasal or via canine fossa* (work RVU = 2.70, 20 minutes intra-service time, 56 minutes total time) appropriately bracket the surveyed code and support the relativity of the recommended work RVU. **The RUC recommends a work RVU of 2.70 for CPT code 64728.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made minor modifications to the pre-service clinical staff time for the non-facility inputs. The PE Subcommittee acknowledged that the pre-service clinical staff time for 000- and 010-day global codes is presumed to be zero and determined that the standard pre-service time of zero minutes is appropriate for this code for the non-facility

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

setting. Therefore, the recommended time was revised to zero minutes for CA001 *Complete pre-service diagnostic and referral forms* and CA005 *Complete pre-procedure phone calls and prescription*. The PE Subcommittee agreed with the specialties' use of the pre-service time package for "Minimal Use of Clinical Staff" in the facility only.

The PE Subcommittee acknowledged the new high-cost supply input, *Kit, UltraguideCTR,* as recommended for CPT code 64728. The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee.**

New Technology
CPT code 64728 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64728 Tracking Number X1 Original Specialty Recommended RVU: **3.19**
Presented Recommended RVU: **3.19**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **2.70**

CPT Descriptor: Decompression; median nerve at the carpal tunnel, percutaneous, with intracarpal tunnel balloon dilation, including ultrasound guidance

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with a right carpal tunnel syndrome undergoes an ultrasound guided percutaneous release of the transverse carpal ligament with intracarpal tunnel balloon dilation.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 26% , In the ASC 38%, In the office 33%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Re-examine patient to ensure that physical findings have not changed and update H&P. Meet with patient to review planned procedure and postoperative management. Review informed consent with patient. Verify all required instruments and supplies are available. Verify patient data entry into ultrasound equipment software and set and adjust equipment parameters. Position the patient with the wrist on a stable surface in slight extension and in neutral radial-ulnar deviation. Scrub and gown. Prep/supervise prep of the patient's entire forearm, elbow to fingertips, using standard sterile techniques. Open the device packaging and prime the device. Confirm the function of the cutting mechanism and balloon activation. Using direct ultrasound visualization, identify the transverse safe zone between the ulnar aspect of the median nerve and the radial aspect of the ulnar vessels or the hook of the hamate, whichever lies more radial. Identify the incision site at the proximal wrist crease. Scan proximally along the anticipated transverse carpal ligament (TCL) transection line to the lunate bone, located at the proximal wrist crease. Mark the skin in the region of the lunate along the anticipated line of TCL transection, noting the position of the median nerve and ulnar artery. Infiltrate local anesthetic volarly across the wrist in the region of the incision site. As appropriate, using ultrasound guidance, administer additional local anesthetic into the carpal tunnel dorsal to the transverse carpal ligament, separating the synovial tissue from the ligament. Perform surgical time-out.

Description of Intra-Service Work: Using ultrasound guidance, make a 0.5 cm incision through the skin and distal forearm fascia in the marked region of the proximal wrist crease. Insert an elevator dorsal to the transverse carpal ligament. Use the elevator in several passes to remove the synovium from the dorsal surface of the TCL. Using ultrasound guidance, insert the device into the carpal tunnel just dorsal to the TCL. Use the transverse view to position the device between the ulnar edge of the median nerve and the ulnar artery, and the longitudinal view to position the device tip between the distal transverse carpal ligament and the proximal edge of the superficial palmar arch. Under continuous ultrasound guidance, inflate the device balloons to create space and protect key anatomy, and to visualize and confirm proper placement of the device. Reconfirm the absence of vital structures within the anticipated transection pathway. Engage the cutting blade and transect the TCL in a distal to proximal manner. Perform additional release for any remaining fibers, checking the position of vital structures prior to each cutting blade activation. Recess the cutting blade, deflate the balloons, and remove the device. Reinsert the elevator and probe the TCL using ultrasound guidance to confirm a complete transection. Manually express excessive fluid from the wound and close using adhesive strips.

Description of Post-Service Work: Assess circulation, sensation, and motor function of the extremity. Dress the wound in layers using protective padding on the palmer side of the hand and wrist. Discuss home restrictions (ie, activity, bathing) with patient. Complete all appropriate medical records. Dictate an operative report. Write a procedure note in patient's chart. Review and sign the final ultrasound report.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	25%	75%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	15%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	5%	35%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	0%	95%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	11%	44%	44%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	22%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	11%	89%
Physical effort required	33%	34%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	11%	78%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2024 CPT meeting, the Panel accepted a request to: establish new code 64728; move and revise the exclusionary parenthetical following code 64726 to follow code 64728; and add an exclusionary parenthetical to preclude the reporting of 64728 with 29848, 64721, 76942, 76998.

Nine societies expressed an interest in surveying the new code. In addition, ACR obtained a list of 252 trained providers from the device company, who were also surveyed.

ASSH - American Society for Surgery of the Hand
ASPS - American Society of Plastic Surgeons
AAOS - American Academy of Orthopaedic Surgeons
AAPM&R - American Academy of Physical Medicine and Rehabilitation
AANS - American Association of Neurological Surgeons
CNS - Congress of Neurological Surgeons
IPSIS - International Pain and Spine Intervention Society
NANS - North American Neuromodulation Society
ACR - American College of Radiology
Vendor List – administered by ACR

Survey responses were reviewed to confirm that physicians did not complete surveys from multiple sources.

Recommendation

The survey 25th percentile work RVU of 3.19 is recommended.

Pre-time: Package 1 Straightforward Patient/Straightforward Procedure

Evaluation time: An additional 5 minutes (total = 18 minutes) has been added to the standard package time for additional time to prime the device with sterile saline and to test the function of the cutting mechanism and balloon activation. Additional time is also required for preoperative ultrasound visualization of the anatomy prior to marking the incision site, as described in the preservice description of work. This work exceeds the standard two minutes allowed as part of package 1 evaluation time for checking the supplies and equipment and for preparing patient readiness (eg, gown, drape, prep, mark).

Positioning time: An additional 2 minutes (total = 3 minutes) has been added to the standard package time to position the extremity on a stable surface in slight extension and in neutral radial-ulnar deviation using padding, after patient supine positioning, along with positioning the ultrasound equipment for viewing

Scrub, dress, wait time: Standard package time of 6 minutes is recommended.

Post-time: Package 7A Local Anesthesia/ Straightforward Procedure

Package time has been reduced to be consistent with the survey median time..

Key Reference Service Comparison

The intensity/complexity measures for respondents choosing KRS codes 11044 and 19085 indicate the survey code 64728 has greater intensity/complexity across all measures. This may be due to the need for protection of anatomic structures involved in 64728 when compared with the KRS procedures.

RUC Year	CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64999

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty hand surgery How often? Rarely

Specialty orthopaedic surgery How often? Rarely

Specialty plastic surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 10000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Device company sales information provided in code change application - breakdown by specialty for national utilization was not provided in CCA and is not available.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. FUTURE Medicare claims estimated at approximately 25% of vender indicated sales.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 20526

CPT Code	Long Descriptor	Global Period
64728	Decompression; median nerve at the carpal tunnel, percutaneous, with intracarpal tunnel balloon dilation, including ultrasound guidance	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64728	A 50-year-old female with a right carpal tunnel syndrome undergoes an ultrasound guided percutaneous release of the transverse carpal ligament with intracarpal tunnel balloon dilation.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   PE details were developed by physicians familiar with the procedure that were reviewed by the advisors of the surveying societies.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   KRS codes 11044 and 19085 were not used as references because the clinical staff type, supplies, and equipment is not sufficiently similar to 64728.
   Code 20606, *Arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting*, was chosen as a reference to guide the PE details recommended for 64728. Code 20606 is performed by specialties expected to perform 64728, is a percutaneous procedure involving the wrist, and includes ultrasound guidance. However, we note that some clinical staff time, supplies and equipment time was deleted from 20606 as it was determined to typically be reported with an E/M service. We do not expect that 64728 will typically be performed with an E/M.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service? No
   Is this code(s) typically reported with the E/M service in the non-facility? No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-

facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

We do not have information about who will perform this service in the nonfacility setting, but expect the dominant provider will be hand (plastic/ortho) surgeons.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A – this is a new code.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

no

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

n/a

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

n/a

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 64728
SPECIALTY SOCIETY(IES): ASSH, ASPS, AAOS, ACR, AANS, CNS, AAPMR, IPSIS, NANS

n/a

b. Service period (includes pre, intra and post):

- Ensure medical records are available
- Greet patient, provide gown.
- Take vitals (BP, pulse, weight)
- Review procedure with patient and answer any questions
- Prepare room, including portable US machine.
- Set up supplies on mayo stand.
- Assist with patient positioning
- Assist with delivery of local anesthetic.
- Assist as needed during the procedure.
- Clean room and equipment
- Check dressings and review home care and activities with patient.

c. Post-service period:

- Contact patient later the same day as brief postop check-in and to answer any questions.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

The procedure is sterile and the clinical staff will need to be available throughout the procedure and final dressing application to assist the physician.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

n/a

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

n/a

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

no

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Standard pre-time for facility 000 global minimal use of clinical staff is recommended. Phone calls to the patient to review the procedure and review medication changes, calls to payer for preauthorization, calls to order the device kit and have it available in the facility, calls to the facility to confirm kit is available are all necessary prior to the procedure.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

8. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Clinical staff will make phone calls to the patient to review the procedure and review medication changes, calls to payer for preauthorization, calls to order the device kit and have it available in the facility, calls to the facility to confirm kit is available are all necessary prior to the procedure. Fifteen minutes total for these activities is a conservative estimate of clinical staff time.

    b. Service period (includes pre, intra and post):

n/a

    c. Post-service period:

Contact patient later the same day as brief postop check-in and to answer any questions.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

n/a

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Coronary Atherosclerotic Plaque Assessment – Tab 15

In September 2024, the CPT Editorial Panel approved the addition of a new Category I code to report automated quantification and characterization of coronary atherosclerotic plaque to assess the severity of coronary disease derived from augmentative software analysis with interpretation and report by a physician or qualified health care professional, and the deletion of the four existing Category III codes.

75574 ***Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)***
CPT code 75574 was identified as part of the code family and there was an expectation for this code to be surveyed. The specialty societies declined to survey CPT code 75574 because they do not believe it is part of this family of services. The specialty societies indicated that CPT code 75577 is a distinct and non-overlapping service compared to CPT code 75574 and AI-driven analysis of 75577 is not a reason to survey code 75574. **The RUC submits no recommendation for CPT code 75574**.

75577 ***Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional***
The RUC reviewed the survey results from 129 cardiologists and radiologists and determined that the survey 25th percentile work RVU of 0.85 appropriately accounts for the physician work typically involved in this service. The RUC recommends 5 minutes pre-service time, 15 minutes intra-service time, and 7 minutes post-service time for 27 minutes total time as supported by the survey.

CPT code 75577 describes the quantification and characterization of coronary atherosclerotic plaque to assess the severity of coronary disease which must be derived from augmentative software analysis using data from coronary computed tomographic angiography (CCTA) and then separately interpreted by a physician or other qualified health care professional with a unique report. The additional data from 75577 is used to enhance physician decision-making for treatment planning and it is only ordered if indicated by the CCTA. This service occurs after the original CCTA is interpreted and is typically performed on a different day, frequently by a different physician, due to the delay from software analysis processing time, which can take 3-4 hours.

To justify a work RVU of 0.85, the RUC compared CPT code 75577 to the top key reference service code 75580 *Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional* (work RVU = 0.75, 11 minutes intra-service time and 22 minutes total time) and noted that both codes are cardiac augmentative software analysis codes derived from coronary CT angiography in similar patient populations. The surveyed code has more intra-service and total time and is therefore appropriately valued higher

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

than the reference service. The RUC also compared CPT code 75577 to the second key reference service code 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional* (work RVU = 1.75, 20 minutes intra-service time and 40 minutes total time) and noted that the reference service is an imaging study with more intra-service and total time and is therefore appropriately valued higher than 75577. The RUC noted that the survey 25th percentile value is appropriately bracketed by the two key reference service codes.

For additional support, the RUC compared CPT code 75577 to MPC code 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, 10 minutes intra-service time and 20 minutes total time) and noted that the surveyed code has more intra-service and total time, while the comparator code is a nuclear bone scan that involves assessment of a lower complexity imaging and results in a similar amount of physician work due to the lower intra-service time and overall higher intensity. The RUC concluded that CPT code 75577 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.85 for CPT code 75577.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made one modification to remove the minutes from CA031 *Review examination with interpreting MD/DO*. The Subcommittee agreed with the standard times of 2 minutes for CA030 *Technologist QC's images in PACS, checking for all images, reformats, and dose page* and 1 minute for CA032 *Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.* The PE Subcommittee acknowledged the new high-cost supply input, *Plaque Characterization Analysis Software*, and did not deem this an indirect expense as it is utilized for the individual patient. **The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology
CPT code 75577 will be placed on the New Technology list and will be re-reviewed by the RUC in three years.

RE: Tab 15 - Coronary Atherosclerotic Plaque Assessment

Dear Dr. Silva,

The undersigned societies have submitted work RVU and direct practice expense input recommendations for newly created CPT code 75XX6 *(Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional)* for the January 2025 RUC meeting. On the Level of Interest (LOI) form for this meeting, CPT code 75574 *(Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed))* was identified as part of the code family and there was an expectation for this code to be surveyed. The societies declined to survey CPT code 75574 because we do not believe it meets the criteria as a family.

Our rationale is based on two criteria:

- CPT code 75XX6 is a distinct and nonoverlapping service compared to CPT code 75574
- AI-driven analysis of 75XX6 is not a reason to survey code 75574

The RUC has consistently deferred to the specialties to make code family determinations based on their clinical expertise and knowledge, and we explain our rationale below.

CPT Code 75XX6 Background

CPT code 75XX6 describes the quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease which must be derived from augmentative software analysis using data from coronary CTA (CCTA) and then separately interpreted by a physician or other qualified health care professional with a unique report. The additional data from 75XX6 is used to enhance physician decision-making pertaining to treatment planning. This 75XX6 service is typically performed after original CCTA is interpreted, due to the delay from software analysis processing time. Furthermore, like the workflow for 75580, this new service often requires prior authorization, which can take several days to obtain from the insurer. To avoid incorrect patient billing, prior authorization is needed prior to creating a new order and submitting the case for analysis. Additionally, the patient is notified that the coronary plaque assessment is being ordered and is counseled that they might incur a deductible--as would apply to any imaging test for which the patient needs to give consent before moving forward.

Therefore, the societies believe that it is typical that 75XX6 and 75574 are performed on different days and frequently by different physicians.

Distinct and Nonoverlapping Service

A CPT code family is generally defined as a set of related codes. They may represent different levels of similar services. For example, office visit codes 99211-99215 are a family of increasingly complex evaluation and management services. Codes 75XX6 and 75574 do not have that type of similarity between them. While both codes use the same imaging modality input, they are distinct services providing non-overlapping information regarding specific patient characteristics and are not a de facto family.

CPT code 75XX6 was approved as a distinctly different service than CCTA (75574) at the September 2024 CPT Editorial Panel meeting. The work of 75XX6 requires separate training and expertise with interpretation often performed by different providers at different times, that is outside of core training for radiologists/cardiologists. While the interpretation of this new data does include a comparison to the CCTA, there is no overlap or duplication of work in the two services because the two services examine different elements.

AI-Driven Analysis

CPT code 75XX6 represents the creation of a new standalone procedure that includes novel and distinct AI-driven analysis of previously acquired data. The creation and survey of a new standalone AI code/procedure is not a reason to review 75574 at this time.

With the increasing volume of AI codes coming through the CPT and RUC, this has the potential of repeatedly triggering revaluation of the same code(s) that is deemed part of the "family" without specialty input, which is particularly problematic since many of these AI codes are coming through CPT as industry-sponsored CCAs. In this specific situation, we are concerned that future AI codes utilizing cardiac CTA images could repeatedly identify CPT code 75574 for resurvey, placing an undue burden on societies with limited return on investments to the RUC or CMS.

Looking at just CPT code 75574, this is already the second time in two years that a new standalone AI code has identified 75574 for resurvey. Specifically, when 75580 was created and surveyed for the January 2023 RUC meeting, it also identified 75574 as part of the family.

Thank you for your consideration of this matter and we look forward to discussion with the RUC at the January 2025 RUC meeting.

Sincerely,

Andrew Moriarity, MD
ACR RUC Advisor

Kanae Mukai, MD
SCCT RUC Advisor

Richard Wright, MD
ACC RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:75577 Tracking Number Y2 Original Specialty Recommended RVU: **0.85**
Presented Recommended RVU: **0.85**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.85**

CPT Descriptor: Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old male presents to the primary care office with stable chest pain. He has intermediate pre-test likelihood of coronary artery disease. Coronary computed tomography angiography (separately reported) is performed to evaluate for coronary artery disease and automated coronary analysis is ordered to gain additional information regarding severity of coronary atherosclerosis and for improved risk stratification.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the medical record and pertinent clinical history. Review the indication for coronary atherosclerotic plaque assessment, including the necessary diagnostic information in the order, and confirm appropriateness. Review prior applicable imaging studies, including adequacy of the coronary computed tomographic angiography (CCTA) study to be used for plaque analysis. Explain recommendation for coronary atherosclerotic plaque assessment to the patient and obtain informed consent.

Description of Intra-Service Work: Supervise the CT technologist to ensure extraction of the appropriate coronary CTA data and images from the picture archiving and communication system (PACS) and ensure that the appropriate conforming image subsets are identified and collected. Review the augmentative software analysis coronary atherosclerotic plaque assessment preliminary data summary, which involves the transformation of the static CT images for advanced plaque analysis (quantification and characterization of coronary atherosclerotic plaque, also termed AI-QCT) using proprietary algorithms, distinct from the diagnostic output of the underlying coronary CTA. This data is interpreted in conjunction with the patient's medical history, coronary CTA, and any other prior relevant tests and imaging studies. Review coronary CTA and additional images, if applicable, in conjunction with the advanced plaque analysis. Reconcile any discordant data. Assess specific areas of interest, including evaluation of multiple and sequential plaque lesions and characterize the most significant lesion(s). Use this data to determine appropriate treatment recommendation for the patient. Dictate the final report in PACS for the patient's medical record. Enter a note into the patient's chart.

