

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
RUC RECOMMENDATIONS FOR CPT 2014**

**TABLE OF CONTENTS**

<b><u>New/Revised CPT Codes CPT 2014</u></b>	<b><u>TAB</u></b>
Drainage of Abscess	1
Breast Biopsy	2
Shoulder Prosthesis Removal	3
Elbow Prosthesis Removal	4
Transcatheter Aortic Valve Replacement	5
Fenestrated Endovascular Repair	6
Retrograde Treatment Open Carotid Stent	7
Transcatheter Placement of Intravascular Stent	8
Embolization and Occlusion Procedures	9
Esophagoscopy	10
Esophagoscopy Gastroscopy Duodenoscopy (EGD)	11
Endoscopic Retrograde Cholangiopancreatography (ERCP)	12
Cystourethroscopy	13
Chemodenervation of Neck Muscles	14
Chemodenervation of Extremity and Trunk Muscles	15
Insertion of Anterior Segment Device	16
Removal of Cerumen	17
Respiratory Motion Management Simulation	18
Molecular Pathology-Tier 1	19
Immunohistochemistry	20
Optical Endomicroscopy	21

Breath Hydrogen Methane Test	22
Percutaneous Closure Patent Ductus Arteriosus	23
Percutaneous Alcohol Ablation of Septum	24
Mechanical Chest Wall Oscillations	25
Ultrasonic Wound Assessment	26
Anogenital Exam Colposcopy-PE Only	27
Interprofessional Telephone Consultative Services	28
Total Body and Selective Head Hypothermia	29

<b><u>CMS Requests and Relativity Assessment Issues</u></b>	<b>TAB</b>
Destruction of Premalignant Lesions	30
Mohs Surgery	31
Nasal/Sinus Endoscopy	32
Implantation and Removal of Patient Activated Cardiac Event Recorder	33
Renal Allotransplantation	34
Percutaneous Implantation of Neurostimulator-PE Only	35
Aqueous Shunt	36
Repair of Eyelid	37
MRI-Spine	38
CT-Angiography-Abdomen and Pelvis	39
Fluoroscopic Guidance	40
IMRT-PE Only	41
Continuing Medical Physics Consultation-PE Only	42
Radiation Treatment Delivery-PE Only	43
Hyperthermia-PE Only	44

High Dose Rate Brachytherapy-PE Only	45
Cytopatholgy	46
In Situ Hybridization	47
Psychotherapy for Crisis and Interactive Complexity	48
Evoked Potentials and Reflex Tests	49
Negative Pressure Wound Therapy	50

<b><u>HCPAC Recommendation</u></b>	<b><u>TAB</u></b>
Pharmacologic Management with Psychotherapy	51
Speech Evaluation	52

Subject: RUC Recommendations

Dear Ms. Tavenner:

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) submits the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare and Medicaid Services (CMS). These recommendations relate to new and revised codes for *CPT 2014*, as well as to existing services identified by the RUC's Relativity Assessment Workgroup and CMS. If implemented, the RUC recommendations should result in a positive adjustment to the Medicare conversion factor.

*CPT 2014 New and Revised Codes*

Enclosed are two binders containing RUC recommendations, including those for new and revised CPT codes. The total number of coding changes for *CPT 2014* is 227, including 98 additions, 51 revisions, and 41 deletions. In addition, 37 new codes were identified as part of the family for review in relationship to the new/revised codes. The 186 new/revised/related family CPT codes are summarized as follows:

- 30 services are not payable on the RBRVS or do not require physician work at this time (eg, laboratory services and vaccines), and accordingly, the RUC does not submit any information on these codes.
- Four new and revised codes were addressed by the RUC HCPAC Review Board and that recommendation is submitted directly by the HCPAC.
- The RUC recommends that 11 codes be carrier priced.

The RUC submits work value and/or practice expense inputs for 141 new/ revised/related family CPT codes.

Over seventy-five percent of the CPT code revisions for CPT 2014 originated from the potentially misvalued services process.

Existing Services Identified by RUC and CMS for Review

In addition to the new/revised CPT code submission, the RUC submits recommendations for 74 services identified by the RUC or CMS as potentially misvalued and reviewed at the April 2013 RUC meeting. These recommendations are in addition to the 39 recommendations for existing services submitted to CMS following the RUC's October 2012 and January 2013 meetings.

Practice Expense Subcommittee

The attached materials include direct expense input (medical staff, supplies and equipment) recommendations for each code reviewed. As a reminder, cost estimates for medical supplies and equipment not listed on the "CMS labor, Supply, and Equipment List for the Year 2013" are based on provided source(s) as noted, such as manufacturer's catalogue prices and may not reflect the wholesale prices, quantity, or cash discounts, prices for used equipment or any other factors that may alter the cost estimates. The RUC shares this information with CMS without making specific recommendations on the pricing for supplies and equipment.

The Migration from Film to Digital Imaging Workgroup has concluded its work and recommendations are included in the attached submission. The Workgroup has identified 604 imaging CPT codes as being transitioned to digital equipment and the supplies and equipment to be removed from these codes. The Workgroup has also identified the recommended PACS equipment to replace film components that will be removed from the codes and clinical labor activities that the PE Subcommittee will implement as codes are reviewed moving forward.

In the Final Rule CMS asked for comment and data on the number of blocks assumed in the determination of practice expense recommendations for CPT codes 88302-88309. In response, the College of American Pathologists (CAP) and other stakeholders conducted a national study of the number of blocks typically produced for CPT codes 88302-88309. This independent evidence confirms the conservative estimation made by the CAP, and approved by the RUC, in January 2012 of the appropriate typical number of blocks associated with each of these services and which the RUC previously recommended, based on the data presented and on the RUC's clinical knowledge. The PE Subcommittee confirmed the number of blocks approved by the RUC at January 2012 RUC Meeting. The *Pathology Consultations* recommendation from January 2012 and supporting documents from the CAP study are included with this submission.

Enclosed Recommendations and Supporting Materials:

Included in these binders and on the enclosed CD are:

- RUC Recommendation Status Report for New and Revised Codes
- RUC Recommendation Status Report for more than 1,500 services identified to date by the Relativity Assessment Workgroup and CMS as potentially misvalued. In addition, a spreadsheet containing the codes specific to this submission is included.
- RUC Referrals to the CPT Editorial Panel – both for CPT nomenclature revisions and *CPT Assistant* articles.

- Physician Time File: A list of the physician time data for each of the CPT codes reviewed at the October 2012, January 2013, and April 2013 RUC meetings. In addition, a new physician time file for all services within the RBRVS is enclosed.
- Pre-Service Time Packages Definitions: The RUC developed physician pre-service time packages which have been incorporated into these recommendations. The intent of these packages is to streamline the RUC review process as well as create standard pre-service time data for all codes reviewed by the RUC.
- PLI Crosswalk Table: The RUC has committed to selecting appropriate professional liability insurance crosswalks for new and revised codes and existing codes under review. We have provided a PLI Crosswalk Table listing the reviewed code and its crosswalk code for easy reference. We hope that the provision of this table will assist CMS in reviewing and implementing the RUC recommendations.
- Source Code Utilization Crosswalk Table – A table estimating the flow of claims data from existing codes to the new/revised codes. This information is used to project the work relative value savings to be included in the 2014 conversion factor increase.
- New Technology List and Flow Chart – In April 2006, the RUC adopted a process to identify and review codes that represent new technology or services that have the potential to change in value. To date, the RUC has identified 416 of these procedures through the review of new CPT codes. A table of these codes identified as new technology services and the date of review is enclosed, as well as a flow chart providing a detailed description of the process to be utilized to review these services.
- Practice Expense Subcommittee recommendation on the migration of film to digital technology for imaging services is also included.

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at (312) 464-5604.

Sincerely,

Barbara Levy, MD

Subject: HCPAC Recommendations

Dear Ms. Tavenner:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendations to the Centers for Medicare and Medicaid Services (CMS). At its January and April 2013 meetings, the HCPAC reviewed four speech evaluation CPT codes and one pharmacologic management CPT code.

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2014 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Susan Clark via (202) 789-7495 or [Susan.Clark@ama-assn.org](mailto:Susan.Clark@ama-assn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

A handwritten signature in black ink, appearing to read "W. Mangold, Jr.", written over a light blue horizontal line.

William J. Mangold, Jr, MD  
HCPAC Chair

## **The RUC Relativity Assessment Workgroup Progress Report**

In 2006, the RUC established the Five-Year Identification Workgroup (now referred to as the Relativity Assessment Workgroup) to identify potentially misvalued services using objective mechanisms for reevaluation prior to the next Five-Year Review. The RUC formed this Workgroup in response to criticisms that, despite reducing the work RVUs for nearly 400 services in the past, the process contains “bias in the 5-year review in favor of undervalued codes as compared to overvalued codes.”<sup>1</sup> Since the inception of the Relativity Assessment Workgroup, the Workgroup and CMS have identified over 1,500 services through thirteen different screening criteria for further review by the RUC. Additionally, the RUC charged the Workgroup with maintaining the “new technology” list of services that will be re-reviewed by the RUC as reporting and cost data become available.

### **New Technology**

As the RUC identifies new technology services that should be re-reviewed, a list of these services is maintained and forwarded to CMS. Currently, codes are identified as new technology based on recommendations from the specialty society and consensus among RUC members at the time of the RUC review for these services. RUC members consider several factors to evaluate potential new technology services, including: recent FDA-approval, newness or novelty of the service, use of an existing service in a new or novel way, and migration of the service from a Category III to Category I CPT code. The Relativity Assessment Workgroup maintains and develops all standards and procedures associated with the list, which contains 416 services. In September 2010, the re-review cycle began and since then the RUC has recommended 5 services to be re-examined. The remaining services are rarely performed (ie, less than 500 times per year in the Medicare population) and will not be re-examined. The Workgroup will continue to review the remaining 249 services every October after three years of Medicare claims data is available for each service.

### **Site of Service Anomalies**

The Workgroup initiated its effort by reviewing services with anomalous sites of service when compared to Medicare utilization data. Specifically, these services are performed less than 50% of the time in the inpatient setting, yet include inpatient hospital Evaluation and Management services within their global period.

The RUC identified 194 services through the site of service anomaly screen. The RUC required the specialties to resurvey 129 services to capture the appropriate physician work involved. These services were reviewed by the RUC between April 2008 and February 2011. CMS implemented 124 of these recommendations in the 2009, 2010 and 2011 Medicare Physician Payment Schedules. The RUC submitted another 5 recommendations as well as re-reviewed and submitted 44 recommendations to previously reviewed site-of-service identified codes to CMS for the 2012 Medicare Physician Payment Schedule.

---

<sup>1</sup> MedPAC comments to CMS regarding the 2008 Medicare Physician Payment Schedule proposed rule, submitted August 30, 2007.

Of the remaining 65 services that were not re-surveyed, the RUC modified the discharge day management for 46 services, maintained 3 codes and removed 2 codes from the screen as the typical patient was not a Medicare beneficiary and would be an inpatient. The CPT Editorial Panel deleted 13 codes and the RUC will re-review 1 service in the CPT 2016 cycle. The RUC will reassess the data each year going forward to determine if any new site of service anomalies arise.

During this review, the RUC uncovered several services that are reported in the outpatient setting, yet, according to several expert panels and survey data from physicians who performed the procedure, the service, typically requires a hospital stay of greater than 23 hours. The RUC maintains that physician work that is typically performed, such as visits on the date of service and discharge work the following day, should be included within the overall valuation. Subsequent observation day visits and discharge day management service as appropriate proxies for this work.

### **High Volume Growth**

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have increased by at least 100% from 2004 through 2006. The query initially resulted in the identification of 81 services, but was expanded by 15 services to include the family of services, totaling 96 services. Specialty societies submitted comments to the Workgroup in April 2008 to provide feedback or explanations for the growth in reporting. Following this review, the RUC required the specialties to survey 35 services to capture the appropriate work effort and/or practice expense inputs. These services were reviewed by the RUC between February 2009 and April 2010.

The RUC recommended removing 23 services from the screen as the volume growth did not impact the resources required to provide the service. The CPT Editorial Panel deleted 21 codes and will review another 3 services in the CPT 2014 cycle. In September 2011, the RUC began review of services after two years of utilization data were collected. The RUC submitted recommendations to CMS for 8 services for the 2012-2014 Medicare Physician Payment Schedules. The RUC will continue to review the remaining 6 services after additional utilization data is collected.

In April 2013, the RUC assembled a list of all services with a total Medicare utilization of 10,000 or more that have increased by at least 100% from 2006 through 2011. The query resulted in the identification of 40 services. Specialty societies will submit action plans to the RUC in October 2013 to provide feedback or explanations for the growth in reporting. The RUC will determine next steps to address these services after it has reviewed this information.

### **CMS Fastest Growing**

In 2008, CMS developed the Fastest Growing Screen to identify all services with growth of at least 10% per year over the course of 3 years from 2005-2007. Through this screen, CMS identified 114 fastest growing services and the RUC added 69 services to include the family of services, totaling 183. The RUC required the specialties to survey 72 services to capture the appropriate work effort and/or practice expense inputs. These services were reviewed by the RUC from February 2008 through April 2010 and submitted to CMS for the Medicare Physician Payment Schedule.

The RUC recommended removing 51 services from the screen as the volume growth did not impact the resources required to provide the service. The CPT Editorial Panel deleted 25 codes and will review another 4 services in the CPT 2014 cycle. The RUC submitted 13 recommendations to CMS for the 2012 -2013 Medicare Physician Payment Schedules. The RUC will review 4 services for the 2015 cycle and the remaining 14 services after additional utilization data is available.

### **High IWPOT**

The Workgroup assembled a list of all services with a total Medicare utilization of 1,000 or more that have an intra-service work per unit of time (IWPOT) calculation greater than 0.14, indicating an outlier intensity. The query resulted in identification of 32 services. Specialty societies submitted comments to the Workgroup in April 2008 for these services. As a result of this screen, the RUC has reviewed and submitted recommendations to CMS for 28 codes, removing 4 services from the screen as the IWPOT was considered appropriate. The RUC completed review of services under this screen.

### **Services Surveyed by One Specialty – Now Performed by a Different Specialty**

In October 2009, services that were originally surveyed by one specialty, but now performed predominantly by other specialties were identified and reviewed. The RUC identified 21 services by this screen, adding 19 services to address various families of codes. The majority of these services required clarification within CPT. The CPT Editorial Panel deleted 18 codes. The RUC submitted 22 recommendations for physician work and practice expense to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

In April 2013, the RUC queried the top two dominant specialties performing services based on Medicare utilization more than 1,000 and compared it to who originally surveyed the service. Two services were identified and will be assessed to determine future action.

### **Harvard Valued**

#### *Utilization over 1 Million*

CMS requested that the RUC pay specific attention to Harvard valued codes that have a high utilization. The RUC identified 9 Harvard valued services with high utilization (performed over 1 million times per year). The RUC also incorporated an additional 12 Harvard valued codes within the initial family of services identified. The CPT Editorial Panel deleted 1 code. The RUC submitted 20 relative value work recommendations to CMS for the 2011 and 2012 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

#### *Utilization over 100,000*

The RUC continued to review Harvard-only valued codes with significant utilization. The Relativity Assessment Workgroup expanded the review of Harvard codes to those with utilization over 100,000 which totaled 38 services. The RUC expanded this screen by 101 codes to include the family of services, totaling 139 services. The CPT Editorial Panel deleted 27 codes. The RUC submitted 112 recommendations to CMS for the 2011-2014 Medicare Physician Payment Schedules. The RUC completed review of services under this screen.

#### *Utilization over 30,000*

In April 2011, the RUC continued to identify Harvard-only valued codes with utilization over 30,000, based on 2009 Medicare claims data. The RUC determined that the specialty societies should survey the remaining 36 Harvard codes with utilization over 30,000 for September 2011. The RUC expanded the screen to include the family of services, totaling 65 services. The CPT Editorial Panel deleted 12 codes. The RUC submitted recommendations for 51 services for the 2013-2014 Medicare Physician Payment Schedules and will review 2 services in the 2015 cycle.

#### *Medicare Allowed Charges $\geq$ \$10 million*

In June 2012, CMS identified 16 services that were Harvard-Valued with Annual Allowed Charges (2011 data)  $\geq$  \$10 million. The RUC expanded this screen to 29 services to include the proper family of services. The RUC removed 2 services from review as the allowed charges are approximately \$1 million and did not meet the screen criteria. The RUC submitted recommendations for 17 services for the 2013-2014 Medicare Physician Payment Schedules. The CPT Editorial Panel deleted 1 service. The RUC will submit recommendations for the remaining 9 services for the 2015 Medicare Physician Payment Schedule.

#### **CMS/Other**

##### *Utilization over 500,000*

In April 2011, the RUC identified 410 codes with a source of "CMS/Other." CMS/Other codes are services which were not reviewed by the Harvard studies or the RUC and were either gap filled, most often via crosswalk by CMS or were part of a radiology fee schedule. "CMS/Other" source codes would not have been flagged in the Harvard only screens, therefore the RUC recommended that a list of all CMS/Other codes be developed and reviewed. The RUC established the threshold for CMS/Other source codes with Medicare utilization of 500,000 or more, which resulted in 19 codes. The RUC submitted recommendations for 9 services for the 2013-2014 Medicare Physician Payment Schedules. The RUC removed one service from the screen and will provide recommendations on the remaining 9 services for the 2015 Medicare Physician Payment Schedule.

##### *Utilization over 250,000*

In April 2013, the RUC lowered the threshold to the CMS/Other source codes with Medicare utilization of 250,000 or more, which resulted in 26 services. The RUC will review action plans from the specialty societies and determine how to address these services.

#### **Bundled CPT Services**

##### *Reported 95% or More Together*

The Relativity Assessment Workgroup solicited data from CMS regarding services inherently performed by the same physician on the same date of service (95% of the time) in an attempt to identify pairings of services that should be bundled together. The CPT Editorial Panel deleted 31 individual component codes and replaced them with 53 new codes that describe bundles of services. The RUC then surveyed and reviewed work and practice costs associated with these services to account for any efficiencies achieved through the bundling. The RUC completed review of all services under this screen.

#### *Reported 75% or More Together*

In February 2010, the Workgroup continued review of services provided on the same day by the same provider, this time lowering the threshold to 75% or more together. The Relativity Assessment Workgroup again analyzed the Medicare claims data and found 151 code pairs which met the threshold. The Workgroup then collected these code pairs into similar “groups” to ensure that the entire family of services would be coordinated under one code bundling proposal. The grouping effort resulted in 20 code groups, totaling 80 codes, and were sent to specialty societies to solicit action plans for consideration at the April 2010 RUC meeting. Resulting from the Relativity Assessment Workgroup review, 72 additional codes were added for review as part of the family of services to ensure duplication of work and practice expense was mitigated throughout the entire set of services. Of the 152 total codes under review, the CPT Editorial Panel deleted 26 individual component codes and replaced the component coding with 115 new and/or revised codes that described the bundles of services. The CPT Editorial Panel and the RUC are currently working on 16 services and expect to complete this screen for final implementation in the 2014 Medicare Physician Payment Schedule.

#### *Reported 75% or More Together – Part 2*

In August 2011, the Joint CPT/RUC Workgroup on Codes Reported Together Frequently reconvened to perform its third cycle of analysis of code pairs reported together with 75% or greater frequency. The Workgroup reviewed 30 code pair Groups and recommended code bundling for 64 individual codes. In October 2012, the CPT Editorial Panel started review of code bundling solutions, deleting 16 codes, creating 18 codes and is scheduled to review 66 codes in the 2014-2016 cycles. The RUC has submitted 21 code recommendations for the 2014 Medicare Physician Payment Schedule.

#### **Low Value/Billed in Multiple Units**

CMS has requested that services with low work RVUs that are commonly billed with multiple units in a single encounter be reviewed. CMS identified services that are reported in multiples of 5 or more per day, with work RVUs of less than or equal to 0.50 RVUs.

In October 2010, the Workgroup reviewed 12 CMS identified services and determined that 6 of the codes were improperly identified as the services were either not reported in multiple units or were reported in a few units, but that was assumed in the original valuation. The RUC submitted recommendations for the remaining 6 services for the 2012 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

#### **Low Value/High Volume Codes**

CMS has requested that services with low work RVUs and high utilization be reviewed. CMS has requested that the RUC review 24 services that have low work RVUs (less than or equal to 0.25) and high utilization. The RUC questioned the criteria CMS used to identify these services as it appeared some codes were missing from the screen criteria indicated. The RUC identified codes with a work RVU ranging from 0.01 - 0.50 and Medicare utilization greater than one million. In February 2011, the RUC reviewed the codes identified by this criteria and added 5 codes, totaling 29. The RUC submitted 24 recommendations to CMS for the 2012 Medicare Physician Payment Schedule and 5 recommendations to CMS for the 2013 Medicare Physician Payment Schedule. The RUC completed review of services under this screen.

### **Multi-Specialty Points of Comparison List**

CMS requested that services on the Multi-Specialty Points of Comparison (MPC) list should be reviewed. CMS prioritized the review of the MPC list to 33 codes, ranking the codes by allowed service units and charges based on CY 2009 claims data as well as those services reviewed by the RUC more than six years ago. The RUC expanded the list to 176 services to include additional codes as part of a family (105 codes of which are part of the review of GI endoscopy codes). The CPT Editorial Panel deleted 17 codes and will review 2 codes for revision. The RUC submitted recommendations for 103 codes for the 2012-2014 Medicare Physician Payment Schedules and will review the remaining 56 codes in the 2015 cycle.

### **CMS High Expenditure Procedural Codes**

In the July 19, 2011, Proposed Rule for 2012, CMS requests that the RUC review a list of 70 high PFS expenditure procedural codes representing services furnished by an array of specialties. CMS selected these codes since they have not been reviewed for at least 6 years, and in many cases the last review occurred more than 10 years ago.

The RUC reviewed the 70 services identified and expanded the list to 128 services to include additional codes as part of the family. The CPT Editorial Panel deleted 7 codes and will review 7 codes for the 2015 cycle. The RUC submitted 110 recommendations to CMS for the 2013-2014 Medicare Physician Payment Schedules, will submit 1 remaining recommendation for the 2015 Medicare Physician Payment Schedule and will review utilization data for 3 services in 2015.

### **Services with Stand-Alone PE Procedure Time**

In June 2012, CMS proposed adjustments to services with stand alone procedure time assumptions used in developing non-facility PE RVUs. These assumptions are not based on physician time assumptions. CMS prioritized CPT codes that have annual Medicare allowed charges of \$100,000 or more, include direct equipment inputs that amount to \$100 or more, and have PE procedure times greater than 5 minutes for review. The RUC reviewed 27 services identified through this screen, submitted 11 recommendations for the 2014 Medicare Physician Payment Schedule and will provide 2 recommendations for the 2015 Medicare Physician Payment Schedule. The RUC referred 9 services to the CPT Editorial Panel for revision.

### **Public Comment Requests**

In 2011, CMS announced that due to the ongoing identification of potentially misvalued services by CMS and the RUC, the Agency will no longer conduct a separate Five-Year Review. CMS will now call for public comments on an annual basis as part of the comment process on the Final Rule each year. In the Final Rule for the 2013 Medicare Physician Payment Schedule, the public and CMS identified 35 potentially misvalued services. The RUC reviewed these services and referred 3 services to the CPT Editorial Panel for revision. The RUC indicated they did not provide a recommendation for 1 service because it lacked specialty society interest. The RUC submitted recommendations for 20 services for the 2014 Medicare Physician Payment Schedule and will submit the remaining 11 recommendations for the 2015 cycle.

