Intra-Service intensity/complexity	4.75	4.13
Post-Service intensity/complexity	4.02	3.65

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Additional Rationale for Valuing of Mohs codes**

The American Academy of Dermatology (AAD) surveyed a random sample of members who perform Mohs surgery. These codes were thoroughly and exhaustively reviewed last at the April 2006 RUC and multiple approaches were used at that time to value these codes. Since that time, the Mohs procedure has not undergone any technical changes.

The survey data collected has been reviewed by an expert panel. Median survey values support selection of the non-facility pre-time package six (N/F 6), an intra-service time of 110 minutes as well as the survey median for post-service times of 25 minutes.

**These codes require the physician to act in two roles: Surgeon and Pathologist. Thus, the codes encompass both surgical work and pathology work.**

**Reference Service List (RSL)** – We compiled a list of procedure all Mohs surgeons are familiar with, and with Research Subcommittee approval we adjusted services on the RSL to represent Day of Service work. The RSL indicated the day of procedure time and RVUs associated with the day of procedure.

For CPT 17311, surveyees consistently selected reference code 15260 with a 090 day global period. As there is no compelling evidence to increase the value of this code, the specialty society recommends the current RVU value of 6.20. The calculated IWPUT for 17311 is 0.047.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Same code

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology

How often? Sometimes

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1644000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 17311 provided nationally in a one year period is estimated to be 1,644,000.

Specialty Dermatology	Frequency 1595068	Percentage 97.02 %
-----------------------	-------------------	--------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

547,315 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare claims data estimates that CPT code was billed approximately 500,000 times for Medicare patients nationally in a one-year period.

Specialty Dermatology	Frequency 531560	Percentage 97.12 %
-----------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 17311

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 17312	Tracking Number	Original Specialty Recommended RVU: <b>3.30</b>
		Presented Recommended RVU: <b>3.30</b>
Global Period: ZZZ		RUC Recommended RVU: <b>3.30</b>

CPT Descriptor: Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), head, neck, hands, feet, genitalia, or any location with surgery directly involving muscle, cartilage, bone, tendon, major nerves, or vessels; each additional stage after the first stage, up to 5 tissue blocks (List separately in addition to code for primary procedure)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An adult with extensive sun damage presents with tumor positive margins following the first stage of Mohs surgery for a poorly defined infiltrative basal cell carcinoma of the right nose and cheek

Percentage of Survey Respondents who found Vignette to be Typical: 94%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 6%

Description of Pre-Service Work: The patient is returned to the surgical room, and gowned. The stage two Mohs procedure is explained. The method and healing period with restrictions is reviewed. The patient is placed on the surgical table and positioned for access. First stage dressing is removed. The area of histologically positive tumor margin and proposed excision area are marked with a sterile surgical marker to delineate the extent of the planned second stage. The area is cleansed and Lidocaine is injected. The patient is re-prepped and draped, lights are positioned.

Description of Intra-Service Work: Hemostasis is obtained. A scalpel is used to incise along the planned area of the excision. The second layer or stage is excised as a thin continuous wafer of tissue typically 1-3 mm thick around the sides and base of the wound. Prior to removing the specimen, hatch marks are then incised from the margin of the specimen into the surrounding adjacent normal skin, to maintain orientation of the specimen to the defect. Hemostasis is achieved with electrocoagulation and the patient bandaged and discharged to the waiting room. This thin cup or saucer shaped wafer of tissue is flattened by cutting it into pieces (blocks) or making radial incisions to flatten the tissue. The smallest number of tissue blocks are created that will allow the performance of sectioning in the cryostat. The edges of the tissue are color coded with dyes that persist through histologic tissue processing. Once the wafer is cut into pieces and color-coded, a drawing or map of this tissue and its pieces is made so that it corresponds to the surgical wound. These tissue pieces, disassembled like a puzzle, are processed by frozen section pathology. Each flattened piece (or tissue block) is mounted, frozen, sectioned horizontally and then stained. The Mohs surgeon also acts as pathologist. These frozen sections create an image of 100 percent of the new surgical margin including tissue dyes and hatch marks. Microscopic examination of this image allows the Mohs surgeon who also functions as the pathologist to identify the location(s) of any remaining tumor.

The surgeon looks at serial sections of the tissue to evaluate the status of the surgical margin. Residual tumor location(s) as seen through the microscope is marked on the map of the surgical wound.

Description of Post-Service Work: Wound care is reviewed, as well as instructions for problems such as bleeding or pain, and restrictions on motion and activities. Prescriptions for pain and antibiotics, if needed, are given. Arrangements are made for postoperative follow-up.

Post-Service intensity/complexity	3.84	3.68

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Additional Rationale for Valuing of Mohs codes**

The American Academy of Dermatology (AAD) surveyed a random sample of members who perform Mohs surgery. These codes were thoroughly and exhaustively reviewed last at the April 2006 RUC and multiple approaches were used at that time to value these codes. Since that time, the Mohs procedure has not undergone any technical changes.

The survey data collected has been reviewed by an expert panel. Median survey values support selection of the non-facility pre-time package six (N/F 6). However, we are requesting 2 minutes for pre-evaluation, 1 minute positioning, and 5 minutes of scrub/dress/wait time. The survey median for post-service time is 20 minutes, however, we recommend 5 minutes as appropriate. The survey median supports an intra-service time of 65 minutes.

**These codes require the physician to act in two roles: Surgeon and Pathologist. Thus, the codes encompass both surgical work and pathology work.**

**Reference Service List (RSL)** – We compiled a list of procedures that all Mohs surgeons are familiar with, and with Research Subcommittee approval we adjusted services on the RSL to represent Day of Service work. The RSL indicated the day of procedure time and RVUs associated with the day of procedure.

For CPT 17312, surveyees consistently selected reference code 14302 with a ZZZ day global period. As there is no compelling evidence to increase the value of this code, the specialty society recommends the current RVU value of 3.30. The calculated IWPOT for 17312 is 0.047.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 17312

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 6%

Description of Pre-Service Work: The patient is taken to the surgical room, and gowned. The benefits, risks and alternatives to removal are explained. Sun exposure discussed. The procedure is explained, and the healing period with restrictions is reviewed. A fresh history of medications taken, including aspirin, vitamin E, and/or other blood thinners is reviewed along with a review of pertinent problems that may have arisen since the scheduling visit. The patient is placed on the surgical table and positioned for access. Under surgical lighting and magnification, the clinically obvious extent of the tumor is outlined. The area is cleansed with betadine, and a sterile surgical marker is used to delineate the extent of the planned excision. Lidocaine is injected. The patient is re-prepped and draped, lights are positioned.

Description of Intra-Service Work: A scalpel is used to incise along the planned borders of the excision. The visible cancer is removed first (debulking) without attempting to remove a margin of normal tissue. Hemostasis is achieved with electrocoagulation. After the bulk of the tissue is removed, the first layer or stage is excised as a thin continuous wafer of tissue typically 1-3 mm thick around the sides and base of the wound. Prior to removing the specimen, hatch marks are then incised from the margin of the specimen into the surrounding adjacent normal skin, to maintain orientation of the specimen to the defect. Hemostasis is achieved with electrocoagulation and the patient bandaged and discharged to the waiting room. This thin cup or saucer shaped wafer of tissue is flattened by cutting it into pieces (blocks) or making radial incisions to flatten the tissue. The smallest number of tissue blocks are created that will allow the performance of sectioning in the cryostat. The edges of the tissue are color coded with dyes that persist through histologic tissue processing. Once the wafer is cut into pieces and color-coded, a drawing or map of this tissue and its pieces is made so that it corresponds to the surgical wound. These tissue pieces, disassembled like a puzzle, are processed by frozen section pathology. Each flattened piece (or tissue block) is mounted, frozen, sectioned horizontally and then stained. The Mohs

surgeon also acts as pathologist. These frozen sections create an image of 100 percent of the peripheral and deep surgical margin including tissue dyes and hatch marks. Microscopic examination of this image allows the Mohs surgeon who also functions as the pathologist to identify the location(s) of any remaining tumor. The surgeon looks at the serial sections of the tissue to evaluate the status of the surgical margin. Residual tumor location(s) as seen through the microscope is marked on the map of the surgical wound. Following review of the pathology, the patient is returned to the operating room, and outcome of the review is discussed with the patient. After all required Mohs layers have been taken and a tumor free plane is reached, the temporary dressing is removed. The wound is re-anesthetized and hemostasis is obtained as needed, and the defect is evaluated for wound management. A final dressing is applied.

Description of Post-Service Work: Wound care is reviewed, as well as instructions for problems such as bleeding or pain, and restrictions on motion and activities. Prescriptions for pain and antibiotics, if needed, are given. Arrangements are made for post-operative follow-up.

------------------------------------	------	------

Post-Service intensity/complexity	3.72	3.78
-----------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Additional Rationale for Valuing of Mohs codes**

The American Academy of Dermatology (AAD) surveyed a random sample of members who perform Mohs surgery. These codes were thoroughly and exhaustively reviewed last at the April 2006 RUC and multiple approaches were used at that time to value these codes. Since that time, the Mohs procedure has not undergone any technical changes.

The survey data collected has been reviewed by an expert panel. Median survey values support selection of the non-facility pre-time package six (N/F 6) as well as the survey median for intra-service time of 100 minutes and post-service time of 25 minutes.

**These codes require the physician to act in two roles: Surgeon and Pathologist. Thus, the codes encompass both surgical work and pathology work.**

**Reference Service List (RSL)** – We compiled a list of procedures that all Mohs surgeons are familiar with, and with Research Subcommittee approval we adjusted services on the RSL to represent Day of Service work. The RSL indicated the day of procedure time and RVUs associated with the day of procedure.

For CPT 17313, surveyees consistently selected reference code 15260 with a 090 day global period. As there is no compelling evidence to increase the value of this code, the specialty society recommends the current RVU value of 5.56. The calculated IWPUT for 17313 is 0.046.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 17313

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology                      How often? Sometimes

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 240000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Extrapolated from Medicare claims data

Specialty Dermatology	Frequency 232800	Percentage 97.00 %
-----------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

79,616 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Please explain the rationale for this estimate. Medicare claims data

Specialty Dermatology	Frequency 78000	Percentage 97.97 %
-----------------------	-----------------	--------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 17313

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 17314	Tracking Number	Original Specialty Recommended RVU: <b>3.06</b>
		Presented Recommended RVU: <b>3.06</b>
Global Period: ZZZ		RUC Recommended RVU: <b>3.06</b>

CPT Descriptor: Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), of the trunk, arms, or legs; each additional stage after the first stage, up to 5 tissue blocks (List separately in addition to code for primary procedure)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An adult with extensive sun exposure presents with tumor positive margins following the first stage of Mohs surgery for an ill-defined invasive squamous cell carcinoma of the forearm.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 2%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 5%

Description of Pre-Service Work: The patient is returned to the surgical room, and gowned. The stage two Mohs procedure is explained. The method and healing period with restrictions is reviewed. The patient is placed on the surgical table, positioned for access and stage one dressing removed. The area of histologically-positive tumor margin and the proposed excision are marked with a sterile surgical marker to delineate the extent of the planned second stage. The area is cleansed and Lidocaine is injected. The patient is re-prepped and draped, lights are positioned.

Description of Intra-Service Work: Hemostasis is obtained. A scalpel is used to incise along the planned area of the excision. The second layer or stage is excised as a thin continuous wafer of tissue typically 1-3 mm thick around the sides and base of the wound. Prior to removing the specimen, hatch marks are then incised from the margin of the specimen into the surrounding adjacent normal skin, to maintain orientation of the specimen to the defect.. Hemostasis is achieved and the patient bandaged and discharged to the waiting room. This thin cup or saucer shaped wafer of tissue is flattened by cutting it into pieces (blocks) or making radial incisions to flatten the tissue. The smallest number of tissue blocks are created that will allow the performance of sectioning in the cryostat. The edges of the tissue are color coded with dyes that persist through histologic tissue processing. Once the wafer is cut into pieces and color-coded, a drawing or map of this tissue and its pieces is made so that it corresponds to the surgical wound. These tissue pieces, disassembled like a puzzle, are processed by frozen section pathology. Each flattened piece (or tissue block) is mounted, frozen, sectioned horizontally and then stained. The Mohs surgeon also acts as pathologist. These frozen sections create an image of 100 percent of the new surgical margin. Microscopic examination of this image allows the Mohs surgeon who also functions as the pathologist to identify the location(s) of any remaining tumor. The surgeon looks at the serial sections of the tissue to

evaluate the status of the surgical margin. Residual tumor location(s) as seen through the microscope is marked on the map of the surgical wound.

Description of Post-Service Work: Wound care is reviewed, as well as instructions for problems such as bleeding or pain, and restrictions on motion and activities. Prescriptions for pain and antibiotics, if needed, are given. Arrangements are made for postoperative follow-up.

-----------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Additional Rationale for Valuing of Mohs codes**

The American Academy of Dermatology (AAD) surveyed a random sample of members who perform Mohs surgery. These codes were thoroughly and exhaustively reviewed last at the April 2006 RUC and multiple approaches were used at that time to value these codes. Since that time, the Mohs procedure has not undergone any technical changes.

The survey data collected has been reviewed by an expert panel. Median survey values support selection of the non-facility pre-time package six (N/F 6). However, we are requesting 2 minutes for pre-evaluation, 1 minute positioning, and 5 minutes of scrub/dress/wait time. The survey median for post-service time is 20 minutes, however, we recommend 5 minutes as appropriate. The survey median supports an intra-service time of 60 minutes.

**These codes require the physician to act in two roles: Surgeon and Pathologist. Thus, the codes encompass both surgical work and pathology work.**

**Reference Service List (RSL)** – We compiled a list of procedure all Mohs surgeons are familiar with, and with Research Subcommittee approval we adjusted services on the RSL to represent Day of Service work. The RSL indicated the day of procedure time and RVUs associated with the day of procedure.

For CPT 17314, surveyees consistently selected reference code 11606 with a 010 day global period. As there is no compelling evidence to increase the value of this code, the specialty society recommends the current RVU value of 3.06. The calculated IWPUT for 17314 is 0.047.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 17314

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology                      How often? Sometimes

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 130500

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Extrapolated from Medicare claims data

Specialty Dermatology	Frequency 127107	Percentage 97.40 %
-----------------------	------------------	--------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 17314

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 17315	Tracking Number	Original Specialty Recommended RVU: <b>0.87</b>
		Presented Recommended RVU: <b>0.87</b>
Global Period: ZZZ		RUC Recommended RVU: <b>0.87</b>

CPT Descriptor: Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), each additional block after the first 5 tissue blocks, any stage (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An adult with extensive sun damage presents with a large, ill-defined infiltrative basal cell carcinoma of the scalp. The first stage is cut into seven blocks. The initial Mohs stage is reported as 17311. The other two blocks are each reported with CPT code 17315.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: The layer or stage is excised as a thin continuous wafer of tissue typically 1-3 mm thick around the sides and base of the wound. Hemostasis is achieved and the patient bandaged and discharged to the waiting room. This thin cup or saucer shaped wafer of tissue is flattened by cutting it into pieces (blocks) or making radial incisions to flatten the tissue. The smallest number of tissue blocks are created that will allow the performance of sectioning in the cryostat. The edges of the tissue are color coded with dyes that persist through histologic tissue processing. Once the wafer is cut into pieces and color-coded, a drawing or map of this tissue and its pieces is made so that it corresponds to the surgical wound. These tissue pieces, disassembled like a puzzle, are processed by frozen section pathology. Each flattened piece (or tissue block) is mounted, frozen, sectioned horizontally and then stained. The Mohs surgeon also acts as pathologist. These frozen sections create an image of 100 percent of the new surgical margin. Microscopic examination of this image allows the Mohs surgeon who also functions as the pathologist to identify the location(s) of any remaining tumor. The surgeon looks at serial sections of the tissue to evaluate the status of the surgical margin. Residual tumor location(s) as seen through the microscope is marked on the map of the surgical wound.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Additional Rationale for Valuing of Mohs codes

The American Academy of Dermatology (AAD) surveyed a random sample of members who perform Mohs surgery. These codes were thoroughly and exhaustively reviewed last at the April 2006 RUC and multiple approaches were used at that time to value these codes. Since that time, the Mohs procedure has not undergone any technical changes.

The survey data collected has been reviewed by an expert panel. Median survey values support the current intra-service time of 30 minutes.

**These codes require the physician to act in two roles: Surgeon and Pathologist. Thus, the codes encompass both surgical work and pathology work.**

**Reference Service List (RSL)** – We compiled a list of procedure all Mohs surgeons are familiar with, and with Research Subcommittee approval we adjusted services on the RSL to represent Day of Service work. The RSL indicated the day of procedure time and RVUs associated with the day of procedure.

For CPT 17315, surveyees consistently selected reference code 13102 with a ZZZ day global period. As there is no compelling evidence to increase the value of this code, the specialty society recommends the current RVU value of 0.87. The calculated IWPOT for 17315 is 0.029.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 17315

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

CPT Long Descriptor(s):

**17311-** (000) Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), head, neck, hands, feet, genitalia, or any location with surgery directly involving muscle, cartilage, bone, tendon, major nerves, or vessels; first stage, up to 5 tissue blocks

**17312-** (ZZZ) Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), head, neck, hands, feet, genitalia, or any location with surgery directly involving muscle, cartilage, bone, tendon, major nerves, or vessels; each additional stage after the first stage, up to 5 tissue blocks (List separately in addition to code for primary procedure)

**17313-** (000) Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), of the trunk, arms, or legs; first stage, up to 5 tissue blocks

**17314-** (ZZZ) Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), of the trunk, arms, or legs; each additional stage after the first stage, up to 5 tissue blocks (List separately in addition to code for primary procedure)

**17315-** (ZZZ) Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), each additional block after the first 5 tissue blocks, any stage (List separately in addition to code for primary procedure)

Global Period(s): **000 & ZZZ**

Meeting Date: **April 2013**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

These values have been reviewed by the Mohs PE Task Force, a sub group appointed by and reporting to the AAD RBRVS Committee. This group is comprised of general dermatologists, dermatopathologists as well as Mohs surgeons.

The Task Force was charged with reviewing the current direct inputs to ensure the accuracy of the clinical labor, supplies and equipment and recommending additions or deletions to reflect current procedural requirements.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes.

**Reference Code Rationale:** The practice expense recommendations are based on the current pe direct input values for the Mohs codes contained in the AMA RUC database. These values were reviewed by the PERC at the Feb 2006 meeting.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

All clinical labor times proposed are at or below current PE Subcommittee standards.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

All clinical labor times proposed are at or below current PE Subcommittee standards. However, clinical labor time has been added for those functions which have always been included in the staff work for these procedures but had not been previously broken out by the PE Subcommittee and associated/recognized with a particular function.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Clinical staff completes pre-service diagnostic & referral forms, coordinates pre-surgery services, and provides pre-service education/obtain consent. The benefits, risks and alternatives to removal are explained. Sun exposure discussed. The procedure is explained, and the healing period with restrictions is reviewed. A fresh history of medications taken, including aspirin, vitamin E, and/or other blood thinners is reviewed along with a review of pertinent problems that may have arisen since the scheduling visit.

Intra-Service Clinical Labor Activities:

Clinical staff greets patient, provides gowning, ensures appropriate medical records are available and obtains vital signs. Staff prepares room, equipment, supplies. Staff prepares and positions patient and monitor patient during the procedure.

Clinical staff members assist as surgeon performs a lamellar excision of the tumor, carefully excising a thin layer of tissue around the surgical wound created by the previous procedures. The intensity of this lamellar excision is high since the typical malignancy is located at highly sensitive areas of the face, ears, eyes, nose and lips where risk of loss of substantial tissue mass and nerve function is high. Tissue excised may include epidermis, dermis, subcutaneous fat, muscle, cartilage and bone. The lamellar excision, to ensure the pathologic examination that immediately follows, must be perfectly flat, uniform of thickness and contain no holes in the layer of excised tissue. The

tissue excised is cut and divided into four or five sections for smaller tissue excisions and substantially more sections for larger tissue excisions. The number of divisions varies according to the shape and pliability of the tissue excised. In addition the tissue must be sized to allow the specimen(s) to fit on a tissue object disk for subsequent processing to allow sectioning for placement on a slide.

Clinical staff members assist the surgeon to maintain the orientation of the excised tissue to the patient's wound, the excised tissue is marked with color dyes to permit accurate orientation of excised tissue. The surgeon will manipulate the specimen to make sure it lies flat in a two-dimensional plane for precise orientation to the patient. Photos may be taken to further insure proper orientation of specimens to wound site.

The surgeon hands over the excised tissue specimens to the histologic technician and provides any special instructions necessary for proper preparation of the tissue specimens for the surgeon's subsequent examination. Typically, the surgeon plays an active role in mapping and grossing the specimen to assure precise orientation to allow localization of any areas in need of further excision.

The histotechnician prepares tissue block(s) 1 block = 2-4 sides (10, 6, 6, 1), embedding, flattening and freezing tissue labeling slides, mounting tissue on slides, staining tissue, cover slipping slides, transporting slides to microscope cleaning slide prep area, filing and storing slides.

Post-Service Clinical Labor Activities:

Clinical staff monitors the patient following service. Staff clean room/equipment used by physician staff cleans Surgical Instrument Package, completes diagnostic forms, lab requisitions. Checks dressings & wound/ home care instructions / prescriptions.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*High Expenditure Procedural Codes Screen*

April 2013

**Nasal/Sinus Endoscopy**

CPT code 31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)* was identified through the CMS High Expenditure Procedural Codes screen. The RUC recommended survey of physician work and review of practice expense for this family of services at the April 2013 RUC meeting.

**31237 *Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)***

The RUC reviewed the survey results from 153 otolaryngologists and agreed with the specialty on the following physician time components: 23 minutes of pre-service time, 20 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey data and agreed that current work RVU of 2.98 no longer accurately reflects the physician work involved in this service. Specifically, the RUC noted the decrease in intra-service time from the previous survey performed in 1993. Given this, the RUC agreed with the specialty society that the 25<sup>th</sup> percentile survey value of 2.60 accurately accounts for the work to perform 31237. To justify this value, the RUC reviewed MPC code 51102 *Aspiration of bladder; with insertion of suprapubic catheter* (work RVU= 2.70) and noted that both services have identical intra-service time, 20 minutes; however, the reference code has 12 additional minutes of total time and is therefore properly valued slightly higher than the surveyed code. In addition, the RUC compared code 31237 to CPT code 57454 *Colposcopy of the cervix including upper/adjacent vagina; with biopsy(s) of the cervix and endocervical curettage* (work RVU= 2.33) and agreed that while both procedures have identical intra-service time, the surveyed code should be valued higher due to greater total time and increased intensity compared to 57454. **The RUC recommends a work RVU of 2.60 for CPT code 31237.**

**31238 *Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage***

The RUC reviewed the survey results from 132 otolaryngologists and agreed with the specialty on the following physician time components: 18 minutes of pre-service time, 25 minutes of intra-service time and 10 minutes of immediate post-service time. These recommended pre- and post-service times reflect a reduction of 5 minutes in each category to account for any potential overlap of physician work between the endoscopy service and an Evaluation and Management service that is typically performed on the same date of service.

The RUC reviewed the survey data and agreed that the current work RVU of 3.26 no longer accurately reflects the physician work involved in this service. As with the survey data for 31237, the median intra-service time is lower than the last RUC survey performed in 1993. Given this, the RUC agreed with the specialty society that the 25<sup>th</sup> percentile survey value of 2.74 accurately accounts for the work of 31238. To justify this value,

the RUC reviewed the key reference code 31296 *Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (eg, balloon dilation)* (work RVU= 3.29) and noted that the reference code has 5 additional minutes of intra-service time and greater total time compared to the surveyed code. Therefore, the reference code is accurately valued higher than 31238. In addition, the RUC reviewed codes 57460 *Colposcopy of the cervix including upper/adjacent vagina; with loop electrode biopsy(s) of the cervix* (work RVU= 2.83) and 52204 *Cystourethroscopy, with biopsy(s)* (work RVU= 2.59) and agreed that since both codes have identical intra-service time, 25 minutes, compared to the surveyed code, 31238 is appropriately valued between these services. **The RUC recommends a work RVU of 2.74 for CPT code 31238.**

### **31239 *Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy***

The RUC reviewed the survey results from 105 otolaryngologists and ophthalmologists and agreed with the specialties on the following physician time components: 46 minutes of pre-service time, 60 minutes of intra-service time and 20 minutes of immediate post-service time. The RUC also agreed with the following post-operative visits for this 010 day global code: one 99213 and one-half day discharge management service, 99238. The RUC noted that while the survey respondents did not indicate a discharge management service was typical, there was consensus that the physician work of detailing to the patient the post-operative care instructions and prescriptions, preparing the operative report and scheduling the follow-up visit is necessary physician work and should be captured in a discharge management code.

The RUC reviewed the survey data and agreed that the current work RVU of 9.33 no longer accurately reflects the physician work involved in this service. The RUC again noted that the surveyed median intra-service time is lower than the last RUC survey performed in 1994, 60 minutes versus 90 minutes. To determine an appropriate value, the RUC compared the surveyed code to CPT code 22523 *Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device, 1 vertebral body, unilateral or bilateral cannulation (eg, kyphoplasty); thoracic* (work RVU= 9.04) and agreed that both codes have almost identical intra-service time, 58 minutes compared to 60 minutes, and similar total time. Therefore, the RUC agreed to directly crosswalk the physician work of 22523 to the surveyed code, 31239. To justify a work RVU of 9.04, the RUC compared the surveyed code to MPC code 22520 *Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection; thoracic* (work RVU= 9.22) and agreed that since the reference code has slightly greater total time and is a more intense procedure, it is appropriately valued slightly higher than 31239. Finally, the RUC validated the crosswalk by noting that the recommended post-operative visits contain one less 99213 and the addition of a half-day discharge code compared to the current time for this code. By subtracting out the work of a 99213 (0.97) and adding in the work of a half-day discharge (0.64) to the current work RVU (9.33) the resulting value (9.00) is almost identical to the recommended value of 9.04. **The RUC recommends a work RVU of 9.04 for CPT code 31239.**

**31240 Nasal/sinus endoscopy, surgical; with concha bullosa resection**

The RUC reviewed the survey results from 125 otolaryngologists and agreed with the specialty on the following physician time components: 38 minutes of pre-service time, 20 minutes of intra-service time and 15 minutes of immediate post-service time.

The RUC reviewed the survey respondent's estimated physician work values and agreed that the current work value of 2.61, almost identical to the 25<sup>th</sup> percentile value (2.64), remains appropriate for this code. The RUC noted that the median intra-service time is reduced from the last survey performed in 1993, 20 minutes versus 30 minutes. However, it appears that in 1993 the RUC recommended a much higher value (4.00) for this procedure, but CMS (then HCFA) rejected this recommendation by lowering the value for the services in this family by 33 percent. This arbitrary reduction was justified by the Agency, noting that the intensities would have been too high based on the RUC recommendations at the time. Given how these services were previously considered by the RUC, the RUC agreed that the current value, properly valued relative to the other codes in this family of services, is appropriate. Further justification was gained by comparing the surveyed code to key reference code 31295 *Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (eg, balloon dilation), transnasal or via canine fossa* (work RVU= 2.70). The RUC noted that since both codes have identical intra-service time and analogous total time, the two codes should be valued similarly. Finally, CPT code 36555 *Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age* (work RVU= 2.68) was compared to code 31240 and since both codes have identical intra-service time, they should be valued similarly. **The RUC recommends a work RVU of 2.61 for CPT code 31240.**

**Practice Expense:**

The PE Subcommittee determined that the equipment time needed to be recalculated to comply with the CMS definition of appropriate allocation of equipment time. This resulted in removing 15 minutes of equipment time for each of the three scopes included in this procedure. The RUC noted that the specialty did not agree with this decision, stating that staff observes the patient for recurrent bleeding and if bleeding occurs the scopes need to be available in the room and therefore cannot be used by other patients. However, the RUC agreed that the 15 minutes of patient monitoring should be removed from all the equipment time to comply with CMS standards. The Chair noted that a PE Subcommittee workgroup is going to be established to review monitoring time issues. The RUC reviewed and approved the direct practice expense inputs with modifications as recommended by the Practice Expense Subcommittee.

**Work Neutrality:**

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

<b>CPT Code (•New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
31237	Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)	000	2.60
31238	with control of nasal hemorrhage	000	2.74
31239	with dacryocystorhinostomy	010	9.04
31240	with concha bullosa resection	000	2.61 (No Change)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor:

50360 Renal allotransplantation, implantation of graft; without recipient nephrectomy

Global Period: 090

Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: Representatives of the American Society of Transplant Surgeons and the American Urological Surgeons utilized the practice expense details accepted by the RUC and CMS in 2004.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: An additional 30 minutes has been added to the typical 60 minutes assigned to 90-day global procedures. All work performed once the patient is admitted to the hospital relevant to the recipient procedure falls under Medicare Part B. this is in sharp contrast to all work performed prior to admission, including evaluation, listing, maintenance on waiting list, up to and including organ offer, which fall under Medicare Part A. While the latter non-physician work is typically performed by hospital staff, the former is typically performed by nurse coordinators involved in the post transplant care and commonly the responsibility of the surgical team. This transition of care is highly regulated and has been and continues to be the topic of OIG investigations and therefore most programs are acutely aware of the need to abide by these regulatory directives.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A
5. Please describe in detail the clinical activities of your staff:

CLINICAL STAFF TYPE: It has previously been accepted that transplant surgeons will have an RN as their typical staff type, therefore, "RN" is indicated for all clinical staff activities.

Pre-Service Clinical Labor Activities:

Standard time of 60 minutes for major surgical procedures (90-day global) is indicated . An additional 30 minutes has been added to the typical 60 minutes assigned to 90-day global procedures. All work performed once the patient is admitted to the hospital relevant to the recipient procedure falls under Medicare Part B. this is in sharp contrast to all work performed prior to admission, including evaluation, listing, maintenance on waiting list, up to and including organ offer, which fall under Medicare Part A. While the latter non-physician work is typically performed by hospital staff, the former is typically performed by nurse coordinators involved in the post transplant care and commonly the responsibility of the surgical team. This transition of care is highly regulated and has been and continues to be the topic of OIG investigations and therefore most programs are acutely aware of the need to abide by these regulatory directives.

Intra-Service Clinical Labor Activities:

The RUC database indicates discharge day management at 99238 level for the living donor procedure codes. The PEAC standard 12 minutes of clinical staff activity for 99238 is shown on the spreadsheet.

Post-Service Clinical Labor Activities:

Standard times for each office visit.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31238	Tracking Number	Original Specialty Recommended RVU: <b>2.74</b>
		Presented Recommended RVU: <b>2.74</b>
Global Period: 000		RUC Recommended RVU: <b>2.74</b>

CPT Descriptor: Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68 year old with hypertension presents with refractory left epistaxis which is not controlled by anterior or posterior nasal packing. The patient undergoes endoscopic examination with identification of the bleeding source in the nasal cavity followed by control of hemorrhage.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 49%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 9%

**Description of Pre-Service Work:**

- After the decision is made for the need for nasal endoscopy the patient is moved to a room equipped with the video tower and a protective drape is placed on the patient.
- Vital signs are obtained.
- The physician ensures that the endoscopes, suction, air source for insufflation, cautery, and video recording equipment are available and functioning properly.
- The procedure is explained and consent obtained.
- A time out is performed.
- The physician washes hands and dons proper gloves, mask, and protective eye wear.
- Topical decongestant and anesthetic sprays are applied to the nostrils followed by a wait time for it to take effect.
- The patient is positioned in an upright, seated position.

Description of Intra-Service Work: Complete bilateral nasal endoscopy is performed. Previous packing, crusts, and clots are removed to help identify the bleeding site. The bleeding area is then packed with cotton or pledget soaked with topical decongestant and anesthetic spray followed by a wait time for the anesthetic to take effect. The bleeding region is then infiltrated with local with epinephrine followed by a wait time. The bleeding site(s) is then cauterized with bipolar or suction cautery to achieve control of epistaxis. Absorbable packing, such as fibrillar surgical, is applied to the cautery site and any other bleeding areas.

**Description of Post-Service Work:**

- Monitor patient during recovery period and check for any recurrence of bleeding.

- Home restrictions (i.e. diet, activity), treatment and findings are explained to the patient using the procedure video recording and pointing out areas of normal anatomy and pathology.
- Subsequent evaluation and therapeutic plan are discussed.
- Write prescriptions for medications and supplies needed post-discharge
- Perform medication reconciliation.
- The examination and any still images are saved on the digital recording system.
- The procedure note is dictated and findings communicated to the referring physician.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013.

**Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. The standard 000 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. The Otolaryngology physician work recommendations were derived by conducting a random survey of our members. Surveys for CPT 31238 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology, as well as to the Academy's leadership and key committees such as the Rhinology Paranasal Sinus Committee which contains clinicians who were most likely to be familiar with the services under review. Of the 1088 surveys distributed for CPT 31238, 132 responses were received, a response rate of 12%.

**Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 6 (Non-Facility procedure with sedation/anesthesia care) was most appropriate. Prepackage 6 assigns 17 minutes for evaluation, 1 minute for positioning, and 5 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is predominantly provided in a physician's office and topical anesthetic and decongestant is utilized to numb the nose prior to providing an endoscopy procedure. We recognize that the five percent file claims data provided by the AMA RUC staff reflects that 31238 is billed with an E/M code on the same date of service 67% of the time. As a result, our expert panel recommends a reduction to the pre-service package's evaluation time of 9 minutes (the time for the history and exam) to account for the E/M typically billed on the same day. Our expert panel felt, however, that the preservice package's 1 minute allotted for the check/set-up room, supplies and equipment was not sufficient for this type of emergency procedure, and recommends adding 4 minutes for this work, resulting in 5 minutes to set up the room for a total of 12 preservice evaluation minutes. This results in a total pre service time recommendation of 18 minutes.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 25 minutes for intra service work.

**Post Time:** Likewise, our experts felt that the survey's post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 15 minutes. The expert panel did not feel it was necessary to reduce the post time for this service, despite the fact that it is typically billed with an E/M, because with this type of emergency procedure patients frequently stay at the physician office far longer than the survey's reflected 15 minutes of post time to ensure there is no recurrence of bleeding. This results in a request for a total of 58 minutes of physician work time for CPT 31238.

**Physician Work Recommendation**

After concluding the survey, the results were analyzed by an expert panel and it was determined that the survey's median value was too high given that the work for this service has not changed, and no compelling evidence exists to increase the value of the service. As a result, they felt the survey's 25<sup>th</sup> percentile of 2.74 RVUs was more appropriate for CPT 31238.

**Therefore, we recommend an RVU of 2.74, consistent with the survey's 25<sup>th</sup> percentile, for CPT 31238.**

This recommendation is supported by the key reference service (KRS) 31296. While survey said the KRS was lower in intensity and complexity, it contains 30 minutes of additional time as compared to our recommendations for 31238, and therefore, has a higher work RVU of 3.29. Our expert panel also felt CPT 57460 served as an excellent reference code for this service and has a work RVU of 2.83 and a total time of 50 minutes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31238.

**Comparison to key reference code**

CPT Code	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	Post
31238	2.74	0.0829	58	12	1	5	25	15

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) CPT 31238 is typically billed in conjunction with an E/M office visit.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT 31238 is billed with one of the following office E/M visits (99212-99215) on the same day 67% of the time per the CMS 5% data file.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31238

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology

How often? Commonly

Specialty Physicians Assistant

How often? Rarely

Specialty Nurse Practitioners

How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 74847

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2011 Medicare volume for this service which we believe accurately estimates the national frequency of this service.

Specialty Otolaryngology	Frequency 72602	Percentage 97.00 %
--------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 24,949 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2011 claims data from the 2013 RUC database.

Specialty Otolaryngology	Frequency 24201	Percentage 97.00 %
--------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31238

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 31239	Tracking Number	Original Specialty Recommended RVU: <b>9.33</b>
		Presented Recommended RVU: <b>9.33</b>
Global Period: 010		RUC Recommended RVU: <b>9.04</b>

CPT Descriptor: Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 49 year old presents with constant daily tearing in the right eye over the past six months. The patient has a history of multiple episodes of conjunctivitis and right inner canthal tenderness that have responded to topical and oral antibiotics. The examination confirms a purulent discharge with pressure to the lacrimal sac. Lacrimal irrigation reveals a blocked nasolacrimal duct distal to the common canaliculus.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 55% , In the ASC 46%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 49% , Overnight stay-less than 24 hours 7% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 4%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 54%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 8%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented in the patient record. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The operative nostril is decongested with Afrin nasal spray twice separated by a ten minute interval. The surgical eye is confirmed with the patient, surgical and anesthesia team, and the forehead is marked to indicate the operative eye. After anesthesia is administered, the patient is positioned.

Description of Intra-Service Work: The operative eyelid is confirmed by the surgeon and surgical team. The patient is monitored with pulse oximetry and electrocardiography. The surgeon adds topical anesthesia to both eyes. A local anesthetic block is injected into the operative supratrochlear, infraorbital, anterior lacrimal crest regions and intra-nasally along the lacrimal crest and middle turbinate. The involved nostril is packed with a cotton pledget soaked in 2% lidocaine w/epinephrine. The eye, periocular area and nostril are prepped and draped. The nasal packing is removed. A fiber optic endoilluminator is inserted through the lacrimal canaliculi into the sac to transilluminate the lacrimal bone. A nasal endoscope is inserted for visualization. The nasal mucosa is incised vertically with a crescent blade and elevated with endoscopic forceps and periosteal elevators to fully expose the lacrimal bone. The lacrimal bone is removed with Kerrison or pituitary rongeurs. The final bony ostium should allow adequate clearance of the common canaliculus and the inferior sac. The exposed lacrimal sac mucosa is infiltrated with local anesthetic for vasoconstriction, incised, and the medial sac mucosa removed with forceps. Adequate lacrimal sac mucosal removal is confirmed by free flow of saline or fluorescein from the canaliculi through the nasal ostium, or direct visualization of the common internal punctum with the endoscope. Nasal dressing is applied. Antibiotic-steroid drops are placed in the operative eye.

Description of Post-Service Work: Pain management is discussed and the IV removed. The nostril is packed if excessive intranasal bleeding is noted. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is prepared, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013. We note as a reminder for the RUC in reviewing this family of codes, that 31239 is the only 010 global in this “family”, and therefore, has an appropriately higher RVU and associated time required to perform this procedure.

### **Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. One of the codes, 31239, was surveyed jointly by Otolaryngology and Ophthalmology. The standard 010 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. The Otolaryngology physician work recommendations were derived by conducting a random survey of our members. Surveys for 31239 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology, as well as to the Academy’s leadership and key committees such as the Rhinology Paranasal Sinus Committee which contains clinicians who were most likely to be familiar with the services under review. The American Academy of Ophthalmology’s survey for 31239 was distributed to 264 Ophthalmologists, who indicated an interest in ocular plastic procedures. Of the 1355 surveys distributed for 31239, 105 responses were received, a response rate of 7.7%.

### **Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 3 (Straightforward Patient/Difficult Procedure) was most appropriate. Prepackage 3 assigns 33 minutes for evaluation, 3 minute for positioning, and 15 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is provided in the facility setting and both topical and general anesthetic are utilized for the endoscopy procedure. They believe this qualifies as a “difficult procedure” based on the fact that the surgical site is located in the corner of the eye and involved placing metal rods in the nose which can cause bleeding and has the risk of other complications. The expert panel reviewed the survey pre times and determined that 33 minutes for evaluation and 3 minutes for positioning were appropriate, however, they recommended reducing the scrub dress and wait package time of 15 minutes down to 10 to maintain consistency with the time allotted for scrub dress and wait by the survey respondents. This results in an overall preservice time recommendation of 33 minutes evaluation, 3 minutes for positioning, and 10 minutes for scrub, dress and wait, totaling 46 preservice minutes for 31239.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 60 minutes for intra service work.

**Post Time & Post Operative Visits:** Likewise, our experts felt that the survey’s post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 20 minutes. In addition, we are requesting the standard .5 discharge management visit (99238) which is typical for 010 global services performed in the facility where the patient is discharged on the same day as the procedure. Our expert panel also agreed with survey respondents that one visit, a 99213 office visit, is typical during the 5-10 days of the post operative period. This results in a request for a total of 168 minutes of physician work time for CPT 31239.

### **Physician Work Recommendation**

After concluding the survey, the results were analyzed by an expert panel and it was determined that the existing value for 31239 is appropriate and should be maintained. This is supported by our survey which had a higher median and 25<sup>th</sup> percentile, than the existing value of 9.33 RVUs. Our expert panel does not believe this service has changed, or that compelling evidence exists to increase the value of the code; **therefore, we recommend retention of the existing value of 9.33 RVUs for CPT 31239.**

This recommendation is supported by the key reference code 31292 which survey respondents said was greater in intensity and complexity, and as a result, has a higher work RVU of 15.90 and substantially more post operative work, resulting in a total time of 453 total minutes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31239.

### **Comparison to key reference code**

<u>CPT Code</u>	<u>RVW</u>	<u>IWPUT</u>	<u>Total Time</u>	<u>Eval</u>	<u>Posit</u>	<u>SDW</u>	<u>INTRA</u>	<u>Post</u>	<u>Post Visits</u>
-----------------	------------	--------------	-------------------	-------------	--------------	------------	--------------	-------------	--------------------

<b>31292</b>	15.90	0.0449	453	90	0	0	140	30	193
<b>31239</b>	9.33	0.1064	168	33	3	10	60	20	42

**Comparison to MPC codes**

<b>CPT Code</b>	<b>Descriptor</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>	<b>Post Visits</b>
<b>22523</b>	Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device, 1 vertebral body, unilateral or bilateral cannulation (eg, kyphoplasty); thoracic	9.04	0.1009	180	30	15	15	58	20	42
<b>31239</b>	Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy	9.33	0.1064	168	30	3	10	60	20	42
<b>38571</b>	Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy	14.76	0.0692	272	60	0	0	180	0	32

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 31239 is appropriate.

<b>RUC Reviewed</b>	<b>CPT Code</b>	<b>Descriptor</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>	<b>Post Visits</b>

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This service is billed with CPT 68815, Probing of Nasolacrimal Duct, 51% of the time according to the five percent file 2011 data. Multiple procedure modifier -51 would be appended to CPT 68815 when billed in conjunction with 31239. SEE TABLE AT END OF SOR.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31239

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology                      How often? Sometimes

Specialty Otolaryngology                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3168

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2011 Medicare volume for this service which we believe accurately estimates the national frequency of this service.

Specialty Ophthalmology                      Frequency 1869                      Percentage 58.99 %

Specialty Otolaryngology                      Frequency 1267                      Percentage 39.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,056

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2011 claims data from the 2013 RUC database.

Specialty Ophthalmology                      Frequency 623                      Percentage 58.99 %

Specialty Otolaryngology                      Frequency 422                      Percentage 39.96 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? No

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31239

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 31240	Tracking Number	Original Specialty Recommended RVU: <b>2.61</b>
		Presented Recommended RVU: <b>2.61</b>
Global Period: 000		RUC Recommended RVU: <b>2.61</b>

CPT Descriptor: Nasal/sinus endoscopy, surgical; with concha bullosa resection

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 30 year old presents with a history of nasal blockage, facial pressure, and recurrent maxillary sinusitis and an obstruction of the natural ostium of the left maxillary sinus from an abnormally large and pneumatized middle turbinate (a concha bullosa cell). The patient undergoes endoscopic resection of the obstructing concha bullosa.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 54%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 16%

**Description of Pre-Service Work:**

- After the decision is made to perform a nasal endoscopy with excision of a concha bullosa, the physician must perform the following steps to prepare the patient and the room for the procedure.
  - Assure appropriate selection, timing, and administration of DVT prophylaxis.
  - Assess need for beta-blockers, order as required.
  - Review medical history, pathology, and radiology report.
  - Review radiographic images.
  - Review results of preoperative testing (labs, EKG, CXR).
  - Review reports of consultants providing preoperative assessment and clearance as indicated.
  - Meet with patient and family to review planned procedure and postoperative management.
  - Reexamine patient to ensure that physical findings have not changed and dictate history and physical.
  - Obtain informed consent.
  - Review airway and medical management with anesthesiologist.
  - Review planned procedure with OR staff.
  - Verify that all required instruments and supplies are available, set up scopes, suction, light source, and photodocumentation equipment and ensure functionality.
  - Change into scrub clothes.
  - Observe/wait during induction of anesthesia and intubation.
  - Monitor/assist with positioning of the patient (supine, head slightly elevated)
  - Ensure that radiographic images are available in the OR.
- Cotton pledgts soaked with topical decongestant are placed in the nasal cavity under direct visualization.
- Monitor/assist with draping.

- Scrub and gown.
- Operating table is turned either 90 or 180 degrees.
- Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Previously placed pledgets are removed. An endoscope is utilized for visualization. Local anesthesia is injected into the anterior and posterior attachments of the concha bullosa. Cotton pledgets soaked with topical decongestant are placed adjacent to the concha bullosa, followed by a wait time to allow efficacy. A vertical incision is made through the anterior portion of the concha bullosa. Thru cutting instruments are utilized to extend the cut posteriorly, both at the anterior and inferior attachments. Care is taken not to excessively manipulate to concha bullosa. The anterior and posterior cuts are completed and the lateral aspect of the concha bullosa is removed. Bipolar electrocautery is applied to the area of the inferior attachment as this can be a source of major hemorrhage. The middle meatus is then packed with cotton pledgets soaked with topical decongestant, followed by a wait time to ensure adequate hemostasis. Once adequate hemostasis is confirmed, the patient is turned over to anesthesia and awoken from anesthesia.

#### Description of Post-Service Work:

- Monitor patient during reversal of anesthesia.
- Monitor transport of patient from OR to recovery room.
- Discuss postoperative recovery care with anesthesia and nursing staff.
- Write postoperative orders.
- Discuss procedure and operative findings with family and the patient.
- Write postoperative note. Dictate operative note and copy to referring physician.
- Monitor patient progress. Chart notes.
- Monitor overall medical condition of the patient including fluid balance, vital signs, and urinary function
- Assess pain scores and adequacy of analgesia.
- Discuss post-discharge management with nursing staff and answer questions
- Home restrictions (i.e., diet, activity) are discussed with the patient, family members and discharging nurse.
- Write prescriptions for medications and supplies needed post-discharge
- Perform medication reconciliation
- All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Why are these codes being reviewed?**

The nasal/sinus endoscopy code 31237 was identified in the CY 2012 Final Physician Fee Schedule by CMS as a potentially misvalued service. Following submission of an action plan to survey 31237 by the Academy, it was determined that 31237-31240 was a “family” of codes based on their location in the CPT book, and therefore, all four codes were required for survey by the RAW for April 2013.

**Description of Random Survey**

All four codes in this family were surveyed by AAO-HNS. The standard 000 global survey instrument was utilized with two revisions instructing respondents to include time for administering topical anesthetic, where appropriate, in the pre-service time and localized or injected anesthesia, where appropriate, in the intra service time. This change was approved by the Research Subcommittee. The Otolaryngology physician work recommendations were derived by conducting a random survey of our members. Surveys for 31240 were sent to nearly 1100 Otolaryngologists, including the subspecialty of rhinology, as well as to the Academy's leadership and key committees such as the Rhinology Paranasal Sinus Committee which contains clinicians who were most likely to be familiar with the services under review. Of the 1090 surveys distributed for 31240, 125 responses were received, a response rate of 11%.

**Physician Time**

**Pre Time:** Following a review of the pre-time survey data, our expert panel determined that preservice package 3 Facility - Straightforward patient/Difficult was most appropriate. Prepackage 3 assigns 33 minutes for evaluation, 3 minutes for positioning, and 15 minutes for scrub, dress, and wait. Our expert panel felt this was the most appropriate package given that service is predominantly provided in the facility setting and both topical and general anesthetic is utilized for the endoscopy procedure. The expert panel reviewed the survey pre times and recommended that the preservice time for evaluation be adjusted down to 25 minutes to maintain consistency with the survey responses. Similarly, they recommended that time for scrub, dress and wait be reduced from the package's 15 minutes down to 10 to match the time allotted for this work by survey respondents. This results in a total preservice time recommendation of 38 minutes.

**Intra Time:** Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 20 minutes for intra service work.

**Post Time:** Likewise, our experts felt that the survey's post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 15 minutes. This results in a request for a total of 73 minutes of physician work time for CPT 31240.

**Physician Work Recommendation**

After concluding the survey, the results were analyzed by an expert panel and it was determined that the existing RVU of 2.61 is appropriate for 31240. This is supported by our survey which had a higher median, and 25<sup>th</sup> percentile, than existing value of 2.61 RVUs. Our expert panel does not believe this service has changed, or that compelling evidence exists, to increase the value of the code; **therefore, we recommend retention of the existing value of 2.61 RVUs for CPT 31240.**

This recommendation is supported by the key reference code 31295 which survey respondents said was similar in intensity and complexity, but has a slightly higher work RVU of 2.70 and similar total physician time of 78 minutes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 31240.

**Comparison to key reference code**

<b>CPT Code</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>
<b>31240</b>	2.61	0.0783	73	25	3	10	20	15
<b>31295</b>	2.70	0.0772	78	30	3	10	20	15

**Comparison to MPC codes**

<b>CPT Code</b>	<b>Descriptor</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>
<b>36556</b>	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	2.50	0.1192	50	15	5	5	15	10
<b>31240</b>	Nasal/sinus endoscopy, surgical; with concha bullosa resection	2.61	0.0783	73	25	3	10	20	15
<b>51102</b>	Aspiration of bladder; with insertion of suprapubic catheter	2.70	0.0938	60	19	1	5	20	15

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 31240 is appropriate.

<b>RUC Reviewed</b>	<b>CPT Code</b>	<b>Descriptor</b>	<b>RVW</b>	<b>IWPUT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>Post</b>
---------------------	-----------------	-------------------	------------	--------------	-------------------	-------------	--------------	------------	--------------	-------------

2002	<b>56821</b>	Colposcopy of the vulva; with biopsy(s)	2.05	0.0745	45	15	0	0	20	10
2002	<b>57421</b>	Colposcopy of the entire vagina, with cervix if present; with biopsy(s) of vagina/cervix	2.20	0.0820	45	15	0	0	20	10
2002	<b>57454</b>	Colposcopy of the cervix including upper/adjacent vagina; with biopsy(s) of the cervix and endocervical curettage	2.33	0.0885	45	15	0	0	20	10

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This service is billed with CPT 30520, Repair of Nasal Septum, 58% of the time according to the five percent file 2011 data. Multiple procedure modifier -51 would be appended to CPT 31240 when billed in conjunction with 30520. SEE TABLE AT END OF SOR.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31240

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology

How often? Commonly

## SS Rec Summary

[illegible]

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)

Global Period: 000 Meeting Date: April 2013

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31237 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31237 as a reference.*

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31237 as a reference.*

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *Our recommendations do not exceed PEAC approved standards for the facility setting.*

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *Our recommendations do not exceed the previous recommendations for 31237 in the facility setting.*

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:**

For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, provide pre-service education and obtain consent, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:**

There are no intra service clinical labor activities for this code.