Description of Post-Service Work: Review, edit and sign the report. Discuss results with referring provider, and patient as applicable.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2025					
Presenter(s):	Andrew Moriarity MD; Michael Booker MD, Cindy Yuan MD, Richard Wright MD, Ed Tuohy MD and Kanae Mukai MD.					
Specialty Society(ies):	ACR,SCCT,ACC					
CPT Code:	75577					
Sample Size:	4399	**Resp N:**	129			
Description of Sample:	The ACR surveyed a random sample of 1,000 radiologists from its membership. We also surveyed 57 physicians from the provided vendor lists. The SCCT and ACC surveyed a random sample of 3,234 cardiologists from its combined membership. They also surveyed 108 physicians from the provided vendor lists.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	33%	48%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	33%	59%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	48%	46%
Physical effort required	4%	70%	26%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	52%	33%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	15%	15%	70%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	10%	90%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	15%	85%
Physical effort required	15%	15%	70%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	10%	85%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At their September 2024 meeting, the CPT Editorial Panel approved an industry-submitted application for the creation of a code to describe a technology for advanced plaque analysis (quantification and characterization

of coronary atherosclerotic plaque) that uses algorithms from the dataset of a typically acquired coronary computed tomography angiography scan images.

- 75577 - *Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional*

Code 75577 was assigned an XXX global period.

Survey Process

The American College of Radiology (ACR), American College of Cardiology (ACC) and the Society of Cardiovascular Computed Tomography (SCCT) conducted a random survey of our respective members. We also sent targeted surveys to three vendor lists. All societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

We recommend a work RVU of 0.85, the survey 25th percentile value.

Time Recommendation

We recommend the median survey times of 5 minutes pre-service, 15 minutes intra-service and post-service time of 7 minutes.

CPT Code 75577 Description/Background

CPT code 75577 is typically performed to evaluate for coronary artery disease and automated coronary analysis is ordered to gain additional information regarding the severity of coronary atherosclerosis and for improved risk stratification. A plaque analysis is expected to be ordered for less than 50% of CCTAs.
This 75577 service is typically performed after the original CCTA is interpreted due to the delay in software analysis processing time. The service often requires prior authorization, which can take several days to obtain from the insurer. Additionally, the patient is notified that the coronary plaque assessment is being ordered and is counseled that they might incur a deductible, which would apply to any imaging test to which the patient must consent before moving forward. As a result, it is typical that 75577 is performed on a different day than the CCTA. Frequently, they are performed by different physicians.

Key Reference Services

Our recommendation is bracketed by the following key reference services (KRS):

- 75580 - *Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional*
- 93351 - *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional*

75580 and 75577 are both cardiac augmentative software analysis codes derived from coronary CT angiography in similar patient populations. 75577 involves more physician work with longer intra-service and total times with overall similar or somewhat great intensity, according to 81% of survey respondents assessing 75577 to 75580.

75577 is a more intensive service than 75580, primarily due to the nature and extent of information that is collected, as well as the clinical implications of the data that is acquired and analyzed. Compared to 75580 where FFRCT values are utilized to describe the expected flow changes across a focal lesion of stenosis, 75577 (plaque analysis) requires the physician to individually characterize more structures (including the coronary lumen, vessel wall, and plaque types across the entire length of each of the individual coronary arteries), quantify various plaque characteristics, assess the plaque severity stage, and provide clinical recommendations based on overall findings and statistics.

The following describes the typical steps required for assessment of plaque in any given coronary artery or vessel greater than 2 mm in diameter (per SCCT guidelines).

1) Once the plaque analysis data summary is generated, the physician will need to recheck the region of interest where plaque analysis is performed, confirm vessels smaller than 2 mm in diameter are not included in the analysis, and will check the centerline for accuracy.
2) The physician will review the contours generated by the semi-automated tools for plaque analysis and adjust the outer contour of the segmented vessel (if positive remodeling is present) and the contour of the vessel lumen, and adjusts the window level display settings as needed.
3) If the study includes coronary stents or chronic total occlusion, the physician will confirm that they are removed from the analysis.
4) Once plaque is identified, the physician needs to confirm that they are correctly classified by the analysis tool as: A) predominantly calcified; B) predominantly non-calcified; C) partially calcified and will adjust the plaque thresholds as needed.
5) The physician needs to determine whether high risk features are present (positive vessel remodeling, low attenuation plaque, spotty calcification, and the napkin ring sign).
6) The physician will then review the vessel statistics and confirm the accuracy of calculations for the total vessel and individual plaque segment.
7) Any variations between the initial CCTA report and the data summary will be reconciled so that there are no discrepancies.
8) Lastly, the physician will report the plaque stage and appropriate clinical recommendation (eg. initiation of medications including statin, ezetimibe, other lipid lowering medications (PCSK-9 inhibitors, icosapent ethyl, inclisiran, bempedoic acid), colchicine, aspirin, rivaroxaban, GLP-1 receptor agonist or SGLT2 inhibitor (for diabetic patients), and cardiac rehabilitation or supervised exercise program.

The image quality requirements are similar between 75577 and 75580. In both cases, physician involvement is crucial to ensure adequate image quality for plaque analysis by minimizing cardiac and respiratory motion artifact and ensuring adequate luminal opacification with contrast. Heart rate reduction and rhythm control will need to be optimized in all cases and 0.8mg sublingual nitroglycerin is recommended.

The society advisors noted that despite being a more intensive service the IWPUT for 75577 of 0.039 is lower than the IWPUT for 75580 (0.046). They dismissed this apparent contradiction because IWPUT is a flawed measure for XXX global codes such as these.

The society advisors acknowledge that IWPUT differences for 75577 and 75580 (0.046) are not as reliable for low intra-service time XXX global codes such as these.

93351 is also an imaging study assessing cardiac disease in similar patient populations, with somewhat more intra-service and total time than 75577. 85% of survey respondents judged 75577 to have higher overall intensity than 93351. The recommended work RVU of 75577 reflects the lower amount of total physician work time.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
75580	Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional	0.75	22	5	11	6	0.046

75577	**Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional**	**0.85**	**27**	**5**	**15**	**7**	**0.039**
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional	1.75	40	10	20	10	0.065

MPC Codes

CPT code 75577 compares well with the two MPC codes below:

- 78306 *(Bone and/or joint imaging; whole body)* is a nuclear bone scan which involves assessment of a lower complexity imaging and results in a similar wRVU to the recommended value for 75577 due to the lower intra-service and overall intensity
- 74246 *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered)* is a double contrast fluoroscopic upper GI exam which involves assessment of multiple radiographic images. These studies have the same intra-service time and because more images are reviewed in 74246 there is higher wRVU due to the higher intensity.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
75577	**Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional**	0.85	27	5	15	7	0.039
78306	Bone and/or joint imaging; whole body	0.86	20	5	10	5	0.064
74246	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered	0.90	22	4	15	3	0.050

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation of 0.85 RVU with 5 minutes of pre-service, 15 minutes of intra-service, and 7 minutes of post-service time for CPT code 75577.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0623T, 0624T, 0625T, 0626T

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Cardiology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 120000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. This service described by CPT code 75577 is estimated to be provided 120,000 times nationally in a one-year period. This calculation is completed by multiplying the medicare number by 3.

Specialty Diagnostic Radiology Frequency 70800 Percentage 59.00 %

Specialty Cardiology Frequency 39600 Percentage 33.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40,000 If this is a recommendation from multiple specialties please estimate frequency <u>and percentage</u> for each specialty. Please explain the rationale for this estimate. The service described by CPT code 75577 is estimated to be provided 40,000 times in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 23600 Percentage 59.00 %

Specialty Cardiology Frequency 13200 Percentage 33.00 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
CAT/CT/CTA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 78451

75577	Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified health care professional	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
75577	A 60-year-old male presents to the primary care office with stable chest pain. He has intermediate pre-test likelihood of coronary artery disease. Coronary computed tomography angiography (separately reported) is performed to evaluate for coronary artery disease and automated coronary analysis is ordered to gain additional information regarding severity of coronary atherosclerosis and for improved risk stratification.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology, American College of Cardiology, and the Society of Cardiovascular Computed Tomography convened a panel that included a number of experts familiar with this service to evaluate the direct practice expense inputs for Coronary Atherosclerotic Plaque Assessment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   This procedure is currently reported with CPT codes 0623T, 0624T, 0625T and 0626T which have no current inputs. The specialty societies have selected CPT code 75580 & 75574 as reference codes. CPT code 75574 involves the underlying CT studies from which the data for 75577 is derived for later analysis, and CPT code 75580 is a similar service to 75577.

   75580 – *(Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional)*

   75574 – *(Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)*

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

   Is this code(s) typically reported with the E/M service in the non-facility?
   No. This code is not typically reported with an E/M service.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Diagnostic Radiology
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A
   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.
   NO

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:
   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:
   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

- CA011: Technologist educates the patient and obtains informed consent specific to the plaque characterization, in addition to the CCTA. This is necessary because the patient may receive a separate bill/co-pay for the plaque characterization.
- CA014: The technologist must separately confirm the order and protocol the exam for plaque characterization in addition to the order/protocol for 75574.
- CA021: The CT technologist uploads the necessary images from the CCTA to the plaque characterization server. Once the analysis is complete, the technologist uploads the processed images and reports back into PACS for review by the physician. The administration of nitrate is included in code 75574. The plaque characterization platform is not typically native to the CT scanner software or to the facility IT environment. The technologist may have several steps dictated by PHI and cybersecurity policies to direct the patient's data into the vendor's platform. This may involve physical media (e.g., creating USB drives or optical media) to be sent to the vendor, multistep internal processes to shepherd patient data safely from one internal facility software system to another internal software system connected to the outside vendor, or, in the simplest scenario, a direct connection between the CT scanner or PACS and the outside vendor platform. Although the last scenario is the simplest, it is less common during the early adoption of outside-vendor technology, and many sites will rely on a more complicated method for transmitting data securely.
- CA030: Technologist QCs images in PACS before alerting the physician that these images are ready for review.
- CA031: Technologist notifies the physician that the plaque characterization is ready and discusses any issues with the physician.
- CA032: Technologist scans documents into PACS and completes the plaque characterization exam in the RIS.

    c. Post-service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

- CA021: The CT technologist uploads the necessary images from the CCTA to the plaque characterization server. Once the analysis is complete, the technologist uploads the processed images and report back into PACS for review by the physician. The technologist may have quality control related questions from the vendor that may require additional data transmission of alternative series or new reconstructions of the original dataset. If the vendor is unable to process a dataset, there may be communication with the technologist (and ultimately the physician) to decide how to proceed (e.g., partial analysis of the data or reject analysis altogether). Any vendor questions (e.g., additional questions regarding patient history and prior procedures) would initially be fielded by the technologist managing facility-vendor transmission.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

Plaque Characterization Analysis Software - supply used to create a 3D image of patient's coronary arteries non-invasively to provide novel assessment of coronary artery plaque characterization to aid in reporting and analysis. The invoice represents the per-patient fee paid by the physician for the plaque data analysis summary generated by the vendor.

18. Are you recommending a PE supply pack for this recommendation? Yes or (No.)
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

NO

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

• Technologist PACS Workstation (ED050) – PACS Formula, equal to service period clinical staff time • Professional PACS Workstation (ED053) – equals ½ of physician pre-time + physician intra time

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

At the RUC meeting line 72 (CA031-Review examination with interpreting MD/DO) – 2 mins was removed in code 75577 in the non-facility column.

There was discussion at the table that these two minutes were not needed for this service because the technologist is not directly discussing the vendor output with the interpreting physician when they are performing the required activities in CA030 and CA032 in order to QC the images that are loaded into PACS and complete the required uploading of documents into PACS and completing the examination in the RIS to populate the imaging work queue.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Services with Stand-Alone PE Procedure Time (77014-77412)*
Screen: CMS-Other - Utilization over 20,000 (G6001-G6016)*

January 2025

Radiation Oncology Treatment Delivery – Tab 16

In October 2020, the RUC Relativity Assessment Workgroup (RAW) identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review these services in two years (September 2023) after the CMS-issued *Radiation Oncology Advance Payment Model (RO Model)* is initiated (which includes these codes). The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the RAW reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 the CMS Innovation Center delayed the RO Model. The American Society for Radiation Oncology (ASTRO) began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). Thus, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The RAW disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations, and the inputs may not represent the services as they are currently performed. The RAW discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define the services and attempt to address CMS' concerns. The RAW referred radiation treatment delivery services G6001-G6017, 77402, 77407, 77412, 77385, 77386, 77387 and 77014 to the CPT Editorial Panel for revision.

In September 2024, the CPT Editorial Panel reviewed the radiation oncology code change application (CCA) which proposed to establish a technique agnostic family of codes and bundle imaging into all three services. The Panel approved the revision of 77402, 77407 and 77412 and the deletion of existing codes 77385, 77386 and 77014. The related guidelines and tables were updated to reflect the consolidated services for radiation treatment delivery. The specialty societies also requested that CMS delete the related G-codes G6001-G6017. The five-code family was surveyed for the January 2025 RUC meeting. Only CPT code 77387 was surveyed for physician work.

77387 ***Guidance for localization of target volume for delivery of radiation treatment, includes intrafraction tracking, when performed***
The RUC reviewed the survey results from 102 radiation oncologists and determined that the survey 25th percentile work RVU of 0.70 appropriately accounts for the physician work typically required to perform this service. The work of CPT code 77387 involves clinical interpretation of the positional relationship of the planned isodose versus what would be the actual isodose distribution. This is accomplished by examining the images acquired immediately prior to treatment delivery and their relationship to the images acquired at simulation, and if any over or underdosing at the targeted isocenter and adjacent organs at risk is likely, similar to diagnostic radiology. The RUC recommends 3 minutes pre-service time, 10 minutes intra-service time, and 3 minutes immediate post-service time for 16 minutes total time as supported by the survey.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To justify a work RVU of 0.70, the RUC compared CPT code 77387 to the top key reference service code 76377 *3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; requiring image postprocessing on an independent workstation* (work RVU = 0.79, 15 minutes intra-service time and 25 minutes total time) and noted that the reference service has more intra-service time and total time and is appropriately valued higher than the surveyed code. Nonetheless, the RUC noted that 92% of the survey respondents that selected the first key reference service rated 77387 as identical or more intense and complex overall relative to the reference code. The RUC also compared CPT code 77387 to the second key reference service code 72192 *Computed tomography, pelvis; without contrast material* (work RVU = 1.09, 10 minutes intra-service time and 18 minutes total time) and noted the identical intra-service time and similar total time, yet the reference code is more intense, justifying a higher work value than 77387.

For additional support, the RUC compared CPT code 77387 to MPC code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70, 11 minutes intra-service time and 16 minutes total time) noting the strong comparison in the amount of physician work, similar intra-service time and identical total time. The RUC also compared 77387 to MPC code 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, 10 minutes intra-service time and 20 minutes total time) and noted that the intra-service time is identical, yet the reference code has greater intensity and total time and is therefore appropriately valued higher than the surveyed code. The RUC offered another diagnostic radiology code 77076 *Radiologic examination, osseous survey, infant* (work RVU = 0.70, 10 minutes intra-service time and 18 minutes total time) for additional support, noting the services require the same amount of physician work and intra-service time.

The RUC noted that within radiation oncology services, the intensity of 77387 is most like the intensity for the planning code 77301 *Intensity modulated radiotherapy plan, including dose-volume histograms for target and critical structure partial tolerance specifications* (work RVU = 7.99, 130 minutes intra-service time and 195 minutes total time). The specialties explained that this makes sense as the intensity for work of 77387, analyzing how images acquired immediately prior to treatment delivery would affect the fraction specific dose delivered to targets and organs at risk, should be the same as the intensity for work of analyzing the total dose delivered to targets and organs at risk during the creation of the initial plan in 77301.

The RUC concluded that CPT code 77387 should be valued at the 25th percentile work RVU as supported by the survey and to maintain relativity within the services with similar XXX surveyed codes with 10 minutes of intra-service time. **The RUC recommends a work RVU of 0.70 for CPT code 77387.**

Practice Expense

A custom Practice Expense (PE) survey was created for CPT codes 77402, 77407, 77412. The specialties conducted a practice expense survey, with a Research Subcommittee approved tool, for CPT codes 77402, 77407 and 77412. The specialties also convened a consensus panel that included physicians and clinical staff who perform radiation oncology procedures in both the non-facility and facility settings. The consensus panel developed the direct practice expense recommendations for CPT codes 77402, 77407 and 77412 based on the survey data, best practices and current AMA RUC/PE guidelines. CPT code 77417 is a radiation oncology service with stand-alone procedure time, however, the equipment used

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

is not over $1M. As such, the specialties used the consensus panel to develop direct practice expense recommendations for 77417 based on best practices and current AMA RUC/PE guidelines. CPT code 77387 is a PC/TC code. As such, the specialties used the consensus panel to develop direct practice expense recommendations for 77387 based on best practices and current AMA RUC/PE guidelines.

For CPT codes 77402, 77407 and 77412, the RUC reviewed the survey results from over 75 radiation oncologists and noted that the descriptions of work in the PE SOR clearly outline the duties of the two L050C *Radiation Therapists* in CA021 *Perform procedure/service---NOT directly related to physician work time.* The Subcommittee agrees that radiation therapists are doing concurrent, but distinct clinical activities critical in performing the service, and the PE SOR states that the current CMS policy is two radiation therapists for treatment delivery.

The PE Subcommittee reviewed the practice expense recommendations for the code family and approved the inputs with no modifications. The PE Subcommittee acknowledged the updated pricing information submitted for the following three existing equipment inputs: ER056 *Radiation Treatment Vault*, ER065 *Water Chiller (radiation treatment)* and ER089 *IMRT Accelerator* as well as the specialties request to rename ER089 to "Radiation Treatment Delivery Linear Accelerator." **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

G-Codes
The RUC requests that CMS delete G6001-G6017 since CPT codes 77402, 77407, 77412 and 77417 have been revised and may be used to report these services instead.

(Do not report 77338 more than once per IMRT plan)

(For immobilization in IMRT treatment, see 77332-77334)

Stereotactic Radiation Treatment Delivery

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

77373 *Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions*

(Do not report 77373 in conjunction with ~~77385, 77386, *77401,*~~ 77402, 77407, 77412)

(*For single fraction cranial lesion[s], see 77371, 77372)*

Radiation Treatment Delivery

Following dosimetry calculations, there are a number of alternative methods to deliver external beam radiation treatments, which are described with specific CPT codes:

- ~~X-ray (~~Superficial and orthovoltage X-rays ~~photon), including conventional and intensity modulated radiation therapy (IMRT) beams;~~
- Electron beams;
- Neutron beams;
- Proton beams;~~.~~
- Megavoltage photons.