### **Other Issues**

In addition to the above screening criteria, the Relativity Assessment Workgroup performed an exhaustive search of the RUC database for services indicated by the RUC to be re-reviewed at a later date. Three codes were found that had not yet been re-reviewed. The RUC recommended a work RVU decrease for 2 codes and to maintain the work RVU for another code.

CMS also identified 72 services that required further practice expense review. The RUC submitted practice expense recommendations on 67 services and the CPT Editorial Panel deleted 5 services. The RUC also reviewed special requests for 19 audiology and speech-language pathology services. The RUC submitted recommendations for 10 services for the 2010 Medicare Physician Payment Schedule and the remaining 9 services for the 2011 Medicare Physician Payment Schedule.

**CMS Requests and RUC Relativity Assessment Workgroup Code Status**

<b>Total Number of Codes Identified*</b>	<b>1,537</b>
<b>Codes Completed</b>	<b>1,291</b>
Work and PE Maintained	406
Work Increased	114
Work Decreased	447
Direct Practice Expense Revised (beyond work changes)	121
Deleted from CPT	203
<b>Codes Under Review</b>	<b>246</b>
Referred to CPT	84
RUC to Review October 2013	117
RUC to Review January or April 2014	45

*\*The total number of codes identified will not equal the number of codes from each screen as some codes have been identified in more than one screen.*

The RUC's efforts for 2009-2014 have resulted in \$2.5 billion in redistribution within the Medicare Physician Payment Schedule.

## RUC Recommendations for Existing Codes

CPT Code	Descriptor	RUC Recommendation	CMS Fastest Growing	High Volume Growth	CMS/Other Source - Utilization over 500,000	Codes Reported Together	Low Value Billed in Multiple Units	MPC List	CMS Request - PE Review	Site of Service Anomaly	Harvard-Valued Annual Allowed Charges > \$10 million	CMS Request - Final Rule for 2013	CMS High Expenditure Procedural Codes	Services with Stand-Alone PE Procedure Time
17000	Destruction (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), premalignant lesions (eg, actinic keratoses); first lesion	0.61						X						
17003	Destruction (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), premalignant lesions (eg, actinic keratoses); second through 14 lesions, each (List separately in addition to code for first lesion)	0.04					X						X

## ***RUC Recommendations to Develop CPT Assistant Articles - Incomplete Issues***

---

<b>51784</b>	<b>Electromyography studies (EMG) of anal or urethral sphincter, other than needle, any technique</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>RUC Rec:</b></u> Refer to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together.	<u><b>Specialty Society:</b></u> AUA	<u><b>CPT Asst Status:</b></u>
--------------	---	---	--	--	---	--------------------------------

**Background:** Refer to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together.

---

<b>51792</b>	<b>Stimulus evoked response (eg, measurement of bulbocavernosus reflex latency time)</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>RUC Rec:</b></u> Refer to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together.	<u><b>Specialty Society:</b></u> AUA	<u><b>CPT Asst Status:</b></u>
--------------	--	---	--	--	---	--------------------------------

**Background:** Refer to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together.

---

<b>70371</b>	<b>Complex dynamic pharyngeal and speech evaluation by cine or video recording</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>RUC Rec:</b></u> Develop CPT Assistant article.	<u><b>Specialty Society:</b></u> ACR, AAFP	<u><b>CPT Asst Status:</b></u>
--------------	--	---	--	--	---	--------------------------------

**Background:** The Joint Workgroup recommended that the specialties develop a CPT Assistant article to provide education on the correct reporting of 70371 and 70373. The specialties were unsure why codes 70371 and 70373 are performed by Family Practice physicians by such a large proportion of the utilization. Timeline: No later than CPT 2015.

---

---

94060	<b>Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration</b>	<u>Screen:</u> MPC List	<u>RUC Meeting:</u> October 2012	<u>RUC Rec:</u> Refer to CPT Assistant. 0.31	<u>Specialty Society:</u> ATS, ACCP	<u>CPT Asst Status:</u>
-------	--	----------------------------	-------------------------------------	---	--	-------------------------

**Background:** Code had not been reviewed by the RUC in the past 6 years. The RUC reviewed in April 2011 and recommended 0.31. In October 2012, the Joint Workgroup agreed with the specialties to create a CPT Assistant Article. The specialties also were asked to provide a detailed outline for the article to ensure that the content will be effective in negating the instances when these services are reported on the same day. The Workgroup reviewed this submission and agreed with that the content should go forward by CPT 2015 cycle. Codes: 94400-26, 94060-26  
94400-TC, 94060  
94668, 94640

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

22520	<b>Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection; thoracic</b>	<u><a href="#">Screen:</a></u> CMS Request - Practice Expense Review / Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> February 2009	<u><a href="#">Specialty Society:</a></u> ACR, NASS, ASNR, SIR, ASIPP, AANS/CNS	<u><a href="#">CPT Meeting:</a></u> CPT 2015 cycle	<u><a href="#">CPT Tab:</a></u>
-------	---	---	--	--	---	---------------------------------

**Background:** Joint Workgroup recommends that 72291 be bundled with 22520, 22523, 22524 and 72292 be bundled with 22521 by the 2015 CPT cycle.

22521	<b>Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection; lumbar</b>	<u><a href="#">Screen:</a></u> Site of Service Anomaly (99238-Only); CMS Request - PE Inputs / Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> February 2009	<u><a href="#">Specialty Society:</a></u> ACR, ASNR, NASS, SIR	<u><a href="#">CPT Meeting:</a></u> CPT 2015 cycle	<u><a href="#">CPT Tab:</a></u>
-------	---	---	--	---	---	---------------------------------

**Background:** Joint Workgroup recommends that 72291 be bundled with 22520, 22523, 22524 and 72292 be bundled with 22521 by the 2015 CPT cycle.

36870	<b>Thrombectomy, percutaneous, arteriovenous fistula, autogenous or nonautogenous graft (includes mechanical thrombus extraction and intra-graft thrombolysis)</b>	<u><a href="#">Screen:</a></u> Site of Service Anomaly (99238-Only) / CMS High Expenditure Procedural Codes	<u><a href="#">RUC Meeting:</a></u> January 2013	<u><a href="#">Specialty Society:</a></u> ACR, SIR, SVS	<u><a href="#">CPT Meeting:</a></u>	<u><a href="#">CPT Tab:</a></u>
-------	--	--	---	--	-------------------------------------	---------------------------------

**Background:** The RUC reviewed the 2010 Medicare Claims 5% Billed Together sample file and noted there are three services commonly billed on the same date of service with 36870: 36147, 35476 and 36148. The specialties noted that in order to perform thrombectomy the access code, 36147, has to be billed on the same date. With this understanding, the RUC referred CPT code 36870 to the CPT Editorial Panel to bundle the appropriate services into 36870.

37205	<b>Transcatheter placement of an intravascular stent(s) (except coronary, carotid, vertebral, iliac, and lower extremity arteries), percutaneous; initial vessel</b>	<u><a href="#">Screen:</a></u> High Volume Growth1 / Codes Reported Together 75% or More-Part1	<u><a href="#">RUC Meeting:</a></u> April 2010	<u><a href="#">Specialty Society:</a></u> SVS, ACS, SIR, ACR, ACC	<u><a href="#">CPT Meeting:</a></u> February 2013	<u><a href="#">CPT Tab:</a></u> 10
-------	--	---	---	--	--	---------------------------------------

**Background:** In February 2010, the CPT Editorial Panel revised this code as part of the larger Endovascular Revascularization issue. April 2010 - The Workgroup acknowledges that it is unclear what volume of services will remain described by these codes given the removal of the lower extremity revascularization services and agrees with the specialties to defer this issue for one year until the RUC has reviewed the lower extremity revascularization codes in April 2010 and the new codes are implemented. Currently, the Workgroup encourages the specialties to consider a bundled code for the 2012 CPT cycle. Specialties will address at the February 2013 CPT meeting. Specialties will address at the February 2013 CPT meeting.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

37206	<b>Transcatheter placement of an intravascular stent(s) (except coronary, carotid, vertebral, iliac, and lower extremity arteries), percutaneous; each additional vessel (List separately in addition to code for primary procedure)</b>	<u>Screen:</u> High Volume Growth1	<u>RUC Meeting:</u> April 2010	<u>Specialty Society:</u> SVS, ACS, SIR, ACR, ACC	<u>CPT Meeting:</u> February 2013	<u>CPT Tab:</u> 10
-------	--	---------------------------------------	-----------------------------------	--	--------------------------------------	-----------------------

**Background:** In February 2010, the CPT Editorial Panel revised this code as part of the larger Endovascular Revascularization issue. Currently, the Workgroup encourages the specialties to consider a bundled code for the 2012 CPT cycle. Specialty to address by the February 2013 CPT meeting.

43260	<b>Endoscopic retrograde cholangiopancreatography (ERCP); diagnostic, with or without collection of specimen(s) by brushing or washing (separate procedure)</b>	<u>Screen:</u> MPC List	<u>RUC Meeting:</u> April 2013	<u>Specialty Society:</u>	<u>CPT Meeting:</u> February 2013	<u>CPT Tab:</u> 13
-------	---	----------------------------	-----------------------------------	---------------------------	--------------------------------------	-----------------------

**Background:** Several specific codes identified by CMS through the MPC List screen were scheduled for review at the September 2011 RUC meeting. Review of the codes led to significant concerns with the survey data, and in some cases, coding and payment policy for the individual codes. The specialty societies representing gastroenterology indicated that appropriate surveys could not be conducted until after the specialty societies had an opportunity to resolve payment policy issues related to the provision of moderate sedation. The RUC understands that gastroenterology will be working with the CPT Editorial Panel and CMS to resolve this coding and payment policy question as it relates to over 100 GI endoscopy services. In the meantime, the RUC will not include any of these services on the MPC List. The specialty societies indicated that they plan to engage with the RUC on a workplan to survey this family of codes once the issues related to moderate sedation have been addressed.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

**Background:** The Joint Workgroup referred to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together.

---

51792	Stimulus evoked response (eg, measurement of bulbocavernosus reflex latency time)	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> AUA	<u>CPT Meeting:</u> 2015 CPT cycle	<u>CPT Tab:</u>
-------	---	--	-------------------------------------	----------------------------------	---------------------------------------	-----------------

**Background:** The Joint Workgroup referred to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together.

---

62284	Injection procedure for myelography and/or computed tomography, spinal (other than C1-C2 and posterior fossa)	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> ACR, ASNR	<u>CPT Meeting:</u> CPT 2015 cycle	<u>CPT Tab:</u>
-------	---	--	-------------------------------------	--	---------------------------------------	-----------------

**Background:** Joint Workgroup requests that codes 62284 be bundled with 72240, 72265 and 72270 by the 2015 CPT cycle.

---

## ***RUC Referrals to CPT Editorial Panel - Incomplete Issues***

66180	<b>Aqueous shunt to extraocular reservoir (eg, Molteno, Schocket, Denver-Krupin)</b>	<u><b>Screen:</b></u> Harvard-Valued Annual Allowed Charges Greater than \$10 million	<u><b>RUC Meeting:</b></u> April 2013	<u><b>Specialty Society:</b></u> AAO	<u><b>CPT Meeting:</b></u>	<u><b>CPT Tab:</b></u>
-------	--	--	--	---	----------------------------	------------------------

**Background:** In April 2013, the American Academy of Ophthalmology noted that based on data from the last meeting the specialty society was informed that 66180 is typically reported (73%) with 67255 Scleral reinforcement (separate procedure); with graft and it appears that these services should be surveyed as a bundled code. The specialty society requested that 66180 and 66185 be referred to CPT to create codes to describe with and without patch. The specialty society also noted that they will survey 67255 with this family of services. The RUC agreed and recommends that these services be referred to the CPT Editorial Panel for revision.

66185	<b>Revision of aqueous shunt to extraocular reservoir</b>	<u><b>Screen:</b></u> Harvard-Valued Annual Allowed Charges Greater than \$10 million	<u><b>RUC Meeting:</b></u> April 2013	<u><b>Specialty Society:</b></u> AAO	<u><b>CPT Meeting:</b></u>	<u><b>CPT Tab:</b></u>
-------	---	--	--	---	----------------------------	------------------------

**Background:** In April 2013, the American Academy of Ophthalmology noted that based on data from the last meeting the specialty society was informed that 66180 is typically reported (73%) with 67255 Scleral reinforcement (separate procedure); with graft and it appears that these services should be surveyed as a bundled code. 68040	<b>Expression of conjunctival follicles (eg, for trachoma)</b>	<u><b>Screen:</b></u> High Volume Growth1	<u><b>RUC Meeting:</b></u> September 2011	<u><b>Specialty Society:</b></u> AAO	<u><b>CPT Meeting:</b></u>	<u><b>CPT Tab:</b></u>
-------	--	--	--	---	----------------------------	------------------------

**Background:** AAO to develop CPT Assistant article to educate providers about the intended use of this code and how to code for newer devices that we believe are erroneously being coded using CPT 68040. Additionally, AAO suggests that a parenthetical be added after CPT 68040, "(To report automated evacuation of Meibomian glands, see 0207T)". AAO will submit a CCP for the CPT 2014 cycle.

72170	<b>Radiologic examination, pelvis; 1 or 2 views</b>	<u><b>Screen:</b></u> Low Value-High Volume / Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> April 2011	<u><b>Specialty Society:</b></u> ACR, AAOS	<u><b>CPT Meeting:</b></u> February 2015	<u><b>CPT Tab:</b></u>
-------	---	--	--	---	---	------------------------

**Background:** The Joint Workgroup recommended that 73500 and 72170 be bundled by the CPT 2016 cycle.

72240	<b>Myelography, cervical, radiological supervision and interpretation</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>Specialty Society:</b></u> ACR, ASNR	<u><b>CPT Meeting:</b></u> CPT 2015 cycle	<u><b>CPT Tab:</b></u>
-------	---	---	--	---	--	------------------------

**Background:** Joint Workgroup requests that codes 62284 be bundled with 72240, 72265 and 72270 by the 2015 CPT cycle.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

72265	<b>Myelography, lumbosacral, radiological supervision and interpretation</b>	<u><a href="#">Screen:</a></u> Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> October 2012	<u><a href="#">Specialty Society:</a></u> ACR, ASNR	<u><a href="#">CPT Meeting:</a></u> CPT 2015 cycle	<u><a href="#">CPT Tab:</a></u>
-------	--	--	---	--	---	---------------------------------

**Background:** Joint Workgroup requests that codes 62284 be bundled with 72240, 72265 and 72270 by the 2015 CPT cycle.

72270	<b>Myelography, 2 or more regions (eg, lumbar/thoracic, cervical/thoracic, lumbar/cervical, lumbar/thoracic/cervical), radiological supervision and interpretation</b>	<u><a href="#">Screen:</a></u> Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> October 2012	<u><a href="#">Specialty Society:</a></u> ACR, ASNR	<u><a href="#">CPT Meeting:</a></u> CPT 2015 cycle	<u><a href="#">CPT Tab:</a></u>
-------	--	--	---	--	---	---------------------------------

**Background:** Joint Workgroup requests that codes 62284 be bundled with 72240, 72265 and 72270 by the 2015 CPT cycle.

72291	<b>Radiological supervision and interpretation, percutaneous vertebroplasty, vertebral augmentation, or sacral augmentation (sacroplasty), including cavity creation, per vertebral body or sacrum; under fluoroscopic guidance</b>	<u><a href="#">Screen:</a></u> Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> October 2012	<u><a href="#">Specialty Society:</a></u>	<u><a href="#">CPT Meeting:</a></u> CPT 2015 cycle	<u><a href="#">CPT Tab:</a></u>
-------	---	--	---	---	---	---------------------------------

**Background:** Joint Workgroup recommends that 72291 be bundled with 22520, 22523, 22524 and 72292 be bundled with 22521 by the 2015 CPT cycle.

72291	<b>Radiological supervision and interpretation, percutaneous vertebroplasty, vertebral augmentation, or sacral augmentation (sacroplasty), including cavity creation, per vertebral body or sacrum; under fluoroscopic guidance</b>	<u><a href="#">Screen:</a></u> Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> October 2012	<u><a href="#">Specialty Society:</a></u>	<u><a href="#">CPT Meeting:</a></u> CPT 2015 cycle	<u><a href="#">CPT Tab:</a></u>
-------	---	--	---	---	---	---------------------------------

**Background:** Joint Workgroup recommends that 72291 be bundled with 22520, 22523, 22524 and 72292 be bundled with 22521 by the 2015 CPT cycle.

73500	<b>Radiologic examination, hip, unilateral; 1 view</b>	<u><a href="#">Screen:</a></u> CMS-Other - Utilization over 500,000 / Codes Reported Together 75% or More-Part2	<u><a href="#">RUC Meeting:</a></u> January 2012	<u><a href="#">Specialty Society:</a></u> AAOS, ACR	<u><a href="#">CPT Meeting:</a></u> February 2015	<u><a href="#">CPT Tab:</a></u>
-------	--	--	---	--	--	---------------------------------

**Background:** In Jan 2012, the specialty society requested that this service be referred to CPT to clarify the descriptors or add editorial language/parentheticals as needed. This service was also identified by the Joint CPT/RUC workgroup to bundle this service. The Specialties will address at the February 2015 CPT meeting.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

73550	Radiologic examination, femur, 2 views	<u>Screen:</u> CMS-Other - Utilization over 500,000	<u>RUC Meeting:</u> January 2012	<u>Specialty Society:</u> AAOS, ACR	<u>CPT Meeting:</u> February 2015	<u>CPT Tab:</u>
-------	--	--	-------------------------------------	--	--------------------------------------	-----------------

**Background:** In Jan 2012, the specialty society requested that this service be referred to CPT to clarify the descriptors or add editorial language/parentheticals as needed. This service was also identified by the Joint CPT/RUC workgroup to bundle this service. The Specialties will address at the February 2015 CPT meeting.

74305	Cholangiography and/or pancreatography; through existing catheter, radiological supervision and interpretation	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> ACR, SIR	<u>CPT Meeting:</u> CPT 2016 cycle	<u>CPT Tab:</u>
-------	--	---	-------------------------------------	---------------------------------------	---------------------------------------	-----------------

**Background:** The Joint Workgroup recommends bundling 47500 and 74320, 47505 and 74305, 47510 and 75980 and 47511 and 75982 by CPT 2016 cycle.

74320	Cholangiography, percutaneous, transhepatic, radiological supervision and interpretation	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> ACR, SIR	<u>CPT Meeting:</u> CPT 2016 cycle	<u>CPT Tab:</u>
-------	--	---	-------------------------------------	---------------------------------------	---------------------------------------	-----------------

**Background:** The Joint Workgroup recommends bundling 47500 and 74320, 47505 and 74305, 47510 and 75980 and 47511 and 75982 by CPT 2016 cycle.

74425	Urography, antegrade (pyelostogram, nephrostogram, loopogram), radiological supervision and interpretation	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> ACR, SIR	<u>CPT Meeting:</u> CPT 2016 cycle	<u>CPT Tab:</u>
-------	--	---	-------------------------------------	---------------------------------------	---------------------------------------	-----------------

**Background:** The Joint Workgroup recommends bundling 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 by the CPT 2016 cycle.

74475	Introduction of intracatheter or catheter into renal pelvis for drainage and/or injection, percutaneous, radiological supervision and interpretation	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> ACR, SIR	<u>CPT Meeting:</u> CPT 2016 cycle	<u>CPT Tab:</u>
-------	--	---	-------------------------------------	---------------------------------------	---------------------------------------	-----------------

**Background:** The Joint Workgroup recommends bundling 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 by the CPT 2016 cycle.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

74480	<b>Introduction of ureteral catheter or stent into ureter through renal pelvis for drainage and/or injection, percutaneous, radiological supervision and interpretation</b>	<u>Screen:</u> Codes Reported Together 75% or More-Part2	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u> ACR, SIR	<u>CPT Meeting:</u> CPT 2016 cycle	<u>CPT Tab:</u>
-------	---	--	-------------------------------------	---------------------------------------	---------------------------------------	-----------------

**Background:** The Joint Workgroup recommends bundling 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 by the CPT 2016 cycle.

75894	<b>Transcatheter therapy, embolization, any method, radiological supervision and interpretation</b>	<u>Screen:</u> Codes Reported Together 75% or More-Part1	<u>RUC Meeting:</u> April 2010	<u>Specialty Society:</u> ACC, ACR, SIR, SVS	<u>CPT Meeting:</u> October 2012	<u>CPT Tab:</u>
-------	---	--	-----------------------------------	---	-------------------------------------	-----------------

**Background:** The Workgroup accepts the specialties' recommendation to submit a code change proposal that would address any duplication when this service is reported with 37201 on the same date by the same physician. ACC submitted a CCP for October 2012 CPT related to 75894, creating a new code for a particular cardiac procedure that is currently reported using that code.

75896	<b>Transcatheter therapy, infusion, other than for thrombolysis, radiological supervision and interpretation</b>	<u>Screen:</u> Codes Reported Together 75% or More-Part1	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u>	<u>CPT Meeting:</u> February 2013	<u>CPT Tab:</u>
-------	--	--	-------------------------------------	---------------------------	--------------------------------------	-----------------

**Background:** AANS indicated that they will develop a CCP to bundle 75896 with 37201 and 37202 for CPT Feb 2013 for RUC review at the April 2013 meeting. At the October 2012 RUC meeting, the specialties reiterated to the RUC that under the current coding structure, CPT codes 75896 and 75898 are reported during thrombolytic therapy. However, with the CPT revisions for 2013, these two codes will no longer be reported during thrombolytic therapy. Given this, it is unknown exactly how these two orphan codes will be reported in 2013. The remaining non-thrombolysis use of these codes will be influenced by future CPT Editorial Panel changes. CPT code 75896 will be included in a multi-specialty coding revision effort led by neurosurgery. This coding proposal will describe intracranial infusion other than for thrombolysis (e.g. vasodilators in the setting of cerebral vasospasm). This coding change is expected to be reviewed by the CPT Editorial Panel in February 2013. CPT code 75898 will be addressed in the multi-specialty embolization coding revision due for CPT Editorial Panel review in February 2013 and RUC review in April 2013 as well. However, until recommendations are reviewed and submitted for 2014, the RUC continues to recommend carrier pricing for CPT codes 75896 and 75898.