**Post-Service Clinical Labor Activities:**

The only post service clinical activity is conducting a phone call and calling in any necessary prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)

Global Period: 000 Meeting Date: April 2013

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31237 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31237 as a reference.*
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The reference code utilized was the 2003 PEAC approved practice expense inputs for 31237.*
3. **If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not making any recommendations which exceed PEAC standards.*
4. **If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not recommending an increase over current staff times, but would note that we have reduced minutes on lines 22, 25, 27, and 30 which is offset by our requests for the addition of time, per PEAC standards, in lines 32, 34, and 35. These recommended changes in the assignment of minutes does not change the overall staff time recommended for this code in the non-facility setting.*

*We are recommending some revised supplies and equipment for 31237. Specifically, we recommend deletion of line 69 as lidocaine is included in the injection pack and we did not feel cocaine was needed in addition for this procedure. In addition, we recommend deletion of supplies in lines 78-81 and replacing with the PEAC approved standard endoscope cleaning pack SAO42. The compelling evidence for this change is a change from previous code-specific PE to adoption of an applicable standard or package. For equipment, we are adding two endoscopes, lines 87 and 88, as three scopes of varying degrees (which provide different angles of visualization) are used for this procedure and only one scope was previously listed for 31237.*

5. Please describe in detail the clinical activities of your staff:

**Pre-Service Clinical Labor Activities:** Clinical staff completes pre-service diagnostic and referral forms, coordinates pre-surgery services, provides pre-service education and obtains consent, conducts follow up phone calls and coordinates any necessary prescriptions.

**Intra-Service Clinical Labor Activities:** Staff greet the patient, gown them, and ensure appropriate medical records are available. They obtain vital signs, prepare the room with equipment and supplies, set up the scope, prepare and position the patient, and apply anesthesia. Clinical staff assists during the entire procedure and monitor the patient following the procedure. They clean the room and equipment, as well as the scope and surgical instrument package. They complete diagnostic forms, read any necessary x-ray, lab, pathology reports, and check dressing and provide home care instructions and coordinate prescriptions.

**Post-Service Clinical Labor Activities:** Clinical staff conducts a follow up phone call in the post-service period.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage

Global Period: 000 Meeting Date: April 2013

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31238 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31238 as a reference.*

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31238 as a reference.*

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *Our recommendations do not exceed PEAC approved standards for the facility setting.*

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *Our recommendations do not exceed the previous recommendations for 31238 in the facility setting.*

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:**

For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, provide pre-service education and obtain consent, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:**

There are no intra service clinical labor activities for this code.

**Post-Service Clinical Labor Activities:**

The only post service clinical activity is conducting a phone call and calling in any necessary prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage

Global Period: 000 Meeting Date: April 2013

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31238 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31238 as a reference.*
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The reference code utilized was the 2003 PEAC approved practice expense inputs for 31238.*
3. **If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not making any recommendations which exceed PEAC standards.*
4. **If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not recommending an increase over current staff times, but would note that we have reduced minutes on lines 25, 27, and 30 and deleted time for greeting the patient and obtaining vital signs, lines 21 and 22, since this code is typically billed with an E/M and we felt those minutes would be duplicative. These reductions in time are offset by our requests for the addition of time, per PEAC standards, in lines 32, 34, and 35. These recommended changes in the assignment of minutes do not exceed existing time for clinical staff work for 31238.*

*Regarding supplies and equipment for 31238, we are requesting the same changes made to CPT 31237 with a few additional changes. Specifically, we recommend deletion of line 69 as lidocaine is included in the injection pack and we did not feel cocaine was needed in addition for this procedure. In addition, we recommend deletion of supplies in lines 78-81 and replacing with the PEAC approved standard endoscope cleaning pack SAO42. The compelling evidence for this change is a change from previous code-specific PE to adoption of an applicable standard or package. We also request the addition of a new supply, line 84, to include a fibrillar (an invoice has been provided for this new supply). This is used to aid in the control of bleeding for this service. The compelling evidence for this change is that there has been a change in the technology and silver nitrate cautery is no longer sufficient, on its own, to control this type of hemorrhage. Therefore, we are adding supplies and equipment to reflect the necessary tools to control the nasal hemorrhage.*

*For equipment, we are adding two endoscopes, lines 87 and 88, as three scopes of varying degrees (which provide different angles of visualization) are used for this procedure and only one scope was previously listed for 31238. We also request the addition of new equipment, lines 96 and 97, to include bipolar cautery forceps and a biopolar cautery two-wire cable (an invoice has been provided for these pieces of equipment). These are also typically used to aid in the control of bleeding for this service. As noted above, the compelling evidence for this change is that there has been a change in the technology and silver nitrate cautery is no longer sufficient, on its own, to control this type of hemorrhage. Therefore, we are adding supplies and equipment to reflect the necessary tools to control the nasal hemorrhage.*

5. Please describe in detail the clinical activities of your staff:

**Pre-Service Clinical Labor Activities:** There is no pre-service clinical staff time for 31238 in the non-facility setting.

**Intra-Service Clinical Labor Activities:** Clinical staff prepares the room with equipment and supplies, set up the scope, prepare and position the patient, and apply anesthesia. Clinical staff assists during the entire procedure and monitor the patient following the procedure. They clean the room and equipment, as well as the scope and surgical instrument package. They complete diagnostic forms, read any necessary x-ray, lab, pathology reports, and check dressing and provide home care instructions and coordinate prescriptions.

**Post-Service Clinical Labor Activities:** Clinical staff conducts a follow up phone call in the post-service period and calls in any necessary prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy

Global Period: 010 Meeting Date: April 2013

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *Our societies convened an expert panel to review the practice expense for 31239 which included our RUC Advisors, Alternate Advisors and clinical experts who specialize in the procedure for both specialties. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31239 as a reference.*

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31239 as a reference.*

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not recommending more minutes than the PE Subcommittee standards for CPT 31239.*

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not requesting an increase over current inputs in clinical staff time. We do request some minor modifications from the prior practice expense, including removal of 7 minutes for providing pre-service education/obtaining consent, as well as the addition of 10 minutes during the post-service period, line 54, to clean the instrument pack during the post operative visit.*

*We are requesting modifications to the supplies and equipment for 31239 to reflect the necessary items for the office visit (99213) in the post operative period for 31239. The compelling evidence for this change is that previous PE supplies and equipment did not reflect the equipment/supplies required by the dominant specialty (Ophthalmology), therefore, previous inputs were based on Otolaryngology, but in actuality this service is currently provided primarily by Ophthalmologists according to utilization data. The new supplies we are requesting include the standard pack for an Ophthalmology visit (SA050), a 5-6 ml syringe, and the standard cleaning pack for cleaning/disinfecting the endoscope utilized during the post operative visit.*

*The new equipment includes a screening lane, listed on line 95, and a medium instrument pack. Both of these are standard pieces of equipment utilized during a routine ophthalmology post operative visit. The time assigned to the equipment is consistent with the time for the post operative office visit (36 minutes).*

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:** For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:**

The only intra service staff time for this service is 6 minutes for a half discharge management visit (99238).

**Post-Service Clinical Labor Activities:**

**CPT Code:** 31239  
**Specialty Society('s)** AAO-HNS

The clinical staff post time includes time for a post operative visit which is done in the physician office (99213) and time to clean the instrument pack utilized during the visit.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: Nasal/sinus endoscopy, surgical; with concha bullosa resection

Global Period: 000 Meeting Date: April 2013

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:** *We convened an expert panel to review the practice expense for 31240 which included our RUC Advisor and Alternate Advisor as well as two clinical experts who specialize in Rhinology. The practice expense inputs were revised using the 2003 PEAC approved inputs for 31240 as a reference.*

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: *The practice expense inputs were derived using the 2003 PEAC approved inputs for 31240 as a reference.*

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:** *We are not recommending more minutes than the PE Subcommittee standards for CPT 31240.*

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:** *We are not requesting any changes to existing inputs for 31240.*

*There are no supplies or equipment requested for 31240 as this procedure is performed in the facility setting and is a 000 global.*

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:** For this procedure we believe the use of extensive clinical staff is required to complete pre-service diagnostic forms, coordinate pre-surgery services, schedule space and equipment, provide pre-service education and obtain consent, and conduct follow up phone calls and coordinate prescriptions.

**Intra-Service Clinical Labor Activities:** There are no intra service clinical staff activities for 31240 as this procedure is facility based.

**Post-Service Clinical Labor Activities:** The clinical staff post time includes time for a follow up phone call and calling in any necessary prescriptions.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Requests Final Rule for 2013 Screen*

April 2013

**Implantation and Removal of Patient Activated Cardiac Event Recorder**

In the Final Rule for the 2013 Medicare Fee Schedule, a request was made to review CPT codes 33282 *Implantation of patient-activated cardiac event recorder* and 33284 *Removal of an implantable, patient-activated cardiac event recorder* in the non-facility setting. CMS was asked to establish appropriate non-facility PE RVUs for these services. CMS acknowledged that the Agency received very few Medicare claims for these services in the non-facility setting; nonetheless, the Agency believed it was appropriate to consider the relative resources involved in furnishing these services in the non-facility setting. CMS reiterated that the valuation of a service under the PFS in a particular setting does not address whether those services and the setting in which they are furnished are medically reasonable and necessary for a patient's medical needs and condition. CMS proposed to review CPT codes 33282 and 33284 and requested recommendations from the RUC and other public commenters on the appropriate physician work RVUs (as measured by time and intensity), and facility and non-facility direct PE inputs for these services. The RUC reviewed the survey data and confirmed that these procedures are typically performed in a hospital under moderate sedation.

**33282 *Implantation of patient-activated cardiac event recorder***

The RUC reviewed the survey results from 36 electrophysiologists and agreed that a work RVU of 3.50, the survey 25<sup>th</sup> percentile is appropriate for this procedure. The RUC noted that this value is a reduction from the current work RVU of 4.80. The RUC reviewed key reference code 33212 *Insertion of pacemaker pulse generator only; with existing single lead* (work RVU=5.26) and determined that 33212 requires 20 minutes more intra-service time and is a more complex procedure requiring more physician work, therefore it should be valued higher. The RUC also compared 33282 to CPT codes 20102 *Exploration of penetrating wound (separate procedure); abdomen/flank/back* (work RVU=3.98) and 64633 *Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint* (work RVU=3.84) and agreed that both reference codes require more physician time and work to perform compared to the surveyed code.

**The RUC recommends a work RVU of 3.50 for CPT code 33282.**

**33284 Removal of an implantable, patient-activated cardiac event recorder**

The RUC reviewed the survey results from 36 electrophysiologists and agreed that a work RVU of 3.00, the survey 25<sup>th</sup> percentile is appropriate for this procedure. The RUC noted that this value is lower than the current work RVU of 3.14. To support this value, the RUC reviewed key reference code 33233 *Removal of permanent pacemaker pulse generator only* (work RVU=3.39) and determined that since this is a more complex procedure requiring more physician work, it should be valued higher. The RUC also compared 33284 to CPT code 46945 *Hemorrhoidectomy, internal, by ligation other than rubber band; single hemorrhoid column/group* (work RVU=2.21) and agreed that 33284 required more physician work and complexity. **The RUC recommends a work RVU of 3.00 for CPT code 33284.**

**Practice Expense**

The RUC accepted the direct PE inputs with minor modifications as recommended by the PE Subcommittee.

**Work Neutrality**

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code (•New)	CPT Descriptor	Global Period	Work RVU Recommendation
33282	Implantation of patient-activated cardiac event recorder  (Initial implantation includes programming. For subsequent electronic analysis and/or reprogramming, use 93285, 93291, 93298, 93299)	090	3.50
33284	Removal of an implantable, patient-activated cardiac event recorder	090	3.00

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 33282	Tracking Number	Original Specialty Recommended RVU: <b>3.98</b>
		Presented Recommended RVU: <b>3.50</b>
Global Period: 090		RUC Recommended RVU: <b>3.50</b>

CPT Descriptor: Implantation of patient-activated cardiac event recorder

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 42-year-old white female, with a history of syncopal spells with inconclusive results using various investigations. The patient continues to have distressing symptoms somewhat infrequently. A history and physical were performed. The procedure, indications, potential complications and alternatives were explained to the patient who appeared to understand and indicated the same. Opportunity for questions was provided and informed consent obtained.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 94%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: A pertinent history is obtained, and physical examination is performed. All laboratory tests, including blood tests, chest x-ray, and ECG, are reviewed. The risks and benefits of and alternatives to the procedure are discussed with the patient and family, and informed consent is obtained. The history, physical examination, and subsequent discussion are documented in the patient's records. The patient is prepared for the procedure using standard, sterile technique, and the surgical site and surrounding area are cleaned with an antimicrobial agent. Drapes are then placed to create a sterile field. The patient may require administration of conscious sedation. Local anesthetic is injected into the skin and subcutaneous tissue, and a 2 cm length incision is made down to the subcutaneous fat. Additional local anesthetic is placed in the subcutaneous plane as needed for patient comfort during the procedure.

Description of Intra-Service Work: Using blunt dissection, a subcutaneous pocket the size and shape of the recording device is created deeply enough to improve patient comfort and reduce the risk for skin erosion of the device. Hemostasis is maintained using standard techniques. The device is then inserted into the pocket. The ECG signal quality and amplitude are verified by placing the programmer head in a sterile sleeve over the recorder, establishing telemetry. The waveform is evaluated on the programmer screen, and the gain is adjusted to optimize waveform amplitude. The device may require repositioning or orientation within the pocket until adequate signal amplitude is achieved. Once the signal amplitude is satisfactory, the device is sutured to the adjacent underlying tissue using nonabsorbable sutures through the anchoring suture holes in the device to prevent rotation or migration following implantation. The incision is then closed with subcuticular absorbable sutures and a cutaneous nonabsorbable suture.

Description of Post-Service Work: The wound is dressed, the device is programmed using a pacemaker programmer, and record is initiated. The results of the procedure are reviewed with the patient, and the patient is educated on the operation of

the implantable event recorder. Standard postoperative care and follow-up procedures are reviewed with the patient and all questions answered.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes that describe implantation and removal of patient-activated implantable loop recorders were reviewed in response to CMS' request that nonfacility inputs be created and that both codes undergo review of work and PE. Despite

ACC and HRS concerns that such a review was unwarranted, the societies complied with the wishes of the RAW and the RUC to review the codes for work and facility PE.

Code 33282 describes the work to implant the device. A joint RVS panel of ACC and HRS physicians familiar with the services reviewed the survey data. Given the relatively small utilization, the survey was robust and completed by physicians who have experience with the services.

The survey showed that the service is performed in a hospital under moderate sedation and the patient is sent home the same day. Based on established RUC standards, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of one follow-up visit for this service. This is a reduction from the current level of two 99213 visits. The panel recommends the survey result of one 99213 visit.

The key reference service is 33213, insertion only of a pacemaker pulse generator; with existing dual leads. Respondents who selected the key reference service felt 33282 was generally less intense/complex than the reference code. This aligns with the time and RVW results.

The panel did not believe a compelling evidence argument could be made to support the median survey RVW of 5.00. However, the panel also felt the 25<sup>th</sup> percentile work RVW of 3.50 would undervalue the insertion code and create a rank order anomaly with 25<sup>th</sup> percentile recommendation for the related removal code. The panel reviewed a number of 90- and 10-day services with similar times and RVWs in search of a crosswalk and supporting comparator codes. The panel recommends a work value of 3.98. This value is a direct crosswalk to CPT code 20102 that describes the work of exploring a penetrating wound in the abdomen or back. This value is supported by additional, similar comparators codes included in the attached summary spreadsheet.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33282

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology/electrophysiology                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 30900

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Most of these services are provided to non-Medicare aptients. We estimate that ratio at 3 to 1, multiplying the below estimation by 3.

Specialty cardiology/electrophysiology	Frequency 30900	Percentage 100.00 %
--	-----------------	---------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,300 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Utilization has increased an average of 17% the past 4 years. Applying that rate of increased utilization to 2011 data, and considering the increasing utility of these devices in the population, we predict the service may be provided around 10,300 times in 2013.

Specialty cardiology/electrophysiology	Frequency 17,000	Percentage 100.00 %
--	------------------	---------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 33282

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 33284	Tracking Number	Original Specialty Recommended RVU: <b>3.00</b>
		Presented Recommended RVU: <b>3.00</b>
Global Period: 090		RUC Recommended RVU: <b>3.00</b>

CPT Descriptor: Removal of an implantable, patient-activated cardiac event recorder

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 42-year-old white female with a history of syncopal spells, the cause of which was recently diagnosed using an insertable loop recorder. A history and physical were performed. The procedure, indications, potential complications and alternatives were explained to the patient who appeared to understand and indicated the same. Opportunity for questions was provided and informed consent obtained.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 97%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The nature of the procedure, along with its risks and benefits, are reviewed with the patient, and a pertinent history and physical examination are performed. Pertinent laboratory tests are reviewed, and informed consent is obtained. The history, physical examination, and discussion are documented in the patient's record. The patient is prepared for the procedure using standard, sterile technique. The surgical site and surrounding area are cleaned and prepared with an antimicrobial solution, and drapes are placed to create a sterile field. The patient may require conscious sedation. Local anesthetic is injected into the skin and subcutaneous fat, and the previously created pocket that contains the device is opened.

Description of Intra-Service Work: The sutures anchoring the recorder to the subcutaneous tissue are cut, and the device is removed from the pocket. The pocket is the flushed with an antimicrobial solution and closed with subcuticular absorbable sutures and a subcutaneous nonabsorbable suture.

Description of Post-Service Work: The wound is dressed. The results of the procedure are reviewed with the patient along with standard postoperative care and follow-up procedures.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Code 33284 describes the work to remove a patient-activated implantable loop recorder. Given the relatively small utilization, the survey was robust and completed by physicians who have experience with the services.

The survey showed that the service is performed in a hospital but the patient is sent home the same day. Based on established RUC standards, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of one follow-up visit for this service. This is a reduction from the current level of two 99213 visits. The panel recommends the survey result of one 99213 visit.

The key reference service is 33233, removal of permanent pacemaker pulse generator only. Respondents who selected the key reference service felt 33284 was less intense/complex than the reference code. This aligns with the time and RVU results. The panel did not believe the changes in intraservice and postservice times could support a work recommendation at the median. As such, the panel recommends a work value of 3.00, the survey 25<sup>th</sup>-percentile value.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33282

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology/electrophysiology

How often? Sometimes

Specialty

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 33284

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

## SS Rec Summary

[illegible]

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor:

33282 Implantation of patient-activated cardiac event recorder

33284 Removal of an implantable, patient-activated cardiac event recorder

Global Period: .090 Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

A specialty panel representing cardiology and electrophysiology discussed the practice expense requirements for the various codes and determined that the standard 90-day global inputs for a straightforward patient and procedure under anesthesia would apply.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: The existing codes were used for comparison codes.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: n/a

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: n/a

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

The standard times have been applied for pre-service clinical labor time to complete preservice diagnostic & referral forms, coordinate presurgery services, schedule space and equipment in facility, provide preservice education/obtain consent, and make follow-up phone calls and prescriptions.

Intra-Service Clinical Labor Activities:

The standard 6 minutes has been applied for these inpatient procedures for one half discharge day management related services.

Post-Service Clinical Labor Activities:

Standard times to ready patient/records and assist the physician at each post-op office visit have been applied.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Harvard-Valued Annual Allowed Charges Greater than \$10 million Screen*

April 2013

**Renal Allotransplantation**

CPT code 50360 *Renal allotransplantation, implantation of graft; without recipient nephrectomy* was identified through the Harvard-Valued Annual Allowed Charges  $\geq$  \$10 million screen. The RUC recommended survey of physician work and review of practice expense for this service.

The specialty societies presented compelling evidence to justify a change in the physician work value. The physician work and time components of CPT code 50360 were valued in the Harvard studies. Since that time, there has been a change in patient population and donor grafts. The number of transplants performed annually in patients aged 50 years or older has steadily increased, and the number performed annually in patients aged 65 years or older tripled between 1998 and 2011. In addition, diabetes and hypertension as the primary cause of renal failure has increased in kidney transplant recipients. The effects of these diseases, along with increased time on dialysis at the time of transplant, have resulted in higher prevalence of peripheral vascular disease, coronary artery disease and cerebrovascular disease at the time of transplant, often requiring vascular procedures prior to transplantation. These co-morbidities and prior interventions translate into more complex and intense work in the pre, intra and post-operative transplant period.

Increases in the number of candidates on the waiting list and relatively flat organ donation rates have resulted in steady decreases in transplant rates for adult wait-listed candidates. In 1998, the deceased donor transplant rate was 20.6 transplants per 100 wait-list years, compared with 11.4 transplants per 100 wait-list years in 2011. As a result of the flat organ donation rates and increasing number of candidates on the waiting list, the percentage of deceased donors who had co-morbidities that would affect the graft has increased; the major components of the kidney donor risk index (KDRI) has increased over time. In combination with an older, sicker, and more complex typical recipient, a more marginal graft results in higher complexity and intensity of work both intra-operatively and post-operatively, including but not limited to delayed graft function, requiring post-transplant dialysis, higher risk of infection, higher need for post-transplant assessment of the graft, including biopsy, and generally increased post-transplant morbidity.

As mentioned above, CPT code 50360 was reviewed as part of the Harvard study. The Harvard reports indicate that the pre-, intra-, and post-operative time estimates were collected from five general surgeons. However, transplant surgeons were not part of the Harvard study. In 1992, CPT code 50360 underwent CMS Refinement Panel review and the work RVU was increased from 26.43 to 27.71. However, there is no discussion of this change in the Federal Register.

In 1997, a CMS contractor was tasked with transforming the post-operative time from the Harvard study into hospital and office visits. This was undertaken so that changes in the work RVUs for Evaluation and Management (E/M) codes after the first Five-Year-Review could be incorporated into codes with a global period of 10 or 90 days. The Harvard post-op time data was transformed into hospital and office visits. This transformation increased the total Harvard time from 839 to 1,526 minutes and resulted in a negative IWPOT. Most noticeable is the change in hospital visit time from 308 minutes in the Harvard study to 978 minutes using E/M visits. The RUC agreed with the specialty society that the methodology to impute frequency and level of post-op E/M visits was flawed. Therefore, the RUC agreed with the specialty society that there is compelling evidence that the current value for this procedure is potentially misvalued. This marks the first time this procedure has been surveyed for both time and physician work by surgeons familiar with the procedure.

The RUC reviewed survey data from 109 transplant specialists and agreed that the survey 25<sup>th</sup> percentile slightly overestimated the physician work and complexity. The RUC noted that the number of post-operative visits has decreased, but as mentioned, these were imputed rather than based on survey data. The RUC reviewed key reference code 47780 *Anastomosis, Roux-en-Y, of extrahepatic biliary ducts and gastrointestinal tract* (work RVU=42.32, intra-service time=240 minutes) and noted that 50360 required 30 minutes less intra service time, less hospital visits, but more office visits. The RUC agreed that CPT code 50360 should be valued lower. In addition, the RUC reviewed MPC codes 33512 *Coronary artery bypass, vein only; 3 coronary venous grafts* (work RVU=43.98, intra service time=213 minutes) and 33426 *Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring* (work RVU=43.28, intra-service time= 205 minutes) and noted that although 50360 requires similar intra-service work, 33512 and 33426 require more total physician work and time, and therefore, should be valued slightly higher.

In addition, the RUC determined that an additional 50 minutes of pre service evaluation time is appropriate due to the extensive time required to evaluate the patient and coordinate with other health care providers after the patient's admission to the hospital and prior to surgery. Specifically, after the patient is admitted to the hospital, the surgeon performs a history and physical examination, reviews the patient's medical record and current laboratory data to ensure suitability for transplant. This work exceeds the standard pre-service work associated with most major surgical operations for the typical recipient, as the surgeon will not have had the opportunity to assess the patient for months, possibly years, prior to the transplant. Therefore, for recipients with complicated past medical histories and the typical co-morbidities, consultation with the referring and transplant center nephrologist and anesthesiologist is completed to rule out any prohibitive medical conditions and to determine if urgent dialysis is required prior to surgery. If the latter is required, coordination with the dialysis service is initiated to schedule the operating room making sure that the graft is not exposed to unacceptable cold ischemic times. Similarly, if any further evaluation is required, this will also need to be completed in the context of optimal cold ischemic times. The additional pre-service evaluation time is consistent with other RUC reviewed transplant procedures, but less than 32851 *Lung transplant, single; without cardiopulmonary bypass* and 33945 *Heart transplant, with or without recipient cardiectomy*. **The RUC recommends a work RVU of 40.90 for CPT code 50360.**

### **Practice Expense:**

The RUC accepted the direct PE inputs as submitted by the specialty society.

CPT Descriptor: Renal allotransplantation, implantation of graft; without recipient nephrectomy

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 61-year-old male with end stage renal disease secondary to Type II diabetes and hypertension has been on dialysis and the transplant waiting list for 4 years. He has peripheral vascular disease and a BMI of 33. He is cardiac high risk and is ASA Grade 4. A matched cadaver graft from a 58-year-old donor who died of stroke becomes available. After backbench biopsy site repair and anatomical reconstruction of the graft (reported separately), a kidney transplant without native nephrectomy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 39%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: After being notified of a potential organ offer for an identified recipient the surgeon logs onto the UNOS web portal (UNET) to review the electronic medical record of the donor. The suitability of the donor is determined based on past medical and surgical history, age, ABO blood-type compatibility and organ quality. If suitable, a provisional yes is entered into the UNET donor system. For certain donors, such as those with advanced age or underlying medical or surgical comorbidities, the OPO may be contacted to arrange for renal biopsy and placement of the kidneys on perfusion pump at the time of organ retrieval. Organs procured in remote locations require more complicated travel arrangements such as commercial air-flight and additional ground transportation. These arrangements need to be coordinated with the OPO to ensure that the organ will arrive in a suitable time for safe use. For recipients with complicated past medical histories, consultation with the referring nephrologists and anesthesia personnel is performed to determine if urgent dialysis is required before surgery and to rule out any prohibitive medical conditions. After the patient is admitted to the hospital, the surgeon performs a history and physical examination, reviews the patients' medical record and current laboratory data to ensure suitability for transplant. This examination will particularly focus on any recent infections, hospitalizations, or recent sensitization events such as transfusions. The patient and family are counseled and operative consent is obtained. The operative site is marked prior to proceeding to the operating room and preoperative orders are written, including beta blockers, antibiotics, DVT prophylaxis and induction immunosuppression. Once there is confirmation of a crossmatch and the organ has been visualized as part of a back table preparation (separately reported), the recipient is brought to the operating room. The surgeon assists in placing intravenous access (typically difficult in ESRD patients who have PVD) and placing a Foley catheter (typically difficult as these patients often do not produce urine). The surgical area is prepped and draped. A comprehensive "time out" is undertaken by the entire operating room team, including reviewing the UNOS ID and the blood type of donor and recipient, that antibiotics have been given within 1 hour

of incision, VTE prophylaxis with either Venodyne boots or heparin is in place as well as reviewing the timing of anti-rejection and any other medications such as volume expanders or diuretics with anesthesia personnel.

**Description of Intra-Service Work:** A standard iliac fossa incision is performed. The retroperitoneal space is entered with division of the inferior epigastric vessels and a retractors are placed for appropriate exposure. In a female recipient, the round ligament may be divided and in a male recipient the cord structures must be identified and retracted. The iliac vessels in the pelvis are exposed, ligating any branches and overlying lymphatic vessels. The vessels are examined for their suitability and if appropriate, they are test clamped. If the vessels are diseased, which is not uncommon, further cephalad dissection or even contralateral side dissection may be needed to find a suitable place to implant the organ. The prepared donor organ (backbench work, when performed, is separately reported) is then brought into the operative field. Heparin may be given prior to vessel clamping. The iliac vein is clamped and an incision made on its anterior surface. The renal vein is then anastomosed to this opening using 5-0 Prolene sutures in a running fashion. Next, vascular clamps are placed on the iliac artery and an incision is made on its anterior surface. This opening is widened with an aortic punch. The inside of the artery is examined to look for plaque or an intimal flap which may complicate the anastomosis and cause embolization into the kidney or leg. If found, tacking sutures using 6-0 Prolene are used to suture down these plaques or flaps to the side wall. The renal artery is then anastomosed to the iliac artery using 6-0 Prolene sutures in a running fashion. The vessels are then unclamped slowly, leaving the arterial inflow last to minimize embolization to the kidney. Mannitol and furosemide may be given prior to reperfusion to minimize ischemia reperfusion injury and promote diuresis. The anastomoses and kidney surfaces are examined for hemostasis. If there is evidence of vasospasm or suboptimal arterial flow, papaverine and/or verapamil may be injected into the artery. Once satisfied with the vascular anastomoses, the retractors are repositioned to help identify the bladder. This may be difficult as often many ESRD patients do not make urine. The surgeon may insufflate the bladder with solution to help find it. The lateral aspect of the bladder is dissected, going through the detrusor muscle to identify the bladder mucosa. The donor ureter is then trimmed and spatulated to widen its mouth. The bladder mucosa is then opened and the ureter is sown to it using 5-0 PDS sutures. Hemostasis is once again confirmed. A drain is placed. After confirming correct instrument and lap pad counts, the wound is closed in layers.

**Description of Post-Service Work: Post-operative Work - Hospital:** Apply dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Monitor hourly urine output. Perform an ultrasound of the kidney to confirm patent vasculature. Serial blood tests are ordered and reviewed to confirm no evidence of bleeding and improvement of kidney function. Abnormal chemistry results may necessitate urgent dialysis for the patient with consultation with nephrology personnel. Discuss procedure and outcome with family. Write postoperative note. Dictate operative report. Write orders for transferring to surgical floor and discuss ongoing care with floor nurses. Daily rounds are made with a multidisciplinary team, including a transplant pharmacist and transplant dietician. Ultrasounds to evaluate for vascular or ureteral problems are performed as necessary. Monitor fluid and electrolyte status and renal function. Immunosuppression and prophylactic antibiotic medications are evaluated on a daily basis. Many of these patients have co-morbidities which need to be addressed in the postoperative period. These include hypertension and diabetes, which may be worsened in the post transplant period and need monitoring, treatment and consultation with endocrinology and cardiology personnel. Manage dressings to wound daily, monitoring status of incision, looking for signs of infection as well as drain output. Continue prophylaxis for DVT. Monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Review nursing/other staff patient chart notes. Write orders for labs, films (if indicated), medications, diet, and patient activity. Chart patient progress notes daily. Answer patient and family questions. Answer nursing/other staff questions. Prior to discharge, the patient and family will be given detailed instructions on their medications and potential side effects to look for, as well as protocol post-operative expectations for the patients. Discharge includes appropriate paperwork, patient and family counseling, dietary instruction, provision of prescriptions and arranging for follow-up. If there is persistent delayed graft function, with the patient needing to be discharged while still on dialysis, arrangements need to be made with the dialysis center to perform dialysis in close conjunction with the transplant center, frequently in a tapering schedule. All appropriate medical records are completed, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

#### **Post-operative Work - Office:**

Office visits for post-transplant patients require complex chronic care, where the primary goal of short-term and long-term medical follow-up is to enable surveillance for signs and symptoms of renal allograft dysfunction. At the first post-discharge visit, a comprehensive review of systems and physical exam is performed concentrating on potential complications from the surgery. Management of the operative wound, assessment for surgical site infection, and drain management are all performed. All discharge medications, including those for pain, hypertension, diabetes, and anti-microbial therapy are reviewed and adjusted as appropriate.

Post-op office visits (after the initial visit) include a complete review of the patient's medical record and review of interval chart notes. This is important since the patient will likely have been seen and/or monitored by other transplant team providers (eg, pharmacists, home health care, therapy, dietician) who have entered notes in the medical record. The transplant surgeon will continue assessment of the patient for medical or surgical complications, including but not limited to bleeding, infection, wound complications, venous thrombosis, and pulmonary complications. Removal of skin staples is delayed to at least 3 weeks because the surgeon has to be certain that the wound is well healed; which is complicated by immunosuppressive drugs.

Post-op office visits also include assessment of graft function to determine when the patient can cease hemodialysis; including review of volume status, evidence of uremia/azotemia, and serum BUN and creatinine determinations. Careful monitoring is necessary because, although a graft may have great initial function, there are a number of reasons why renal function may decline, including drug nephrotoxicity, acute tubular necrosis, recurrent disease, and obviously acute rejection. Review of drugs and lab studies is an important component of each visit requiring complex medical decision making and considerable time. In combination with medication adherence history and physical examination, lab results and imaging assist the transplant surgeon in assessment of graft function. Postoperatively, comorbid diseases are typical and need to be aggressively managed. Both traditional and nontraditional cardiovascular risk factors, including the concurrent presence of PVD, contribute to CVD morbidity and mortality in kidney transplant recipients. Therefore, aggressive treatment of hypertension and hyperlipidemia is necessary since these diseases are established risk factors for CVD mortality in kidney transplant recipients. Similarly, new-onset diabetes after transplantation has been identified as one of the most important factors associated with reduced graft function and patient and graft survival. The transplant surgeon will write orders for a multifaceted approach of weight control, diet and exercise, oral medication and insulin as necessary for tight glycemic control. In addition to CVD related evaluation and management, the transplant surgeon will monitor for infections which remain the second most common cause of death in kidney transplant recipients.

At the end of each encounter, the surgeon will write orders for further evaluation, dictate progress notes for the medical chart, and communicate with referring physicians and consultants as appropriate.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**WHY IS THIS CODE BEING REVIEWED**

Code 50360 was identified by CMS through a Harvard-valued annual allowed charges greater than \$10 million screen.

## COMPELLING EVIDENCE

Kidney transplantation (50360) was last reviewed during the Harvard study prior to publication of the first Physician Fee schedule in 1992. Since that review in the late 1980's, the patient receiving a kidney transplant and the characteristics of the donor graft have changed. The data presented below are taken from the UNOS 2011 Annual Data Report, which is a comprehensive report of the Organ Procurement and Transplantation Network (OPTN) and U.S. Scientific Registry of Transplant Recipients (SRTR).

### 1. Change in Patient - AGE

The number of kidney transplant candidates on the waiting list continues to increase each year. Commensurate with the increasing age of candidates on the waiting list, the number of transplants performed annually in patients aged 50 years or older has steadily increased, and the number performed annually in patients aged 65 years or older tripled between 1998 and 2011.

*Distribution by AGE of adult patients waiting for a kidney transplant*

*Total number of annual adult kidney transplants*

### 2. Change in Patient - Comorbidities

Diabetes and hypertension as the primary cause of renal failure has increased in kidney transplant recipients. The effects of these diseases, along with increased time on dialysis at the time of transplant, have resulted in a higher prevalence of peripheral vascular disease, coronary artery disease, and cerebrovascular disease at the time of transplant, often requiring vascular procedures prior to transplantation. These comorbidities and prior interventions translate into more complex and intense work in the pre-, intra-, and post-operative transplant period.

### 3. Change in Donor Grafts

Increases in the number of candidates on the waiting list and relatively flat organ donation rates have resulted in steady decreases in transplant rates for adult wait-listed candidates. In 1998, the deceased donor transplant rate was 20.6 transplants per 100 wait-list years, compared with 11.4 transplants per 100 wait-list years in 2011. As a result of the flat organ donation rates and increasing number of candidates on the waiting list, the percentage of deceased donors with co-morbidities that would affect the graft has increased; the major components of the kidney donor risk index (KDRI) has increased over time. In combination with an older, sicker, and more complex typical recipient, a more marginal graft results in higher complexity and intensity of work both intra-operatively and post-operatively, including but not limited to delayed graft function, requiring post-transplant dialysis, higher risk of infection, higher need for post-transplant assessment of the graft, including biopsy, and generally increased post-transplant morbidity.

*Percent of donors with given characteristics*

### 4. Flawed Methodology Related to Post-operative Visits

Kidney transplantation (50360) was reviewed as part of the Harvard study. The Harvard reports indicate that the pre-, intra-, and post-operative time estimates shown below were collected from five general surgeons (transplant surgeons were not part of the Harvard study).

source	CPT	Total time	eval	posit	sdw	intra	Immed-post	hosp	off
Hvd	50360	839	71	0	25	183	62	308	190

Code 50360 underwent CMS Refinement Panel review in 1992 and the wRVU was increased from 26.43 to 27.71. There is no discussion of this change in the Federal Register.

In 1997, a CMS contractor (Dan Dunn) was tasked with transforming the post-operative time from the Harvard study into hospital and office visits. This was undertaken so that changes in the wRVUs for E/M codes after the first five-year-review could be incorporated into codes with a global period of 10 or 90 days. The Harvard post-op time data was transformed into hospital and office visits, as shown below. This transformation increased the total Harvard time from 839 to 1,526 minutes and resulted in a negative IWPUP of -0.220. Most noticeable is the change in hospital visit time from 308 minutes in the Harvard study to 978 minutes using E/M visits.

Source	CPT	IWPUP	RVW	Tot	HV	OV	eval	posit	sdw	intra	Im-post	99291	99231	99238	99213
Dunn 1997	50360	-0.220	27.05	1526	978	207	71	0	25	183	62	10	12	1	9

Even after two increases in wRVU to account for increases in wRVUs for E/M services, the current wRVU for 50360 continues to have a negative IWPUT (-0.144).

Source	CPT	IWPUT	RVW	Tot	HV	OV	eval	posit	sdw	intra	Im-post	99291	99231	99238	99213
2013 PFS	50360	-0.144	40.90	1526	978	207	71	0	25	183	62	10	12	1	9

We believe it is clear from this discussion that the methodology to impute frequency and level of post-op E/M visits was flawed.

## RECOMMENDATION DISCUSSION

### Survey Process

The American Society of Transplant Surgeons and American Urological Association conducted a standard RUC survey. Surveys were sent to the entire ASTS membership. A crosscheck with AUA indicated overlap in membership between ASTS and AUA transplant specialists. Of the 927 survey requests sent, 109 responses were received. All respondents indicated experience in performing the procedure in the past 12 months.

### Pre-time Recommendation: 90/3/20

Package 4 (difficult patient/difficult procedure) is appropriate with the addition of 50 minutes to the evaluation component. Kidney transplantation requires significant pre-operative work prior to surgery. As described in the pre-service work description on the first page of this SoR, the surgeon is required to thoroughly evaluate both the patient and the graft prior to surgery, and more importantly, to “match” the graft with the donor not only from an immunological perspective, but also from a risk/benefit perspective. For each graft, a surgeon must first decide on a number of patients to be “crossed-matched” against a specific donor. Even when the cross-match is favorable for a specific donor, a surgeon may turn down a graft offer for that particular recipient, while potentially accepting the same graft for another recipient.

With respect to the deceased donor graft, this involves evaluation of the donor's medical history electronically to confirm suitability for the intended transplant recipient. For donors with advanced age or underlying medical or surgical comorbidities (typical), evaluation is necessary to determine if renal biopsy or placement of the kidney on perfusion pump at the time of organ retrieval is required, and when appropriate, interpretation of the biopsy and pump parameters enter into the decision to accept or not accept the graft. A final decision is often made upon inspection of the graft.

With respect to the patient, the transplant surgeon contacts the patient to explain the nature of the donor graft and any inherent risks associated with the particular donor graft. Once the patient agrees to the transplant, he/she will come to the hospital for admission. After the patient is admitted to the hospital, the surgeon performs a history and physical examination, reviews the patients’ medical record and current laboratory data to ensure suitability for transplant. This work exceeds the standard pre-service work associated with most major operations for the typical recipient, as the surgeon will not have had the opportunity to assess the patient for months or even years prior to the transplant. Therefore, for recipients who have complicated past medical histories and the typical co-morbidities, consultation with the referring nephrologist, and with the transplant nephrologist at the transplant center, and with anesthesia personnel is performed to determine whether i) any further evaluation is needed to rule out potential medical contraindications, or ii) urgent dialysis is required before surgery. If the latter is the case, coordination with the dialysis service is needed to schedule the operating room making sure that the graft is not exposed to unacceptable cold ischemic times (CIT). Similarly, if any further evaluation is required, this needs to be done in the context of optimal CIT. Note that code 50360 is not billed with an E/M service.

### Post-operative Work

The survey indicated that a hospital visit was not typical on the day of surgery after discharge from recovery to the surgical ward. The survey median length of stay was 6 days and median number and level of hospital visits were 2x99233, 2x99232, 1x99231, and 1x99238. For the first few days after surgery, the patient is monitored closely for signs of graft rejection and vascular or ureteral problems. Labs and imaging is ordered and reviewed daily as needed.

Comorbid diseases (ie, HTN, diabetes) are also closely monitored, as these typically worsen and are brittle in the postoperative period. After discharge from the hospital, the patient is typically seen four times prior to the transplant surgeon transferring care to a nephrologist. The initial visits require high to moderate complexity of decision making regarding the graft function and patient comorbid disease management. A comprehensive or detailed exam is required, along with coordination with other health professionals caring for the patient. These include but are not limited to communicating with pharmacy, nephrology, and infectious diseases providers, and coordinating home care and patient evaluation with visiting nurse services, home care services for catheter care, home infusion services for antibiotic coverage and home rehabilitation services.

### **wRVU Recommendation**

Based on a comparison to the key reference code, MPC codes, and other RUC reviewed services, we recommend the survey 25<sup>th</sup> percentile wRVU of 43.00.

### **Comparison to Key Reference Code**

The 33 respondents that chose 47780 as their reference code rated the intensity and complexity of 50360 higher for 9 of the 11 measures. With respect to fitness to rate, 29 of the 33 respondents had experience performing 47780 in the past 12 months. The pre-operative work for 50360 is significantly greater and of higher complexity. Although 50360 requires less intra-time, the work is more intense (ie, higher IWPUT) because renal transplantation requires two vascular and one ureteral anastomosis, often performed in diseased vessels and atrophied bladder. Anything short of a technically perfect vascular anastomosis can jeopardize the viability of the graft and the success of the transplant. In the 477980 procedure, a single biliary anastomosis is performed that is technically less challenging and maybe salvaged even with complication with conservative management such as percutaneous drainage or operative revision. Intraoperative time during renal transplantation is shorter compared to 47780 since exposure of the iliac vessels can be achieved relatively quickly whereas exposure of the hepatic ducts may take longer but less intense. However, after exposure is obtained, renal transplantation requires a high level of focused work to not only identify an appropriate site for anastomosis but also factoring the need for urinary reconstruction. With diseased iliac vessels, obtaining an appropriate site for anastomosis within these constraints can be difficult and may require vascular reconstruction.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☒ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your

scenario. 50323 (Backbench standard preparation of cadaver donor renal allograft prior to transplantation, including dissection and removal of perinephric fat, diaphragmatic and retroperitoneal attachments, excision of adrenal gland, and preparation of ureter(s), renal vein(s), and renal artery(s), ligating branches, as necessary). The 2010 Medicare 5% beneficiary file indicates that code 50323 was reported ~60% of the time by the same physician on the same day. This work will always be necessary to prepare the donor graft, and may be performed by the surgeon who retrieves the organ, an independent surgeon working at the back bench, or the transplant surgeon. Code 50323 is carrier priced and paid only by report.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 50360

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery-transplant surgeon                      How often? Commonly

Specialty urological surgeon                      How often? Sometimes

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15321

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. UNOS 2011 data - surgical specialty distribution not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,916  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2011 Medicare database

Specialty general surgery-transplant surgeon	Frequency 9000	Percentage 90.76 %
Specialty urological surgeon	Frequency 700	Percentage 7.05 %
Specialty	Frequency	Percentage %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 50360

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Facility Direct Inputs**

CPT Long Descriptor:

50360 Renal allotransplantation, implantation of graft; without recipient nephrectomy

Global Period: 090

Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: Representatives of the American Society of Transplant Surgeons and the American Urological Surgeons utilized the practice expense details accepted by the RUC and CMS in 2004.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: N/A
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: An additional 30 minutes has been added to the typical 60 minutes assigned to 90-day global procedures. All work performed once the patient is admitted to the hospital relevant to the recipient procedure falls under Medicare Part B. this is in sharp contrast to all work performed prior to admission, including evaluation, listing, maintenance on waiting list, up to and including organ offer, which fall under Medicare Part A. While the latter non-physician work is typically performed by hospital staff, the former is typically performed by nurse coordinators involved in the post transplant care and commonly the responsibility of the surgical team. This transition of care is highly regulated and has been and continues to be the topic of OIG investigations and therefore most programs are acutely aware of the need to abide by these regulatory directives.
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A
5. Please describe in detail the clinical activities of your staff:

**CLINICAL STAFF TYPE:** It has previously been accepted that transplant surgeons will have an RN as their typical staff type, therefore, "RN" is indicated for all clinical staff activities.

Pre-Service Clinical Labor Activities:

Standard time of 60 minutes for major surgical procedures (90-day global) is indicated . An additional 30 minutes has been added to the typical 60 minutes assigned to 90-day global procedures. All work performed once the patient is admitted to the hospital relevant to the recipient procedure falls under Medicare Part B. this is in sharp contrast to all work performed prior to admission, including evaluation, listing, maintenance on waiting list, up to and including organ offer, which fall under Medicare Part A. While the latter non-physician work is typically performed by hospital staff, the former is typically performed by nurse coordinators involved in the post transplant care and commonly the responsibility of the surgical team. This transition of care is highly regulated and has been and continues to be the topic of OIG investigations and therefore most programs are acutely aware of the need to abide by these regulatory directives.

Intra-Service Clinical Labor Activities:

The RUC database indicates discharge day management at 99238 level for the living donor procedure codes. The PEAC standard 12 minutes of clinical staff activity for 99238 is shown on the spreadsheet.

Post-Service Clinical Labor Activities:

Standard times for each office visit.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Site of Service Anomaly / CMS Fastest Growing / CMS Requests: Final Rule for 2013*

April 2013

**Percutaneous Implantation of Neurostimulator –PE Only**

In the Final Rule for 2013, CPT code 63650 *Percutaneous implantation of neurostimulator electrode array, epidural* was identified by stakeholders as a procedure performed in the non-facility setting. CMS requested non-facility practice expense (PE) inputs. The RUC determined that review of physician work is not necessary at this time, as this service was last surveyed in February 2008 and re-reviewed in October 2010. The RUC recommended that the service be referred to the PE Subcommittee for review at the April 2013 RUC meeting. The specialty clarified that 63650 is frequently furnished in the physician office and that 2 arrays are required. The PE Subcommittee noted that this code was previously a 090-day global and still retains its pre-service time for a standard 090-day global. The current standard is 0 minutes for a 010-day global in the facility setting. However, if the specialty can justify time, 15 minutes of pre-service time for minimal use of clinical staff or 30 minutes for extensive use of clinical staff may be appropriate. The specialty society confirmed that there is extensive use of clinical staff and the pre-service time was modified from 090-day global standard of 60 minutes to 30 minutes in the facility. The PE Subcommittee reviewed the non-facility clinical staff time input *Obtain vital signs* and reduced it to 3 minutes for 1-3 vital signs and reduced *Setup scope (non facility setting only)* to 0 minutes because there is no scope utilized for this service. The PE Subcommittee also adjusted equipment minutes. **The RUC reviewed and approved the direct practice expense inputs with modifications as recommended by the Practice Expense Subcommittee.**

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
63650		Percutaneous implantation of neurostimulator electrode array, epidural	010	7.15 (No Change) (PE Input Recommendations Only)

based on the proportion of indirect expense to direct expense that is typical of other psychiatric services, and is not on par with other services that require similar investments in capital equipment and high-cost, disposable supplies.

Historically, we have contractor-priced (meaning our claims processing contractors develop payment rates) for services with resource costs that cannot be appropriately valued within the generally applicable PE methodology used to price services across the PFS. Because there is no mechanism to develop appropriate payment rates for these services within our current methodology, we proposed to contractor price these codes for CY 2013.

*Comment:* One commenter objected to the proposal to contractor price these codes for CY 2013 and suggested that CMS should establish PE RVUs using the generally applicable PE methodology and must endeavor in ensuing rulemaking to revise the methodology to refine any values the agency views as “anomalous.” The commenter also questioned CMS’s assumption that the direct costs for psychiatrists who furnish these services “far exceed” the direct costs for psychiatrists who do not furnish these services. The commenter stated that CMS made this assessment without any empirical support and that CMS needs to conduct a survey or obtain other data from psychiatrists before drawing any conclusions regarding the appropriateness of Medicare payment rates on this basis.

*Response:* We understand the commenter’s objections, but as we explained in the proposal, we do not believe that there is a mechanism within the current methodology that allows us to develop appropriate payment rates for these services. We agree with the commenter that it may be appropriate to consider potential changes to the practice expense methodology to accommodate changing circumstances of medical practice. We do not agree with the commenter, however, that we have no means to pay appropriately for services when we recognize areas where the practice expense methodology is inadequate and that we must establish national RVUs based on that methodology, even when it does not accommodate the unique circumstances of particular services. Instead, we believe that in outlier cases, contractor pricing allows Medicare to pay more appropriately for particular services furnished to beneficiaries.

In our proposal, we pointed out that the direct costs incurred by psychiatrists reporting the codes far exceed the direct

costs typical to any other service predominantly furnished by psychiatrists. The commenter objected to this assertion and claimed it was made without any empirical support. We made that assertion based on comparing the direct practice expense input costs for transcranial magnetic stimulation services and the current direct practice expense input costs in the direct PE database for services predominantly furnished by the specialty based on Medicare claims data. In our examination of 20 frequently billed psychiatry services (where greater than half of the Medicare allowed services were reported by psychiatrists), the total direct costs (clinical labor, disposable medical supplies, or medical equipment) in the direct PE input database summed to under \$10 for all but 3 of these 20 services. Examples of these services include CPT codes 90807 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services), 90862 (Pharmacologic management, including prescription, use, and review of medication with no more than minimal medical psychotherapy), and 90845 (Psychoanalysis). For the three where the direct PE input costs summed to greater than \$10, HCPCS code M0064 (Brief office visit for the sole purpose of monitoring or changing drug prescriptions used in the treatment of mental psychoneurotic and personality disorders), and CPT codes 90865 (Narcosynthesis for psychiatric diagnostic and therapeutic purposes (eg, sodium amobarbital (Amytal) interview)), and 90870 (Electroconvulsive therapy (includes necessary monitoring)), the service with the highest direct cost sum was \$32.24. In contrast, the transcranial magnetic stimulation services treatment delivery (CPT code 90867) included direct PE inputs that summed to direct costs of \$145.19. The disparity between the TMS direct costs and the direct costs in other frequent psychiatry codes was the basis for our assertion that the direct costs for this service far exceeded the direct costs typical to any other service predominantly furnished by psychiatrists. Thus, we continue to believe our decision to contractor price these codes is the proper one.

*Comment:* Another commenter requested that CMS use the existing methodology to price the codes or contractor price the codes. This commenter also urged CMS to consider

alternate sources of data for resource costs as they become available, or to make appropriate future refinements to the practice expense methodology.

*Response:* We appreciate the commenter’s support for our proposal as a suitable means of pricing the services. We will consider appropriate means to develop national prices for these services in the context of potential changes to the practice expense methodology and the availability of new data sources.

After consideration of these public comments, we are finalizing our proposal to contractor price CPT codes 90867, 90868, and 90869 for CY 2013.