~~*For superficial or orthovoltage X-rays, use 77401*~~

All treatment delivery codes are reported once per treatment session. The treatment delivery codes recognize technical-only services. ~~and contain no physician work (the professional component). In contrast,~~ The treatment management codes contain ~~only~~ the professional component.

Radiation treatment delivery with conventional X-ray or electron beams is assigned levels of complexity based on the number of treatment sites and the complexity of the treatment delivery. Complexity refers to the time and effort of therapists, physicians and physicists to effect safe delivery. ~~and complexity of the treatment fields, blocking, wedges, and physical or virtual tissue compensators. A simple block is straight-edged or an approximation of a straight edge created by a multileaf collimator (MLC).~~ Neither e~~E~~nergy of the megavoltage (≥ 1 MeV) beam nor technique (3D, IMRT or VMAT) ~~does not~~ contributes to complexity. ~~Techniques such as treating a field-in-field to ensure dose homogeneity reflect added complexity.~~

~~Energies below the megavoltage range may be used in the treatment of skin lesions. Superficial radiation energies (up to 200 kV) may be generated by a variety of technologies and should not be reported with megavoltage (77402, 77407, 77412) for surface application. Do not report clinical treatment planning (77261, 77262, 77263), treatment devices (77332, 77333, 77334), isodose planning (77306, 77307, 77316, 77317, 77318), physics consultation (77336), or radiation treatment management (77427, 77431, 77432, 77435, 77469, 77470, 77499) with 77401, 0394T, or 0395T. When reporting 77401 alone, evaluation and management, when performed, may be reported with the appropriate E/M codes.~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Radiation may be delivered to a primary malignant site, to a primary malignant site plus the draining lymph nodes at risk for disease involvement, for palliative care or benign diseases.

2-dimensional radiation therapy (2D RT) is delivered with uniform radiation beam intensities and radiation delivery set-up, either by surface anatomic landmarks or bony landmarks with kilovoltage or megavoltage imaging. 3-dimensional conformal radiation therapy (3D CRT) uses volumetric imaging to identify targets and organs at risk (OAR). Using volumetric imaging 3D CRT utilizes computer-based photon beam arrangements to create more conformal dose distributions than 2D RT. In both 2D and 3D therapy, a uniform photon beam is used to deliver therapy. 2D RT and 3D CRT differ by complexity of the beam arrangements and identification of target(s) and sparing of OAR.

For 3D conformal radiation therapy, OAR should be identified and radiation dose evaluated using a dose-volume histogram.

Intensity modulated radiation therapy (IMRT) uses computer-based optimization techniques with non-uniform radiation beam intensities to create highly conformal dose distributions that can be delivered by a radiotherapy treatment machine. A number of technologies, including spatially and temporally modulated beams, cylindrical beamlets, dynamic MLC, single or multiple fields or arcs (volumetric arc therapy [VMAT]), or compensators, may be used to generate IMRT. The complexity of IMRT varies ~~may vary~~ depending on the area being treated, the number of targets identified, differential doses delivered, or the technique being used.

Image-guided radiation therapy (IGRT) may be used to direct the radiation beam and to observe ~~reflect~~ target or OAR position ~~motion~~ prior to and/or during treatment. A variety of techniques may be used to perform this guidance including imaging (eg, ultrasound, CT, MRI, stereoscopic X-ray imaging) and other techniques ~~non-imaging~~ (eg, electromagnetic or infrared) ~~techniques~~. Guidance may be used with any radiation treatment delivery technique ~~and is typically used with IMRT delivery~~. ~~IMRT delivery codes include the technical component of guidance or tracking, if performed.~~ Because only the technical portion of IGRT is bundled into radiation treatment delivery (77402, 77407, 77412) ~~IMRT~~, the physician involvement in guidance or tracking may be reported separately. ~~When guidance is required with conventional radiation treatment delivery, both the professional and technical components are reported because neither component of guidance is bundled into conventional radiation treatment delivery services.~~

Isocenter

As a starting point the patient is positioned as specified in the plan to the reference point of the treatment machine coordinate system, hereinafter identified by the term “isocenter”. Prior to treatment delivery the patient position relative to the isocenter requires image verification. If a shift in the patient relative to the isocenter is necessary for additional treatment volumes, as described in the patient isodose plan(s), this would be a second isocenter.

Active Motion Management

Treatment delivery with active motion management (77412) includes intra-fraction localization and tracking of the target(s) or patient motion to optimize beam delivery (eg, intrafraction motion, surface guidance). Intrafraction motion management utilizes fiducials or imaging to monitor the target or organs at risk during the breathing cycle (eg, during a deep inspiration breath hold). This method minimizes organ motion and allows more accurate delivery of radiation to mobile targets and active avoidance of organs at risk.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Surface Guidance

Surface guidance for active motion management is a technique that allows the linear accelerator to perform gating (eg, optical) during treatment delivery using the body surface contour as a surrogate for internal target motion and OAR avoidance. Surface guidance is one method to effect active motion management although there are other methods as well.

Note: This is NOT for patient set up prior to treatment delivery (eg, not to replace tattoos).

The technical and professional components of guidance are handled differently with each radiation delivery code depending on the type of radiation being administered as the timing and complexity of physician involvement varies. The **Radiation Management and Treatment Table** is provided for clarity.

Definitions

Radiation Treatment Delivery, megavoltage (≥ 1 MeV), any energy

Level 1 ~~***Simple:***~~ ~~All of the following criteria are met (and none of the complex or intermediate criteria are met): single treatment area, one or two ports, and two or fewer simple blocks.~~ Any photon 2D radiation therapy delivered with uniform radiation beam intensities and radiation delivery set up, either by surface anatomic landmarks or bony landmarks with kilovoltage or megavoltage imaging OR any electron therapy not meeting Level III criteria.

Level 2 ~~***Intermediate:***~~ Any photon therapy, delivered with 3D CRT or IMRT to a single isocenter. ~~of the following criteria are met (and none of the complex criteria are met): 2 separate treatment areas,3 or more ports on a single treatment area, or 3 or more simple blocks~~. Note: Does not include active motion management.

Level 3 ~~***Complex:***~~ Any photon therapy with active motion management, including 3D CRT or IMRT OR any photon delivery with 3D CRT or IMRT to 2 separate isocenters OR ~~of the following criteria are met: 3 or more separate~~ total skin electrons OR mixed electron and photon fields. ~~treatment areas, custom blocking, tangential ports, wedges, rotational beam, field-in-field or other tissue compensation that does not meet IMRT guidelines, or electron beam.~~

Codes 77402, 77407, 77412 ~~IMRT~~, ~~any energy,~~ include~~s~~ the technical services for imaging guidance.

~~***Simple:*** Any of the following: prostate, breast, and all sites using physical compensator based IMRT.~~

~~***Complex:*** Includes all other sites if not using physical compensator based IMRT.~~

To report stereotactic body radiation therapy, treatment delivery, use 77373.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77387 Tracking Number Z5 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: **0.00** RUC Recommended RVU: **0.70**

CPT Descriptor: Guidance for localization of target volume for delivery of radiation treatment, includes intrafraction tracking, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male who presents with Stage III lung cancer will undergo concurrent chemotherapy and 3D conformal radiation. Before daily radiation therapy, cone-beam CT image guidance scan is performed and reviewed, and the patient's position is adjusted to localize the primary tumor and the mediastinal nodes accurately before treatment. Surface tracking is performed during treatment delivery to ensure no movement exceeds safe thresholds.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the imported planning CT images, and identifies reproducible anatomical structures and fiducial markers.

Description of Intra-Service Work: The physician oversees patient preparation, including placement of external markers used for alignment and camera system used for surface tracking. Under physician supervision, the therapist aligns the patient using the four directional alignment room lasers via external skin marks and markers.

Immediately prior to treatment acquire a CT scan in the treatment position, and while this data is loaded on the treatment console, align, register, and fuse it using various manual or automatic tools to visualize the target volume or implanted markers and critical normal structures. The physician then ensures that the fusion is accurate, and evaluates the images. Calculate the translation errors of the patient set-up and the table movement necessary to optimally align the patient's target volume at the isocenter in longitudinal, lateral, and vertical directions. Identify and correct any rotational errors. If present, determine and correct deviations by adjusting the patient's treatment position to the treatment target volume isocenter. Under physician supervision, the therapist performs the adjustments by applying the required translational shifts to the treatment couch. Achieve accurate positioning, then start the treatment delivery, tracking and observing patient motion during radiation therapy using surface rendering to calculate precisely any patient movement in all six degrees of freedom, and monitor respiratory motion to confirm that it is within the planning parameters.

The physician reviews the images, evaluates target volume changes and normal tissue variation, and compares with previous shifts. The physician provides feedback to the therapists about the adequacy of registrations and about the steps necessary to take to improve registrations as well as for required treatment modifications for the subsequent day. Convey to staff in an ongoing process throughout treatments any patient-specific preferences regarding the relative importance of targets vs. normal tissues.

Description of Post-Service Work: The physician verifies that all the appropriate images and shifts, if necessary, have been acquired, performed, and documented accurately. The physician documents and signs the images.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	36%	48%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	36%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	52%	48%
Physical effort required	16%	72%	12%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	24%	72%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	41%	18%	32%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	23%	73%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	50%	41%
Physical effort required	0%	36%	64%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	23%	77%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the October 2013 CPT meeting, the Panel approved a restructuring of the radiation oncology treatment delivery codes, creating CPT Codes 77402, 77407, 77412, 77385, 77386 and 77387. The specialty societies presented recommendations at the January 2014 RUC meeting. The RUC forwarded recommendations to CMS for these new CPT Codes, to be effective 1/1/2015.

CMS did not accept the RUC recommendations. The Agency identified concerns with the packaging of IGRT into some of the delivery codes in the family and not others. The recommendations forwarded to CMS included a code structure that resulted in breast treatments typically being assigned to "simple" codes, for which the Agency received pushback from stakeholders.

As a result, CMS created 17 G-codes, to mirror the existing codes (at the time), maintained 77014, and established values that linked directly to the existing values/inputs. The new CPT codes were published in the 2015 CPT book, and used in the HOPPS payment system, but not in the MFS.

Over the years, the Radiation Oncology community met with CMS and CMMI to address the concerns identified by CMS in the 2015 code set as well as the possibility of creating an episode-based alternative payment approach for radiation therapy services.

The G-codes were caught in a RAW screen (CMS/Other source with 2019 estimated Medicare utilization over 20,000). The RAW did not agree with the specialties request to maintain. As such, the specialties went back to CPT to once again re-define the code set and attempt to address CMS' concerns.

At the September 2024 CPT meeting, the Panel reviewed the radiation oncology CCA establishing a technique agnostic family of codes and bundling imaging into all three services. The Panel approved the revision of 77402, 77407 and 77412 and the deletion of 77385, 77386 and 77014. The related guidelines and tables were all updated to reflect the consolidated services for radiation treatment delivery. The specialty societies have also requested that CMS delete the related G-codes.

Relativity

The work of 77387 involves clinical interpretation of the positional relationship of the planned isodose versus what would be the actual isodose distribution by examining the images acquired immediately prior to treatment delivery and their relationship to the images acquired at simulation and if any over or underdosing at the targeted isocenter and adjacent organs at risk is likely, similar to diagnostic radiology. Clinical interpretation of images.

Of the 100 RUC reviewed codes with similar total times here are a sample of three diagnostic radiology codes that were recently RUC reviewed with majority performed in the outpatient setting:

- CPT Code 77076 Radiologic examination, osseous survey, infant – 3 min pre, 10 min intra, 5 min post – same work RVU – 0.70
- CPT Code 78264 Gastric emptying imaging study (eg, solid, liquid, or both) – 5 min pre, 10 min intra, 5 min post – higher work RVU of 0.79
- CPT Code 78305 Bone and/or joint imaging; multiple areas – 5 min pre, 10 min intra, 5 min post – higher IWPUT – higher work RVU 0.83

Within the radiation oncology services, the IWPUT for 77387 (0.057) is lower than IWPUT for brachytherapy services and most like the IWPUT for the planning code 77301 (0.05). This makes sense since the intensity for work of the surveyed service (77387) analyzing how images acquired immediately prior to treatment delivery would affect the fraction specific dose delivered to targets and organs at risk should be the same as the intensity for work of analyzing the total dose delivered to targets and organs at risk during the creation of the initial plan (77301).

The specialty society believes the recommendations for 77387 maintain relativity within the services with similar XXX surveyed codes with 10 minutes of intra time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. The professional component of CPT Code 77387 will be billed with radiation treatment delivery codes (eg, 77402-77412). The radiation treatment delivery codes are TC only codes and do not have physician work RVUs.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77014, G6002, G6001

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data is not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,520,740 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The current RUC database indicates 77014 was reported approximately 2,520,778 times in 2022. The specialty socieites estimate

Specialty Radiation Oncology Frequency Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 77014

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
77402	A 68-year-old male presents with squamous cell carcinoma of the skin. Radiation treatment is delivered.
77407	A 68-year-old male presents with localized, high-grade adenocarcinoma of the prostate. Radiation treatment is delivered with image guidance to the prostate, seminal vesicles and regional nodes.
77412	A 66-year-old female presents with an infiltrating ductal carcinoma of the left breast. Radiation treatment is delivered with a deep inspiration breath hold using active motion management to the breast and regional lymph nodes.
77387	A 67-year-old male who presents with Stage III lung cancer will undergo concurrent chemotherapy and 3D conformal radiation. Before daily radiation therapy, cone-beam CT image guidance scan is performed and reviewed, and the patient's position is adjusted to localize the primary tumor and the mediastinal nodes accurately before treatment. Surface tracking is performed during treatment delivery to ensure no movement exceeds safe thresholds.
77417	50 yo female presents with an infiltrating ductal carcinoma of the right breast metastatic to the right axillary nodes. Radiation treatment is delivered to the breast and regional lymph nodes (separately reportable).

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

ASTRO and ACRO convened a consensus panel that included physicians and clinical staff who perform radiation oncology procedures in both the NF and F settings.

77402, 77407, 77412
Historically, CMS and the AMA RUC/Practice Expense (PE) subcommittee require specialty societies to conduct practice expense surveys for services with stand-alone procedure times and equipment over $1M. (Federal Register / Vol. 77, No. 146). As such, the specialties conducted a practice expense survey, with a research subcommittee approved tool, for CPT Codes 77402, 77407

and 77412. The panel developed the direct practice expense recommendations for CPT Codes 77402, 77407 and 77412 based on survey data, best practices and current AMA RUC/PE guidelines.

77417
CPT code is a radiation oncology service with stand-alone procedure time, however, the equipment used is not over $1M. As such, the specialties used the consensus panel to develop direct practice expense recommendations for CPT Code 77417 based on best practices and current AMA RUC/PE guidelines.

77387
CPT code is a PC/TC code. As such, the specialties used the consensus panel to develop direct practice expense recommendations for CPT Code 77387 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

CPT Code 77373 *Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions* was used as a reference service code for on the PE spreadsheet. CPT Code 77373 is also a radiation treatment delivery service (used for high dose).

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

CPT Codes 77402, 77407, 77412, 77387 and 77417 are not typically reported with an E/M (F/NF).

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Radiation Oncology will be the dominant provider in the NF setting.
CPT Codes 77402, 77407, 77412, 77417 are TC only codes.

CPT Code 77387 is a PC/TC code. It is reported approximately 59% of the time in the outpatient setting (F). Radiation Oncology will be the dominant provider in both the NF and F settings.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):77402, 77407, 77412, 77387, 77417
SPECIALTY SOCIETY(IES): ASTRO and ACRO
PRESENTER(S): Amar Rewari, MD, Micheal Kuettel, MD, PhD, Catherine Yashsar, MD, Christopher Jahraus, MD, Alex Harris, MD and Gerald White, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

CA013 Prepare room, equipment and supplies. The specialty is recommending 3 minutes (1 minute above the standard). Verify prescription with regard to fractionation, max days, max dose. Transfer treatment parameters from record and verify system to the linac system. Verify selected parameters.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

G6015 and G6016 currently have 5 minutes in the post service period (see RUC database). When the specialty societies reviewed the 2014 RUC documents those 5 minutes were assigned to CA030 *Technologist QC's images in PACS, checking for all images, reformats, and dose page* CA031 *Review examination with interpreting MD/DO* and CA032 *scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.* However, those clinical activities were in the post period – not the post *service* period. The customary post service clinical activities (conduct patient communications, coordinate post-procedure services) did not have times assigned to them. CA030, CA031, CA032 should be included in the post service period (not post). The specialty societies are recommending zero minutes in the post service period and recommending minutes for CA030, CA031 and CA032.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

In reference code 77373 three minutes were allocated for *CA010 obtain vital signs* prior to the 2018 vital signs CMS change.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records are available
Prepare room, equipment and supplies
Prepare, set-up and start IV, initial positioning and monitoring of patient
Perform procedure, not directly related to physician time
Review with MD/DO
QC images
Clean room

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

77402
The patient is identified by at least two methods and brought into the treatment vault. Patient is assisted onto the table and position is verified by either triangulation with tattoos or using external set up system. Plan is loaded onto in-vault computers and couch, gantry rotation, and table height is verified for SSD (skin to source distance) or SAD (source to axis distance). Treatment block(s) is placed into electron cone and treatment site is verified on skin. Adjustment of patient, table height, collimator rotation is done to adjust block to cover target, as needed. Bolus is applied. Treatment dose delivered. Therapists enter vault and assist patient off the table and escort from the vault.

77407
The patient is identified by at least two methods and brought into the treatment vault. Patient is assisted onto the table and position is verified by either triangulation with tattoos or using external set up system. Verification is performed to assure patient has appropriate bladder and rectal filling. Plan is loaded onto in-vault computers and couch, gantry rotation, and table height is verified for SSD (skin to source distance) or SAD (source to axis distance). Adjustment of patient, table height, gantry or collimator rotation is done to assure patient is in the intended position. Image guidance is performed to assure treatment targets are spatially within intended dose region and organs at risk are spared. Treatment dose is delivered. Therapists enter vault and assist patient off the table and escort from the vault.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The patient is identified by at least two methods and brought into the treatment vault. Patient is assisted onto the table and position is verified by either triangulation with tattoos or using external set up system. Plan is loaded onto in-vault computers and couch, gantry rotation, and table height is verified for SSD (skin to source distance) or SAD (source to axis distance). Adjustment of patient, table height, gantry or collimator rotation is done to assure patient is in the intended position. Image guidance is performed to assure patient is appropriately aligned for treatment targets to be within intended dose region and organs at risk are spared.