75898	<b>Angiography through existing catheter for follow-up study for transcatheter therapy, embolization or infusion, other than for thrombolysis</b>	<u>Screen:</u> Codes Reported Together 75% or More-Part1	<u>RUC Meeting:</u> October 2012	<u>Specialty Society:</u>	<u>CPT Meeting:</u> February 2013	<u>CPT Tab:</u>
-------	---	--	-------------------------------------	---------------------------	--------------------------------------	-----------------

**Background:** The Workgroup accepts the specialties' recommendation to submit a code change proposal that would address any duplication when these services are reported together on the same date by the same physician. At the October 2012 RUC meeting, the specialties reiterated to the RUC that under the current coding structure, CPT codes 75896 and 75898 are reported during thrombolytic therapy. However, with the CPT revisions for 2013, these two codes will no longer be reported during thrombolytic therapy. Given this, it is unknown exactly how these two orphan codes will be reported in 2013. The remaining non-thrombolysis use of these codes will be influenced by future CPT Editorial Panel changes. CPT code 75896 will be included in a multi-specialty coding revision effort led by neurosurgery. This coding proposal will describe intracranial infusion other than for thrombolysis (e.g. vasodilators in the setting of cerebral vasospasm). This coding change is expected to be reviewed by the CPT Editorial Panel in February 2013. CPT code 75898 will be addressed in the multi-specialty embolization coding revision due for CPT Editorial Panel review in February 2013 and RUC review in April 2013 as well. However, until recommendations are reviewed and submitted for 2014, the RUC continues to recommend carrier pricing for CPT codes 75896 and 75898.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

75960	<b>Transcatheter introduction of intravascular stent(s) (except coronary, carotid, vertebral, iliac, and lower extremity artery), percutaneous and/or open, radiological supervision and interpretation, each vessel</b>	<u><b>Screen:</b></u> High Volume Growth1 / Codes Reported Together 75% or More-Part1	<u><b>RUC Meeting:</b></u> October 2012	<u><b>Specialty Society:</b></u> ACC, ACR, SIR, SVS	<u><b>CPT Meeting:</b></u> February 2013	<u><b>CPT Tab:</b></u> 10
-------	--	--	--	--	---	------------------------------

**Background:** In February 2010, the CPT Editorial Panel revised this code as part of the larger Endovascular Revascularization issue. April 2010 - The Workgroup acknowledges that it is unclear what volume of services will remain described by these codes given the removal of the lower extremity revascularization services and agrees with the specialties to defer this issue for one year until the RUC has reviewed the lower extremity revascularization codes in April 2010 and the new codes are implemented. Currently, the Workgroup encourages the specialties to consider a bundled code for the 2012 CPT cycle. Timeline: Review complete no later than the February 2011 CPT Editorial Panel meeting. The Specialty societies indicated that this service will be part of the Intravascular Stent CCP submitted for review at the February 2013 CPT meeting.

75980	<b>Percutaneous transhepatic biliary drainage with contrast monitoring, radiological supervision and interpretation</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>Specialty Society:</b></u> ACR, SIR	<u><b>CPT Meeting:</b></u> CPT 2016 cycle	<u><b>CPT Tab:</b></u>
-------	---	--	--	--	--	------------------------

**Background:** The Joint Workgroup recommends bundling 47500 and 74320, 47505 and 74305, 47510 and 75980 and 47511 and 75982 by CPT 2016 cycle.

75982	<b>Percutaneous placement of drainage catheter for combined internal and external biliary drainage or of a drainage stent for internal biliary drainage in patients with an inoperable mechanical biliary obstruction, radiological supervision and interpretation</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>Specialty Society:</b></u> ACR, SIR	<u><b>CPT Meeting:</b></u> CPT 2016 cycle	<u><b>CPT Tab:</b></u>
-------	--	--	--	--	--	------------------------

**Background:** The Joint Workgroup recommends bundling 47500 and 74320, 47505 and 74305, 47510 and 75980 and 47511 and 75982 by CPT 2016 cycle.

75984	<b>Change of percutaneous tube or drainage catheter with contrast monitoring (eg, genitourinary system, abscess), radiological supervision and interpretation</b>	<u><b>Screen:</b></u> Codes Reported Together 75% or More-Part2	<u><b>RUC Meeting:</b></u> October 2012	<u><b>Specialty Society:</b></u> ACR, SIR	<u><b>CPT Meeting:</b></u> CPT 2016 cycle	<u><b>CPT Tab:</b></u>
-------	---	--	--	--	--	------------------------

**Background:** The Joint Workgroup recommends bundling 50392 and 74475, 50393 and 74480, 50394 and 74425, 50398 and 75984 and 50392 by the CPT 2016 cycle.

## *RUC Referrals to CPT Editorial Panel - Incomplete Issues*

---

77014	Computed tomography guidance for placement of radiation therapy fields	<u>Screen:</u> CMS Request - Practice Expense Review / CMS-Other - Utilization over 500,000 / CMS High Expenditure Procedural Codes	<u>RUC Meeting:</u> January 2012	<u>Specialty Society:</u> ASTRO, ACR	<u>CPT Meeting:</u> May 2013	<u>CPT Tab:</u>
-------	--	--	-------------------------------------	---	---------------------------------	-----------------

**Background:** Specialty intends on revising this service may revise to include image guidance. The specialties will submit a CCP for review at the May 2013 CPT meeting.

-------	--	--	---	---	-------------------------------------	---------------------------------

**Background:** At the April 2013 RUC meeting, the specialty indicated that as clinical practice has evolved, several issues have arisen which require CPT clarification. The specialty intends to address a number of interrelated issues and revise the entire treatment delivery family. The RUC recommends CPT codes 77402-77417 be referred to the CPT Editorial Panel for review.

### Detailed Description of Pre-Service Time Packages (Minutes)

		FACILITY						NON-FAC	
		1A	1B*	2A	2B*	3	4	5	6
	<b>Total Pre-Service Time</b>	<b>20</b>	<b>25</b>	<b>25</b>	<b>39</b>	<b>51</b>	<b>63</b>	<b>7</b>	<b>23</b>

#### **CATEGORY SUBTOTALS**

<b>A</b>	Pre-Service Evaluation (IWPUT =0.0224)	13	19	18	33	33	40	7	17
<b>B</b>	Pre-Service Positioning (IWPUT = 0.0224)	1	1	1	1	3	3	0	1
<b>C</b>	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	5	6	5	15	20	0	5

#### **DETAILS**

<b>A</b>	History and Exam (Performance and review of appropriate Pre-Tests)	5	5	10	10	10	15	4	9
<b>A</b>	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2	2	2	2	4	1	1
<b>A</b>	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3	3	5	5	5	2	3
<b>A</b>	Communicate with other professionals	0	1	0	3	5	5	0	2
<b>A</b>	Check/set-up room, supplies and equipment	1	1	1	1	5	5	0	1
<b>A</b>	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1	1	1	5	5	0	1
<b>A</b>	Prepare/ review/ confirm procedure	1	1	1	1	1	1	0	0
<b>A</b>	Administer moderate sedation/observe (wait) anesthesia care	0	5	0	10	0	0	0	0
<b>B</b>	Perform/ supervise patient positioning	1	1	1	1	3	3	0	1
<b>C</b>	Administer local anesthesia	1	0	1	0	0	0	0	5
<b>C</b>	Observe (wait anesthesia care)	0	0	0	0	10	15	0	0
<b>C</b>	Dress and scrub for procedure	5	5	5	5	5	5	0	0

\* Indicates packages that contain moderate sedation

- 1A** Straightforward Patient/Straightforward Procedure (No sedation/anesthesia care)
- 1B\*** Straightforward Patient/Straightforward Procedure (With sedation/anesthesia care)
- 2A** Difficult Patient/Straightforward Procedure (No sedation/anesthesia care)
- 2B\*** Difficult Patient/Straightforward Procedure (With sedation/anesthesia care)
- 3** Straightforward Patient/Difficult Procedure
- 4** Difficult Patient/Difficult Procedure
- 5** Procedure without sedation/anesthesia care
- 6** Procedure with sedation/anesthesia care

#### **Additional Positioning Times for Spinal Surgical Procedures**

<b>SS1</b>	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
<b>SS2</b>	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
<b>SS3</b>	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
<b>SS4</b>	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
<b>SS5</b>	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

#### **Additional Positioning Times for Spinal Injection Procedures**

<b>SI1</b>	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
<b>SI2</b>	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
<b>SI3</b>	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
<b>SI4</b>	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

#### **Notes:**

\*Roll-over cells for additional detail where available

**\*Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice**

\*For building block IWPUT purposes whenever the procedure is on Appendix G – (Summary of CPT codes that include moderate (conscious) sedation) the IWPUT should be .0224 for the administration of moderate sedation line item because the physician is responsible for the administration of conscious sedation. If the procedure is one where conscious sedation is not inherent the same line item should have an IWPUT of .0081.

straightforward patient undergoing a straightforward procedure (Package 1B), if the procedure is performed under general anesthesia and the surveys support additional pre-service time.

## NOTES

### Tab 2

- \*Represents utilization of 19103 without a 51 modifier
- \*\*Represents utilization billed with mod 51
- \*\*\*Represents utilization of 19102 without a 51 modifier
- \*\*\*\*Represents utilization billed with mod 51

### Tab 19

Represents left over utilization from 83913 from CPT 2012 Molecular Pathology recommendations  
83912 was deleted for CPT 2013

### Tab 49

Savings accounted for in CPT 2012.

## ***New Technology/New Services List***

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
0318T	Implantation of catheter-delivered prosthetic aortic heart valve, open thoracic approach, (eg, transapical, other than transaortic)	Apr 2012	Transcatheter Aortic Valve Replacement	12	CPT 2013	September 2016		<input type="checkbox"/>
14302	Adjacent tissue transfer or rearrangement, any area; each additional 30.0 sq cm, or part thereof (List separately in addition to code for primary procedure)	Apr 2009	Adjacent Tissue Transfer	4	CPT 2010	September 2013		<input type="checkbox"/>
15271	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15272	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15273	Application of skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15274	Application of skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15275	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
15276	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15277	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15278	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
15777	Implantation of biologic implant (eg, acellular dermal matrix) for soft tissue reinforcement (eg, breast, trunk) (List separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	September 2015		<input type="checkbox"/>
17106	Destruction of cutaneous vascular proliferative lesions (eg, laser technique); less than 10 sq cm	Oct 2008	Destruction of Skin Lesions	11	CPT 2009	September 2013		<input type="checkbox"/>
17107	Destruction of cutaneous vascular proliferative lesions (eg, laser technique); 10.0 to 50.0 sq cm	Oct 2008	Destruction of Skin Lesions	11	CPT 2009	September 2013		<input type="checkbox"/>
17108	Destruction of cutaneous vascular proliferative lesions (eg, laser technique); over 50.0 sq cm	Oct 2008	Destruction of Skin Lesions	11	CPT 2009	September 2013		<input type="checkbox"/>
19105	Ablation, cryosurgical, of fibroadenoma, including ultrasound guidance, each fibroadenoma	Apr 2006	Fibroadenoma Cryoablation	11	CPT 2007	September 2011	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
20696	Application of multiplane (pins or wires in more than 1 plane), unilateral, external fixation with stereotactic computer-assisted adjustment (eg, spatial frame), including imaging; initial and subsequent alignment(s), assessment(s), and computation(s) of adjustment schedule(s)	Apr 2008	Computer Dependent External Fixation	6	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
20697	Application of multiplane (pins or wires in more than 1 plane), unilateral, external fixation with stereotactic computer-assisted adjustment (eg, spatial frame), including imaging; exchange (ie, removal and replacement) of strut, each	Apr 2008	Computer Dependent External Fixation	6	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
20985	Computer-assisted surgical navigational procedure for musculoskeletal procedures, image-less (List separately in addition to code for primary procedure)	Apr 2007	Computer Navigation	7	CPT 2008	September 2011	Resurvey for January 2012	<input checked="" type="checkbox"/>
20986	Code Deleted	Apr 2007	Computer Navigation	7	CPT 2008	September 2011	Code Deleted CPT 2009	<input checked="" type="checkbox"/>
20987	Code Deleted	Apr 2007	Computer Navigation	7	CPT 2008	September 2011	Code Deleted CPT 2009	<input checked="" type="checkbox"/>
21011	Excision, tumor, soft tissue of face or scalp, subcutaneous; less than 2 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21012	Excision, tumor, soft tissue of face or scalp, subcutaneous; 2 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
21013	Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21014	Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); 2 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21015	Radical resection of tumor (eg, malignant neoplasm), soft tissue of face or scalp; less than 2 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21016	Radical resection of tumor (eg, malignant neoplasm), soft tissue of face or scalp; 2 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21552	Excision, tumor, soft tissue of neck or anterior thorax, subcutaneous; 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21554	Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
21555	Excision, tumor, soft tissue of neck or anterior thorax, subcutaneous; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21556	Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21557	Radical resection of tumor (eg, malignant neoplasm), soft tissue of neck or anterior thorax; less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21558	Radical resection of tumor (eg, malignant neoplasm), soft tissue of neck or anterior thorax; 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21930	Excision, tumor, soft tissue of back or flank, subcutaneous; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21931	Excision, tumor, soft tissue of back or flank, subcutaneous; 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
21932	Excision, tumor, soft tissue of back or flank, subfascial (eg, intramuscular); less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21933	Excision, tumor, soft tissue of back or flank, subfascial (eg, intramuscular); 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21935	Radical resection of tumor (eg, malignant neoplasm), soft tissue of back or flank; less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
21936	Radical resection of tumor (eg, malignant neoplasm), soft tissue of back or flank; 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
22526	Percutaneous intradiscal electrothermal annuloplasty, unilateral or bilateral including fluoroscopic guidance; single level	Apr 2006	Percutaneous Intradiscal Annuloplast	13	CPT 2007	September 2010	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22527	Percutaneous intradiscal electrothermal annuloplasty, unilateral or bilateral including fluoroscopic guidance; 1 or more additional levels (List separately in addition to code for primary procedure)	Apr 2006	Percutaneous Intradiscal Annuloplast	13	CPT 2007	September 2010	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
22856	Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophylectomy for nerve root or spinal cord decompression and microdissection), single interspace, cervical	Apr 2008	Cervical Arthroplasty	7	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22857	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), single interspace, lumbar	Feb 2006	Lumbar Arthroplasty	8	CPT 2007	September 2010	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22861	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	Apr 2008	Cervical Arthroplasty	7	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22862	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace; lumbar	Feb 2006	Lumbar Arthroplasty	8	CPT 2007	September 2010	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22864	Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	Apr 2008	Cervical Arthroplasty	7	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22865	Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; lumbar	Feb 2006	Lumbar Arthroplasty	8	CPT 2007	September 2010	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
22900	Excision, tumor, soft tissue of abdominal wall, subfascial (eg, intramuscular); less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
22901	Excision, tumor, soft tissue of abdominal wall, subfascial (eg, intramuscular); 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
22902	Excision, tumor, soft tissue of abdominal wall, subcutaneous; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
22903	Excision, tumor, soft tissue of abdominal wall, subcutaneous; 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
22904	Radical resection of tumor (eg, malignant neoplasm), soft tissue of abdominal wall; less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
22905	Radical resection of tumor (eg, malignant neoplasm), soft tissue of abdominal wall; 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23071	Excision, tumor, soft tissue of shoulder area, subcutaneous; 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23073	Excision, tumor, soft tissue of shoulder area, subfascial (eg, intramuscular); 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
23075	Excision, tumor, soft tissue of shoulder area, subcutaneous; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23076	Excision, tumor, soft tissue of shoulder area, subfascial (eg, intramuscular); less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23077	Radical resection of tumor (eg, malignant neoplasm), soft tissue of shoulder area; less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23078	Radical resection of tumor (eg, malignant neoplasm), soft tissue of shoulder area; 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23200	Radical resection of tumor; clavicle	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
23210	Radical resection of tumor; scapula	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
23220	Radical resection of tumor, proximal humerus	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
24073	Excision, tumor, soft tissue of upper arm or elbow area, subfascial (eg, intramuscular); 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
24075	Excision, tumor, soft tissue of upper arm or elbow area, subcutaneous; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
24076	Excision, tumor, soft tissue of upper arm or elbow area, subfascial (eg, intramuscular); less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
24077	Radical resection of tumor (eg, malignant neoplasm), soft tissue of upper arm or elbow area; less than 5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
24079	Radical resection of tumor (eg, malignant neoplasm), soft tissue of upper arm or elbow area; 5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
24150	Radical resection of tumor, shaft or distal humerus	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
24152	Radical resection of tumor, radial head or neck	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
25071	Excision, tumor, soft tissue of forearm and/or wrist area, subcutaneous; 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
25073	Excision, tumor, soft tissue of forearm and/or wrist area, subfascial (eg, intramuscular); 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
25075	Excision, tumor, soft tissue of forearm and/or wrist area, subcutaneous; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
25076	Excision, tumor, soft tissue of forearm and/or wrist area, subfascial (eg, intramuscular); less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

<i>CPT Code</i>	<i>2013 Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
25077	Radical resection of tumor (eg, malignant neoplasm), soft tissue of forearm and/or wrist area; less than 3 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
25078	Radical resection of tumor (eg, malignant neoplasm), soft tissue of forearm and/or wrist area; 3 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
25170	Radical resection of tumor, radius or ulna	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
26111	Excision, tumor or vascular malformation, soft tissue of hand or finger, subcutaneous; 1.5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
26113	Excision, tumor, soft tissue, or vascular malformation, of hand or finger, subfascial (eg, intramuscular); 1.5 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>
26115	Excision, tumor or vascular malformation, soft tissue of hand or finger, subcutaneous; less than 1.5 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	September 2015	Review in 3 years after additional data and coding introductory language and education have taken effect.	<input type="checkbox"/>

81235	EGFR (epidermal growth factor receptor) (eg, non-small cell lung cancer) gene analysis, common variants (eg, exon 19 LREA deletion, L858R, T790M, G719A, G719S, L861Q)	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81240	F2 (prothrombin, coagulation factor II) (eg, hereditary hypercoagulability) gene analysis, 20210G>A variant	Apr 2011	Molecular Pathology Test - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81241	F5 (coagulation Factor V) (eg, hereditary hypercoagulability) gene analysis, Leiden variant	Apr 2011	Molecular Pathology Test - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81243	FMR1 (Fragile X mental retardation 1) (eg, fragile X mental retardation) gene analysis; evaluation to detect abnormal (eg, expanded) alleles	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81244	FMR1 (Fragile X mental retardation 1) (eg, fragile X mental retardation) gene analysis; characterization of alleles (eg, expanded size and methylation status)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81245	FLT3 (fms-related tyrosine kinase 3) (eg, acute myeloid leukemia), gene analysis, internal tandem duplication (ITD) variants (ie, exons 14, 15)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81252	GJB2 (gap junction protein, beta 2, 26kDa; connexin 26) (eg, nonsyndromic hearing loss) gene analysis; full gene sequence	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81253	GJB2 (gap junction protein, beta 2, 26kDa; connexin 26) (eg, nonsyndromic hearing loss) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81254	GJB6 (gap junction protein, beta 6, 30kDa, connexin 30) (eg, nonsyndromic hearing loss) gene analysis, common variants (eg, 309kb [del(GJB6-D13S1830)] and 232kb [del(GJB6-D13S1854)])	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	September 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81256	HFE (hemochromatosis) (eg, hereditary hemochromatosis) gene analysis, common variants (eg, C282Y, H63D)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81257	HBA1/HBA2 (alpha globin 1 and alpha globin 2) (eg, alpha thalassemia, Hb Bart hydrops fetalis syndrome, HbH disease), gene analysis, for common deletions or variant (eg, Southeast Asian, Thai, Filipino, Mediterranean, alpha3.7, alpha4.2, alpha20.5, and Constant Spring)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81261	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); amplified methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81262	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); direct probe methodology (eg, Southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81263	IGH@ (Immunoglobulin heavy chain locus) (eg, leukemia and lymphoma, B-cell), variable region somatic mutation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81264	IGK@ (Immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, B-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81265	Comparative analysis using Short Tandem Repeat (STR) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81266	Comparative analysis using Short Tandem Repeat (STR) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygosity in multiple birth pregnancies) (List separately in addition to code for primary procedure)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>
81267	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; without cell selection	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81268	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; with cell selection (eg, CD3, CD33), each cell type	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81270	JAK2 (Janus kinase 2) (eg, myeloproliferative disorder) gene analysis, p.Val617Phe (V617F) variant	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81275	KRAS (v-Ki-ras2 Kirsten rat sarcoma viral oncogene) (eg, carcinoma) gene analysis, variants in codons 12 and 13	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81291	MTHFR (5,10-methylenetetrahydrofolate reductase) (eg, hereditary hypercoagulability) gene analysis, common variants (eg, 677T, 1298C)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81292	MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	September 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i><b>CPT Code</b></i>	<i><b>2013 Descriptor</b></i>	<i><b>RUC Meeting</b></i>	<i><b>Issue</b></i>	<i><b>Tab</b></i>	<i><b>CPT Year</b></i>	<i><b>Date to Re-Review</b></i>	<i><b>RUC Rec</b></i>	<i><b>Complete</b></i>

## New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

### Example

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Codes Reported Together 75% or More Screen*

January 2013

**Drainage of Abscess**

In January 2012, several codes describing the percutaneous drainage of abscesses were identified in the Codes reported together 75% or more screen, including 49021 *Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous*, 49041 *Drainage of subdiaphragmatic or subphrenic abscess; percutaneous*, and 49061 *Drainage of retroperitoneal abscess; percutaneous* along with CPT code 75989 *Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*. In October 2012, the CPT Editorial Panel deleted nine codes and established four bundled codes to describe percutaneous image guided drainage of abscesses.

**10030 Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); soft tissue (eg, extremity, abdominal wall, neck), percutaneous**

The RUC reviewed the survey results from 65 radiologists and determined that a work RVU of 3.00, the survey 25<sup>th</sup> percentile appropriately accounts for the physician work required to perform this service. The committee reviewed CPT code 49083 *Abdominal paracentesis (diagnostic or therapeutic); with imaging guidance* (work RVU=2.00) and determined that physician time and work of 10030 was greater. The RUC also reviewed 62267 *Percutaneous aspiration within the nucleus pulposus, intervertebral disc, or paravertebral tissue for diagnostic purposes* (work RVU=3.00) and determined that physician time and intensity were identical, and therefore, these two services should be valued the same. For additional support, the committee reviewed CPT codes 32557 *Pleural drainage, percutaneous, with insertion of indwelling catheter; with imaging guidance* (work RVU=3.12) and agreed that these services were similar in physician work and intensity. In addition, the RUC reviewed 12016 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 12.6 cm to 20.0 cm* (work RVU=2.68) and MPC 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU=2.78) and agreed that 10030 required more physician work and complexity. **The RUC recommends a work RVU of 3.00, the survey 25<sup>th</sup> percentile for CPT code 10030.**

**49405 Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous**

The RUC reviewed the survey results from 53 radiologists and determined that a work RVU of 4.25, the survey 25<sup>th</sup> percentile appropriately accounts for the physician work and time required to perform this service. The committee noted that this service was previously reported using a combination of the following deleted CPT codes: 32201 *Pneumonostomy; with percutaneous drainage of abscess or cyst* (work RVU=3.99),

47011 *Hepatotomy; for percutaneous drainage of abscess or cyst, 1 or 2 stages* (work RVU=3.69), 48511 *External drainage, pseudocyst of pancreas; percutaneous* (work RVU=3.99), and 50021 *Drainage of perirenal or renal abscess; percutaneous* (work RVU=3.37), along with 75989 *Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation* (work RVU=1.19). The proposed work RVU of 4.25 is much lower than the previous work RVUs. In addition, the committee noted that patients described by 49405, 49406 and 49407 are sicker and more complex patients with deep abscesses. The committee reviewed CPT code 49418 *Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous* (work RVU=4.21) and MPC codes 11044 *Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less* (work RVU=4.10) and 15004 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children* (work RVU=4.58) and determined that physician work and intensity are similar. **The RUC recommends a work RVU of 4.25, the survey 25<sup>th</sup> percentile for CPT code 49405.**

**49406 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous***

The RUC reviewed the survey results from 54 radiologists and determined that a work RVU of 4.25, which is slightly below the survey 25<sup>th</sup> percentile appropriately accounts for the physician work and time required to perform this service. The specialty societies confirmed that the physician work and time of 49405 and 49406 is identical and therefore the work RVU should be identical. The committee noted that this service was previously reported using a combination of 49021 *Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous* (work RVU=3.37), 49041 *Drainage of subdiaphragmatic or subphrenic abscess; percutaneous* (work RVU=3.99) and 49061 *Drainage of retroperitoneal abscess; percutaneous* (work RVU=3.69) along with 75989 *Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation* (work RVU=1.19). The proposed work RVU of 4.25 is much lower than the previous work RVUs. In addition, the committee noted that patients described by 49405, 49406 and 49407 are sicker and more complex patients with deep abscesses. The committee reviewed CPT code 49418 *Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous* (work RVU=4.21) and MPC codes 11044 *Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less* (work RVU=4.10) and 15004 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children* (work RVU=4.58) and determined that physician work and intensity are similar. **The RUC recommends a work RVU of 4.25 for CPT code 49406.**

**49407 Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal**

The RUC reviewed the survey results from 51 radiologists and determined that a work RVU of 4.50, the survey 25<sup>th</sup> percentile appropriately accounts for the physician work and time required to perform this service. There was consensus among the members that this procedure should be valued higher due to the complexity and intensity of transrectal and transvaginal abscesses. The committee noted that this service was previously reported by 58823 *Drainage of pelvic abscess, transvaginal or transrectal approach, percutaneous (eg, ovarian, pericolic)* (Work RVU=3.37), along with 75989 *Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation* (work RVU=1.19). In addition, the committee noted that patients described by 49405, 49406 and 49407 are sicker and more complex patients with deep abscesses. The committee reviewed CPT code 49418 *Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous* (work RVU=4.21) and MPC codes 11044 *Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less* (work RVU=4.10) and 15004 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children* (work RVU=4.58) and determined that physician work and intensity are similar. **The RUC recommends a work RVU of 4.50 for CPT code 49407.**

**Practice Expense:**

The practice expense (PE) standard for monitoring after moderate sedation is 15 minutes of RN time per 1 hour of monitoring. The specialty societies' recommendation of 60 minutes for this clinical staff activity indicates 4 hours of monitoring. The PE subcommittee determined that 4 hours of monitoring was not appropriate and that the typical time for recovery after moderate sedation for these services is 2 hours. The PE spreadsheet now reflects 30 minutes of RN time for 2 hours of monitoring. The RUC accepted the direct PE inputs for all codes with minor modifications as recommended by the PE Subcommittee.