#### d. Spinal Cord Stimulation Trial Procedures in the Nonfacility Setting

Stakeholders have recently brought to our attention that CPT code 63650 (Percutaneous implantation of neurostimulator electrode array, epidural) is frequently furnished in the physician office setting but is not priced in that setting. We note that the valuation of a service under the PFS in particular settings does not address whether those services are medically reasonable and necessary in the case of individual patients, including being furnished in a setting appropriate to the patient’s medical needs and condition. However, because these services are being furnished in the nonfacility setting, we believed that CPT code 63650 should be reviewed to establish appropriate nonfacility inputs. We proposed to review CPT code 63650 and requested recommendations from the AMA RUC and other public commenters on the appropriate physician work RVUs (as measured by time and intensity), and facility and nonfacility direct PE inputs for this service. We understand that disposable leads comprise a significant resource cost for this service and are currently separately reportable to Medicare for payment purposes when the service is furnished in the physician office setting. Disposable medical supplies are not considered prosthetic devices paid under the Durable Medical Equipment, Prosthetic/Orthotic, and Supplies (DMEPOS) fee schedule and generally are incorporated as nonfacility direct PE inputs to PE RVUs. We sought comment on establishing nonfacility PE RVUs for CPT code 63650.

*Comment:* Several commenters expressed concerns regarding the possibility of establishing nonfacility PE RVUs for this service based on the assumption that the nonfacility PFS payment rate would be lower than the rate paid by the Medicare hospital outpatient prospective payment system

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Global Period: 10 Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

Clinical labor standards were followed and reviewed by the various societies RUC representatives.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Reference code 63663: Revision including replacement, when performed, of spinal neurostimulator electrode percutaneous array(s), including fluoroscopy, when performed. This was used as comparator code as it represents a similar procedure and equipment, labor intensity, practice expense and intensity. This procedure has been valued in the non-facility setting. The comparator code is used to revise or replace a lead previously implanted whereas the code under review is for a new trial placement.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Completion of diagnostic and referral forms for required preauthorization and scheduling.

Intra-Service Clinical Labor Activities:

Education and consent for this procedure is involved. The procedure requires active patient involvement intra-operatively in order for the surgery to be a success. The patient's pain pattern must be reviewed and confirmed, what is to be expected in the OR including from a pt participation stand-point. The key to a good trial is a prepared pt who understands that they must work with the doctor to be sure they are getting optimal coverage of their area of pain with the stimulator trial lead placement. Small lead movements (cephalad/caudad/lateral) can result in changes in the area of stimulation coverage and /or uncomfortable stimulation and therefore the pts needs to be able to report what they are feeling accurately. Pts are awake and must be properly mentally prepared for a trial. The clinical staff will also perform the usual requirements of preparing the room, assembling films, setting up the fluoroscopy C-arm, starting an IV

and monitoring for sedation.

An assistant, usually an RN, is required to be in the room attending to the patient at all times during the procedure. In addition to directly assisting the physician the patient is monitored and lightly sedated. At the conclusion of successful placement the RN must apply sterile dressings, assist in anchoring the lead, affix the screening cable.

A radiologic technician assists throughout the procedure. The c-arm is prepared and set to the preferred setting for patient body habitus and location of intended lead. A pre-operative image is obtained after to ensure correct position on table. Images are obtained throughout the procedure until the leads have been successfully positioned and programmed to adequate effect. After suturing the trial lead to the skin a final film is required for documentation of lead position.

Post-Service Clinical Labor Activities:

Please see also the pre-service rationale regarding complexity of instructions to patients for effective trial that must also be reviewed post-operatively. In addition, the post op instructions for care of the wound and equipment and how to manage medications are very complex. The patient operates the equipment completely on their own after the surgery & it takes time to educate the patient. This is entirely different from all other procedures done in the pain treatment world. For other procedures the patient is essentially a passive conduit, following an injection or even a pump trial the pt is not required to know how to operate a complex piece of medical equipment. Post-op the patient must be taught on their unique set of programs and how to operate their hand held device. Think of teaching someone to use a new cell phone with some new apps.

### Background on CMS Request for 63650

With office based trials for spinal cord stimulation (SCS) the expense of the lead array is reimbursed using the Level II HCPCS code L8680 billed as one unit per each "electrode" or "contact". A typical lead array is an assembly of contacts consisting of 4, 8 and recently 16 contacts per lead array. In usual clinical parlance the array is referred to as the "lead" and each "electrode" as a "contact". More than one lead is often implanted.

CMS revised the long code descriptor for code L8680 effective January 2010 from *"implantable neurostimulator electrode, each"* to *"implantable neurostimulator electrode (with any number of contact points), each"*. The January 2010 DMEPOS payment for this code remained unchanged from 2009 to 2010. CMS previously clarified that use of the term "electrode" in the definition of L8680 referred, correctly, to each contact point and that the DMEPOS payment rate for L8680 was established on that basis. There are no PE RVUs established for the procedure in this setting. The average Medicare reimbursement is about \$430 per contact.

Whereas permanent SCS implant procedures are facility-based, over the past 10 years trials have increasingly migrated to the office setting. Current RUC database list utilization of 63650 in Physician office as 35.86%. From MarketScan® Commercial Claims and Encounters Database (MSCCAE) from Thomson Reuters (Healthcare) Inc. 2006 -2009:

The report of quantities 1 or 2 likely reflect incorrect documentation and represents 1 or 2 leads. The most common reported electrode quantity is 16 in this data base from 2009.

CMS issued the following statement in the 2012 MPFS on page 49-50:

*"Stakeholders have recently brought to our attention that CPT code 63650 (Percutaneous implantation of neurostimulator electrode array, epidural) is frequently furnished in the physician office setting but is not priced in that setting... We understand that disposable leads comprise a significant resource cost for this service and are currently separately reportable to Medicare for payment purposes when the service is furnished in the physician office setting. Disposable medical supplies are not considered prosthetic devices paid under the Durable Medical Equipment, Prosthetic/Orthotic, and Supplies (DMEPOS) fee schedule and generally are incorporated as nonfacility direct PE inputs to PE RVUs. We seek comment on establishing nonfacility PE RVUs for CPT code 63650"*

In 2012 this service was identified as potentially misvalued in the NPRM for 2013. The work was recently reviewed for CY 2012. The RUC recommended that the **PE only** be reviewed by the April 2013 meeting.

## Lead Pricing

Trial lead pricing from the major manufacturers is variable. It appears to be related to market forces including competitive concerns, volume of business by the implanter, geographic area and payor mix. While Industry does publish list pricing for the leads they are almost always highly discounted. In addition to the lead pricing *per se* s screening kit, usually one per patient (which includes a number of cables and programming devices) is required. Finally there are various regional dependent amounts of tax that is applied.

The lead array that is by far the most commonly used is an 8 electrode (contact) array. Although one manufacturer does supply 4 contract arrays the list pricing is within \$100. Additionally, one manufacturer (Boston Scientific Inc) has recently introduced a 16 contact array. Overall usage in the non-facility setting is unknown but given the new entry into the market is likely to low. List pricing on this lead is \$3900 as compared to \$1815 for the 8 contact array. Medtronic list price for all leads and models is the same at \$1390. Market prices are unclear, variable and viewed as confidential by the manufacturers.

## IMS Health Hospital Supply Index volume – 8-e vs 4-e lead sales

Trial lead models only, not permanent used for temporary trials.

We have provided de-identified representative invoices for 8 electrode trial leads from all three of the major manufacturers and from various practice settings and regions. The range is \$500 to \$1150 each in this sampling. Screening kits range from \$50 to \$200 depending on manufacturer, region and discount. In some cases this appears to be bundled into the invoice price for two leads.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Harvard-Valued Annual Allowed Charges Greater than \$10 million Screen*

April 2013

**Aqueous Shunt**

CPT code 66180 was identified through the Harvard-Valued Annual Allowed Charges  $\geq$  \$10 million screen. In January 2013, the RUC recommended survey of physician work and review of practice expense for this family of services. The direct practice expense inputs were reviewed at the January 2013 meeting. However, the review of physician work was postponed for review at the April 2013 RUC meeting in order to assure the surveyed post-operative visits were calculated correctly.

In April 2013, the American Academy of Ophthalmology noted that based on data from the last meeting the specialty society was informed that 66180 is typically reported (73%) with 67255 *Scleral reinforcement (separate procedure); with graft* and it appears that these services should be surveyed as a bundled code. The specialty society requested that 66180 and 66185 be referred to CPT to create codes to describe with and without patch. The specialty society also noted that they will survey 67255 with this family of services. **The RUC agreed and recommends that these services be referred to the CPT Editorial Panel for revision.**

**Practice Expense**

The Practice Expense Subcommittee reviewed the direct practice expense inputs for 66180 and 66185 in January 2013. The RUC recommends reaffirming the practice expense inputs as reviewed and approved by the RUC at the January 2013 RUC meeting.

CPT Code (•New)	CPT Descriptor	Global Period	Work RVU Recommendation
66180	Aqueous shunt to extraocular reservoir (eg, Molteno, Schocket, Denver-Krupin)	090	Refer to CPT (Practice Expense Recommendations attached)

66185	Revision of aqueous shunt to extraocular reservoir  (For removal of implanted shunt, use 67120)	090	Refer to CPT  (Practice Expense Recommendations attached)
67255	Scleral reinforcement (separate procedure); with graft	090	Refer to CPT

**AMA/Specialty Society Update Process**  
**Practice Expense Summary of Recommendation**  
**Facility Direct Inputs**

CPT Long Descriptor: 66180 Aqueous shunt to extraocular reservoir (eg, Molteno, Schocket, Denver-Krupin)

Global Period: 090

Meeting Date: 4/2013

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a Consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other physicians who have the appropriate expertise. The consensus committee reviewed the current PE details and made the appropriate changes to clinical time in order to match the survey results and any standard packages that are now applicable as compared to the current facility input. The existing supplies and equipment were also reviewed and any needed adjustments were also applied.

If you have provided any comparison practice expense inputs on your spreadsheet, please provide a rationale for the selection of codes. Comparison Code Rationale:

This code is an existing code being evaluated per CMS request in the 2013 NPRM Table 7.

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Standard 90-day global times to: Complete pre-service diagnostic & referral forms; Coordinate pre-surgery services; Schedule space and equipment in facility; Provide pre-service education/obtain consent, and follow-up phone calls & prescriptions.

Intra-Service Clinical Labor Activities:

Standard 6 minutes for discharge day management coordination.

Post-Service Clinical Labor Activities:

Standard times for 8 post-operative office visits at the appropriate levels.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Harvard-Valued Annual Allowed Charges Greater than \$10 million Screen*

April 2013

**Repair of Eyelid**

CPT code 67917 *Repair of ectropion; extensive (eg, tarsal strip operations)* was identified through the Harvard-Valued Annual Allowed Charges  $\geq$  \$10 million screen. In October 2012, the RUC recommended survey of physician work and review of practice expense for this family of services at the April 2013 RUC meeting.

The RUC noted that for all the codes the current values were below the 25<sup>th</sup> percentile of the survey. The RUC evaluated potential cross-walk codes for each code and considered whether they supported the current value, a lower value or a higher value. For many of the codes, the RUC determined that the current value undervalued the service, but there was not compelling evidence to justify an increase above current values. After a robust discussion of the codes, the RUC determined that the current values or lower values were appropriate and identified cross-walk codes to justify current values. Deliberations of the RUC were made more difficult by a scarcity of RUC-surveyed cross-walk codes with the same global period and similar intra times and total times.

**67914 Repair of ectropion; suture**

The RUC reviewed the survey results from 33 ophthalmologists for CPT code 67914 and determined that the current work RVU of 3.75 appropriately accounts for the physician work required to perform this service. The survey 25<sup>th</sup> percentile work RVU was above the current work RVU, but the specialty societies indicated and the RUC agreed that there was not compelling evidence to increase the value. This 090-day global service includes 25 minutes pre-service, 20 minutes intra-service, 10 minutes immediate post-service, a half day discharge day management and 3 office visits. The RUC compared 67914 to 26160 *Excision of lesion of tendon sheath or joint capsule (eg, cyst, mucous cyst, or ganglion), hand or finger* (090-day global, work RVU = 3.57, 20 minutes intra-service time, a half day discharge day management and 3 office visits) and 21073 *Manipulation of temporomandibular joint(s) (TMJ), therapeutic, requiring an anesthesia service (ie, general or monitored anesthesia care)* (090-day global, work RVU = 3.35, 20 minutes intra-service time, and 4 office visits) and determined that a work RVU of 3.75 for 67914 is appropriate relative to these similar services. **The RUC recommends a work RVU of 3.75 for CPT code 67914.**

### **67915 Repair of ectropion; thermocauterization**

The RUC reviewed CPT code 67915 and determined that the survey respondents overestimated the work required to perform these services. Therefore, the RUC recommends a crosswalk to CPT code 28470 *Closed treatment of metatarsal fracture; without manipulation, each* (090-global, work RVU = 2.03, 15 minutes of intra-service time and 3 office visits). CPT code 67915 is a 090-day global service that includes 23 minutes pre-service, 10 minutes intra-service, 5 minutes immediate post-service and 2 office visits. CPT code 67915 requires 5 minutes less intra-service time than 28470, but is more intense involving a procedure on the eye compared to the foot. For additional support, the RUC referenced similar service 46945 *Hemorrhoidectomy, internal, by ligation other than rubber band; single hemorrhoid column/group* (090-global, work RVU = 2.21, 15 minutes intra-service time and 2 office visits). **The RUC recommends a work RVU of 2.03 for CPT codes 67915.**

### **67916 Repair of ectropion; excision tarsal wedge**

The RUC reviewed CPT code 67916 and determined that the current work RVU of 5.48 appropriately accounts for the physician work required to perform this service. The survey 25<sup>th</sup> percentile work RVU was above the current work RVU, but the specialty societies indicated and the RUC agreed that there was not compelling evidence to increase the work value at this time. CPT code 67916 is a 090-day global service that includes 25 minutes pre-service, 25 minutes intra-service, 10 minutes immediate post-service, a half day discharge day management and 3 office visits. The RUC compared 67916 to 28525 *Open treatment of fracture, phalanx or phalanges, other than great toe, includes internal fixation, when performed, each* (090-day global, work RVU = 5.62, 30 minutes intra-service time, a half day discharge day management and 4 office visits) and determined that 28525 requires 5 more minutes of intra-service time and slightly more physician work than the surveyed service. Thus, using magnitude estimation the RUC recommends maintaining the current work RVU. **The RUC recommends a work RVU of 5.48 for CPT code 67916.**

### **67917 Repair of ectropion; extensive (eg, tarsal strip operations)**

The RUC reviewed the survey results from 34 ophthalmologists for CPT code 67917 and compared it to 67924 *Repair of entropion; extensive (eg, tarsal strip or capsulopalpebral fascia repairs operation)* (recommended work RVU = 5.93). CPT code 67917 is a 090-day global service that includes 25 minutes pre-service, 33 minutes intra-service, 10 minutes immediate post-service, a half day discharge day management and 3 office visits. The RUC noted that 67917 requires 33 minutes intra-service time compared to 40 minutes intra-service time for 67924, however it is more intense to perform extensive repair to the ectropion. The specialty societies indicated and the RUC agreed that the current work RVU of 6.19 for 67917 represents too much of a difference between the repair of the entropion service and should be the same as 67924. The RUC also compared 67917 to similar services 58600 *Ligation or transection of fallopian tube(s), abdominal or vaginal approach, unilateral or bilateral* (090-day global, work RVU 5.91, 35 minutes intra-service time, 1 discharge day management and 1 office visit) and 23071 *Excision, tumor, soft tissue of*

*shoulder area, subcutaneous; 3 cm or greater* (090-day global, work RVU=5.91, 45 minutes intra-service time, a half day discharge day management and 2 office visits) and determined a work RVU of 5.93 is appropriate compared to these similar services. **The RUC recommends a work RVU of 5.93 for CPT code 67917.**

#### **67921 Repair of entropion; suture**

The RUC reviewed the survey results from 34 ophthalmologists for CPT code 67921 and determined that the current work RVU of 3.47 appropriately accounts for the work required to perform this service. CPT code 67921 is a 090-day global service that includes 25 minutes pre-service, 15 minutes intra-service, 5 minutes immediate post-service, a half day discharge day management and 3 office visits. For additional support to maintain the current value, the RUC referenced similar services 21073 *Manipulation of temporomandibular joint(s) (TMJ), therapeutic, requiring an anesthesia service (ie, general or monitored anesthesia care)* (090-day global, work RVU=3.45, 20 minutes intra-service time and 4 office visits) and 26160 *Excision of lesion of tendon sheath or joint capsule (eg, cyst, mucous cyst, or ganglion), hand or finger* (090-day global, work RVU = 3.57, 20 minutes intra-service time, a half day discharge day management and 3 office visits). **The RUC recommends a work RVU of 3.47 for CPT code 67921.**

#### **67922 Repair of entropion; thermocauterization**

The RUC reviewed CPT code 67922 and determined that the survey respondents overestimated the work required to perform these services. Therefore, the RUC recommends a crosswalk to CPT code 28470 *Closed treatment of metatarsal fracture; without manipulation, each* (090-global, work RVU = 2.03, 15 minutes of intra-service time and 3 office visits). CPT code 67922 is a 090-day global service that includes 23 minutes pre-service, 10 minutes intra-service, 10 minutes immediate post-service and 2 office visits. CPT code 67922 requires 5 minutes less intra-service time than 28470, but is more intense involving a procedure on the eye compared to the foot. For additional support, the RUC referenced similar service 46945 *Hemorrhoidectomy, internal, by ligation other than rubber band; single hemorrhoid column/group* (090-global, work RVU = 2.21, 15 minutes intra-service time and 2 office visits). **The RUC recommends a work RVU of 2.03 for CPT codes 67922.**

#### **67923 Repair of entropion; excision tarsal wedge**

The RUC reviewed CPT code 67923 and determined it requires the same physician work as 67916 *Repair of ectropion; excision tarsal wedge* (recommending a work RVU of 5.48). CPT code 67923 is a 090-day global service that includes 25 minutes pre-service, 25 minutes intra-service, 10 minutes immediate post-service, a half day discharge day management and 3 office visits. The RUC compared 67923 to 28525 *Open treatment of fracture, phalanx or phalanges, other than great toe, includes internal fixation, when performed, each* (090-day global, work RVU = 5.62, 30 minutes intra-service time, a half day discharge day management and 4 office visits) and determined that 28525 requires 5 more minutes of intra-

service time and slightly more physician work than the surveyed service, therefore using magnitude estimation a work RVU of 5.48 appropriately places CPT code 67923 relative to other similar services. The RUC recommends reducing the work RVU to 5.48 for CPT code 67923, the same as 67916. **The RUC recommends a work RVU of 5.48 for CPT code 67923.**

**67924 Repair of entropion; extensive (eg, tarsal strip or capsulopalpebral fascia repairs operation)**

The RUC reviewed 67924 and determined that the current work RVU of 5.93 appropriately accounts for the physician work required to perform this service. CPT code 67924 is a 090-day global service that includes 25 minutes pre-service, 40 minutes intra-service, 10 minutes immediate post-service, a half day discharge day management and 3 office visits. The RUC supported maintaining the current work RVU comparing 67924 to similar services 58600 *Ligation or transection of fallopian tube(s), abdominal or vaginal approach, unilateral or bilateral* (090-day global, work RVU 5.91, 35 minutes intra-service time, 1 discharge day management and 1 office visit) and 23071 *Excision, tumor, soft tissue of shoulder area, subcutaneous; 3 cm or greater* (090-day global, work RVU=5.91, 45 minutes intra-service time, a half day discharge day management and 2 office visits). **The RUC recommends a work RVU of 5.93 for CPT code 67924.**

**Work Neutrality**

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**Practice Expense**

The RUC accepted the direct PE inputs with modifications as recommended by the PE Subcommittee.

CPT Code (•New)	CPT Descriptor	Global Period	Work RVU Recommendation
67914	Repair of ectropion; suture	090	3.75 (No Change)
67915	thermocauterization	090	2.03

67916	excision tarsal wedge	090	5.48 (No Change)
67917	extensive (eg, tarsal strip operations) (For correction of everted punctum, use 68705)	090	5.93
67921	Repair of entropion; suture	090	3.47 (No Change)
67922	thermocauterization	090	2.03
67923	excision tarsal wedge	090	5.48
67924	extensive (eg, tarsal strip or capsulopalpebral fascia repairs operation) (For repair of cicatricial ectropion or entropion requiring scar excision or skin graft, see also 67961 et seq)	090	5.93 (No Change)

SUMMARY OF RECOMMENDATION**

CPT Code: 67914	Tracking Number	Original Specialty Recommended RVU: <b>3.75</b>
		Presented Recommended RVU: <b>3.75</b>
Global Period: 090		RUC Recommended RVU: <b>3.75</b>

CPT Descriptor: Repair of ectropion; suture

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70 year old female has progressive ocular irritation, redness, and daily eyelash matting associated with the lower eyelid margin lifted off the eye. Her symptoms do not respond to eyelid hygiene, topical lubricants, antibiotics and steroids. The examination confirms eversion of the lower eyelid margin and breakdown of the ocular surface.

Percentage of Survey Respondents who found Vignette to be Typical: 73%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 6% , In the ASC 39%, In the office 55%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 68%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 19%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. After conscious sedation is initiated, the surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored. The eye and periocular area are prepped and draped.

Description of Intra-Service Work: The lower eyelid conjunctiva is grasped with forceps just below the tarsus and pushed inferiorly to estimate the amount of rotation needed to replace the eyelid margin against the globe. An appropriate lower eyelid crease is marked with methylene blue. A series of double armed 4-0 absorbable horizontal mattress sutures are placed full thickness through the eyelid from the conjunctival side just inferior to the tarsus, grasping the lower eyelid retractors and emerging from the marked lower eyelid skin crease. This requires four sutures to provide a stable eyelid margin. Hemostasis is obtained with direct pressure. The sutures are tied to create a deep cutaneous crease and rotate the eyelid margin an appropriate amount. The sutures may require removal and/or adjustment to ensure the eyelid margin, crease and lash positions are adequate.

Description of Post-Service Work: The eye, incision and eyelids are cleaned and the wounds dressed with antibiotic drops and ointment. Pain management is discussed and the IV removed. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is prepared, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another eyelid repair procedure, CPT 67917 Repair of ectropion; extensive (e.g., tarsal strip operations), was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family as including the ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

**CPT 67914 Survey Analysis**

The Academy survey for CPT 67914 had 33 respondents. The median WRVU was 5.25 and the 25<sup>th</sup> percentile was 4.22. The median IST was 20 minutes. There were three postoperative visits in the 90-day global period. The current value of the code is 3.75. Preservice package 1B was chosen. The primary reference code CPT 67911 *Correction of lid retraction* was RUC reviewed in August 2005. It has an RVU of 7.50. For all categories, respondents indicated that the reference code was more intense and complex than the surveyed code.

**Recommendation for CPT 67914**

The typical patient has symptomatic eversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. The surgical techniques to correct this problem have changed little over the years. The volume for this code is low at 2300/yr. This surgery is performed primarily in patients who are too frail to undergo a more extensive lid procedure. The code has a 90-day global period and is performed primarily in the facility setting.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that it was a good survey. The panel agreed that the surveyed code was less work than the reference code. The panel felt that there is no compelling evidence that the current code is misvalued. Therefore, the panel recommended that the current value of 3.75 WRVU be maintained. This value is less than the survey 25<sup>th</sup> percentile.

There are many codes in the database that have similar values to the recommended value for this code. CPT 26160 *Excision of lesion of tendon sheath or joint capsule (e.g., cyst, mucous cyst, or ganglion), hand or finger* (RUC reviewed Aug 2005) has a WRVU of 3.57 and the same IST and number of postoperative visits. CPT 25259, *Manipulation, wrist, under anesthesia* (RUC 2001) has an RVU of 4.04, and the same 20 minute IST. Similarly CPT 24300(RUC 2001), *Manipulation, elbow, under anesthesia* has an identical work and IST. Both of these codes have more postoperative visits than the surveyed code. CPT 28890, *Extracorporeal shock wave, high energy, performed by a physician or other qualified health care professional, requiring anesthesia other than local, including ultrasound guidance, involving the plantar fascia* (RUC Feb 2005) has an IST of 25 minutes but lower postoperative work and a WRVU of 3.45. CPT 24357, *Tenotomy, elbow, lateral or medial (e.g., epicondylitis, tennis elbow, golfer's elbow); percutaneous* (RUC 2007) has the same IST and a WRVU of 5.44. It has one additional postoperative visit. These comparison codes indicate that 67914 is fairly valued at the recommended WRVU of 3.75.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology

How often? Sometimes

Specialty Plastic & Reconstructive

How often? Rarely

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States? No

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 67914

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 67915	Tracking Number	Original Specialty Recommended RVU: <b>2.25</b>
		Presented Recommended RVU: <b>2.25</b>
Global Period: 090		RUC Recommended RVU: <b>2.03</b>

CPT Descriptor: Repair of ectropion; thermocauterization

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 80 year old male nursing facility patient with multiple health co-morbidities develops progressive ocular irritation, redness, and daily eyelash matting associated with the eversion of the lower eyelid margin. His symptoms fail to respond to eyelid hygiene, topical lubricants, antibiotics and steroids. The examination confirms eversion of the lower eyelid margin with erythema and eyelash matting.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 9% , In the ASC 26%, In the office 65%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 63%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 25%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. The surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: A hot temperature cautery unit is inspected and determined to be in working order. A vertical traction suture may be placed with a 4-0 silk suture in the central lower eyelid margin. The lower eyelid is everted over a Desmarre retractor. The conjunctiva is marked with methylene blue along a line just inferior to the tarsal plate. Cauterized spots are created along the marked line. The depth, number and placement of the cautery are adjusted to allow an appropriate cicatricial inward rotation of the eyelid margin.

Description of Post-Service Work: The eye, incision and eyelids are cleaned and the wounds dressed with antibiotic drops. Pain management is discussed with patient. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is prepared, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another repair procedure, CPT 67917 Repair of ectropion; extensive (e.g., tarsal strip operations), was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family including ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well as entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

**CPT 67915 Survey Analysis**

The AAO survey had 23 respondents reflecting the considerably low volume for this code. The median WRVU was 4.25 and the 25<sup>th</sup> percentile was 4.00. The median IST was 10 minutes. There are two 99212 postoperative visits in the 90-day global period. These are necessary to be certain that punctate keratitis does not develop as the eye heals. The current value of the code is 3.26. Preservice package 6 was chosen. The primary reference code CPT 23075 *Excision, tumor, soft tissue of shoulder area, subcutaneous; less than 3 cm* was RUC reviewed in February 2009. It has an RVU of 4.21. For almost all categories, respondents indicated that the reference code and the surveyed code were similar in intensity and complexity.

**CPT 67915 WRVU Recommendation**

The typical patient has symptomatic eversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. Corneal injury is common from exposure. The surgical techniques to correct this problem have changed little over the years. The volume for this code is low at 500/yr. This surgery is performed primarily in patients who are too frail to undergo a more extensive lid procedure. The code has a 90-day global period and is performed primarily in the office setting.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that the low volume for the code made both the number of respondents and the performance level lower than desired. The panel agreed that the surveyed code was less work than the reference code and a consensus recommendation is being put forward. The surveyed code is less work than the reference code with a shorter IST. The panel believes the current value of the code is too high.

There are very few 90-day global codes with an IST this short. CPT 26600 *Closed treatment of metacarpal fracture, single; without manipulation, each bone* (RUC August 2005) has a WRVU of 2.62 with an IST of 15 minutes. CPT 46930 *Destruction of internal hemorrhoid(s) by thermal energy (e.g., infrared coagulation, cautery, radiofrequency)* (RUC April 2008) has 5 minutes of IST and 1 99213 visit. The WRVU is 1.61. CPT 67915 takes more time and has more postoperative visits. CPT 36589 *Removal of tunneled central venous catheter, without subcutaneous port or pump* (RUC 2003) has a 10-day global with one postoperative visit at the 99211 level, IST of 13 minutes and a WRVU of 2.28. The recommended value of 2.03 WRVU is consistent with the work value, time, intensity and complexity of these codes.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

SUMMARY OF RECOMMENDATION**

CPT Code: 67916	Tracking Number	Original Specialty Recommended RVU: <b>5.48</b>
		Presented Recommended RVU: <b>5.48</b>
Global Period: 090		RUC Recommended RVU: <b>5.48</b>

CPT Descriptor: Repair of ectropion; excision tarsal wedge

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65 year old male presents with an out turning segment of central lower eyelid margin six months after excision of a skin cancer from the cheek. He has progressive ocular irritation and redness. His symptoms fail to respond to wound massage and topical lubricants. The examination confirms eversion of the central lower eyelid margin associated with conjunctival epithelial damage, tarsal laxity, normal canthal tendons and breakdown of the ocular surface.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 11% , In the ASC 64%, In the office 25%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 80%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 40%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. After conscious sedation is initiated, the surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: A full thickness incision is made through the tarsus at the medial edge of the everted lower eyelid. The edges are pulled over each other to determine the necessary amount of eyelid excision to maximally remove the abnormal eyelid margin and reposition the eyelid without creating retraction. The lateral edge is marked for excision. A full thickness pentagonal wedge resection of the marked central lower eyelid is performed. Absolute hemostasis is achieved with cautery. The lower eyelid retractors are closed with a running 6-0 absorbable suture. The tarsus is closed with two horizontal mattress 6-0 sutures at the inferior tarsal border and the posterior eyelid margin. The eyelid margin is closed with two 6-0 interrupted sutures at the grey line and anterior lash line. The skin is closed with a running 6-0 suture.

Description of Post-Service Work: The eye, incision and eyelids are cleaned and the wounds dressed with antibiotic drops and ointment. Pain management is discussed and the IV removed. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is prepared, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another eyelid repair procedure CPT 67917 Repair of ectropion; extensive (eg, tarsal strip operations) was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family as including the ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

**CPT 67916 Survey Analysis**

The AAO survey had 28 respondents. The median WRVU was 6.63 and the 25<sup>th</sup> percentile was 6.19. The median IST was 25 minutes. There were three postoperative visits in the 90-day global period. The current value of the code is 5.48. Preservice package 1B was chosen. The primary reference code CPT 15823 *Blepharoplasty, upper eyelid; with excessive skin weighting down lid* was RUC reviewed in February 2010. It has an RVU of 6.81. For most categories, respondents indicated that the reference code was more intense and complex than the surveyed code.

**CPT 67916 Recommendation**

The typical patient has symptomatic eversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. The surgical techniques to correct this problem have changed little over the years. The volume for this code is low at 3143/yr. This surgery is performed for patients who have mild to moderate ectropion. The code has a 90-day global period and is performed primarily in the facility setting.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that it was a good survey although the number of respondents was slightly lower than ideal. This was due to the low performance rate for this procedure. The panel agreed that the surveyed code was less work than the reference code and a consensus recommendation is being put forward. The panel believes that there is no compelling evidence that the code is currently misvalued. Therefore, the panel recommended that the current value of 5.48 WRVU be maintained. This value is less than the 25<sup>th</sup> percentile of the survey.

There are many codes in the database that have similar values to the recommended value for this code. CPT 46275 *Surgical treatment of anal fistula (fistulectomy/fistulotomy); intersphincteric* (RUC reviewed August 2005) has a WRVU of 5.42, 30 minutes of IST and same number of postoperative visits. CPT 28285 *Correction, hammertoe (eg, inter-phalangeal fusion, partial or total phalangectomy* (RUC October 2010) has an RVU of 5.62 with a slightly longer IST and one more postoperative visit. Similarly CPT 28675 *Open treatment of interphalangeal joint dislocation, includes internal fixation, when performed* (RUC February 2007) has a WRVU of 5.62 with 30 minutes IST and one more postoperative visit. CPT 28820 *Amputation, toe; metatarsophalangeal joint* (RUC October 2010) has a WRVU of 5.82 with 30 minutes of IST and 4 postoperative visits. These comparison codes indicate that 67916 is fairly valued at the recommended WRVU of 5.48.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

CPT Descriptor: Repair of ectropion; extensive (eg, tarsal strip operations)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55 year old female presents with an out turning lateral lower eyelid six months after a fall causing traumatic facial scar near the lateral orbital rim. She has progressive ocular irritation and redness. Her symptoms fail to respond to wound massage, steroid injections to the scar and topical lubricants. The examination confirms a hypertrophic scar of the eyelid skin causing tractional eversion of the lateral lower eyelid and breakdown of the ocular surface.

Percentage of Survey Respondents who found Vignette to be Typical: 41%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 9% , In the ASC 79%, In the office 12%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 77%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 31%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. After conscious sedation is initiated, the surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: A sharp canthal angle is created with interrupted 6-0 absorbable sutures at the grey line and anterior lash lines.. Electrodissection is used to expose the periosteum of the lateral orbital rim. The lower eyelid is securely grasped with forceps and the lateral canthal tendon is sharply released from the bone. Any attachments to the lower eyelid, particularly those creating inferior traction, are released with sharp dissection in the subcutaneous plane. The lateral tarsal stump is shortened as necessary and mitered 45 degrees to the eyelid margin. A tongue or strip of tarsus is further dissected removing any lashes, epithelial and conjunctival elements. The globe is repositioned away from the orbital rim and protected with Sewall retractors. The tarsal strip is then sutured to the inner orbital rim with permanent 5-0 horizontal mattress sutures. The eyelid tension, contour and position are evaluated and adjusted as needed. Absolute hemostasis is achieved with cautery. The wound is closed, in layers. The subcutaneous tissues are supported to the periosteum of the anterior zygoma with 5-0 permanent sutures. The skin is closed with interrupted 6-0 non-absorbable sutures.

Description of Post-Service Work: The eye and eyelids are cleaned and the wounds dressed with antibiotic drops and ointment. Pain management is discussed and the IV removed. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is prepared, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

This eyelid repair procedure, CPT 67917 Repair of ectropion; extensive (e.g., tarsal strip operations), was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family as including

the ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

### **CPT 67917 Survey Analysis**

The AAO survey had 34 respondents and a tight survey. The median WRVU was 6.86 and the 25<sup>th</sup> percentile was 6.66. The median IST was 32.5 minutes. There were three postoperative visits in the 90-day global period. The current value of the code is 6.19 RVU. Preservice package 1B was chosen. The primary reference code CPT 15823, *Blepharoplasty, upper eyelid; with excessive skin weighting down lid*, was RUC reviewed in February 2010. It has an RVU of 6.81. For most categories, respondents indicated that the reference code and the surveyed code were similar. For a few categories the reference code was higher.

### **CPT 67917 Recommendation**

The typical patient has symptomatic eversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. The surgical techniques to correct this problem have changed little over the years. The volume for this code is 28000/yr. This procedure is the most extensive in the family for correction of ectropion, performed in patients who have the most severe disease. The code has a 90-day global period and is performed primarily in the facility setting.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that it was a good survey with a good reference code. The panel agreed that the surveyed code was less work than the reference code. The panel felt that there is no compelling evidence that the current code is misvalued. Therefore, recommend 5.93 WRVU value, less than the 25<sup>th</sup> percentile of the survey.

There are codes in the database that have similar values to the recommended value for this code. CPT 67912 *Correction of lagophthalmos, with implantation of upper eyelid lid load (eg, gold weight)* (RUC reviewed April 2003) has a WRVU of 6.36, a slightly longer IST and the same number of postoperative visits. CPT 46060, *Incision and drainage of ischiorectal or intramural abscess, with fistulectomy or fistulotomy, submuscular, with or without placement of seton* (RUC August 2005) has an RVU of 6.37, an IST of 40 and the same number of postoperative visits. Similarly CPT 25109 *Excision of tendon, forearm and/or wrist, flexor or extensor, each* (RUC April 2006) has 40 minutes of IST and 3 postoperative visits. These comparison codes indicate that CPT 67917 is fairly valued at the recommended WRVU of 5.93.

## **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 47%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 14%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. After conscious administration is administered, the surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: An appropriate higher eyelid crease is marked with methylene blue. A series of double armed 4-0 absorbable horizontal mattress sutures are placed through full thickness eyelid from the conjunctival side just above the lower conjunctival fornix, grasping the lower eyelid retractors and emerging from the marked higher eyelid skin crease. This typically requires four sutures to rotate the lid and lashes, prevent orbicularis override, and provide a stable eyelid margin and crease. The sutures are tied to create a deep cutaneous crease and rotate the eyelid margin a desired amount. The sutures may require removal and/or adjustment to ensure the eyelid margin and lash positions are adequate. Hemostasis is managed with direct pressure.

Description of Post-Service Work: The eye, incision and eyelids are cleaned and the wounds dressed with antibiotic drops and ointment. Pain management is discussed and the IV removed. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is produced, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another eyelid repair procedure CPT 67917 Repair of ectropion; extensive (e.g., tarsal strip operations) was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family as including the ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

**CPT 67921 Survey Analysis**

The AAO survey had 34 respondents. The median WRVU was 5.03 and the 25<sup>th</sup> percentile was 4.21. The median IST was 20 minutes. There were three 99212 postoperative visits in the 90-day global period. The current value of the code is 3.47. Preservice package 1B was chosen. The primary reference code CPT 23075 *Excision, tumor, soft tissue of shoulder area, subcutaneous; less than 3 cm* was RUC reviewed in February 2009. It has longer IST and one 99213 and one 99212 visit in the postoperative period. The reference code has an RVU of 4.21. Overall, respondents indicated that the reference code and the surveyed code were about equal in intensity and complexity.

**CPT 67921 Recommendation**

The typical patient has symptomatic inversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. Corneal irritation is common as well. The surgical techniques to correct this problem have changed little over the years. The volume for this code is relatively low at 5000/yr. This surgery is performed primarily in patients who are too frail to undergo a more extensive lid procedure. The code has a 90-day global period. The RUC database indicates that just over 50% of these cases are done in the office.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that it was a good survey and that the reference code was appropriate. The panel felt that there is no compelling evidence which meets the RUC standard for a misvalued code. Therefore, the panel recommended that the current value of 3.47 WRVU be maintained. This value is less than the 25<sup>th</sup> percentile of the survey.

There are many codes in the database that have similar values to the recommended value for this code. CPT 26160 *Excision of lesion of tendon sheath or joint capsule (e.g., cyst, mucous cyst, or ganglion), hand or finger* (RUC reviewed Aug 2005) has a WRVU of 3.57 and the same IST and number of postoperative visits. CPT 25359, *Manipulation, wrist, under anesthesia* (RUC 2001) has an RVU of 4.04, and the same 20 minute IST. Similarly CPT 24300 (RUC 2001), *Manipulation, elbow, under anesthesia* has an identical WRVU of 4.06 and the same IST. CPT 28890, *Extracorporeal shock wave, high energy, performed by a physician or other qualified health care professional, requiring anesthesia other than local, including ultrasound guidance, involving the plantar fascia* (RUC Feb 2005) has an IST of 25 minutes but lower postoperative work and a WRVU of 3.45. CPT 24357, *Tenotomy, elbow, lateral or medial (e.g., epicondylitis, tennis elbow, golfer's elbow); percutaneous* (RUC 2007) has the same IST and a WRVU of 5.44. It has one additional postoperative visit. These comparison codes indicate that 67921 is fairly valued at the recommended WRVU of 3.47.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty Plastic and Reconstructive Surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? Primarily Medicare

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,072

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States? No

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 67921

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 67922	Tracking Number	Original Specialty Recommended RVU: <b>2.25</b>
		Presented Recommended RVU: <b>2.25</b>
Global Period: 090		RUC Recommended RVU: <b>2.03</b>

CPT Descriptor: Repair of entropion; thermocauterization

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 80 year old male nursing home patient with multiple health co-morbidities develops progressive ocular irritation, redness and daily eyelash matting associated with inward turning of the lower lashes. His symptoms fail to respond to lubricants, topical antibiotics or lateral taping of the eyelid. The examination confirms inversion of the eyelid resulting in medial lower eyelashes touching the cornea and causing breakdown of the ocular surface.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 5% , In the ASC 25%, In the office 70%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 33%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 10%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. The surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: A hot temperature cautery unit is inspected and determined to be in working order. A vertical traction suture may be placed with a 4-0 silk suture in the central lower eyelid margin. An appropriate lower eyelid crease is marked with methylene blue. A horizontal line of cauterized spots are created along the marked external skin crease, just beneath the tarsal plate. The depth, number and placement of the cautery are adjusted to provide an appropriate cicatricial outward rotation of the lower eyelid margin.

Description of Post-Service Work: The eye, incision and eyelids are cleaned and the wounds dressed with antibiotic drops. Pain management is discussed. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is produced, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another procedure, CPT 67917 Repair of ectropion; extensive (e.g., tarsal strip operations), was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family including the

ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well as the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

### **CPT 67922 Survey Analysis**

The AAO survey had 23 respondents reflecting the low volume for this code. The median WRVU was 4.25 and the 25<sup>th</sup> percentile was 4.00. The median IST was 10 minutes. There are two 99212 postoperative visits in the 90-day global period. These are necessary to be certain that punctate keratitis does not develop as the eye heals. The current value of the code is 3.26. Preservice package 6 was chosen as this is primarily an office-based procedure. The primary reference code CPT 23075 *Excision, tumor, soft tissue of shoulder area, subcutaneous; less than 3 cm* was RUC reviewed in February 2009. It has an RVU of 4.21. For almost all categories, respondents indicated that the reference code and the surveyed code were similar in intensity and complexity.

### **CPT 67922 WRVU Recommendation**

The typical patient has symptomatic inversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. Corneal injury is common from mechanical irritation from the lashes. The surgical techniques to correct this problem have changed little over the years. The volume for this code is low at 252/yr. This surgery is performed primarily in patients who are too frail to undergo a more extensive lid procedure. The code has a 90-day global period and is performed primarily in the office setting and at the bedside.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that the low volume for the code made both the number of respondents and the performance level lower than desired. The panel agreed that the surveyed code was less work with a shorter IST than the reference code and a consensus recommendation is being put forward. The panel also believes that the current value of the code is too high. After review of RUC codes with similar times and postoperative visits, the Academy consensus panel recommends a value of 2.03 WRVU. This value is less than the 25<sup>th</sup> percentile of the survey.

There are very few 90-day global codes with an IST this short. CPT 26600 *Closed treatment of metacarpal fracture, single; without manipulation, each bone* (RUC August 2005) has a WRVU of 2.62 with an IST of 15 minutes. CPT 46930 *Destruction of internal hemorrhoid(s) by thermal energy (e.g., infrared coagulation, cautery, radiofrequency)* (RUC April 2008) has 5 minutes of IST and one 99213 visit and a WRVU of 1.61. CPT 67915 takes more time and has more postoperative visits. CPT 36589 *Removal of tunneled central venous catheter, without subcutaneous port or pump* (RUC 2003) is a 10-day global with one visit at the 99211 level, IST of 13 minutes and a WRVU of 2.28. The recommended value of 2.03 WRVU is consistent with the work value, time, intensity and complexity of these codes.

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

CPT Code: 67923	Tracking Number	Original Specialty Recommended RVU: <b>6.05</b>
		Presented Recommended RVU: <b>6.05</b>
Global Period: 090		RUC Recommended RVU: <b>5.48</b>

CPT Descriptor: Repair of entropion; excision tarsal wedge

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65 yo male presents with constant ocular irritation, mattering, and redness three months after a traumatic eyelid laceration. His symptoms fail to respond to topical lubricants, antibiotics and eyelash epilation. The examination confirms thinning of a central segment of the lower eyelid margin with aberrant lashes growing towards the globe. This is associated with tarsal laxity, normal canthal tendons and breakdown of the ocular surface.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 12% , In the ASC 71%, In the office 17%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 69%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 30%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. After conscious sedation is initiated, the surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: A full thickness incision is made through the tarsus just medial to the aberrant lower eyelid margin. The edges are overlapped to ensure the aberrant margin can be safely excised. The lateral edge is marked with methylene blue. A full thickness pentagonal wedge resection is removed containing the aberrant eyelid margin. Absolute hemostasis is achieved with handheld cautery. The lower eyelid retractors are closed with a running 6-0 absorbable suture. The tarsus is closed with two horizontal mattress sutures at the inferior tarsal border and the posterior eyelid margin. The eyelid margin is closed with two interrupted sutures at the grey line and anterior lash line. The skin is closed with a running suture, incorporating the ends of the eyelid margin sutures to present contact of the margin sutures with the globe.

Description of Post-Service Work: The eye and eyelids are cleaned and the wounds dressed with antibiotic drops and ointment. Pain management is discussed and the IV removed. The patient and family are given detailed postoperative care instructions and appropriate prescriptions. An operative report is produced, and required paperwork completed. Follow-up visits are scheduled.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another eyelid repair procedure CPT 67917 Repair of ectropion; extensive (eg, tarsal strip operations) was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family as including the ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 as well the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

**CPT 67923 Survey Analysis**

The AAO survey had 24 respondents, reflecting the low volume of the code. The median WRVU was 6.70 and the 25<sup>th</sup> percentile was 6.23. The median IST was 25 minutes. There were three postoperative visits in the 90-day global period. The current value of the code is 6.05. Preservice package 1B was chosen. The primary reference code CPT 15823 *Blepharoplasty, upper eyelid; with excessive skin weighting down lid* was RUC reviewed in February 2010. It has an RVU of 6.81. For all categories, respondents indicated that the reference code was more intense and complex than the surveyed code.

**CPT 67923 Recommendation**

The typical patient for CPT 67923 has symptomatic inversion of the lower eyelid margin with symptoms of redness, tearing and mattering of the lashes. The surgical techniques to correct this problem have changed little over the years. The volume for this code is low at 2615/yr. This surgery is performed for patients who have mild to moderate entropion. The code has a 90-day global period and is performed primarily in the facility setting.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that it was a good survey although the number of respondents was lower than ideal. This was due to the low performance rate for this procedure. The panel agreed that the surveyed code was less work than the reference code and a consensus recommendation is being put forward. The panel felt that there is no compelling evidence that the currently the code is misvalued. Therefore, the panel recommended that the current value of 6.05 WRVU be maintained. This value is less than the 25<sup>th</sup> percentile of the survey.

There are several codes in the database that have similar values to the recommended value for this code. CPT 28820 *Amputation, toe; metatarsophalangeal joint* (RUC October 2010) has a WRVU of 5.82 with 30 minutes of IST and 4 postoperative visits. CPT 26951, *Amputation, finger or thumb, primary or secondary, any joint or phalanx, single, including neurectomies; with direct closure* (RUC August 2005) has a WRVU of 6.04, 30 min IST and more post-operative visits. CPT 25605 *Closed treatment of distal radial fracture (e.g., Colles or Smith type) or epiphyseal separation, includes closed treatment of fracture of ulnar styloid, when performed; with manipulation* has 30 minutes of IST and a work value of 6.25. Another orthopedic code CPT 25520 *Closed treatment of radial shaft fracture and closed treatment of dislocation of distal radioulnar joint (Galeazzi fracture/dislocation)* has an IST of 30 minutes, WRVU of 6.5 and slightly more postoperative care. These comparison codes indicate that 67923 is fairly valued at the recommended WRVU of 6.05.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Percent of survey respondents who stated moderate sedation is typical in the office setting? 31%

Description of Pre-Service Work: The patient history, physical exam and appropriate preoperative tests are reviewed. The preoperative interval history and exam are documented. Photographs are reviewed. The surgical plan is discussed with the patient, all questions are addressed and surgical consent is reviewed. The forehead is marked to indicate the operative eye. The patient is positioned and the surgical eye is confirmed with the patient, surgical and anesthesia team. The eye and periocular area are prepped and draped. After conscious sedation is initiated, the surgeon adds topical anesthesia to both eyes and injects a local anesthetic block to the operative eyelid while the patient is monitored.

Description of Intra-Service Work: The lower eyelid is supported with two 4-0 silk vertical traction sutures placed in the medial and lateral eyelid margin. A lower eyelid crease incision is marked and later incised 5mm inferior to the punctum tapering to 7mm laterally. Electrodissection is used to expose the orbital septum which is incised. The capsulopalpebral fascia (CPF) is exposed with blunt and sharp dissection. Any significant fat present within the wound is clamped, cut, cauterized and observed for hemostasis prior to allowing it to retract into the orbit. A solid portion of the CPF is sutured to the inferior tarsal border with five or more interrupted 6-0 permanent sutures across the entire lower tarsus. The eyelid position is inspected for remaining laxity and the degree of marginal retraction. The sutures removed and adjusted, if necessary. The inferior lower eyelid skin is draped over the wound and any excess skin is excised. Absolute hemostasis is achieved with cautery. An eyelid crease closure is achieved with interrupted 6-0 absorbable sutures grasping the CPF with each bite.

Description of Post-Service Work: The eye and eyelids are cleaned and the wounds dressed with antibiotic drops and ointment. Pain management is discussed and IV removed. The patient and family are given detailed postoperative care

instructions and appropriate prescriptions. An operative report is produced, and required paperwork completed. Follow-up visits are scheduled.

----------------------------------	------	------

Intra-Service intensity/complexity	3.93	3.73
------------------------------------	------	------

Post-Service intensity/complexity	3.13	3.07
-----------------------------------	------	------

---

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Another eyelid repair procedure CPT 67917 Repair of ectropion; extensive (e.g., tarsal strip operation) was identified in the CY 2013 Final Physician Fee Schedule by CMS as a potentially misvalued service. The Academy submitted an action plan to the RAW in October 2012 identifying the entire family including

the ectropion procedures of CPT Codes 67914, 67915, 67916 and 67917 and the entropion procedures of CPT 67921, 67922 67923 and 67924 to survey for consideration at the April 2013 AMA RUC meeting.

### **CPT 67924 Survey Analysis**

The AAO survey had 33 respondents and a tight survey. The median WRVU was 7.3 and the 25<sup>th</sup> percentile was 6.75. The median IST was 40 minutes. There were three postoperative visits in the 90-day global period. The current value of the code is 5.93 RVU. Preservice package 1B was chosen. The primary reference code CPT 67911 *Correction of lid retraction* was RUC reviewed in August 2005. It has an RVU of 7.50. Across all categories, respondents indicated that the reference code and the surveyed code were similar in intensity and complexity.

### **CPT 67924 Recommendation**

The typical patient treated for entropion has symptomatic inversion of the lower eyelid margin with symptoms of redness, tearing and matting of the lashes. The cornea is also subject to irritation from in-turned lashes. The surgical techniques to correct this problem have changed little over the years. The volume for this code is 12924/yr. This procedure is the most complex in the family for correction of entropion, performed in patients who have the most severe disease. The code has a 90-day global period and is performed primarily in the facility setting.

The AAO expert panel which was familiar with the surgery and the RUC process reviewed the results. The panel felt that it was a good survey. The reference code has a longer intraservice time but similar postoperative care. The panel felt, however, that there is no compelling evidence that the current code is misvalued using RUC-approved criteria. Therefore, the panel recommended that the current value of 5.93 WRVU be maintained. This value is less than the 25<sup>th</sup> percentile of the survey.

There are codes in the database that have similar values to the recommended value for this code. CPT 67912 *Correction of lagophthalmos, with implantation of upper eyelid lid load (eg, gold weight)* (RUC reviewed April 2003) has a WRVU of 6.36, a slightly longer IST and the same number of postoperative visits. CPT 46060, *Incision and drainage of ischiorectal or intramural abscess, with fistulectomy or fistulotomy, submuscular, with or without placement of seton* (RUC August 2005) has an RVU of 6.37, an IST of 40 and the same number of postoperative visits. Similarly CPT 25109 *Excision of tendon, forearm and/or wrist, flexor or extensor, each* (RUC April 2006) has WRVU of 6.94, 40 minutes of IST and 3 postoperative visits. These comparison codes indicate that 67924 is certainly not overvalued at the recommended WRVU of 5.93.