The patient is contacted through audio system and asked to perform a deep inspiration breath hold. Verification that breath hold is sufficiently deep to avoid normal tissues is done and treatment program for linear accelerator delivers partial dose to primary site, while therapist is actively watching and listening to the patient through the camera and audio system. When the patient is noted to tire of breath hold patient is instructed to freely breath. Patient is again counseled to take a deep breath, verification of sufficiency of breath hold is completed, and treatment dose is delivered. This is repeated until full treatment dose is delivered, rotating the gantry to deliver both medial and lateral tangent fields.

The couch is then shifted to a different isocenter and image guidance is performed to assure that abutting fields for tangents and draining lymph nodes are not overlapping. The patient is contacted through audio system and asked to perform a deep inspiration breath hold. Verification that breath hold is sufficiently deep to avoid normal tissues is done and treatment program for linear accelerator delivers partial dose to draining lymph nodes, while therapist is actively watching and listening to the patient through the camera and audio system. When the patient is noted to tire of breath hold patient is instructed to freely breath. Patient is again counseled to take a deep breath, verification of sufficiency of breath hold is completed, treatment dose is delivered. This is repeated until full treatment dose is delivered.

The physicist oversees the respiratory motion and surface management processes during treatment delivery and ensures that it accurately mirrors what was acquired during simulation and developed during treatment planning. They are the ones who developed and verified the initial isodose plan with the motion management plans.

For respiratory management and respiratory gating, the physicist ensures the adequate placement of the optical positioning device on the patient and would move it and restart the acquisition if not positioned correctly. They have the most technical knowledge about the respiratory gating window and the location of the patients' lung/heart/chest interface with respect to the dose cloud. Physicists set the gating thresholds in the software and recapture reference data on the fly and are the only ones with rights in the software systems to adjust or modify the gating window at the linac during treatment delivery, because doing so requires modifying safety parameters that are in place to protect the patient from mistreatment.

For surface management, the physicist is responsible for examining the monitored surface of the patient at treatment delivery vs. the planned surface and ensures the camera in the room used to capture the surface management is in the right position and will have to mechanically adjust it or power cycle the camera when the planned vs. monitored surface are not aligning. They must make sure the correct isocenter is being used by the surface guidance system to ensure patient safety and no systemic variations.

The therapists enter the vault and assist patient off the table and escort from the vault.

Position gantry to accept Electron Cone. Adjust patient position as necessary. Set SSD, adjusting table/gantry	4				Retrieve and mount electron cone, retrieve and mount electron block, scan and verify electron block. Adjust patient position as necessary. Set SSD, adjusting patient postion.	4		
Re-set gantry to neutral vertical position and assist patient up from treatment table and out of immobilization device	1	1	2		Remove and replace electron cone and electron block. and assist patient up from treatment table and out of immobilization device	1	1	2

77387
The planned treatment parameters are loaded into the control console. The gantry is rotated to the starting field position. Initial MLC pattern is compared to the plan and treatment initiated. Prescribed changes in MLC patterns are continuously monitored and compared to the plan by one radiation therapist during beam on time, while the second radiation therapist is monitoring the patient. On completion of the first field, the gantry is rotated to the second prescribed angle. Treatment is delivered as described. The room is entered and the patient is released from

immobilization. The gantry is rotated to a safe position and the table is lowered. The patient is assisted off the table. The room is cleaned for the next patient.

77417
The treatment plan has been loaded onto the computer. After the patient is set up, immobilization is verified, and the treatment parameters are verified the gantry is rotated to the first treatment field position. The electronic portable imaging is extended to the appropriate position, assuring no patient contact but avoiding excessive distance to maximize resolution. Therapists leave the room. The therapists load the first treatment field data from the record and verify system, transfer to the linear accelerator delivery system, enable port image mode on the treatment beam, and acquire first exposure using the treatment beam energy. The jaws and multi leaf collimators are opened to acquire a second, open field exposure with the treatment beam energy. The images are reviewed to assure double exposure edge detection was successful. The electronic portable imaging device is then retracted to a position suitable for gantry rotation to avoid collisions, and the gantry is rotated to the plan prescribed angle for the second treatment field. The electronic portable imaging is extended to position for the second treatment field, assuring no patient contact but avoiding excessive distance to maximize resolution. These steps are repeated until double exposure images are acquired sequentially for all radiation treatment fields. If the patient needs to be shifted for treatment to a second site (second isocenter) the therapists enter the room to assure set up, immobilization and treatment parameters are per plan and double exposure images are acquired for all fields. All images are sent to the record and verify system. Physician then views imaging of each treatment field to verify that port films match the approved treatment plan and, if necessary, adjustments are made prior to radiation delivery. Treatment is then delivered and imaging for port films, approval by physician and radiation treatment delivery are documented in the chart.

Note: Port films are reported once per five fractions regardless of the number of films required or portals evaluated during this time interval. *CMS Billing and Coding Guidelines for Radiation Oncology Including Intensity Modulated Radiation Therapy (IMRT), Revised November 1, 2015.*

The appropriate code to report is 77417, Therapeutic radiology port film(s). Port films are X rays taken during the delivery of radiation treatment using the treatment beam of the machine. Port films demonstrate the exact shape, size, and area covered by the treatment beam during an actual treatment. Port films are reported by the facility, once per five fractions or once per week of treatment management per patient, regardless of the number of films required or portals evaluated. *February 2006 Newsletter, page 14: Radiology, 77417 Q and A.*

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The specialty societies are making recommendations that include clinical times 'not directly related to physician time' (see Question 11).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

The specialty societies are including updated pricing for the following equipment items: ER056 radiation treatment vault ER065 water chiller (radiation treatment) ER089 IMRT accelerator The specialties recommend retitling ER089 to read "Radiation Treatment Delivery Linear Accelerator"

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The specialty societies recommend maintaining the current useful life years for ER056, ER065 and ER089.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

The highly technical equipment formula was used for the following equipment items:

ED035	video camera
EQ139	intercom (incl. master, pt substation, power, wiring)
ER039	laser targeting system (4 diodes)
ER056	radiation treatment vault
ER065	water chiller (radiation treatment)
ER089	IMRT accelerator
ER090	Computer system, record and verify, IMRT

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(a) A national estimate of the number of times this service might be provided nationally in a one-year period is not known.

(b)
77402 – 77,920
77407 – 779,199
77412 – 701,279
77387 (TC) – 41,736
77417 – 27,820

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The specialty society recommends CPT Code 77373 as a PLI crosswalk for CPT Codes 77402, 77407, 77412, 77387, 77417 based on a similar specialty mix.

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Clinical Labor
The current CMS policy is two radiation therapists for treatment delivery. Below is the background for that policy decision.

It is the position of the American Society of Radiologic Technologists (ASRT) that two registered radiation therapists per patient per treatment unit is the minimum standard for safe and efficient delivery of radiation therapy.[1] The 2022 ASRT staffing survey document an average of 2.4 radiation therapist per linear accelerator. (See page 17)

ACR Accreditation requires minimum of two radiation therapists at each treatment session for adequate staffing and support.[2]

ACRO Accreditation also requires a minimum of two radiation therapists per linear accelerator. (See page 6)

ASTRO Accreditation also requires a minimum of two radiation therapists per linear accelerator. (See page 6)

"Safety Is No Accident" a joint document sponsored by ASTRO and developed/endorsed by 9 radiation oncology organizations recommends a minimum of two qualified individuals be present for any routine external beam patient treatment. (See page 11)

Supplies
The PE survey included a question asking respondents to indicate whether the following items were typically used during treatments (and whether they were used per fraction or per course). The results indicated the following items were typical.

Pillowcase 95%	Sheet 99%	Gloves 99%
Skin Pen 99%	Wipe 100%	Drape 63%

[1] https://www.asrt.org/main/standards-and-regulations/professional-practice/position-statements-online

Per Fraction		
SB006	drape, non-sterile, sheet 40in x 60in	77402 (1) used on the treatment table 77407/77412 (2) one used on the treatment table, one used to cover patient
SB022	gloves, non-sterile	two pairs - one for each Radiation Therapist
SB026	gown, patient	PE Survey indicated that 77402 patient is typically treated in street clothes.
SB037	pillowcase	
SK075	skin marking pen, sterile (Skin Skribe)	Outline field edges for verification with light field
SM022	sanitizing cloth-wipe (surface, instruments, equipment)	used to clean the equipment after completion of treatment

Equipment

ED035	video camera	View patient during treatment
EQ139	intercom (incl. master, pt substation, power, wiring)	To communicate with patient during treatment
ER039	laser targeting system (4 diodes)	To set-up and align patient accurately on the treatment table
ER056	radiation treatment vault	Room used to treat patient
ER065	water chiller (radiation treatment)	Used to keep accelerator running at the appropriate temperature
ER089	IMRT accelerator	Used to delivery treatment to patient
ER090	Computer system, record and verify, IMRT	Software necessary to deliver the stored treatment plan for the procedure and record delivery and parameters

Direct vs Indirect
The debate whether a radiation treatment vault should be considered direct or indirect in CMS' practice expense methodology dates all the way back to 1997. In general, for vaults used with

radiation oncology services, the RUC has included them in the recommendations forwarded to CMS and CMS has included them in radiation treatment delivery services. While CMS has included them in the related codes CMS has included comments in the federal register noting (1) concern about how vaults should be handled (direct vs indirect), (2) the need for consistency and (3) the need for further study on the issue.

The societies are optimistic that issues regarding how CMS should handle radiation oncology vaults and shielding will be addressed when the new PPI data is available for review. The RUC included the radiation oncology treatment vault/shielding as a direct expense in the current 2023-2024 Physician Practice Expense Survey.

The specialties request that the PE subcommittee review the equipment formulas/times associated with vault/shielding and pass along the invoices submitted to CMS. The specialties look forward to robust discussions with CMS when they review the PPI results.

Vault/Shielding Background
Below is a brief history regarding vaults/shielding.

1997
The original Clinical Practice Expert Panel (CPEP) data appears to have categorized the treatment vault as a direct expense. The direct PE inputs included the vault at that time.

2000
In the CY2001 Final Rule CMS discussed changes in equipment methodology. CMS proposed to delete several items, including lead shielding, from the CPEP data equipment. They will categorize many items, including lead shielding, as an indirect expense. CMS stated that they believed this categorization would simplify the PE methodology without causing new problems.

2002
The PEAC went through refinement of several thousand CPT codes. At the September 2002 meeting, Family 7 (Treatment Delivery) was reviewed. The treatment vault *(Treatment vault $550,669.75 (General Contractor))* was added to the treatment delivery codes.

2004
CMS accepted the PEAC recommendations, and the vault is included in the direct practice expense files.

2012/2013
RO stakeholders requested the treatment vault be added to CPT code 77418 as a direct expense. CMS added the radiation treatment vault to 77418 to align the code with the similar radiation treatment delivery codes and noted they intended to study the issue further. CMS noted that they question whether it is fully consistent with the principles underlying the PFS PE methodology to continue to classify the radiation treatment vault as medical equipment.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):77402, 77407, 77412, 77387, 77417
SPECIALTY SOCIETY(IES): ASTRO and ACRO
PRESENTER(S): Amar Rewari, MD, Micheal Kuettel, MD, PhD, Catherine Yashsar, MD, Christopher Jahraus, MD, Alex Harris, MD and Gerald White, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

2014/2015
CMS indicated that they included the radiation treatment vault as a direct PE input for several recently reviewed radiation treatment codes for the sake of consistency with its previous inclusion as a direct PE input for some other radiation treatment services, but that they intended to review the radiation treatment vault input and address whether or not it should be included in the direct PE input database for all services in future rulemaking. After continued review of the issues pertaining to the vault in the context of the comments, they believe that these issues required further study. Therefore, at that time, they decided to continue to include the vault as a direct PE input for the services listed in CPT Code 77402-77418, 77373 (Table 9).

2015/2016
CMS accepted RUC recommendations for five new brachytherapy codes (77767-77772) which included creating a new equipment item for a brachytherapy vault (ES052).

CMS also responded to comments requesting updated pricing and useful life designation for the radiation treatment vault (ER056). They noted their concerns regarding the pricing of direct PE inputs, particularly the prices for expensive equipment. They stated that they would continue to consider this issue, including these commenters' suggestion to use increased pricing for the item.

2018/2019
CMS increased the price of the brachytherapy vault (ES052) from $175,000 to $193,114.

2020/2021
Protons
CMS encountered significant difficulties in reviewing the recommended direct PE inputs for the codes in the Proton Beam Treatment Delivery family (77520-77525). These difficulties were largely associated with determining a price for the two new equipment items in the code family, the Proton Treatment Vault (ER115) and the Proton Treatment Delivery System (ER116). These equipment items had extraordinarily high prices of $19,001,914 and $30,400,000 respectively on the invoices submitted with the code family. CMS had concerns that establishing equipment pricing for the proton treatment vault and delivery system at a rate that is so much higher than anything else in our equipment database could distort relativity. They also stated concerns their ongoing concerns about whether a vault is direct or indirect. As a result, they maintained Carrier Pricing for the proton codes.

2023/2024
The AMA launched the new PPI survey. The RUC included the radiation oncology treatment vault/shielding as a direct expense in the current 2023-2024 Physician Practice Expense Survey.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: High Volume Category III Codes 2019 (0394T)*

January 2025

Superficial Radiation Therapy – Tab 17

In October 2019, code 0394T was identified via the Relativity Assessment Workgroup's (RAW's) high-volume category III codes screen based on 2018 Medicare utilization data over 1,000. In January 2020, the RUC recommended maintaining this service and review in 3 years (Sept 2023). In September 2023, the RUC recommended that this service be referred to CPT May 2024 to create a Category I code.

Additionally, in October 2020, code G6001 was identified by the RAW via the CMS/Other Medicare utilization over 20,000 screen. In January 2021, the RUC recommended referring G6001 to CPT to develop new code(s) that reflect the different process of care between the two specialties (dermatology and radiation oncology). Over a year later, a Category I code had not been created, therefore this issue was placed back on the RAW for review at the April 2022 Workgroup meeting. In April 2022, the Workgroup agreed with the specialty society that the specialties work with CMS to develop a MLN Matters article to clarify correct coding and that the Workgroup re-review in two years (April 2024). In September 2023, the Workgroup reviewed an action plan related to other radiation treatment delivery codes G6012-G6015, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns.

In September 2024, the CPT Editorial Panel created four codes and a new subsection to report surface radiation therapy. The existing Category III code, 0394T, and one Category I code, 77401, were deleted. The code family was surveyed for the January 2024 RUC meeting.

Superficial and orthovoltage radiotherapy utilize low energy ionizing radiation to treat cancer and other conditions that occur either on or close to the skin surface. Simulation-aided field setting for superficial radiation therapy (SRT) is currently reported using CPT code 77280 *Therapeutic radiology simulation-aided field setting; simple*. The new code family provides a series of CPT codes—covering planning, simulation, and treatment delivery—that describe SRT, performed typically by dermatology, and includes a combination of professional/technical services to allow for the reporting of services performed. As a result, SRT treatment planning and simulation-aided field setting will be reported with the new CPT code 77436. The reporting of 77280 for SRT will be prohibited under new CPT guidelines.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Compelling Evidence
The RUC agreed with the specialty societies that there is compelling evidence to support a change in physician work for the code family based on a change in dominant specialty as Dermatology did not participate in the prior RUC survey. At the January 2013 meeting, the RUC recommended a work RVU of 0.70 for 77280, based on a survey that consisted only of Radiation Oncology. The typical current predominant diagnosis for 77280 is skin cancer and the dominant specialty is Dermatology, which was not the case in 2013.

In addition, the vignette for the 2013 valuation of 77280 is substantially different than the vignette for the new code 77436. The vignette for 77280 described therapeutic radiation field setting to the lumbar spine in a patient with metastatic prostate cancer, while the vignette for 77436 describes the typical patient undergoing treatment planning for surface radiation therapy to treat a localized squamous cell carcinoma on the shin.

The RUC concurred that there is compelling evidence that the physician work for these services has changed due to a previous valuation excluded a specialty that currently provides a plurality of the service and a misleading vignette, survey and/or flawed crosswalk assumptions in a previous evaluation.

77436 ***Surface radiation therapy; superficial or orthovoltage, treatment planning and simulation-aided field setting***
The RUC reviewed the survey results from 64 dermatologists and radiation oncologists and concluded that the survey respondents overvalued the physician work involved in performing this service. The RUC determined that a direct work RVU crosswalk to CPT code 95991 *Refilling and maintenance of implantable pump or reservoir for drug delivery, spinal (intrathecal, epidural) or brain (intraventricular), includes electronic analysis of pump, when performed; requiring skill of a physician or other qualified health care professional* (work RVU = 0.77, 20 minutes intra-service time and 37 minutes total time), which falls below the survey 25th percentile and has nearly identical intra-service time, appropriately accounts for the physician work involved in this service. The RUC noted that the value is similar to the current code being reported 77280 which has a work RVU of 0.70 and is also similar to the survey responses by dermatologists with the survey 25th percentile work RVU of 0.80. The RUC recommends 7 minutes pre-service time, 19 minutes intra-service time, 10 minutes post-service time for 36 minutes total time as supported by the survey. The typical course of superficial radiation therapy for the treatment of skin cancer consists of approximately fifteen treatments, with the appropriate treatment delivery code (e.g., 77437) reported for each session. Based on the current usage of CPT code 77280, the RUC clarified that the new planning code, 77436, will be used multiple times throughout the treatment course."

To justify a work RVU of 0.77, the RUC compared CPT code 77436 to both the key reference service codes 77262 *Therapeutic radiology treatment planning; intermediate* (work RVU = 2.00, 45 minutes intra-service time, and 54 minutes total time) and 77261 *Therapeutic radiology treatment planning; simple* (work RVU = 1.30, 30 minutes intra-service time, and 36 minutes total time) and noted that the key reference services have much more intra-service and total time and are more intense than 77436, therefore the reference codes are appropriately valued higher than the surveyed code. The RUC also compared CPT code 77436 to MPC code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30, 20 minutes intra-service time and 30 minutes total time) noting that the comparator code has slightly more intra-service time and is much more intense than the surveyed code and is therefore appropriately valued higher.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC noted a strong comparison between CPT code 77436 and CPT code 93280 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system* (work RVU = 0.77, 15 minutes intra-service time and 32 minutes total time) which has the same amount and intensity of physician work, yet less intra-service and total time. The RUC also referenced CPT codes 62370 *Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming and refill (requiring skill of a physician or other qualified health care professional)* (work RVU = 0.90, 20 minutes intra-service time and 37 minutes total time) and 38226 *Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage)* (work RVU = 0.79, 18 minutes intra-service time and 28 minutes total time) for additional justification.