**Work Neutrality**

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
☉● 10030	N1	<p>Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); soft tissue (eg, extremity, abdominal wall, neck), percutaneous</p> <p><u>(Report 10030 for each individual collection drained with a separate catheter)</u></p> <p><u>(Do not report 10030 in conjunction with 75989, 76942, 77002, 77003, 77012, 77021)</u></p> <p><u>(For image-guided fluid collection drainage, percutaneous or transvaginal/transrectal of visceral, peritoneal or retroperitoneal collections see 49405-49407)</u></p>	000	3.00

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 10030      Tracking Number N1      Original Specialty Recommended RVU: **3.00**  
 Presented Recommended RVU: **3.00**  
 Global Period: 000      RUC Recommended RVU: **3.00**

CPT Descriptor: Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); soft tissue (eg, extremity, abdominal wall, neck), percutaneous

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old female's status is post abdominal wall hernia repair febrile with an abdominal wall fluid collection on computed tomography. Percutaneous drainage using imaging guidance is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 83%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 65%

### Description of Pre-Service Work:

- The medical records and previous imaging and lab studies are reviewed and a decision made on appropriate guidance method(s) and the safest percutaneous route to the collection
- Discuss procedure details, including alternatives and risks with the patient and family and informed consent is reviewed
- Estimate the range of devices that may be required and ensure all are available for use
- Ensure all technical personnel have been familiarized with the procedure and are fully familiar with all required devices
- A brief history and physical examination is performed including suitability for moderate sedation
- Personnel don radiation attire, if required
- Surgical time out performed
- The patient is placed in an appropriate position in the imaging suite
- Patient is given intravenous moderate sedation
- The collection is localized under appropriate imaging guidance (e.g., CT, ultrasound, fluoroscopy or MR). Repositioning may be necessary
- The skin is prepped and draped
- Subcutaneous and deep lidocaine is administered to anesthetize skin and deep structures

### Description of Intra-Service Work:

- The subcutaneous collection is accessed with a needle using appropriate imaging guidance
- Fluid is aspirated and sent for laboratory analysis (e.g., microbiology, chemistry, cell count, etc)
- A small amount of contrast is injected to confirm access into the targeted collection
- A guidewire is passed into the collection and repeat imaging performed
- The tract is serially dilated to the necessary size

- A drainage catheter is advanced into the collection and imaging (which may involve contrast injection) is performed to verify proper position in the collection
- The catheter is secured in place with a suture
- The drainage catheter is connected to a drainage system (e.g., suction, gravity)

Description of Post-Service Work:

- The images are reviewed
- The patient is sent to recovery and patient care orders written
- Education is provided to nursing staff, family members and patient on maintaining and caring for catheter
- Post-procedure vital signs are assessed
- A formal report of the procedure is dictated into the permanent medical record
- The results and further management are discussed with the patient and their family, as well as the requesting physician
- The procedure report is reviewed and signed

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several codes describing the percutaneous drainage of abscesses were identified by the “Codes reported together 75% or more” RAW screen. This included the following combinations 49021 (*Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous*), 49041 (*Drainage of subdiaphragmatic or subphrenic abscess; percutaneous*), and 49061 (*Drainage of retroperitoneal abscess; percutaneous*), along with S&I code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*). To improve the reporting of these procedures, the CPT Editorial Panel created a family of four bundled codes to describe percutaneous image guided drainage of abscesses. The base surgical codes encompassing these new bundled codes will be deleted.

CPT code 10030 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); soft tissue (eg, extremity, abdominal wall, neck), percutaneous*) describes image guided catheter drainage of abscesses or other fluid collections in the subcutaneous and deep tissues. No code is currently available to describe the percutaneous drainage of a superficial fluid collection.

The American College of Radiology and Society of Interventional Radiology surveyed the new family of abscess drainage codes, including CPT code 10030, in November and December 2012, and convened an expert panel of physicians familiar with these services to review the survey data.

### Work RVU Recommendation

The expert panel recommends the 25<sup>th</sup> percentile work RVU of 3.00.

### Pre-Service Time

The panel recommends pre-service package 2B (*Difficult Patient/Straightforward Procedure (With sedation/anesthesia care)*) with the following adjustments: pre-service evaluation time is increased by 2 minutes and pre-service positioning time is increased by 4 minutes to conform to the survey results and account for time prior to skin prep used for US localization of the abscess. Based on the survey instrument, it is reasonable to conclude respondents would consider imaging work prior to skin prep to be pre-service work, and this is consistent with the recently reviewed paracentesis and thoracentesis codes.

### Intra and Post-Service Times

The panel recommends the median intra and post service times for code 10030: 30 minutes and 20 minutes, respectively.

### Comparison to Key Reference Service

The most commonly selected key reference service was CPT code 49083 (*Abdominal paracentesis (diagnostic or therapeutic); with imaging guidance*), which has 2.00 work RVUs and pre, intra, and post service times of 25, 25, and 10 minutes, respectively. CPT code 10030 has longer survey times and greater surveyed complexity (on all 11 measures) than the key reference service. While both of these procedures involve introduction of a catheter using imaging guidance, the greater complexity of the patients and increased skill required for the performance of code 10030 is manifest in the survey responses.

Code	RVU	Pre	Intra	Post	Total	IWPUT
10030	3.00	45	30	20	95	0.054
49083	2.00	25	25	10	60	0.052

### MPC Comparison

The panel recommendation of 3.00 RVUs for 10030 is bracketed by two MPC 0-day global codes: 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)*) and 15002 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children*). 10030 has a higher RVU than 31622, with 30 minutes more total time. 10030 has greater intra-service time than 15002 and slightly less total time.

Code	RVU	Pre	Intra	Post	Total	IWPUT
31622	2.78	20	30	15	65	0.069
10030	3.00	45	30	20	95	0.054
15002	3.65	75	20	20	115	0.087

### Comparison Within Family

Given the lack of a historical standard from which to judge the surveyed values for 10030, comparison with the recommendations for the remainder of the abscess drainage code family provides a context for the current recommendations. The expert panel believes the IWPUT values across the family are appropriate since a superficial drainage would be expected to be less complex than the greater complexity of patients requiring drainage of solid organ (49405) or retroperitoneal (49406) abscesses. Transrectal and transvaginal abscesses should fall closer to solid organ and retroperitoneal abscesses in intensity.

Codes in Family	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
10030	3.00	45	30	20	95	0.054
49405	4.28	45	40	20	105	0.072
49406	4.28	45	40	20	105	0.072
49407	4.50	45	45	20	110	0.069

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Interventional Radiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. An estimate for the number of times this service is performed nationally in a one-year period is unknown.

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. An estimate for the number of times this service is provided to Medicare patients nationally in a one-year period is unknown.

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 37200

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 49405	Tracking Number N2	Original Specialty Recommended RVU: <b>4.28</b>
		Presented Recommended RVU: <b>4.28</b>
Global Period: 000		RUC Recommended RVU: <b>4.25</b>

CPT Descriptor: Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male with history of diverticulitis now intubated and septic in the intensive care unit on pressor support. CT scan shows a low density collection in segment 5 of the liver. Percutaneous drainage using imaging guidance is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 94%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 76%

#### Description of Pre-Service Work:

- The medical records and previous imaging and lab studies are reviewed and a decision made on appropriate guidance method(s) and the safest percutaneous route to the collection
- Discuss procedure details, including alternatives and risks with the patient and family and informed consent is reviewed
- Estimate the range of devices that may be required and ensure all are available for use
- Ensure all technical personnel have been familiarized with the procedure and are fully familiar with all required devices
- A brief history and physical examination is performed including suitability for moderate sedation
- Personnel don radiation attire, if required
- Surgical time out performed

#### Description of Intra-Service Work:

- The patient is placed in an appropriate position in the imaging suite
- Patient is given intravenous moderate sedation
- The collection is localized under appropriate imaging guidance (e.g., CT, ultrasound, fluoroscopy or MR). Repositioning may be necessary
- The skin is prepped and draped
- Subcutaneous and deep lidocaine is administered to anesthetize skin and deep structures
- The visceral collection is accessed with a needle using appropriate imaging guidance
- Fluid is aspirated and sent for laboratory analysis (e.g., microbiology, chemistry, cell count, etc)
- A small amount of contrast is injected to confirm access into the targeted collection

- A guidewire is passed into the collection and repeat imaging performed
- The tract is serially dilated to the necessary size
- A drainage catheter is advanced into the collection and imaging (which may involve contrast injection) is performed to verify proper position in the collection
- The catheter is secured in place with a suture
- The drainage catheter is connected to a drainage system (e.g., suction, gravity)
- The patient is sent to recovery and patient care orders written

Description of Post-Service Work:

- The images are reviewed
- The patient is sent to recovery and patient care orders written
- Post-procedure vital signs are assessed
- A formal report of the procedure is dictated into the permanent medical record
- The results and further management are discussed with the patient and their family, as well as the requesting physician
- The procedure report is reviewed and signed

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

## Background

Several codes describing the percutaneous drainage of abscesses were identified by the “Codes reported together 75% or more” RAW screen. This included the following combinations 49021 (*Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous*), 49041 (*Drainage of subdiaphragmatic or subphrenic abscess; percutaneous*), and 49061 (*Drainage of retroperitoneal abscess; percutaneous*), along with S&I code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*). To improve the reporting of these procedures, the CPT Editorial Panel created a family of four bundled codes to describe percutaneous image guided drainage of abscesses. The base surgical codes encompassing these new bundled codes will be deleted.

CPT code 49405 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous*) describes image guided catheter drainage of abscesses or other fluid collections involving visceral organs such as the liver. This new code replaces several codes previously employed to describe the drainage of a visceral fluid collection, including 50021 (*Drainage of perirenal or renal abscess; percutaneous*), 47011 (*Hepatotomy; for percutaneous drainage of abscess or cyst, 1 or 2 stages*), 48511 (*External drainage, pseudocyst of pancreas; percutaneous*), and 32201 (*Pneumonostomy; with percutaneous drainage of abscess or cyst*). When image guidance is utilized, these codes are reported with code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*).

The American College of Radiology and Society of Interventional Radiology surveyed the new family of abscess drainage codes, including CPT code 49405, in November and December 2012, and convened an expert panel of physicians familiar with these services to review the survey data.

## Work RVU Recommendation

The expert panel recommends a work value of 4.28 RVUs, which is the same as our recommendation for 49406, and very near the 25<sup>th</sup> percentile. This is below the current value.

## Pre-Service Time

The panel recommends pre-service package 2B (*Difficult Patient/Straightforward Procedure (With sedation/anesthesia care)*) with the following adjustments: pre-service evaluation time is increased by 2 minutes and pre-service positioning time is increased by 4 minutes to conform to the survey result and account for time prior to skin prep used for CT localization of the visceral abscess. Based on the survey instrument it is reasonable to conclude respondents would consider imaging work prior to skin prep to be pre-service work and this is consistent with the recently reviewed paracentesis and thoracentesis codes.

## Intra and Post-Service Times

The panel recommends the median intra and post service times for code 49405: 40 minutes and 20 minutes, respectively.

## Comparison to Key Reference Service

The most commonly selected key reference service was CPT code 49418 (*Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous*), which has 4.21 work RVUs and pre, intra, and post service times of 44, 40, and 20 minutes, respectively. 49405 has longer survey times and greater surveyed complexity (on all 11 measures) than the key reference service. Both of these procedures involve introduction of a catheter using imaging guidance, and have nearly identical service period and total times.

The slightly higher RVU for 49405 is justified by the greater complexity of the patients and increased skill required for the performance of code 49405.

Code	RVU	Pre	Intra	Post	Total	IWPUT
49405	4.28	45	40	20	105	0.072
49418	4.21	44	40	20	104	0.071

### MPC Comparison

The panel recommendation of 4.28 RVUs compares favorably to, and is bracketed by, MPC codes 11044 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less*) and 15004 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children*). 49405 has a similar intra-service time to both of these codes and is slightly higher in RVU than 11044 and slightly lower than 15004.

Code	RVU	Pre	Intra	Post	Total	IWPUT
11044	4.10	51	45	20	116	0.061
49405	4.28	45	40	20	105	0.072
15004	4.58	75	45	30	150	0.054

### Building Block Methodology

This is a new CPT code describing an existing service that previously was coded using multiple different codes, including 50021 (*Drainage of perirenal or renal abscess; percutaneous*), 47011 (*Hepatotomy; for percutaneous drainage of abscess or cyst, 1 or 2 stages*), 48511 (*External drainage, pseudocyst of pancreas; percutaneous*), and 32201 (*Pneumonostomy; with percutaneous drainage of abscess or cyst*). The use of these codes with the corresponding radiologic supervision and interpretation code, 75989, allow for direct comparison to the surveyed values. When combined with CPT code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision*), these codes form a range of reference points for consideration of CPT code 49405.

50021 (3.37 RVUs) + 75989 (1.19 RVUs) = 4.56 RVUs.

47011 (3.69 RVUs) + 75989 (1.19 RVUs) = 4.88 RVUs.

48511 (3.99 RVUs) + 75989 (1.19 RVUs) = 5.18 RVUs.

32201 (3.99 RVUs) + 75989 (1.19 RVUs) = 5.18 RVUs.

### Comparison Within Family

The data summarized in the table below demonstrate the accurate relative work involved in the procedures surveyed within the abscess code family. While the survey times increase throughout the code family, the IWPUT across the different codes appropriately reflects the differences in intensity related to treating the varying complexity of patients requiring drainage of superficial (10030), solid organ (49405), retroperitoneal (49406), and deep pelvic abscesses (49407). The expert panel believes the IWPUT values across the family are appropriate since a superficial drainage would be expected to be less complex than the greater complexity of patients requiring drainage of solid organ (49405) or retroperitoneal (49406) abscesses. Transrectal and transvaginal abscesses should fall closer to solid organ and retroperitoneal abscesses in intensity.

Codes in Family	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
-----------------	------------------	----------	------------	-----------	------------	-------

10030	3.00	45	30	20	95	0.054
49405	4.28	45	40	20	105	0.072
49406	4.28	45	40	20	105	0.072
49407	4.50	45	45	20	110	0.069

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 32201, 48511, 47011, 50021, 75989

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Interventional Radiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 14364

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on the number of times this service might be provided to Medicare patients nationally in a one-year period, it is estimated that 4900X2 might be provided 14,364 times nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 11490                      Percentage 79.99 %

Specialty Interventional Radiology                      Frequency 2330                      Percentage 16.22 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,788

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The estimated frequency for Medicare patients is 4,788, which is the 2012 Medicare utilization frequency for codes 32201, 48511, 47011, and 50021. Based on past frequency data, we estimated the percent performed by Radiology to be about 79.99%, and by Interventional Radionolgy about 16.22%.

Specialty Diagnostic Radiology	Frequency 3830	Percentage 79.99 %
Specialty Interventional Radiology	Frequency 777	Percentage 16.22 %
Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 37200

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 49406      Tracking Number N3      Original Specialty Recommended RVU: **4.28**  
 Presented Recommended RVU: **4.28**  
 Global Period: 000      RUC Recommended RVU: **4.25**

CPT Descriptor: Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 64-year-old female is status-post right colectomy now febrile with an elevated white blood cell count. CT scan shows a low density collection in the lesser sac with an enhancing rim. Percutaneous drainage using imaging guidance is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 94%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 78%

### Description of Pre-Service Work:

- The medical records and previous imaging and lab studies are reviewed and a decision made on appropriate guidance method(s) and the safest percutaneous route to the collection
- Discuss procedure details, including alternatives and risks with the patient and family and informed consent is reviewed
- Estimate the range of devices that may be required and ensure all are available for use
- Ensure all technical personnel have been familiarized with the procedure and are fully familiar with all required devices
- A brief history and physical examination is performed including suitability for moderate sedation
- Personnel don radiation attire, if required
- Surgical time out performedThe patient is placed in an appropriate position in the imaging suite
- Patient is given intravenous moderate sedation
- The collection is localized under appropriate imaging guidance (e.g., CT, ultrasound, fluoroscopy or MR). Repositioning may be necessary
- The skin is prepped and draped

### Description of Intra-Service Work:

- Subcutaneous and deep lidocaine is administered to anesthetize skin and deep structures
- The peritoneal or retroperitoneal collection is accessed with a needle using appropriate imaging guidance
- Fluid is aspirated and sent for laboratory analysis (e.g., microbiology, chemistry, cell count, etc)
- A small amount of contrast is injected to confirm access into the targeted collection
- A guidewire is passed into the collection and repeat imaging performed
- The tract is serially dilated to the necessary size

- A drainage catheter is advanced into the collection and imaging (which may involve contrast injection) is performed to verify proper position in the collection
- The catheter is secured in place with a suture
- The drainage catheter is connected to a drainage system (e.g., suction, gravity)
- The patient is sent to recovery and patient care orders written

Description of Post-Service Work:

- The images are reviewed
- The patient is sent to recovery and patient care orders written
- Post-procedure vital signs are assessed
- A formal report of the procedure is dictated into the permanent medical record
- The results and further management are discussed with the patient and their family, as well as the requesting physician
- The procedure report is reviewed and signed

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

## Background

Several codes describing the percutaneous drainage of abscesses were identified by the “Codes reported together 75% or more” RAW screen. This included the following combinations 49021 (*Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous*), 49041 (*Drainage of subdiaphragmatic or subphrenic abscess; percutaneous*), and 49061 (*Drainage of retroperitoneal abscess; percutaneous*), along with S&I code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*). To improve the reporting of these procedures, the CPT Editorial Panel created a family of four bundled codes to describe percutaneous image guided drainage of abscesses. The base surgical codes encompassing these new bundled codes will be deleted.

CPT code 49406 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous*) describes image guided catheter drainage of abscesses or other fluid collections in the peritoneal and retroperitoneal space. This new code replaces several codes which were previously employed to describe the drainage of peritoneal and retroperitoneal fluid collections: 49021 (*Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous*), 49061 (*Drainage of retroperitoneal abscess; percutaneous*), 49041 (*Drainage of subdiaphragmatic or subphrenic abscess; percutaneous*), and 44901 (*Incision and drainage of appendiceal abscess; percutaneous*). When imaging guidance is used, these codes are typically paired with code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*).

The American College of Radiology and Society of Interventional Radiology surveyed the new family of abscess drainage codes, including CPT code 49406, in November and December 2012, and convened an expert panel of physicians familiar with these services to review the survey data.

## Work RVU Recommendation

The expert panel recommends the survey 25<sup>th</sup> percentile work value of 4.28 RVUs, which is the same as our recommendation for 49405. This is below the current value.

## Pre-Service Time

The panel recommends pre-service package 2B (*Difficult Patient/Straightforward Procedure (With sedation/anesthesia care)*) with the following adjustments: pre-service evaluation time is increased by 2 minutes and pre-service positioning time is increased by 4 minutes to conform to the survey result and account for time prior to skin prep used CT localization of the visceral abscess. Based on the survey instrument, it is reasonable to conclude respondents would consider imaging work prior to skin prep to be pre-service work, and this is consistent with the recently reviewed paracentesis and thoracentesis codes.

## Intra and Post-Service Times

The panel recommends the median intra and post service times for code 49406: 40 and 20 minutes, respectively.

## Comparison to Key Reference Service

The most commonly selected key reference service was CPT code 49418 (*Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous*), which has 4.21 work RVUs and pre, intra, and post service times of 44, 40, and 20 minutes, respectively. 49406 has longer survey times and greater surveyed complexity (on all 11 measures) than the key reference service. Both of these procedures involve introduction of a catheter using imaging guidance, and have nearly identical service period and total times.

The slightly higher RVU for 49406 is justified by the greater complexity of the patients and increased skill required for the performance of code 49406.

Code	RVU	Pre	Intra	Post	Total	IWPUT
49406	4.28	45	40	20	105	0.072
49418	4.21	44	40	20	104	0.071

### MPC Comparison

The panel recommendation of 4.28 RVUs compares favorably to, and is bracketed by, MPC codes 11044 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less*) and 15004 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants*). 49406 has a similar intra-service time to both of these codes and is slightly higher in RVU than 11044 and slightly lower than 15004.

Code	RVU	Pre	Intra	Post	Total	IWPUT
11044	4.10	51	45	20	116	0.061
49406	4.28	45	40	20	105	0.072
15004	4.58	75	45	30	150	0.054

### Building Block Methodology

This is a new CPT code describing an existing service that previously was coded using multiple different codes, including 49021, 44901, 49061, and 49041. The use of these codes with the corresponding radiologic supervision and interpretation code, 75989, allow for direct comparison to the surveyed values. When combined with CPT code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision*), these codes form a range of reference points for consideration of CPT code 49406.

49021 (3.37 RVUs) + 75989 (1.19 RVUs) = 4.56 RVUs.

44901 (3.37 RVUs) + 75989 (1.19 RVUs) = 4.56 RVUs.

49061 (3.69 RVUs) + 75989 (1.19 RVUs) = 4.88 RVUs.

49041 (3.99 RVUs) + 75989 (1.19 RVUs) = 5.18 RVUs.

### Comparison Within Family

The data summarized in the table below demonstrate the accurate relative work involved in the procedures surveyed within the abscess code family. While the survey times increase throughout the code family, the IWPUT across the different codes appropriately reflects the differences in intensity related to treating the varying complexity of patients requiring drainage of superficial (10030), solid organ (49405), retroperitoneal (49406), and deep pelvic abscesses (49407). The expert panel believes the IWPUT values across the family are appropriate since a superficial drainage would be expected to be less complex than the greater complexity of patients requiring drainage of solid organ (49405) or retroperitoneal (49406) abscesses. Transrectal and transvaginal abscesses should fall closer to solid organ and retroperitoneal abscesses in intensity.