## **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology                      How often? Sometimes

Specialty Plastic and Reconstructive How often? Rarely

Specialty	How often?
-----------	------------

Estimate the number of times this service might be provided nationally in a one-year period? Primarily Medicare pop. If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
12,594 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. RUC Database

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States? No

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 67924

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor: 67914 Repair of ectropion; suture

Global Period: 090

Meeting Date: 4/2013

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a Consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other physicians who have the appropriate expertise. The consensus committee reviewed the current PE details and made the appropriate changes to clinical time in order to match the survey results and any standard packages that are now applicable as compared to the current facility input. The existing supplies and equipment were also reviewed and any needed adjustments were also applied

If you have provided any comparison practice expense inputs on your spreadsheet, please provide a rationale for the selection of codes. Comparison Code Rationale:

This code is an existing code being evaluated per CMS request in the 2013 NPRM Table 7.

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Standard 90-day global times to: Complete pre-service diagnostic & referral forms; Coordinate pre-surgery services; Schedule space and equipment in facility; Provide pre-service education/obtain consent, and follow-up phone calls & prescriptions.

Intra-Service Clinical Labor Activities:

Standard 6 minutes for discharge day management coordination.

Post-Service Clinical Labor Activities:

Standard times for post-operative office visits at the appropriate levels.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: 67914 Repair of Ectropion; suture

Global Period: 090 Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Academy convenes a Consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other physicians who have the appropriate expertise. The consensus committee reviewed the current PE details and made the appropriate changes to clinical time in order to match the survey results and any standard packages that are now applicable as compared to the current facility input. The existing supplies and equipment were also reviewed and any needed adjustments were also applied

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

This code is an existing code being evaluated per CMS request in the 2013 NPRM Table 7.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Standard 90-day global times to: Complete pre-service diagnostic & referral forms; Coordinate pre-surgery services; Schedule space and equipment in facility; Provide pre-service education/obtain consent, and follow-up phone calls & prescriptions.

Intra-Service Clinical Labor Activities:

Standard 6 minutes for discharge day management coordination.

Post-Service Clinical Labor Activities:

Standard times for post-operative office visits at the appropriate levels.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS-Other - Utilization over 500,000 / CMS High Expenditure Procedural Codes*

April 2013

**MRI-Spine**

CPT codes 72141 and 72148 were identified through the CMS High Expenditure Procedural Codes screen. The RUC recommended a survey of physician work and review of practice expense for this family of services at the April 2013 RUC meeting. The specialties added additional codes to survey as part of this family of services. The RUC agreed that the work and intensity of spine codes are similar across lumbar, thoracic and cervical regions. The RUC also discussed that the MRI brain CPT codes were recently reviewed at the January 2013 RUC meeting. The MRI spine codes have similar work and intensity and should maintain rank order with the MRI brain codes.

***72141 Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material***

The RUC reviewed the survey results from 52 radiologists and neuroradiologists and recommends the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes. The RUC noted that all services in the family that do not require contrast material have the same amount of pre, intra and post service time and the same level of intensity, and therefore, should be valued the same. The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 1.60 and determined that the respondents overestimated the physician work required to perform this service. The RUC determined that a work value of 1.48, which is the lowest current RVU out of the three without contrast material codes in the family (CPT code 72148), is the appropriate value for all codes without contrast materials across the lumbar, thoracic and cervical regions. It also maintains relativity with similar CPT code 70551 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (RUC recommended work RVU=1.48, 5 minutes pre-time, 18 minutes intra-time, 5 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value.

The RUC also compared the surveyed code to CPT code 70336 *Magnetic resonance (eg, proton) imaging, temporomandibular joint(s)* (work RVU=1.48, 20 minutes intra-time) and noted that the codes have the same intra-service time and should be valued the same. For additional support the RUC compared the surveyed code to CPT code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family* (work RVU=1.42, 4 minutes pre-time, 20 minutes intra-time, 5 minutes post-time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the*

*patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family (work RVU=1.50, 5 minutes pre-time, 25 minutes intra-time, 10 minutes post-time. The RUC noted that 99203 and the surveyed code have identical intra-service time and similar pre- and post-service time, justifying the similar work value. The RUC also noted that 99214 has slightly more intra-service time but is less intense to perform, justifying the similar work value. **The RUC recommends a work RVU of 1.48 for CPT code 72141.***

***72142 Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; with contrast material(s)***

The RUC reviewed the survey results from 52 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 23 minutes and post-service time of 5 minutes. The RUC noted that all services in the family that require contrast materials have the same amount of pre, intra and post service time and the same level of intensity, and therefore, should be valued the same. The RUC reviewed the survey median work RVU of 2.00 and determined that the respondents overestimated the physician work required to perform this service. The RUC determined that a work value of 1.78, which is the lowest current RVU out of the three with contrast material(s) codes in the family (CPT code 72149), is the appropriate value for all codes with contrast material(s) across the lumbar, thoracic and cervical regions. Additionally, the value is between the survey 25<sup>th</sup> and median for this service. It also maintains relativity with similar CPT code 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (RUC recommended work RVU=1.78, 5 minutes pre-time, 20 minutes intra-time and 7 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value. The RUC also compared the surveyed code to CPT code 70498 *Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU=1.75, 7 minutes pre-time, 20 minutes intra-time and 10 minutes post-time) and noted that both services are with contrast material(s) and agreed that 72142 should be valued slightly higher because it has slightly more intra-service time. **The RUC recommends a work RVU of 1.78 for CPT code 72142.**

***72146 Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material***

The RUC reviewed the survey results from 46 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes. The RUC noted that all services in the family that do not require contrast material have the same amount of pre, intra and post service time and the same level of intensity and should be valued the same. The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 1.61 and determined that the respondents overestimated the physician work required to perform this service. The RUC determined that a work value of 1.48, which is the lowest current RVU out of the three without contrast material codes in the family (CPT code 72148), is the appropriate value for all codes without contrast materials across the lumbar, thoracic and cervical regions. It also maintains relativity with similar CPT code 70551 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (RUC recommended work RVU=1.48, 5 minutes pre-time, 18 minutes intra-time, 5 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value.

The RUC also compared the surveyed code to CPT code 70336 *Magnetic resonance (eg, proton) imaging, temporomandibular joint(s)* (work RVU=1.48, 20 minutes intra-time) and noted that the codes have the same intra-service time and should be valued the same. For additional support

the RUC compared the surveyed code to CPT code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family* (work RVU=1.42, 4 minutes pre-time, 20 minutes intra-time, 5 minutes post-time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family* (work RVU=1.50, 5 minutes pre-time, 25 minutes intra-time, 10 minutes post-time). The RUC noted that 99203 and the surveyed code have identical intra-service time and similar pre- and post-service time, justifying the similar work value. The RUC also noted that 99214 has slightly more intra-service time but is less intense to perform, justifying the similar work value. **The RUC recommends a work RVU of 1.48 for CPT code 72146.**

***72147 Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; with contrast material(s)***

The RUC reviewed the survey results from 46 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 23 minutes and post-service time of 5 minutes. The RUC noted that all services in the family that require contrast materials have the same amount of pre, intra and post service time and the same level of intensity, and therefore, should be valued the same. The RUC reviewed the survey median work RVU of 2.00 and determined that the respondents overestimated the physician work required to perform this service. The RUC determined that a work value of 1.78, which is the lowest current RVU out of the three with contrast material(s) codes in the family (CPT code 72149), is the appropriate value for all codes with contrast material(s) across the lumbar, thoracic and cervical regions. Additionally, the value is between the survey 25<sup>th</sup> and median for this service. It also maintains relativity with similar CPT code 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (RUC recommended work RVU=1.78, 5 minutes pre-time, 20 minutes intra-time and 7 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value. The RUC also compared the surveyed code to CPT code 70498 *Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU=1.75, 7 minutes pre-time, 20 minutes intra-time and 10 minutes post-time) and noted that both services are with contrast material(s) and agreed that 72147 should be valued slightly higher because it has slightly more intra-service time. **The RUC recommends a work RVU of 1.78 for CPT code 72147.**

***72148 Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material***

The RUC reviewed the survey results from 49 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 20 minutes and post-service time of 5 minutes. The RUC noted that all services in the family that do not require contrast material have the same amount of pre, intra and post service time and the same level of intensity, and therefore, should be valued the same. The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 1.60 and determined that the respondents overestimated the physician

work required to perform this service. Therefore, the current value of 1.48 is appropriate for this service. Additionally, the RUC determined that a work value of 1.48, which is lowest current RVU out of the three without contrast material codes in the family, is the appropriate value for all codes without contrast materials across the lumbar, thoracic and cervical regions. It also maintains relativity with similar CPT code 70551 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material* (RUC recommended work RVU=1.48, 5 minutes pre-time, 18 minutes intra-time, 5 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value.

The RUC also compared the surveyed code to CPT code 70336 *Magnetic resonance (eg, proton) imaging, temporomandibular joint(s)* (work RVU=1.48, 20 minutes intra-time) and noted that the codes have the same intra-service time and should be valued the same. For additional support the RUC compared the surveyed code to CPT code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family* (work RVU=1.42, 4 minutes pre-time, 20 minutes intra-time, 5 minutes post-time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family* (work RVU=1.50, 5 minutes pre-time, 25 minutes intra-time, 10 minutes post-time). The RUC noted that 99203 and the surveyed code have identical intra-service time and similar pre- and post-service time, justifying the similar work value. The RUC also noted that 99214 has slightly more intra-service time but is less intense to perform, justifying the similar work value. **The RUC recommends a work RVU of 1.48 for CPT code 72148.**

#### **72149 Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; with contrast material(s)**

The RUC reviewed the survey results from 49 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 23 minutes and post-service time of 5 minutes. The RUC noted that all services in the family that require contrast materials have the same amount of pre, intra and post service time and the same level of intensity, and therefore, should be valued the same. The RUC reviewed the survey 25<sup>th</sup> percentile work RVU of 1.75 and agreed with the specialty societies that the current value of 1.78 is appropriate for this service. Additionally, the RUC determined that a work value of 1.78, which is the lowest current RVU out of the three with contrast material(s) codes in the family, is the appropriate value for all codes with contrast material(s) across the lumbar, thoracic and cervical regions. It also maintains relativity with similar CPT code 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (RUC recommended work RVU=1.78, 5 minutes pre-time, 20 minutes intra-time and 7 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value. The RUC also compared the surveyed code to CPT code 70498 *Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU=1.75, 7 minutes pre-time, 20 minutes intra-time and 10 minutes post-time) and noted that both services are with contrast material(s) and agreed that 72149 should be valued slightly higher because it has slightly more intra-service time. **The RUC recommends a work RVU of 1.78 for CPT code 72149.**

***72156 Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical***

The RUC reviewed the survey results from 52 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 25 minutes and post-service time of 5 minutes. The specialty noted and the RUC agreed that all services in the family that are performed without contrast material, followed by with contrast material(s) have the same amount of pre, intra and post service time and the same level of intensity and should be valued the same. The RUC reviewed the survey median work RVU of 2.29 and determined it appropriately accounts for the work required to perform this service. The RUC determined that a work value of 2.29, which is the median survey value for this procedure and the lowest survey median RVU out of the three without and with contrast material(s) codes in the family, is the appropriate value for all codes without and with contrast material(s) across the lumbar, thoracic and cervical regions. Additionally, it is lower than the current value. It also maintains relativity with similar CPT code 70553 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences* (RUC recommended work RVU=2.36, 5 minutes pre-time, 25 minutes intra-time and 7 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value. The RUC noted that the lower work value for 72156 is justified because an MRI of the spine without and with contrast requires slightly less time and intensity than the brain MRI codes without and with contrast. The RUC also compared the surveyed code to CPT code 72197 *Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences* (work RVU=2.26, 10 minutes pre-time, 25 minutes intra-time and 10 minutes post-time) and noted that both codes are without and with contrast. The RUC agreed that while 72197 and the surveyed code have identical intra-service time, the spine is a more complex region of the body and should be valued slightly higher. Additionally, the RUC compared the surveyed code to key reference service 74261 *Computed tomographic (CT) colonography, diagnostic, including image postprocessing; without contrast material* (work RVU=2.40, 5 minutes pre-time, 40 minutes intra-time and 5 minutes post-time) and noted that the lower intensity image processing for CT colonography requires more time, but the higher intensity and complexity for a spine MRI supports the only slightly lower work value of 2.29. **The RUC recommends a work RVU of 2.29 for CPT code 72156.**

***72157 Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; thoracic***

The RUC reviewed the survey results from 46 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 25 minutes and post-service time of 5 minutes. The specialty noted and the RUC agreed that all services in the family that are performed without contrast material, followed by with contrast material(s) have the same amount of pre, intra and post service time and the same level of intensity and should be valued the same. The specialty societies indicated and the RUC agreed that a work RVU of 2.29, between the survey 25<sup>th</sup> percentile and median, is appropriate for this service. The RUC determined that a work value of 2.29, the survey median work RVU for 72156, which is the lowest survey median RVU out of the three without and with contrast material(s) codes in the family, is the appropriate value for all codes without and with contrast material(s) across the lumbar, thoracic and cervical regions. Additionally, it is lower than the current value. It also maintains relativity with similar CPT code 70553 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences* (RUC recommended work RVU=2.36, 5 minutes pre-time, 25 minutes intra-time and 7 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value.

The RUC noted that the lower work value for 72157 is justified because an MRI of the spine without and with contrast requires slightly less time and intensity than the brain MRI codes without and with contrast. The RUC also compared the surveyed code to CPT code 72197 *Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences* (work RVU=2.26, 10 minutes pre-time, 25 minutes intra-time and 10 minutes post-time) and noted that both codes are without and with contrast. The RUC agreed that while 72197 and the surveyed code have identical intra-service time, the spine is a more complex region of the body and should be valued slightly higher. Additionally, the RUC compared the surveyed code to key reference service 74261 *Computed tomographic (CT) colonography, diagnostic, including image postprocessing; without contrast material* (work RVU=2.40, 5 minutes pre-time, 40 minutes intra-time and 5 minutes post-time) and noted that the lower intensity image processing for CT colonography requires more time, but the higher intensity and complexity for a spine MRI supports the only slightly lower work value of 2.29. **The RUC recommends a work RVU of 2.29 for CPT code 72157.**

***72158 Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar***

The RUC reviewed the survey results from 49 radiologists and neuroradiologists and recommend the following physician time components: pre-service time of 5 minutes, intra-service time of 25 minutes and post-service time of 5 minutes. The specialty noted and the RUC agreed that all services in the family that are performed without contrast material, followed by with contrast material(s) have the same amount of pre, intra and post service time and the same level of intensity and should be valued the same. The specialty societies indicated and the RUC agreed that a work RVU of 2.29, between the survey 25<sup>th</sup> percentile and median, is appropriate for this service. The RUC determined that a work value of 2.29, the survey median work RVU for 72156, which is the lowest survey median RVU out of the three without and with contrast material(s) codes in the family, is the appropriate value for all codes without and with contrast material(s) across the lumbar, thoracic and cervical regions. Additionally, it is lower than the current value. It also maintains relativity with similar CPT code 70553 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences* (RUC recommended work RVU=2.36, 5 minutes pre-time, 25 minutes intra-time and 7 minutes post-time), which the RUC reviewed in January 2013 and recommended the current value. The RUC noted that the lower work value for 72158 is justified because an MRI of the spine without and with contrast requires slightly less time and intensity than the brain MRI codes without and with contrast. The RUC also compared the surveyed code to CPT code 72197 *Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences* (work RVU=2.26, 10 minutes pre-time, 25 minutes intra-time and 10 minutes post-time) and noted that both codes are without and with contrast. The RUC agreed that while 72197 and the surveyed code have identical intra-service time, the spine is a more complex region of the body and should be valued slightly higher. Additionally, the RUC compared the surveyed code to key reference service 74261 *Computed tomographic (CT) colonography, diagnostic, including image postprocessing; without contrast material* (work RVU=2.40, 5 minutes pre-time, 40 minutes intra-time and 5 minutes post-time) and noted that the lower intensity image processing for CT colonography requires more time, but the higher intensity and complexity for a spine MRI supports the only slightly lower work value of 2.29. **The RUC recommends a work RVU of 2.29 for CPT code 72158.**

Code	Short Desc	Pre-	Intra-	Post-	Work RVU
------	------------	------	--------	-------	----------

### Practice Expense:

The RUC reviewed and accepted the direct practice expense inputs as modified by the Practice Expense Subcommittee.

### Work Neutrality

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
72141		Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material	XXX	1.48
72142		with contrast material(s)  (For cervical spinal canal imaging without contrast material followed by contrast material, use 72156)	XXX	1.78
72146		Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material	XXX	1.48

72147		with contrast material(s)  (For thoracic spinal canal imaging without contrast material followed by contrast material, use 72157)	XXX	1.78
72148		Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material	XXX	1.48 (No Change)
72149		with contrast material(s)  (For lumbar spinal canal imaging without contrast material followed by contrast material, use 72158)	XXX	1.78 (No Change)
72156		Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical	XXX	2.29

SUMMARY OF RECOMMENDATION**

CPT Code: 72141	Tracking Number	Original Specialty Recommended RVU: <b>1.60</b>
		Presented Recommended RVU: <b>1.60</b>
Global Period: XXX		RUC Recommended RVU: <b>1.48</b>

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 50-year-old male with acute onset neck pain and left arm weakness.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 19%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 7%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Obtain/review axial and sagittal planes of T1, T2, STIR, and T2 MEDIC pulse sequences and determine whether contrast enhanced sequences or coronal sequences are necessary.
- Interpret the axial and sagittal planes of T1, T2, STIR, and T2 MEDIC pulse sequences of cervical spine. Evaluate vertebral bodies, pedicles, posterior elements, vertebral alignment, and the skull base. Evaluate spinal cord, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, transverse/cruciform ligaments, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints and uncovertebral joints. Evaluate spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate proximal aspects of the brachial plexus. Evaluate vertebral arteries and visible anterior neck soft tissues. Evaluate images for degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression.
- Compare to all pertinent available prior studies.
- Dictate report.

**Description of Post-Service Work:**

- Review and sign the final report.

- Communicate findings with referring physician/emergency department.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72141 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material] was identified on the CMS' High Expenditure Procedural Codes Screen. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72141, 72142, and 72156 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

### Work RVU Recommendations

The expert panel recommends maintaining current value for 72141 and 72142. The panel recommends the median survey RVU of 2.29 for 72156, below the existing value of 2.57 RVU.

### Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72141	MR C-spine W/O DYE	1.60	5	20	5	30	0.069
72142	MR C-spine W DYE	1.92	5	23	5	33	0.074
72156	MR C-spine W/O & W DYE	2.29	5	25	5	35	0.083

### Compelling Evidence

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72141, 72142, and 72156 [*Magnetic resonance (eg, Proton) imaging of cervical spine family*] are invaluable tools in investigating a diverse set of pathologies which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

### Comparison to other RUC reviewed MR codes

CPT Code	Short Descriptor	Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

**Summary of Recommendation for CPT Code 72141 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material]**

Our expert panel recommends maintaining the current value of 72141 at 1.60 RVU with median service period times of 5, 20, and 5 minutes. The current and recommended work RVU value of 1.60 is equal to the 25th percentile reported by our survey participants, supporting maintaining current value.

*Key Reference Service for (KRS) 72141:*

Our recommended work RVU of 1.60 is 0.15 RVU less than the most commonly chosen KRS, 70496 (*Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image post processing*). Our intra-service time recommendation of 20 minutes is identical to the KRS. The difference in total time is entirely secondary to the additional pre and post service time allotted to 70496. Intensity and complexity measures were all higher for 72141 vs. 70496, supporting the slightly higher IWP/UT. The identical intra-service times and similar IWP/UTs support a work RVU value similar to the KRS. The slightly higher work RVU for 70496 is supported by the longer total time.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT
<b>72141</b>	<b>MR C-spine W/O DYE</b>	<b>1.60</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.069</b>
<b>70496</b>	CTA angiogram Head W/DYE	1.75	8	20	10	38	0.067

*MPC Code for 72141:*

Our recommendation is compared to MPC code 93351 (*Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional*), demonstrating identical intra service times and nearly identical IWP/UTs. Total time difference is solely secondary to the post service period. This difference in time supports the subtle difference in RVU.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWP/UT
<b>72141</b>	<b>MR C-spine W/O DYE</b>	<b>1.60</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.069</b>
<b>93351</b>	Transthoracic echo rest and stress	1.75	5	20	10	35	0.071

**Summary**

Our expert panel recommends maintaining the current value of 72141 at 1.60 RVU with median service period times of 5, 20, and 5 minutes. We believe this compares favorably with the key reference service, 70496, and MPC code, 93351. Relativity is also appropriate across the 3 codes for MR of the cervical spine as well as across the larger family of MR codes.

### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT
72148	MRI L-Spine w/o	1.48	5	20	5	0.063

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72141

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1531080

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72141 provided nationally in a one-year period is estimated to be 1,531,080

Specialty Diagnostic Radiology	Frequency 1271000	Percentage 83.01 %
--------------------------------	-------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

510,360 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72141 was billed approximately 510,360 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 423700	Percentage 83.01 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72141

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

		Presented Recommended RVU: <b>1.92</b>
Global Period: XXX		RUC Recommended RVU: <b>1.78</b>

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; with contrast material(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 30-year-old female with multiple sclerosis on therapy presents with new right hand numbness.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 21%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 7%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review lab studies to assess renal function. Review medical record for allergy history, absence of contraindications to contrast injection, factors predisposing to contrast-induced Nephrogenic Systemic Fibrosis, and adjust contrast product and amount to be injected. Request renal consult if necessary.
- Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise IV placement.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Supervise Gadolinium contrast injection, supervise monitoring for contrast reaction and extravasation.
- Obtain the contrast-phase MR images and review, consider obtaining delayed-phase MR images. Also consider obtaining coronal sequences.
- Obtain/review axial and sagittal planes of T1, T2, STIR, and T2 MEDIC pulse sequences after contrast.
- Interpret the axial and sagittal planes of T1, T2, STIR, and T2 MEDIC pulse sequences of cervical spine. Evaluate vertebral bodies, pedicles, posterior elements, vertebral alignment, and the skull base. Evaluate spinal cord, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, transverse/cruciform ligaments, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints and uncovertebral joints. Evaluate spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate proximal aspects of the brachial plexus. Evaluate vertebral arteries and visible anterior neck soft tissues. Evaluate images for

degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression. Count neoplastic, infectious, or demyelinating lesions and measure in two dimensions, if applicable.

- Compare to all pertinent available prior studies.
- Dictate report.

Description of Post-Service Work:

- Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast.
- Review and sign the final report.
- Communicate findings with referring physician/emergency department.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72141 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material] was identified on the CMS' High Expenditure Procedural Codes Screen. The American College of Radiology (ACR) and

American Society of Neuroradiology (ASNR) surveyed 72141, 72142, and 72156 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

### Work RVU Recommendations

The expert panel recommends maintaining current value for 72141 and 72142. The panel recommends the median survey RVU of 2.29 for 72156, below the existing value of 2.57 RVU.

### Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72141	MR C-spine W/O DYE	1.60	5	20	5	30	0.069
72142	MR C-spine W DYE	1.92	5	23	5	33	0.074
72156	MR C-spine W/O & W DYE	2.29	5	25	5	35	0.083

### Compelling Evidence

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72141, 72142, and 72156 [*Magnetic resonance (eg. Proton) imaging of cervical spine family*] are invaluable tools in investigating a diverse set of pathologies which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

### Comparison to other RUC reviewed MR codes

**Summary of Recommendation for CPT Code 72142 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; with contrast material]**

Our expert panel recommends current value of 72142 at 1.92 RVU with median service period times of 5, 23, and 5 minutes. The current and recommended work RVU of 1.92 is between the 25th and 50<sup>th</sup> percentiles reported by our survey participants. The work RVU incremental increase between 72141 (without contrast) and 72142 (with contrast), equal to 0.32 (20%) RVU, is consistent with other RUC reviewed MRI code families (chart below). Both these factors support maintaining the current work value.

CPT code	Description	Work RVU	Percent Change
70540	MRI ORBIT/FACE/NECK W/O DYE	1.35	
70542	MRI ORBIT/FACE/NECK W/DYE	1.62	20%
70543	MRI ORBT/FAC/NCK W/O &W/DYE	2.15	33%
70551	MRI BRAIN STEM W/O DYE	1.48	
70552	MRI BRAIN STEM W/DYE	1.78	20%
70553	MRI BRAIN STEM W/O & W/DYE	2.36	33%
72195	MRI PELVIS W/O DYE	1.46	
72196	MRI PELVIS W/DYE	1.73	18%
72197	MRI PELVIS W/O & W/DYE	2.26	31%

*Key Reference Service (KRS) for 72142:*

Our recommended work RVU of 1.92 is very similar to the most commonly chosen KRS, 74177 (*Computed tomography, abdomen and pelvis; with contrast material(s)*). The pre, intra, and post service times are virtually identical. Survey respondents felt the intensity and complexity measures for 72142 were all higher than the KRS, supporting a higher IWPOT and work RVU value.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72142	MR C-spine W DYE	1.92	5	23	5	33	0.074
74177	CT AB/PEL W/DYE	1.82	5	25	5	35	0.064

#### MPC Code for 72142:

Our recommendation is compared to MPC code 92004 (*Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits*), demonstrating nearly identical intra service times. 72142 is a contrast enhanced exam which, by nature, typically means a complex patient with prior surgery, multiple sclerosis, tumor, etc. This is reflected in the higher IWPUT. Contrast exams are also very rarely performed as a first line examination; therefore, a prior comparison study will frequently be available.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72142	MR C-spine W DYE	1.92	5	23	5	33	0.074
92004	Ophth. E&M. New Patient	1.82	5	25	10	40	0.059

#### Summary

Our expert panel recommends maintaining the current value of 72142 at 1.92 RVU with median service period times of 5, 23, and 5 minutes. We believe this compares favorably with the key reference service, 74177, and MPC code, 92004. Relativity is also appropriate across the 3 codes for MR of the cervical spine as well as across the larger family of MR codes.

#### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT
72148	MRI L-Spine w/o	1.48	5	20	5	0.063

72158	MRI L-Spine w/o&w/	2.29	5	25	5	0.083

#### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72142

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 13104

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72142 provided nationally in a one-year period is estimated to be 13104

Specialty Diagnostic Radiology                      Frequency 11535                      Percentage 88.02 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,368

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72142 was billed approximately 4,368 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 3845                      Percentage 88.02 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72142

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 72146	Tracking Number	Original Specialty Recommended RVU: <b>1.60</b>
		Presented Recommended RVU: <b>1.60</b>
Global Period: XXX		RUC Recommended RVU: <b>1.48</b>

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 75-year-old female presents with severe back pain after fall. X-rays of thoracic spine are normal, but patient has persistent intractable pain.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 21%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 3%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Obtain/review axial and sagittal planes of T1, T2, and STIR pulse sequences and determine whether contrast enhanced sequences or coronal sequences are necessary.
- Interpret the axial and sagittal planes of T1, T2, and STIR pulse sequences of thoracic spine. Evaluate vertebral bodies, pedicles, posterior elements and alignment. Evaluate spinal cord, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints. Evaluate the spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate visible paraspinal soft tissues, including aortic contours. Evaluate images for degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression.
- Compare to all pertinent available prior studies.
- Dictate report.

**Description of Post-Service Work:**

- Review and sign the final report.

- Communicate findings with referring physician/emergency department.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72146 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material] is being brought to the RUC for work evaluation as part of a series of spine codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72146, 72147, and 72157 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

### Work RVU Recommendations

The expert panel recommends maintaining current value for 72146 and 72147. The panel is recommending a work RVU of 2.29 for code 72157 which is below the existing value of 2.57.

### Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
<b>72146</b>	<b>MR T-spine W/O DYE</b>	<b>1.60</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.069</b>
<b>72147</b>	MR T-spine W DYE	1.92	5	23	5	33	0.074
<b>72157</b>	MR T-spine W/O & W DYE	2.29	5	25	5	35	0.083

### Compelling Evidence

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72146, 72147, and 72157 [*Magnetic resonance (eg, Proton) imaging of thoracic spine family*] are invaluable tools in investigating a diverse set of pathologies, which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

### Comparison to other RUC reviewed MR codes

CPT Code	Short Descriptor	Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

### Summary of Recommendation for CPT Code 72146 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material]

Our expert panel recommends maintaining the current value of 72146 at 1.60 RVU with median service period times of 5, 20, and 5 minutes. The current and recommended work RVU value of 1.60 is slightly less than the 25th percentile reported by our survey participants, supporting maintaining current value.

#### Key Reference Service (KRS) for 72146:

Our recommended work RVU of 1.60 is 0.15 RVU less than the most commonly chosen KRS, 70496 (*Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image post processing*). Our intra-service time recommendation of 20 minutes is identical to the KRS. The difference in total time is entirely secondary to the additional pre and post service work required for 70496. Intensity and complexity measures were all higher for 72146 vs. 70496, supporting the slightly higher IWPUT. The identical intra-service times and similar IWPUTs support a work RVU value similar to the KRS. The slightly higher work RVU for 70496 is supported by the longer total time.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
<b>72146</b>	<b>MR T-spine W/O DYE</b>	<b>1.60</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.069</b>
<b>70496</b>	CTA angiogram Head W/DYE	1.75	8	20	10	38	0.067

#### MPC Code for 72146:

Our recommendation is compared to MPC code 93351 (*Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional*), demonstrating identical intra service times and nearly identical IWPUTs. Total time difference is solely secondary to the post service period. This difference in time supports the subtle difference in RVU.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
<b>72146</b>	<b>MR T-spine W/O DYE</b>	<b>1.60</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.069</b>
<b>93351</b>	Transthoracic echo rest and stress	1.75	5	20	10	35	0.071

### Summary

Our expert panel recommends maintaining the current value of 72146 at 1.60 RVU with median service period times of 5, 20, and 5 minutes. We believe this compares favorably with the key reference service, 70496, and

MPC code, 93351. Relativity is also appropriate across the 3 codes for MR of the thoracic spine as well as across the larger family of MR codes.

### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT
72148	MRI L-Spine w/o	1.48	5	20	5	0.063
72141	MRI C-Spine w/o	1.60	5	20	5	0.069
72146	MRI T-Spine w/o	1.60	5	20	5	0.069
72149	MRI L-Spine w/	1.78	5	23	5	0.068
72142	MRI C-Spine w/	1.92	5	23	5	0.074

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72146

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 557277

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72146 provided nationally in a one-year period is estimated to be 557,277

Specialty Diagnostic Radiology	Frequency 482000	Percentage 86.49 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

185,759 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72146 was billed approximately 185759 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 160700	Percentage 86.50 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72146

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 72147	Tracking Number	Original Specialty Recommended RVU: <b>1.92</b>
		Presented Recommended RVU: <b>1.92</b>
Global Period: XXX		RUC Recommended RVU: <b>1.78</b>

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; with contrast material(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 46-year-old female with multiple sclerosis on therapy presents with worsening lower extremity numbness and tingling. Brain MRI did not show any new demyelinating plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 24%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 5%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review lab studies to assess renal function. Review medical record for allergy history, absence of contraindications to contrast injection, factors predisposing to contrast-induced Nephrogenic Systemic Fibrosis, and adjust contrast product and amount to be injected. Request renal consult if necessary.
- Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise IV placement.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Supervise Gadolinium contrast injection, supervise monitoring for contrast reaction and extravasation.
- Obtain the contrast-phase MR images and review, consider obtaining delayed-phase MR images.
- Obtain/review axial and sagittal planes of T1, T2, and STIR sequences after contrast. Also consider obtaining coronal sequences.
- Interpret the axial and sagittal planes of T1, T2, and STIR pulse sequences of thoracic spine. Evaluate vertebral bodies, pedicles, posterior elements and alignment. Evaluate spinal cord, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints. Evaluate the spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate visible paraspinal soft tissues, including aortic contours. Evaluate images for degenerative disease,

stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression. Count neoplastic, infectious, or demyelinating lesions and measure in two dimensions, if applicable.

- Compare to all pertinent available prior studies.
- Dictate report.

Description of Post-Service Work:

- Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast.
- Review and sign the final report.
- Communicate findings with referring physician/emergency department.

-----------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72146 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material] is being brought to the RUC for work evaluation as part of a series of spine codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72146, 72147, and 72157 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

**Work RVU Recommendations**

The expert panel recommends maintaining current value for 72146 and 72147. The panel is recommending a work RVU of 2.29 for code 72157 which is below the existing value of 2.57.

**Pre, Intra, and Post Service Times**

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72146	MR T-spine W/O DYE	1.60	5	20	5	30	0.069
72147	MR T-spine W DYE	1.92	5	23	5	33	0.074
72157	MR T-spine W/O & W DYE	2.29	5	25	5	35	0.083

**Compelling Evidence**

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72146, 72147, and 72157 [*Magnetic resonance (eg. Proton) imaging of thoracic spine family*] are invaluable tools in investigating a diverse set of pathologies, which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

**Comparison to other RUC reviewed MR codes**

**Summary of Recommendation for CPT Code 72147 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; with contrast material]**

Our expert panel recommends current value of 72147 at 1.92 RVU with median service period times of 5, 23, and 5 minutes. The current and recommended work RVU of 1.92 is between the 25<sup>th</sup> and median 50<sup>th</sup> percentiles reported by our survey participants. The work RVU incremental increase between 72146 (without contrast) and 72147 (with contrast) equal to 0.32 (20%) RVU is consistent with other RUC reviewed MRI code families (chart below). Both these factors support maintaining the current work value.

CPT code	Description	Work RVU	Percent Change
70540	MRI ORBIT/FACE/NECK W/O DYE	1.35	
70542	MRI ORBIT/FACE/NECK W/DYE	1.62	20%
70543	MRI ORBT/FAC/NCK W/O &W/DYE	2.15	33%
70551	MRI BRAIN STEM W/O DYE	1.48	
70552	MRI BRAIN STEM W/DYE	1.78	20%
70553	MRI BRAIN STEM W/O & W/DYE	2.36	33%
72195	MRI PELVIS W/O DYE	1.46	
72196	MRI PELVIS W/DYE	1.73	18%
72197	MRI PELVIS W/O & W/DYE	2.26	31%

**Key Reference Service (KRS) for 72147:**

Our recommended work RVU of 1.92 is 0.09 RVU lower than the most commonly chosen KRS, 74178 (*Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions*). The intra service time for the KRS is longer; however, survey respondents felt the intensity and complexity measures for 72147 were all higher, supporting a higher IWPOT. The longer total time of the KRS justifies the higher work RVU.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72147	MR T-spine W DYE	1.92	5	23	5	33	0.074
74178	CT AB/PEL W/O & W DYE	2.01	5	30	5	40	0.060

#### MPC Code for 72147:

Our recommendation is compared to MPC code 92004 (*Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits*), demonstrating nearly identical intra service times. 72147 is a contrast enhanced exam which, by nature, typically means a complex patient with prior surgery, multiple sclerosis, tumor, etc. This is reflected in the higher IWPUT. Contrast exams are also very rarely performed as a first line examination; therefore, a prior comparison study will frequently be available.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72147	MR T-spine W DYE	1.92	5	23	5	33	0.074
92004	Ophth. E&M. New Patient	1.82	5	25	10	40	0.059

#### Summary

Our expert panel recommends maintaining the current value of 72147 at 1.92 RVU with median service period times of 5, 23, and 5 minutes. We believe this compares favorably with the key reference service, 74178, and MPC code, 92004. Relativity is also appropriate across the 3 codes for MR of the thoracic spine as well as across the larger family of MR codes.

#### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT
72148	MRI L-Spine w/o	1.48	5	20	5	0.063

72158	MRI L-Spine w/o&w/	2.29	5	25	5	0.083

#### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72147

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 11085

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72147 provided nationally in a one-year period is estimated to be 11085

Specialty Diagnostic Radiology                      Frequency 9832                      Percentage 88.69 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,695

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72147 was billed approximately 3695 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 3278                      Percentage 88.71 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72147

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 72148	Tracking Number	Original Specialty Recommended RVU: <b>1.48</b>
		Presented Recommended RVU: <b>1.48</b>
Global Period: XXX		RUC Recommended RVU: <b>1.48</b>

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 75-year-old male presents with back pain and spinal claudication.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 18%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 7%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Obtain/review axial, coronal, sagittal planes of T1, T2, and STIR pulse sequences and determine whether contrast enhanced sequences or coronal sequences are necessary.
- Interpret the axial and sagittal planes of T1, T2, and STIR pulse sequences of lumbar spine. Evaluate vertebral bodies, pedicles, posterior elements, vertebral alignment, sacral ala, and visualized iliac bones. Evaluate spinal cord/conus medullaris, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints and sacroiliac joints. Evaluate the spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate visible paraspinal soft tissues, including aortic contours. Evaluate images for degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression.
- Compare to all pertinent available prior studies.
- Dictate report.

**Description of Post-Service Work:**

- Review and sign the final report.

- Communicate findings with referring physician/emergency department.

Intra-Service intensity/complexity	3.78	3.00
Post-Service intensity/complexity	3.67	3.06

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72148 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material] was identified on the CMS' High Expenditure Procedural Codes Screen. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72148, 72149, and 72158 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

### Work RVU Recommendations

The expert panel recommends maintaining current value for 72148 and 72149. The panel is recommending a work RVU of RVU of 2.29 for code 72158, which is below the existing value of 2.36.

### Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72148	MR L-spine W/O DYE	1.48	5	20	5	30	0.063
72149	MR L-spine W DYE	1.78	5	23	5	33	0.068
72158	MR L-spine W/O & W DYE	2.29	5	25	5	35	0.083

### Compelling Evidence

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72148, 72149, and 72158 [*Magnetic resonance (eg, proton) imaging of lumbar spine family*] are invaluable tools in investigating a diverse set of pathologies which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

### Comparison to other RUC reviewed MR codes

CPT Code	Short Descriptor	Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT
70547	MR ANGIOGRAPHY NECK W/O DYE	1.20	5	10	10	25	0.086

<b>72156</b>	<b>MRI CERVICAL SPINE W/O &amp; W/DYE</b>	<b>2.29</b>	<b>5</b>	<b>25</b>	<b>5</b>	<b>35</b>	<b>0.083</b>
70555	FMRI BRAIN BY PHYS/PSYCH	2.54	10	45	10	65	0.047
75561	CARDIAC MRI FOR MORPH W/DYE	2.60	10	45	10	65	0.048

**Summary of Recommendation for CPT Code 72148 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material]**

Our expert panel recommends maintaining the current value of 72148 at 1.48 RVU with median service period times of 5, 20, and 5 minutes. The current and recommended work RVU value of 1.48 is less than the 25th percentile reported by our survey participants, supporting maintaining current value.

*Key Reference Service (KRS) for 72148:*

Our recommended work RVU of 1.48 is 0.27 RVU less than the most commonly chosen KRS, 70496 (*Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image post processing*). Our intra-service time recommendation of 20 minutes is identical to the KRS. The difference in total time is entirely secondary to the additional pre and post service time allotted to 70496. Intensity and complexity measures were all higher for 72148 vs. 70496, yet 72148 has a lower, but similar, IWPUT. The lower RVU for 72148 is justified based on the shorter total time.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
<b>72148</b>	<b>MR L-spine W/O DYE</b>	<b>1.48</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.063</b>
<b>70496</b>	CTA angiogram Head W/DYE	1.75	8	20	10	38	0.067

*MPC Code for 72148:*

Our recommendation is compared to MPC code 93351 (*Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional*), demonstrating identical intra service times. Total time difference is solely secondary to the post service period. This difference in time supports the difference in RVU.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
<b>72148</b>	<b>MR L-spine W/O DYE</b>	<b>1.48</b>	<b>5</b>	<b>20</b>	<b>5</b>	<b>30</b>	<b>0.063</b>
<b>93351</b>	Transthoracic echo rest and stress	1.75	5	20	10	35	0.071

**Summary**

Our expert panel recommends maintaining the current value of 72148 at 1.48 RVU with median service period times of 5, 20, and 5 minutes. We believe this compares favorably with the key reference service, 70496, and MPC code, 93351.

Relativity is also appropriate across the 3 codes for MR of the lumbar spine as well as across the larger family of MR codes.

### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT
72148	MRI L-Spine w/o	1.48	5	20	5	0.063
72141	MRI C-Spine w/o	1.60	5	20	5	0.069
72146	MRI T-Spine w/o	1.60	5	20	5	0.069
72149	MRI L-Spine w/	1.78	5	23	5	0.068
72142	MRI C-Spine w/	1.92	5	23	5	0.074
72147	MRI T-Spine w/	1.92	5	23	5	0.074

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72148

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3518787

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72148 provided nationally in a one-year period is estimated to be 3518787

Specialty Diagnostic Radiology	Frequency 2914000	Percentage 82.81 %

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; with contrast material(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 30-year-old male with lymphoma presents with gait ataxia, sensory abnormalities, and headache. Evaluate for leptomeningeal tumor.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 22%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 5%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review lab studies to assess renal function. Review medical record for allergy history, absence of contraindications to contrast injection, factors predisposing to contrast-induced Nephrogenic Systemic Fibrosis, and adjust contrast product and amount to be injected. Request renal consult if necessary.
- Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise IV placement.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Supervise Gadolinium contrast injection, supervise monitoring for contrast reaction and extravasation.
- Obtain the contrast-phase MR images and review, consider obtaining delayed-phase MR images. Also consider obtaining coronal sequences.
- Obtain/review axial and sagittal planes of T1, T2, and STIR sequences after contrast.
- Interpret the axial and sagittal planes of T1, T2, and STIR pulse sequences of lumbar spine. Evaluate vertebral bodies, pedicles, posterior elements, vertebral alignment, sacral ala, and visualized iliac bones. Evaluate spinal cord/conus medullaris, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints and sacroiliac joints. Evaluate the spinal canal, lateral recesses, foramen, and extra-foraminal regions. Evaluate visible

paraspinal soft tissues, including aortic contours. Evaluate images for degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression. Count neoplastic, infectious, or demyelinating lesions and measure in two dimensions, if applicable.

- Compare to all pertinent available prior studies.
- Dictate report.

Description of Post-Service Work:

- Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast.
- Review and sign the final report.
- Communicate findings with referring physician/emergency department.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72148 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material] was identified on the CMS' High Expenditure Procedural Codes Screen. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72148, 72149, and 72158 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

**Work RVU Recommendations**

The expert panel recommends maintaining current value for 72148 and 72149. The panel is recommending a work RVU of RVU of 2.29 for code 72158, which is below the existing value of 2.36.

**Pre, Intra, and Post Service Times**

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72148	MR L-spine W/O DYE	1.48	5	20	5	30	0.063
72149	MR L-spine W DYE	1.78	5	23	5	33	0.068
72158	MR L-spine W/O & W DYE	2.29	5	25	5	35	0.083

**Compelling Evidence**

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72148, 72149, and 72158 [*Magnetic resonance (eg. proton) imaging of lumbar spine family*] are invaluable tools in investigating a diverse set of pathologies which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

**Comparison to other RUC reviewed MR codes**

CPT Code	Short Descriptor	Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

70555	FMRI BRAIN BY PHYS/PSYCH	2.54	10	45	10	65	0.047
75561	CARDIAC MRI FOR MORPH W/DYE	2.60	10	45	10	65	0.048

**Summary of Recommendation for CPT Code 72149 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; with contrast material]**

Our expert panel recommends current value of 72149 at 1.78 RVU with median service period times of 5, 23, and 5 minutes. The current and recommended work RVU of 1.78 is between the 25th and 50<sup>th</sup> percentiles reported by our survey participants. The work RVU incremental increase between 72148 (without contrast) and 72149 (with contrast) equal to 0.30 (20%) RVU, is consistent with other RUC reviewed MRI code families (chart below). Both these factors support maintaining the current work value.

CPT code	Description	Work RVU	Percent Change
70540	MRI ORBIT/FACE/NECK W/O DYE	1.35	
70542	MRI ORBIT/FACE/NECK W/DYE	1.62	20%
70543	MRI ORBT/FAC/NCK W/O &W/DYE	2.15	33%
70551	MRI BRAIN STEM W/O DYE	1.48	
70552	MRI BRAIN STEM W/DYE	1.78	20%
70553	MRI BRAIN STEM W/O & W/DYE	2.36	33%
72195	MRI PELVIS W/O DYE	1.46	
72196	MRI PELVIS W/DYE	1.73	18%
72197	MRI PELVIS W/O & W/DYE	2.26	31%

**Key Reference Service (KRS) for 72149:**

Our recommended work RVU of 1.78 is very similar to the most commonly chosen KRS, 74177 (*Computed tomography, abdomen and pelvis; with contrast material(s)*). The pre, intra, and post service times are virtually identical. Survey respondents felt the intensity and complexity measures for 72149 were all higher than the KRS. The slightly higher intra service time for the KRS justifies the higher RVU.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
----------	------------------	----------	-------------	---------------	--------------	------------	-------

<b>72149</b>	<b>MR L-spine W DYE</b>	<b>1.78</b>	<b>5</b>	<b>23</b>	<b>5</b>	<b>33</b>	<b>0.068</b>
<b>74177</b>	CT AB/PEL W/DYE	1.82	5	25	5	35	0.064

**MPC Code for 72149:**

Our recommendation is compared to MPC code 92004 (*Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits*), demonstrating nearly identical intra service times. 72149 is a contrast enhanced exam which, by nature, typically means a complex patient with prior surgery, multiple sclerosis, tumor, etc. This is reflected in the higher IWP/UT. Contrast exams are also very rarely performed as a first line examination; therefore, a prior comparison study will frequently be available.

<b>CPT Code</b>	<b>Short Descriptor</b>	<b>Work RVU</b>	<b>Pre-Service</b>	<b>Intra-Service</b>	<b>Post-Service</b>	<b>Total Time</b>	<b>IWP/UT</b>
<b>72149</b>	<b>MR L-spine W DYE</b>	<b>1.78</b>	<b>5</b>	<b>23</b>	<b>5</b>	<b>33</b>	<b>0.068</b>
<b>92004</b>	Ophth. E&M. New Patient	1.82	5	25	10	40	0.059

**Summary**

Our expert panel recommends maintaining the current value of 72149 at 1.78 RVU with median service period times of 5, 23, and 5 minutes. We believe this compares favorably with the key reference service, 74177, and MPC code, 92004. Relativity is also appropriate across the 3 codes for MR of the lumbar spine as well as across the larger family of MR codes.

**Summary Table**

<b>Code</b>	<b>Short Desc</b>	<b>Proposed RVU</b>	<b>Pre-</b>	<b>Intra-</b>	<b>Post-</b>	<b>IWP/UT</b>
72148	MRI L-Spine w/o	1.48	5	20	5	0.063

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72149

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 22086

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72149 provided nationally in a one-year period is estimated to be 22086

Specialty Diagnostic Radiology                      Frequency 19085                      Percentage 86.41 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,362

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72149 was billed approximately 7362 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 6361                      Percentage 86.40 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72149

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 72156	Tracking Number	Original Specialty Recommended RVU: <b>2.29</b>
		Presented Recommended RVU: <b>2.29</b>
Global Period: XXX		RUC Recommended RVU: <b>2.29</b>

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 67-year-old female two weeks status post C5-6 discectomy and fusion presents with fevers, difficulty swallowing, and neck tenderness.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 21%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 7%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review lab studies to assess renal function. Review medical record for allergy history, absence of contraindications to contrast injection, factors predisposing to contrast-induced Nephrogenic Systemic Fibrosis, and adjust contrast product and amount to be injected. Request renal consult if necessary.
- Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise IV placement.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Supervise Gadolinium contrast injection, supervise monitoring for contrast reaction and extravasation.
- Obtain the contrast-phase MR images and review, consider obtaining delayed-phase MR images. Also consider obtaining coronal sequences.
- Obtain/review axial and sagittal planes of T1, T2, STIR, and T2 MEDIC pulse sequences before contrast. Obtain/review sagittal and axial images after contrast.
- Interpret the axial and sagittal planes of T1, T2, STIR, and T2 MEDIC pulse sequences of cervical spine. Evaluate vertebral bodies, pedicles, posterior elements, vertebral alignment, and the skull base. Evaluate spinal cord, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, transverse/cruciform

ligaments, interspinous ligaments, ligamenta flava, paraspinal muscles, prevertebral muscles. Evaluate facet joints and uncovertebral joints. Evaluate spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate proximal aspects of the brachial plexus. Evaluate vertebral arteries and visible anterior neck soft tissues. Evaluate images for degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression. Count neoplastic, infectious, or demyelinating lesions and measure in two dimensions, if applicable.

- Compare to all pertinent available prior studies.
- Dictate report.

Description of Post-Service Work:

- Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast.
- Review and sign the final report.
- Communicate findings with referring physician/emergency department.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

CPT Code 72141 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material] was identified on the CMS' High Expenditure Procedural Codes Screen. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72141, 72142, and 72156 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

### Work RVU Recommendations

The expert panel recommends maintaining current value for 72141 and 72142. The panel recommends the median survey RVU of 2.29 for 72156, below the existing value of 2.57 RVU.

### Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72141	MR C-spine W/O DYE	1.60	5	20	5	30	0.069
72142	MR C-spine W DYE	1.92	5	23	5	33	0.074
<b>72156</b>	<b>MR C-spine W/O &amp; W DYE</b>	<b>2.29</b>	<b>5</b>	<b>25</b>	<b>5</b>	<b>35</b>	<b>0.083</b>

### Compelling Evidence

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72141, 72142, and 72156 [*Magnetic resonance (eg, Proton) imaging of cervical spine family*] are invaluable tools in investigating a diverse set of pathologies which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

### Comparison to other RUC reviewed MR codes

CPT Code	Short Descriptor	Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

70555	FMRI BRAIN BY PHYS/PSYCH	2.54	10	45	10	65	0.047
75561	CARDIAC MRI FOR MORPH W/DYE	2.60	10	45	10	65	0.048

**Summary of Recommendation for CPT Code 72156 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical]**

Our expert panel recommends the median survey value of 2.29 RVU for 72156, below the existing value of 2.57 RVU with median pre, intra and post service period times of 5, 25, and 5 minutes, respectively.

*Key Reference Service (KRS) for 72156:*

Our recommended work RVU of 2.29 is 0.11 RVU lower than the most commonly chosen KRS, 74261 (*Computed tomographic (CT) colonography, diagnostic, including image postprocessing; without contrast material*), despite having higher intensity and complexity measures in every category. The lower intensity image processing for CT colonography requires more time, but the higher intensity and complexity for a spine MR supports the higher IWPOT.