The RUC concluded that CPT code 77436 should be valued based on a direct work RVU crosswalk to CPT code 95991, noting that both services involve nearly identical intra-service and total time, and agreed the crosswalk value below the survey 25th percentile was appropriate. **The RUC recommends a work RVU of 0.77 for CPT code 77436.**

77439 ***Surface radiation therapy; superficial or orthovoltage, image guidance, ultrasound for placement of radiation therapy fields for treatment of cutaneous tumors, per course of treatment (List separately in addition to the code for primary procedure)***
The RUC reviewed the survey results from 51 dermatologists and radiation oncologists and determined that the survey 25th percentile work RVU of 0.30 appropriately accounts for the physician work involved in this add-on service. The RUC recommends 10 minutes intra-service and total time as supported by the survey. Reporting of the new add-on code is limited to once per course of treatment.

Ultrasound guidance for the placement of radiation therapy fields for SRT is currently reported using HCPCs code *G6001 Ultrasonic guidance for placement of radiation therapy fields*. The new code family provides a series of CPT codes—covering planning, simulation, and treatment delivery—that describe SRT, performed typically by dermatology, and includes a combination of professional/technical services to allow for the reporting of services performed. As a result, ultrasound for placement of radiation therapy fields for treatment of cutaneous tumors for SRT will be reported with new CPT code 77439. **The RUC recommends deletion of HCPCS code G6001**.

To justify a work RVU of 0.30, the RUC compared CPT code 77439 to the top key reference service code 76937 *Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)* (work RVU = 0.30, 10 minutes intra-service and total time) and noted the strong comparison between the services which involve identical intra-service and total time and the same amount and intensity of physician work. The RUC also compared CPT code 77439 to the second key reference service code 77293 *Respiratory motion management simulation (List separately in addition to code for primary procedure)* (work RVU = 2.00, 45 minutes intra-service and total time) and noted that the reference service has much more intra-service and total time and is therefore appropriately valued higher than the surveyed code.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC noted that recommended value for CPT code 77439 is appropriately bracketed between MPC codes 96411 *Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.20, 4 minutes intra-service time and 7 minutes total time) and 95885 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)* (work RVU = 0.35, 15 minutes intra-service and total time). The RUC concluded that CPT code 77439 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.30 for CPT code 77439.**

Practice Expense
The Practice Expense (PE) Subcommittee considered the entire code family, CPT codes 77436 and 77439 alongside PE-only codes 77437 and 77438. Compelling evidence was not needed for the family but was provided for new code 77437 as the practice expense inputs are greater than the code it is replacing, CPT code 77401. The PE Subcommittee concurred that there is compelling evidence to support an increase over the aggregate current cost for clinical staff time, supplies and equipment based on changes in technology/updated equipment because the cost of the radiation delivery device typically used has increased. Compelling evidence was accepted under the recognized category of: Evidence that there has been a change in equipment or practice expense cost.

The PE Subcommittee reviewed the direct practice expense inputs and questioned discrepancies between the inputs for codes 77437 and 77438. The specialties explained that the codes are different procedures that utilize different pieces of equipment, involve different patient populations and different specialties. CPT code 77437 is for superficial delivery and will predominantly be reported by dermatology, while 77438 is for orthovoltage services and will be reported by radiation oncologists. For CPT code 77438, the PE Subcommittee acknowledged two new equipment items, *Orthovoltage Treatment Delivery System* and the *Orthovoltage Vault*. It was clarified that the equipment is typically purchased or leased.

The PE Subcommittee made one modification to CPT code 77436 to remove minutes from CA009 *Greet patient, provide gowning, ensure appropriate medical records* to eliminate potential overlap with 77437. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

G-Codes
The RUC requests that CMS delete G6001 since CPT codes 77436-77439 have been created and may be used to report superficial radiation therapy.

New Technology
The code family, CPT codes 77436, 77437, 77438 and 77439, will be placed on the New Technology list and will be re-reviewed by the RUC in three years.

~~77401, 0394T, or 0395T. When reporting 77401 alone, evaluation and management, when performed, may be reported with the appropriate E/M codes.~~ . . .				
D77401	-	~~Radiation treatment delivery, superficial and/or ortho voltage, per day~~ ~~(Do not report 77401 in conjunction with 77373)~~ (77401 has been deleted. For surface radiation therapy, see 77436, 77437, 77438, 77439)	~~XXX~~	~~(2025 Work RVU = 0.00)~~
Surface Radiation Therapy (SRT) Surface radiation therapy (SRT) is a type of external radiation therapy that utilizes low energy radiation, <500kV, that limits penetration to tissues beyond the skin. Radiation therapy of skin cancers is principally done with X-rays. X-rays can be generated with different energies. Low energy X-rays do not penetrate deep into the body and transmit most of their energy into the skin and are therefore used for the treatment of skin cancers. These low energy X-rays are often called superficial (SXT) or orthovoltage (DXT) X-rays. Superficial and orthovoltage radiotherapy utilize low energy ionizing radiation to treat cancer and other conditions that occur either on or close to the skin surface. SRT utilizes ≤150 kilovoltage (kV) X-rays to treat various benign and malignant skin lesions on or near the surface of the skin. They penetrate tissue <1.5-2 cm from the skin surface. The shielding requirements and machinery used to generate superficial radiation differ from orthovoltage radiation. Orthovoltage X-rays, >150-500 kV, are sometimes termed “deep” X-rays (DXR). They cover the upper limit of energies used for surface radiation therapy to treat cancer and tumors. Orthovoltage X-rays penetrate tissue to a therapeutic depth < 4 cm from the skin surface. SRT should not be reported in conjunction with megavoltage (77402, 77407, 77412). Do not report clinical treatment planning (77261, 77262, 77263), simulation (77280, 77285, 77290, 77295), basic dosimetry calculation (77300), special dosimetry (77331), treatment devices (77332, 77333, 77334), isodose planning (77306, 77307, 77316, 77317, 77318), or radiation treatment management (77427, 77431, 77432, 77435, 77469, 77470, 77499) in conjunction with 77436, 77437, 77438, 77439. Superficial or orthovoltage ultrasound image guidance for placement of radiation therapy fields for treatment of cutaneous tumors, if performed, may be reported no more than once per course of treatment.				
●77436	AA1	Surface radiation therapy; superficial or orthovoltage, treatment planning and simulation-aided field setting (Do not report 77436 in conjunction with 77261, 77262, 77280)	XXX	0.77

…

Radiation Oncology
Clinical Brachytherapy

Clinical brachytherapy requires the use of either natural or man-made radioelements applied into or around a treatment field of interest. The supervision of radioelements and dose interpretation are performed solely by the therapeutic radiologist.

Services 77750-77799 include admission to the hospital and daily visits.

For insertion of ovoids and tandems, use 57155.

For insertion of Heyman capsules, use 58346.

Definitions

(Sources refer to intracavitary placement or permanent interstitial placement; ribbons refer to temporary interstitial placement)

***A simple** application has one to four sources/ribbons.*

***An intermediate** application has five to 10 sources/ribbons.*

***A complex** application has greater than 10 sources/ribbons.*

High dose-rate brachytherapy…

Small electronic X-ray sources placed into an applicator within or close to the target may also be used to generate radiation at high-dose rates. This is referred to as high dose-rate electronic brachytherapy.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To report high dose-rate electronic brachytherapy, ~~see~~ use ~~0394T,~~ 0395T.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77436 Tracking Number AA1 Original Specialty Recommended RVU: **1.15**
Presented Recommended RVU: **1.15**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **0.77**

CPT Descriptor: Surface radiation therapy; superficial or orthovoltage, treatment planning and simulation-aided field setting (Do not report 77436 in conjunction with 77261, 77262, 77280)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 76-year-old male with a 2-cm squamous cell carcinoma on the shin.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient's clinical history, pathology report, and diagnostic imaging. The patient is positioned to allow for examination of the treatment site.

Description of Intra-Service Work: The area of concern is identified, confirmed with the medical record and direct examination. The thickness of the lesion is assessed by clinical exam and/or imaging. The clinical extent of the lesion, as well as an appropriate lateral margin for microscopic involvement, is outlined based on clinical exam and/or imaging. The cone/applicator size is chosen based on the size of the treatment area. The treatment nozzle/applicator and patient positioning are adjusted to minimize the air gap between the treatment nozzle and to place the area of concern enface to the treatment nozzle/applicator. Shielding is used to shape the radiation field appropriately to the treatment area and to protect adjacent uninvolved tissues. Photographs are taken of the lesion and patient set up to facilitate subsequent treatments. The treating physician determines the appropriate treatment dose, number of fractions and radiation energy to optimally treat the target lesion. The time required to deliver the radiation dose for each fraction is determined using predefined depth dose tables or a computer algorithm.

Description of Post-Service Work: Record treatment and set up parameters as well as images depicting patient shielding and machine positioning in the medical record to reference for subsequent treatments. Review images, treatment scheduling, side effects, and expectations with the patient and/or family, if present.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2025		
Presenter(s):	Ryan Hick, MD Alina Bridges, DO Brent Moody, MD William Posten, MD Brad Glick, DO, MPH Amar Rewari, MD Michael Kuettel, MD, PhD Chris Jahraus, MD Alec Harris, MD		
Specialty Society(ies):	American Academy of Dermatology Association American Society of Radiation Oncology American College of Radiation Oncology		
CPT Code:	77436		
Sample Size:	5293	**Resp N:**	64
Description of Sample:	The AADA, ASTRO, and ACRO used targeted survey methodology, accompanied by a random sample, as approved by the Research Subcommittee. The Subcommittee approved the use of a targeted list of physicians from the CMS Medicare Physician & Other Practitioners Lookup Tool (https://data.coms.gov) who report the current SRT code 77401 (Radiation treatment delivery, superficial and/or ortho voltage, per day) and 0394T (High dose rate electronic brachytherapy, skin surface application, per fraction, includes basic dosimetry, when performed). For the dermatology sample, surveys were distributed to 2,000 randomly selected U.S.-based practicing dermatologists, excluding residents. The targeted list, derived from the approved CMS database, included 331 physicians who reported codes 77401 and 0394T. Of these, 12 were excluded because their email addresses were not available in the AADA database, and 18 duplicates were removed after comparing with the random sample, resulting in surveys being sent to 301 individuals from the targeted list. Radiation Oncology distributed surveys to 2,975 randomly selected radiation oncologists, based on their membership in either ASTRO or ACRO, and to 17 physicians from the CMS-targeted list who are members of either society.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	39%	46%	15%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2026, the CPT Editorial Panel approved deletion of Category I code 77401 and Category III code 0394T and establishment of three new Category I codes 77436, 77437, 77438 to report surface radiation therapy (SRT) and one new add-on code, 77439, to report ultrasound guidance for the placement of radiation therapy fields for treatment of cutaneous tumors. Reporting of the new add-on code is limited to once per course of treatment.

Simulation-aided field setting for SRT is currently reported using CPT code 77280 *Therapeutic radiology simulation-aided field setting; simple*. The new code family provides a series of CPT codes—covering planning, simulation, and treatment delivery—that describe SRT, performed typically by dermatology, and includes a combination of professional/technical services to allow for the reporting of services performed. As a result, SRT treatment planning and simulation-aided field setting will be reported with new CPT code 77436. The billing of 77280 for SRT will be prohibited under new CPT guidelines.

Survey Process

A multi-disciplinary survey conducted by AADA, ASTRO, and ACRO was distributed to both targeted and randomly selected members within each specialty. The Research Subcommittee approved use of the Medicare Physician & Other Practitioners database to identify physicians in dermatology and radiation oncology who report CPT code 77401 and Category III code 0394T. Dermatology's sample initially included 1,000 randomly selected, practicing U.S.-based dermatologists, excluding residents, and a targeted list of 301 dermatologists. For radiation oncology, a corresponding sample was drawn, comprising 2,975 randomly selected members from ASTRO and ACRO and a targeted sample of 17 physicians.

During the survey process, the AADA received emails from six dermatologists from the targeted survey declining to participate. These respondents expressed concern that the new SRT code set did not reflect their clinical practice model. Two of these responses were submitted by industry-affiliated representatives under physicians' names, and the consistent language and tone across emails raised concerns about potential industry influence. Together, these factors prompted the AADA to notify AMA RUC staff.

The AMA acknowledged the unique circumstances and shared the AADA's concerns regarding possible industry coordination to boycott survey completion. To encourage broader dermatology engagement, the AMA recommended distributing an additional random sample. After consultation with ASTRO and ACRO, it was determined that this further sampling would be limited to dermatology, as no similar feedback patterns were observed within radiation oncology responses.

The AADA subsequently distributed the survey to another randomly selected 1,000 dermatologists, following the same criteria as the original random sample, which resulted in four additional complete survey responses.

Rationale for Compelling Evidence (CE) – 77436

Recommendation: The surveying specialty societies are recommending a work RVU for 77436 (1.15) above the current value of 77280 (0.70).

Background: In April 2024, the Relativity Assessment Workgroup identified CPT code 77280 as a service for which the top specialty performing over 50% of the Medicare claims did not survey the service at the last valuation. 77280 was RUC reviewed in January 2013 after being surveyed by Radiation Oncologists. Over time, Dermatology became the

dominant using specialty. The interested specialties recommended referral to CPT for development of a superficial radiation therapy specific code. In September 2024, the CPT Editorial Panel created four new codes to describe SRT services, as noted above.

Current dominant specialty was not included in previous valuation: At the January 2013 meeting, the RUC recommended a work RVU of 0.70 for 77280, based on a survey that consisted only of Radiation Oncology. As noted, the current predominant specialty for 77280 is Dermatology.

Changed vignette from previous valuation: The vignette for the 2013 valuation of 77280 is substantially different than the vignette for the new code 77436. The vignette for 77280 describes therapeutic radiation field setting to the lumbar spine in a patient with **metastatic prostate cancer**, while the vignette for 77436 describes the typical patient undergoing treatment planning for surface radiation therapy to treat a **localized squamous cell carcinoma** on the shin.

Evidence that incorrect assumptions were made in the previous valuation of the service: The specialty societies believe that two CE criteria are met, (1) "*a previous valuation excluded a specialty that currently provides a plurality of the service"* and (2) *"a misleading vignette, survey and/or flawed crosswalk assumptions in a previous evaluation*," based on the background and summary provided above.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 77436 (New): Global XXX, Work RVUs; Pre-Service Time; Intra-Service Time; Post-Service Time not yet established.
   AND: 77437 (New): Global XXX; Technical/PE-only OR 77438 (New): Global XXX; Technical/PE-only.
   AND, IF PERFORMED:
   77439 (New): Global ZZZ; Work RVUs not yet established; Pre-Service Time N/A; Intra-Service Time not yet established; Post-Service Time N/A.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77280

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Commonly

Specialty Radiation Oncology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 909000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. To estimate the national utilization of this service, Medicare Fee-For-Service data was used as a representative sample. According to claims data, 2022 Medicare utilization for 77280 is 406,305. As Medicare Fee-for-Service accounts for approximately one third of all skin cancer cases, the Medicare utilization figure for 77436 as estimated below was multiplied by 3 to approximate the total number of times this service might be provided nationally over one year.

Specialty Dermatology Frequency 828000 Percentage 91.08 %

Specialty Radiation Oncology Frequency 81000 Percentage 8.91 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 303,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2022 Medicare utilization for CPT code 77280—both Global and 26—is 406,305. Dermatology represents the primary users of SRT services, accounting for approximately 68% of the total utilization for 77280 in the non-facility setting, or around 276,000. We estimate that dermatology's 276,000 services will represent approximately 90% of the total utilization of the new code, 77436, with radiation oncology accounting for approximately 9–10%.

Specialty Dermatology Frequency 276000 Percentage 91.08 %

Specialty Radiation Oncology Frequency 27000 Percentage 8.91 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77439 Tracking Number AA4 Original Specialty Recommended RVU: **0.30**
Presented Recommended RVU: **0.30**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **0.30**

CPT Descriptor: Surface radiation therapy; superficial or orthovoltage, image guidance, ultrasound for placement of radiation therapy fields for treatment of cutaneous tumors, per course of treatment (List separately in addition to the code for primary procedure) (Use 77439 in conjunction with 77437, 77438)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During radiation therapy treatment delivery, a 76-year-old male with a 2-cm squamous cell carcinoma on the shin, also requires ultrasound guidance for placement of radiation therapy fields for the treatment of a cutaneous tumor. [Note: This is an add-on service. Only consider the additional work related to surface radiation therapy guidance.]

Percentage of Survey Respondents who found Vignette to be Typical: 78.43%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Ultrasound images of cutaneous tumor are evaluated. Tumor thickness, depth of invasion, and lateral extension of the tumor are measured. The physician documents the findings in the medical record and discusses the results with the patient and/or family.

Description of Post-Service Work: N/A

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2025		
Presenter(s):	Ryan Hick, MD Alina Bridges, DO Brent Moody, MD William Posten, MD Brad Glick, DO, MPH Amar Rewari, MD Michael Kuettel, MD, PhD Chris Jahraus, MD Alec Harris, MD		
Specialty Society(ies):	American Academy of Dermatology Association American Society of Radiation Oncology American College of Radiation Oncology		
CPT Code:	77439		
Sample Size:	5293	**Resp N:**	51
Description of Sample:	The AADA, ASTRO, and ACRO used targeted survey methodology, accompanied by a random sample, as approved by the Research Subcommittee. The Subcommittee approved the use of a targeted list of physicians from the CMS Medicare Physician & Other Practitioners Lookup Tool (https://data.coms.gov) who report the current SRT code 77401 (Radiation treatment delivery, superficial and/or ortho voltage, per day) and 0394T (High dose rate electronic brachytherapy, skin surface application, per fraction, includes basic dosimetry, when performed). For the dermatology sample, surveys were distributed to 2,000 randomly selected U.S.-based practicing dermatologists, excluding residents. The targeted list, derived from the approved CMS database, included 331 physicians who reported codes 77401 and 0394T. Of these, 12 were excluded because their email addresses were not available in the AADA database, and 18 duplicates were removed after comparing with the random sample, resulting in surveys being sent to 301 individuals from the targeted list. Radiation Oncology distributed surveys to 2,975 randomly selected radiation oncologists, based on their membership in either ASTRO or ACRO, and to 17 physicians from the CMS-targeted list who are members of either society.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	33%	40%	27%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	67%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	27%	60%	13%
Physical effort required	33%	60%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	67%	13%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	12%	12%	38%	38%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	38%	62%
Physical effort required	0%	38%	62%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	12%	88%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2026, the CPT Editorial Panel approved deletion of Category I code 77401 and Category III code 0394T and establishment of three new Category I codes 77436, 77437, 77438 to report surface radiation therapy (SRT) and one new add-on code, 77439, to report ultrasound guidance for the placement of radiation therapy fields for treatment of cutaneous tumors. Reporting of the new add-on code is limited to once per course of treatment.