Codes in Family	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
10030	3.00	45	30	20	95	0.054
49405	4.28	45	40	20	105	0.072
49406	4.28	45	40	20	105	0.072
49407	4.50	45	45	20	110	0.069

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 49021, 49041, 49061, 75989

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Interventional Radiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 90672

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on the number of times this service might be provided to Medicare patients nationally in a one-year period, it is estimated that 49406 might be provided 90,672 times nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 71900                      Percentage 79.29 %

Specialty Interventional Radiology                      Frequency 13040                      Percentage 14.38 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

30,224 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The estimated frequency for Medicare is 30,224, which is the 2012 Medicare utilization frequency for codes 44901, 49021, 49041, and 49061. Based on past frequency data, we estimated the percent performed by Radiology to be about 79.29%, and by Interventional Radiology about 14.38%.

Specialty Diagnostic Radiology                      Frequency 23964                      Percentage 79.28 %

Specialty Interventional Radiology

Frequency 4346

Percentage 14.37 %

Specialty

Frequency 0

Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 37200

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 49407      Tracking Number N4      Original Specialty Recommended RVU: **4.50**  
 Presented Recommended RVU: **4.50**  
 Global Period: 000      RUC Recommended RVU: **4.50**

CPT Descriptor: Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 58-year-old female is status-post hemicolectomy now febrile with an elevated white blood cell count. CT scan shows a low density collection deep in the pelvis between the vagina and the rectum. Percutaneous transvaginal drainage using imaging guidance is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 96%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 79%

**Description of Pre-Service Work:**

- The medical records and previous imaging and lab studies are reviewed and a decision made on appropriate guidance method(s) and the safest percutaneous route to the collection
- Discuss procedure details, including alternatives and risks with the patient and family and informed consent is reviewed
- Estimate the range of devices that may be required and ensure all are available for use
- Ensure all technical personnel have been familiarized with the procedure and are fully familiar with all required devices
- A brief history and physical examination is performed including suitability for moderate sedation
- Personnel don radiation attire, if required
- Surgical time out performed
- The patient is placed in an appropriate position in the imaging suite
- Patient is given intravenous moderate sedation

**Description of Intra-Service Work:**

- Gently insert transrectal or transvaginal ultrasound probe into rectum or vagina, respectively
- The collection is localized under transvaginal (TV) or transrectal (TR) ultrasound. Repositioning may be necessary
- The entry site is prepped and draped
- Lidocaine is administered to anesthetize entry site and deep structures
- The collection is accessed with a needle using TV or TR ultrasound guidance
- Fluid is aspirated and sent for laboratory analysis (e.g., microbiology, chemistry, cell count, etc)
- A small amount of contrast is injected to confirm access into the targeted collection
- A guidewire is passed into the collection and repeat imaging performed

- The tract is serially dilated to the necessary size
- A drainage catheter is advanced into the collection and imaging (which may involve contrast injection) is performed to verify proper position in the collection
- The catheter is secured in place with a suture
- The drainage catheter is connected to a drainage system (e.g., suction, gravity)
- The patient is sent to recovery and patient care orders written

Description of Post-Service Work:

- The images are reviewed
- The patient is sent to recovery and patient care orders written
- Post-procedure vital signs are assessed
- A formal report of the procedure is dictated into the permanent medical record
- The results and further management are discussed with the patient and their family, as well as the requesting physician
- The procedure report is reviewed and signed

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

## Background

Several codes describing the percutaneous drainage of abscesses were identified by the “Codes reported together 75% or more” RAW screen. This included the following combinations 49021 (*Drainage of peritoneal abscess or localized peritonitis, exclusive of appendiceal abscess; percutaneous*), 49041 (*Drainage of subdiaphragmatic or subphrenic abscess; percutaneous*), and 49061 (*Drainage of retroperitoneal abscess; percutaneous*), along with S&I code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*). To improve the reporting of these procedures, the CPT Editorial Panel created a family of four bundled codes to describe percutaneous image guided drainage of abscesses. The base surgical codes encompassing these new bundled codes will be deleted.

CPT code 49407 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal*) describes image guided catheter drainage of abscesses or other fluid collections in the peritoneal or retroperitoneal space using a transvaginal or transrectal technique. The new code replaces the code previously used to describe the drainage of a deep pelvic fluid collection, 58823 (*Drainage of pelvic abscess, transvaginal or transrectal approach, percutaneous (eg, ovarian, pericolic)*). When imaging guidance is used, this code is typically paired with code 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation*).

The American College of Radiology and Society of Interventional Radiology surveyed the new family of abscess drainage codes, including CPT code 49407, in November and December 2012, and convened an expert panel of physicians familiar with these services to review the survey data.

## Work RVU Recommendation

The expert panel recommends the survey 25<sup>th</sup> percentile survey value of 4.50 RVUs, which is below the current value.

## Pre-Service Time

The panel recommends pre-service package 2B (*Difficult Patient/Straightforward Procedure (With sedation/anesthesia care)*) with the following adjustments: pre-service evaluation time is increased by 2 minutes and pre-service positioning time is increased by 4 minutes to conform to the survey result and account for time prior to skin prep used for US localization of the abscess. Based on the survey instrument, it is reasonable to conclude respondents would consider imaging work prior to skin prep to be pre-service work, and this is consistent with the recently reviewed paracentesis and thoracentesis codes.

## Intra and Post-Service Times

The panel recommends the median intra and post service times for code 49407, with 45 minutes and 20 minutes, respectively.

## Comparison to Key Reference Service

The most commonly selected key reference service was CPT code 49418 (*Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous*), which has 4.21 work RVUs and pre, intra, and post service times of 44, 40, and 20 minutes, respectively. 49407 has longer survey times and significantly greater surveyed complexity (on all 11 measures) than the key reference service. While both of these procedures involve introduction of a catheter using imaging guidance, the greater complexity of the patients and increased skill required for the performance of code 49407 is manifest in the survey responses.

Code	RVU	Pre	Intra	Post	Total	IWPUT
49407	4.50	45	45	20	110	0.069
49418	4.21	44	40	20	104	0.071

### MPC Comparison

The panel recommendation of 4.50 RVUs compares favorably to, and is bracketed by, MPC codes 11044 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less*) and 15004 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children*). 49407 has a similar intra-service time to both of these codes and is slightly higher in RVU than 11044 and slightly lower than 15004.

Code	RVU	Pre	Intra	Post	Total	IWPUT
11044	4.10	51	45	20	116	0.061
49407	4.50	45	45	20	110	0.069
15004	4.58	75	45	30	150	0.054

### Building Block Methodology

This is a new CPT code describing an existing service that previously was coded using codes 58823 (*Drainage of pelvic abscess, transvaginal or transrectal approach, percutaneous (eg, ovarian, pericolic)*) and 75989 (*Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision*).

58823 (3.37 RVUs) + 75989 (1.19 RVUs) = 4.56 RVUs.

### Comparison Within Family

The data summarized in the table below demonstrate the accurate relative work involved in the procedures surveyed within the abscess code family. While the survey times increase throughout the code family, the IWPUT across the different codes appropriately reflects the differences in intensity related to treating the varying complexity of patients requiring drainage of superficial (10030), solid organ (49405), retroperitoneal (49406), and deep pelvic abscesses (49407). The expert panel believes the IWPUT values across the family are appropriate since a superficial drainage would be expected to be less complex than the greater complexity of patients requiring drainage of solid organ (49405) or retroperitoneal (49406) abscesses. Transrectal and transvaginal abscesses should fall closer to solid organ and retroperitoneal abscesses in intensity.

Codes in Family	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
10030	3.00	45	30	20	95	0.054
49405	4.28	45	40	20	105	0.072
49406	4.28	45	40	20	105	0.072
49407	4.50	45	45	20	110	0.069

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 58823, 75989

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Interventional Radiology                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 876

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 49407 provided nationally in a one-year period is estimated to be 876.

Specialty Diagnostic Radiology                      Frequency 541                      Percentage 61.75 %

Specialty Interventional Radiology                      Frequency 154                      Percentage 17.57 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 292

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The estimated frequency for Medicare is 292 which is the 2012 Medicare utilization frequency for CPT code 58823. Based on past frequency data, we estimated the percent performed by Radiology to be about 61.78%, and by Interventional Radiology about 17.59%.

Specialty Diagnostic Radiology                      Frequency 180                      Percentage 61.64 %

Specialty Interventional Radiology                      Frequency 51                      Percentage 17.46 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 37200

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Non Facility Direct Inputs**

CPT Long Descriptor:

**10030** - Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); soft tissue (eg, extremity, abdominal wall, neck), percutaneous

**49405** - Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous

**49406** - Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous

**49407** - Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, transvaginal or transrectal

Global Period: 000 Meeting Date: 01/2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology and the Society of Interventional Radiology convened a consensus panel to finalize the practice expense data for CPT codes 10030, 49405, 49406, and 49407.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The existing codes, 50021, 49021, and 58823, are being replaced by the abscess drainage codes, 49405-49407, and the practice expense inputs for these codes are similar to the practice expense inputs for the new codes. For 10030, because there is no existing code that represents the described procedure, the ACR and SIR crosswalked it to the other abscess codes.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

The additional time for pre-service activities represents staff activities which typically occur following the decision for the procedure

4. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Complete pre-service diagnostic & referral forms
- Coordinate pre-surgery services
- Provide pre-service education/obtain consent
- Other Clinical Activity - Retrieve prior imaging exams, hang for MD review, verify orders, review chart to incorporate relevant clinical information, confirm contrast protocol with interpreting MD

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Provide pre-service education/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Sedate/apply anesthesia
- Assist physician in performing procedure
- Assist physician in performing procedure (CS)
- Image Acquisition (75%)
- Circulating throughout procedure (25%)
- Monitor pt. following service/check tubes, monitors, drains
- Clean room/equipment by physician staff
- Complete diagnostic forms, lab & X-ray requisitions
- Check dressings & wound/ home care instructions /coordinate office visits /prescriptions
- Other Clinical Activity: Process and hang films

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Codes Reported Together 75% or More Screen*

April 2013

**Breast Biopsy**

In January 2012, the RUC identified codes 77031 *Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation*, 19103 *Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance*, 77032 *Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation* and 19290 *Preoperative placement of needle localization wire, breast* through the Codes Reported Together 75% or More screen. In October 2012, the CPT Editorial Panel established six new bundled codes to report breast biopsy with imaging guidance and established eight new bundled codes to report placement of breast location devices with imaging guidance. The six breast lesion biopsy codes include marker placement and specimen radiography if performed and are categorized by stereotactic guidance, ultrasound guidance and MRI guidance, each with an add-on code to describe additional lesions subject to biopsy. The eight breast marker placement codes are reported in the absence of breast biopsy and are categorized by mammographic guidance, stereotactic guidance, ultrasound guidance and MRI guidance, each with an add-one code to describe additional lesions localized.

The RUC noted that the recommendations for these two families of services, breast lesion biopsy and breast marker placement, maintain the proper rank order relative to one another in regards to physician work as follows: (1) magnetic resonance guidance; (2) stereotactic guidance; (3) mammographic guidance; and (4) ultrasound guidance.

**Breast Lesion Biopsy**

The specialty society indicated and the RUC agreed that for the breast lesion biopsy family of services, imaging of the biopsy specimen is bundled into these services when performed. For example, the physician would use radiography for a specimen from the patient to identify calcification and confirm it is in the specimen prior to sending it to the pathologist for further analysis.

**19081 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance**

The RUC reviewed the survey results from 99 physicians for CPT code 19081 and determined that the survey respondents slightly overestimated the work required to perform this service. The respondents indicated CPT code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.71) as the key reference service which is more intense and complex and may have caused the respondents to overestimate the work for 19081. Additionally, the RUC determined that the 25<sup>th</sup> percentile work RVU was

too low for this service and would cause a rank order anomaly within this family and other similar services. Therefore, the RUC recommended a direct crosswalk to CPT code 31296 *Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)* (work RVU = 3.29 and 30 minutes intra-service time). The RUC determined that for stereotactic guidance service, the patient is typically in the prone position, therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC determined the physician time of 22 minutes pre-service, 30 minutes intra-service and 15 minutes immediate post-service time were appropriate to perform this procedure. For additional support the RUC compared 19081 to 50386 *Removal (via snare/capture) of internally dwelling ureteral stent via transurethral approach, without use of cystoscopy, including radiological supervision and interpretation* (work RVU = 3.30) and determined that each require similar physician work and the same intra-service time of 30 minutes. **The RUC recommends a work RVU of 3.29 for CPT code 19081.**

**19082 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 52 physicians for CPT code 19082 and determined that the physician work may have been overestimated in relation to the base code 19081. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion biopsied. The specialty society indicated and the RUC agreed that the physician work required to biopsy each additional lesion is half that of the primary code. Therefore, the RUC determined a work value of 1.65 appropriately values this procedure. For support the RUC referenced similar service 76812 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation plus detailed fetal anatomic examination, transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)* (work RVU = 1.78), which requires similar physician work and time. **The RUC recommends a work RVU of 1.65 for CPT code 19082.**

**19083 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including ultrasound guidance**

The RUC reviewed the survey results from 97 physicians for CPT code 19083 and determined that the median work RVU of 3.10 appropriately accounts for the work required to perform this service and is appropriate in relation to this code family. The RUC determined that for this ultrasound guided service, the patient is typically in the supine position; therefore, no additional positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with an adjustment in the scrub, dress and wait time to match the survey respondents for 13 minutes evaluation, 1 minute positioning and 5 minutes scrub, dress and wait pre-service time is appropriate. The RUC recommends 19 minutes of pre-service, 25 minutes of intra-service and 15 minutes of immediate post-service time for this service. The RUC compared 19083 to key reference service 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intra-procedural*

*roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.71) and agreed that the key reference service is more intense and complex and requires 5 more minutes intra-service to perform. For additional support the RUC reviewed MPC codes 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.78); 15002 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children* (work RVU = 3.65) and similar service 32557 *Pleural drainage, percutaneous, with insertion of indwelling catheter; with imaging guidance* (work RVU = 3.12) and determined that the median work RVU of 3.10 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 3.10 for CPT code 19083.**

**19084 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 52 physicians for CPT code 19084 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19083. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion biopsied. The specialty society indicated and the RUC agreed that the physician work required to biopsy each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.55 appropriately values this procedure. For support, the RUC referenced similar service 49412 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), open, intra-abdominal, intrapelvic, and/or retroperitoneum, including image guidance, if performed, single or multiple (List separately in addition to code for primary procedure)* (work RVU = 1.50), which requires similar physician work and time. **The RUC recommends a work RVU of 1.55 for CPT code 19084.**

**19085 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance**

The RUC reviewed the survey results from 64 physicians for CPT code 19085 and determined that the median work RVU of 3.64 accounts for the work required to perform this service and maintains appropriate relativity within this family. The RUC determined that for MRI guidance service, the patient is typically in the prone position, therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC recommends 22 minutes of pre-service, 45 minutes of intra-service and 15 minutes of immediate post-service time for this service. The RUC compared 19085 to key reference service 49411 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple* (work RVU = 3.82) and noted that the respondents indicated variation in the intensity and complexity measures for both of these services, which reflects the unique nature of breast interventions.

Although reference code 49411 requires 5 minutes less intra-service than 19085, 40 and 45 minutes, respectively, it is a more intense service. For additional support the RUC reviewed MPC codes 15002 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children* (work RVU = 3.65) and 31628 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe* (work RVU = 3.80) and determined that the median work RVU of 3.64 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 3.64 for CPT code 19085.**

**19086 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 40 physicians for CPT code 19086 and determined that the survey 25<sup>th</sup> percentile work RVU of 1.80 was appropriate. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required to biopsy each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.82 appropriately values this procedure. For support, the RUC referenced similar service 13133 *Repair, complex, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; each additional 5 cm or less (List separately in addition to code for primary procedure)* (work RVU = 2.19), which has slightly higher total time and, hence, a slightly higher RVU. **The RUC recommends a work RVU of 1.82 for CPT code 19086.**

**Breast Marker Placement**

**19281 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including mammographic guidance**

The RUC reviewed the survey results from 62 physicians and determined that the median work RVU of 2.00 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* for 13 minutes evaluation, 1 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC agreed that 20 minutes of pre-service, 30 minutes of intra-service and 15 minutes of immediate post-service time are appropriate for this service. The RUC compared 19281 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50) and noted that the respondents indicated higher intensity and complexity for the surveyed service, however, 36556 requires 15 minutes of intra-service time compared to 30 minutes. The RUC agreed that this reflects the unique nature of breast interventions. The breast marker placement services are associated with very high patient and family anxiety, which tend to increase the psychological stress of the physician. Although the reference code requires less time, the physician work is higher, rendering it a more intense service. For additional support, the RUC reviewed MPC codes 64483 *Injection(s)*,

*anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level (work RVU = 1.90) and 90937 Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription (work RVU = 2.11) and determined that the median work RVU of 2.00 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 2.00 for CPT code 19281.***

**19282 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including mammographic guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 37 physicians for CPT code 19282 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19281. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.00 appropriately values this procedure. For further support the RUC referenced similar service 11046 *Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 1.03), which requires similar physician work and time. **The RUC recommends a work RVU of 1.00 for CPT code 19282.**

**19283 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including stereotactic guidance**

The RUC reviewed the survey results from 93 physicians and determined that the survey 25<sup>th</sup> percentile work RVU of 2.00 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC determined that for this stereotactic guidance service, the patient is typically in the prone position, therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC agreed that 22 minutes of pre-service, 20 minutes of intra-service and 15 minutes of immediate post-service time are appropriate for this service. The survey respondents indicated that the intra-service time is 10 minutes less for 19283 compared to 19281. The RUC noted that the survey respondents may have only assumed one wire for 19283 as it is not specified as a dual-wire service in the vignette as it is for 19281, thus causing the time variation. The specialty societies indicated and the RUC agreed that two wires are typical to perform 19283, the same as 19281, therefore it is appropriate that the work RVU for these services to be the same. The RUC compared 19283 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50) and noted that the respondents indicated higher intensity and complexity for the surveyed service, however, 36556 requires 15 minutes of intra-service time compared to 20 minutes. The RUC agreed that this reflects the unique nature of breast interventions. The breast marker placement services are associated with very high patient and family anxiety, which tend to increase the psychological stress of the physician. Although the reference code requires less time, the physician work is higher, rendering it a more intense service. For additional support, the RUC reviewed MPC

codes 64483 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level* (work RVU = 1.90) and 90937 *Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription* (work RVU = 2.11) and determined that the 25<sup>th</sup> percentile work RVU of 2.00 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 2.00 for CPT code 19283.**

**19284 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 48 physicians for CPT code 19284 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19283. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half that of the primary code. Therefore, the RUC determined a work value of 1.00 appropriately values this procedure. Additionally, the RUC determined that this service requires the same physician work and time as 19282 and therefore should be valued the same. For further support the RUC referenced similar service 11046 *Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 1.03), which requires similar physician work and time. **The RUC recommends a work RVU of 1.00 for CPT code 19284.**

**19285 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including ultrasound guidance**

The RUC reviewed the survey results from 101 physicians and determined that the survey 25<sup>th</sup> percentile work RVU of 1.70 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC determined that for this ultrasound guidance service, the patient is typically in the supine position; therefore no additional positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* for 13 minutes evaluation, 1 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC agreed that 20 minutes of pre-service, 15 minutes of intra-service and 15 minutes of immediate post-service time are appropriate for this service. The RUC noted that 19285 typically requires one wire and less intra-service time than 19281 and 19283 and therefore should be valued lower. The RUC compared 19285 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50) and noted that the respondents indicated higher intensity and complexity for the surveyed service, however, both services require 15 minutes of intra-service time. The RUC agreed that this reflects the unique nature of breast interventions. The breast marker placement services are associated with very high patient and family anxiety, which tend to increase the psychological stress of the physician. Although the reference code has the same intra-service time, the physician work is higher, rendering it a more intense service. For additional support, the RUC reviewed MPC code 64483 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT);*

*lumbar or sacral, single level* (work RVU = 1.90) and determined that the 25<sup>th</sup> percentile work RVU of 1.70 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 1.70 for CPT code 19285.**

**19286 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 48 physicians for CPT code 19286 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19285. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 0.85 appropriately values this procedure. For further support the RUC referenced similar service 93565 *Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective left ventricular or left atrial angiography (List separately in addition to code for primary procedure)* (work RVU = 0.86), which requires similar physician work and time. **The RUC recommends a work RVU of 0.85 for CPT code 19286.**

**19287 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including magnetic resonance guidance**

The RUC reviewed the survey results from 64 physicians for CPT code 19287 and determined that the median work RVU of 3.02 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC determined that for this magnetic resonance guidance service, the patient is typically in the prone position; therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC recommends 22 minutes of pre-service, 37 minutes of intra-service and 15 minutes of immediate post-service time for this service. The RUC noted that 19287 is for the primary lesion with multiple clips, typically 3 clips. The RUC compared 19287 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50 and 15 minutes intra-service time) and determined that the physician work is more intense and complex and requires an additional 22 minutes of intra-service time to complete than the key reference service. For additional support, the RUC reviewed MPC code 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.78 and 30 minutes intra-service time) and determined that the median work RVU of 3.02 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 3.02 for CPT code 19287.**

**19288 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 40 physicians for CPT code 19288 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19287. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.51 appropriately values this procedure. For further support the RUC referenced similar service 31637 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; each additional major bronchus stented (List separately in addition to code for primary procedure)* (work RVU = 1.58), which requires similar physician work and time. **The RUC recommends a work RVU of 1.51 for CPT code 19288.**

### **Practice Expense**

The RUC requested that the specialties clarify the contents of the stereotactic imaging system included as an equipment input in the practice expense. According to the CMS direct PE inputs the *breast biopsy imaging system, stereotactic (imager, table, software)* (EQ075) includes a table used for stereotactic services. The RUC noted a separate input, *table, power* (EF031) is also included in the equipment items and should be removed if a separate table is not necessary to perform the service. Following the meeting, the specialty confirmed that a separate table is not needed and subsequently the *table, power* (EF031) has been removed from the stereotactic services codes. The RUC noted that a *table, exam* (EF023) is included in the equipment inputs for the mammography codes because a table is not included in the *room, mammography* (EL013). The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### **Work Neutrality**

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>General</b>				
10022		<p>Fine needle aspiration, with imaging guidance</p> <p>(For placement of percutaneous localization <u>device[s]</u> [eg, clip, metallic pellet, during breast biopsy], <del>use 19295, see 19081-19086</del>)</p> <p>(For radiological supervision and interpretation, see 76942, 77002, 77012, 77021)</p> <p>(For percutaneous needle biopsy other than fine needle aspiration, see <del>20206 19081-19086 19081, 19083, 19085</del>, for breast, <u>20206</u>, for muscle, 32400 for pleura, 32405 for lung or mediastinum, 42400 for salivary gland, 47000 for liver, 48102 for pancreas, 49180 for abdominal or retroperitoneal mass, 50200 for kidney, 54500 for testis, 54800 for epididymis, 60100 for thyroid, 62267 for nucleus pulposus, intervertebral disc, or paravertebral tissue, 62269 for spinal cord)</p> <p>(For evaluation of fine needle aspirate, see 88172, 88173)</p>		
<b>Surgery Integumentary Breast Incision</b>				
19000		Puncture aspiration of cyst of breast;		
19001		<p>each additional cyst (List separately in addition to code for primary procedure)</p> <p>(Use 19001 in conjunction with 19000)</p> <p>(If imaging guidance is performed, see 76942, 77021, <del>77031, 77032</del>)</p>		

**Integumentary**  
**Breast**  
**Excision**  
**Surgery**

Excisional breast surgery includes certain biopsy procedures, the removal of cysts or other benign or malignant tumors or lesions, and the surgical treatment of breast and chest wall malignancies. Biopsy procedures may be percutaneous or open, and they involve the removal of differing amounts of tissue for diagnosis.