<b>CPT Code</b>	<b>Short Descriptor</b>	<b>Work RVU</b>	<b>Pre-Service</b>	<b>Intra-Service</b>	<b>Post-Service</b>	<b>Total Time</b>	<b>IWPOT</b>
<b>72156</b>	<b>MR C-spine W/O &amp; W DYE</b>	<b>2.29</b>	<b>5</b>	<b>25</b>	<b>5</b>	<b>35</b>	<b>0.083</b>
<b>74261</b>	<b>CT Colonography W/O DYE</b>	<b>2.40</b>	<b>5</b>	<b>40</b>	<b>5</b>	<b>50</b>	<b>0.054</b>

*MPC Code for 72156:*

Our recommendation is compared to MPC code 99284 (*Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician physicians, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.*), demonstrating identical intra service times. 72156 is a contrast enhanced exam which, by nature, typically means a complex patient with prior surgery, multiple sclerosis, tumor, etc. This is reflected in the comparable IWPOT. Contrast exams are also very rarely performed as a first line examination; therefore, a prior comparison study will frequently be available. The higher RVU for 99284 is acknowledged based on the longer total time.

<b>CPT Code</b>	<b>Short Descriptor</b>	<b>Work RVU</b>	<b>Pre-Service</b>	<b>Intra-Service</b>	<b>Post-Service</b>	<b>Total Time</b>	<b>IWPOT</b>
<b>72156</b>	<b>MR C-spine W/O &amp; W DYE</b>	<b>2.29</b>	<b>5</b>	<b>25</b>	<b>5</b>	<b>35</b>	<b>0.083</b>
<b>99284</b>	<b>ER E&amp;M Moderate Complexity</b>	<b>2.56</b>	<b>5</b>	<b>25</b>	<b>10</b>	<b>40</b>	<b>0.089</b>

**Summary**

Our expert panel recommends reducing the current value of 72156 to 2.29 RVU with median service period times of 5, 25, and 5 minutes. We believe this compares favorably with the key reference service, 74261, and MPC code, 99284.

Relativity is also appropriate across the 3 codes for MR of the cervical spine as well as across the larger family of MR codes.

### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72156

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 298998

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72156 provided nationally in a one-year period is estimated to be 298,998

Specialty Diagnostic Radiology	Frequency 264350	Percentage 88.41 %
--------------------------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

99,666 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72156 was billed approximately 99,666 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 88100	Percentage 88.39 %
--------------------------------	-----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72156

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS

CPT Descriptor: Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; thoracic

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 55-year-old male with history of lung cancer presents with urinary retention, fecal incontinence, and back pain. Evaluate for cord compression.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 21%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 8%

**Description of Pre-Service Work:**

- Review the request for appropriateness, review clinical history.
- Confirm no contraindication for MRI.
- Review lab studies to assess renal function. Review medical record for allergy history, absence of contraindications to contrast injection, factors predisposing to contrast-induced Nephrogenic Systemic Fibrosis, and adjust contrast product and amount to be injected. Request renal consult if necessary.
- Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise IV placement.
- Review any prior applicable studies.
- Communicate protocol to technologist.

**Description of Intra-Service Work:**

- Obtain/interpret scout views of area to be imaged.
- Supervise Gadolinium contrast injection, supervise monitoring for contrast reaction and extravasation.
- Obtain the contrast-phase MR images and review, consider obtaining delayed-phase MR images. Also consider obtaining coronal sequences.
- Obtain/review axial and sagittal planes of T1, T2, and STIR sequences before contrast. Obtain/review sagittal and axial T1 sequences after contrast.
- Interpret the axial and sagittal planes of T1, T2, and STIR pulse sequences of thoracic spine. Evaluate vertebral bodies, pedicles, posterior elements and alignment. Evaluate spinal cord, spinal nerve roots, spinal arteries and veins, thecal sac, epidural space, epidural venous plexus. Evaluate disk spaces, annulus fibrosis, nucleus pulposus, vertebral endplates, anterior longitudinal ligament, posterior longitudinal ligament, interspinous ligaments, ligamenta flava, paraspinal muscles,

prevertebral muscles. Evaluate facet joints. Evaluate the spinal canal, lateral recesses, foramina, and extra-foraminal regions. Evaluate visible paraspinal soft tissues, including aortic contours. Evaluate images for degenerative disease, stenoses, tumor, infection, congenital anomalies, demyelination, cord compression, cord ischemia, trauma, and nerve root thickening or nerve root compression. Count neoplastic, infectious, or demyelinating lesions and measure in two dimensions, if applicable.

- Compare to all pertinent available prior studies.
- Dictate report.

Description of Post-Service Work:

- Confirm lack of complication from contrast agent such as allergic reaction or extravasation of contrast.
- Review and sign the final report.
- Communicate findings with referring physician/emergency department.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

## Background

CPT Code 72146 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material] is being brought to the RUC for work evaluation as part of a series of spine codes. The American College of Radiology (ACR) and American Society of Neuroradiology (ASNR) surveyed 72146, 72147, and 72157 (code family), and convened an expert panel of physicians familiar with the services to review the survey data.

## Work RVU Recommendations

The expert panel recommends maintaining current value for 72146 and 72147. The panel is recommending a work RVU of 2.29 for code 72157 which is below the existing value of 2.57.

## Pre, Intra, and Post Service Times

The panel recommends the median survey service period times for all three codes as summarized in the following table:

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUT
72146	MR T-spine W/O DYE	1.60	5	20	5	30	0.069
72147	MR T-spine W DYE	1.92	5	23	5	33	0.074
72157	MR T-spine W/O & W DYE	2.29	5	25	5	35	0.083

## Compelling Evidence

While our societies are not submitting arguments for compelling evidence for an increase in value, we would point out that there have been revolutionary changes in MR technology since this procedure was originally valued. Modern pulse sequences have allowed thinner slice profiles, leading to an increase in the number of images typically acquired. The thinner slice profile has led to the detection of subtle abnormalities not visible on old techniques. This includes detection of disk herniations, facet cysts, cord demyelination, tumors, dural arteriovenous fistulas, and arachnoid cysts/adhesions.

Codes 72146, 72147, and 72157 [*Magnetic resonance (eg, Proton) imaging of thoracic spine family*] are invaluable tools in investigating a diverse set of pathologies, which range from minor to life threatening. They are pivotal tools in investigating back pain, radiculopathy, myelopathy, trauma, tumor, metastatic disease, demyelination, vascular malformations, vascular insults, and infection, among many other central nervous system pathologies. Not only is a positive result significant, a negative result is also pertinent in patient management, in relieving patient anxiety, and in providing assurance to ordering physicians. They are technically challenging examinations to interpret. Subtle findings, combined with pulsation artifact created by CSF flow, require meticulous attention to detail in order to provide proper interpretation. Each MR pulse sequence is interpreted in conjunction with the other sequences, as the differential diagnosis will drastically change depending on how pathology looks on each sequence (no one sequence is diagnostic in isolation). A combination of its utility (as a positive and negative predictor of pathology), intensity, and the amount of technical training necessary to accurately interpret led us to believe that this procedure is appropriately valued as above.

## Comparison to other RUC reviewed MR codes

CPT Code	Short Descriptor	Work RVU	Pre Time	Intra Time	Post Time	Total Time	IWPUT

**Summary of Recommendation for CPT Code 72157 [Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; thoracic]**

Our expert panel recommends 2.29 RVUs which is between the 25<sup>th</sup> and median survey RVUs and below the existing value of 2.57 RVU. We are recommending median pre, intra, and post service period times of 5, 25, and 5 minutes, respectively. The recommended value was chosen to parallel the MRI cervical spine family for which all previous RVU values and times were in parity.

*Key Reference Service (KRS) for 72157:*

Our recommended work RVU of 2.29 is 0.11 RVU lower than the most commonly chosen KRS, 74261 (*Computed tomographic (CT) colonography, diagnostic, including image post processing; without contrast material*), despite having higher intensity and complexity measures in every category. The lower intensity image processing for CT colonography requires more time, but the higher intensity and complexity for a spine MR supports the higher IWPUP.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUP
<b>72157</b>	<b>MR T-spine W/O &amp; W DYE</b>	<b>2.29</b>	<b>5</b>	<b>25</b>	<b>5</b>	<b>35</b>	<b>0.083</b>
<b>74261</b>	<b>CT Colonography W/O DYE</b>	<b>2.40</b>	<b>5</b>	<b>40</b>	<b>5</b>	<b>50</b>	<b>0.054</b>

*MPC Code for 72157:*

Our recommendation is compared to MPC code 99284 (*Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician physicians, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.*), demonstrating nearly identical intra service times. 72157 is a contrast enhanced exam which, by

nature, typically means a complex patient with prior surgery, multiple sclerosis, tumor, etc. This is reflected in the comparable IWPUP. Contrast exams are also very rarely performed as a first line examination; therefore, a comparison study will frequently be available. The higher RVU for 99284 is acknowledged based on the longer total time.

CPT Code	Short Descriptor	Work RVU	Pre-Service	Intra-Service	Post-Service	Total Time	IWPUP
<b>72157</b>	<b>MR T-spine W/O &amp; W DYE</b>	<b>2.29</b>	<b>5</b>	<b>25</b>	<b>5</b>	<b>35</b>	<b>0.083</b>

99284	ER E&M Moderate Complexity	2.56	5	25	10	40	0.089
-------	----------------------------	------	---	----	----	----	-------

### Summary

Our expert panel recommends reducing the current value of 72157 to 2.29 RVU with median service period times of 5, 25, and 5 minutes. We believe this compares favorably with the key reference service, 74261, and MPC code, 99284. Relativity is also appropriate across the 3 codes for MR of the thoracic spine as well as across the larger family of MR codes.

### Summary Table

Code	Short Desc	Proposed RVU	Pre-	Intra-	Post-	IWPUT
72148	MRI L-Spine w/o	1.48	5	20	5	0.063
72141	MRI C-Spine w/o	1.60	5	20	5	0.069
72146	MRI T-Spine w/o	1.60	5	20	5	0.069

72156	MRI C-Spine w/o&w/	2.29	5	25	5	0.083
72157	MRI T-Spine w/o&w/	2.29	5	25	5	0.083
72158	MRI L-Spine w/o&w/	2.29	5	25	5	0.083

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 72157

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 229389

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 72157 provided nationally in a one-year period is estimated to be 229,389

Specialty Diagnostic Radiology                      Frequency 210850                      Percentage 91.91 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 76,463 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 72157 was billed approximately 76463 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 70275                      Percentage 91.90 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 72157

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77372 Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; linear accelerator based*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The Society prepared a practice expense survey and presented it to the research subcommittee. The surveys were sent electronically to 400 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 18 surveys.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77372 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

**Pre Service Activities**

*Complete pre-service diagnostic & referral forms & Coordinate pre-surgery services*

A number of insurance companies require preauthorization for SRS. This time is allotted to complete the pre service forms and work with the insurance company on clinical matters.

**Provide pre-service education/obtain consent**

The clinical staff calls the patient prior to arriving for treatment. They will answer any questions regarding the procedure and go over what to expect during treatment. They may ask the patient not to eat or drink anything after midnight. They will discuss medications. They will discuss the need to have a family member or friend must accompany them the day of treatment and should drive them home following the procedure.

**Prepare Delivery System Unit for Treatment**

This line item is included in the service period in the existing inputs. However, it we believe it is more appropriate to include it in the pre service period.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are not recommending additional clinical times, supplies or equipment from existing inputs. However, when we compute the time for the SRS machine we get 75 minutes, not 51. We included rows 23, 30, 32, 36, 42 and 49. When we compute the time for the pulse oximeter we get 55 minutes not 51. We included rows 30, 32, 36, 42 and 49.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

The physicist has prepared the machine for treatment prior to patient arriving in the treatment area. To ensure the accuracy of the treatment setup, the physicist then verifies the stereotactic isocenter using the Winston-Lutz phantom test.

Intra-Service Clinical Labor Activities:

The patient is taken into the treatment room, and the physician and the physicist together review the original and new films, the prescription, and the data that was entered into the treatment machine. The nurse is assisting the patient in getting comfortable and then takes the patient's vital signs. Once these vitals have been documented, the patient is then placed on the treatment couch. The nurse then lets the radiation therapist and the physicist position the patient with the appropriate immobilization system, and the head ring is calibrated to the stereotactic isocenter and the tests that were performed to validate the patient setup. Once the patient is then positioned, the nurse then inserts the IV for the patient, and the SRS treatment delivery begins.

During the treatment delivery, the physicist and the radiation therapist are in the control room at all times to monitor the delivery procedure. The nurse monitors the oxygen (O<sub>2</sub>) saturation of the patient. The amount of radiation given is continuously tracked.

The patient is taken out of the immobilization apparatus. (After treatment is complete the neurosurgeon removes the head frame, as described in CPT Code 61793.) The patient is then taken into a separate room for recovery.

Post-Service Clinical Labor Activities:

Phone calls are made by the nurse to follow up on side effects and phone in prescriptions.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

<b>72141</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; without contrast material
<b>72142</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, cervical; with contrast material(s)
<b>72156</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical
<b>72146</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; without contrast material
<b>72147</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, thoracic; with contrast material(s)
<b>72157</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; thoracic
<b>72148</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; without contrast material
<b>72149</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, lumbar; with contrast material(s)
<b>72158</b>	Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar

Global Period: XXX Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology and the American Society of Neuroradiology convened a consensus panel to finalize the practice expense data for CPT codes 72141-72158.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Since 72141-72158 are existing codes, we used the PEAC approved data as the basis for the practice expense inputs.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- We have increased the intra-service “assist physician/acquire images” time for CPT codes 72147 (*MRI T-spine w/contrast*) and 72157 (*MRI T-spine w/o & w/contrast*) to parallel the times for the *w/contrast* and *w/o and w/contrast* for the other MRI spine codes, 72142 and 72149, and 72156 and 72158, respectively.
- The room times have been revised to equal the service period time; only the times relating to T-spine actually increased.
- A DVD, patient gown and exam paper were added to the *w/o contrast* codes, 72141, 72146, and 72148, similar to the recently RUC reviewed MRI brain codes.
- For the *w/o contrast* codes, 72141, 72146, and 72148, the film inputs have been moved from SK034 (film, x-ray 14in x 17in) to SK098 (film, x-ray, laser print) to maintain consistency across the family.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Retrieve prior appropriate imaging exams and hang for MD review. Verify orders, review the chart, verify physician order including clinical information, confirm contrast protocol with interpreting physician

Intra-Service Clinical Labor Activities:

- Greet patient, provide gowning, ensure appropriate medical records are available
- Provide pre-service education/obtain consent/ Interview patient for contraindications
- Prepare room, equipment, supplies/ Enter patient data and choose coil
- Prepare and position patient/ monitor patient/ set up IV
- Assist physician in performing procedure/ Acquire images
- Clean room/equipment by physician staff
- Process films, hang films, and review study with interpreting MD prior to patient discharge
- Escort patient from exam room due to magnetic sensitivity

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Fastest Growing / Codes Reported Together 75% or More /*  
*CMS Request to Re-Review Families of Recently Reviewed CPT Codes / CMS Request: Final Rule for 2013 Screen*

April 2013

**CT-Angiography-Abdomen and Pelvis**

In the Final Rule for 2013, CMS re-stated they believe that when codes are bundled, the new codes should be reviewed along with their component codes to ensure consistency in RVUs and inputs. The survey of CPT code 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* pre-dates this CMS recommendation. CMS believes there is an anomalous relationship between the physician times assigned to codes in this family. CPT code 74174 describes computed tomographic angiography (CTA) of both the abdomen and pelvis together. This CPT code includes 5 minutes of pre-service time, 30 minutes of intraservice time, and 5 minutes of post-service time, which is consistent with several other similar bundled CPT codes. CPT code 74175 describes CTA of the abdomen only, and includes 10 minutes of pre-service time, 30 minutes of intra-service time, and 10 minutes of post-service time. Similarly, CPT code 72191 describes CTA of the pelvis only, and includes 9 minutes of pre-service time, 30 minutes of intra-service time, and 10 minutes of post-service time. CMS does not believe that CTA of just the abdomen or just the pelvis should include more pre- and post-service time than the combined code. Also, while CMS believes furnishing the bundled code does not involve much more time than furnishing the stand-alone codes, they find it unlikely that the bundled service requires exactly the same intra-service time as the component services. CMS requested recommendations from the RUC and other public commenters on the appropriate work and time values for these services. In January of 2012, the Relativity Assessment Workgroup reviewed the specialty societies' proposal to equalize the pre and post times across the family at 5 minutes and retain the existing work RVUs. This recommendation was placed on the April 2013 RUC agenda to re-review the rationale and recommend changes to the times based on the existence of new pre-service packages.

The RUC noted that the specialty societies proposed two distinct actions on these three codes. First, the pre-service and post-service times for the component codes, 72191 *CTA pelvis with and without contrast* and 74175 *CTA abdomen with and without contrast*, should not be higher than the bundled code 74174 *CTA abdomen and pelvis with and without contrast*. The RUC agreed and recommends 5 minutes of pre-service time and 5 minutes of post-service time for both 72191 and 74175, so that they are identical to the pre- and post-service components of 74174. Secondly, the specialties noted that while the intra-service times are all identical, 30 minutes, the relativity among the work RVUs for these three codes is appropriate. Thus, a new survey of the family is not necessary. The RUC disagreed stating that while the relativity of the work values for these three codes may be appropriate, the intra-service time appears anomalous. CPT code 74174 requires review of two anatomical sites and should thus take some additional intra-service time for the physician to interpret and report the findings compared to the single-site components codes. **The RUC recommends the current values as interim, with modified pre- and post-service times for the following codes: 72191 (work RVU= 1.81, pre time= 5 minutes, intra time= 30 minutes, post time= 5 minutes); 74175 (work RVU= 1.90, pre time= 5 minutes, intra time= 30 minutes, post time= 5 minutes); and 74174 (work RVU= 2.20, pre time= 5 minutes, intra time= 30 minutes, post time= 5 minutes). In addition, the RUC recommends all three codes be re-surveyed for physician work and time at the October 2013 RUC meeting.**

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
72191	Computed tomographic angiography, pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing (Do not report 72191 in conjunction with 73706 or 75635. **AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Computed tomographic angiography, abdomen and pelvis; with contrast material(s), including noncontrast images, if performed, and image postprocessing

(Do not report 74174 in conjunction with 72191, 73706, 74175, 75635, 76376, 76377)

(For CTA aorto-iliofemoral runoff, use 75635)

Global Period: XXX

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The ACR utilized a consensus panel process to develop recommended inputs. The ACR Practice Expense Committee was assembled using representatives from each of the ACR sub-specialty Economics Committees, thus assuring a broad representation of all the multiple radiology sub-specialties, general radiology and radiation oncology. Attention was paid to the geographic distribution, practice type (academic, private practice) and practice size of the representatives. This Committee was the final common pathway of all the recommendations that are submitted.

If you have provide any comparison practice expense inputs on your spreadsheet, please provide a rationale for the selection of codes. Comparison Code Rationale:

The ACR used 74178 (Computed tomography abdomen and pelvis; without contrast material in one or both body regions, followed by with contrast materials and further sections in one or both body regions) and 76377 (3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality; requiring image postprocessing on an independent workstation) as comparison codes. Code 74178 is a recently RUC surveyed code, was the second most commonly chosen reference service and the practice expense inputs also compares favorably with our surveyed code. Both codes involve the study of the abdomen and pelvis with and without the administration of IV contrast.

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Retrieve prior appropriate imaging exams and hang for MD review, verify orders, review the chart to incorporate relevant clinical information
- Greet patient and provide gowning
- Education/instruction/counseling/obtain consent
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Perform CT examination to obtain source images

Intra-Service Clinical Labor Activities:

- Assist physician in performing procedure/Computer post processing
- Acquire images

Post-Service Clinical Labor Activities:

- Clean room/equipment
- Starting IV for high volume and rate power injection
- Process films, hang films and review study with interpreting MD prior to patient discharge

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*MPC List / CMS High Expenditure Procedural Codes/CMS Request: Final Rule for 2013*  
April 2013

**Fluoroscopic Guidance**

CPT code 77003 was identified through the CMS High Expenditure Procedural Codes screen and the MPC List screen. The RUC submitted work and practice recommendations for the 2013 Medicare Physician Payment Schedule. In the Final Rule for 2013, CMS indicated that the Agency will maintain the current work RVU of 0.60 for CPT code 77003 as interim. CMS indicated that it was necessary to review code 77003 alongside codes 77001 and 77002 in 2013 for the 2014 Medicare Physician Payment Schedule. CMS requested public comments on the appropriate work values and practice expense inputs for these services. The RUC recommended surveying for work and developing PE inputs for 77001 and 77002 for review at the April 2013 RUC meeting. CPT code 77003 was recently reviewed in January 2012 and was not resurveyed with the family.

***77001 Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 74 radiologists and anesthesiologists and agreed with the specialty societies that the respondents overestimated the physician time involved in this service and that the following current physician time components should be maintained: pre-service time of 0 minutes, intra-service time of 9 minutes and post-service time of 4 minutes. The RUC reviewed the survey and determined that the current value of 0.38 is appropriate for this service. To validate this work value, the RUC compared the surveyed code to key reference service 36148 *Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); additional access for therapeutic intervention (List separately in addition to code for primary procedure)* (work RVU=1.00, 15 minutes intra-service). While both 77001 and 36148 involve catheter directed procedures, 36148 includes both the vascular access and imaging guidance whereas, 77001 represents the guidance only, which requires less intensity to perform. Less work and the lower intensity account for the lower value for 77001. Additionally, MPC code 95874 *Needle electromyography for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure)* (work RVU=0.37, 20 minutes intra-service) was reviewed and the RUC agreed that with slightly less total time and higher intensity 77001 should be valued slightly higher. **The RUC recommends a work RVU of 0.38 for CPT code 77001.**

***77002 Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device)***

The RUC reviewed the survey results from 73 radiologists, anesthesiologists and physical medicine and rehabilitation physicians and recommended the following physician time components: pre-service time of 7 minutes, intra-service time of 15 minutes and post-service time of 5 minutes. The RUC determined that the current value of 0.54 is appropriate for this service. To validate this work value, the RUC compared the surveyed code to key reference service 76937 *Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites,*

documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure) (work RVU=0.30, 0 minutes pre-service, 10 minutes intra-service and 4 minutes post-service) and agreed that with higher intra-service time and intensity, 77002 should be valued higher than the reference code. Additionally, recently valued MPC codes 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU=0.52, 2 minutes pre-service, 15 minutes intra-service and 7 minutes post-service) and 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU=0.56, 4 minutes pre-service, 10 minutes intra-service and 4 minutes post-service) were reviewed and the RUC agreed that 77002 has slightly more total time than 93224 and should be valued slightly higher and 77002 has more time, but is less intense to perform than 76536 and should be valued slightly higher. **The RUC recommends a work RVU of 0.54 for CPT code 77002.**

### 77003

#### ***Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid)***

The RUC reviewed the RUC recommendations from January 2012 for CPT code 77003 and agreed to reaffirm the established values, as they are appropriate relative to the family of services reviewed at the April 2013 RUC meeting. In January 2012, the RUC reviewed the survey responses from 122 anesthesiologists, interventional radiologists, radiologists, spine surgeons and pain medicine physicians and determined that the physician work for CPT code 77003 should be maintained at 0.60 work RVUs, lower than the survey's 25<sup>th</sup> percentile. The RUC reaffirms the following recommended physician time components: pre-service time of 7 minutes, intra-service time of 15 minutes and post-service time of 5 minutes. **The RUC recommends reaffirming a work RVU of 0.60 for CPT code 77003.**

### Practice Expense

The RUC recommends practice expense for CPT codes 77001 and 77002 with minor modifications as approved by the PE Subcommittee. The RUC reaffirms recently reviewed practice expense for CPT code 77003 as previously approved by the PE Subcommittee.

CPT Code (•New)	CPT Descriptor	Global Period	Work RVU Recommendation
77001	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access	ZZZ	0.38 (No Change)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 77001	Tracking Number	Original Specialty Recommended RVU: <b>0.38</b>
		Presented Recommended RVU: <b>0.38</b>
Global Period: ZZZ		RUC Recommended RVU: <b>0.38</b>

CPT Descriptor: Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: 60-year-old male patient in need of hemodialysis. Tunneled central venous access placement is performed (the catheter placement is separately reported) during which fluoroscopic guidance is used to facilitate the catheter and wire manipulations and ensure proper positioning of the catheter.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 88%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 65%

**Description of Pre-Service Work:**

Description of Intra-Service Work: Following achievement of venous access (separately reported), fluoroscopy is used to manipulate the guidewire and subsequently the catheter into an appropriate central venous position. Any contrast injection through access site (via needle, catheter or sheath) for venographic evaluation and mapping of appropriate path is included. Additional fluoroscopy after venography may be necessary for optimal positioning. Spot film or other radiographic confirmation of final catheter position is performed. Description of all aspects of fluoroscopic guidance are reported with procedure.

Description of Post-Service Work: A report describing the guidance procedure, including the final position of the needle/catheter, is dictated, proofread, and submitted for the patient's medical record. The results of the procedure are communicated to the referring physician when appropriate.

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Introduction

CPT code 77001 is being reviewed along with 77002 to ensure relativity across this family of codes after 77003 was recently surveyed and its value accepted by CMS on an interim basis. This family of codes describes the use of fluoroscopic guidance for localization of needles or catheters during a variety of procedures.

### Background

CMS previously identified CPT code 77003 (*Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinal diagnostic or therapeutic injection procedures (epidural or subarachnoid)*) as potentially misvalued through its screen of MPC codes. Code 77003 was re-surveyed twice by the specialties, with recommendations accepted by the RUC in January of 2012. In the 2013 Final Rule, CMS accepted the RUC recommended value of 77003 as “interim” for 2013, indicating they “believe it is necessary to review this service alongside very similar CPT codes 77001 and 77002 to determine the appropriate relative value for this high volume, high expenditure procedure code.”

CPT code 77001 (*Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (list separately in addition to code for primary procedure)*) describes the use of fluoroscopy to ensure appropriate positioning of the guidewires and catheters during central line placement, replacement, repositioning, or removal. The American College of Radiology, Society of Interventional Radiology, and American Society of Anesthesiologists surveyed this family, including CPT codes 77001 and 77002, in March 2013, and convened an expert panel of physicians familiar with these services to review the survey data.

### Global Period

CPT code 77001 was surveyed as a ZZZ add-on code and, across all three societies, pre and post-service work times were indicated, similar to the other XXX codes in this family (77002 and 77003). This proposed change in global period from ZZZ to XXX would serve to correctly capture the non-duplicative work performed during 77001 and maintain consistency with 77002 and 77003.

### Work RVU Recommendation

The expert panel recommends maintaining the existing work RVU of 0.38.

### Service Times

The panel recommends the following service period times for 77001: pre, intra, and post times of 7, 20, and 5 minutes, respectively. This is predicated on the RUCs agreement that a change in the global period is appropriate.

The pre and post times had median survey values of 10 minutes each for 77001. However, the panel recommends using the recent RUC approved pre and post survey times for 77003 (7 and 5 minutes, respectively), which appropriately reflect the work involved with the imaging guidance used in both 77001 and 77002.

The panel recommends the median intra-service time of 20 minutes, which reflects the time required for fluoroscopic guidance during manipulation of guide wires and catheters in the mediastinal vessels.

### Key Reference Service

The most commonly selected key reference service was CPT code 36148 (*Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); additional access for therapeutic intervention (List separately in addition to code for primary procedure)*). This ZZZ code was selected by approximately one third of those surveyed, and it has 1.00 work RVU with an intra service time of 15 minutes.

While both 77001 and 36148 involve the catheter directed procedures, 36148 includes both the vascular access and imaging guidance whereas 77001 represents the guidance only, which is lower intensity work.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
77001	Fluoro guidance during central catheter	0.38	0	9	4	13	0.006
36148	Additional AV shunt access	1.00	0	15	0	15	0.067

### MPC Comparison

The panel recommendation of 0.38 RVUs for 77001 is bracketed by three MPC codes with XXX and ZZZ global periods: 92025 (*Computerized corneal topography, unilateral or bilateral, with interpretation and report*), 95874 (*Needle electromyography for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure)*), and 93923 (*Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)*).

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Global
92025	Computerized corneal topography	0.35	5	12	0	17	0.020	XXX
95874	EMG during chemodenervation	0.37	0	20	0	20	0.019	ZZZ
77001	Fluoro guidance during central catheter	0.38	0	9	4	13	0.006	ZZZ
93923	Doppler/duplex extremity	0.45	3	10	3	16	0.032	XXX

### Comparison within the Family

Allowing for our suggested change in global period for 77001 from ZZZ to XXX, and using the service times outlined above, this creates a structure that accurately reflects the work of performing 77001, while creating a proper family of codes.

Codes in Family	Descriptor	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
77001	Fluoro guidance during central catheter	0.38	0	9	4	13	0.006
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022

The data summarized in the table above demonstrate the relative work involved in the procedures surveyed within the fluoroscopic guidance code family. While the intra-procedure survey times decrease through the code family, the IWPUT across the different codes appropriately reflects the differences in intensity related to the anatomy and technical difficulty of these procedures.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) This is not a stand-alone service. It would only be reported along with another procedure when that procedure was done with fluoroscopic guidance and that guidance was not already bundled into the procedure

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code would only be reported in conjunction with a procedure when imaging guidance is not already bundled into the code that describes the underlying procedure. The incidence of this will decrease markedly, as CPT code changes to bundle fluoroscopic guidance into a large number of codes will be accounted for.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77001

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Interventional Radiology                      How often? Commonly

Specialty Anesthesiology                      How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 1390206

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 77001 provided nationally in a one-year period is estimated to be 1,390,206

Specialty Diagnostic Radiology                      Frequency 823750                      Percentage 59.25 %

Specialty Interventional Radiology                      Frequency 145000                      Percentage 10.43 %

Specialty Anesthesiology                      Frequency 600                      Percentage 0.04 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 463,402 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 77001 was billed approximately 463,402 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 274600	Percentage 59.25 %
Specialty Interventional Radiology	Frequency 48400	Percentage 10.44 %
Specialty Anesthesiology	Frequency 250	Percentage 0.05 %

Do many physicians perform this service across the United States? Yes

---

SUMMARY OF RECOMMENDATION**

CPT Code: 77002	Tracking Number	Original Specialty Recommended RVU: <b>0.54</b>
		Presented Recommended RVU: <b>0.54</b>
Global Period: XXX		RUC Recommended RVU: <b>0.54</b>

CPT Descriptor: Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old male with hip pain and suspected joint effusion is referred for joint aspiration. Fluoroscopic guidance is used to advance a needle into the joint space, after which joint fluid is aspirated (needle aspiration is reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 47%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 28%

Description of Pre-Service Work: The physician reviews the patient's prior imaging studies (eg, radiographs, computed tomography [CT] scans, magnetic resonance imaging [MRI] scans) to be familiar with the patient's anatomy to plan an appropriate trajectory for the needle placement (including access site, pertinent landmarks, and variant anatomy). The physician dresses in radiation attire and instructs the radiologic technologists in the imaging equipment required and the proper settings for the imaging equipment.

Description of Intra-Service Work: The patient is placed on an X-ray table and positioned appropriately depending on the type of procedure to be performed. Preliminary fluoroscopy is performed to identify the appropriate level and approach for the initial needle placement, and the skin entry site is prepped and marked. Sterile drapes are applied. During the needle placement, intermittent fluoroscopy is used to confirm the correct approach and the need for needle repositioning or realignment. When the needle position appears correct, radiographic contrast may be injected to confirm the proper position or tissue samples may be acquired and reviewed. If the position is not correct, additional fluoroscopy is utilized to guide repositioning until the proper position is achieved.

Description of Post-Service Work: A report describing the guidance procedure, including the final position of the needle/catheter, is dictated, proofread, and submitted for the patient's medical record. The results of the procedure are communicated to the referring physician when appropriate.

---

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Introduction

CPT code 77002 is being reviewed along with 77001 to ensure relativity across this family of codes after 77003 was recently surveyed and its value accepted by CMS on an interim basis. This family of codes describes the use of fluoroscopic guidance for localization of needles or catheters during a variety of procedures.

### Background

CMS previously identified CPT code 77003 (*Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinal diagnostic or therapeutic injection procedures (epidural or subarachnoid)*) as potentially misvalued through its screen of MPC codes. Code 77003 was re-surveyed twice by the specialties, with recommendations accepted by the RUC in January of 2012. In the 2013 Final Rule, CMS accepted the RUC recommended value of 77003 as “interim” for 2013, indicating they “believe it is necessary to review this service alongside very similar CPT codes 77001 and 77002 to determine the appropriate relative value for this high volume, high expenditure procedure code.”

CPT code 77002 (*Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device)*) describes the use of fluoroscopy to ensure appropriate positioning of the needle during a variety of procedures, such as joint aspirations and injections, bone biopsies, and percutaneous access of implantable surgical devices. The American College of Radiology, Society of Interventional Radiology, American Society of Anesthesiologists, and American Academy of Physical Medicine and Rehabilitation surveyed this family, including CPT codes 77001 and 77002, in March 2013, and convened an expert panel of physicians familiar with these services to review the survey data.

### Work RVU Recommendation

The expert panel recommends the existing work RVU of 0.54.

### Service Times

The panel recommends pre, intra, and post times of 7, 15, and 5 minutes, respectively.

The pre and post times had median survey values of 10 minutes each for 77002. However, the panel recommends using the recent RUC approved survey values for 77003 (7 and 5 minutes, respectively), which appropriately reflects the specific work involved with imaging guidance.

The panel recommends the median intra-service time of 15 minutes.

### Key Reference Service

The most commonly selected key reference service was CPT code 76937 (*Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)*). This code was selected by approximately one third of those surveyed, and it has 0.30 work RVU with pre, intra, and post service times of 0, 10, and 4 minutes, respectively.

CPT code 77002 has much longer survey times and greater surveyed complexity (on all 11 measures) than the key reference service. Given the relative differences in time required for each procedure, this comparison properly reflects the value assigned to 77002.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
76937	Ultrasound guidance for vascular access	0.30	0	10	4	14	0.021

### MPC Comparison

The panel recommendation of 0.54 RVUs for 77002 is bracketed by two recently valued MPC codes: 93224 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording,*

scanning analysis with report, review and interpretation by a physician or other qualified health care professional) and 76536 (Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation).

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
93224	EKG monitoring	0.52	2	15	7	24	0.021
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
76536	Head and neck u/s	0.56	4	10	4	18	0.038

### Comparison within the Family

The data summarized in this table demonstrate the relative work involved in the procedures surveyed within the fluoroscopic guidance code family. While the intra-procedure survey times decrease through the code family, the IWPUT across the different codes appropriately reflects the differences in intensity related to the anatomy and technical difficulty of these procedures.

Codes in Family	Descriptor	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
77001	Fluoro guidance during central catheter	0.38	7	20	5	32	0.006
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) This is not a stand-alone service. It would only be reported along with another procedure when that procedure was done with fluoroscopic guidance and that guidance was not already bundled into the procedure

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code would only be reported in conjunction with a procedure when imaging guidance is not already bundled into the code that describes the underlying procedure. The incidence of this will decrease markedly, as CPT code changes to bundle fluoroscopic guidance into a large number of codes will be accounted for.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77002

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty Physical Medicine and Rehabilitation                      How often? Commonly

Specialty Anesthesiology                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 742191

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 77002 provided nationally in a one-year period is estimated to be 742,191

Specialty Diagnostic Radiology	Frequency 253900	Percentage 34.20 %
--------------------------------	------------------	--------------------

Specialty Physical Medicine and Rehabilitation	Frequency 73250	Percentage 9.86 %
--	-----------------	-------------------

Specialty Anesthesiology	Frequency 57800	Percentage 7.78 %
--------------------------	-----------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 247,397 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2011 Medicare data estimates that CPT code 77002 was billed approximately 247,397 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology	Frequency 84600	Percentage 34.19 %
--------------------------------	-----------------	--------------------

Specialty Physical Medicine and Rehabilitation	Frequency 24400	Percentage 9.86 %
--	-----------------	-------------------

Specialty Anesthesiology	Frequency 19250	Percentage 7.78 %
--------------------------	-----------------	-------------------

Do many physicians perform this service across the United States? Yes

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77002

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 77003	Tracking Number	Original Specialty Recommended RVU: <b>0.60</b>
		Presented Recommended RVU: <b>0.60</b>
Global Period: XXX		RUC Recommended RVU: <b>0.60</b>

CPT Descriptor: Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: The patient is a 52 year-old male with neck pain and radicular pain from cervical disc disease that has not responded to conservative therapy. He is scheduled for a cervical epidural steroid injection (the injection is reported separately), and fluoroscopic guidance is used during needle placement to assure proper position of the needle and maximize safety.

NOTE: Placement of the needle/catheter is not included in code 77003, but rather is included in the injection code(s). When completing this survey, consider only the fluoroscopic guidance as described by code 77003. Do not include the injection procedure.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 44%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 30%

Description of Pre-Service Work: The physician reviews the patients prior imaging studies (radiographs, CT scans, MRI exams) to be familiar with the patients spine anatomy (numbering of levels, anatomic variants, prior surgery, pathology, etc.). The physician dresses in radiation attire and instructs radiologic technologists in imaging equipment required and the proper settings for the imaging equipment.

Description of Intra-Service Work: The patient is placed on an x-ray table in the prone, decubitus or prone oblique position, depending on the type of injection to be performed. Preliminary fluoroscopy is performed to identify the appropriate level and approach for initial needle placement, and the skin entry site marked. During the needle/catheter placement, intermittent fluoroscopy is used to confirm the correct approach and need for needle repositioning or realignment. When the needle position appears correct, radiographic contrast may be injected to confirm proper position. If position is not correct, additional fluoroscopy is provided during repositioning until proper position is achieved. If a catheter is to be placed, additional fluoroscopic guidance is provided during and after the catheter positioning to confirm proper positioning, and additional contrast injection may be performed.

Description of Post-Service Work: A report describing the guidance procedure, including the final position of the needle/catheter is dictated, proofread and submitted for the patient record

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
72291	XXX	1.31	RUC Time

CPT Descriptor Radiological supervision and interpretation, percutaneous vertebroplasty, vertebral augmentation, or sacral augmentation (sacroplasty), including cavity creation, per vertebral body or sacrum; under fluoroscopic guidance

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
92083	XXX	0.50	RUC Time	2,651,934

CPT Descriptor 1 Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 degrees, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
76700	XXX	0.81	RUC Time	1,053,471

CPT Descriptor 2 Ultrasound, abdominal, real time with image documentation; complete

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
77001	ZZZ	0.38	RUC Time

CPT Descriptor Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code: 38      % of respondents: 31.1 %**

**TIME ESTIMATES (Median)**

	<b>CPT Code: 77003</b>	<b>Key Reference CPT Code: 72291</b>	<b>Source of Time RUC Time</b>
Median Pre-Service Time	7.00	45.00	
Median Intra-Service Time	15.00	60.00	
Median Immediate Post-service Time	5.00	15.00	
Median Critical Care Time	0.0	0.00	

Median Other Hospital Visit Time	0.0	0.00
Median Discharge Day Management Time	0.0	0.00
Median Office Visit Time	0.0	0.00
Prolonged Services Time	0.0	0.00
Median Subsequent Observation Care Time	0.0	0.00
<b>Median Total Time</b>	<b>27.00</b>	<b>120.00</b>
<b>Other time if appropriate</b>		

**INTENSITY/COMPLEXITY MEASURES (Mean)****(of those that selected Key  
Reference code)****Mental Effort and Judgment (Mean)**

The number of possible diagnosis and/or the number of management options that must be considered	3.42	3.37
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.50	3.63
Urgency of medical decision making	3.29	3.24

**Technical Skill/Physical Effort (Mean)**

Technical skill required	4.18	4.16
Physical effort required	2.89	3.05
<b><u>Psychological Stress (Mean)</u></b>		
The risk of significant complications, morbidity and/or mortality	4.18	4.11
Outcome depends on the skill and judgment of physician	4.39	4.39
Estimated risk of malpractice suit with poor outcome	4.55	4.45

Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	2.76	2.76
Intra-Service intensity/complexity	4.11	4.16
Post-Service intensity/complexity	2.31	2.39

---

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

This code was flagged for review as part of the CMS request for review of services included on the MPC list. In their Action Plan, the specialties suggested that this code be revisited after we had two years of data that reflect all the recent coding changes that will impact use of this code. {Fluoroscopic guidance was bundled into 1. facet joint injections (codes 64490-64495) in 2010; 2. transforaminal epidural injections (codes 64479-64484) in 2011; 3. SI joint injections (code 27096) and 4. paravertebral facet joint destruction (new codes 64633– 64636, which replaced 64622-64627) in 2012} The specialties believed that it would be necessary to have 2012 data in order to establish dominant specialty, site of service, associated diagnoses and identification of procedures for which fluoroscopic guidance would remain separately reportable. The RAW and the RUC requested that the code be surveyed for this September 2011 meeting.

**For the September 2011 meeting eight specialty societies participated in the survey and collected 100 responses. The key reference service selected by the survey respondents was 77002 – Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device). With median survey value of 1.00 RVUs and 25<sup>th</sup> percentile of 0.61 RVUs. The specialty societies recommended maintaining the current value of 0.60.**

**Due to RUC Members' concerns that the surveyees were not clear that code 77003 includes only guidance and might have included the work of the injection in their responses, the specialty societies were asked to re-survey with clear instructions in the vignette as well as an updated CPT descriptor. The vignette and RSL were reviewed by the Research Committee, which made a suggestion that 77002 should not be used on the RSL.**

**Eight specialty societies surveyed the code 77003 with revised vignette, descriptor and RSL, and collected 122 responses. The results came back with identical median value, nearly identical 25<sup>th</sup> percentile value and identical intra-service time as the survey for September 2011 meeting.**

**The specialty societies recommend maintaining of the current value of 0.60 RVUs for 77003.**

Comparison Codes:

Code	Descriptor	Pre-Service	Intra-Service	Post - Service	Global	RVUw
76886	Ultrasound, infant hips, real time with imaging documentation; limited, static (not requiring physician manipulation)	0	15	0	XXX	0.62
77300	Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician	0	15	0	XXX	0.62
51797	Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)	0	15	0	ZZZ	0.80

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code would only be reported in conjunction with a procedure when imaging guidance is not already bundled into the code that describes the underlying procedure. The incidence of this will decrease markedly, as CPT code changes to bundle fluoroscopic guidance into a large number of codes will be accounted for.

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77003

If the recommendation is from multiple specialties, please provide information for each specialty.

How often? Commonly

How often? Commonly

How often? Commonly

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that this would be 1.5 times the Medicare frequency

Percentage 32.27 %

Percentage 24.88 %

Percentage 17.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
574,054 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate. 2010 Medicare frequency for 77003 minus the 2010 Medicare frequency of  
the services which were since revised to bundle 77003: ( transforaminal injections (64479, 64483), neurolytic agent nerve  
destruction 64622, 64626) and SI joint injection (27096))

2010 Frequency for 77003:	1,890,663
less 2010 Frequency for 64479:	43,666
less 2010 Frequency for 64483:	803,663
less 2010 Frequency for 64622:	137,505
less 2010 Frequency for 64626:	30,537
less 2010 Frequency for 27096:	301,238

Estimated Medicare Frequency for revised code 77003: 574,054

Specialty Interventional Pain Management	Frequency 192868	Percentage 33.59 %
--	------------------	--------------------

Specialty Anesthesiology	Frequency 148714	Percentage 25.90 %
--------------------------	------------------	--------------------

Specialty Physical Medicine and Rehabilitation	Frequency 107547	Percentage 18.73 %
--	------------------	--------------------

Do many physicians perform this service across the United States? Yes

---

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77003

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

77001: Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

Global Period: ZZZ Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology, Society of Interventional Radiology, and American Society of Anesthesiologists convened a consensus panel to finalize the practice expense data for CPT 77001.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Since 77001 is an existing code for fluoroscopic guidance but has not been PEAC reviewed, we used 76937 (ultrasound guidance) and 36556 (insertion of non-tunneled central venous catheter) as references, and also included the PE inputs for 77001 from the RUC Database.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- We are recommending a global period change from ZZZ to XXX for this code. Accordingly, pre and post service activity specific to the imaging equipment has been added.
- 3 minutes of pre-service time assigned to "Retrieve prior imaging exams".
- The "assist physician" time is equal to our physician work intra-service time.
- The film input has been changed from SK034 (film, x-ray 14in x 17in) to SK028 (film, fluoroscopic 14 x 17) to maintain consistency across the family.
- Supply inputs, SM013 (disinfectant, surface (Envirocide, Sanizide)), SB008 (drape, sterile, c-arm, fluoro), and SK089 (x-ray developer solution), have been added.
- An alternator was added, and the film alternator was changed from ED025 (film processor, wet) to ED024 (film processor, dry, laser) to maintain consistency with 77002.
- The room time reflects typical use exclusive to a patient.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Retrieve prior imaging exams, hang for MD review, verify orders, review chart to incorporate relevant clinical information, confirm contrast protocol with interpreting MD.

Intra-Service Clinical Labor Activities:

- Prepare room, equipment, supplies.
- Prepare and position patient/ monitor patient/ set up IV.
- Assist physician with fluoro and image acquisition.
- Clean room/equipment by physician staff.
- Process films, hang films and review study with interpreting MD prior to patient discharge

Post-Service Clinical Labor Activities:

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

77002: Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device)

Global Period: XXX Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology, Society of Interventional Radiology, American Society of Anesthesiologists, and American Academy of Physical Medicine and Rehabilitation convened a consensus panel to finalize the practice expense data for CPT 77002.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

Since 77002 is an existing code for fluoroscopic guidance, we used the PEAC approved data as the basis for the practice expense inputs; 76003 was replaced by 77002. We've also included 20610 (Arthrocentesis) as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- "Retrieve prior imaging exams" was added to pre-time.
- "Prepare room", "prepare patient", and "clean room" were added at the standard times.
- The "assist physician" time is equal to our physician work intra-service time.
- "Process films" time was added.
- Supply items SB008 (drape, sterile, c-arm, fluoro) and SK089 (x-ray developer solution) have been added.
- The room time reflects typical use exclusive to a patient.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Retrieve prior appropriate imaging exams and hang for MD review, verify orders, review the chart to incorporate relevant clinical information and confirm contrast protocol with interpreting MD.

Intra-Service Clinical Labor Activities:

- Prepare room, equipment, supplies/ Enter patient demographic information into the MRI scanner.
- Prepare and position patient/ monitor patient/ set up IV.
- Assist physician with fluoro and image acquisition.
- Clean room/equipment by physician staff.
- Process films, hang films and review study with interpreting MD prior to patient discharge.

Post-Service Clinical Labor Activities:

Specialty Society(s) ASA, ISIS, AAPM, ACR, SIR, NASS, ASIPP, AAPMR

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural, subarachnoid)

Global Period: XXX Meeting Date: January 2012

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**A consensus panel comprised of representatives from the specialty societies convened to review the PE inputs for code 77003. The panel included physicians from a variety of practice locales and settings.**

If you have provided any comparison practice expense inputs on your spreadsheet, please provide a rationale for the selection of codes. Comparison Code Rationale:

**We have included several additional CPT codes on our spreadsheet. CPT code 75901 is included as a supervision and interpretation (S&I) reference code and although the code is not in this spine family it is recently RUC'ed and follows the same process of care. CPT code 77002 has been included as another S&I. This code is in the spine family. However, the direct line items for clinical time are not available, so just the summed times, supplies and equipment items are included in the spreadsheet. The current inputs for CPT code 77003 are included as a reference. CPT code 62310 has been included on the spreadsheet as well. That is a typical surgical companion code that is billed with 77003 (source is the 5% file). We have included that code to demonstrate there is no double counting of clinical times. Finally, CPT code 64493 has been included as an example of what the inputs of a bundled code look like.**

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**A Radiology Tech will prepare prior imaging studies for review by the physician.**

Intra-Service Clinical Labor Activities:

**The Radiology Tech will prepare the imaging equipment and input patient and procedure information. S/he positions the imaging equipment and assists with patient positioning. S/he will perform the required imaging and at the end of the procedure will clean the equipment and process and store the films.**

Post-Service Clinical Labor Activities:

**N/A**

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Fastest Growing / CMS Request - Practice Expense Review /*  
*CMS High Expenditure Procedural Codes / Services with Stand-Alone PE Procedure Time*

April 2013

**IMRT –PE Only**

CPT codes 77301 and 77338 were identified through the Services with Stand-Alone PE Procedure Time screen. In October 2012, the RUC recommended that the PE Subcommittee review the direct PE inputs for these services at the April 2013 meeting. CMS requested a practice expense survey for clinical staff time only, which was conducted for the family. The specialty societies convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures.

***77301 Intensity modulated radiotherapy plan, including dose-volume histograms for target and critical structure partial tolerance specifications***

The PE Subcommittee reviewed the survey results from 22 radiation oncologists and noted that the survey times are higher than the current clinical staff times. The specialty society did not present compelling evidence to increase any of the existing PE times. The PE subcommittee agreed that the existing times were appropriate. The specialty clarified that the patient is only in the office from the beginning of the service period through *acquire and process CT scan* (line 38) and that two, not three, staff present during the *contouring* phase of the procedure (lines 39-41). The specialty also clarified that CMS clinical labor type, *Medical Dosimetrist/Medical Physicist (L107A)* was not included as an option on the survey, because it is not a known staff type in a typical clinic that performs this service and respondents would not recognize it. The service can be performed by a senior dosimetrist or a junior physicist and is typically performed by a senior dosimetrist. As a result, the survey respondents chose dosimetrist as the staff type. The specialty recommends and the PE Subcommittee agrees that the *Medical Dosimetrist/Medical Physicist (L107A)* is representative of the senior dosimetrist staff level and should be maintained as one of the two staff, along with the *Medical Physicist (L152A)*, performing contouring for this service. **The RUC reviewed and approved the direct practice expense inputs as submitted by the specialty and recommended by the Practice Expense Subcommittee.**

***77338 Multi-leaf collimator (MLC) device(s) for intensity modulated radiation therapy (IMRT), design and construction per IMRT plan***

The PE Subcommittee reviewed the survey results from 22 radiation oncologists and noted that the survey times are higher than the current clinical staff times. The specialty society did not present compelling evidence to increase any of the existing PE times. The PE subcommittee agreed that the existing times were appropriate. **The RUC reviewed and approved the direct practice expense inputs as submitted by the specialty and recommended by the Practice Expense Subcommittee.**

<b>CPT Code (•New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
77301	Intensity modulated radiotherapy plan, including dose-volume histograms for target and critical structure partial tolerance specifications  (Dose plan is optimized using inverse or forward planning technique for modulated beam delivery [eg, binary, dynamic MLC] to create highly conformal dose distribution. Computer plan distribution must be verified for positional accuracy based on dosimetric verification of the intensity map with verification of treatment set-up and interpretation of verification methodology)	XXX	7.99  (No Change)  (PE Input Recommendations Only)
77338	Multi-leaf collimator (MLC) device(s) for intensity modulated radiation therapy (IMRT), design and construction per IMRT plan  (Do not report 77338 more than once per IMRT plan)  (For immobilization in IMRT treatment, see 77332- 77334 )  (Do not report 77338 in conjunction with 0073T, compensator based IMRT)	XXX	4.29  (No change)  (PE Input Recommendations Only)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77301 Intensity modulated radiotherapy plan, including dose-volume histograms for target and critical structure partial tolerance specifications*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The Society prepared a practice expense survey and presented it to the research subcommittee. The surveys were sent electronically to 300 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 22 surveys.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77301 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

We are recommending maintaining the two minutes of clinical time for “complete pre-service diagnostic & referral forms”. The clinical staff spend time with the insurance companies/radiation oncology benefit managers to get approval to move forward with planning for an IMRT case.