Ultrasound guidance for the placement of radiation therapy fields for SRT is currently reported using HCPCs code G6001 (Ultrasonic guidance for placement of radiation therapy fields). The new code family provides a series of CPT codes—covering planning, simulation, and treatment delivery—that describe SRT, performed typically by dermatology, and includes a combination of professional/technical services to allow for the reporting of services performed. As a result, ultrasound for placement of radiation therapy fields for treatment of cutaneous tumors for SRT will be reported with new CPT code 77439. The anticipated recommendation is for CMS to delete HCPCS code G6001.

Survey Process

A multi-disciplinary survey conducted by AADA, ASTRO, and ACRO was distributed to both targeted and randomly selected members within each specialty. The Research Subcommittee approved use of the Medicare Physician & Other Practitioners database to identify physicians in dermatology and radiation oncology who report CPT code 77401 and Category III code 0394T. Dermatology's sample initially included 1,000 randomly selected, practicing U.S.-based dermatologists, excluding residents, and a targeted list of 301 dermatologists. For radiation oncology, a corresponding sample was drawn, comprising 2,975 randomly selected members from ASTRO and ACRO and a targeted sample of 17 physicians.

During the survey process, the AADA received emails from six dermatologists from the targeted survey declining to participate. These respondents expressed concern that the new SRT code set did not reflect their clinical practice model. Two of these responses were submitted by industry-affiliated representatives under physicians' names, and the consistent language and tone across emails raised concerns about potential industry influence. Together, these factors prompted the AADA to notify AMA RUC staff.

The AMA acknowledged the unique circumstances and shared the AADA's concerns regarding possible industry coordination to boycott survey completion. To encourage broader dermatology engagement, the AMA recommended distributing an additional random sample. After consultation with ASTRO and ACRO, it was determined that this further sampling would be limited to dermatology, as no similar feedback patterns were observed within radiation oncology responses.

The AADA subsequently distributed the survey to another randomly selected 1,000 dermatologists, following the same criteria as the original random sample, which resulted in four additional complete survey responses.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 77436 (New): Global XXX, Work RVUs; Pre-Service Time; Intra-Service Time; Post-Service Time not yet established.
AND: 77437 (New): Global XXX; Technical/PE-only OR 77X08 (New): Global XXX; Technical/PE-only.
AND:
77439 (New): Global ZZZ; Work RVUs not yet established; Pre-Service Time N/A; Intra-Service Time not yet established; Post-Service Time N/A.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G6001

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty Radiation Oncology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 28500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Using the updated utilization for the Medicare population as estimated below, this figure was multiplied by 3—since Medicare Fee-for-Service accounts for approximately one third of all skin cancer cases—to approximate the total number of times this service might be provided nationally over one year.

Specialty Dermatology Frequency 26000 Percentage 91.22 %

Specialty Radiation Oncology Frequency 2600 Percentage 9.09 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2022 Medicare utilization data for G6001 is 192,052. Because reporting of 77439 is limited to once per course of treatment, as opposed to per fraction as with code G6001, the utilization for 77439 is estimated to decrease by approximately 95%. Dermatology represents the primary users of SRT services, accounting for an estimated 90% to total ultilization for 77439, with radiation oncology accounting for approximately 9-10%.

Specialty Dermatology Frequency 8640 Percentage 90.94 %

Specialty Radiation Oncology Frequency 860 Percentage 9.05 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
77436	Surface radiation therapy; superficial or orthovoltage, treatment planning and simulation-aided field setting (Do not report 77436 in conjunction with 77261, 77262, 77280)	XXX
77437	Surface radiation therapy; superficial, delivery, ≤150 kV, per fraction (eg, electronic brachytherapy)	XXX
+77439	Surface radiation therapy; superficial or orthovoltage, image guidance, ultrasound for placement of radiation therapy fields for treatment of cutaneous tumors, per course of treatment (List separately in addition to the code for primary procedure) (Use 77439 in conjunction with 77437, 77438)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
77436	A 76-year-old male with a 2-cm squamous cell carcinoma on the shin.
77437	A 76-year-old male with a 1-cm basal cell carcinoma of the nose.
+77439	During radiation therapy treatment delivery, a 76-year-old male with a 2-cm squamous cell carcinoma on the shin, also requires ultrasound guidance for placement of radiation therapy fields for the treatment of a cutaneous tumor. [**Note:** This is an add-on service. Only consider the additional work related to surface radiation therapy guidance.]

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AADA convened a panel that included physicians who perform the procedures. The panel developed the direct practice expense recommendations for CPT Codes 77436, 77437, and 77439 based on typical clinical practice and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   77436

   For 77436, CPT code 77280 *Therapeutic radiology simulation-aided field setting; simple* was used as a reference service code on the PE spreadsheet. Field planning for SRT is currently reported with CPT code 77280.

   77437

   For 77437, both CPT codes 77401 *Radiation treatment delivery, superficial and/or ortho voltage, per day* and 96932 *Reflectance confocal microscopy (RCM) for cellular and sub-cellular imaging of skin; image acquisition only, first lesion* are referenced on the PE spreadsheet. Superficial radiation treatment delivery is currently reported with code 77401, which will be deleted for CPT 2026.

77439
Ultrasound guidance for placement of radiation therapy codes is currently reported with HCPCS Code G6001 *Ultrasonic guidance for placement of radiation therapy fields.* Both G6001 and CPT code 76937 *Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)* are referenced on the PE spreadsheet for 77439. Of note, G6001 was created by CMS and has not been RUC reviewed for PE or physician work. The anticipated recommendation is for CMS to delete HCPCS code G6001.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

77436, 77437, and 77439 will not typically be reported with an E/M service (in the F or the NF).

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Dermatology is expected to be the dominant provider in the non-facility setting for codes 77436, 77437, and 77439.

77436
Dermatology is currently the dominant provider across both the non-facility and global settings for 77280. It is anticipated that 77436 will be performed approximately 95% of the time in the non-facility setting.

77437
Currently, dermatology provides 83% of SRT services with 99% in the non-facility setting. 77437 is a TC only code.

77439
Currently, dermatology is the dominant provider across both the non-facility and global settings for G6001. It is anticipated that 77439 will be performed approximately 98% of the time in the non-facility setting.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

77437
77437 is a new code. However, the practice expense inputs are greater than the code it is replacing, which is 77401, because the cost of the radiation deliver device typically used has increased. A paid

invoice is included. Our compelling evidence falls under the recognized CE category of: Evidence that there has been a change in equipment or practice expense cost.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

77436
No time is allocated for vital signs for 77436. It is assumed that this code will typically be reported with 77437, which does include time for obtaining vital signs.

77437
For 77437, 3 minutes are allocated for performance of 3 vital signs.

77439
77439 is an add-on code and, when performed, must be reported with the appropriate code for SRT treatment delivery (i.e., 77437 for superficial or 77438 for orthovoltage). We assume 77439 will typically be reported with 77437, which includes time for obtaining vital signs.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

77436 Assist physician or other qualified healthcare professional – related to physician work time 77437 Greet patient, provide gowning, ensure appropriate medical records Obtain vital signs Prepare room, equipment and supplies Confirm order, protocol exam Prepare, set-up and start IV, initial positioning and monitoring of patient Perform procedure – not directly related to physician time Clean room/equipment by clinical staff Check dressings, catheters, wounds Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.) Review home care instructions, coordinate visits/prescriptions 77439 Perform procedure – not directly related to physician time Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

77437 The treatment area is assessed to ensure appropriate coverage with direct visualization. The treatment applicator is positioned over the treatment area. After confirmation of the appropriate set up, treatment with superficial radiation is delivered. 77439 The treatment site is identified. Ultrasound transmission gel is applied. Ultrasound transducer is applied over the site and ultrasound images are obtained to evaluate tumor depth and lateral margins. Wipe off the ultrasound gel from the patient. Save image into EHR.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    77437
    An invoice for the typically used radiation delivery device is included. This will replace the current input cost for ER045 *Superficial Radiation Therapy System*. The useful life will remain the same as the current input, ER045 (5 years).

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

77436
There are no equipment inputs for 77436.

77437
The "*Default Formula"* was used for the power table, exam light, superficial radiation therapy system and the lead blocking shield kit.

77439
The "*Default Formula"* was used for the portable ultrasound unit.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

77437
77437 is a PE-only code. We estimate this service will be provided approximately 285,000 times per year to Medicare patients nationally. For all patients, we estimate approximately 855,000 services yearly.

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

77437
We recommend CPT code 96567 *Photodynamic therapy by external application of light to destroy premalignant lesions of the skin and adjacent mucosa with application and illumination/activation of photosensitive drug(s), per day* for a PLI crosswalk for 77437, based on a similar specialty mix.

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

77437
Equipment time: The code which 77437 is replacing, 77401, reflects 19 minutes of equipment time. The 19 minutes for 77401 was based on the typical dermatology practice, where a single dedicated room is used for all aspects of service delivery. While the actual radiation delivery involves two minutes of machine use, the machine is unavailable for other use while a patient is in the room.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We propose reducing total equipment time for 77437 to 17 minutes. While the proposed time is reduced from 19 minutes, the use of a single dedicated room and the unavailability of the machine during the service remains the same. Our expert panel recommends 17 minutes of equipment time, calculated by totaling the following clinical activities:

- CA009 *Greet patient, provide gowning, ensure appropriate medical records* – 3 minutes
- CA010 *Obtain vital signs* – 3 minutes
- CA013 *Prepare room, equipment and supplies* – 2 minutes
- CA014 *Confirm order, protocol exam* – 1 minute
- CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient* – 2 minutes
- CA021 *Perform procedure/service – Not directly related to physician work* – 2 minutes
- CA024 *Clean room/equipment by clinical staff* – 3 minutes
- CA029 *Check dressings, catheters, wounds* – 1 minute

We are assuming that the two minutes of documentation (CA034) and the two minutes for review of home care instructions (CA035) are performed outside of the procedure room and thus are not included in the 17 minutes of equipment time on the PE spreadsheet.

77439
Equipment time: Our expert panel indicates it takes 5 minutes for clinical staff to acquire the ultrasound image. The predominant practice is to use the ultrasound device attached to the radiation delivery device. However, ultrasound function is not integral to the radiation deliver device. That is, the ultrasound does not directly communicate with the radiation delivery device and can be done with a portable ultrasound device. For this reason, we recommend using EQ250 *Ultrasound unit, portable* as the input for the ultrasound device rather than the much more expensive radiation delivery device. No time for the radiation delivery device is included in 77436 in any way.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

During the PE Subcommittee meeting, it was recommended to remove the 2 minutes for CA009 *Greet patient, provide gowning, ensure appropriate medical records are available* from 77436. This change was made to address what the PE Subcommittee identified as potential overlap with 77437.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S): 77436, 77437, 77439**

SPECIALTY SOCIETY(IES): AADA

PRESENTER(S): Brent Moody, MD; Ryan Hick, MD; Alina Bridges, DO; Brad Glick, DO, MPH and Willian Posten, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S):** 77438

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
77438	orthovoltage, delivery, >150-500 kV, per fraction	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
77438	A 76-year-old male with a 2-cm squamous cell carcinoma on the shin.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   ASTRO and ACRO convened a panel that included physician who perform the procedure. The panel developed the direct practice expense recommendations for CPT Code 77438 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   CPT Code 77373 *Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions* was used as a reference service code for 77438 on the PE spreadsheet. The other radiation oncology treatment delivery codes are under review at the January 2025 RUC meeting.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   CPT Code 77438 will not typically be reported with an E/M service (in the F or the NF).
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Radiation Oncology will be the dominant provider in the non-facility setting for 77438. 77438 is a TC only code.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The specialties are requesting an increase over the aggregate current costs for clinical activities, supplies and equipment.

Background
CPT Code 77401 is currently used to report radiation treatment delivery for superficial and orthovoltage services. When the practice expense inputs were defined in 2002, they were based on practice patterns related to radiation oncology. In January 2020 the RUC (PE subcommittee) reviewed CPT Code 77401 and agreed that the service was, at the time, provided primarily by dermatologists according to utilization data (84% of the time). Due to change in presenting specialty, there had been a change in PE inputs including clinical staff type. The PE Subcommittee agreed that there was compelling evidence that there had been a change to perform this service based on change in dominant specialty. The inputs were then based on a typical dermatology patient.

New Codes
CPT recently approved four new CPT codes to describe surface radiation therapy (SRT). CPT Code 77436, a PC/TC code to describe planning/simulation. Both dermatology and radiation oncology will use 77436. CPT Code 77439, another PC/TC code, will be used to describe ultrasound guidance for SRT. CPT Code 77438 and 77439 are treatment delivery codes (TC only). 77437 is for superficial and will predominantly be reported by dermatology. 77438 is for orthovoltage services and will be reported by radiation oncologists.

Compelling Evidence
The specialty societies believe the CE criteria "*Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data*" is met based on the background and summary provided above.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

In reference code 77373 three minutes were allocated for *CA010 obtain vital signs* prior to the 2018 vital signs CMS change.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records are available Prepare room, equipment and supplies Prepare, set-up and start IV, initial positioning and monitoring of patient Perform procedure, not directly related to physician time Clean room

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

The patient is brought into the room and identified appropriately. The patient will be set up according to the simulation information. The tumor and area of treatment will be assessed to ensure appropriate coverage with direct visualization and the treatment applicator will be positioned over the treatment area. After confirmation of the appropriate set up, treatment with orthovoltage radiation is delivered.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

Perform procedure, not directly related to physician time

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

ER045 *Superficial Radiation Therapy System* is priced based on an invoice from Sensus for a superficial radiation therapy system. An invoice is included for an orthovoltage treatment delivery system. The orthovoltage system includes the treatment machine, TP2 control CCU, generator and water cooler. The specialties included an invoice for a new orthovoltage treatment delivery vault. The orthovoltage vault has appropriate shielding for a treatments <150-500 kV.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The specialties are recommending a useful life of 7 years for the orthovoltage treatment delivery system, consistent with inputs for similar items in the CMS database.

The specialties are recommending a useful life of 15 years for the orthovoltage vault, consistent with inputs for similar items in the CMS database.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

The "*Default Formula"* was used for the exam table, orthovoltage treatment delivery system and the orthovoltage vault.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

The specialties estimate that 77438 might be reported in Medicare approximately 6,500. (Current RUC database, 2022 claims data for 77401, 2.2% of the claims for RO)
The specialties estimate that possibly 13,000 might be preformed nationally, based on a 50/50 Medicare/Non Medicare split. However, a true number is not known.

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

The specialties recommend CPT Code 77373 as a PLI crosswalk for CPT Code 77438.

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Clinical Labor
The current CMS policy is two radiation therapists for treatment delivery. Below is the background for that policy decision.

It is the position of the American Society of Radiologic Technologists (ASRT) that two registered radiation therapists per patient per treatment unit is the minimum standard for safe and efficient

delivery of radiation therapy.[1] The 2022 ASRT staffing survey document an average of 2.4 radiation therapist per linear accelerator. (See page 17)

ACR Accreditation requires minimum of two radiation therapists at each treatment session for adequate staffing and support.[2]

ACRO Accreditation also requires a minimum of two radiation therapists per linear accelerator. (See page 6)

ASTRO Accreditation also requires a minimum of two radiation therapists per linear accelerator. (See page 6)

"Safety Is No Accident" a joint document sponsored by ASTRO and developed/endorsed by 9 radiation oncology organizations recommends a minimum of two qualified individuals be present for any routine external beam patient treatment. (See page 11)

Equipment
Treatments >150-500 kV will need appropriate shielding. As such, the specialty societies have included pricing for a new orthovoltage vault to be used in CPT Code 77438.

Background
The debate whether a radiation treatment vault should be considered direct or indirect in CMS' practice expense methodology dates all the way back to 1997. In general, for vaults used with radiation oncology services, the RUC has included them in the recommendations forwarded to CMS and CMS has included them in radiation treatment delivery services. While CMS has included them in the related codes CMS has included comments in the federal register noting (1) concern about how vaults should be handled (direct vs indirect), (2) the need for consistency and (3) the need for further study on the issue.

The societies are optimistic that issues regarding how CMS should handle radiation oncology vaults and shielding will be addressed when the new PPI data is available for review. The RUC included the radiation oncology treatment vault/shielding as a direct expense in the current 2023-2024 Physician Practice Expense Survey.

The specialties request that the PE subcommittee review the equipment formulas/times associated with vault/shielding and pass along the invoices submitted to CMS. The specialties look forward to robust discussions with CMS when they review the PPI results.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Combination COVID-19 Vaccine Administration – Tab 18

In September 2024, the CPT Editorial Panel created a new add-on code, 90481, to report when each additional non-COVID vaccine component is administered with the COVID-19 vaccine. CPT code 90480 was revised as part of this family of services.

90480 ***Immunization administration by intramuscular injection, ~~of~~ severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine; first or only component of each vaccine administered***
In September 2023, the RUC reviewed CPT code 90480 and recommended the survey median work RVU of 0.25. The RUC recommended 7 minutes of intra-service/total time. The RUC noted that this service is typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time is not duplicative from that which is included in the E/M visit. The specialty societies requested that the RUC affirm the work RVU for 90480 as it was recently surveyed. **The RUC recommends affirming a work RVU of 0.25 for CPT code 90480.**

90481 ***Immunization administration by intramuscular injection, ~~of~~ severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine; each additional component administered (List separately in addition to code for primary procedure)***
The specialty societies noted that 90481 does not have additional physician work or direct practice expenses associated with it. All work and direct practice expense is included in the administration of the base code 90480. The CDC requested this code for tracking multi-antigen vaccines outside the pediatric population. This add-on code is intended for use in the identification of a second component of the COVID combination vaccine. CPT code 90481 simply represents the second component of the product composition that was administered and provides a means to track the administration of the second vaccine. **The RUC recommends a work RVU of 0.00 for CPT code 90481.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. For CPT code 90480, the RUC affirmed the September 2023 inputs. No direct practice expense inputs were recommended for CPT code 90481 as it was developed for product tracking purposes only. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Evaluation and Management Services
Preventive Medicine Services

The extent and focus of the services will largely...

. . .

Codes 99381-99397 include counseling/anticipatory guidance/risk factor reduction interventions which are provided at the time of the initial or periodic comprehensive preventive medicine examination. (Refer to 99401, 99402, 99403, 99404, 99411, and 99412 for reporting those counseling/anticipatory guidance/risk factor reduction interventions that are provided at an encounter separate from the preventive medicine examination.)