Breast biopsies, without image guidance are reported with 19100 and 19101. Image-guided breast biopsies including the placement of localization devices when performed are reported using codes 19081-19086. The image-guided placement of localization devices without image-guided biopsy are reported with 19100-19103, 19281-19288. When more than one biopsy or localization device placement is performed using the same imaging modality, use an add-on code. If additional biopsies are performed using different imaging modalities, report another primary code for each additional modality. When an open incisional biopsy is performed after image-guided placement of a localization device, 19101 is reported and the appropriate image-guided localization device placement code is reported. The open excision of breast lesions (eg, lesions of the breast ducts, cysts, benign or malignant tumors), without specific attention to adequate surgical margins, with or without the preoperative placement of radiological markers, is reported using codes 19110-19126. Partial mastectomy procedures (eg, lumpectomy, tylectomy, quadrantectomy, or segmentectomy) describe open excisions of breast tissue with specific attention to adequate surgical margins

Partial mastectomy procedures are reported using codes 19301 or 19302 as appropriate. Documentation for partial mastectomy procedures includes attention to the removal of adequate surgical margins surrounding the breast mass or lesion.

Total mastectomy procedures include simple mastectomy, complete mastectomy, subcutaneous mastectomy, modified radical mastectomy, radical mastectomy, and more extended procedures (eg, Urban type operation). Total mastectomy procedures are reported using codes 19303-19307 as appropriate.

Excisions or resections of chest wall tumors including ribs, with or without reconstruction, with or without mediastinal lymphadenectomy, are reported using codes 19260, 19271, or 19272. Codes 19260-19272 are not restricted to breast tumors and are used to report resections of chest wall tumors originating from any chest wall component. (For excision of lung or pleura, see 32310 et seq)

(To report bilateral procedure, report modifier 50 with the procedure code)

(Use 77051 in conjunction with 77055, 77056)

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Codes Reported Together 75% or More Screen*

April 2013

**Breast Biopsy**

In January 2012, the RUC identified codes 77031 *Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation*, 19103 *Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance*, 77032 *Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation* and 19290 *Preoperative placement of needle localization wire, breast* through the Codes Reported Together 75% or More screen. In October 2012, the CPT Editorial Panel established six new bundled codes to report breast biopsy with imaging guidance and established eight new bundled codes to report placement of breast location devices with imaging guidance. The six breast lesion biopsy codes include marker placement and specimen radiography if performed and are categorized by stereotactic guidance, ultrasound guidance and MRI guidance, each with an add-on code to describe additional lesions subject to biopsy. The eight breast marker placement codes are reported in the absence of breast biopsy and are categorized by mammographic guidance, stereotactic guidance, ultrasound guidance and MRI guidance, each with an add-one code to describe additional lesions localized.

The RUC noted that the recommendations for these two families of services, breast lesion biopsy and breast marker placement, maintain the proper rank order relative to one another in regards to physician work as follows: (1) magnetic resonance guidance; (2) stereotactic guidance; (3) mammographic guidance; and (4) ultrasound guidance.

**Breast Lesion Biopsy**

The specialty society indicated and the RUC agreed that for the breast lesion biopsy family of services, imaging of the biopsy specimen is bundled into these services when performed. For example, the physician would use radiography for a specimen from the patient to identify calcification and confirm it is in the specimen prior to sending it to the pathologist for further analysis.

**19081 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance**

The RUC reviewed the survey results from 99 physicians for CPT code 19081 and determined that the survey respondents slightly overestimated the work required to perform this service. The respondents indicated CPT code 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.71) as the key reference service which is more intense and complex and may have caused the respondents to overestimate the work for 19081. Additionally, the RUC determined that the 25<sup>th</sup> percentile work RVU was

too low for this service and would cause a rank order anomaly within this family and other similar services. Therefore, the RUC recommended a direct crosswalk to CPT code 31296 *Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)* (work RVU = 3.29 and 30 minutes intra-service time). The RUC determined that for stereotactic guidance service, the patient is typically in the prone position, therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC determined the physician time of 22 minutes pre-service, 30 minutes intra-service and 15 minutes immediate post-service time were appropriate to perform this procedure. For additional support the RUC compared 19081 to 50386 *Removal (via snare/capture) of internally dwelling ureteral stent via transurethral approach, without use of cystoscopy, including radiological supervision and interpretation* (work RVU = 3.30) and determined that each require similar physician work and the same intra-service time of 30 minutes. **The RUC recommends a work RVU of 3.29 for CPT code 19081.**

**19082 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 52 physicians for CPT code 19082 and determined that the physician work may have been overestimated in relation to the base code 19081. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion biopsied. The specialty society indicated and the RUC agreed that the physician work required to biopsy each additional lesion is half that of the primary code. Therefore, the RUC determined a work value of 1.65 appropriately values this procedure. For support the RUC referenced similar service 76812 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation plus detailed fetal anatomic examination, transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)* (work RVU = 1.78), which requires similar physician work and time. **The RUC recommends a work RVU of 1.65 for CPT code 19082.**

**19083 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including ultrasound guidance**

The RUC reviewed the survey results from 97 physicians for CPT code 19083 and determined that the median work RVU of 3.10 appropriately accounts for the work required to perform this service and is appropriate in relation to this code family. The RUC determined that for this ultrasound guided service, the patient is typically in the supine position; therefore, no additional positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with an adjustment in the scrub, dress and wait time to match the survey respondents for 13 minutes evaluation, 1 minute positioning and 5 minutes scrub, dress and wait pre-service time is appropriate. The RUC recommends 19 minutes of pre-service, 25 minutes of intra-service and 15 minutes of immediate post-service time for this service. The RUC compared 19083 to key reference service 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intra-procedural*

*roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.71) and agreed that the key reference service is more intense and complex and requires 5 more minutes intra-service to perform. For additional support the RUC reviewed MPC codes 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.78); 15002 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children* (work RVU = 3.65) and similar service 32557 *Pleural drainage, percutaneous, with insertion of indwelling catheter; with imaging guidance* (work RVU = 3.12) and determined that the median work RVU of 3.10 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 3.10 for CPT code 19083.**

**19084 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 52 physicians for CPT code 19084 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19083. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion biopsied. The specialty society indicated and the RUC agreed that the physician work required to biopsy each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.55 appropriately values this procedure. For support, the RUC referenced similar service 49412 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), open, intra-abdominal, intrapelvic, and/or retroperitoneum, including image guidance, if performed, single or multiple (List separately in addition to code for primary procedure)* (work RVU = 1.50), which requires similar physician work and time. **The RUC recommends a work RVU of 1.55 for CPT code 19084.**

**19085 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance**

The RUC reviewed the survey results from 64 physicians for CPT code 19085 and determined that the median work RVU of 3.64 accounts for the work required to perform this service and maintains appropriate relativity within this family. The RUC determined that for MRI guidance service, the patient is typically in the prone position, therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC recommends 22 minutes of pre-service, 45 minutes of intra-service and 15 minutes of immediate post-service time for this service. The RUC compared 19085 to key reference service 49411 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple* (work RVU = 3.82) and noted that the respondents indicated variation in the intensity and complexity measures for both of these services, which reflects the unique nature of breast interventions.

Although reference code 49411 requires 5 minutes less intra-service than 19085, 40 and 45 minutes, respectively, it is a more intense service. For additional support the RUC reviewed MPC codes 15002 *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children* (work RVU = 3.65) and 31628 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe* (work RVU = 3.80) and determined that the median work RVU of 3.64 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 3.64 for CPT code 19085.**

**19086 Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 40 physicians for CPT code 19086 and determined that the survey 25<sup>th</sup> percentile work RVU of 1.80 was appropriate. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required to biopsy each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.82 appropriately values this procedure. For support, the RUC referenced similar service 13133 *Repair, complex, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; each additional 5 cm or less (List separately in addition to code for primary procedure)* (work RVU = 2.19), which has slightly higher total time and, hence, a slightly higher RVU. **The RUC recommends a work RVU of 1.82 for CPT code 19086.**

**Breast Marker Placement**

**19281 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including mammographic guidance**

The RUC reviewed the survey results from 62 physicians and determined that the median work RVU of 2.00 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* for 13 minutes evaluation, 1 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC agreed that 20 minutes of pre-service, 30 minutes of intra-service and 15 minutes of immediate post-service time are appropriate for this service. The RUC compared 19281 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50) and noted that the respondents indicated higher intensity and complexity for the surveyed service, however, 36556 requires 15 minutes of intra-service time compared to 30 minutes. The RUC agreed that this reflects the unique nature of breast interventions. The breast marker placement services are associated with very high patient and family anxiety, which tend to increase the psychological stress of the physician. Although the reference code requires less time, the physician work is higher, rendering it a more intense service. For additional support, the RUC reviewed MPC codes 64483 *Injection(s)*,

*anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level (work RVU = 1.90) and 90937 Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription (work RVU = 2.11) and determined that the median work RVU of 2.00 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 2.00 for CPT code 19281.***

**19282 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including mammographic guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 37 physicians for CPT code 19282 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19281. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.00 appropriately values this procedure. For further support the RUC referenced similar service 11046 *Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 1.03), which requires similar physician work and time. **The RUC recommends a work RVU of 1.00 for CPT code 19282.**

**19283 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including stereotactic guidance**

The RUC reviewed the survey results from 93 physicians and determined that the survey 25<sup>th</sup> percentile work RVU of 2.00 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC determined that for this stereotactic guidance service, the patient is typically in the prone position, therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC agreed that 22 minutes of pre-service, 20 minutes of intra-service and 15 minutes of immediate post-service time are appropriate for this service. The survey respondents indicated that the intra-service time is 10 minutes less for 19283 compared to 19281. The RUC noted that the survey respondents may have only assumed one wire for 19283 as it is not specified as a dual-wire service in the vignette as it is for 19281, thus causing the time variation. The specialty societies indicated and the RUC agreed that two wires are typical to perform 19283, the same as 19281, therefore it is appropriate that the work RVU for these services to be the same. The RUC compared 19283 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50) and noted that the respondents indicated higher intensity and complexity for the surveyed service, however, 36556 requires 15 minutes of intra-service time compared to 20 minutes. The RUC agreed that this reflects the unique nature of breast interventions. The breast marker placement services are associated with very high patient and family anxiety, which tend to increase the psychological stress of the physician. Although the reference code requires less time, the physician work is higher, rendering it a more intense service. For additional support, the RUC reviewed MPC

codes 64483 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level* (work RVU = 1.90) and 90937 *Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription* (work RVU = 2.11) and determined that the 25<sup>th</sup> percentile work RVU of 2.00 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 2.00 for CPT code 19283.**

**19284 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 48 physicians for CPT code 19284 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19283. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half that of the primary code. Therefore, the RUC determined a work value of 1.00 appropriately values this procedure. Additionally, the RUC determined that this service requires the same physician work and time as 19282 and therefore should be valued the same. For further support the RUC referenced similar service 11046 *Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 1.03), which requires similar physician work and time. **The RUC recommends a work RVU of 1.00 for CPT code 19284.**

**19285 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including ultrasound guidance**

The RUC reviewed the survey results from 101 physicians and determined that the survey 25<sup>th</sup> percentile work RVU of 1.70 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC determined that for this ultrasound guidance service, the patient is typically in the supine position; therefore no additional positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* for 13 minutes evaluation, 1 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC agreed that 20 minutes of pre-service, 15 minutes of intra-service and 15 minutes of immediate post-service time are appropriate for this service. The RUC noted that 19285 typically requires one wire and less intra-service time than 19281 and 19283 and therefore should be valued lower. The RUC compared 19285 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50) and noted that the respondents indicated higher intensity and complexity for the surveyed service, however, both services require 15 minutes of intra-service time. The RUC agreed that this reflects the unique nature of breast interventions. The breast marker placement services are associated with very high patient and family anxiety, which tend to increase the psychological stress of the physician. Although the reference code has the same intra-service time, the physician work is higher, rendering it a more intense service. For additional support, the RUC reviewed MPC code 64483 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT);*

*lumbar or sacral, single level* (work RVU = 1.90) and determined that the 25<sup>th</sup> percentile work RVU of 1.70 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 1.70 for CPT code 19285.**

**19286 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 48 physicians for CPT code 19286 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19285. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 0.85 appropriately values this procedure. For further support the RUC referenced similar service 93565 *Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective left ventricular or left atrial angiography (List separately in addition to code for primary procedure)* (work RVU = 0.86), which requires similar physician work and time. **The RUC recommends a work RVU of 0.85 for CPT code 19286.**

**19287 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including magnetic resonance guidance**

The RUC reviewed the survey results from 64 physicians for CPT code 19287 and determined that the median work RVU of 3.02 appropriately accounts for the work required to perform this service and maintains appropriate relativity within this code family. The RUC determined that for this magnetic resonance guidance service, the patient is typically in the prone position; therefore 2 additional minutes for positioning time is warranted. The RUC agreed that the pre-service package 1A *Facility straightforward patient/procedure (no sedation/anesthesia)* with the positioning adjustment for 13 minutes evaluation, 3 minute positioning and 6 minutes scrub, dress and wait pre-service time is appropriate. The RUC recommends 22 minutes of pre-service, 37 minutes of intra-service and 15 minutes of immediate post-service time for this service. The RUC noted that 19287 is for the primary lesion with multiple clips, typically 3 clips. The RUC compared 19287 to key reference service 36556 *Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older* (work RVU = 2.50 and 15 minutes intra-service time) and determined that the physician work is more intense and complex and requires an additional 22 minutes of intra-service time to complete than the key reference service. For additional support, the RUC reviewed MPC code 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.78 and 30 minutes intra-service time) and determined that the median work RVU of 3.02 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 3.02 for CPT code 19287.**

**19288 Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 40 physicians for CPT code 19288 and determined that the physician work may have been overestimated in relation to the survey responses related to the base code 19287. The RUC discussed the pre-service time associated with this add-on code and determined that 1 minute positioning and 4 minutes scrub, dress and wait of pre-service time are appropriate. The patient must come off of the table to be re-positioned, re-draped and additional anesthesia must be administered for each subsequent lesion. The specialty society indicated and the RUC agreed that the physician work required for each additional lesion is half of that of the primary code. Therefore, the RUC determined a work value of 1.51 appropriately values this procedure. For further support the RUC referenced similar service 31637 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; each additional major bronchus stented (List separately in addition to code for primary procedure)* (work RVU = 1.58), which requires similar physician work and time. **The RUC recommends a work RVU of 1.51 for CPT code 19288.**

### **Practice Expense**

The RUC requested that the specialties clarify the contents of the stereotactic imaging system included as an equipment input in the practice expense. According to the CMS direct PE inputs the *breast biopsy imaging system, stereotactic (imager, table, software)* (EQ075) includes a table used for stereotactic services. The RUC noted a separate input, *table, power* (EF031) is also included in the equipment items and should be removed if a separate table is not necessary to perform the service. Following the meeting, the specialty confirmed that a separate table is not needed and subsequently the *table, power* (EF031) has been removed from the stereotactic services codes. The RUC noted that a *table, exam* (EF023) is included in the equipment inputs for the mammography codes because a table is not included in the *room, mammography* (EL013). The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### **Work Neutrality**

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>General</b>				
10022		Fine needle aspiration, with imaging guidance  (For placement of percutaneous localization <u>device[s]</u> [eg, clip, metallic pellet, during breast biopsy], <del>use 19295, see 19081-19086</del> )  (For radiological supervision and interpretation, see 76942, 77002, 77012, 77021)  (For percutaneous needle biopsy other than fine needle aspiration, see <del>20206</del> <u>19081-19086</u> <del>19081, 19083, 19085</del> , for breast, <u>20206</u> , for muscle, 32400 for pleura, 32405 for lung or mediastinum, 42400 for salivary gland, 47000 for liver, 48102 for pancreas, 49180 for abdominal or retroperitoneal mass, 50200 for kidney, 54500 for testis, 54800 for epididymis, 60100 for thyroid, 62267 for nucleus pulposus, intervertebral disc, or paravertebral tissue, 62269 for spinal cord)  (For evaluation of fine needle aspirate, see 88172, 88173)		
<b>Surgery Integumentary Breast Incision</b>				
19000		Puncture aspiration of cyst of breast;		
19001		each additional cyst (List separately in addition to code for primary procedure)  (Use 19001 in conjunction with 19000)  (If imaging guidance is performed, see 76942, 77021, <del>77031, 77032</del> )		

**Integumentary**  
**Breast**  
**Excision**  
**Surgery**

Excisional breast surgery includes certain biopsy procedures, the removal of cysts or other benign or malignant tumors or lesions, and the surgical treatment of breast and chest wall malignancies. Biopsy procedures may be percutaneous or open, and they involve the removal of differing amounts of tissue for diagnosis.

Breast biopsies, without image guidance are reported with 19100 and 19101. Image-guided breast biopsies including the placement of localization devices when performed are reported using codes 19081-19086. The image-guided placement of localization devices without image-guided biopsy are reported with ~~19100-19103~~19281-19288. When more than one biopsy or localization device placement is performed using the same imaging modality, use an add-on code. If additional biopsies are performed using different imaging modalities, report another primary code for each additional modality. When an open incisional biopsy is performed after image-guided placement of a localization device, 19101 is reported and the appropriate image-guided localization device placement code is reported. The open excision of breast lesions (eg, lesions of the breast ducts, cysts, benign or malignant tumors), without specific attention to adequate surgical margins, with or without the preoperative placement of radiological markers, is reported using codes 19110-19126. Partial mastectomy procedures (eg, lumpectomy, tylectomy, quadrantectomy, or segmentectomy) describe open excisions of breast tissue with specific attention to adequate surgical margins

Partial mastectomy procedures are reported using codes 19301 or 19302 as appropriate. Documentation for partial mastectomy procedures includes attention to the removal of adequate surgical margins surrounding the breast mass or lesion.

Total mastectomy procedures include simple mastectomy, complete mastectomy, subcutaneous mastectomy, modified radical mastectomy, radical mastectomy, and more extended procedures (eg, Urban type operation). Total mastectomy procedures are reported using codes 19303-19307 as appropriate.

Excisions or resections of chest wall tumors including ribs, with or without reconstruction, with or without mediastinal lymphadenectomy, are reported using codes 19260, 19271, or 19272. Codes 19260-19272 are not restricted to breast tumors and are used to report resections of chest wall tumors originating from any chest wall component. (For excision of lung or pleura, see 32310 et seq)

(To report bilateral procedure, report modifier 50 with the procedure code)

●19081	O1	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance	000	3.29
●+19082	O2	each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure) <u>(Use 19082 in conjunction with 19081)</u>	ZZZ	1.65

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 19081      Tracking Number 01      Original Specialty Recommended RVU: **3.80**  
 Presented Recommended RVU: **3.50**  
 Global Period: 000      RUC Recommended RVU: **3.29**

CPT Descriptor: Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 63-year-old asymptomatic female has new indeterminate microcalcifications in the upper-outer quadrant of the right breast. A biopsy is performed using stereotactic guidance.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 10%

**Description of Pre-Service Work:**

- Review medical records and previous imaging and decide on appropriate guidance method and initial approach based on prior imaging.
- Discuss procedure details, including alternatives and risks with the patient and family and obtain informed consent.
- Review set up in the biopsy suite. Perform stereo calibration of the equipment. Supervise initial positioning and preparation of the patient.
- Surgical time out performed.
- Supervise and review initial scout image and stereotactic pair of images. Target the lesion to be biopsied. Transmit coordinates to the biopsy device. If the lesion is not adequately visualized, change patient position and repeat the localizing process.
- Move the needle into appropriate position on the machine. Confirm that coordinates have transmitted correctly.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

**Description of Intra-Service Work:**

- Make a small incision with a scalpel.
- Obtain and review periodic imaging to assure that the biopsy device is accurately positioned. Once needle position is verified, "fire" the needle; verify needle position with an additional stereotactic pair of images.
- Activate vacuum system; remove multiple samples of tissue. Once the tissue is removed, partially withdraw the biopsy device; stereotactically image the biopsy bed to evaluate for sample adequacy.
- Obtain a radiograph of the specimen samples to confirm sampling adequacy.

- If additional tissue is deemed necessary, retarget the lesion, re-advance the needle to the lesion, and obtain additional tissue. Obtain an additional radiograph of the new specimen samples and an additional stereotactic set of images of the biopsy bed. Repeat until the physician is convinced that an adequate sample has been obtained for the pathologist.
- Once adequate sampling has been determined, place a marker into the breast through the stereotactic needle system to mark the site of biopsy.
- Obtain stereotactic images after marker deployment.
- Review post-marker placement stereotactic images for successful deployment.
- Withdraw the needle and obtain hemostasis with manual compression over the biopsy site.
- Close the skin incision with steri-strips.

Description of Post-Service Work:

- Apply dressing.
- Monitor the patient's condition prior to discharge including wound check.
- Review post-procedure wound care and activity level instructions with the patient and her family.
- A formal report of the procedure is dictated into the permanent medical record.
- The results and further management are discussed with the patient and their family, as well as the requesting physician.
- Review and sign procedure report.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

### Biopsy Codes (19081-19086)

#### Compelling Evidence

The Society recommendations detailed below satisfy budget neutrality requirements, so compelling evidence arguments are not required. However, the societies would like to point out that since the original breast biopsy codes were developed, advances in imaging guidance have made it possible to target and sample progressively smaller and more subtle lesions. Lesions that previously were impossible to biopsy by stereotactic guidance are now routinely performed. Similar advancements in ultrasound and MRI technology have allowed sampling of lesions that previously needed open surgical biopsy for diagnosis.

CPT code 19081 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance*) describes image guided breast biopsy of a first lesion utilizing stereotactic imaging guidance including the placement of a breast localizing device(s) and imaging of the biopsy specimen, when performed. This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance	3.69
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation	1.59
<b>76098</b>	Radiological examination, surgical specimen	0.16
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)	0.00

#### Work RVU Recommendation

The expert panel recommends the median RVU of 3.80 RVUs which is below the RVUs for the combination of codes currently used to report this service.

#### Pre-Service Time

The expert panel recommends pre-service package 1a (Straightforward Patient/Straightforward Procedure (No sedation/anesthesia care)) with the following adjustments:

(1) Increase the total pre-service evaluation time by 5 minutes to 18 minutes total to accommodate an extra 3 minutes necessary for "history and exam (Performance and review of appropriate pre-tests) and an additional 2 minutes for "Communicate with patient and/or family (Discuss procedure / obtain consent)". Patients undergoing stereotactic breast biopsy typically have a large number of prior examinations which must be reviewed in detail including prior screening mammography, diagnostic mammography, diagnostic ultrasound, prior biopsies and clip placements. Moreover, a careful review of the prior pathology, previous medical and surgical treatment and planned therapy is performed. It is incumbent on the performing physician to review the entire breast imaging record prior to the biopsy being performed including imaging of the opposite breast. These patients are often well informed women appropriately requiring and expecting detailed discussion of the expected course and outcome. Unlike other biopsies performed elsewhere in the body, there is high anxiety, both because the biopsy is often unanticipated and because it involves the breast. For these reasons, breast biopsy patients have more anxiety, have more questions, and frequently bring multiple family members to the consent, which increases time to address all of their needs as well.