We are also recommending maintaining 10 minutes of pre planning physics time in the pre service period. We believe the survey results support including this time. We did not include a specific question on the survey requesting time for this specific activity (oversight on our part) but over half of the survey respondents wrote in extra physics time either in pre service or the service period. This is a critical function of the physicist.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are making some modifications to the clinical time in the intra service period.

*Acquire and Process CT Scan*

The time remains the same for this step.

*Contouring (including image correlation & manipulation) –*

The physics time remains the same for this category.

We are making the recommendation to maintain the MP/Dos blend time of 45 minutes. We did not have that as a staff option on the survey (MP/Phy is a CMS staff type that blends the rate of a physicist and a dosimetrist). The survey respondents included 50 minutes of dosimetrist time in the data.

*Planning*

We are recommending a change for this category. The survey results indicate that some of the planning work is done by a dosimetrist. As such, we are recommending maintaining 85 minutes of physics time and adding 20 minutes of MP/Dos blend time. The 20 minutes reflects half of the time indicated on the surveys for dosimetrists, to account for the pay difference in the blend figure.

*Plan Verification*

The time remains the same for this step.

We are not recommending any changes in supplies.

We are not recommending any changes in equipment. However, we did note that when you sum the appropriate rows for the simulator, accelerator, phantom, chamber and the electrometer (rows 32, 34, 38 and 48) the result is 48 minutes not the 47 that CMS currently has in the database.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

The nursing staff will Complete pre-service diagnostic & referral forms, discuss the forms and necessary referrals with the patient and make calls to the practices to which the patient has been referred as necessary.

Service Clinical Labor Activities:

The nursing staff will greet patient, provide gowning and ensure appropriate medical records are available for the procedure. They will then obtain vital signs and Provide pre-service education/obtain consent.

The Radiation Therapist will prepare room, equipment, supplies for the CT based procedure. Once the nursing staff has completed their work with the patient, the Radiation Therapist will Prepare and position patient on the CT table.

The Radiation Therapist Aligns the patient with respect to the scan center of the CT scan and the plane of the CT table using three or four externally mounted lasers that are positioned in the same way as the alignment lasers in the linac treatment room. They then mark the patient with

radiopaque markers, and then take multiple AP and Lat scout scans and adjust patient position after each scout such that at the end of the process the patient is aligned without rotation in the x,y and z axis and the external markers are appropriately centered for the area to be imaged and that the patient is comfortable in this position, or else this is adjusted.

The Radiation Therapist then selects the appropriate CT technique based on the anticipated needs of the IMRT process, acquires and processes the CT data set scan. They then discuss the acquired images with the physician, evaluating appropriate bladder, rectal filling. After approval, the patient is marked with tattoos at the external markers or at a preselected isocenter. The data is then transferred to the treatment planning computer.

The medical physicist evaluates the planning CT for artifacts and Hounsfield Unit anomalies. He or she will then evaluate fusion image data sets for appropriate voxel characteristics and if acceptable fuse image data sets.

*The contouring phase:*

A combination of the medical physicist and medical dosimetrist contour the external contour(s) of the patient, table and devices, review all M.D. created contours with physician, interpolate contours & create expansions for CTV and PTV based on M.D. contouring and Rx, create density overrides, review the entire final 3-D contour set with physician.

After the initial contouring is completed, the medical physicist will review all contours for high spatial frequency characteristics that may interfere with the sampling voxels of the optimization algorithm kernel. Perform contour vertex expansion/reduction as necessary.

The Medical Physicist will perform Boolean operations on contours to resolve optimization constraint and objective conflicts and create synthetic structure contours for use in optimization and evaluation.

*Next is the planning phase:*

The dosimetrist will enumerate critical normal tissues adjacent to tumor volume, enter partial dose/volume objectives and constraints for normal tissues and PTV's, Dosimetrist, physicist and physician create initial gantry and table angles for field families, Evaluate initial plan for goodness of fit for tumor and normal tissue dose constraints, Modify tumor and normal tissue dose constraints if necessary to re-run plan, iterate plan until dose constraints are acceptable, typically creating a series of possible optimization endpoints for later comparison and selection.

After initial optimizations are completed, the medical physicist will evaluate dose plan distribution and objective function values for excessive influence of non-unit density HU values, modify and override densities as necessary. The physicist will then re-run plans with optimized parameters. He or she will then evaluate and rank plans for physics and radiobiological-based optimization using a dose response index for the probability of uncomplicated tumor control.

After the physician has completed the review of the above described plan and options and selected the final isodose plan to be delivered, the dosimetrist will review plan, transfer to R&V

system, create synthetic orthogonal isocenter digitally reconstructed radiographs, calculate and transfer phantom planar dose sets and create staff worklists.

*Delivery verification process:*

In the final stage, the medical physicist verifies the plan by delivering the dose distribution to a phantom with appropriate dose measuring devices. The physicist will acquire, process and review phantom/film/EPID or diode Dosimetry referenced to ion chamber single point dosimetry to confirm correct dose delivery compared with graphical plan. He or she will prepare a gamma analysis (distance to agreement and relative dose correspondence) for Physician review. Investigate any anomalous results and modify isodose plan, dose rate, etc. as necessary.

Post-Service Clinical Labor Activities:

At the conclusion of the image acquisition portion of the procedure the Radiation Therapist will clean and replace equipment used for the patient. The nursing staff will coordinate necessary prescriptions with the physician and call the pharmacy, instruct the patient and perform follow up phone calls to the patient.

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77338 Multi-leaf collimator (MLC) device(s) for intensity modulated radiation therapy (IMRT), design and construction per IMRT plan*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The Society prepared a practice expense survey and presented it to the research subcommittee. The surveys were sent electronically to 300 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 22 surveys.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77338 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

We are not recommending minutes above the PE Subcommittee standards.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are not recommending an increase over the current inputs in clinical staff time, supplies or equipment. Although we believe when you add the activities for the treatment planning system the result is 118 minutes, not 100. Also, we believe the time on the desktop computer should be 18 minutes, not 118.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

N/A

Intra-Service Clinical Labor Activities:

The dosimetrist/medical physicist loads the IMRT plan with associated fluence patterns. The dosimetrist/medical physicist reviews the fluence patterns from the IMRT plans and then constructs the MLC motion pattern to produce the desired fluence or reviews and adjusts the MLC position and segment number constraints. The MLC position set is then created using the radiation treatment planning (RTP) system and/or MLC shaper system. The dosimetrist/medical physicist then modifies individual leaf positions to reduce or increase dose as necessary. Repeat for each of the 9 fields. Dose is recalculated based on modified patterns as necessary.

The medical physicist will then review each resultant MLC segment, digitally overlaid on the region of interest, for conformality and appropriateness of position. The medical physicist will modify individual leaf positions to remove inappropriate MLC leaf positions and review all segments to confirm an appropriate minimum number of monitor units per segment based on leaf speed and maximum leaf travel. This process is repeated for all 9 fields. After all changes have been made, the medical physicist operates the software that recalculates the resultant MLC driven fluence and reviews the effect on the final dose distribution. The process is then repeated for both the initial and any separate boost IMRT segments.

The dosimetrist formats and prints the final MLC pattern map for entry into the patient's chart. The dosimetrist then uploads into the record and verify software that controls the linear accelerator's treatment delivery performance the information that defines each beam's MLC pattern of segments, confirming that each set of independent jaw positions and leaf positions are accurately transferred and repeating for each field

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request: Final Rule for 2013*

April 2013

**Continuing Medical Physics Consultation – PE Only**

CPT Codes 77336 *Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reported per week of therapy* was identified in the Final Rule for 2013 as a potentially misvalued service. CMS requested that the RUC review the direct practice expense (PE) inputs only, for this family of services.

The PE for 77336 has changed since this service was last reviewed in September 2002. The specialty society provided compelling evidence regarding a change in technology, staff type, staff time and equipment. Since this service was last reviewed, treatments have become increasingly complex with the use of modulated fields, gated delivery, and intricate non-coplanar patient setup geometries. Multileaf collimators (MLC's) have replaced simple alloy blocks and dynamic jaw movement has replaced simple physical wedges. Stereotactic treatment delivery and on-board imaging has allowed the use of smaller fields, making accurate patient positioning and accurate and precise delivery even more critical. The treatment units that deliver the radiation beams have become more complex as well, incorporating imaging hardware, computerized control and even robotic positioning. Equipment and treatment complexity now requires a higher level of oversight to assure that treatments are delivered safely. Further, it is now necessary that the medical physicist and not the dosimetrist provide this service and ongoing patient support. One can no longer verify a correct setup by simple inspection of gantry angle and choice of beam modifier. It is the physicist who has the required training and expertise in all aspects of the radiation therapy treatment process from patient imaging to planning to treatment delivery. The PE Subcommittee reviewed and approved this compelling evidence and the RUC agreed.

The PE Subcommittee recommends the addition of a new piece of equipment *beam characterization measurement equipment kit* to replace previous equipment items. This equipment is used by the physicist to verify the delivery of the radiation beams of the treatment unit and imaging system, which has not been performed as part of a code that the patient would receive prior to this service. Invoices for this equipment are included.

**The RUC reviewed and approved the direct practice expense inputs as recommended by the Practice Expense Subcommittee.**

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77336 Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reported per week of therapy*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The American Society for Radiation Oncology (ASTRO) and the American Association of Physicists in Medicine (AAPM) convened a consensus panel that included a number of experts familiar with these services to evaluate the existing direct practice expense inputs for these procedures.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77336 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

We are not recommending more minutes than PE Subcommittee standards.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

*Compelling Evidence: Change in Technology*

The technology of radiation therapy has changed dramatically since CPT code 77336 was last reviewed. Since that time, treatments have become increasingly complex with the use of modulated fields, gated delivery, and intricate non-coplanar patient setup geometries. Multileaf collimators (MLC's) have replaced simple alloy blocks; dynamic jaw movement has replaced simple physical wedges. Stereotactic treatment delivery and on-board imaging has allowed the use of smaller fields, making accurate patient positioning and accurate and precise delivery even more critical. The treatment units that deliver the radiation beams have become more complex as well, incorporating imaging hardware, computerized control and even robotic positioning.

While this increased equipment and treatment complexity has improved patient outcomes, a higher level of oversight is required to assure that treatments are delivered safely, in accordance with the Radiation Oncologist's prescription.

*Change in Staff Type*

Further, it is now necessary that the medical physicist and not the dosimetrist provide this oversight and ongoing patient support. The complexity and computerization of today's treatments make patient setup much less intuitive. One can no longer verify a correct setup by simple inspection of gantry angle and choice of beam modifier. The conditions and discrepancies that can lead to treatment error are much less obvious than in the past. It is the physicist who has the required training and expertise in all aspects of the radiation therapy treatment process: from patient imaging to planning to treatment delivery. Physicists understand linacs and their associated equipment. They understand the flow of patient data and images through the entire imaging-treatment-recording chain. They understand and are well versed in failure and recovery modes. They are uniquely suited to recognize the conditions that can lead to patient treatment error. We are therefore requesting that the staffing inputs for 77336 be changed from a dosimetrist/physicist mix to physicist only. The provision of these oversight activities by a medical physicist are recommended by both the 2010 ACR Technical Standard for the Performance of Radiation Oncology Physics for External Beam Therapy and the ASTRO/ACR Guide to Radiation Oncology Coding.

*Increase in Clinical Staff Time*

Further, the time and effort required for the duties of 77336 have increased due to a number of factors including the volume of data and images associated with each treatment record that must be reviewed, the increased frequency of consultations with the radiation oncologist regarding treatment issues and the time required to observe the setups of patients where there are issues of patient or beam positioning. As such, we are requesting an increase in the time inputs for 77336, from 32 to 36 minutes.

*Pre Service Activities*

We are making the recommendation to move radiation beam verification of the treatment unit/on board imaging systems from the service period to the pre service period. We believe based on current PE Subcommittee conventions, it is better suited in Pre Service.

*Change in Equipment*

We are recommending the addition of two additional pieces of equipment. The first is CMS equipment #ED011 Record and Verify system. This piece of equipment is essential to this procedure because the record and verify system is where all of the patient treatment data is stored and accessed for review. All of the analysis and calculations, which the physicist performs during 77336 utilizes this computer system.

We are also recommending the addition of a new piece of equipment *Beam Characterization measurement equipment kit*. This equipment is used by the physicist to verify the radiation beams of the treatment unit and imaging system. The specific instruments used for beam verification have changed due to advances in measuring technology. This kit reflects current best measurement practice and hardware. This equipment item replaces all of the equipment items included in the current direct practice expense equipment list.

**5. Please describe in detail the clinical activities of your staff:**

The work performed by the Qualified Medical Physicist under 77336 includes a number of activities whose purpose is to ensure the continuing accurate execution of the Radiation Oncologist's treatment prescription.

Pre-Service Clinical Labor Activities:

The physicist performs characterization and verification of the radiation beams of the treatment unit and the on-board imaging systems to ensure accurate dose delivery and imaging.

Intra-Service Clinical Labor Activities:

The weekly patient chart review begins with a check of the prescription to determine if there have been any changes or additions. The radiation therapy treatment plan is reviewed to ensure that it is still in accordance with that treatment prescription. Special attention is paid to any changes in total dose or fractionation that may have been ordered. The medical physicist will consult with the Radiation Oncologist immediately with any questions or discrepancies. The medical physicist will also review the patient's daily treatment records to verify that all treatment parameters remain consistent with the treatment plan. These parameters include beam mode, energy, geometry, weighting and monitor unit settings. Any recorded overrides or deviations from the treatment plan are investigated. Daily patient setup notes from the radiation therapist(s) are reviewed. Special attention is paid to weekly geometric measurements, which may indicate a change in the patient's tumor or difficulties with patient positioning or beam delivery.

The medical physicist will review the daily and cumulative doses that are recorded in the patient chart and will compare these with expected values to verify that the tumor has received the correct dose at that point in the patient's treatment course. The physicist will also check the elapsed days from the start of treatment to verify that there have not been any significant treatment interruptions. An additional area of review includes the images taken during treatment to verify proper beam positioning, beam blocking, and patient alignment. These images are compared to reference images by the Radiation Oncologist who will order patient position shifts if the reference and treatment images do not match. The medical physicist will review the images and verify that all shifts were executed correctly and that follow-up images were taken and approved in accordance with the Radiation Oncologist directives.

For many patients, the medical physicist will participate in the patient's setup and/or imaging on the treatment machine. This may be done to verify proper compliance with the physician's prescription, to further investigate discrepancies or anomalies noted during the chart review process, or to provide specific assistance for a treatment related problem identified by the radiation oncologist or radiation therapist. The physicist will frequently consult with the radiation oncologist and/or radiation therapist in the resolution of these problems.

Other ongoing patient-specific medical physicist duties within 77336 include such tasks as participation in weekly chart rounds and daily patient planning conferences where patients and treatment plans are discussed and questions from the radiation therapists, dosimetrists and Radiation Oncologists which may arise during a patient's treatment course are answered.

Physicist work under 77336 includes support of the treatment delivery system operation. This includes investigating any system anomalies or error messages related to patient treatment or

imaging, assuring their resolution and verifying that they did not affect the accuracy of the patient's treatment. Physics work also includes characterization and verification of the radiation beams of the treatment unit and on-board imaging systems. These measurements and calculations are conducted by the medical physicist using calibrated measuring equipment and include such parameters as radiation output accuracy, energy level and beam alignment. All factors must be within tight tolerances in order to deliver the prescribed dose to the patient. This process is required by professional guidelines as well as by accrediting and regulatory agencies.

Post-Service Clinical Labor Activities:

The American College of Radiology, with more than 30,000 members, is the principal organization of radiologists, radiation oncologists, and clinical medical physicists in the United States. The College is a nonprofit professional society whose primary purposes are to advance the science of radiology, improve radiologic services to the patient, study the socioeconomic aspects of the practice of radiology, and encourage continuing education for radiologists, radiation oncologists, medical physicists, and persons practicing in allied professional fields.

The American College of Radiology will periodically define new practice guidelines and technical standards for radiologic practice to help advance the science of radiology and to improve the quality of service to patients throughout the United States. Existing practice guidelines and technical standards will be reviewed for revision or renewal, as appropriate, on their fifth anniversary or sooner, if indicated.

Each practice guideline and technical standard, representing a policy statement by the College, has undergone a thorough consensus process in which it has been subjected to extensive review, requiring the approval of the Commission on Quality and Safety as well as the ACR Board of Chancellors, the ACR Council Steering Committee, and the ACR Council. The practice guidelines and technical standards recognize that the safe and effective use of diagnostic and therapeutic radiology requires specific training, skills, and techniques, as described in each document. Reproduction or modification of the published practice guideline and technical standard by those entities not providing these services is not authorized.

Revised 2010 (Resolution 7)\*

## **ACR TECHNICAL STANDARD FOR THE PERFORMANCE OF RADIATION ONCOLOGY PHYSICS FOR EXTERNAL BEAM THERAPY**

---

### **PREAMBLE**

These guidelines are an educational tool designed to assist practitioners in providing appropriate radiation oncology care for patients. They are not inflexible rules or requirements of practice and are not intended, nor should they be used, to establish a legal standard of care. For these reasons and those set forth below, the American College of Radiology cautions against the use of these guidelines in litigation in which the clinical decisions of a practitioner are called into question.

The ultimate judgment regarding the propriety of any specific procedure or course of action must be made by the physician or medical physicist in light of all the circumstances presented. Thus, an approach that differs from the guidelines, standing alone, does not necessarily imply that the approach was below the standard of care. To the contrary, a conscientious practitioner may responsibly adopt a course of action different from that set forth in the guidelines when, in the reasonable judgment of the practitioner, such course of action is indicated by the condition of the patient, limitations of available resources, or advances in knowledge or technology subsequent to publication of the guidelines. However, a practitioner who employs an approach substantially different from these guidelines is advised to document in the patient record information sufficient to explain the approach taken.

The practice of medicine involves not only the science, but also the art of dealing with the prevention, diagnosis, alleviation, and treatment of disease. The variety and complexity of human conditions make it impossible to always reach the most appropriate diagnosis or to predict with certainty a particular response to treatment.

Therefore, it should be recognized that adherence to these guidelines will not assure an accurate diagnosis or a successful outcome. All that should be expected is that the practitioner will follow a reasonable course of action based on current knowledge, available resources, and the needs of the patient to deliver effective and safe medical care. The sole purpose of these guidelines is to assist practitioners in achieving this objective.

### **I. INTRODUCTION**

The success of radiation oncology depends on the accuracy of delivery of specified absorbed doses to selected targets, in both tumors and normal tissues. This standard was revised by the American College of Radiology (ACR) with assistance from the American Association of Physicists in medicine (AAPM) to assist the medical physicist in ensuring the accurate and safe delivery of external beam radiation therapy. Since the practice of radiation oncology physics occurs in a variety of settings, the judgment of the medical physicist should be used to apply these standards to individual practices.

### **II. QUALIFICATIONS AND RESPONSIBILITIES OF PERSONNEL**

#### **A. Qualifications**

A Qualified Medical Physicist is an individual who is competent to practice independently one or more of the subfields in medical physics. The American College of Radiology (ACR) considers certification, continuing education, and experience in the appropriate subfield(s) to demonstrate that an individual is competent to practice one or more of the subfields in medical physics and to be

a Qualified Medical Physicist. The ACR strongly recommends that the individual be certified in the appropriate subfields by the American Board of Radiology (ABR), the Canadian College of Physics in Medicine, or by the American Board of Medical Physics (ABMP).

The appropriate subfield of medical physics for this standard is Therapeutic Medical Physics. (Previous medical physics certification categories including Radiological Physics and Therapeutic Radiological Physics are also acceptable.)

A Qualified Medical Physicist should meet the [ACR Practice Guideline for Continuing Medical Education \(CME\)](#). (ACR Resolution 17, 1996 – revised in 2012, Resolution 42)

In addition, the Qualified Medical Physicist must meet any qualifications imposed by the state and/or local radiation control agency to practice radiation oncology physics and/or to provide oversight of the establishment and conduct of the physics quality management program.

#### B. Credentialing

The qualifications of a medical physicist and subsequent delineation of clinical privileges must be set forth either in a job description or through the medical staff membership process in the appropriate category.

#### C. Professional Relationships

##### 1. Accountability

The Qualified Medical Physicist must be accountable directly to the medical director of radiation oncology. Where medical physicists are employed in a setting that precludes direct reporting to the medical director on administrative matters, the medical physicist should also be accountable to the appropriate senior institutional administrator with oversight responsibility for radiation oncology.

##### 2. Authority

A Qualified Medical Physicist must direct the radiation oncology physics program. In most settings, this will include direction of medical dosimetrists, junior/resident physicists, therapy equipment service engineers; other physics support staff personnel, and radiation therapists in their physics-related responsibilities. Responsibilities and reporting status of support staff must be clearly defined by the medical physicist. In departments with more than one medical physicist, delegation of responsibility

and lines of communication must be clearly established.

#### D. Professional Development

The Qualified Medical Physicist is expected to remain current with technical developments, standards of practice, professional issues, and changes in regulatory requirements by attending national and regional meetings, conferences, and symposia and through access to current journals and books.

#### E. Professional Arrangements

This standard applies to any arrangement by which medical physics services are provided: by contract with the individual, by contract with a medical physics private practice group, by contract with a physician group employing physicists, or by direct employment.

### III. SPECIFICS

#### A. Responsibilities

Medical physicists are primarily and professionally engaged in the design, optimization, technical evaluation, and precise and accurate delivery of treatment plans. They are also responsible for radiation protection of patients and staff. Their role may include clinical, research, educational, and administrative duties. The responsibilities of the medical physicist must be clearly defined by the medical director.

#### B. Equipment Needs

The Qualified Medical Physicist must determine the need for, specify, and have access to dosimetric and treatment planning equipment, including but not limited to the following:

1. Measurement instruments to calibrate all treatment equipment and patient monitoring devices. Such instruments must include ionization chambers/electrometers used as local standards, ionization chambers/electrometers used as field instruments, readout devices, constancy check instruments, and plastic and water filled dosimetric phantoms.
2. A three-dimensional computerized treatment planning system.
3. Computerized water phantom systems with appropriate ionization chambers or diodes.
4. Film densitometry systems or solid-state detector array systems.
5. In vivo patient dose measuring systems, e.g., diodes, metal oxide silicon field effect transistors (MOSFETs), thermoluminescence dosimeters

(TLDs), or optically stimulated luminescence (OSL) dosimeters.

6. Radiation protection measurement devices.
7. Appropriate quality assurance test tools for radiation therapy equipment.
8. Equipment to support special external beam techniques (such as those listed in section III.C).

The Qualified Medical Physicist must participate in the specification, selection, acceptance, and commissioning of radiation-producing machines, accessories, and computerized treatment planning systems. The physics staff should also supervise arrangements for proper maintenance of this equipment. The medical physicist will periodically evaluate all equipment for continued utility, appropriateness, reliable performance, age, and condition and make recommendations on a practical life span, obsolescence, and replacement.

### C. Personnel Requirements

The numbers of medical physicists and support personnel must be appropriate for the types, the levels of complexity, and the volume of the external beam services offered. External beam physics services generally include calibration of the radiation beams, safe and appropriate operation of the treatment units, continuing quality assurance, and support of the radiation oncologist's dose prescription. This clinical support includes patient-specific dose measurements (if requested), monitoring of the custom block fabrication process or appropriate use of multileaf collimation (MLC), and responsibility for the technical accuracy of the computerized treatment plans, including patient data acquisition and calculation and dose delivery verification as necessary. A medical physicist must be available for each institution that uses therapeutic equipment. Special external beam treatment techniques — e.g., stereotactic techniques, intensity modulated radiation therapy (IMRT) including volumetric modulated arc therapy (VMAT), total-body irradiation (TBI), image-guided radiation therapy (IGRT), total skin electron treatment (TSET) — require additional physics support at a level higher than that required for routine external beam therapy.

Staffing requirements are in addition to those required to provide services outside the scope of this standard, including brachytherapy, radiation safety, research, administration, and education and training programs. Trainees with medical physics responsibilities must be supervised and their work reviewed by a medical physicist or his/her designee.

Commissioning of modern therapy systems is a critically important, time-consuming process. The technological complexity of modern systems requires a well-designed and carefully implemented series of steps for data

collection, analysis, computer modeling, and validation on the specific system as installed. Such a large and important task requires appropriate focus by a physicist directly accountable for the accuracy of the system's clinical use. In many cases, the services of a consultant physicist with expertise in such commissioning processes may be an acceptable approach. Regardless of the approach chosen by the practice, the qualified medical physicist responsible for the site should determine the scope of work to be performed consistent with the clinical scope of service in the practice, and the appropriate timeline for the work to ensure that all quality and safety aspects are afforded sufficient focus. The qualified medical physicist should review the final results of the commissioning process and independently repeat a subset of the measurements. The qualified medical physicist determines when the therapy system can commence clinical use and communicates any possible limitations on the scope of use.

Physics support staff should be appropriately trained. Medical dosimetrists should be certified by the Medical Dosimetry Certification Board. In-house therapy equipment service engineers should participate in the manufacturer's training program.

Prior to the introduction of a new modality, such as IMRT including VMAT, TBI, intraoperative radiation therapy, stereotactic techniques, TSET, and dedicated special purpose treatment units, the administrator and the medical director should consult the medical physicist so that adjustments to staffing can be made for specialized procedures. Issues related to several complex treatment techniques are dealt with in other standards and guidelines [1-4].

## IV. QUALITY MANAGEMENT PROGRAM

### A. Introduction

Quality management (QM) in radiation oncology may be defined as those procedures that ensure a consistent and safe fulfillment of the dose prescription. The medical physicist is responsible for designing and implementing those aspects of the QM program that involve the use of the external beam radiotherapy equipment. The medical physicist is also responsible for reviewing and approving the procedures followed by the radiation therapy and dosimetry staff in planning and delivering the prescribed dose.

Quality management of radiation therapy equipment is primarily an ongoing evaluation of functional performance characteristics. Accordingly, the medical physicist must develop, implement, supervise, and review the policies and procedures that encompass radiation therapy equipment.

## B. General Protocol Outline

The goal of the QM program for external beam radiation therapy equipment is to ensure that the performance characteristics defined by physical parameters and established during commissioning of the equipment remain within acceptable limits. Procedures must be established to verify that all equipment meets the manufacturer's specifications and to establish baseline performance values for new or refurbished equipment or for equipment following major repair. Once a baseline standard has been established, a protocol for periodic QM tests must be developed for monitoring the baseline performance values. The protocol for QM tests should recommend the equipment to be used, the frequency of measurement, techniques to be followed, suggested performance criteria, action levels, and routes of notification. QM test procedures should be able to measure parameter changes smaller than tolerance or action levels.

The effectiveness of the QM program should be evaluated annually. Such evaluations help to maintain a uniform standard dose among different treatment facilities, ensuring more accurate dissemination of treatment regimens and results in the literature. A written summary of physics activities along with the results of the evaluation should be reviewed with and approved by the medical director and senior institutional administrator annually. This written summary should be incorporated into the institution's overall QM program.

## C. Specific Protocols

### 1. Measurement equipment

A program must be in place to ensure the accuracy and precision of measurement equipment used for calibration and constancy checks of treatment machines and instruments used for patient dosimetry. The program must have documented procedures for instrument calibration to ensure traceability to accredited calibration facilities and to affirm instrument precision and accuracy.

Redundancy in dose calibration equipment is recommended to ensure that instruments are holding their calibration. A check system can be established by comparing the response of the measurement equipment with an appropriate long-lived radioactive source. If access to an appropriate check source is unavailable, it is recommended that both a local standard and a field dosimetry system be maintained and routinely compared.

### 2. Calibration of treatment machines and independent verification of output

Protocols for calibrating treatment machines must follow those protocols currently published by the American Association of Physicists in Medicine and adhere to state and federal guidelines.

An independent check of the output of each beam must be performed annually to verify that the treatment unit calibration is consistent with national standards. The independent check should be performed by either:

- a. A medical physicist who did not perform the annual output calibration, using a dosimetry system other than the one that was used during the annual calibration (this dosimetry system must also have calibration factors traceable to an accredited dosimetry calibration laboratory); or
- b. Using an independent TLD service that is designed to measure doses within an uncertainty of 5%.

### 3. Radiotherapy simulators, imaging equipment, and treatment devices

Procedures for establishing and maintaining the imaging equipment used in planning radiation therapy treatment planning (e.g., computed tomography (CT) and magnetic resonance (MR) scanners, radiography equipment), should be an integral part of a QM program. The medical physicist must be aware of the factors that affect image quality as well as the effect of image distortions on treatment planning. The medical physicist should ensure that those elements of imaging equipment quality control directly relevant to radiation oncology planning are carried out at an appropriate frequency.

### 4. Treatment planning computer systems

The treatment planning computer model must be verified using actual beam data measured by the qualified medical physicist on the same treatment unit for which the model will be applied for patient planning. Treatment planning computer systems must undergo rigorous acceptance tests and commissioning to ensure that the calculated output satisfactorily agrees with measured beam data for a series of test cases and to ensure that the hardware and software were installed properly. (See the ACR–ASTRO Practice Guideline for 3D External Beam Radiation Planning and Conformal

Therapy.) All users must receive proper training. Documented training should be given to new users and following major software releases.

Graphical planning systems must be tested to ensure that they meet the published specifications of the system. All features of the system that are used by the practice must be tested. Both central-axis and off-axis beam characteristics at specific points should be tested for various field sizes to confirm the spatial accuracy of the dose display. A study must be performed for open fields, blocked fields, and wedged fields. The calculated data must be compared with measured data. Suggested standards of agreement have been published. The limitations of the dose-calculational algorithm(s) must be established and presented to the radiation oncologists.

If the graphical planning system is used to define beam apertures, then this function should be tested along with margin tools used to define the planning target volume.

In many graphical planning systems, the dose can be displayed in terms of absolute dose or relative dose. The exact method of dose display must be consistent with the treatment planning approach that is used clinically. The user must confirm that the relative dose distribution is as described in the system manual. The absolute dose calculation must be confirmed by measurements under normal conditions in radiation fields of various sizes.

If dose-volume histograms are used in the analysis of the plan, their validity must be checked. Various dose distributions can be calculated whose characteristics are known. The dose and volume results from the dose-volume histogram can be checked against the known values.

Periodic tests (e.g., standard plans) must be performed routinely and after any major service or software change to ensure the accuracy of monitor unit and/or dose-calculation algorithms, to ensure that any software changes (including editing of beam data files) were implemented correctly and have not corrupted the beam data, to ensure that any hardware changes were installed properly, and to verify that the system performance is consistent with its initial commissioning.

## 5. Electrical, mechanical, and radiation safety

A documented program must be implemented to assess potential safety hazards and to check the integrity of mechanical and electrical patient care devices. This program should include periodic inspections of patient dose-monitoring devices, treatment machines, and simulators (including the patient support assembly), and the accessories to these machines, including MLC systems, treatment couches, imaging systems, immobilization devices, and beam attenuators.

The radiation protection program must be designed to cover all treatment and imaging equipment and be consistent with state and federal regulations and the as-low-as-reasonably-achievable (ALARA) concept.

## V. CLINICAL PRACTICE

### A. Availability

The medical physicist must be available for continuing medical physics consultation for patients, consultation with the radiation oncologist and to provide advice or direction to staff when patient treatment is being planned or conducted. Procedures must be established to meet clinic needs for periods when a medical physicist is not immediately available on site, including standard procedures and covering physicists.

The medical physicist must review, as soon as possible, all dosimetric and physics activities that occurred during his/her absence. Authority to perform specific clinical physics duties must be delegated by the medical physicist to each member of the physics staff in accordance with their training and competence. The radiation oncologist must be informed of the clinical activities authorized for each member and/or the locum tenens physicist. Daily on-site availability is preferable. Practices without a full-time medical physicist must have regular on-site physics support during hours of clinical activity at least 2 days a week and provide 0.4 full time equivalents (FTE) coverage. In addition, state or local regulatory requirements must be met.

### B. Calculation Procedures and Protocols

#### 1. Patient data

Patient data may be acquired through digital or manual techniques. All data used in the dose-distribution calculation and implementation process should be reviewed by a member of the physics staff for reasonableness prior to its use in computation. The spatial linearity (in 3 dimensions) of CT or other digital images used for planning should be verified by test imaging

of appropriate phantoms having fixed fiducials and/or known external dimensions.

## 2. Monitor units or treatment time

Each practice must have a written procedure that defines how to calculate the monitor units or treatment time for all routine treatments. Such calculations should be based on measured dosimetric parameters. Tables of these dosimetric parameters must be compiled.

All calculations of monitor units or treatment time must be verified by a system for independent checking by another person or method before the first treatment if the total number of fractions is five or fewer or otherwise before the third fraction. Verification must begin with a review of the written dose prescription. IMRT has different requirements (See the ACR–ASTRO Practice Guideline for Intensity-Modulated Radiation Therapy [IMRT].) Documentation of this review and verification must be inserted in the patient’s treatment record.

## 3. External beam dose distributions

External beam dose distributions must be generated as requested by the radiation oncologist. Cumulative dose distributions should be generated as appropriate. The medical physicist must review all dose distributions. The physics review must include a review of the dose prescription and the patient’s treatment record to ensure that the graphical dose distribution is consistent with the dose prescription and the treatment record.

## 4. Treatment plan beam parameters

The medical physicist must review and verify the parameters that are used to describe the radiation beam or beams used in the treatment plan. They include the target-to-patient distance, the collimator rotation and opening, a description of the beam aperture or MLC pattern(s) when shaped fields are used, the identification of wedges or compensator if such are used, the relative beam weight or normalization, and all gantry and treatment couch parameters.

## 5. External beam dose distributions and associated coordinate systems

Independent systems involved in the treatment simulation, planning and delivery process may have different image characteristics and

coordinate systems. Faithful data transfer and coordinate translation must be achieved, and this process must be routinely tested. One method to test the data chain is via an “end-to-end” test, which may contain some or all of the following components:

- a. Simulation, including CT scanning of a dosimetry phantom.
- b. Phantom image data transfer to the treatment planning system.
- c. Creation of a treatment plan with variables such as independent jaws, wedging, blocking, noncoplanar beams, or other techniques at the discretion of the medical physicist.
- d. Calculation, monitor unit verification and transfer of the plan to the record and verify system or treatment unit, in the custom of the clinic.
- e. Treatment of the dosimetry phantom with dosimeter(s) in place.
- f. Analysis of dose measured compared to that predicted by the planning system.
- g. In each of the imaging systems (simulation and planning), a check of spatial fidelity, Hounsfield unit (HU) value, and beam geometry (size, source skin distance [SSD], etc.) against nominal values.

Alternative methods of completely testing the image/data chain may be devised by the medical physicist.

## C. Clinical Quality Management

### 1. Plan implementation

Appropriate implementation of the dose prescription is critical for safe and effective radiotherapy treatment. Routine review of all patient treatment plans must be performed by the medical physicist and must include review of patient and dosimetric data as well as beam and machine parameters and their faithful transfer from simulation to planning to treatment unit.

### 2. System overview

The medical physicist must review all of the technical aspects of the treatment delivery system on an established schedule. This review must be presented to the medical director and administration on a documented, periodic basis.

### 3. Chart rounds

The medical physicist should participate in weekly department-wide chart rounds to ensure

the fulfillment of the prescription and review any changes in dose, patient setup(s), and simulation and port films.

The medical physicist should be present to review and/or supervise complicated simulations as well as treatment setups and communicate specific requirements directly.

#### 4. Medical physics chart review protocol

The medical physicist must develop a chart review protocol for reviewing treatment records. This protocol should review new or modified treatment fields, treatment prescription, simulation instructions, isodose distributions, special dose calculations and measurements, monitor units (time) calculations, in vivo measurements, daily treatment records, and cumulative doses. The review must assess accuracy of information as well as completeness and clarity of the record. If verify and record systems are used, the physics chart check protocol must include reviewing all treatment related data recorded therein.

##### a. Physicist's continuing chart review

The medical physicist must review each patient's chart to ensure accuracy of calculation, appropriateness of charting data, and fulfillment of the physicians' written prescription. Any deviation from the radiotherapy prescription should be reported in a timely manner to the responsible radiation oncologists so that corrective action can be taken. The physics chart review must be conducted at least weekly.

##### b. Completion of treatment chart review

At the completion (end) of treatment (EOT), the medical physicist must review the entire chart to affirm the fulfillment of the initial and/or revised prescribed dose. This review must be performed within 1 week of EOT and documented in the treatment record. Any deviations from the physician treatment plan or radiotherapy prescription must be documented and promptly brought to the attention of the attending radiation oncologist.

## VI. NEW PROCEDURES

The practice of radiation oncology often involves the implementation of new procedures and technologies. When these are being considered, the medical physicist should participate along with team members of the medical and administrative areas. The medical physicist

should undertake a systematic literature review, make site visits, confer with colleagues familiar with the new procedure or equipment, and otherwise obtain factual information for use in planning, acquisition, and implementation. Such information may include clinical application, impacts on workflows, equipment, staffing, and space utilization.

Prior to implementation of any procedure, technique, system, or accessory, they must be received, commissioned, and released for clinical use by the medical physicist. In the case of a product (hardware, software, or accessory) the commissioning must include safety testing and verification that the system or device meets the manufacturer's performance standards. Commissioning will also include institution of a quality assurance (QA) program to demonstrate the consistent safety and performance of the system or device.

The quality improvement program associated with any new procedure should be periodically reviewed and updated.

For more information on image-guided radiation therapy, see the [ACR Technical Standard for Medical Physics Performance Monitoring of Image-Guided External Beam Radiation Therapy \(IGRT\)](#) and the [ACR–ASTRO Practice Guideline for Image-Guided Radiation Therapy \(IGRT\)](#) [5,6].

## VII. DOCUMENTATION

The medical physicist is responsible for documenting the following:

1. Procedures for instrument calibration and periodic instrument constancy checks.
2. Procedures to verify the manufacturer's specifications and to establish baseline performance values for radiation therapy equipment.
3. Quality management programs for radiation therapy equipment, simulators, treatment planning systems, and monitor unit calculation algorithms.
4. Monitor units (time) calculation procedures and protocols.
5. Physics chart check protocol for reviewing treatment delivery.
6. Procedures for checking the mechanical and electrical integrity of patient care devices.
7. Radiation protection program as it pertains to radiation oncology.
8. Calculations related to patient dosimetry and/or physics measurements when such needs arise or per clinicians' requests.
9. Consultations requested by the radiation oncologist.

10. Commissioning of new systems and/or equipment introduced into the clinic.

## VIII. PEER REVIEW

The medical physicist should engage in a formalized peer review on a regular basis [7,8].

Physicists engaged in solo practice (being the only qualified medical physicist at a facility, or serving as consultant providing the only medical physicist service to the facility) should follow published AAPM recommendations, including peer review recommendations.[7-14]

## ACKNOWLEDGEMENTS

This standard was revised according to the process described under the heading *The Process for Developing ACR Practice Guidelines and Technical Standards* on the ACR web page (<http://www.acr.org/guidelines>) by the Guidelines and Standards Committee of the Commission on Medical Physics with assistance from the AAPM.

ASTRO /ACR GUIDE TO

RADIATION ONCOLOGY  
CODING 2010

## MEDICAL RADIATION PHYSICS: CPT® CODES 77336 AND 77370

The codes for continuing medical radiation physics consultation and special medical radiation physics consultation are distinct and entirely independent services provided during a course of radiation therapy. The continuing medical radiation physics consultation (CPT code 77336) is used to describe the ongoing medical physics assessment provided by a qualified medical physicist to each patient receiving radiation therapy. The special medical radiation physics consultation (CPT code 77370) is used when the radiation oncologist makes a direct request to the qualified medical physicist for a special consultative report or for specific physics services for an individual patient. Both CPT codes 77336 and 77370 are technical-only codes.

Continuing medical radiation physics consultation (CPT code 77336) is used to describe the ongoing medical physics assessment provided by a medical physicist to each patient receiving radiation therapy. CPT code 77336 is reported once for five fractions of external beam radiation therapy, regardless of the actual time period in which services are provided. The services need not be furnished on consecutive days. Multiple fractions representing two or more treatment sessions furnished on the same day may be counted separately as long as there is a distinct break in therapy sessions.

For reporting purposes, CPT code 77336 may be billed by grouping in units of five fractions or treatment sessions, or by reporting on a given day each week. However, total charges may not exceed the number of fractions divided by five, rounded to the nearest integer (e.g., 18 fractions will be billed four times, 17 fractions will be billed three times). CPT code 77336 may be billed once for treatment courses, which consist of only one or two fractions. CPT code 77336 may be reported for the last three or four fractions of external beam treatment. High-dose-rate brachytherapy treatments are each considered one radiation fraction and thus can be added to external beam fraction for calculating the total number of fractions delivered for billing CPT code 77336. For brachytherapy that occurs in a week without associated external beam therapy, the CPT code 77336 may be billed once in each week in which a brachytherapy treatment occurs.

A facility may choose to bill the code on the completion of each set of five fractions (or other fractionation pattern warranting the code) or may bill the code on a particular day of the week established in facility policy, provided the frequency constraints described above are met.

CPT code 77336, continuing medical physics assessment, involves weekly chart reviews, review and analysis of medical physics aspects of changes to the treatment regime, consultation on patient setup and treatment modifications, verification of dose calculation data, reviewing accuracy of the current data record, including review of patient-specific therapist treatment and technical notes, and patient radiation safety. These services are essential and medically necessary and are separate and

distinct services provided to patients undergoing a course of radiation therapy. The medical physicist will review all aspects of the treatment delivery, including correlating the treatment prescription with the technical and medical physics aspects of the treatment, and with the actual execution of the treatment. Appropriate modifications to the technical aspects of the patient treatment are formulated and the medical physicist will recommend implementation of these modifications, as required, in a timely fashion. It should be noted that if this work is not carried out and appropriate modifications to the treatment regime are not instituted, serious harm could come to the patient because of the irreversible nature of the therapeutic radiation delivery. The inherent danger in delivering therapeutic dose levels of radiation to cancer patients is mitigated by the medical physicist's analysis and intervention pertaining to the technical aspects of the treatment process. Documentation of these services should include a signed and dated indication by the medical physicist in the patient's chart that the continuing medical physics consultation has been done.

The following two illustrative vignettes are examples of the specific nature (and importance) of work done under CPT® code 77336, which is not covered under any of the other radiation oncology codes in the 77xxx series. In these vignettes, if the work under CPT code 77336 was not done in a timely and serial manner during the course of therapy (or not done at all), serious consequences for these patients could have ensued due to the irreversible nature of the therapeutic radiation delivery.

**Vignette 1:** John Doe's chart was reviewed and it was determined that the therapists treating the patient performed an inadvertent shift of isocenter based on the plan's digitally reconstructed radiographs. The medical physicist reconstructed an isodose plan based on the inadvertent treatment position for Mr. Doe and consulted with the radiation oncologist on what steps were needed to solve the discrepancy and optimize the remainder of the patient's treatment course. The patient-specific consequences on dosimetry were outlined for the radiation oncologist and the physicist performed needed beam and field setting calculations.

**Vignette 2:** During the weekly chart review for Jane Doe, it was determined by the medical physicist that an improper linear accelerator gantry angle was being used to treat the patient such that the spinal cord, originally prescribed to be out of the radiation field, was now being partially irradiated. The medical physicist calculated the dose that the spinal cord received by this error and consulted with the radiation oncologist regarding changes to the treatment course to minimize its effect.

The special medical radiation physics consultation CPT code 77370 is used when the complexity of the treatment plan is of such magnitude that a written analysis is necessary to address a specific problem, or when the service to be performed requires the expertise of a qualified medical physicist. The clinical indication that justifies the request for the special physics consultation should also be documented.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Services with Stand-Alone PE Procedure Time*

April 2013

**Radiation Treatment Delivery – PE Only**

CPT codes 77372 and 77402-77417 were identified through the Services with Stand-Alone PE Procedure Time screen. In October 2012, the RUC recommended that the PE Subcommittee review the PE direct inputs for these services at the April 2013 meeting. The specialty society is requesting referral to the CPT Editorial Panel for CPT codes 77402-77417.

***77372 Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; linear accelerator based***

The PE Subcommittee reviewed the survey results from 18 radiation oncologists and noted that the survey times are higher than the current clinical staff times. Survey respondents indicated significantly higher clinical staff times for the pre-service, service (pre-service) and post-service periods than are currently included. The specialty recommended and the RUC agreed that these times should be maintained at current RUC standards. Since there is no compelling evidence to change the clinical staff time of this procedure, times consistent or below the current inputs are appropriate. The PE Subcommittee noted that the intra-service portion of the service period validates the range of the current PE inputs. Survey respondents did include a dosimetrist in addition to the typical staff of *Radiation Therapist (L050C)* and *Medical Physicist (L152A)*, to *Prepare system for treatment* (line 37); however, the PE Subcommittee agreed that although this additional staff may be used in clinics, it should not be included in the intra-service time. Equipment time for the *SRS system, Lincac* (ER082) was recalculated to include Prepare Machine (line 23). This time is needed prior to the patient entering the office to set up the machine for the service. **The RUC reviewed and approved the direct practice expense inputs with a minor modification as recommended by the Practice Expense Subcommittee.**

The specialty society is requesting referral to the CPT Editorial Panel for CPT codes 77402-77417 because questions regarding the appropriateness of the existing radiation treatment delivery codes to describe current practice have been raised in multiple venues.

- In Table 8 of the 2013 Medicare Physician Final Rule, CMS asked for review of multiple treatment delivery codes.
- The AMA/RUC has raised questions regarding the time associated with IMRT delivery.
- Others have raised the question of the appropriate coding for newer techniques.
- Image guidance that may be used with radiation treatment delivery has also grown. It is sometimes performed with conventional treatments and almost always is used with IMRT, suggesting a bundling solution.

As clinical practice has evolved, several issues have arisen which require CPT clarification. The specialty intends to address a number of interrelated issues and revise the entire treatment delivery family. The RUC recommends CPT codes 77402-77417 be referred to the CPT Editorial Panel for review at the May CPT meeting.

<b>CPT Code (●New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
77372	Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; linear accelerator based	XXX	0.00 (No Change) (PE Input Recommendations Only)

April 2, 2013

Barbara Levy, MD  
Chair, RVS Update Committee  
American Medical Association  
515 N. State St.  
Chicago, IL 60610

Re: Tab 29 Radiation Treatment Delivery (77402-77417)

Dear Dr. Levy:

The Radiation Oncology Treatment Delivery Codes (CPT Codes 77402-77417) were included on the CMS Requests and Relativity Assessment level of interest form (LOI). As we noted on the LOI these codes were included in a CCP submitted February 15, 2013 for the upcoming CPT Panel Meeting. As such, we are not submitting RUC recommendations at this time. If you have any questions, please let us know.

Respectfully,

Najeeb Mohideen, MD  
ASTRO RUC Advisor

cc: Sheila Madhani  
Trisha Crishock

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77372 Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; linear accelerator based*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The Society prepared a practice expense survey and presented it to the research subcommittee. The surveys were sent electronically to 400 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 18 surveys.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77372 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

**Pre Service Activities**

*Complete pre-service diagnostic & referral forms & Coordinate pre-surgery services*

A number of insurance companies require preauthorization for SRS. This time is allotted to complete the pre service forms and work with the insurance company on clinical matters.

**Provide pre-service education/obtain consent**

The clinical staff calls the patient prior to arriving for treatment. They will answer any questions regarding the procedure and go over what to expect during treatment. They may ask the patient not to eat or drink anything after midnight. They will discuss medications. They will discuss the need to have a family member or friend must accompany them the day of treatment and should drive them home following the procedure.

**Prepare Delivery System Unit for Treatment**

This line item is included in the service period in the existing inputs. However, it we believe it is more appropriate to include it in the pre service period.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are not recommending additional clinical times, supplies or equipment from existing inputs. However, when we compute the time for the SRS machine we get 75 minutes, not 51. We included rows 23, 30, 32, 36, 42 and 49. When we compute the time for the pulse oximeter we get 55 minutes not 51. We included rows 30, 32, 36, 42 and 49.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

The physicist has prepared the machine for treatment prior to patient arriving in the treatment area. To ensure the accuracy of the treatment setup, the physicist then verifies the stereotactic isocenter using the Winston-Lutz phantom test.

Intra-Service Clinical Labor Activities:

The patient is taken into the treatment room, and the physician and the physicist together review the original and new films, the prescription, and the data that was entered into the treatment machine. The nurse is assisting the patient in getting comfortable and then takes the patient's vital signs. Once these vitals have been documented, the patient is then placed on the treatment couch. The nurse then lets the radiation therapist and the physicist position the patient with the appropriate immobilization system, and the head ring is calibrated to the stereotactic isocenter and the tests that were performed to validate the patient setup. Once the patient is then positioned, the nurse then inserts the IV for the patient, and the SRS treatment delivery begins.

During the treatment delivery, the physicist and the radiation therapist are in the control room at all times to monitor the delivery procedure. The nurse monitors the oxygen (O<sub>2</sub>) saturation of the patient. The amount of radiation given is continuously tracked.

The patient is taken out of the immobilization apparatus. (After treatment is complete the neurosurgeon removes the head frame, as described in CPT Code 61793.) The patient is then taken into a separate room for recovery.

Post-Service Clinical Labor Activities:

Phone calls are made by the nurse to follow up on side effects and phone in prescriptions.

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77372 Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; linear accelerator based*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The Society prepared a practice expense survey and presented it to the research subcommittee. The surveys were sent electronically to 400 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 18 surveys.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77372 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

**Pre Service Activities**

We are requesting to maintain our pre service clinical time for these XXX services. The Radiation Oncologist typically uses his/her own clinical staff to complete pre-service diagnostic/referral forms and to work with the insurance companies/radiation oncology benefits manager. They ensure all pre authorization forms are completed and forward approved forms to the appropriate personnel. They also coordinate pre-procedure services to ensure that they are completed and that the results are acceptable to proceed with Radiosurgery treatment. Their clinical staff works with the facility to ensure that the facility is available as well as all the necessary supplies. Their clinical staff also answers the patient's questions regarding the treatment and what to expect during and after treatments.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

N/A

**5. Please describe in detail the clinical activities of your staff:**

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Services with Stand-Alone PE Procedure Time*

April 2013

**Hyperthermia –PE Only**

CPT code 77600 *Hyperthermia, externally generated; superficial (ie, heating to a depth of 4 cm or less)* was identified through the Services with Stand-Alone PE Procedure Time screen. In October 2012, the RUC recommended that the PE Subcommittee review the direct PE inputs for these services at the April 2013 meeting.