(For behavior change intervention, see 99406, 99407, 99408, 99409)

Immunization/vaccine/toxoid products, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. For immunization risk/benefit counseling without administration, see 90482, 90483, 90484. For immunization administration and immunization risk/benefit counseling, see 90460, 90461, 90471-90474, 90480, 90481*, 96380, 96381. For immunization/vaccine/toxoid products, see 90380, 90381, 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322.*

Medicine
Immunization Administration for Vaccines/Toxoids

Report vaccine immunization administration codes (*90460, 90461, 90471-90474, 90480,* 90481*) in addition to the vaccine and toxoid code(s) (90476-90759, 91304, 91318, 91319, 91320, 91321, 91322).*

Report codes 90460 and 90461 only when the physician or other qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine other than when performed for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccines. For immunization administration of any vaccine, other than SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines, that is not accompanied by face-to-face physician or other qualified health care professional counseling to the patient/family/guardian or for administration of vaccines to patients over 18 years of age, report codes 90471-90474. (See also ***Instructions for Use of the CPT Codebook*** *for definition of reporting qualifications.)*

Report 90480, 90481 for immunization administration only if the vaccine includes a ~~of~~ SARS-CoV-2 (coronavirus disease [COVID-19]) component~~vaccines only~~. ~~This code is~~ These codes are used for administration and counseling that involves the use of COVID-19 vaccines for immunization against contracting disease. *This includes administration of COVID-19 vaccine for all age populations*. For administration of

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

additional vaccine(s) or toxoid component(s) combined with COVID-19 vaccine for patients 18 years of age or younger with counseling by the physician or other qualified health care professional for the additional vaccine or toxoid component, use 90461.

For physician or other qualified health care professional (QHP) immunization counseling of three minutes or greater when the immunization is not administered on the same date, see 90482, 90483, 90484.

If more than one immunization is recommended and the patient/family/caregiver accepts one or more immunization(s) and declines one or more immunization(s), use 90460, 90461, 90471, 90472, 90473, 90474, 90480, 96380, 96381 as indicated for immunization administration and see 90482, 90483, 90484 for immunization counseling for those immunizations for which administration did not occur on the same day that counseling was performed.

If a significant separately identifiable evaluation and management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99242, 99243, 99244, 99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 909461). Multi-valent antigens or multiple serotypes of antigens against a signle organism are considered a single component of vaccines. Combination vaccines are thosew vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.

For immune globulines and monoclonal antibodies immunizations, see 90281-90399. For administration of immue globulines and monoclonal antibodies immunizations, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96372, 96364.

For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96372, 96374, 96375, 96380, 96381, 96380, 96381.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372-96379)

90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only compent of each vaccine or toxoid administered*

+90461 *each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)*

(Use 90460 for each vaccine administered. For vaccines with multiple components [combination vaccines], report 90460 in conjunction with 90461 for each additional component in a given vaccine)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		(Do not report 90460, 90461 in conjunction with 91304, 91318, 91319, 91320, 91321, 91322, unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter) *(For physician or other qualified health care professional immunization counseling of 3 minutes or greater when one or more immunizations are not administered on the same date, see 90482, 90483, 90484)* (For administration of additional vaccine[s] or toxoid[s] component combined with COVID-19 vaccine for patients 18 years of age or younger with counseling by the physician or other qualified health care professional for the additional vaccine or toxoid component, use 90461)		
▲90480	BB1	Immunization administration by intramuscular injection, ~~of~~ severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine~~, single dose~~; first or only component of each vaccine administered (Report 90480 for the administration of vaccine 91304, 91318, 91319, 91320, 91321, 91322) (Do not report 90480 in conjunction with 90476-90759, unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter) (For physician or other qualified health care professional [QHP] immunization counseling of 3 minutes or greater when one or more immunizations are not administered on the same date, see 90482, 90483, 90484)	XXX	0.25 (Affirm September 2023 RUC Recommendation)
✚●90481	BB2	each additional component administered (List separately in addition to code for primary procedure) (Use 90481 in conjunction with 90480) (Report 90481 for immunization administration for all patients greater than 18 years of age and patients 18 years of age or younger without counseling by the physician or other qualified health care professional for the additional vaccine or toxoid component)	ZZZ	0.00

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

★◀●*90482* *Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; 3 minutes up to 10 minutes*

★◀●*90483* *greater than 10 minutes up to 20 minutes*

★◀●*90484* *greater than 20 minutes*

(When reporting 90482, 90483, 90484, do not count time spent on counseling for immunizations that were administered on the same day of service)

(When reporting 90482, 90483, 90484, do not include service time reported with 90460, 90461, 90471, 90472, 90473, 90474, 90480, 96380, 96381)

(Report 90482, 90483, 90484 once per date of service for cumulative counseling time for immunization[s] not provided, regardless of the number of products)

Vaccines, Toxoids

To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website (ama-assn.org/cpt-cat-i-immunization-codes), which features updates of CPT Editorial Panel actions regarding these products. See the Introduction section of the CPT code set for a complete list of the dates of release and implementation.

The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ↗ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ↗ symbol will be removed. CPT users should refer to the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes) for the most up-to-date information on codes with the ↗ symbol.

*Codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 identify the vaccine product **only**. To report the administration of a vaccine/toxoid other than SARS-CoV-2 (coronavirus disease [COVID-19]), the vaccine/toxoid product codes (90476-90759) must be used in addition to an immunization administration code(s) (90460, 90461, 90471, 90472, 90473, 90474). To report the administration of a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine, the vaccine/toxoid product codes 91304, 91318, 91319, 91320, 91321, 91322 should be reported with the corresponding immunization administration ~~code~~s (90480, 90481).*

Do not report 90476-90759 in conjunction with the SARS-CoV-2 (coronavirus disease [COVID-19]) immunization administration ~~code~~s 90480, 90481, unless both a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter.

Modifier 51 should not be reported with vaccine/toxoid codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322, when reported in conjunction with administration codes 90460, 90461, 90471, 90472, 90473, 90474, 90480, 90481.

If a significantly separately identifiable Evaluation and Management (E/M) service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chicago, IL 60611

Dear Dr. Silva,

The American Osteopathic Association, on behalf of the more than 195,000 osteopathic physicians and medical students we represent, appreciates this opportunity to comment on Tab 18 of the January 2025 RUC meeting (Combination COVID-19 Vaccine Administration, CPT codes 90480 and 9X16X). Approximately 57% of DOs practice in primary care specialties, including family medicine, internal medicine, pediatrics, geriatrics, and obstetrics/gynecology. As a result, most of our members commonly provide vaccine administration services as part of their practice. We would like to express our support for the recommendation submitted for 90480 and 9X16X.

CPT code 90480, I*mmunization administration by intramuscular injection, of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)(coronavirus disease [COVID-19]) vaccine single dose; first or only component of each vaccine administered*, was recently surveyed and valued at the September 2023 RUC meeting. As described by the specialty societies, the CPT Editorial Panel approved changes to the original code descriptor that are editorial in nature to reflect combination vaccine products newly entering the market. As more of these products are developed and their administration becomes more commonplace, it is important that CPT coding enables physicians to document and report vaccines administered. Because the change made by CPT is largely editorial, and there has been no substantive change to this service since its survey in 2023, we agree with the societies' recommendation to reaffirm the current 7 minutes of intra-service/total time, work RVU of 0.25, and direct practice expense inputs.

CPT code 9X16X, *each additional component administered (list separately in addition to code for primary procedure)*, is a child code for 90480 intended to indicate the additional components of the combination vaccine product. The societies developing recommendations for tab 18 explain that this code has no work or direct practice expense because it is intended to be used for tracking purposes for multi-antigen vaccines, and the work of vaccine administration is already captured by 90480.

Thank you again for the opportunity to comment on this tab. The AOA supports the recommendations submitted for tab 18. Please let us know if you have any questions.

Paul Martin, DO, FACOFP
AOA RUC Advisor

Robert Pedowitz, DO
AOA RUC Alternate Advisor

Chicago, IL 60611

Re: Tab 18 Combination COVID-19 Vaccine Administration (90480, 9X16X)

Dear Dr. Silva:

The American Academy of Pediatrics (AAP), the American Academy of Family Physicians (AAFP), the American College of Physicians (ACP), and the American Nurses Association (ANA) respectfully submit the following recommendations for Tab 18, Combination COVID-19 Vaccine Administration (90480 and 9X16X).

1. 90480 *Immunization administration by intramuscular injection, of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine single dose; first or only component of each vaccine administered*: **Reaffirm current time, work RVUs, and direct Practice Expense inputs (see Summary Spreadsheet and PE Spreadsheet)**

   Rationale
   a. CPT code 90480 was recently valued at the September 2023 RUC meeting based upon a robust survey response of 171 physicians.
   b. At the September 2024 CPT Editorial Panel meeting, the CPT Panel approved edits to the code descriptor that are editorial in nature to accommodate future introduction into the marketplace of a combination COVID-19/flu vaccine that are administered in a single injection and do not change the physician time, work, or PE inputs for the service.
   c. No changes were made by the CPT Editorial Panel to the vignette for the typical patient used for the RUC survey for 90480.

2. 9X16X *each additional component administered (List separately in addition to code for primary procedure)*: **No work or direct Practice Expense inputs (see Summary Spreadsheet and PE Spreadsheet)**

   Rationale:
   a. The CPT Editorial Panel approved this code at the September 2024 CPT Editorial Panel meeting.

   b. The CDC requested this code for tracking multi-antigen vaccines outside the pediatric population. This add-on code is intended for use in the identification of the second

component of the COVID combination vaccine. Per the CPT Panel, there is no work or practice expense associated with this code. The work of the "administration" is captured by 90480. It simply represents the second component of the "cocktail" that was administered and provides a means to track the administration of this second vaccine.

Background

On August 14, 2023, new CPT codes were created to consolidate over 50 previously implemented codes and streamline the reporting of immunizations for the novel coronavirus (SARS-CoV-2, also known as COVID-19). The CPT Editorial Panel approved a single code (90480) to describe the administration of new and existing COVID-19 vaccine products. In August 2023, the specialty societies conducted an expedited survey to value the consolidated single COVID-19 immunization administration code, CPT code 90480. The RUC reviewed the specialty societies' recommendation at the September 2023 RUC meeting and determined that the survey median work RVU of 0.25 appropriately accounted for the work required to perform this service. The RUC recommended 7 minutes of intra-service/total time. The RUC noted that this service is typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time are not duplicative from that which is included in the E/M visit.

At the September 2024 CPT Editorial Panel meeting, *Moderna* and *Pfizer* collaborated on a Code Change Application to address appropriate reporting for the administration of a vaccine that includes COVID-19 product and influenza product for vaccination against both conditions/diseases. The Code Change Application was submitted in anticipation of FDA approval for products currently being tested in clinical trials. The CPT Editorial Panel approved (1) revision of code 90480 to note "first or only component of each vaccine administered"; and (2) creation of child code 9X16X to report each additional non-COVID vaccine component administration.

90480 Immunization administration by intramuscular injection, ~~of~~ severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine ~~single dose~~; first or only component of each vaccine administered

(Report 90480 for the administration of vaccine 91304, 9XXX1, 9XXX2, 9XXX3, 9XXX4, 9XXX5)

(Do not report 90480 in conjunction with 90476-90759)

+9X16X each additional component administered (List separately in addition to code for primary procedure)

(Use 9X16X in conjunction with 90480)

(Report 9X16X for immunization administration for all patients greater than 18 years of age and patients 18 years of age or younger without counseling by the physician or other qualified healthcare professional for the additional vaccine or toxoid component)

(For administration of an additional vaccine or toxoid component combined with COVID-19 vaccine for patients 18 years of age or younger with counseling by the physician or other qualified healthcare professional for the additional vaccine or toxoid component, use 90461)

Code Use

The typical site of service for 90480 and 9X16X includes both Facility and Non-facility settings:

Hospital inpatient
Hospital outpatient
Emergency department
Office
Inpatient psychiatric facility
Skilled nursing facility
Nursing facility
Assisted living facility
Patient's home
Other
Public health clinics, pharmacies, other seasonal vaccine clinics (can be employer sponsored or another sponsor).

Summary

The AAP, the AAFP, the ACP, and the ANA recommend reaffirming the current time of 7 minutes intra-service/total time and work RVU of 0.25 for 90480. We recommend reaffirming the current PE inputs.

For 9X16X, we recommend no time, work, or direct PE inputs.

Sincerely,

Steven Krug, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025 (Affirmation of September 2023 Recommendations for 90480)

CPT Code	Long Descriptor	Global Period
90480	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR CoV2) (coronavirus disease [COVID 19]) vaccine, first or only component of each vaccine administered	XXX
90481	each additional component administered (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
90480	A female patient presents for possible immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. After counseling, she is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.
90481	An adult female patient presents for possible immunization against SARS-CoV-2 and influenza infection to decrease the risk of contracting the diseases. The physician or QHP determines that the patient is an appropriate candidate for a combination COVID-19 and Influenza vaccine and orders its administration. [**Note:** This is an add-on service. Only consider the additional work related to the administration of the additional influenza immunization.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened multispecialty consensus panel including RUC advisors and providers of immunizations in the NF setting. The panel developed the direct practice expense recommendations for CPT Code 90480 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   CPT Code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other QHP; first or only component of each vaccine or toxoid administered* was selected as a comparison on the PE spreadsheet. Code 90460 is a recently PE reviewed IA service.

   There is no work or PE associated with the new code 90481 as it was developed for product tracking purposes only. Thus no comparison code was selected.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

Code 90480 is typically reported with an E/M service. Code 90480 is typically reported with an E/M service in the NF setting.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

The dominant provider for new CPT Code 90480 and new CPT Code 90481 in the facility and non facility is not known at this time.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre Service CA007 Review patient clinical extant information and questionnaire

Used for imaging service. 1 minute standard.
Specialties are recommending 1 minute to account for the clinical staff time to review the patient immunization questionnaire.

CA008
Perform regulatory mandated quality assurance activity (pre-service)
Standard is 0 for XXX services.
Specialties are recommending 1 minute to account for the clinical staff time to ensure the vaccine stock is viable.

Service
CA014 Confirm order, protocol exam
Used for imaging service. 1 minute standard.
Specialties are recommending 2 minutes to account for the clinical staff time to ensure the correct sequencing and vaccination.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA007: Confirming vaccine order/checking appropriateness for patient

CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

    b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine

CA021: Actual administration of vaccine; bandage application

CA022: Watching patient after vaccine is administered

CA024: Disposal of vaccine-specific medical waste

CA034: Charting administered immunizations in the patient chart and EMR; preparing patient record/immunization card

c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or **No**.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

The specialty societies included the following equipment items:

EF049 refrigerator, vaccine medical grade, 2-data logger sngl glass door
ED043 refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates

The specialties used the 'default' equipment formula for both EF049 and ED043.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Equipment
ED043: While its description begins with "refrigerator, vaccine," it is the temperature monitor with alarm for the vaccine medical grade refrigerator. The specialties do not have two vaccine refrigerators included as part of the recommendations.

We are recommending affirmation of the September 2023 recommendations for CPT Code 90480. No changes have been made from those approved times on the PE SOR. There is no work or PE associated with the new code 90481 as it was developed for product tracking purposes only.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2023

SARS-CoV-2-Immunization Administration – Tab 18

On August 14, 2023, new CPT codes were created to consolidate over 50 previously implemented codes and streamline the reporting of immunizations for the novel coronavirus (SARS-CoV-2, also known as COVID-19). The CPT Editorial Panel approved the addition of new product codes 91318-91322 to identify monovalent vaccine product for immunization against COVID-19 (Pfizer, Moderna); retained existing Novavax Product Code 91304 for currently authorized vaccine product available for use in the U.S. and the updated (XBB.1.5) vaccine; deleted and/or revised all other existing COVID codes (product and administration with associated guidelines and parenthetical note deletions/revisions); and added a single administration code (90480) for administration of new (i.e., 91318-91322) and existing (i.e., 91304) COVID-19 vaccine products.

All existing CPT codes that describe COVID-19 vaccine products and associated administration codes that end in "A" for products that are no longer covered under an existing Emergency Use Authorization (EUA) or Biologics License Application (BLA) from the US Food and Drug Administration (FDA) will be deleted effective November 1, 2023.

In August 2023, the specialty societies conducted an expedited survey to value the consolidated single COVID-19 immunization administration code, CPT code 90480. The RUC reviewed the specialty societies' recommendation at the September 2023 RUC meeting.

90480 ***Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose***
The RUC reviewed the survey results from 171 pediatricians and obstetricians/gynecologists and determined that the survey median work RVU of 0.25 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes of intra-service/total time. The RUC noted that this service is typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time is not duplicative from that which is included in the E/M visit.

The RUC compared the surveyed code with the top key reference service 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes intra-service/total time). The RUC noted that 70% of the respondents who chose CPT code 90460 as the key reference service indicated the surveyed code is overall slightly more intense and complex to perform. This is supported by the additional complexity of the intra-service work as compared to 90460 based on the need to address ongoing vaccine hesitancy associated with COVID-19. Analysis from the CDC's State of Vaccine Confidence Insights Report, KFF COVID-19 Vaccine Monitor, American Academy of Family Physicians, American College Health Association, American Academy of Pediatrics, and Journal of Community have shown that the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

COVID-19 pandemic has had a profound effect on vaccine confidence, with a significant overall increase in vaccine hesitancy. Notably, COVID-19 vaccines have experienced the highest level of hesitancy compared to other vaccines. Therefore, the RUC determined that the physician or QHP work is slightly more for code 90480 compared to 90460.

The RUC compared the surveyed code to the second top key reference service 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* (work RVU = 0.17 and 7 minutes intra-service/total time). The RUC noted that while both services require the same amount of time, offering CPT code 90471 (such as for seasonal influenza), which entails less physician work and is less intense/complex. CPT code 90741 is valued appropriately lower, as there is slightly less patient education and discussion about vaccination hesitancy when compared to the COVID related patient education and vaccine protection that is required for CPT code 90480.