(2) Increase the positioning time by 2 minutes to 3 minutes to accommodate the additional time necessary to optimally position these patients on the stereotactic table and ensure that operator and imaging equipment are likewise well positioned relative to the patient. Further, it is reasonable to conclude that survey respondents would consider imaging to localize the mass and guide skin prep prior to biopsy to be considered pre-service work.

### Intra and Post Service Times

We are recommending the median intra and post-service times of 30 and 15 minutes, respectively.

### Comparison to Key Reference Service

The panel would like to point out that many of our survey respondents practice nearly 100% breast imaging. Since the surveyed code family essentially includes all of the 0 day global services this survey population performs, respondents may have struggled to find a 0 day global reference service they commonly perform. Nonetheless, the most commonly chosen KRS is 37191 (*Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed*) which has the same intra-service time of 30 minutes but higher RVUs of 4.71. Both of these procedures include imaging guidance, and while 37191 scored higher or equal to 19081 on most complexity measures, 19081 scored higher on all 3 measures assessing psychological stress, including the estimated risk of a malpractice suit with a poor outcome. This reflects the unique nature of breast interventions. These procedures are associated with very high patient and family anxiety, which tends to increase the psychological stress of the physician performing the exam. Additionally, these types of exams have a higher frequency to be associated with malpractice suits, which adds to the stress as well.

Our recommendation yields an IWPUT of 0.0982, reflecting the intensity of this procedure in this subset of patients. Indeed, the patient is laying prone with her breast in compression throughout the intra service period of this procedure. The stereotactic table is inherently uncomfortable leading to frequent complaints of neck and shoulder pain during the procedure as time passes. Due to the need for the patient to remain fully aware and not move even a few millimeters, the atmosphere in the room can become quite tense. Calcifications which are readily visible on a high resolution digital mammogram are often poorly seen on the much lower resolution screen of the stereotactic machine. In addition, surrounding landmarks are often not visible in the much smaller field of view. This can lead to multiple changes of patient position which can be very unsettling for the patient and increase pressure on the physician thus increasing the intensity of the procedure.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
<b>19081</b>	<b>3.29</b>	<b>13</b>	<b>3</b>	<b>6</b>	<b>23</b>	<b>30</b>	<b>15</b>		
37191	4.71	30	3	5	38	30	15	83	0.1198

### MPC Comparison

Our recommendation is bracketed in both RVUs and intra-service time by two MPC codes, 15002 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children*) and 31628 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
15002	3.65	45	15	15	75	20	20	115	0.0868
<b>19081</b>	<b>3.29</b>	<b>13</b>	<b>3</b>	<b>6</b>	<b>23</b>	<b>30</b>	<b>15</b>		
31628	3.80	10	10	10	30	40	20	90	0.0706

### Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of breast biopsy codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

### Conclusion

In summary, the panel recommends the median survey value of 3.80 RVU. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided, and within the larger family of breast intervention codes.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19103, 77031, 76098, 19295

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty General Surgery                              How often? Commonly

Specialty    How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We are unable to accurately estimate the number of times this service might be provided nationally in a one year period.

Specialty	Frequency 0	Percentage 0.00 %

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 19082	Tracking Number O2	Original Specialty Recommended RVU: <b>1.90</b>
		Presented Recommended RVU: <b>1.90</b>
Global Period: ZZZ		RUC Recommended RVU: <b>1.65</b>

CPT Descriptor: Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 72-year-old asymptomatic female has new segmental coarse heterogenous microcalcifications in the upper outer quadrant of the right breast, and a separate cluster of linear pleomorphic microcalcifications in the lower outer quadrant of the right breast. Stereotactic-guided biopsy of the second cluster of calcifications in the lower outer breast is performed after initial stereotactic biopsy of the calcifications in the upper outer breast. (Initial biopsy reported separately, using 19081)

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 16%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 17%

**Description of Pre-Service Work:**

- Reposition patient back into the stereotactic biopsy system.
- Target second separate lesion. Supervise and review scout image and stereotactic pair of images. Transmit coordinates to the biopsy device. If the lesion is not adequately visualized, change patient position and repeat the localizing process.
- Move the needle into appropriate position on the machine.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

**Description of Intra-Service Work:**

- Make a small incision with a scalpel.
- Obtain and review periodic imaging to assure accurate positioning of the biopsy device. Once needle position is verified, "fire" the needle; verify its position with a stereotactic pair of images.
- Activate vacuum system. Remove multiple samples of tissue. Once the tissue is removed, partially withdraw the biopsy device; stereotactically image the biopsy bed to evaluate for sample adequacy.
- Obtain a radiograph of the specimen samples to determine sampling adequacy.
- If additional tissue is deemed necessary, retarget the lesion, re-advance the needle to the lesion, and obtain additional tissue. Obtain an additional radiograph of the new specimen samples and an additional stereotactic set of images of the biopsy bed. This is repeated until the physician is convinced that an adequate sample has been obtained for the pathologist.

- Once adequate sampling has been determined, place a marker into the breast through the stereotactic needle system to mark the site of biopsy.
- Obtain stereotactic images after marker deployment.
- Review post-marker placement stereotactic images for successful deployment.
- Withdraw the needle and obtain hemostasis with manual compression over the biopsy site.
- Close the skin incision with steri-strips.

Description of Post-Service Work:

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

### Biopsy Codes (19081-19086)

### Compelling Evidence

The Society recommendations detailed below satisfy budget neutrality requirements, so compelling evidence arguments are not required. However, the societies would like to point out that since the original breast biopsy codes were developed, advances in imaging guidance have made it possible to target and sample progressively smaller and more subtle lesions. Lesions that previously were impossible to biopsy by stereotactic guidance are now routinely performed. Similar advancements in ultrasound and MRI technology have allowed sampling of lesions that previously needed open surgical biopsy for diagnosis.

CPT code 19082 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)*) describes image guided breast biopsy of each additional lesion utilizing stereotactic imaging guidance including the placement of a breast localizing device and imaging of the biopsy specimen, when performed. Currently, these are typically performed using multiple localization wires to “bracket” the lesion. Depending on lesion morphology, this procedure can involve placement of 1-4 wires, with 2 being most typical. This CPT code was designed to utilize a single CPT code, reported only once, regardless of the number or type of markers placed in or around a second separate lesion under stereotactic guidance. This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19103-51</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance	1.85
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation	1.59
<b>76098</b>	Radiological examination, surgical specimen	0.16
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)	0.00

### Work RVU Recommendation

The expert panel recommends a work RVU of 1.90 RVUs which is of half the recommended value of 19081, the base code with which add on code 19082 will be reported. The intra-service time for these 2 codes is nearly identical (30 vs. 25 minutes)

suggesting the application of the surgical MPPR to reach our recommendation is appropriate. Our recommendation is below the 25th percentile of our survey and below the existing value of the four codes currently used to describe this service.

### Pre and Post-Service Time

The respondents indicated 5 minutes of pre service time and 5 minutes of post service time for this ZZZ add-on code. The expert panel attributes this time to the following activities which occur after and in addition to similar activities involved in treating the 1<sup>st</sup> lesion

pre-service activities:

- Target second separate lesion. Supervise and review scout image and stereotactic pair of images. Transmit coordinates to the biopsy device. If the lesion is not adequately visualized, change patient position and repeat the localizing process.
- Move the needle into appropriate position on the machine.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

and post-service activities:

- Apply dressing.

### Intra Service Time

We are recommending the median intra service time of 25 minutes which is slightly less than the 30 minutes of intra-service time for the base code, 191081, with which this ZZZ code is reported. The panel again points out that treating the second lesion involves completely new skin preparation, lesion localization, biopsy, wound dressing and recovery. If it is concluded that our recommended pre and post times are not appropriate for this ZZZ code, we suggest adding those minutes to the intra-service work since survey respondents could have easily shifted what is otherwise intra-service time to the pre and post service periods.

### Comparison to Key Reference Service

The panel would like to point out that many of our survey respondents practice nearly 100% breast imaging. Since the surveyed code family essentially includes all of the services this survey population performs, respondents may have struggled to find a ZZZ day global KRS they commonly perform. Nonetheless, the most commonly chosen KRS is 36479 (*Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; second and subsequent veins treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)*) which has a higher RVU of 3.38 and a longer intra service time of 45 minutes and, hence, a higher RVU.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
<b>19082</b>	<b>1.65</b>	<b>0</b>	<b>1</b>	<b>4</b>	<b>5</b>	<b>25</b>	<b>0</b>	<b>30</b>	
36479	3.38					45		45	0.0750

### MPC Comparison

Our recommendation is bracketed in both RVUs and intra-service time by two ZZZ MPC codes, 64480 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)*) and 99292 (*Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
64480	1.20					15		15	0.0800
<b>19082</b>	<b>1.65</b>	<b>0</b>	<b>1</b>	<b>4</b>	<b>5</b>	<b>25</b>	<b>0</b>	<b>30</b>	
99292	2.25					30		30	0.0750

### Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of breast biopsy codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

**Conclusion**

In summary, the panel recommends an RVU of 1.90, half the value of the base code with which this code will be reported. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided and within the larger family of breast biopsy codes.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19103-51, 76098, 19295, 77031

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty General Surgery                              How often? Commonly

Specialty    How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We are unable to accurately estimate the number of times this service might be provided nationally in a one year period.

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 64480

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 19083      Tracking Number 03      Original Specialty Recommended RVU: **3.10**  
 Presented Recommended RVU: **3.10**  
 Global Period: 000      RUC Recommended RVU: **3.10**

CPT Descriptor: Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including ultrasound guidance

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 58-year-old asymptomatic female has an indeterminate hypo-echoic mass demonstrated on ultrasound in the left breast with irregular margins and posterior acoustic shadowing. A biopsy is performed using ultrasound guidance.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 10%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 10%

**Description of Pre-Service Work:**

- Review medical records and previous imaging and decide on appropriate guidance method and initial approach based on prior imaging.
- Discuss procedure details, including alternatives and risks with the patient and family and obtain informed consent.
- Review set up in the biopsy suite. Ensure accurate calibration of the equipment. Supervise positioning and preparation of the patient.
- Surgical time out performed.
- Position patient on the ultrasound table to best localize the lesion. Reimage sonographically to confirm adequate lesion visualization and approach to lesion.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

**Description of Intra-Service Work:**

- Make a small incision with a scalpel.
- Under ultrasound visualization, move the tip of the biopsy needle to the edge of the lesion. Once needle position is verified, “fire” the needle. Obtain pre-fire and post-fire images.
- Activate vacuum system. While watching with ultrasound, obtain a series of samples through the lesion until the lesion is determined to be adequately sampled by the physician.
- Once adequate sampling has been determined, place a marker into the breast utilizing ultrasound guidance to mark the site of biopsy. Document marker deployment with an ultrasound image.
- Withdraw the needle and obtain hemostasis with manual compression over the biopsy site.
- Close the skin incision with steri-strips

Description of Post-Service Work:

- Apply dressing.
- Monitor the patient's condition prior to discharge including wound check.
- Review post-procedure wound care and activity level instructions with the patient and her family.
- A formal report of the procedure is dictated into the permanent medical record.
- The results and further management are discussed with the patient and their family, as well as the requesting physician.
- Review and sign procedure report.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

### Biopsy Codes (19081-19086)

#### Compelling Evidence

The Society recommendations detailed below satisfy budget neutrality requirements, so compelling evidence arguments are not required. However, the societies would like to point out that since the original breast biopsy codes were developed, advances in imaging guidance have made it possible to target and sample progressively smaller and more subtle lesions. Lesions that previously were impossible to biopsy by stereotactic guidance are now routinely performed. Similar advancements in ultrasound and MRI technology have allowed sampling of lesions that previously needed open surgical biopsy for diagnosis.

CPT code 19083 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including ultrasound guidance*) describes image guided breast biopsy of a first lesion utilizing ultrasound imaging guidance including the placement of a breast localizing device(s) and imaging of the biopsy specimen, when performed.

This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance	3.69
<b>76942</b>	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation	0.67
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)	0.00

#### Work RVU Recommendation

The expert panel recommends the median survey RVU of 3.10. This is below the existing value of the three codes currently used to describe this service.

#### Pre-Service Time

The expert panel recommends pre-service package 1a (Straightforward Patient/Straightforward Procedure (No sedation/anesthesia care)) with the following adjustments:

(1) Increase the total pre-service evaluation time by 5 minutes to 18 minutes total to accommodate an extra 3 minutes necessary for "history and exam (Performance and review of appropriate pre-tests) and an additional 2 minutes for "Communicate with patient and/or family (Discuss procedure / obtain consent)". Patients undergoing ultrasound breast biopsy typically have a number of prior examinations which must be reviewed in detail including prior screening mammography, diagnostic mammography, diagnostic ultrasound, prior biopsies and clip placements. Moreover, a careful review of the prior pathology, previous medical and surgical treatment and planned therapy is performed. It is incumbent on the performing physician to review the entire breast imaging record prior to the biopsy being performed including imaging of the opposite breast. These patients are often well informed women appropriately requiring and expecting detailed discussion of the expected course and outcome. Unlike other biopsies performed elsewhere in the body, there is high anxiety, both because the biopsy is often unanticipated and because it involves the breast. For these reasons, breast biopsy patients have more anxiety, have more questions, and frequently bring multiple family members to the consent, which increases time to address all of their needs as well.

(2) Increase the positioning time by 2 minutes to 3 minutes to accommodate the additional time necessary to optimally position these patients on the ultrasound table and ensure that operator and imaging equipment are likewise well positioned relative to the patient. Further, it is reasonable to conclude that survey respondents would consider imaging to localize the mass and guide skin prep prior to biopsy to be considered pre-service work.

### Intra and Post Service Times

We are recommending the median intra and post-service times of 25 and 15 minutes, respectively.

### Comparison to Key Reference Service

The panel would like to point out that many of our survey respondents practice nearly 100% breast imaging. Since the surveyed code family essentially includes all of the 0 day global services this survey population performs, respondents may have struggled to find a 0 day global reference service they commonly perform. Nonetheless, the most commonly chosen KRS is 37191 (*Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed*), which has slightly higher intra-service time of 30 minutes but also higher RVUs of 4.71. 37191 also scored higher than 19083 on most complexity measures. This reflects the unique nature of breast interventions. These procedures are associated with very high patient and family anxiety, which tends to increase the psychological stress of the physician performing the exam. Additionally, these types of exams have a higher frequency to be associated with malpractice suits, which adds to the stress as well.

Our recommendation yields an IWP/UT of 0.0898, reflecting the intensity of this procedure in this subset of patients. Due to the need for the patient to remain fully aware and not move even a few millimeters, the atmosphere in the room can become quite tense. The patient is typically able to view the, large biopsy device entering her breast which makes many patients very anxious. Some lesions can be quite mobile both initially and after local anesthesia administration leading to difficulty localizing the lesion which can add to the anxiety.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWP/UT
<b>19083</b>	<b>3.10</b>	<b>13</b>	<b>1</b>	<b>5</b>	<b>19</b>	<b>25</b>	<b>15</b>		
37191	4.71	30	3	5	38	30	15	83	0.1198

### MPC Comparison

Our recommendation is bracketed in both RVUs and intra-service time by two MPC codes, 15002 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children*) and 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWP/UT
31622	2.78	10	5	5	30	30	15	65	0.0688

<b>19083</b>	<b>3.10</b>	<b>13</b>	<b>1</b>	<b>5</b>	<b>19</b>	<b>25</b>	<b>15</b>		
15002	3.65	45	15	15	75	20	20	115	0.0868

### Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of breast biopsy codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

### Conclusion

In summary, the panel recommends the median survey value for the base surgical code of 3.10 RVU. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided, and within the larger family of breast intervention codes.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19103, 19295, 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty General Surgery                              How often? Commonly

Specialty    How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We are unable to accurately estimate the number of times this service might be provided nationally in a one year period.

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
108,668 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. see work neutrality estimates.

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 32551

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 19084      Tracking Number 04      Original Specialty Recommended RVU: **1.55**  
 Presented Recommended RVU: **1.55**  
 Global Period: ZZZ      RUC Recommended RVU: **1.55**

CPT Descriptor: Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year old female has two indeterminate nodules seen in the right breast on ultrasound at the 10 o'clock and 2 o'clock locations. Ultrasound-guided biopsy of the lesion at 2 o'clock is performed after initial ultrasound-guided biopsy of the lesion at 10 o'clock. (Initial biopsy reported separately, using 19083)

Percentage of Survey Respondents who found Vignette to be Typical: 92%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 16%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 17%

### Description of Pre-Service Work:

- Reposition the patient as needed to optimally target second lesion.
- Target second separate lesion. Position patient on the ultrasound table to best localize the lesion.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

### Description of Intra-Service Work:

- Make a small incision with a scalpel.
- Under ultrasound visualization, move the tip of the needle to the edge of the lesion. Once needle position is verified, "fire" the needle. Obtain pre-fire and post-fire images.
- Activate vacuum system. While watching with ultrasound, obtain a series of samples through the lesion until the lesion is determined to be adequately sampled by the physician.
- Once adequate sampling has been determined, place a marker into the breast utilizing ultrasound guidance to mark the site of biopsy. Document marker deployment with an ultrasound image.
- Withdraw the needle and obtain hemostasis with manual compression over the biopsy site.
- Close the skin incision with steri-strips

### Description of Post-Service Work:

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

### Biopsy Codes (19081-19086)

#### Compelling Evidence

The Society recommendations detailed below satisfy budget neutrality requirements, so compelling evidence arguments are not required. However, the societies would like to point out that since the original breast biopsy codes were developed, advances in imaging guidance have made it possible to target and sample progressively smaller and more subtle lesions. Lesions that previously were impossible to biopsy by stereotactic guidance are now routinely performed. Similar advancements in ultrasound and MRI technology have allowed sampling of lesions that previously needed open surgical biopsy for diagnosis.

CPT code 19084 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)*) describes image guided breast biopsy of each additional lesion utilizing ultrasound imaging guidance including the placement of a breast localizing device and imaging of the biopsy specimen, when performed. Currently, these are typically performed using multiple localization wires to “bracket” the lesion. Depending on lesion morphology, this procedure can involve placement of 1-4 wires, with 2 being most typical. This CPT code was designed to utilize a single CPT code, reported only once, regardless of the number or type of markers placed in or around a second separate lesion under ultrasound guidance. This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19103-51</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance	1.85
<b>76942</b>	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation	0.67
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)	0.00

#### Work RVU Recommendation

The expert panel recommends a work RVU of 1.55, which is half the recommended value of 19083 the base code with which add-on code 19084 will be reported. The intra-service time for these 2 codes is nearly identical (25 vs. 20 minutes), suggesting the application of the surgical MPPR to reach our recommendation is appropriate. Our recommendation is below the 25th percentile of our survey and below the existing value of the three codes currently used to describe this service.

#### Pre and Post-Service Time

The respondents indicated 5 minutes of pre service time and 5 minutes of post service time for this ZZZ add-on code. The expert panel attributes this time to the following activities which occur after and in addition to similar activities involved in treating the 1<sup>st</sup> lesion.

pre-service activities:

- Target second separate lesion. Position patient on the ultrasound table to best localize the lesion.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

and post-service activities:

- Apply dressing.

### Intra Service Time

We are recommending the median intra service time of 20 minutes which is slightly less than the 25 minutes of intra-service time for the base code, 191XX3, with which this ZZZ code is reported. The panel again points out that treating the second lesion involves completely new skin preparation, lesion localization, biopsy, wound dressing and recovery. If it is concluded that our recommended pre and post times are not appropriate for this ZZZ code, we suggest adding those minutes to the intra-service work since survey respondents could have easily shifted what is otherwise intra-service time to the pre and post service periods.

### Comparison to Key Reference Service

The panel would like to point out that many of our survey respondents practice nearly 100% breast imaging. Since the surveyed code family essentially includes all of the services this survey population performs, respondents may have struggled to find a ZZZ day global KRS they commonly perform. Nonetheless, the most commonly chosen KRS is 36479 (*Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; second and subsequent veins treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)*) which has a higher RVU of 3.38 and a longer intra service time of 45 minutes and, hence, a higher RVU.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
<b>19084</b>	<b>1.55</b>		<b>1</b>	<b>4</b>	<b>5</b>	<b>20</b>		<b>25</b>	
36479	3.38					45		45	0.0750

### MPC Comparison

Our recommendation is bracketed in both RVUs and intra-service time by two ZZZ MPC codes, 64480 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)*) and 99292 (*Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
64480	1.20					15		15	0.0800
<b>19084</b>	<b>1.55</b>		<b>1</b>	<b>4</b>	<b>5</b>	<b>20</b>		<b>25</b>	
99292	2.25					30		30	0.0750

### Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of breast biopsy codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

### Conclusion

In summary, the panel recommends an RVU of 1.55, half the value of the base code with which this code will be reported. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided and within the larger family of breast biopsy codes.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19103-51, 19295, 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty General Surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. unable to estimate

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

10,812 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. see work neutrality estimates

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 64480

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 19085      Tracking Number 05      Original Specialty Recommended RVU: **3.64**  
 Presented Recommended RVU: **3.64**  
 Global Period: 000      RUC Recommended RVU: **3.64**

CPT Descriptor: Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 49-year-old female has recently been diagnosed with invasive ductal carcinoma in the right breast. Pre-operative MRI demonstrates a small indeterminate nodule in the left breast upper outer quadrant with suspicious enhancement characteristics. MRI-guided biopsy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 18%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 21%

**Description of Pre-Service Work:**

- Review medical records and previous imaging and decide on appropriate guidance method and initial approach based on prior imaging.
- Discuss procedure details, including alternatives and risks with the patient and family and obtain informed consent.
- Review set up in the biopsy suite. Ensure accurate calibration of the equipment. Supervise positioning and preparation of the patient.
- Surgical time out performed.
- Supervise and review initial magnetic resonance sequences and target the lesion to be biopsied. Transmit coordinates to work station. Choose grid coordinates.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

**Description of Intra-Service Work:**

- Make a small incision with a scalpel.
- Move the trocar into appropriate position. Confirm placement with MR imaging. Adjust as necessary.
- Advance vacuum assisted needle system through trocar. After proper position is obtained, remove multiple samples of tissue. Remove biopsy device and image the biopsy bed with MRI to evaluate for sample adequacy.
- If additional tissue is deemed necessary, retarget the lesion, reposition the trocar, re-advance the needle to the lesion, and obtain additional tissue. Obtain an additional set of MRI images of the biopsy bed. This is repeated until the physician is convinced that an adequate sample has been obtained for the pathologist.
- Once adequate sampling has been determined, place a marker into the breast through the MRI trocar system to mark the site of biopsy.

- Obtain MRI images of biopsy bed after marker deployment.
- Review post-marker placement images for successful deployment.
- Withdraw the trocar and obtain hemostasis with manual compression over the biopsy site.
- Close the skin incision with steri-strips.

Description of Post-Service Work:

- Apply dressing.
- Monitor the patient's condition prior to discharge including wound check.
- Review post-procedure wound care and activity level instructions with the patient and her family.
- A formal report of the procedure is dictated into the permanent medical record.
- The results and further management are discussed with the patient and their family, as well as the requesting physician.
- Review and sign procedure report.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

### Biopsy Codes (19081-19086)

#### Compelling Evidence

The Society recommendations detailed below satisfy budget neutrality requirements, so compelling evidence arguments are not required. However, the societies would like to point out that since the original breast biopsy codes were developed, advances in imaging guidance have made it possible to target and sample progressively smaller and more subtle lesions. Lesions that previously were impossible to biopsy by stereotactic guidance are now routinely performed. Similar advancements in ultrasound and MRI technology have allowed sampling of lesions that previously needed open surgical biopsy for diagnosis.