The PE Subcommittee reviewed the survey results from 5 radiation oncologist practices and noted that the survey times are higher than the current clinical staff times. The number of responses is low because very few radiation oncologists perform this service resulting in a small pool of potential survey respondents. Survey respondents indicated time in the pre-service period where currently there is none. Respondents also indicated significantly higher time in the service period (pre-service and post-service) and post-service period than is currently included. The specialty recommended and the PE Subcommittee agreed that these times should be maintained at current RUC standards, since there is no compelling evidence to change the clinical staff time of this procedure. The PE Subcommittee noted that the *Treatment* (line 40) time in the intra-service portion of the service period validates the time of the current PE input. **The RUC reviewed and approved the direct practice expense inputs with a minor modification as recommended by the Practice Expense Subcommittee.**

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
77600	Hyperthermia, externally generated; superficial (ie, heating to a depth of 4 cm or less)	XXX	1.56 (No Change) (PE Input Recommendations Only)

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77600 Hyperthermia, externally generated; superficial (ie, heating to a depth of 4 cm or less)*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The Society prepared a practice expense survey and presented it to the research subcommittee. The surveys were sent electronically to all radiation oncologists with indication of thermal medicine (N=50). The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 5 surveys.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

CPT code 77600 is currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

We are not recommending any times higher than the PE subcommittee standards.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are not recommending additional clinical times, supplies or equipment from existing inputs.

**5. Please describe in detail the clinical activities of your staff:**

**Pre-Service Clinical Labor Activities:**

Prepare room and equipment for patient according to prescription regarding field size, applicator, water bolus, immobilization devices, microwave and thermal shielding measures, etc. Calibrate thermal sensors and prepare all supplies, waterbolus circulation system, power sources for patient use. Check patient identification, diagnosis, chart, prescription, and clearly explain to the patient the upcoming procedure, expected communications during treatment, and procedures to

follow if an emergency arises during or after treatment. Place thermal sensors appropriately to monitor and document thermal prescription.

Intra-Service Clinical Labor Activities:

The Radiation Oncologist, Hyperthermia Medical Physicist, Nurse and Radiation Therapist apply non-ionizing radiation to the patient in accordance with the treatment plan. This includes: Optimize applicator placement over tumor and adjust as needed throughout treatment, including optimization of waterbolus, immobilization devices, electromagnetic field and thermal blocks, etc. Accurately deliver the prescribed course of hyperthermia therapy, continuously monitoring thermal dosimetry and adjusting treatment for optimum correlation of dose delivery with the prescription. Take vital signs and maintain patient comfort with sedation if necessary. Observe non-ionizing radiation safety measures for patient and personnel, monitoring and recording electromagnetic radiation levels as specified to meet standards. Maintain patient markings and observe patient for unusual reactions. Calculate thermal dose distribution and correlate with ongoing dose prescription.

Post-Service Clinical Labor Activities:

Detach equipment and applicators from patient and remove thermal probes. Replace dressings and give wound/home care instructions. Complete treatment documentation including daily hyperthermia system warm-up. Clean up all equipment, applicators, probes and patient contacting interface. Maintain supplies. Make phone calls to follow up on side effects, and phone in prescriptions.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Services with Stand-Alone PE Procedure Time*

April 2013

**High Dose Rate Brachytherapy–PE Only**

CPT codes 77785-77787 were identified in CMS' final rule through the Services with Stand-Alone PE Procedure Time Screen. In October 2012, the RUC recommended that the PE Subcommittee review the PE direct inputs for these services at the April 2013 meeting. As CMS requested for this screen, a practice expense survey for clinical staff time only was conducted for the family. The specialty societies convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures.

***77785 Remote afterloading high dose rate radionuclide brachytherapy; 1 channel***

The RUC reviewed the survey results from 37 radiation oncologists and noted that the survey times were either higher than the current clinical staff times or exceeded PE Subcommittee standards. The RUC agreed with the expert panel that the respondents overestimated the clinical staff time involved in many elements of the service. The specialty recommends and the RUC agrees that an *emergency service container safety kit* should be added to this service as it is missing from the direct PE equipment inputs. An invoice is included with this submission. In addition, the RUC recommends that for brachytherapy procedures additional activities beyond the PE Subcommittee standards should be included in the equipment time calculations. These procedures require extensive room/procedure preparation and use a live radiation source. There are federal guidelines for handling the source, documentation, etc. Many of the activities that are performed before/after the procedure need to be done in the room because of contamination potentials (i.e. room survey, transfer tube cleaning, etc.). The RUC recommends the following activities to be included in equipment time calculations:

- Prepare room (Line 30)
- Set up remote monitoring (Line 31)
- Position patient (Line 32)
- Intra time (Lines 36-49 accounting for concurrent activities)
- Monitor patient (Line 51)
- Clean room (Line 52)
- Clean transfer tubes (Line 53)

**77786 Remote afterloading high dose rate radionuclide brachytherapy; 2-12 channels**

The RUC reviewed the survey results from 39 radiation oncologists and noted that the survey times were either higher than the current clinical staff times or exceeded PE Subcommittee standards. The RUC agreed with the expert panel that the respondents overestimated the clinical staff time involved in many elements of the service. The specialty recommends and the RUC agrees that an *emergency service container safety kit* should be added to this service as it is missing from the direct PE equipment inputs. An invoice is included with this submission. In addition, the RUC recommends that for brachytherapy procedures additional activities beyond the PE Subcommittee standards should be included in the equipment time calculations. These procedures require extensive room/procedure preparation and use a live radiation source. There are federal guidelines for handling the source, documentation, etc. Many of the activities that are performed before/after the procedure need to be done in the room because of contamination potentials (i.e. room survey, transfer tube cleaning, etc.). The RUC recommends the following activities to be included in equipment time calculations:

- Prepare room (Line 30)
- Set up remote monitoring (Line 31)
- Position patient (Line 32)
- Intra time (Lines 36-49 accounting for concurrent activities)
- Monitor patient (Line 51)
- Clean room (Line 52)
- Clean transfer tubes (Line 53)

**77787 Remote afterloading high dose rate radionuclide brachytherapy; over 12 channels**

The RUC reviewed the survey results from 34 radiation oncologists and noted that the survey times were either higher than the current clinical staff times or exceeded PE Subcommittee standards. The RUC agreed with the expert panel that the respondents overestimated the clinical staff time involved in many elements of the service. The specialty recommends and the RUC agrees that an *emergency service container safety kit* should be added to this service as it is missing from the direct PE equipment inputs. An invoice is included with this submission. In addition, the RUC recommends that for brachytherapy procedures additional activities beyond the PE Subcommittee standards should be included in the equipment time calculations. These procedures require extensive room/procedure preparation and use a live radiation source. There are federal guidelines for handling the source, documentation, etc. Many of the activities that are performed before/after the procedure need to be done in the room because of contamination potentials (i.e. room survey, transfer tube cleaning, etc.). The RUC recommends the following activities to be included in equipment time calculations:

- Prepare room (Line 30)
- Set up remote monitoring (Line 31)
- Position patient (Line 32)
- Intra time (Lines 36-49 accounting for concurrent activities)
- Monitor patient (Line 51)

- Clean room (Line 52)
- Clean transfer tubes (Line 53)

**The RUC reviewed and approved the direct practice expense inputs with modifications as recommended by the Practice Expense Subcommittee.**

<b>CPT Code (•New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
77785	Remote afterloading high dose rate radionuclide brachytherapy; 1 channel	XXX	1.42 (No Change) (PE Input Recommendations Only)
77786	2-12 channels	XXX	3.25 (No Change) (PE Input Recommendations Only)
77787	over 12 channels	XXX	4.89 (No Change) (PE Input Recommendations Only)

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs

Global Period: XXX

Meeting Date: April 2013

CPT Long Descriptors:

*77785 Remote afterloading high dose rate radionuclide brachytherapy; 1 channel*

*77786 Remote afterloading high dose rate radionuclide brachytherapy; 2-12 channels*

*77787 Remote afterloading high dose rate radionuclide brachytherapy; over 12 channels*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

The multispecialty organizations (ASTRO and ACR) prepared practice expense surveys and presented them to the research subcommittee. The surveys were sent electronically to 1000 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The panel reviewed the office survey results from 37, 39 and 34 respectively.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

The HDR codes are currently priced in the office. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

We are requesting to maintain our pre service clinical time for these XXX services. The Radiation Oncologists' clinical staff must complete pre-service diagnostic/referral forms and work with the insurance companies/radiation oncology benefits manager. They ensure all pre authorization forms are completed. They also coordinate pre-procedure services to ensure that they are completed and that the results are acceptable to proceed with brachytherapy treatment. Their clinical staff also answers the patient's questions regarding the brachytherapy treatment and what to expect during and after treatments.

Monitor pt. following service/check tubes, monitors, drains

We recommend maintaining the clinical staff time for post procedure monitoring. Although we do not typically use conscious sedation for 77785 or 77786 we have included 2 and 7 minutes

respectively for monitoring. The patients have to be watched after the procedure for vital signs, bleeding, etc.

#### Equipment Times

For these brachytherapy procedures we have included activities in the equipment time calculations above the recommended [=set up + intraservice + clean up times]. These procedures require extensive room/procedure preparation. These procedures use a live radiation source. There are federal guidelines for handling the source, documentation, etc. Many of the activities that are performed before/after the procedure need to be done in the room because of contamination potentials (i.e. room survey, transfer tube cleaning, etc). As such we have included the following activities in our equipment time calculations:

- Prepare room (Line 30)
- Set up remote monitoring (Line 31)
- Position patient (Line 32)
- Intra time (Lines 36-49 accounting for concurrent activities)
- Monitor patient (Line 51)
- Clean room (Line 52)
- Clean transfer tubes (Line 53)

#### **4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are not recommending additional clinical staff times or supplies for these three procedures.

We are recommending additional equipment items be added to the direct PE inputs. We do not believe the procedure has changed since these were last reviewed (Oct 2009) but we do believe there are items missing from the direct PE equipment inputs.

We have added the following items:

- Emergency service container-safety kit
- HDR shielding

#### **5. Please describe in detail the clinical activities of your staff:**

##### Pre-Service Clinical Labor Activities:

The Radiation Oncologists' clinical staff completes pre-service diagnostic & referral forms and coordinates pre-surgery services. They provide pre-service education/obtain consent from the patient. The physicist prepares the HDR brachytherapy afterloader for treatment.

##### Intra-Service Clinical Labor Activities:

###### 77785

*The patient is taken into the shielded HDR treatment room,. The HDR machine is tested, validated and prepared for treatment by the physicist. The implant channel is cleaned and source cables are attached by the therapist. The source transfer cable is attached to the applicator and the HDR afterloader. The radiation prescription is verified and the treatment time and dwell positions are checked by the physicist. The test cable run is*

*performed to assure an unobstructed transfer. While the physicist is performing these steps and procedures, the ORN is present and immediately available, connecting the patient to the remote monitors, assessing pain, and tracking vital signs. After the system has been connected, checked, and the dwell times and doses verified, and the patient has been positioned for remote monitoring, the staff leave the treatment room and the room is closed. The HDR machine is then armed and the source released. The HDR treatment lasts approximately fifteen minutes as the source moves in and out of the transfer cable into the indwelling applicator channel. Supervision is personal for the physician, physicist, oncology nurse, and radiation therapist. The RTT monitors the dwell position times and verifies the overall treatment time. The nurse is monitoring the patient's vital signs and general condition, the physicist monitors the source exchange and is immediately available to assist the physician to troubleshoot any treatment console system error codes, and the physician is present for the entire treatment delivery. After the HDR treatment, the radiation source is secured and the room is entered. The room and patient are surveyed and the source transfer tube is disconnected from the patient and the HDR afterloader. The physician removes the cylinder.*

77786

*The patient is taken into the shielded HDR treatment room. The HDR machine is tested, validated and prepared for treatment by the physicist. The implant channel is cleaned and source cables are attached by the therapist. The brachytherapy channels are cleaned and the catheters are trimmed to their final length by the physicist/ dosimetrist. The source transfer cables, each individually numbered and cross referenced to the computerized treatment plan, are attached one at a time and double checked. The radiation prescription is verified and the treatment time and dwell positions are checked by the physicist. The test cable run is performed, as each catheter must be checked to assure an unobstructed transfer. While the physicist is performing these procedures, the Oncology Registered Nurse (ORN) is present and immediately available, connecting the patient to the remote monitors, assessing pain, and tracking vital signs. After the system has been connected, checked, and the dwell times and doses verified, and the patient has been positioned for remote monitoring, the staff leave the treatment room and the room is closed. The HDR machine is then armed and the source released. The HDR treatment lasts approximately twenty five minutes as the source moves in and out of the transfer cables into the matrix of brachytherapy channel dwell positions for precisely prescribed periods of time. Supervision is personal for the physician, MP, ORN, and RTT. The RTT monitors the dwell position times and verifies the total treatment time, the nurse is monitoring the patient's vital signs and oxygen saturation status, the physicist monitors the source exchange and is immediately available to assist the physician to troubleshoot any error codes, and the physician is present for the entire exposure. After the last transfer, the radiation source is secured and the room is entered. The room and patient are surveyed and the source transfer tubes are disconnected from the patient and the HDR afterloader. The implant is removed. The nurse assists the physician with the implant removal, which takes about fifteen minutes, including the time to apply direct pressure to the implant catheter sites to obtain hemostasis and to manage the patient's airway. After the bleeding has been controlled and airway is deemed stable, the nurse monitors the patient's vital signs, and ensures complete recovery after the procedure.*

77787

*The patient is taken into the shielded HDR treatment room,. The HDR machine is tested, validated and prepared for treatment by the physicist. The implant channel is cleaned and source cables are attached by the therapist. The brachytherapy channels are cleaned and the catheters are trimmed to their final length by the physicist/ dosimetrist. The source transfer cables, each individually numbered and cross referenced to the computerized treatment plan, are attached one at a time and double checked. The radiation prescription is verified and the treatment time and dwell positions are checked by the physicist. The test cable run is performed, as each catheter must be checked to assure an unobstructed transfer. While the physicist is performing these procedures, the ORN is present and immediately available, connecting the patient to the remote monitors, assessing pain, and tracking vital signs. The nurse administers intravenous pain meds as needed as directed by the physician. After the system has been connected, checked, and the dwell times and doses verified, and the patient has been positioned for remote monitoring, the staff leave the treatment room and the room closed. The HDR machine is then armed and the source released. The HDR treatment lasts approximately forty minutes as the source moves in and out of the transfer cables into the matrix of brachytherapy channel dwell positions for precisely prescribed periods of time. Supervision is personal for the physician, MP, ORN, and RTT. The RTT monitors the dwell times and verifies the treatment times, the nurse is monitoring the patient's vital signs and oxygen saturation status, the physicist monitors the source exchange and is immediately available to assist the physician to troubleshoot any error codes, and the physician is present for the entire exposure. After the last radiation transfer, the source is secured and the room is entered. The room and patient are surveyed and the source transfer tubes are disconnected from the patient and the HDR afterloader. The implant is removed. The nurse assists the physician with the implant removal, which takes about fifteen minutes, including the time to apply direct pressure on the perineum to obtain hemostasis. After the implant site and urinary bleeding have been controlled, the nurse removes the foley catheter, monitors the patient's vital signs, and ensures complete recovery after the procedure.*

Post-Service Clinical Labor Activities:

Nurse removes the IV, cleans the implant site, applies a dressing, assists the patient out of bed, monitors vital signs, and provides post treatment education and schedules the follow up appointments. Phone calls are made by the nurse to follow up and phone in prescriptions.

AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs

**Global Period:** XXX

**Meeting Date:** April 2013

**CPT Long Descriptors:**

*77785 Remote afterloading high dose rate radionuclide brachytherapy; 1 channel*

*77786 Remote afterloading high dose rate radionuclide brachytherapy; 2-12 channels*

*77787 Remote afterloading high dose rate radionuclide brachytherapy; over 12 channels*

**1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:**

For the non-facility direct practice expense inputs the multispecialty organizations (ASTRO and ACR) prepared practice expense surveys and presented them to the research subcommittee. Then surveys were sent electronically to 1000 radiation oncologists. The specialties convened a consensus panel that included a number of experts familiar with these services to evaluate the survey results and existing direct practice expense inputs for these procedures. The specialties discarded the surveys from the hospital-based respondents, as requested by the research subcommittee. The consensus panel reviewed the existing facility inputs and made these facility-setting recommendations.

**2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:**

The HDR codes are currently have facility inputs. As such, we have included columns with the existing inputs for reference.

**3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:**

We are requesting to maintain our pre service clinical time for these XXX services. The Radiation Oncologist typically uses his/her own clinical staff to complete pre-service diagnostic/referral forms and to work with the insurance companies/radiation oncology benefits manager. They ensure all pre authorization forms are completed and forward approved forms to the appropriate personnel. They also coordinate pre-procedure services to ensure that they are completed and that the results are acceptable to proceed with brachytherapy treatment. Their clinical staff works with the facility to ensure that the brachytherapy suite is available as well as all the necessary supplies. Their clinical staff also answers the patient's questions regarding the brachytherapy treatment and what to expect during and after treatments.

**4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:**

We are not recommending additional clinical staff time, supplies or equipment for these procedures.

**5. Please describe in detail the clinical activities of your staff:**

Pre-Service Clinical Labor Activities:

The Radiation Oncologists' clinical staff completes pre-service diagnostic & referral forms and coordinates pre-surgery services. They work with all involved parties to schedule this service. Finally, they also provide pre-service education/obtain consent.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedural Codes Screen*

April 2013

**Cytopathology**

CPT code 88112 was identified through the CMS High Expenditure Procedural Codes screen. The RUC recommended survey of physician work and review of practice expense for this service at the April 2013 RUC meeting.

***88112 Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal***

In April 2003, The RUC reviewed the survey results for new service CPT code 88112. At that time the code was surveyed for pre-and post-service time in addition to intra-service time and the total time was 43 minutes including with a work value of 1.18. At that time the RUC determined that the new service required more physician time and a higher level of intensity than CPT codes 88104 *Cytopathology, fluids, washings or brushings, except cervical or vaginal; smears with interpretation* (work RVU=0.56) and 88108 *Cytopathology, concentration technique, smears and interpretation (eg, Saccomanno technique)* (work RVU= 0.44). In the subsequent years the service has changed considerably, pre- and post-service times are no longer included in the physician work as they previously would have been. Also the vignette has changed and urinary specimen is now typical for this service.

The RUC reviewed the survey results from 194 pathologists and recommends 15 minutes of intra-service physician time for this service. The RUC reviewed the survey and determined that the 25<sup>th</sup> percentile work RVU of 0.56 is appropriate for this service. To validate this work value the RUC compared the surveyed code to key reference service 88104 *Cytopathology, fluids, washings or brushings, except cervical or vaginal; smears with interpretation* (work RVU=0.56, 24 minute intra-service) and noted that 88112 is more intense and is often used on more complicated specimens due to the use of concentration technique which allows the instrument to remove cellular “junk” and the physician to review a greater magnitude of cells in close detail. Although code 88104 requires more physician time to perform, the higher intensity of 88112 justifies the identical work value. The RUC also compared the 88112 to CPT code 88108 *Cytopathology, concentration technique, smears and interpretation (eg, Saccomanno technique)* (work RVU=0.44, 19 minutes intra-service) which is also a concentration technique, but an older technique. The RUC original recommendation for CPT code 88108 was a work RVU of 0.56 and it was subsequently reduced to 0.44 by CMS. The RUC continues to support the recommendation of 0.56 for CPT code 88108, and determined that 88112 should have a work value of 0.56 as well. The RUC notes that this recommendation reflects a significant reduction from the current value of 1.18. **The RUC recommends a work RVU of 0.56 for CPT code 88112.**

### Practice Expense

Equipment time elements for each equipment item on the RUC practice expense recommendations made prior to CPT 2011 were determined by CMS. At its April 2010 meeting, the RUC changed policy and specialties now provide the actual number of minutes that the equipment item is used for each service. The specialty discovered an error in the current CMS equipment direct practice expense inputs file for 88112. All equipment items for this service are shown as being used for one minute. This is clearly a data input error as it is impossible to perform this service using all of the equipment items for only one minute. The RUC recommends that equipment direct PE inputs be corrected to reflect the times recommended by the PE Subcommittee in the attached spreadsheet.

The specialty society has submitted comments to CMS stating that they do not agree that courier transportation costs, specimen disposal costs, copath system, software, and laboratory information system maintenance contracts are indirect PE expenses. This is an ongoing issue between CMS and the specialty, and the RUC is maintaining the items on the spreadsheet simply to acknowledge the unresolved issue and will not comment on the inclusion or exclusion of these PE inputs or the pricing proposed by the specialty at this time. **The RUC reviewed and approved the direct practice expense inputs with minor modifications as recommended by the Practice Expense Subcommittee.**

### Work Neutrality

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code (•New)	CPT Descriptor	Global Period	Work RVU Recommendation
88112	Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal  (Do not report 88112 with 88108)	XXX	0.56

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:88112	Tracking Number	Original Specialty Recommended RVU: <b>0.70</b>
		Presented Recommended RVU: <b>0.70</b>
Global Period: XXX		RUC Recommended RVU: <b>0.56</b>

CPT Descriptor: Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal (Do not report 88112 with 88108)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An elderly male with a history of High Grade Papillary Urothelial Carcinoma who is post BCG therapy has submitted a surveillance urine specimen. A cellular enhancement preparation is processed from the urine sediment.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: NA

Description of Intra-Service Work: Obtaining and reviewing the history and results of other diagnostic studies, including examination of previous/additional slides and/or reports, during the gross and microscopic interpretation of the histologic specimen and/or cellular material; comparison to previous study reports; identification of clinically meaningful findings; consultation with other professionals regarding the specimen; any review of literature or research during examination of the specimen; any dictation, preparation and finalization of the report.

Description of Post-Service Work: NA

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

In the July 19, 2011, Proposed Rule for 2012, CMS requested that the RUC review a list of 70 high PFS expenditure procedural codes representing services furnished by an array of specialties. CMS selected these codes based on the fact that they have not been reviewed for at least 6 years, and in many cases the last review occurred more than 10 years ago. CPT Code 88112 was on CMS' list of 70 codes.

When 88112 was first RUC surveyed for physician work in 2003, survey participants were asked to provide estimates of both pre-service and post-service work and time. The survey results indicated a pre-service time of 8 minutes and a post service time of 10 minutes. This work was extracted from this most recent survey as it is not typically performed by the pathologist at this time. The College only surveyed for the intra-service work for this service.

In addition, while preparing for survey the CAP recognized that the typical patient had changed. The typical patient specimen when 88112 originally was valued by the RUC was for the examination of common bile duct brushings and today the typical vignette involves a urine specimen. The RUC's Research Subcommittee approved the vignette change for 88112 at its last meeting in February 2013.

2013 - 88112 Vignette - A 72 year old male with a history of High Grade Papillary Urothelial Carcinoma who is post BCG therapy has submitted a surveillance urine specimen. A cellular enhancement preparation is processed from the urine sediment.

### **Survey Effort and Results**

The College of American Pathologists (CAP) and the American Society of Cytopathology (ASC) performed a random survey of 1,200 members each for a total of 2,400 potential survey respondents. The survey yielded 194 respondents in total, 125 from ASC members and 69 from CAP members. Survey data between the two groups were very similar. Data from both societies are shown on this form.

CAP's expert panel reviewed the survey and developed its recommendations. The expert panel included CAP's CPT/RUC Workgroup, an ASC representative, and other representatives from general and academic pathology practice settings. The expert panel reviewed the survey results from the 194 respondents and compared the recommended RVW, time and intensity/complexity of 88112 to the key reference service (88104) and other pathology codes such as 88173 - Cytopathology, evaluation of fine needle aspirate; interpretation and report.

The median RVW was 0.70 and a survey median time of 15 minutes. The expert panel felt the survey respondents appropriately estimated the physician work at an RVU of 0.70, with the change in the typical specimen, and the physician time considering the change in the survey instrument (elimination of the pre and post work). With 194 respondents, CAP and ASC experts agreed that the survey statistics are very good and reflect the physician work and time of 88112.

Panel members agreed that the median RVW and time, as reflected in the robust survey results, accurately reflects the physician work involved in 88112. The expert panel did feel that the survey respondents had underestimated the intensity of the work in the current survey in comparison with the reference code, and thus recommend the median value of 0.70 RVUs. The expert panel concluded that given the robustness of the survey, the survey median RVU of 0.70 accurately reflects the relative value of the service.

During the development of our recommendation, the expert panel also reviewed the survey results and compared the physician work to previously RUC valued services which include:

1. 77057 -Screening mammography, bilateral (2-view film study of each breast) (Work RVU = 0.70, RUC Reviewed – April 2002, Total time = 12 minutes, 5 intra – XXX day global)

2. 76815 - Ultrasound, pregnant uterus, real time with image documentation, limited (eg, fetal heart beat, placental location, fetal position and/or qualitative amniotic fluid volume), 1 or more fetuses (April 2002 RUC reviewed, 0.65 RVW, with 15.5 total time, XXX day global).
3. 20552 - Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s) ( Work RVU = 0.66, RUC Reviewed- April 2002, 13.5 minutes total time.000 day global.
4. 67820 – Correction of trichiasis; epilation, by forceps only (Work RVU = 0.71, RUC Reviewed – August 2005, total time= 15 minutes, 000 day global
5. 99231 - Subsequent hospital care, per day, for the evaluation and management of a patient,... (RUC Reviewed Feb 2006, 0.76 RVW, 10 minutes intra, 20 minutes total time, XXX day global)
6. 76817 - Ultrasound, pregnant uterus, real time with image documentation, transvaginal (RUC Reviewed April 2002, 0.75 RVW, 10 intra, 23 total time, XXX day global)

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 88112

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Sometimes

Specialty Independent laboratory                      How often? Sometimes

Specialty Urology                      How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 2026790

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents approximately 50% of the total utilization. Medicare 2011 global utilization - RUC Database 2013 v1, multiplied by two.

Specialty Pathology	Frequency 950767	Percentage 46.90 %
Specialty Independent laboratory	Frequency 911042	Percentage 44.94 %
Specialty Urology/other	Frequency 164981	Percentage 8.14 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,013,395 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare 2011 global utilization - RUC Database 2013 v1

Specialty Pathology	Frequency 475384	Percentage 46.91 %
Specialty Clinical Laboratory	Frequency 455521	Percentage 44.94 %
Specialty Urology/other4	Frequency 82490	Percentage 8.13 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 88112

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Scott Manaker, M.D., Ph.D.  
Chair, Practice Expense Subcommittee  
AMA/Specialty Society Relative Value Update Society  
American Medical Association  
515 North State Street  
Chicago, IL 60654

RE: Current Direct Practice Expense Equipment Inputs - 88112

Dear Doctor Manaker;

While preparing the College of American Pathologists (CAP) practice expense recommendation for CPT code 88112 - *Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal* we noticed an obvious error in the CMS' existing direct practice expense inputs file. The CAP believes this is an important error that should be recognized and understood by the practice expense subcommittee and the RUC. This error may exist with other CPT codes.

You recall that for RUC practice expense recommendations made prior to CPT 2011, the equipment time elements for each equipment item on the practice expense recommendations were determined by CMS staff. The RUC had simply indicated that the equipment was typically used by placing a numerical "1" or "X" on the recommendation spreadsheet or template to indicate the typical use of that equipment item. At its April 2010 meeting, the RUC's practice expense subcommittee discussed and made its recommendation to the RUC for the more detailed equipment recommendation using minutes. This process change was approved by the RUC at the same meeting and specialties now provide the actual number of minutes that the equipment item is used for each service.

The error that currently exists is within CMS' equipment direct practice expense inputs file for 88112. All equipment items for this service are shown as being used for one minute. This is clearly a data input error as it is impossible to perform this service using all of the equipment items for only one minute. Below is the original equipment practice expense RUC recommendation for 88112 which demonstrates the way the RUC previously recommended equipment use to CMS (column 3 labeled "No. of units in practice").

Table from the RUC's 2003 88112 recommendation to CMS

HCFA's Equipment Code*	Procedure Specific Medical Equipment	No. of units in practice	Cost Estimate and Source (if applicable)
No Code	Biohazard hood	1	
E13601	Microscope, compound	1	
E13642	Robotic cover slipper	1	
E13645	Slide etcher	1	

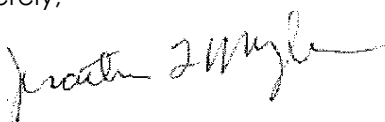

## College of American Pathologists

E13648	Vortex mixer	1	
E13657	Cytology ThinPrep™ Processor	1	
E13644	Slide dryer oven	1	
E13649	Tissue processing fume hood	1	
E91003	Ventilator hood & blower	1	
E13643	Routine Pap stainer	1	

The CAP appreciates the opportunity to correct this error with the refinement of the all of the direct practice expense inputs for 88112 at the April 2013 RUC meeting.

If you have any questions or concerns, please contact, Todd Klemp, Assistant Director of Economic and Regulatory Affairs at (847) 832-7403 or tklemp@cap.org.

Sincerely,

Jonathan L. Myles, MD, FCAP  
RUC Advisor  
College of American Pathologists

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal

(Do not report 88112 with 88108)

Global Period: XXX Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:  
Individuals with expertise in this service were consulted through a series of conference calls in order to develop the typical practice expense inputs. CAP's expert panel reviewed and compiled PE inputs and made adjustments to the clinical labor, supplies, and equipment. These inputs were further refined with individual pathologists who perform this service.
2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: Current direct inputs for 88112 were used as a reference.
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: None greater than standards
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:
  - Clinical Labor - The total clinical labor time recommended represents a decrease of 22.50 minutes (-38%)
  - Medical Supplies - The typical laboratory processes have changed to reflect greater clinical accuracy and efficiencies, and therefore the array of medical supplies has changed and current input quantities have either decreased or remained the same.
  - Equipment – Current CMS equipment time was incorrectly entered into CMS direct inputs database in 2003. The number of units were entered (1) instead of minutes. At that time the number of minutes for each equipment item were not compiled as they are today. In 2003, PEAC recommendations for equipment were only listed as typically used and the minutes were compiled by CMS. The equipment time minutes currently in CMS' database are clearly in error. Typical time for each equipment item is clearly stated on the spreadsheet.
5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

**CPT Code: 88112**

**Specialty Society('s) \_\_ College of American Pathologists**

The laboratory technician handles the ordering, restocking, and distribution of specimen containers with requisition forms. A technician also accession the specimen in laboratory information system including the following: Unwrapping and/or remove specimen bottle and requisition slip from plastic bag. Check demographics to ensure they are correct and to ensure proper billing. Check requisition slip against bottle to see if patient name and/or specimen location (s) match each other. Distribute requisition form and specimen to grossing station. Then describes and documents the grossing of the specimen in laboratory information system.

A histotechnologist processes specimen for slide preparation (includes centrifuging, monolayer preparation, slide quality control function, maintaining specimen tracking, logs and labeling). Specifically, during this step, the histotechnologist centrifuges specimen; hand label filters and centrifuge tubes; pour off supernatant; add cytolyte to centrifuge tube; vortex 5 sec; pour specimen into container; hand label purchased slides (paper label will not survive); remove lid from slide capture container; load specimen on processor; load non-gyn filter; load slide; hit start; (2-3 min); remove slide from slide capture container and put in stain rack; clean filter cap with kimwipes; print labels and add label to slide prior to staining, cover slipping.

In addition the histotechnologist then prepares the automated stainer with solutions and loads microscopic slides and sets and confirms the stainer program.

A histotechnologist also prepares the automated coverslipper, removes the slides from stainer and places them on automated coverslipper.

A cytotechnologist confirms the patient ID, organizes work for pathologist, verifies and reviews the specimen/patient history. The cytotechnologist also enters the screening diagnosis in laboratory information system, and completes the workload recording logs and assembles and delivers slides with paperwork to pathologist.

Intra-Service Clinical Labor Activities:

No Clinical Labor Activities

Post-Service Clinical Labor Activities:

A laboratory technician prepares, packs, and transports slides and records for in-house storage and external storage (where applicable). A laboratory technician also disposes of and/or stores remaining specimens, spent chemicals/other consumable, and hazardous waste. A laboratory technician cleans room/grossing area/equipment following procedure (including any equipment maintenance that must be done after the procedure). The laboratory technician also recycles the xylene from the stainer.

A cytotechnologist manages any relevant utilization review/quality assurance activities and regulatory compliance documentation.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request Final Rule for 2013*

April 2013

**In Situ Hybridization**

For the NPRM for 2012, CMS received comments that unlike the new FISH codes for urinary tract specimens (88120 and 88121), the existing codes (88365-88368) still allow for multiple units of each code as these codes are reported per probe. CMS stated that they reviewed the current work and practice expense (PE) costs associated with 88120 and 88121 and agree at this time that they are accurate. However, the first 6 months of 2011 claims data were shared with the RUC and CMS requests that additional review of these data be considered to determine if further action is warranted. CMS requested that the RUC review both the direct PE inputs and the work values for codes 88365, 88367 and 88368. The RUC determined that these services should be tabled until January 2012 in order to review 2011 diagnosis claims data from CMS. In January 2012, the RUC reviewed 2011 diagnosis claims data, and the American College of Pathologists indicated that they will develop a CPT Assistant article to direct physicians to use the new FISH codes for urinary tract infections (CPT codes 88120 and 88120). The RUC indicated that the specialty should specify the number of probes utilized for these services in the CPT Assistant article. The RUC recommended that it re-review codes 88365, 88367 and 88368 in 1 year after 2012 utilization is available (January 2013). The RUC agreed with the specialty society to maintain current values, but also recommended reviewing 3 more years of data for CPT codes 88120 and 88121 to determine if utilization has shifted from 88365, 88367 and 88368 to these codes. The RUC recommended resurveying the work and develop PE inputs for 88365, 88367 and 88368 for review at the April 2013 RUC meeting.

In April 2013, the College of American Pathologists (CAP) noted that while preparing to survey these services they discovered that the vignette for 88365 required revision. Additionally, the code descriptors for 88365, 88367 and 88368 required revision to describe the typical practice of these services, such as specifying each separately identifiable antibody, cytologic preparation or hematologic smear as was revised in the recent immunohistochemistry services. **The RUC recommends that CPT codes 88365, 88367 and 88368 be referred to the CPT Editorial Panel for revision.**

<b>CPT Code (●New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
88365	In situ hybridization (eg, FISH), each probe  (Do not report 88365 in conjunction with 88367, 88368 for the same probe)	XXX	Referral to CPT Editorial Panel
88367	Morphometric analysis, in situ hybridization (quantitative or semi-quantitative) each probe; using computer-assisted technology	XXX	Referral to CPT Editorial Panel
88368	manual  (For morphometric in situ hybridization evaluation of urinary tract cytologic specimens, see 88120, 88121)	XXX	Referral to CPT Editorial Panel

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedural Codes Screen and CMS Request: Final Rule for 2013*

April 2013

**Psychotherapy for Crisis and Interactive Complexity**

Specific psychotherapy codes were identified through the CMS High Expenditure Procedural codes screen. However, the specialties were already in the process of revising this entire section as indicated from the Fourth Five-Year Review. In April 2012, the specialty societies indicated and the RUC agreed that codes 90785, 90839 and 90840 be carrier priced to allow for education and experience with a significantly different coding structure. This would allow providers to gain experience with the codes prior to conducting a RUC survey. After a year of experience with the new coding structure the specialties would conduct RUC surveys for these services for review of work and direct PE inputs at the April 2013 RUC meeting. In the Final Rule for 2013 CMS assigned interim values to the new psychotherapy codes and indicated that they will re-review all assumptions when they review all recommended values for this family of CPT codes. CMS requested review of the psychotherapy for crisis and interactive complexity codes prior to a review of the work and practice expense of all the new psychology codes. **The RUC reaffirms its April 2012 recommendations for the new psychotherapy codes. The RUC requests that CMS review all the psychotherapy services (all recommendations attached) for consideration in 2014.**

The psychotherapy for crisis codes are timed codes for patients whose presenting problems are typically life threatening and require immediate attention so the crisis is diffused and the safety of the patient and/or others is restored. CPT code 90785 *Interactive complexity* may not be reported with the psychotherapy for crisis codes.

**90839 Psychotherapy for crisis; first 60 minutes**

The RUC reviewed the survey data from 60 adult and child psychiatrists, psychologists and social workers for CPT code 90839 and determined that the median survey work RVU of 3.13 appropriately accounts for the work required to perform this service. The RUC determined that the survey median of 10 minutes pre-service, 60 minutes intra-service and 20 minutes immediate post-service time is appropriate to perform this service. The RUC compared the surveyed code to specialty society survey key reference code 99215 *Evaluation and Management Office Visit* (work RVU = 2.11 and 35 minutes intra-service time) and determined that 90839 requires significantly more time to complete (25 minutes more intra-time), and therefore appropriately requires more physician work to perform. For additional support, the RUC also compared the surveyed service to similar services 99205 *Evaluation and Management office visit, new patient* (work RVU = 3.17 and 45 minutes intra-service time) and 99235 *Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date* (work RVU = 3.24 and 50 minutes intra-service time). The RUC also noted that RUC recommended services 90791 *Psychiatric diagnostic*

*evaluation* (RUC recommended work RVU = 3.00) and 90792 *Psychiatric diagnostic evaluation with medical services* (RUC recommended work RVU = 3.25) require similar work and the same physician times (10 minutes pre-service, 60 minutes intra-service and 20 minutes immediate post-service time). The RUC determined that the recommended physician work and time place this service in the proper rank order relative to codes in the psychotherapy family and other services on the physician payment schedule. **The RUC recommends a work RVU of 3.13 for CPT code 90839.**

**90840 Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)**

The RUC reviewed the survey data from 60 adult and child psychiatrists, psychologists and social workers for CPT code 90840 and determined that the survey 25<sup>th</sup> percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC determined that 30 minutes intra-service time is appropriate to perform this service. The RUC compared the surveyed code to key reference code 99355 *Prolonged service in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes* (work RVU = 1.77) and determined that 90840 requires similar physician work to perform. For additional support, the RUC also compared the surveyed service to similar service 99215 *Evaluation and Management office visit, established patient* (work RVU = 1.50 and 40 minutes total time) and RUC recommended services 90832 *Psychotherapy, 30 minutes with patient and/or family member* (RUC recommended work RVU = 1.50) and 90833 *Psychotherapy, 30 minutes with patient and/or family member when performed with an evaluation and management service (List separately in addition to the code for primary procedure)* (RUC recommended work RVU = 1.50) and determined that the recommended physician work and time place this service in the proper rank order relative to other services. Finally, the RUC noted that the recommendation for this add-on procedure is accurately valued slightly less than half of the base procedure, 90839, given that 90840 requires half the intra-service time as the base code and does not include any pre-service or immediate post-service work. **The RUC recommends a work RVU of 1.50 for CPT code 90840.**

**90785 Interactive complexity (List separately in addition to the code for primary procedure)**

CPT code 90785 was created to capture additional work that occurs during diagnostic psychiatric evaluation, psychotherapy, psychotherapy performed with an Evaluation and Management service and group psychotherapy sessions. CPT 90785 may only be reported once with one of the nine codes for the aforementioned services. If 90785 is conducted with group therapy it would be reported with only the individual patients that require this additional complexity, not necessarily all patients in the group. This service may not be reported with the psychotherapy for crisis codes or in conjunction with an E/M service when no psychotherapy service is reported.

CPT code 90785 replaces a series of procedures under the old framework describing play services or services that required an interpreter or translator. The new interactive complexity service refers to specific communication factors that complicate the delivery of a psychiatric/psychotherapy procedure. Common factors include more difficult communication with discordant or emotional family members and engagement of young or underdeveloped patients. The interactive complexity code is intended to only capture the increased intensity of work performed and capture post-service time. The RUC noted that this interactive complexity code was created because the CPT Editorial Panel

recognized this as a frequent scenario seen in this specialty, and constant use of a -22 *Increased procedural services* modifier would create an administrative burden. CPT code 90785 replaces a series of add-on codes such as 90802 *Interactive psychiatric diagnostic interview examination using play equipment, physical devices, language interpreter, or other mechanisms of communication* (deleted service), which included interactive complexity, that was not used routinely, but more commonly with children.

The RUC reviewed the survey data from 116 adult and child psychiatrists, psychologists and social workers for CPT code 90785 and determined that the survey 25<sup>th</sup> percentile work RVU of 0.33 appropriately accounts for the physician work to perform this service. The RUC noted that the survey median immediate post-service time of 16 minutes to perform this interactive complexity service was overestimated, therefore the RUC recommends the survey 25<sup>th</sup> percentile of 11 minutes, all reflected in the post-service period. The RUC compared 90785 to the similar services MPC and ZZZ code 95874 *Needle electromyography for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure)* (work RVU = 0.37 and total time of 20 minutes); 36400 *Venipuncture, younger than age 3 years, necessitating the skill of a physician or other qualified health care professional, not to be used for routine venipuncture; femoral or jugular vein* (work RVU = 0.38 and total time of 20 minutes); and 36405 *Venipuncture, younger than age 3 years, necessitating the skill of a physician or other qualified health care professional, not to be used for routine venipuncture; scalp vein* (work RVU= 0.31 and total time of 18 minutes) and determined that the recommended physician work and time places this service in the proper rank order relative to other services. **The RUC recommends a work RVU of 0.33 for CPT code 90785.**

#### Practice Expense

The RUC reviewed the direct practice expense inputs submitted by the specialty societies and recommends no modifications.

CPT Code (•New)	CPT Descriptor	Global Period	Work RVU Recommendation
90839	Psychotherapy for crisis; first 60 minutes	XXX	3.13

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90839	Tracking Number	Original Specialty Recommended RVU: <b>3.27</b>
		Presented Recommended RVU: <b>3.13</b>
Global Period: XXX		RUC Recommended RVU: <b>3.13</b>

CPT Descriptor: Psychotherapy for crisis; first 60 minutes

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Psychotherapy for crisis with young adult who has been seen in psychotherapy for depression and is now severely depressed and distraught. The patient expresses suicidal ideation with an imminent plan.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Triage crisis contact (phone, walk-in, etc.), either through direct qualified healthcare professional contact or through office staff as intermediary; adjust schedule to accommodate emergent visit; review patient records prior to visit.

Description of Intra-Service Work: Review with the patient interval history, including stressors, compliance with psychotherapy assignments, compliance with prescribed medications and assess use of substances. Discuss relevant risk factors for suicide/homicide. Conduct examination, assess current emotional state, assess current emotional risk factors for suicide/homicide (plan, means, safety plan, etc), as well as protective factors (religious prohibitions, supports available, etc.). Assess competence of individual's decision-making and ability to follow through with decisions. A standardized screening tool may be administered, if indicated. Consider safety and other determinants for psychotherapeutic intervention and safety planning as well as discussion and consideration of hospitalization and review rationale, risks, benefits and alternatives for plan. Offer recommendations, maintain patient safety during the session, discussion of follow-up services with family, including possible hospitalization or involuntary commitment petition. Involve significant others during intervention as necessary (could be at any or all of the above intervention points).

Description of Post-Service Work: Complete mandated paperwork as necessary. Document services and coordinate care with patient's other health care professionals, as appropriate, including phone calls and making arrangements for disposition.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
99327	XXX	3.46	RUC Time	42,638

CPT Descriptor 1 Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
99337	XXX	3.58	RUC Time	209,629

CPT Descriptor 2 Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent with the patient and/or family or caregiver.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99220	XXX	3.56	RUC Time

CPT Descriptor Initial observation care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission to "observation status" are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code: 19      % of respondents: 31.6 %**

<b><u>TIME ESTIMATES (Median)</u></b>	<b>CPT Code: 90839</b>	<b>Key Reference CPT Code: 99215</b>	<b>Source of Time RUC Time</b>
Median Pre-Service Time	10.00	5.00	
Median Intra-Service Time	60.00	35.00	
Median Immediate Post-service Time	20.00	15.00	
Median Critical Care Time	0.0	0.00	
Median Other Hospital Visit Time	0.0	0.00	
Median Discharge Day Management Time	0.0	0.00	
Median Office Visit Time	0.0	0.00	
Prolonged Services Time	0.0	0.00

<b>Median Total Time</b>	<b>90.00</b>	<b>55.00</b>	
<b>Other time if appropriate</b>			

**INTENSITY/COMPLEXITY MEASURES (Mean)**      **(of those that selected Key Reference code)**

**Mental Effort and Judgment (Mean)**

The number of possible diagnosis and/or the number of management options that must be considered	3.79	3.50
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.58	3.61
Urgency of medical decision making	4.89	3.83

**Technical Skill/Physical Effort (Mean)**

Technical skill required	4.21	3.56
Physical effort required	2.53	2.17

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	4.68	3.61
Outcome depends on the skill and judgment of physician	4.47	3.83
Estimated risk of malpractice suit with poor outcome	4.05	3.00

**INTENSITY/COMPLEXITY MEASURES****CPT Code****Reference  
Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	2.74	2.41
Intra-Service intensity/complexity	4.58	4.06
Post-Service intensity/complexity	4.05	3.00

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background and CPT Definition**

90839 is a new CPT code, describing work that was not previously identified by a separate CPT code. Introductory language in CPT states:

*“Psychotherapy for crisis is an urgent assessment and history of a crisis state, a mental status exam, and a disposition. The treatment includes psychotherapy, mobilization of resources to defuse the crisis and restore safety, and implementation of psychotherapeutic interventions to minimize the potential for psychological trauma. The presenting problem is typically life threatening or complex and requires immediate attention to a patient in high distress.”*

The service is billed based on the total duration of the face-to-face time with the patient and/or family and the patient must be present for all or some of the service. The physician or other qualified Health care professional must devote his or her full attention to the patient during this visit and cannot provide services to any other patients during the same period of time.

**Survey process**

The American Psychiatric Association (APA), American Academy of Child and Adolescent Psychiatry (AACAP), American Psychological Association Practice Organization (APAPO), and National Association of Social Workers (NASW): conducted a random survey of 90839. Each society sent surveys to roughly five hundred of their member psychiatrists (APA and AACAP members), psychologists (APAPO members) and clinical social workers (NASW members).

At the suggestion of the Research Subcommittee, one reference service list was developed and approved for use with CPT 90839, 90840, and 90785. Modifications to the survey tool were also approved by the research committee, primarily consisting of changes related to the provider types for clarity to the different provider types taking the survey.

**Analysis and recommendations from the expert panel**

The specialty societies convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the number of responses, the typicality of the vignette and the service performance rate. Of the 60 survey respondents, 85 percent found the vignette to be typical. The panel believes that the performance rate is reasonable in that this is a service that would not be reported frequently unless the focus of the practice was on crisis care. The expert panel believes that psychologists and clinical social workers will be reporting the large majority of these CPT codes. While psychiatrists will be using this on occasion (we project 6 percent of the time), the panel

believes that psychiatrists will be more likely to bill this encounter using an evaluation and management code along with a psychotherapy add-on code. There were a number of individuals who indicated they had not performed the service within the past year (entered 0 for performance rate of survey code). Attached with the typical RUC summary format we have provided the “perform” versus “did not perform” on the total data set. In general, those who reported they did not perform the service valued it lower than those who stated they did perform the service and therefore were familiar with it. Staff from NASW noted that a number of the randomly selected survey participants contacted them by email or phone to decline from participating in the survey process. The most frequently cited reasons for not completing the survey were: there were no codes on the RSL they were familiar with or billed; they had a financial conflict as owners of their practice; and they were not familiar enough with the new codes to adequately respond to the questions being asked, since it was a new CPT code. The expert panel agreed to keep the survey open a week longer than anticipated to allow NASW to send reminders in hopes to get the volumes from these providers more in line with the projected utilization by specialty. This extension yielded a few more responses from the clinical social workers, not, however, enough to satisfy the expert panel. Therefore, the expert panel requested another analysis be run using the weighted projections of 6 percent psychiatrists, 47 percent psychologists, and 47 percent clinical social workers. Those values are provided in the RUC summary format with this submission.

### Time

The expert panel reviewed the survey times and agreed the median survey times of 10 minutes pre-service, 60 minutes of intra-service, and 20 minutes of post-service time appropriately represent the time for the service. The pre-service time includes speaking to the patient and/or family, arranging for an emergency appointment, and reviewing the patient’s medical record. The intra-service time includes time spent evaluating the patient including assessing risk factors and competence, consider safety and risks, benefits and treatment options (including hospitalization when appropriate). Work includes maintaining the safety of the patient while making arrangements and involving others as necessary. Face-to-face time during the intra service period includes time with the patient and time with family member(s) and does not include time spent coordinating care when neither the patient nor the family are present. The post-service time of 20 minutes includes arranging for further services (e.g., hospitalization, contact with the police regarding an involuntary commitment), other necessary phone calls and documenting the encounter. This work is typically performed by the physician or other qualified health care professional due to a lack of clinical staff support.

### RVW

Thirty-one percent of the survey respondents chose 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family, (5, 35, 15; RVW 2.11)* with a total time of 55 minutes, as the key reference service (99205 was the second most chosen reference service with 23% selecting that code). In addition to a significantly longer total time, a review of the intensity and complexity measures shows that the respondents found the surveyed code to be greater in intensity/complexity for all of the areas of comparison except for one (amount/complexity of data for review). The differential was greatest for the measure tied to urgency of decision making and risk of complications, morbidity and mortality. Patients seen for crisis services are in acute distress requiring decision making at a high level. These patients are unstable and often require admission to a hospital (at times involuntarily) or the implementation of a safety plan that includes coordination with family or others. The expert panel agrees that the time and intensity of the work is greater for the 90839 than that of the 99215.

In looking at other services the expert panel compared the surveyed code to 99337, *Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically 60 minutes are spent with the patient and/or family or caregiver (15, 60, 20; RVW 3.58)*, which is similar in time and intensity. Additional comparisons were made to 99220, *Initial observation care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of*

*the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission to "observation status" are of high severity. Typically 70 minutes are spent at the bedside and on the patient's hospital floor or unit (15, 45, 15; 3.56) and to 99327, Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically 60 minutes are spent with the patient and/or family or caregiver (15, 60, 25; RVW 3.46). The expert panel agreed both of these comparison services are similar in time and intensity to the surveyed code 90839, therefore supporting a value higher than the unweighted median value. All three of the comparison codes describe services provided to patients presenting with problems that are of high severity and require urgent attention.*

## Recommendation

**In summary, based on comparisons to the key reference code, MPC codes, and other reference codes, we recommend the median RVW of 3.13, and median times of 10 minutes pre-, 60 minutes intra-, and 20 minutes post-time for a total time of 90 minutes for the 90839.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code is a base code for the 90840 add-on code; there is insufficient experience to know how frequently the 90839 will be billed with the 90840. Both codes are being reviewed at this meeting. The following table provides information based on the specialty societies recommended values:

CPT code	Global	Rec RVW	Pre	Intra	Post
90839	XXX	3.27 10 min	60 min	20 min	
90840	ZZZ	1.97 0 min	30 min	0 min	
Combined service		5.24 10 min	90 min	20 min	

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This was likely reported previously as a 90808, 90809 or a 99215

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Commonly

Specialty Social Work

How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 9588

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This was based on the previous utilization using the Medicare claims data and adjusting for the volume of non-Medicare services.