For additional support, the RUC referenced MPC codes 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service/total time) and 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVU = 0.32, 7 minutes intra-service time and 9 minutes total time), which places the surveyed code in the proper rank order based on the intensity, complexity, and time required to perform this service. **The RUC recommends a work RVU of 0.25 for CPT code 90480.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. The specialty societies recommended identical inputs as recently reviewed and approved for immunization administration code 90460. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology/New Services
The RUC recommends that CPT code 90480 be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Modifier -51 Exempt
The RUC acknowledges that vaccines and immunizations are inherently precluded from the modifier -51 application and note that the revisions to the CPT guidelines are already in place, which includes COVID immunizations.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Category I
Evaluation and Management
Preventive Medicine Services

Vaccine/toxoid products, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. For immunization administration and vaccine risk/benefit counseling, see 90460, 90461, 90471-90474, 90480 ~~0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~. For vaccine/toxoid products, see 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322, ~~91300-91317~~.

Medicine
Immunization Administration for Vaccines/Toxoids

Report vaccine immunization administration codes (90460, 90461, 90471-90474, 90480 ~~0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~) in addition to the vaccine and toxoid code(s) (90476-90759, 91304, 91318, 91319, 91320, 91321, 91322, ~~91300-91317~~).

Report codes 90460 and 90461 only when the physician or other qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine other than when performed for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccines. For immunization administration of any vaccine, other than SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines, that is not accompanied by face-to-face physician or other qualified health care professional counseling to the patient/family/guardian or for administration of vaccines to patients over 18 years of age, report 90471-90474. (See also ***Instructions for Use of the CPT Codebook*** *for definition of reporting qualifications.)*

Report 90480 ~~0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~ for immunization administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines only. This code is used for administration and counseling that involves the use of COVID-19 vaccines for immunization against contracting the disease. This includes administration of COVID-19 vaccine for all age populations. ~~Each administration code is specific to each individual vaccine product (eg, 91300-91317), the dosage schedule (eg, first dose, second dose), and counseling, when performed. The appropriate administration code is chosen based on the type of vaccine and the specific dose number the patient receives in the schedule. For example, 0012A is reported for the second dose of vaccine 91301. Do not report~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

~~90460-90474 for the administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines. Codes related to SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine administration are listed in Appendix Q, with their associated vaccine code descriptors, vaccine administration codes, patient age, vaccine manufacturer, vaccine name(s), National Drug Code (NDC) Labeler Product ID, and interval between doses. In order to report these codes, the vaccine must fulfill the code descriptor and must be the vaccine represented by the manufacturer and vaccine name listed in Appendix Q.~~

If a significant separately identifiable Evaluation and Management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99241-99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.

For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96372, 96374.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372-96379)

▲*90460* *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*

▲✚*90461* *each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)*

(Use 90460 for each vaccine administered. For vaccines with multiple components [combination vaccines], report 90460 in conjunction with 90461 for each additional component in a given vaccine)

(Do not report 90460, 90461 in conjunction with 91304, 91318, 91319, 91320, 91321, 91322 ~~91300-91317,~~ unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Vaccines, Toxoids

To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website, which features updates of CPT Editorial Panel actions regarding these products. Once approved by the CPT Editorial Panel, these codes will be made available for release on a semiannual (twice a year: July 1 and January 1) basis. As part of the electronic distribution, there is a six-month implementation period from the initial release date (ie, codes released on January 1 are eligible for use on July 1 and codes released on July 1 are eligible for use January 1).

The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ↙ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ↙ symbol will be removed. CPT users should refer to the AMA CPT website (www.ama-assn.org/go/cpt-vaccine) for the most up-to-date information on codes with the ↙ symbol.

Codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322~~, 91300 91317,~~ identify the vaccine product **only**. To report the administration of a vaccine/toxoid other than SARS-CoV-2 (coronavirus disease [COVID-19]), the vaccine/toxoid product codes (90476-90759) must be used in addition to an immunization administration code(s) (90460, 90461, 90471, 90472, 90473, 90474).To report the administration of a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine, the vaccine/toxoid product codes 91304, 91318, 91319, 91320, 91321, 91322 ~~(91300-91317)~~ should be reported with the corresponding immunization administration code (904800001A, ~~0002A, 0003A, 0004A, 0011A, 0012A,~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

In order to report these codes, the vaccine must fulfill the code descriptor and must be the vaccine represented by the manufacturer and vaccine name listed in Appendix Q.~~

Do not report 90476-90759 in conjunction with the SARS-CoV-2 (coronavirus disease [COVID-19]) immunization administration codes ~~90480~~0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A unless both a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter.

Modifier 51 should not be reported with vaccine/toxoid codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322~~91300-91317,~~ when reported in conjunction with administration codes 90460, 90461, 90471, 90472, 90473, 90474, 90480~~0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~.

If a significantly separately identifiable Evaluation and Management (E/M) service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

To meet the reporting requirements of immunization registries, vaccine distribution programs, and reporting systems (eg, Vaccine Adverse Event Reporting System) the exact vaccine product administered needs to be reported. Multiple codes for a particular vaccine are provided in the CPT codebook when the schedule (number of doses or timing) differs for two or more products of the same vaccine type (eg, hepatitis A, Hib) or the vaccine product is available in more than one chemical formulation, dosage, or route of administration.

The "when administered to" age descriptions included in CPT vaccine codes are not intended to identify a product's licensed age indication. The term "preservative free" includes use for vaccines that contain no preservative and vaccines that contain trace amounts of preservative agents that are not present in a sufficient concentration for the purpose of preserving the final vaccine formulation. The absence of a designation regarding a preservative does not necessarily indicate the presence or absence of preservative in the vaccine. Refer to the product's prescribing information (PI) for the licensed age indication before administering vaccine to a patient.

Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.

The vaccine/toxoid abbreviations listed in codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322~~, 91300-91317,~~ reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval by the ACIP on a timely

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

basis via the AMA CPT website (www.ama-assn.org/go/cpt-vaccine). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.

~~*For the purposes of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccinations, codes 0003A, 0013A, 0053A, 0073A, 0083A, 0093A, 0113A, and 0173A represent the administration of a third dose in the primary series (eg, patient with immunocompromising condition or patient age 6 months through 4 years). In contrast, the booster*~~ or additional ~~*dose codes 0004A, 0034A, 0044A, 0054A, 0064A, 0074A, 0094A, 0104A, 0124A, 0134A, 0144A, 0154A, 0164A and 0174A represent the administration of a dose of vaccine when the initial immune response to a primary vaccine series was sufficient, but has likely waned over time.*~~

(For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365-96375)

~~***D**91300 Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3 mL dosage, diluent reconstituted, for intramuscular use*~~

SARS-CoV-2-Immunization Administration – Coding Changes (Clean Copy)

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Category I **Evaluation and Management** **Preventive Medicine Services** Vaccine/toxoid products, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. For immunization administration and vaccine risk/benefit counseling, see 90460, 90461, 90471-90474, 90480. For vaccine/toxoid products, see 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322. **Medicine** **Immunization Administration for Vaccines/Toxoids** Report vaccine immunization administration codes (90460, 90461, 90471-90474, 90480) in addition to the vaccine and toxoid code(s) (90476-90759, 91304, 91318, 91319, 91320, 91321, 91322). *Report codes 90460 and 90461 only when the physician or other qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine other than when performed for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccines. For immunization administration of any vaccine, other than SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines, that is not accompanied by face-to-face physician or other qualified health care professional counseling to the patient/family/guardian or for administration of vaccines to patients over 18 years of age, report 90471-90474. (See also* ***Instructions for Use of the CPT Codebook*** *for definition of reporting qualifications.)* Report 90480 for immunization administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines only. This code is used for administration and counseling that involves the use of COVID-19 vaccines for immunization against contracting the disease. This includes administration of COVID-19 vaccine for all age populations. *If a significant separately identifiable Evaluation and Management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99241-99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.* *A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.*				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
● 90480	DD1	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose (Report 90480 for the administration of vaccine 91304, 91318, 91319, 91320, 91321, 91322) (Do not report 90480 in conjunction with 90476-90759)	XXX	0.25

Vaccines, Toxoids

To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website, which features updates of CPT Editorial Panel actions regarding these products. Once approved by the CPT Editorial Panel, these codes will be made available for release on a semiannual (twice a year: July 1 and January 1) basis. As part of the electronic distribution, there is a six-month implementation period from the initial release date (ie, codes released on January 1 are eligible for use on July 1 and codes released on July 1 are eligible for use January 1).

The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ↯ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ↯ symbol will be removed. CPT users should refer to the AMA CPT website (www.ama-assn.org/go/cpt-vaccine) for the most up-to-date information on codes with the ↯ symbol.

Codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 identify the vaccine product **only**. To report the administration of a vaccine/toxoid other than SARS-CoV-2 (coronavirus disease [COVID-19]), the vaccine/toxoid product codes (90476-90759) must be used in addition to an immunization administration code(s) (90460, 90461, 90471, 90472, 90473, 90474).To report the administration of a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine, the vaccine/toxoid product codes 91304, 91318, 91319, 91320, 91321, 91322 should be reported with the corresponding immunization administration code (90480).

Do not report 90476-90759 in conjunction with the SARS-CoV-2 (coronavirus disease [COVID-19]) immunization administration code 90480 unless both a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter.

Modifier 51 should not be reported with vaccine/toxoid codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 when reported in conjunction with administration codes 90460, 90461, 90471, 90472, 90473, 90474, 90480.

If a significantly separately identifiable Evaluation and Management (E/M) service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To meet the reporting requirements of immunization registries, vaccine distribution programs, and reporting systems (eg, Vaccine Adverse Event Reporting System) the exact vaccine product administered needs to be reported. Multiple codes for a particular vaccine are provided in the CPT codebook when the schedule (number of doses or timing) differs for two or more products of the same vaccine type (eg, hepatitis A, Hib) or the vaccine product is available in more than one chemical formulation, dosage, or route of administration.

The "when administered to" age descriptions included in CPT vaccine codes are not intended to identify a product's licensed age indication. The term "preservative free" includes use for vaccines that contain no preservative and vaccines that contain trace amounts of preservative agents that are not present in a sufficient concentration for the purpose of preserving the final vaccine formulation. The absence of a designation regarding a preservative does not necessarily indicate the presence or absence of preservative in the vaccine. Refer to the product's prescribing information (PI) for the licensed age indication before administering vaccine to a patient.

Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.

The vaccine/toxoid abbreviations listed in codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval by the ACIP on a timely basis via the AMA CPT website (www.ama-assn.org/go/cpt-vaccine). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.

AMERICAN ACADEMY OF FAMILY PHYSICIANS

September 25, 2023

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva:

On behalf of the American Academy of Family Physicians (AAFP) and its 129,600 members, we write to comment on the recommendations in Tab 18 (SARS-CoV-2-Immunization Administration – Revised Code Set) of the September 2023 RUC agenda. Although the AAFP did not participate in the survey for this tab, many family physicians provide this service as part of their practices. These comments are based on our review of the recommendations.

Upon review, we support the specialties' recommendation of 0.25 work relative value units (RVUs) for new code 90480. As noted in the corresponding summary of recommendation (SOR) form, this value is supported by a time and intensity comparison with the key reference service, 90460, and fits nicely with the established work RVUs for other codes with similar time, which are also noted in the SOR.

We likewise support the recommended direct practice expense inputs for code 90480. We note they are the same inputs currently assigned to code 90460, which the RUC recently reviewed in 2021.

Thank you for the opportunity to comment on this tab. Please let us know if you have any questions about these comments.

Sincerely,

/s/

Brad Fox, MD
AAFP RUC Advisor

/s/

Amber Isley, MD
AAFP Alternate RUC Advisor

SUMMARY OF RECOMMENDATION

CPT Code:90480 Tracking Number DD1 Original Specialty Recommended RVU: **0.25**
Presented Recommended RVU: **0.25**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **0.25**

CPT Descriptor: Immunization administration by intramu scular injection of severe acute respiratory syndrome coronavirus 2 (SAR-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A female patient presents for possible immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. After counseling, she is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other QHP reviews the patient's chart to confirm that vaccination to decrease the risk of COVID-19 is indicated. Counsel the patient, parent or guardian on the benefits and risks of vaccination to decrease the risk of COVID-19 and obtain consent. Administer the dose of the COVID-19 vaccine by intramuscular injection. Monitor the patient for any adverse reaction. Update the patient's immunization record (and registry when applicable) to reflect the vaccine administered.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	2%	1%	27%	62%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	35%	62%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	75%	16%

Physical effort required	6%	78%	16%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	27%	70%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	2%	13%	25%	55%	4%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	34%	58%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	83%	6%
Physical effort required	19%	68%	13%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	32%	55%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In response to the needs of the public health emergency (PHE), in 2020 through 2023 the CPT Editorial Panel approved over 50 new CPT codes for the new vaccine products developed for protection against the novel coronavirus (SARS-CoV-2, also known as COVID-19) and their associated administration. These codes were developed based on extensive collaboration with CMS and the CDC to support tracking, reporting and analysis for data-driven planning and allocation to meet the needs of the new pandemic and are unique to each corresponding vaccine, does and patient age range.

Due to the existing pandemic and public health need for rapid deployment of COVID-19 vaccines, the RUC convened special meetings to expedite approval of recommendations for work relative values and direct practice expense inputs for the 47 codes that described immunization administration (IA) by intramuscular injection of COVID-19 vaccines. The American Academy of Family Physicians (AAFP), American College of Obstetricians and Gynecologists (ACOG), American College of Physicians (ACP), American Academy of Pediatrics (AAP), and American Nurses Association (ANA) received approval by the Research Subcommittee to develop work RVU and intra-service time recommendations using a crosswalk methodology. For the initial four IA codes, the RUC approved a work RVU and intra-service time based on a crosswalk to the 2009 RUC recommendations for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered) as proposed by the societies. RUC recommendations for all subsequent COVID-19 IA codes were based on either a similar crosswalk to 90460 or a crosswalk to previously approved values for COVID-19 IA codes. This work occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. Similar to the COVID-19 IA codes, the value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic and has since been retired.

Beginning August 14, 2023, new CPT codes were created to consolidate over 50 previous codes and greatly streamline the reporting of immunizations for the novel coronavirus (SARS-CoV-2, also known as COVID-19). The CPT Editorial Panel approved the addition of new product codes 91318-91322 to identify monovalent vaccine product for immunization against COVID-19 (Pfizer, Moderna); retained existing Novavax Product Code 91304 for currently authorized vaccine product available for use in the U.S. and the updated (XBB.1.5) vaccine; deleted and/or revised all other existing COVID codes (product and administration with associated guidelines and parenthetical note deletions/revisions); and added a single administration code (90480) for administration of new (i.e., 91318-91322) and existing (i.e., 91304) COVID-19 vaccine product.

All existing CPT codes that describe COVID-19 vaccine products and associated administration codes that end in “A” for products that are no longer covered under an existing Emergency Use Authorization (EUA) or Biologics License Application (BLA) from the US Food and Drug Administration (FDA) will be deleted effective Nov. 1, 2023.

Survey Process

In August 2023, ACOG and AAP conducted an expedited survey to value the consolidated single COVID-19 IA code, CPT code 90480, with a total of 171 survey respondents. ACOG used a random sample of their members; AAP used a random sample of applicable subsets of their members. AAP pulled a random sample of US membership from the following practice sections, excluding RUC members, alternate RUC members, students, post-graduate trainees and retirees: Administration and Practice Management, Community Pediatrics, Children with Disabilities, Early Career Physicians, Early Childhood, Immigrant Child and Family Health, and Adolescent Health. AAP determined that these members would most likely be familiar with or have experience administering COVID-19 vaccines. AAP pulled an equal size random sample from each subsection based on expert opinion of the estimated demographics of the providers performing the service.

The societies established an expert panel to review the survey results. The vignette of the typical patient used for the survey was provided by the CPT Editorial Panel. 82% of respondents found the vignette to be typical.

The following recommendations represent the first time standard RUC survey methodology is being used to develop proposed work RVU and intra-service time values for this service.

The RUC reviewed all non-COVID related immunization CPT codes, including 90460, at the April 2021 RUC meeting.

Recommendations

Based on the review of the survey data, the specialties recommend the survey median of 0.25 work RVUs and the survey median of 7 minutes intra-service time, which also serves as the total time. The survey yielded a strong response rate by individuals experienced with the service and indicated tight alignment in their RVU valuations. The median RVUs of 0.25 is supported by the intensity/complexity measures, where 70% of survey respondents indicated the service overall was more intense/complex than the top key reference service code, 90460, *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid,* which has an RVW of 0.24. The IWPUT of 0.036 supports the additional complexity of the intra-service work as compared to 90460 based on the need to address ongoing vaccine hesitancy associated with COVID-19. Surveys on the impact of the COVID-19 pandemic on vaccine confidence indicate vaccine hesitancy overall has increased, and the COVID-19 vaccines may have the greatest hesitancy (CDC's State of Vaccine Confidence Insights Report, KFF COVID-19 Vaccine Monitor, American Academy of Family Physicians, American College Health Association, Pediatrics, Journal of Community.

The recommended time is supported by the primary key reference service, 90460, *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid,* which has an intra-service time of 7 minutes. It is also supported by MPC code 99406, *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes)*, which also has an intra-service time of 7 minutes.

There are multiple other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
88311	Decalcification procedure	XXX	0.24	0	5	2	7
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	XXX	0.24	0	7	0	7
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX	0.24	0	7	0	7
90480	Immunization administration by	XXX	0.25	0	7	0	7

	intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose						
77073	Bone length studies (orthoroentgenogram, scanogram)	XXX	0.26	1	5	1	7
92202	Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral)	XXX	0.26	1	5	1	7
70260	Radiologic examination, skull; complete, minimum of 4 views	XXX	0.28	1	4	1	6

These examples illustrate that the recommended value and time for code 90480 are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion

For code 90480, *Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose*, the societies recommend an RVU of 0.25 and intra-service time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Code 90480 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time
3.	99213	XXX	1.30	5	20	5
4.	90480	XXX	0.25	0	7	0
5.	Total		1.55	5	27	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) One of 47 COVID-19 IA codes

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty AAP How often? Commonly

Specialty ACOG How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 269868876
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. CDC COVID Vaccine Data Tracker; CDC VaxView 2023 data on intent to vaccinate; 2020 US Census Data

Specialty AAP Frequency 14962400 Percentage 5.54 %

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2023

CPT Code	Long Descriptor	Global Period
90480	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR CoV2) (coronavirus disease [COVID 19]) vaccine, single dose	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
90480	A female patient presents for possible immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. After counseling, she is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened multispecialty consensus panel including RUC advisors and providers of immunizations in the NF setting. The panel developed the direct practice expense recommendations for CPT Code 90480 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   CPT Code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other QHP; first or only component of each vaccine or toxoid administered* was selected as a comparison on the PE spreadsheet. Code 90460 is a recently PE reviewed IA service.