CPT code 19085 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance*) describes image guided breast biopsy of a first lesion utilizing magnetic resonance imaging guidance including the placement of a breast localizing device(s) and imaging of the biopsy specimen, when performed. This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance	3.69
<b>77021</b>	Magnetic resonance guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation	1.50
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)	0.00

#### Work RVU Recommendation

**The expert panel recommends** the median survey RVU of 3.64. This is below the existing value of the three codes currently used to describe this service.

#### Pre-Service Time

The expert panel recommends pre-service package 1a (Straightforward Patient/Straightforward Procedure (No sedation/anesthesia care)) with the following adjustments:

(1) Increase the total pre-service evaluation time by 5 minutes to 18 minutes total to accommodate an extra 3 minutes necessary for "history and exam (Performance and review of appropriate pre-tests) and an additional 2 minutes for "Communicate with patient and/or family (Discuss procedure / obtain consent)". Patients undergoing magnetic resonance (MR) breast biopsy typically have a large number of prior examinations which must be reviewed in detail including prior screening mammography, diagnostic mammography, diagnostic ultrasound, prior biopsies and clip placements. Moreover, a careful review of the prior pathology, previous medical and surgical treatment and planned therapy is performed. It is incumbent on the performing physician to review the entire breast imaging record prior to the biopsy being performed including imaging of the opposite breast. These patients are often well informed women appropriately requiring and expecting detailed discussion of the expected course and outcome. Unlike other biopsies performed elsewhere in the body, there is high anxiety, both because the biopsy is often unanticipated and because it involves the breast. For these reasons, breast biopsy patients have more anxiety, have more questions, and frequently bring multiple family members to the consent, which increases time to address all of their needs as well.

(2) Increase the positioning time by 2 minutes to 3 minutes to accommodate the additional time necessary to optimally position these patients on the MR table and ensure that operator and imaging equipment are likewise well positioned relative to the patient. Further, it is reasonable to conclude that survey respondents would consider imaging to localize the mass and guide skin prep prior to biopsy to be considered pre-service work.

### Intra and Post Service Times

We are recommending the median intra and post-service times of 45 and 15 minutes, respectively. The intraservice time for MRI guided procedures is longer than for stereotactic biopsies because of the time needed to image after each step which is several minutes.

### Comparison to Key Reference Service

The panel would like to point out that many of our survey respondents practice nearly 100% breast imaging. Since the surveyed code family essentially includes all of the 0 day global services this survey population performs, respondents may have struggled to find a 0 day global reference service they commonly perform. Nonetheless, the most commonly chosen KRS is 49411 (*Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple*), which has slightly lower intra-service time of 40 minutes but also higher RVUs of 3.82. 49411 and 19085 were equal on four complexity measures, with 49411 showing higher complexity also on four other measures. This reflects the unique nature of breast interventions. These procedures are associated with very high patient and family anxiety, which tends to increase the psychological stress of the physician performing the exam. Additionally, these types of exams have a higher frequency to be associated with malpractice suits, which adds to the stress as well.

Our recommendation yields an IWPUT of 0.0619, reflecting the intensity of this procedure in this subset of patients. Indeed, the patient is laying prone with her breast immobilized throughout the intra service period of this procedure. The MR table is inherently uncomfortable leading to frequent complaints of neck and shoulder pain during the procedure as time passes. Due to the need for the patient to remain fully aware and not move even a few millimeters, the atmosphere in the room can become quite tense. The images for the biopsy are performed on a biopsy device rather than a dedicated breast coil and as such correlating the lesion to be biopsied to the initial lesion of concern can be challenging especially for very small lesions which are typically the ones for which MRI has to be performed since they cannot be visualized sonographically. Many patients have feelings of claustrophobia even if they are actually able to tolerate the machine, which increases the anxiety level of the patient and the pressure on the physician thus increasing the intensity of the procedure.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
49411	3.82	19	1	5	25	40	20	85	0.0721

### MPC Comparison

Our recommendation compares favorably to two MPC codes both of which have similar RVUs but less intra-service time: 15002 (*Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children*) and 31628 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
15002	3.65	45	15	15	75	20	20	115	0.0868
31628	3.80	10	10	10	30	40	20	90	0.0706

### Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of breast biopsy codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

#### Conclusion

In summary, the panel recommends the median survey value for the base surgical code of 3.64 RVU. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided, and within the larger family of breast intervention codes.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19103, 19295, 77021

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We are unable to accurately estimate the number of times this service might be provided nationally in a one year period.

Specialty	Frequency 0	Percentage 0.00 %

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 36565

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 19086      Tracking Number 06      Original Specialty Recommended RVU: **1.82**  
 Presented Recommended RVU: **1.82**  
 Global Period: ZZZ      RUC Recommended RVU: **1.82**

CPT Descriptor: Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 58-year-old female has recently been diagnosed with invasive ductal carcinoma in the right breast. Pre-operative MRI demonstrates a small nodule in the left breast upper-outer quadrant with suspicious enhancement characteristics, and a second separate similar mass in the left breast upper-inner quadrant. The nodule in the left upper-inner quadrant is biopsied under MRI-guidance after initial MRI-guided biopsy of the nodule in the left upper-outer quadrant. (Initial biopsy reported separately, using 19085)

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 22%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 22%

**Description of Pre-Service Work:**

- Reposition patient back into the MRI biopsy system.
- Target second separate lesion. Supervise and review initial magnetic resonance sequences and target the lesion to be biopsied. Transmit coordinates to work station. Choose grid coordinates.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

**Description of Intra-Service Work:**

- Make a small incision with a scalpel.
- Move the trocar into appropriate position. Confirm placement with MR imaging. Adjust as necessary.
- Advance vacuum-assisted needle system through trocar. After proper position is obtained, remove multiple samples of tissue. Remove biopsy device and image the biopsy bed with MRI to evaluate for sample adequacy.
- If additional tissue is deemed necessary, retarget the lesion, reposition the trocar, re-advance the needle to the lesion, and obtain additional tissue. Obtain an additional set of MRI images of the biopsy bed. This is repeated until the physician is convinced that an adequate sample has been obtained for the pathologist.
- Once adequate sampling has been determined, place a marker into the breast through the MRI trocar system to mark the site of biopsy.
- Obtain MRI images of biopsy bed after marker deployment.
- Review post-marker placement images for successful deployment.

- Withdraw the trocar and obtain hemostasis with manual compression over the biopsy site.
- Close the skin incision with steri-strips.

Description of Post-Service Work:

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

#### **Biopsy Codes (19081-19086)**

##### **Compelling Evidence**

The Society recommendations detailed below satisfy budget neutrality requirements, so compelling evidence arguments are not required. However, the societies would like to point out that since the original breast biopsy codes were developed, advances in imaging guidance have made it possible to target and sample progressively smaller and more subtle lesions. Lesions that previously were impossible to biopsy by stereotactic guidance are now routinely performed. Similar advancements in ultrasound and MRI technology have allowed sampling of lesions that previously needed open surgical biopsy for diagnosis.

CPT code 19086 (*Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)*) describes image guided breast biopsy of each additional lesion utilizing magnetic resonance imaging guidance including the placement of a breast localizing device and imaging of the biopsy specimen, when performed. Currently, these are typically performed using multiple localization wires to “bracket” the lesion. Depending on lesion morphology, this procedure can involve placement of 1-4 wires, with 2 being most typical. This CPT code was designed to utilize a single CPT code, reported only once, regardless of the number or type of markers placed in or around a second separate lesion under MRI guidance. This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19103-51</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance	1.85
<b>77021</b>	Magnetic resonance guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation	1.50
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)	0.00

## Work RVU Recommendation

The expert panel recommends a work RVU value of 1.82, which is half the recommended value of 19085, the base code with which add-on code 19086 will be reported. The intra-service time for these 2 codes is nearly identical (45 vs. 38 minutes), suggesting the application of the surgical MPPR to reach our recommendation is appropriate. Our recommendation is close to the 25th percentile of our survey and below the existing value of the three codes currently used to describe this service.

## Pre and Post-Service Time

The respondents indicated 6 minutes of pre service time and 6 minutes of post service time for this ZZZ add-on code; the specialties are recommending 5 minutes of pre and post time to maintain consistency across the add-on codes. The expert panel attributes this time to the following activities which occur after and in addition to similar activities involved in treating the 1<sup>st</sup> lesion

pre-service activities:

- Target second separate lesion. Supervise and review initial magnetic resonance sequences and target the lesion to be biopsied. Transmit coordinates to work station. Choose grid coordinates.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia.

and post-service activities:

- Apply dressing.

## Intra Service Time

We are recommending the median intra service time of 38 minutes, which is slightly less than the 45 minutes of intra-service time for the base code, 191XX5, with which this ZZZ code is reported. The panel again points out that treating the second lesion involves completely new skin preparation, lesion localization, biopsy, wound dressing and recovery. If it is concluded that our recommended pre and post times are not appropriate for this ZZZ code, we suggest adding those minutes to the intra-service work since survey respondents could have easily shifted what is otherwise intra-service time to the pre and post service periods.

## Comparison to Key Reference Service

The most commonly chosen KRS is 76812 (*Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation plus detailed fetal anatomic examination, transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)*) which has a lower RVU of 1.78 and a shorter intra service time of 25 minutes.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
76812	1.78					25		25	0.0712

## MPC Comparison

Our recommendation is bracketed in RVUs by two ZZZ MPC codes, both of which have shorter intra-service times: 64480 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)*) and 99292 (*Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
64480	1.20					15		15	0.0800
99292	2.25					30		30	0.0750

### Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of breast biopsy codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

### Conclusion

In summary, the panel recommends an RVU of 1.82, half the value of the base code with which this code will be reported. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided, and within the larger family of breast biopsy codes.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19103-51, 19295, 77021

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We are unable to accurately estimate the number of times this service might be provided nationally in a one year period.

Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 76812

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 19281      Tracking Number 07      Original Specialty Recommended RVU: **2.00**  
 Presented Recommended RVU: **2.00**  
 Global Period: 000      RUC Recommended RVU: **2.00**

CPT Descriptor: Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including mammographic guidance

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70-year-old female has recently had invasive ductal carcinoma in the upper-outer quadrant of the right breast diagnosed using stereotactic core biopsy and is a candidate for breast conservation surgery. Trailing microcalcifications are seen in two directions from original biopsy site. A dual-wire/needle localization is performed under mammographic guidance to bracket the lesion for surgical planning.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

- Review medical records and previous imaging and decide on appropriate guidance method and initial approach based on prior imaging.
- Discuss procedure details, including alternatives and risks with the patient and family and obtain informed consent.
- Review set up in the procedure suite. Ensure accurate calibration of the equipment. Supervise positioning and preparation of the patient.
- Surgical time out performed.
- Obtain initial mammographic image. Determine coordinates for marker placement.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia at each marker insertion site.

**Description of Intra-Service Work:**

- Advance introducer(s) to site(s) bracketing lesion. Obtain mammographic images in orthogonal planes to confirm location.
- Deploy marker(s). Obtain post-deployment mammographic images to confirm adequacy.
- Annotate images.
- Secure markers as needed.

**Description of Post-Service Work:**

- Cover area with sterile dressing. Confirm patient stability. Transfer patient and marked images to pre-surgical area.

- A formal report of the procedure is dictated into the permanent medical record.
- The results and further management are discussed with the patient and their family, as well as the requesting physician.
- Review and sign procedure report.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Several breast intervention codes were identified by the 75% screen including the following:

Code	Descriptor
<b>19103</b>	Biopsy of breast; percutaneous, automated vacuum assisted or rotating biopsy device, using imaging guidance
<b>19295</b>	Image guided placement, metallic localization clip, percutaneous, during breast biopsy/aspiration (List separately in addition to code for primary procedure)
<b>19290</b>	Preoperative placement of needle localization wire, breast;
<b>77031</b>	Stereotactic localization guidance for breast biopsy or needle placement (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation
<b>76098</b>	Radiological examination, surgical specimen
<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation

To improve the reporting of breast interventions, the entire family of existing breast intervention codes was sent to the CPT Editorial Panel who created a new family of 14 bundled codes to describe image-guided breast interventions. This new family consists of two main groups: (1) 6 codes to describe breast biopsy (19081-19086) differentiated by the imaging modality used, either stereotactic, ultrasound, or MR guidance, with each guidance method then divided into a base code for the 1<sup>st</sup> lesion and an add-on code for each additional lesion biopsied; (2) 8 new codes (19281-19288) to describe the placement of breast localization device(s) also differentiated by the imaging guidance used with base and add-on codes created.

The American College of Radiology, American College of Surgeons, and the American Society of Breast Surgeons randomly surveyed their respective members, and an expert panel was convened to review the survey results. The MR guidance codes (19085, 19085, 19287, and 19288) and the mammo guided localization codes (19281 and 19282) were only surveyed by the ACR.

### Localization Device Placement Codes (19281-19288)

#### Compelling Evidence

We believe the localization device placement codes satisfy compelling evidence standards in a number of ways. Previously, placement of a marker into a breast was a relatively simple and straightforward procedure. This often consisted of using imaging guidance to place only a single marker at the lesion for subsequent localization at the time of excision, or placement of a single marker in the lesion at the time of percutaneous biopsy for future localization or mammographic follow-up. Currently, improvements in open breast surgical technique have made it necessary to not only mark a lesion, but often mark multiple edges of a lesion to better define the lesion's extent preoperatively. This allows closer surgical margins and improved cosmetic results. Additionally, in the era of neo-adjuvant chemotherapy, not all patients go immediately to surgery upon discovery of a breast tumor. Rather, a subset of breast cancer patients is treated with chemotherapy prior to surgical excision. In those cases, it is necessary to mark the lesion along multiple margins to aid in subsequent evaluation of response to the neo-adjuvant chemotherapy.

CPT code 19281 (*Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including mammographic guidance*) describes image guided placement of a wire (or wires) for localization of a tumor utilizing mammographic imaging guidance. Currently, breast wire localizations are typically performed using multiple localization wires to "bracket" the lesion. Depending on lesion morphology, this procedure can involve placement of 1-4 wires, with 2 being most typical. This new CPT code was designed to utilize a single CPT code, reported only once, regardless of the number or type of markers placed in or around a single lesion under mammographic guidance.

This service is currently reported using the following codes:

Code	Descriptor	Work RVU
<b>19290</b>	Preoperative placement of needle localization wire, breast;	1.27

<b>77032</b>	Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation	0.56
--------------	---	------

## Work RVU Recommendation

The expert panel recommends the median survey value of 2.00 RVUs, slightly higher than the existing value of 1.83.

### Pre-Service Time

The expert panel recommends pre-service package 1a (Straightforward Patient/Straightforward Procedure (No sedation/anesthesia care)) with the following adjustments:

(1) Increase the total pre-service evaluation time by 5 minutes to 18 minutes total to accommodate an extra 3 minutes necessary for "history and exam (Performance and review of appropriate pre-tests) and an additional 2 minutes for "Communicate with patient and/or family (Discuss procedure / obtain consent)". Patients undergoing mammographic-guided clip placement typically have a large number of prior examinations which must be reviewed in detail including prior screening mammography, diagnostic mammography, diagnostic ultrasound, prior biopsies and clip placements. Moreover, a careful review of the prior pathology, previous medical and surgical treatment and planned therapy is performed. It is incumbent on the performing physician to review the entire breast imaging record prior to the biopsy being performed including imaging of the opposite breast. These patients are often well informed women appropriately requiring and expecting detailed discussion of the expected course and outcome. Unlike other biopsies performed elsewhere in the body, there is high anxiety, both because the biopsy is often unanticipated and because it involves the breast. For these reasons, breast biopsy patients have more anxiety, have more questions, and frequently bring multiple family members to the consent, which increases time to address all of their needs as well.

(2) Increase the positioning time by 2 minutes to 3 minutes to accommodate the additional time necessary to optimally position these patients on the mammography machine and ensure that operator and imaging equipment are likewise well positioned relative to the patient. Further, it is reasonable to conclude that survey respondents would consider imaging to localize the mass and guide skin prep prior to biopsy to be considered pre-service work.

### Intra and Post Service Times

We are recommending the median intra and post-service times of 30 and 15 minutes, respectively.

## Comparison to Key Reference Service

The panel would like to point out that many of our survey respondents practice nearly 100% breast imaging. Since the surveyed code family essentially includes all of the 0 day global services this survey population performs, respondents may have struggled to find a 0 day global reference service they commonly perform. Nonetheless, the most commonly chosen KRS is 36556 (*Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older*), which has a lower intra-service time of 15 minutes but higher RVUs of 2.50. While both of these procedures include imaging guidance, 19281 scored higher on 9 of the 11 complexity measures and equal on another. This reflects the unique nature of breast interventions. These procedures are associated with very high patient and family anxiety, which tends to increase the psychological stress of the physician performing the exam. Additionally, these types of exams have a higher frequency to be associated with malpractice suits, which adds to the stress as well.

Our recommendation yields an IWPUT of 0.0382, reflecting the intensity of this procedure in this subset of patients. Indeed, the patient has her breast in compression throughout the intra service period of this procedure. The mammography machine is inherently uncomfortable leading to frequent complaints of neck and shoulder pain during the procedure as time passes. Due to the need for the patient to remain fully aware and not move even a few millimeters, the atmosphere in the room can become quite tense.

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
36556	2.50	15	5	5	25	15	10	50	0.1192

## MPC Comparison

Our recommendation is bracketed in RVUs and intra-service time by two MPC codes, 64483 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level*) and 90937 (*Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription*).

Code	RVU	Pre Eval	Pre Positioning	Pre S/D/W	Total Pre	Intra	Post	Total	IWPUT
64483	1.90	13	5	6	24	15	10	49	0.0816
90937	2.11	10			10	40	10	60	0.0415

## Comparison Within the Family

The recommendations maintain appropriate rank order across the entire family of localization device placement codes as summarized in the table below. As discussed above, the inherent level of patient discomfort throughout this examination and the variability of visualization of the biopsy target, procedures performed under stereotactic guidance are, by definition, more intense than other breast biopsies. The MRI guided biopsies have similar proposed RVU values yet significantly longer intra service times due to the much longer acquisition times to obtain MRI sequences to verify lesion location and needle placement than the acquisition times for stereotactic procedures. Similarly ultrasound guided procedures require less intra service time due to the use of real-time imaging.

## Conclusion

In summary, the panel recommends the median survey value of 2.00 RVUs. We believe this relative value is appropriate based on comparisons to the KRS, the two MPC codes provided, and within the larger family of breast localization device placement codes.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 19290, 77032

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 19282      Tracking Number O8      Original Specialty Recommended RVU: **1.00**  
 Presented Recommended RVU: **1.00**  
 Global Period: ZZZ      RUC Recommended RVU: **1.00**

CPT Descriptor: Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including mammographic guidance (List separately in addition to code for primary procedure)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old female with recent stereotactic biopsy demonstrating invasive ductal carcinoma at two separate locations within the right breast upper-outer quadrant. She is still a candidate for breast conservation. Using mammographic guidance, second lesion is marked after initial marking of first lesion for localization during surgery. [Note: This is an add-on code. Marker placement(s) at the initial lesion reported separately using 19281.]

Percentage of Survey Respondents who found Vignette to be Typical: 97%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

### Description of Pre-Service Work:

- Reposition patient back into the mammographic biopsy system.
- Target second separate lesion. Obtain mammographic image. Determine coordinates for marker placement.
- Prepare the skin with an appropriate surgical antiseptic solution and administer local anesthesia at each marker insertion site.

### Description of Intra-Service Work:

- Advance introducer(s) to site(s) bracketing lesion. Obtain mammographic images in orthogonal planes to confirm location.
- Deploy marker(s). Obtain post-deployment mammographic images to confirm adequacy.
- Annotate images.
- Secure markers as needed.

### Description of Post-Service Work:

**SURVEY DATA**

<b>RUC Meeting Date (mm/yyyy)</b>	04/2013				
<b>Presenter(s):</b>	Zeke Silva, MD; Kurt Schoppe, MD; Mark Alson, MD; Jan Jeske, MD				
<b>Specialty(s):</b>	American College of Radiology				
<b>CPT Code:</b>	19282				
<b>Sample Size:</b>	1200	<b>Resp N:</b>	37	<b>Response:</b> 3.0 %	
<b>Description of Sample:</b>	Random Sample				
	<b>Low</b>	<b>25<sup>th</sup> pctl</b>	<b>Median*</b>	<b>75<sup>th</sup> pctl</b>	<b>High</b>
<b>Service Performance Rate</b>	0.00	20.00	40.00	50.00	175.00
<b>Survey RVW:</b>	0.50	1.30	2.10	3.20	4.33
<b>Pre-Service Evaluation Time:</b>			5.00		
<b>Pre-Service Positioning Time:</b>			0.00		
<b>Pre-Service Scrub, Dress, Wait Time:</b>			0.00		
<b>Intra-Service Time:</b>	7.00	18.00	20.00	35.00	39.00
<b>Immediate Post Service-Time:</b>	5.00				
<b>Post Operative Visits</b>	<b>Total Min**</b>	<b>CPT Code and Number of Visits</b>			
<b>Critical Care time/visit(s):</b>	0.00	99291x 0.00 99292x 0.00

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
76812	ZZZ	1.78	RUC Time

CPT Descriptor Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation plus detailed fetal anatomic examination, transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
64484	ZZZ	1.00	RUC Time	442,912

CPT Descriptor 1 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
-----------------------	---------------	-----------------	--------------------	---

CPT Descriptor 2

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
---------------------------------	---------------	-----------------	--------------------

CPT Descriptor**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code: 25      % of respondents: 67.5 %**

**TIME ESTIMATES (Median)**

	<b>CPT Code: 19282</b>	<b>Key Reference CPT Code: 76812</b>	<b>Source of Time RUC Time</b>
Median Pre-Service Time	5.00	0.00	
Median Intra-Service Time	20.00	25.00	
Median Immediate Post-service Time	0.00	0.00	
Median Critical Care Time	0.0	0.00	
Median Other Hospital Visit Time	0.0	0.00	
Median Discharge Day Management Time	0.0	0.00	
Median Office Visit Time	0.0	0.00	
Prolonged Services Time	0.0	0.00	
Median Subsequent Observation Care Time	0.0	0.00	

<b>Median Total Time</b>	<b>25.00</b>	<b>25.00</b>
<b>Other time if appropriate</b>		

**INTENSITY/COMPLEXITY MEASURES (Mean)****(of those that selected Key  
Reference code)****Mental Effort and Judgment (Mean)**

The number of possible diagnosis and/or the number of management options that must be considered	3.40	2.44
--	------	------

The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.40	2.56
--	------	------

Urgency of medical decision making	3.36	2.40
------------------------------------	------	------

**Technical Skill/Physical Effort (Mean)**

Technical skill required	3.40	2.48
--------------------------	------	------

Physical effort required	3.36	2.52
--------------------------	------	------

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	3.32	2.60
---	------	------

Outcome depends on the skill and judgment of physician	3.32	2.56
--	------	------

Estimated risk of malpractice suit with poor outcome	3.36	2.48
--	------	------

**INTENSITY/COMPLEXITY MEASURES****CPT Code****Reference  
Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	3.36	2.68
----------------------------------	------	------

Intra-Service intensity/complexity	3.36	2.68
------------------------------------	------	------

Post-Service intensity/complexity	3.32	2.64
-----------------------------------	------	------

**Additional Rationale and Comments**