Specialty Psychiatry	Frequency 576	Percentage 6.00 %
Specialty Psychology	Frequency 4507	Percentage 47.00 %
Specialty Social Work	Frequency 4507	Percentage 47.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,196

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This was based on the previous utilization using the Medicare claims data

Specialty Psychiatry	Frequency 192	Percentage 6.00 %
Specialty Psychology	Frequency 1503	Percentage 47.02 %
Specialty Social Work	Frequency 1503	Percentage 47.02 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90837

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90840	Tracking Number	Original Specialty Recommended RVU: <b>1.97</b>
		Presented Recommended RVU: <b>1.50</b>
Global Period: ZZZ		RUC Recommended RVU: <b>1.50</b>

CPT Descriptor: Psychotherapy for crisis, each additional 30 minutes (List separately in addition to code for primary service)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Psychotherapy for crisis with young adult who has been seen in psychotherapy for depression and is now severely depressed and distraught. The patient expresses suicidal ideation with an imminent plan. Patient disclosed late in the session they had been sexually assaulted recently.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work: (captured in primary procedure)**

Description of Intra-Service Work: Continuation of 99239 intra-service work until resolution achieved. Review with the patient interval history, including stressors, compliance with psychotherapy assignments, compliance with prescribed medications and assess use of substances. Discuss relevant risk factors for suicide/homicide. Conduct examination, assess current emotional state, assess current emotional risk factors for suicide/homicide (plan, means, safety plan, etc), as well as protective factors (religious prohibitions, supports available, etc.). Assess competence of individual's decision-making and ability to follow through with decisions. A standardized screening tool may be administered, if indicated. Consider safety and other determinants for psychotherapeutic intervention and safety planning as well as discussion and consideration of hospitalization and review rationale, risks, benefits and alternatives for plan. Offer recommendations, maintain patient safety during the session, discussion of follow-up services with family, including possible hospitalization or involuntary commitment petition. Involve significant others during intervention as necessary (could be at any or all of the above intervention points).

**Description of Post-Service Work: (captured in primary procedure)**

Intra-Service intensity/complexity	4.57	4.57
------------------------------------	------	------

Post-Service intensity/complexity	0.00	0.00
-----------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

CPT 90840 is a new add-on code similar to the prolonged service code that captures additional time when providing extension services. This code is billed beginning at the 75<sup>th</sup> minute of the extended service. The 90839 and 90840 are billed on the total time of the face-to-face portion (with patient and/or family members) of the visit and the patient must be present for all or some of the service. The physician or other qualified health care professional must devote his or her full attention to the patient during this visit and cannot provide services to any other patients during the same period of time.

### **Survey process**

The American Psychiatric Association (APA), American Academy of Child and Adolescent Psychiatry (AACAP), American Psychological Association Practice Organization (APAPO), and National Association of Social Workers (NASW): conducted a random survey of 90840. All societies sent surveys to roughly five hundred each randomly selected psychiatrists (APA and AACAP members), psychologists (APAPO members) and clinical social workers (NASW members).

At the suggestion of the research subcommittee, one reference service list was developed and approved for use with CPT 90839, 90840 and 90785. Modifications to the survey tool were also approved by the research committee, primarily consisting of changes related to the provider types for clarity to the different provider types taking the survey.

### **Analysis and recommendations from the expert panel**

The specialty societies convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the number of responses, the typicality of the vignette and the service performance rate. Of the 60 survey respondents, 82 percent found the vignette to be typical. The panel believes that the performance rate is reasonable in that the primary service is one that would not be reported frequently and this add-on even less so. The expert panel believes that psychologists and clinical social workers will be reporting the large majority of these CPT codes. While psychiatrists will be using this on occasion (we project 6 percent of the time), the panel believes that psychiatrists will be more likely to bill this encounter using an evaluation and management code along with a psychotherapy add-on code. There were a number of individuals who indicated they had not performed the service within the past year (entered 0 for performance rate of survey code). As with the 90839 service, attached with the typical RUC summary format we provided the “perform” versus “did not perform” on the total data set. In general, those who reported they did not perform the service valued it lower than those who stated they did perform the service and therefore were familiar with it. Therefore, the expert panel requested another analysis be run using the weighted projections of 6 percent psychiatrists, 47 percent psychologists, and 47 percent clinical social workers. Those values are provided in the RUC summary format with this submission.

### **Time**

The expert panel reviewed the survey times and agreed the median survey times of 0 minutes pre-service, 30 minutes of intra-service, and 0 minutes of post-service time appropriately represent the time for this extension service to 90839, when performed.

### **Recommendation**

**In summary, based on comparisons to the reference code and other services, we recommend the 25<sup>th</sup> percentile RVW of 1.50, and median times of 0 minutes pre, 30 minutes intra, and 0 minutes post time for a total time of 30 minutes for the 90840.**

## **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code is an add-on code that is reported with 90839 to report time beyond the first hour (beginning on the 75<sup>th</sup> minute). There is insufficient experience to know how frequently the 90839 will be billed with the 90840. Both codes are being reviewed at this meeting. The following table provides information based on the specialty societies recommended values:

CPT code	Global	Rec RVW	Pre	Intra	Post
90839	XXX	3.27 10 min	60 min	20 min	
90840	ZZZ	1.97 0 min	30 min	0 min	
Combined service		5.24 10 min	90 min	20 min	

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This was likely reported as a 90808, 90809 or a 99215

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Commonly

Specialty Social Work                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 3198

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the previous utilization using the Medicare claims data and adjusting for the volume of non-Medicare services.

Specialty Psychiatry	Frequency 192	Percentage 6.00 %
Specialty Psychology	Frequency 1503	Percentage 46.99 %
Specialty Social Work	Frequency 1503	Percentage 46.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,066

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the previous utilization using the Medicare claims data.

Specialty Psychiatry	Frequency 64	Percentage 6.00 %
Specialty Psychology	Frequency 501	Percentage 46.99 %
Specialty Social Work	Frequency 501	Percentage 46.99 %

Do many physicians perform this service across the United States? Yes

---

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90833

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90785	Tracking Number	Original Specialty Recommended RVU: <b>0.33</b>
		Presented Recommended RVU: <b>0.33</b>
Global Period: ZZZ		RUC Recommended RVU: <b>0.33</b>

CPT Descriptor: Interactive complexity (List separately in addition to the code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey:

1. Psychotherapy for an older elementary school-aged child accompanied by divorced parents, reporting declining grades, temper outbursts, and bedtime difficulties. Parents are extremely anxious and repeatedly ask questions about the treatment process. Each parent continually challenges the other's observations of the patient.
2. A widowed white male presents for an evaluation of depressed mood and new onset of memory and other cognitive disturbance which makes you question his decision making capacity. He comes to the office with two of his children, a daughter who lives close by and a son who lives at some distance and visits infrequently. He requests they both be present during the interview. Throughout the interview the son and daughter become angry and upset with each other, often providing contradictory history and disrupting the flow of the interview. Additional effort is required to obtain an accurate history and to control the emotional tone of the interview.
3. A widow who suffers from chronic mild to moderate depression and anxiety is being seen for psychotherapy. She struggles with her increasing physical limitations and is contemplating a move into an Assisted Living Facility. During the course of the current visit the patient discloses information that clearly indicates she has recently been the victim of elder abuse by a neighbor. You spend additional effort discussing your obligations under state statutes to report this as elder abuse and initiate this process.
4. Follow-up visit for 4 year old established patient with ADHD, severe oppositional and aggressive behaviors on stimulant. Mother reports mild improvement but oppositional and aggressive behaviors persist. Parents are more consistent with behavioral program. Psychotherapy using therapeutic games is provided to the child to teach cooperative behaviors.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Description of Intra-Service Work: Increased intensity of work is performed in order to manage the anxiety, maladaptive communications, emotional reactivity and conflict of the other participants present during the session with active and repeated redirection back to focus on the treatment of the patient's symptoms, strengths, deficits, and treatment needs. Engage the patient through therapeutic play which requires additional work and skills, when play therapy is provided

Description of Post-Service Work: Document the nature of the interactive work, communicate with participants and others between sessions to ensure treatment plan is implemented. Put away play materials, when play therapy is provided.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**See Attachments C and D for the 9 code comparisons of the intensity complexity measures. Attachment C is the 2013 survey data; attachment D is the 2012 survey data.**

### **CPT Background**

Interactive complexity (IC) is a new/revised service, which in some instances was previously reported using the following stand-alone codes: Interactive psychiatric diagnostic interview examination (90802); Individual psychotherapy, interactive in the office setting (90810, 90811, 90812, 90813, 90814, 90815); Individual psychotherapy, interactive in the inpatient setting (90823, 90824, 90826, 90827, 90828, 90829); and Interactive group psychotherapy (90857). The new IC add-on code can be used along with the following primary procedures: diagnostic evaluation codes (90791, 90792), the psychotherapy XXX and ZZZ codes (90832-90838) and the group psychotherapy code (90853). Its definition of work has been expanded from that of the previously reported stand-alone codes.

### ***From CPT 2013***

Interactive complexity refers to specific communication factors that complicate the delivery of a psychiatric procedure. Common factors include more difficult communication with discordant or emotional family members and engagement of young and verbally undeveloped or impaired patients. Typical patients are those who have third parties, such as parents, guardians, other family members, interpreters, language translators, agencies, court officers, or schools involved in their psychiatric care.

These factors are typically present with patients who:

- Have other individuals legally responsible for their care, such as minors or adults with guardians, or
- Request others to be involved in their care during the visit, such as adults accompanied by one or more participating family members or interpreter or language translator, or
- Require the involvement of other third parties, such as child welfare agencies, parole or probation officers, or schools.

Psychiatric procedures may be reported “with interactive complexity” when at least one of the following is present:

1. The need to manage maladaptive communication (related to, e.g., high anxiety, high reactivity, repeated questions, or disagreement) among participants that complicates delivery of care.
2. Caregiver emotions or behavior that interferes with the caregiver’s understanding and ability to assist in the implementation of the treatment plan.
3. Evidence or disclosure of a sentinel event and mandated report to third party (e.g., abuse or neglect with report to state agency) with initiation of discussion of the sentinel event and/or report with patient and other visit participants.
4. Use of play equipment, other physical devices, interpreter, or translator to communicate with the patient to overcome barriers to therapeutic or diagnostic interaction between the physician or other qualified health care professional and a patient who:
  - Is not fluent in the same language as the physician or other qualified health care professional, or
  - Has not developed, or has lost, either the expressive language communication skills to explain his/her symptoms and response to treatment, or the receptive communication skills to understand the physician or other qualified health care professional if he/she were to use typical language for communication.

### **Survey process**

The RUC Research Subcommittee approved a follow-up modified survey tool to be sent to individuals who had previously participated in the 2012 RUC surveys on the diagnostic and psychotherapy (individual and group) CPT codes. The participants were provided with their 2012 responses to the work RVW estimates for each surveyed code and were asked to provide work RVW recommendation(s) for the same service(s) when IC was added to the primary procedure. From this point forward we will refer to this as the “combined” service. Additionally, participants were asked to select a reference service from the research approved Reference Service List (RSL) keeping in mind the “combined” service and then asked to compare the “combined” service to the RS code chosen.

In addition, the Research Subcommittee approved the inclusion of 4 vignettes: the vignette originally approved by the CPT Editorial panel and three additional vignettes, each one based on a unique instance of IC as described in the CPT introductory language. With Research's approval, an additional question was added asking participants to identify which of the four vignettes would be the most typical IC encounter. Given the recent expansion of what is included in the definition of IC, it was unclear if the typical service was going to continue to be play therapy. Responses to this additional question allowed us to better understand the use of the code.

Finally, the Research Subcommittee approved a revised PowerPoint, consistent with this modified survey tool and approved an AMA proctored webinar, which was recorded and available for participants as they completed the survey.

### Explanation of Data Included in RUC Packet

The table titled "**Attachment A - Psychiatry Family Summary of 2011-2013**" provides information regarding all of the values associated with the codes that have been reviewed and under discussion since 2010. It includes the RUC recommended values from the 2012 survey, the values recommended by the survey participants for each service when it included IC (both the 25<sup>th</sup> percentile and the median) from the 2013 survey, and the interim values assigned by CMS in an effort to maintain budget neutrality for CY 2013. Finally, the table provides information on the RUC approved and CMS interim and final times.

In addition, we have supplied the typical RUC summary, titled "**Attachment B - RUC Summary of 2013 Data with Details**," which includes the total summary information (derived as described below, see note), the total breakdown of responses by physicians/psychologists/clinical social workers, as well as by those who indicated they had performed versus not performed the service in the past year. The tables in attachment B also contain code-by-code details of the 9 primary procedures when performed with IC, and the key reference service code chosen for each code with IC. NOTE: To determine the RVW for add-on code 90785 we took the survey data for the "combined" service (the primary procedure when performed with IC) and then subtracted the 2012 values for the primary procedure to determine the value of the IC for each code. We used the IC values from all 9 primary procedures to determine the median and 25<sup>th</sup> percentile for 90785 noted in Attachment A.

Finally, we have provided summary information on the responses to the intensity and complexity measures for the Key Reference Service chosen for each individual code. We provide the intensity and complexity responses for the 2013 data in **Attachment C** and for the 2012 data in **Attachment D** for comparison. We did not provide intensity and complexity measures for the key reference service selected (99215) since this would blend responses for more than one procedure (psychiatric diagnostic evaluation and psychotherapy services).

### Analysis and recommendations from the expert panel

The societies involved in this survey convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations. A number of tables in addition to the RUC summary table have been developed in an effort to present the information collected through this survey in a clear and concise way. References to specific tables will be made throughout this discussion. To differentiate between survey responses, the years (i.e., 2012, 2013) have been added to the table headers. We will mirror that in the discussion that follows. We have also included CMS's interim values since they have not yet finalized any of the work values and some of the physician time inputs.

The expert panel reviewed the level of participation and responses to the questions about the typical patient and typical type of IC. There were a total of 116 individual respondents. Seventy-nine percent of the respondents found at least one of the vignettes typical. Responses to the follow-up question as to which vignette was typical are displayed in the chart below. Thirty percent of the respondents identified vignette number 2 "caregiver emotions or behavior that interferes with care and the need to manage maladaptive communication" – as typical.

Typical Patient Choice	Response	Percentage
<b>Patient 1:</b> The need to manage maladaptive communication (related to, eg, high anxiety, high reactivity, repeated questions, or disagreement) among participants that complicates delivery of care.	27	23%
<b>Patient 2:</b> Caregiver emotions or behavior that interferes with the caregiver's understanding and ability to assist in the implementation of the treatment plan.	35	30%
<b>Patient 3:</b> Evidence or disclosure of a sentinel event and mandated report to third	19	16%

party (eg, abuse or neglect with report to state agency) with initiation of discussion of the sentinel event and/or report with patient and other visit participants.		
<b>Patient 4:</b> Use of play equipment, other physical devices, interpreter, or translator to communicate with the patient to overcome barriers to therapeutic or diagnostic interaction between the physician or other qualified health care professional and a patient who: <ul style="list-style-type: none"> <li>Is not fluent in the same language as the physician or other qualified health care professional, or</li> <li>Has not developed, or has lost, either the expressive language communication skills to explain his/her symptoms and response to treatment, or the receptive</li> </ul>	10	9%
<b>Total Completed</b>	<b>116</b>	<b>100%</b>

The panel noted that of those respondents who said the vignettes were not typical several did so because the age range differed from their typical patient or they find that more than one IC condition is met during the typical session.

### Time

We included questions regarding pre- and post-service time for this service to better understand the time of the work involved. This add-on code has no separate intra-service time; it describes the increased intensity of the work during the delivery of the primary procedure, not additional intra-service time.

The median pre-service time for all codes (when totaled together, see discussion of the data noted earlier) is 11 minutes and the median post-service time for all codes is 16 minutes. The expert panel agrees with the respondents who said there is additional work beyond that captured in the pre- and post-service work of the primary service. The panel believes that while there may be some pre-service work occurring on occasion (typically with play therapy and the set-up of the materials), it would be typical in each instance of IC to have additional post-service time. This would include additional documentation, and the need for telephone calls between visits with family or others (i.e., schools, police, etc.). **The expert panel therefore supports the median survey post-service time of 16 minutes**, which would account for the additional time necessary to prepare and clean up any play therapy materials as well as the time spent documenting and providing appropriate follow-up care.

### RVW

The expert panel reviewed the survey data from both the 2012 survey data and the 2013 survey data for the “combined” services. They believe the “combined” data from the 2013 survey compared to the previous RUC approved values supports the 2012 RUC recommendations. The expert panel believes the median RVW (2013 survey) value for IC alone of 0.52 is overstated; based on the panel’s expert opinion the 25<sup>th</sup> percentile at 0.33 is more representative of the service. The panel believes that the interim value assigned by CMS of 0.11, which is not based on any survey, understates the work involved.

The panel then reviewed the RUC recommendations for each of the individual codes, comparing the RUC approved value to the 25<sup>th</sup> and median values from the 2013 “combined” survey results. In general, they found either the 25<sup>th</sup> or between the 25<sup>th</sup> and the median supported the RUC recommended values from the 2012 survey. For example, the “combined” results for the 90791 show a service with IC at 3.34 RVWs which is 0.34 more than the RUC approved value of 3.00 RVWs for a service without IC, supporting a value for IC in the 25<sup>th</sup> percentile level. As with averaging of any service there will be some that appear somewhat high and others that are somewhat low, but in general the 0.33 RVW maintains rank order.

The expert panel searched the CPT book to identify services that were the same, yet for another reason, such as age of the patient, the services had separate codes that share the same intra-time and were valued differently. Unfortunately our searches led us to widely different work values for services that did not seem to relate well to the IC service. We remain open to consideration of these types of services as comparisons, however at this point we have none to offer the RUC.

There are no codes in the RUC database with RUC approved values that do not have any intra-service time. There are no codes that have 0 pre, 0 intra, and 16 minutes of post-service time. A review of services with a global ZZZ was too limiting in that most ZZZ services have only intra time or mostly intra time. Therefore, the expert panel expanded our search to global ZZZ, XXX and 000 services that had a similar total time in an effort to assess relativity. For comparison, we offer MPC and ZZZ code 95874, *Needle electromyography for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure)* with an RVW of 0.37 and a total time of 20 minutes and 36400, *Venipuncture, younger than age 3 years, necessitating the skill of a physician or other qualified health care professional, not to be used for routine venipuncture; femoral or jugular vein*; with an RVW of 0.38 and a total time of 20 minutes and 36405, *Venipuncture, younger than age 3 years, necessitating the skill of a physician or other qualified health care professional, not to be used for routine venipuncture; scalp vein* with an RVW of 0.31 and a total time of 18 minutes

### Recommendation

**In summary, based on the comparisons noted, our expert panel, recommends the 25<sup>th</sup> percentile RVW of 0.33 and times of 0 minutes pre, 0 minutes intra, and 16 minutes post time, for a total time of 16 minutes for 90785.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. SEE TABLE TITLED "SERVICES REPORTED WITH MULTIPLE CPT CODES" BELOW THE PLI INFO

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90802, 90810, 90811, 90812, 90813, 90814, 90815, 90823, 90824, 90826, 90827, 90828, 90829, and 90857

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry	How often? Sometimes
Specialty Psychology	How often? Sometimes
Specialty Social Work	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 235047

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the previous utilization using the Medicare claims data and adjusting for the volume of non-Medicare services.

Specialty Psychiatry	Frequency 61113	Percentage 26.00 %
Specialty Psychology	Frequency 56412	Percentage 24.00 %
Specialty Social Work	Frequency 117524	Percentage 50.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

78,349 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This was based on the previous utilization using the Medicare claims data

Specialty Psychiatry	Frequency 20371	Percentage 26.00 %
Specialty Psychology	Frequency 18804	Percentage 24.00 %
Specialty Social Work	Frequency 39175	Percentage 50.00 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90836

April 1, 2013

To: Scott Manaker, MD, Chair, AMA Practice Expense Subcommittee and Sherry Smith

From: American Psychiatric Association (APA), American Academy of Child and Adolescent Psychiatry (AACAP), American Psychological Association Practice Organization (APAPO) and National Association of Social Workers (NASW)

The American Psychiatric Association, the American Academy of Child and Adolescent Psychiatry, the American Psychological Association Practice Organization and the National Association of Social Workers have submitted practice expense (PE) recommendations for CPT codes +90785 (Interactive complexity), 90839 (Psychotherapy for crisis, 60 minutes) and +90840 (Psychotherapy for crisis, each 30 minutes) for the subcommittee's review. These codes are currently carrier priced and are three of the four codes approved by CPT in 2012 that had not yet been valued by the RUC.

The recommendations were developed by an expert panel that consisted of psychiatrists, psychologists and licensed clinical social workers. The recommendations are based on the PE values for psychiatric services that were presented and approved by the RUC in April 2012 as well as the previous PE values for interactive diagnostic and psychotherapeutic services. The recommendations include medical supplies and equipment; there is no clinical labor. We have asked for an increase in the number of tissues on the basis of the nature of the encounter when providing psychotherapy for crisis. Other than that, all other values mirror what had been approved previously.

Contact Becky Yowell ([byowell@psych.org](mailto:byowell@psych.org)) if you have questions or need additional information.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor:

**90839, Psychotherapy for crisis; first 60 minutes**

**(Use 90840 in conjunction with 90839)**

**(Do not report 90839, 90840 in conjunction with 90791, 90792, psychotherapy codes 90832-90838 or other psychiatric services, or 90785-90899)**

Global Period: XXX Meeting Date: **April 2013**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**An expert panel that included psychiatrists, psychologists, and clinical social workers, was developed to review practice expenses for this code submission. The group included participants familiar with the services described by this code.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**This is a new code describing work not previously reported separately. The panel selected CPT code 90837 Psychotherapy, 60 minutes with patient and/or family member, as the reference code because that code is similar in work and time to the 90839, Psychotherapy for crisis; first 60 minutes.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **We are not requesting any clinical labor time.**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **NA**

5. Please describe in detail the clinical activities of your staff: **NA**

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Post-Service Clinical Labor Activities:

Reference Code Rationale: **This is a new code describing work not previously reported separately. The panel selected CPT code 90837 Psychotherapy, 60 minutes with patient and/or family member, as the reference code because that code is similar in work and time to the 90839, Psychotherapy for crisis; first 60 minutes.**
3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **We are not requesting any clinical labor time.**
4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **Our request reflects the supplies and equipment for similar services that were approved by the PE subcommittee and the RUC in April 2012 with the exception of the percentage of tissue usage. The panel believes that usage will increase due to the fact that the patient is in crisis (i.e., unstable) during the encounter.**
5. Please describe in detail the clinical activities of your staff: **NA**

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Post-Service Clinical Labor Activities:

**AMA/Specialty Society Update Process

CPT Long Descriptor:

**90785, Interactive complexity (List separately in addition to the code for primary procedure)**

**(Use 90785 in conjunction with codes for diagnostic psychiatric evaluation [90791, 90792], psychotherapy [90832, 90834, 90837], psychotherapy when performed with an evaluation and management service [90833, 90836, 90838, 99201-99255, 99304-99337, 99341-99350], and group psychotherapy [90853])**

**(Do not report 90785 in conjunction with 90839, 90840, or in conjunction with E/M services when no psychotherapy service is also reported)**

Global Period: **ZZZ** Meeting Date: **April 2013**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: **An expert panel that included psychiatrists, psychologists, and clinical social workers, was developed to review practice expenses for this code submission. The group included participants familiar with the services described by this add-on code.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: **This code is an add-on code to 90791, 90792, 90832-90838 and 90853. The panel chose 90834, Psychotherapy 45 minute with patient present and/or family member, one of the base codes to which this add-on service can be used, as a reference service for this code. This add-on code replaces a series of stand-alone codes that described interactive diagnostic and psychotherapy services (90802, 90810-90815, 90823-90829, 90857). Our expert panel believes that the add-on code will be most frequently billed with this particular base code. The base code reflects the April 2012 RUC-approved PE inputs for the psychotherapy codes.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **We are not requesting any clinical labor time.**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **We are not requesting an increase over the current inputs. Our request includes the supplies and equipment for the interactive services previously described by CPT codes 90802, 90810-90815, 90823-90829, 90857. These services were originally valued in 2001.**

## **AMA/Specialty Society RVS Update Committee Summary of Recommendations**

### *Fourth Five-Year Review*

### *CMS High Expenditure Procedural Codes screen*

April 2012

### **Psychotherapy**

In the 4<sup>th</sup> Five-Year Review of the RBRVS, CMS received comment letters from the providers of psychotherapy, CPT codes 90801-90880 as potentially misvalued. CMS forwarded these services to the RUC to be included in the fourth Five-Year Review process. CPT code 90849 was withdrawn by the original commenter as the specialties indicated that very few of their members provide this service. This specialty recommendation was supported by the Medicare utilization data for this service which was very low in 2008, 343 claims. In April and May 2010, the Research Subcommittee met to review vignettes and reference service lists. The Subcommittee recommended that 90801 and 90802 be removed from the list of codes to be reviewed and be referred to the CPT Editorial Panel so that modifications could be made to the descriptors to reflect the different work performed by the physician and non-physician providers. In June 2010, a RUC Facilitation Committee met with the sponsoring specialty societies. The Pre-Facilitation Committee agreed with the Research Subcommittee's recommendations to refer 90801 and 90802 to the CPT Editorial Panel. The Pre-Facilitation Committee recommended that all of the psychotherapy codes with Evaluation and Management components (90805, 90807, 90809, 90811, 90813, 90815, 90817, 90819, 90822, 90824, 90827, 90829, and 90862) be referred to the CPT Editorial Panel to potentially create a new coding structure based on the varying levels of evaluation and management within each code. The remainder of the CPT codes identified were surveyed for the October 2010 RUC Meeting.

At the October 2010 RUC Meeting, the specialties presented compelling evidence arguments to change the current value of the remaining psychotherapy services. The specialties indicated that the patient population receiving these services has dramatically changed since the codes were previously reviewed. Currently, according to a National Comorbidity Survey, 56% of patients receiving psychotherapy have multiple comorbid conditions, meaning having more than one mental or physical disorder, including substance abuse. Due to the prevalence of comorbid patients, the work of the provider has changed as most research treatment protocols were originally designed for patients with single disorders. Further, the specialties indicated that the site of service for patients receiving many of these services has changed. Patients, who were once treated in the hospital setting, are now more frequently being treated in the office setting as the number of psychiatric beds has dropped by more than 60% between 1970 and 2000. The RUC accepted these compelling evidence arguments to potentially modify the current value of these services.

However, the RUC review of survey data presented at the October 2010 meeting, concluded that the entire section of psychotherapy services would benefit from a restructuring within CPT. A CPT Workgroup was created to address these concerns and a coding proposal was issued from the Workgroup to the CPT Editorial Panel for review. In February 2012, after a year of analysis and participation by all providers of the services, the CPT

Editorial Panel replaced the current psychotherapy section with a new structure allowing separate reporting of E/M codes, eliminating site of service differential and creation of series of add-on codes to psychotherapy to describe interactive complexity and medication management.

The new coding framework, allows all codes to be used in all settings instead of describing site specific services. There are four groupings of services. First, code 90801 *Psychiatric diagnostic interview examination* will be deleted and replaced by two new codes 90791 *Psychiatric diagnostic evaluation* and 90792 *Psychiatric diagnostic evaluation with medical service*. CPT code 90791 is a service without medical work and describes comprehensive psychiatric diagnostic evaluation of psychological and psychosocial conditions often in collaboration with referring primary care physicians. CPT code 90792 is to be reported when a complete comprehensive diagnostic evaluation involves medical work, capturing the work and teasing out medical causes of psychiatric symptoms such as those caused by thyroid disease or metabolic infectious conditions. The next family has two groupings, psychotherapy stand alone codes without medical services (CPT codes 90832, 90834 and 90837) and the psychotherapy add-on codes, which are used only in conjunction with Evaluation and Management services (90833, 90836 and 90838). The current psychotherapy with E/M inpatient or outpatient codes contain one fixed low level E/M service combined with three levels of time-based psychotherapy services. These fixed E/M components were inadequate for today's patient and are replaced by the psychotherapy add-on codes. Thereby, using the existing E/M structure and a choice of one add-on psychotherapy time-based code, 30, 45 or 60 minutes. The selection of the time increment is based both on patient characteristics and the work to be accomplished in certain types of psychotherapy. Some patients are more resistant to open-up in a session and may require longer sessions. Additionally, some forms of psychotherapy are more geared toward 45 minute sessions (psychodynamic or cognitive behavioral therapy), whereas others are more geared towards 30 minute sessions (brief focused supportive therapy). The add-on codes will be new to many professionals and the American Psychiatric Association will offer extensive education on the use of these codes and to ensure that physicians understand that the time on E/M services is not used to determine the time of the psychotherapy service. The third grouping, psychotherapy inpatient and outpatient services that do not include E/M services (90832, 90834 and 90837) are likely to be reported by psychologists and clinical social workers in all clinical settings. The last grouping are family psychotherapy codes, with and without the patient and in a group setting, remain essentially unchanged (90845, 90846, 90847 and 90853).

### **90791 Psychiatric diagnostic evaluation**

The RUC reviewed the survey results from 202 adult and child psychiatrists, psychologists and social workers for CPT code 90791 and determined that the median work RVU of 3.00 appropriately accounts for the physician work required to perform this service. The RUC agreed with the survey times of 10 minutes pre-service, 60 minutes intra-service and 20 minutes post-service. The RUC compared the surveyed service to key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 3.17 and 45 minutes intra-service time) and agreed with the survey respondents that 90791 requires more physician time to perform but is less intense and complex than 99205. The RUC also compared the surveyed service to similar services 95974 *Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour* (work RVU = 3.00 and 60 minutes intra-service time) and 75559 *Cardiac magnetic resonance imaging for morphology and function without contrast material; with stress imaging* (work RVU = 2.95 and 50 minutes intra-service time) and

determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 3.00 for CPT code 90791.**

#### **90792 Psychiatric diagnostic evaluation with medical services**

The RUC reviewed the survey results from 82 adult and child psychiatrists for CPT code 90792 and determined that the median work RVU of 3.25 appropriately accounts for the physician work required to perform this service. The RUC agreed with the survey times of 10 minutes pre-service, 60 minutes intra-service and 20 minutes post-service. The RUC compared code 90792 to 90791, which does not include medical services, and determined that the survey respondents appropriately valued the additional work required to perform this service. The RUC compared the surveyed service to key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 3.17 and 45 minutes intra-service time) and agreed with the survey respondents that 90792 requires more physician time and is more intense and complex to perform than 99205. For additional support, the RUC also compared the surveyed service to similar services 99350 *Home visit for the evaluation and management of an established patient* (work RVU = 3.28 and 75 minutes intra-service time) and 99235 *Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date* (work RVU = 3.24 and 50 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 3.25 for CPT code 90792.**

#### **90832 Psychotherapy, 30 minutes with patient and/or family member**

The RUC reviewed the survey results from 185 adult and child psychiatrists, psychologists and social workers for CPT code 90832 and determined that the median work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC determined 5 minutes pre-service, 30 minutes intra-service and 10 minutes post-service is appropriate to perform this service. Pre-time activities include completing checklists in anticipation of the service depending on the type of therapy and post-service activities include documenting the visit, documentation of therapy notes and treatment plans, follow-up with the primary care physician or therapists and setting up the next visit. The RUC compared the surveyed service to key reference service 96152 *Health and behavior intervention, each 15 minutes, face-to-face; individual* (work RVU = 0.46 and 15 minutes intra-service time) and agreed with the survey respondents that 90832 requires more time and is more intense and complex to perform than 96152. For additional support, the RUC also compared the surveyed service to similar services 99214 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 1.50 and 25 minutes intra-service time) and 94005 *Home ventilator management care plan oversight of a patient (patient not present) in home, domiciliary or rest home (eg, assisted living) requiring review of status, review of laboratories and other studies and revision of orders and respiratory care plan (as appropriate), within a calendar month, 30 minutes or more* (work RVU = 1.50 and 25 minutes intra-service time) and determined that the recommended work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 1.50 for CPT code 90832.**

**90833 Psychotherapy, 30 minutes with patient and/or family member when performed with an Evaluation and Management service**

The specialty societies reiterated that there are specific guidelines that indicate the Evaluation and Management service is to be billed separately with this service. The RUC reviewed the survey results from 114 adult and child psychiatrists for CPT code 90833 and determined that the median work RVU of 1.50 appropriately accounts for the physician work required to perform this service. The RUC determined 0 minutes pre-service, 30 minutes intra-service and 3 minutes post-service is appropriate to perform this service. The specialty indicated and the RUC agreed that any pre-time work will be captured in the separately reported Evaluation and Management service and the 3 minutes of post-service include activities specific to documentation of the symptoms and behaviors that are the focus of the treatment as well as documentation of the specific psychotherapeutic intervention performed. The RUC compared the surveyed service to key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 1.50 and 25 minutes intra-service time) and agreed with the survey respondents that 90833 requires the same physician work, slightly more physician time and similar intensity and complexity to perform compared to 99214. For additional support, the RUC also compared the surveyed service to similar service 94005 *Home ventilator management care plan oversight of a patient (patient not present) in home, domiciliary or rest home (eg, assisted living) requiring review of status, review of laboratories and other studies and revision of orders and respiratory care plan (as appropriate), within a calendar month, 30 minutes or more* (work RVU = 1.50 and 25 minutes intra-service time) and determined that the recommended work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 1.50 for CPT code 90833.**

**90834 Psychotherapy, 45 minutes with patient and/or family member**

The RUC reviewed the survey results from 183 adult and child psychiatrists, psychologists and social workers for CPT code 90834 and determined that the median work RVU of 2.00 appropriately accounts for the work required to perform this service. The RUC determined 5 minutes pre-service, 45 minutes intra-service and 10 minutes post-service is appropriate to perform this service. Pre-time activities include completing checklists in anticipation of the service depending on the type of therapy and post-service activities include documenting the visit, documentation of therapy notes and treatment plans, follow-up with the primary care physician or therapists and setting up the next visit. The RUC compared the surveyed service to similar services 99215 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 2.11 and 35 minutes intra-service time) and 94002 *Ventilation assist and management, initiation of pressure or volume preset ventilators for assisted or controlled breathing; hospital inpatient/observation, initial day* (work RVU = 1.99 and 30 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 2.00 for CPT code 90834.**

**90836 Psychotherapy, 45 minutes with patient and/or family member when performed with an Evaluation and Management service**

The specialty societies reiterated that there are specific guidelines that indicate the Evaluation and Management service is to be billed separately with this service. The RUC reviewed the survey results from 114 adult and child psychiatrists for CPT code 90836 and determined that the median work RVU of 1.90 appropriately accounts for the physician work required to perform this service. The RUC determined 0 minutes pre-service, 45 minutes intra-service and 3 minutes post-service is appropriate to perform this service. The specialty indicated and the RUC agreed that any pre-time work will be captured in the separately reported Evaluation and Management service and the 3 minutes of post-service include activities specific to

documentation of the symptoms and behaviors that are the focus of the treatment as well as documentation of the specific psychotherapeutic intervention performed. The RUC compared the surveyed service to key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 1.50 and 25 minutes intra-service time) and agreed with the survey respondents that 90836 requires more physician work and time and is more intense and complex to perform compared to 99214. For additional support, the RUC also compared the surveyed service to similar service 99221 *Initial hospital care, per day, for the evaluation and management of a patient* (work RVU = 1.92 and 30 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 1.90 for CPT code 90836.**

#### **90837 Psychotherapy, 60 minutes with patient and/or family member**

The RUC reviewed the survey results from 185 adult and child psychiatrists, psychologists and social workers for CPT code 90837 and determined that the survey 75<sup>th</sup> percentile work RVU of 3.00 appropriately accounts for the work required to perform this service. The RUC determined that the survey median work RVU of 2.25 would be too low in relation to 90834 and 0.25 difference in work RVU would not appropriately account for an additional 15 minutes of intra-service time and additional intensity and complexity required to perform 90837. The RUC determined 5 minutes pre-service, 60 minutes intra-service and 10 minutes post-service is appropriate to perform this service. Pre-time activities include completing checklists in anticipation of the service depending on the type of therapy and post-service activities include documenting the visit, documentation of therapy notes and treatment plans, follow-up with the primary care physician or therapists and setting up the next visit. The RUC compared the surveyed service to similar services 99205 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 3.17 and 45 minutes intra-service time), 96111 *Developmental testing, (includes assessment of motor, language, social, adaptive, and/or cognitive functioning by standardized developmental instruments) with interpretation and report* (work RVU = 2.60 and 60 minutes intra-service time) and 99222 *Initial hospital care, per day, for the evaluation and management of a patient* (work RVU = 2.61 and 40 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 3.00 for CPT code 90837.**

#### **90838 Psychotherapy, 60 minutes with patient and/or family member when performed with an Evaluation and Management service**

The specialty societies reiterated that there are specific guidelines that indicate the Evaluation and Management service is to be billed separately with this service. The RUC reviewed the survey results from 114 adult and child psychiatrists for CPT code 90838 and determined that the survey 75<sup>th</sup> percentile work RVU of 2.50 appropriately accounts for the physician work required to perform this service. The RUC determined that the survey median work RVU of 2.10 would be too low in relation to 90836 and 0.20 difference in work RVU would not appropriately account for an additional 15 minutes of intra-service time and additional intensity and complexity required to perform 90838. The RUC determined 0 minutes pre-service, 60 minutes intra-service and 3 minutes post-service is appropriate to perform this service. The specialty indicated and the RUC agreed that any pre-time work will be captured in the separately reported Evaluation and Management service and the 3 minutes of post-service include activities specific to documentation of the symptoms and behaviors that are the focus of the treatment as well as documentation of the specific psychotherapeutic intervention performed. The RUC compared the surveyed service to key reference service 99354 *Prolonged service in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour* (work RVU = 1.77 and 60 minutes intra-service time) and agreed with the

survey respondents that 90838 requires more physician work and is more intense and complex to perform compared to 99354. For additional support, the RUC also compared the surveyed service to similar service 96111 *Developmental testing, (includes assessment of motor, language, social, adaptive, and/or cognitive functioning by standardized developmental instruments) with interpretation and report* (work RVU = 2.60 and 60 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 2.50 for CPT code 90838.**

**90785 Interactive Complexity (List separately in addition to the code for primary procedure)**

**90839 Psychotherapy for crisis, first 60 minutes;**

**90840 Psychotherapy for crisis, first 60 minutes; each additional 30 minutes**

The specialty societies indicated and the RUC agreed that codes 90785, 90839 and 90840 be carrier priced to allow for education and experience with a significantly different coding structure. This will allow providers to gain experience with the codes prior to conducting a RUC survey. After a year of experience with the new coding structure the specialties will conduct RUC surveys for these services.

**90845 Psychoanalysis**

*October 2011 RUC recommendation*

Multiple specialty societies submitted public comment to CMS to review code 90845 *Psychoanalysis* as part of the 4<sup>th</sup> Five-Year Review. In September 2010, recommendations regarding code 90845 were submitted along with 16 additional codes. During that presentation the specialties requested that the entire tab be referred to the CPT Editorial Panel to revised the code descriptors to more accurately describe these services. During the CPT review process, CPT recommended to remove psychoanalysis, as revisions to the descriptor were unnecessary because the work inherent in providing this service was the same regardless of the provider.

In September 2011, the RUC reviewed 90845 and agreed with the specialty society that there is compelling evidence that the patient population has changed and that the technique employed in psychoanalytic practice has changed. Psychoanalysis traditionally treated a wide variety of conditions which included a considerable number of high functioning patients who were treated for relatively minor psychological problems by current standards. Patients with these conditions are now often treated in a variety of newer treatment modalities rather than psychoanalysis. Given this, patients now receiving psychoanalysis are more complex and typically require a more active approach on part of the psychoanalyst due to the increased number of co-morbidities. In addition, in the past psychoanalysts tended to be silent during the treatment, intervening infrequently. Current practice emphasizes the importance of interaction between the psychoanalyst and the patient. As a result of this technical change the psychoanalyst is required to be much more intently focused on the minute to minute interaction during the session and considerably more active during the session. This substantially increases the psychoanalyst's intensity and complexity effort during the session, when compared with the earlier model.

The RUC reviewed CPT code 90845 and agreed with the specialty societies that the typical service is one hour, 5 minute pre-service, 50 minutes intra-service and 5 minutes immediate post-service time. The RUC reviewed the survey results and agreed that the median survey work RVU of 2.10

accurately values the typical physician work involved in the procedure. To justify this value, the RUC compared CPT code 90845 to key reference service 99404 *Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 60 minutes* (work RVU = 1.95, total time = 60 minutes). Although the reference code has greater intra service time compared to the surveyed code, the survey respondents indicated and the RUC agreed that intensity and complexity to perform 90845 is greater in every measure compared to reference service 99404. The RUC also compared 90845 to reference code 99215 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 2.11, total time = 55 minutes). The respondents indicated 90845 was more intense and complex than 99215, specifically the technical skill required to perform 90845 indicated the greatest difference. Finally, the RUC compared 90845 to MPC code 99233 *Subsequent hospital care, per day, for the evaluation and management of a patient* (work RVU = 2.00, total time = 55 minutes). The RUC determined that these comparison codes coupled with the median survey results support a recommendation of 2.10 work RVUs for CPT code 90845. **The RUC recommends a work RVU of 2.10 for CPT code 90845.**

#### **90846 Family psychotherapy (without the patient present)**

The RUC reviewed the survey results from 123 adult and child psychiatrists, psychologists and social workers for CPT code 90846 and determined that the survey median work RVU of 2.40 appropriately accounts for the work required to perform this service. The RUC determined 5 minutes pre-service, 50 minutes intra-service and 10 minutes post-service is appropriate to perform this service. Pre-time activities include completing checklists in anticipation of the service depending on the type of therapy and post-service activities include documenting the visit, documentation of therapy notes and treatment plans, follow-up with the primary care physician or therapists and setting up the next visit. The RUC compared the surveyed service to key reference service 99215 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 2.11 and 35 minutes intra-service time) and agreed with the survey respondents that 90846 requires more work and time and to perform than 99215. For additional support, the RUC also compared the surveyed service to similar services 99204 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 2.43 and 30 minutes intra-service time) and 99349 *Home visit for the evaluation and management of an established patient* (work RVU = 2.33 and 40 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 2.40 for CPT code 90846.**

#### **90847 Family psychotherapy (conjoint psychotherapy) (with patient present)**

The RUC reviewed the survey results from 123 adult and child psychiatrists, psychologists and social workers for CPT code 90847 and determined that the survey median work RVU of 2.50 appropriately accounts for the work required to perform this service. The RUC determined 5 minutes pre-service, 55 minutes intra-service and 10 minutes post-service is appropriate to perform this service. Pre-time activities include completing checklists in anticipation of the service depending on the type of therapy and post-service activities include documenting the visit, documentation of therapy notes and treatment plans, follow-up with the primary care physician or therapists and setting up the next visit. The RUC compared the surveyed service to key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient*, (work RVU = 3.17 and 45 minutes intra-service time) and agreed with the survey respondents that although 90847 requires 10 more minutes of intra-service time, it requires slightly less work to perform than 99205. For additional support, the RUC also compared the surveyed service to similar services 99222 *Initial*

hospital care, per day, for the evaluation and management of a patient (work RVU = 2.61 and 40 minutes intra-service time) and 99336 *Domiciliary or rest home visit for the evaluation and management of an established patient* (work RVU = 2.46 and 40 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 2.50 for CPT code 90847.**

#### **90853 Group psychotherapy (other than of a multiple-family group)**

The RUC reviewed the survey results from 82 adult and child psychiatrists, psychologists and social workers for CPT code 90853 and determined that the current work RVU of 0.59 be maintained. The survey median work RVU of 3.00, for the entire group session divided by 5 the typical number of patients in a group equals 0.60 and maintaining the value appropriately accounts for the work required to perform this service. The RUC agreed with the survey times divided by the typical number of patients resulting in 3 minutes pre-service, 10 minutes intra-service and 3 minutes post-service is appropriate to perform this service. The RUC compared the surveyed service to key reference service 96153 *Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)* (work RVU = 0.10 and 5 minutes total time) and agreed with the survey respondents that 90853 requires more work, time, intensity and complexity to perform than 96153. For additional support, the RUC also compared the surveyed service to MPC code 97002 *Physical therapy re-evaluation* (work RVU = 0.60 and 18 minutes intra-service time) and 76881 *Ultrasound, extremity, nonvascular, real-time with image documentation; complete* (work RVU = 0.63 and 15 minutes intra-service time) and determined that the recommended physician work and time place this service in the proper rank order relative to other services on the physician payment schedule. **The RUC recommends a work RVU of 0.59 for CPT code 90853.**

#### **Practice Expense**

The RUC reviewed the direct practice expense inputs submitted by the specialty societies and recommends no modifications.

<b>CPT Code (•New)</b>	<b>Tracking Number</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
<b>Psychiatry</b> <u>Psychiatry services include diagnostic services, psychotherapy, and other services to an individual, family, or group. Patient condition, characteristics, or situational factors may require services described as being with interactive complexity. Services may be provided to a patient in crisis. Services are provided in all settings of care and psychiatry services codes are reported without regard to setting. Services may be provided by a physician or other qualified health care professional. Some psychiatry services may be reported with <b>Evaluation and Management Services</b> (99201-99255, 99281-99285, 99304-99337, 99341-99350) or other services when performed. <b>Evaluation and Management Services</b> (99201-99285, 99304-99337, 99341-99350) may be reported for treatment of psychiatric conditions, rather than using <b>Psychiatry Services</b> codes, when appropriate.</u>				

Hospital care by the attending physician in treating a psychiatric inpatient or partial hospitalization may be initial or subsequent in nature (see 99221-99233) and may include exchanges with nursing and ancillary personnel. Hospital care services involve a variety of responsibilities unique to the medical management of inpatients, such as physician hospital orders, interpretation of laboratory or other medical diagnostic studies and observations.

Some patients receive hospital evaluation and management services only and others receive hospital evaluation and management services and other procedures. If other procedures such as electroconvulsive therapy or psychotherapy are rendered in addition to hospital evaluation and management services, these ~~should~~may be listed separately (~~ieeg~~, hospital care services (99221-99223, 99231-99233) plus electroconvulsive therapy (90870), or when psychotherapy is done, ~~an~~with appropriate code(s) defining psychotherapy with medical evaluation and management services). Modifier 22 may be used to indicate a more extensive service. Modifier 52 may be used to signify a service that is reduced or less extensive than the usual procedure.

Other evaluation and management services, such as office medical service or other patient encounters, may be described as listed in the section on **Evaluation and Management**, if appropriate.

The evaluation and management services should not be reported separately, when reporting codes 90805, 90807, 90809, 90811, 90813, 90815, 90817, 90819, 90822, 90824, 90827, 90829.

Consultation for psychiatric evaluation of a patient includes examination of a patient and exchange of information with the primary physician and other informants such as nurses or family members, and preparation of a report. These ~~consultation~~ services (99241-99255) are limited to initial evaluation and do not involve psychiatric treatment. Follow-up visits in the consultant's office or other outpatient facility that are initiated by the physician consultant or patient ~~are~~may be reported using the appropriate codes for established patients, office visits (99211-99215), domiciliary, rest home (99334-99337), or home (99347-99350). If an additional request for an opinion or advice regarding the same or a new problem is received from another physician or other appropriate source and documented in the medical record, the office consultation codes may be used again. Services that constitute transfer of care (ie, are provided for the management of the patient's entire care or for the care of a specific condition or problem~~see~~ **Consultations**) are reported with the appropriate new or established patient codes for office or other outpatient visits, domiciliary, rest home services, or home services.

### **Interactive Complexity**

Code 90785 is an add-on code for interactive complexity to be reported in conjunction with codes for diagnostic psychiatric evaluation (90791, 90792), psychotherapy (90832, 90834, 90837), psychotherapy when performed with an Evaluation and Management service (90833, 90836, 90838, 99201-99255, 99304-99337, 99341-99350), and group psychotherapy (90853).

Interactive complexity refers to specific communication factors that complicate the delivery of a psychiatric procedure. Common factors include more difficult communication with discordant or emotional family members and engagement of young and verbally undeveloped or impaired patients. Typical patients are those who have third parties, such as parents, guardians, other family members, interpreters, language translators, agencies, court officers, or schools involved in their psychiatric care.

These factors are typically present with patients who:

- Have other individuals legally responsible for their care, such as minors or adults with guardians, or
- Request others to be involved in their care during the visit, such as adults accompanied by one or more participating family members or interpreter or language translator, or
- Require the involvement of other third parties, such as child welfare agencies, parole or probation officers, or schools.

Psychiatric procedures may be reported “with interactive complexity” when at least one of the following is present:

1. The need to manage maladaptive communication (related to, eg, high anxiety, high reactivity, repeated questions, or disagreement) among participants that complicates delivery of care.
2. Caregiver emotions or behavior that interferes with the caregiver’s understanding and ability to assist in the implementation of the treatment plan.

3. Evidence or disclosure of a sentinel event and mandated report to third party (e.g., abuse or neglect with report to state agency) with initiation of discussion of the sentinel event and/or report with patient and other visit participants.
4. Use of play equipment, other physical devices, interpreter or translator to communicate with the patient to overcome barriers to therapeutic or diagnostic interaction between the physician or other qualified health care professional and a patient who:
  - Is not fluent in the same language as the physician or other qualified health care professional, or
  - Has not developed, or has lost, either the expressive language communication skills to explain his/her symptoms and response to treatment, or the receptive communication skills to understand the physician or other qualified health care professional if he/she were to use typical language for communication.

When provided in conjunction with the psychotherapy codes 90832-90838, the amount of time spent by a physician or other qualified health care professional providing interactive complexity services should be reflected in the timed service code for psychotherapy (90832, 90834, 90837) or the psychotherapy add-on code performed with an Evaluation and Management service (90833, 90836, 90838, 99201-99255, 99304-99337, 99341-99350) and must relate to the psychotherapy service only. Interactive complexity is not a factor for Evaluation and Management Services selection (99201-99255, 99281-99285, 99304-99337, 99341-99350), except as it directly affects key components as defined in Evaluation and Management Services Guidelines (ie, history, examination and medical decision making).

+●90785	LL1	<p>Interactive Complexity (List separately in addition to the code for primary procedure)</p> <p><u>(Use 90785 in conjunction with codes for diagnostic psychiatric evaluation (90791, 90792), psychotherapy (90832, 90834, 90837), psychotherapy when performed with an Evaluation and Management service (90833, 90836, 90838, 99201-99255, 99304-99337, 99341-99350), and group psychotherapy (90853))</u></p> <p><u>(Do not use 90785 in conjunction with 90839, 90840 or in conjunction with E/M services when no psychotherapy service is also reported)</u></p>	ZZZ	Carrier Price

### Psychiatric Diagnostic or Evaluative Interview Procedures

Psychiatric diagnostic interview examination includes a evaluation is an integrated biopsychosocial assessment, including history, mental status, and a disposition, and recommendations. The evaluation may include communication with family or other sources, ordering and review and medical interpretation ordering of laboratory or other medical diagnostic studies. In certain circumstances other informants will be seen in lieu of the patient.

Psychiatric diagnostic evaluation with medical services is an integrated biopsychosocial and medical assessment, including history, mental status, other physical examination elements as indicated, and recommendations. The evaluation may include communication with family or other sources, prescription of medications, and review and ordering of laboratory or other diagnostic studies.

In certain circumstances one or more other informants (family members, guardians, or significant others) may be seen in lieu of the patient. Codes 90791, 90792 may be reported more than once for the patient when separate diagnostic evaluations are conducted with the patient and other informants. Report services as being provided to the patient and not the informant or other party in such circumstances. Codes 90791, 90792 may be reported once per day and not on the same day as an Evaluation and Management service performed by the same individual for the same patient.

Interactive psychiatric diagnostic interview examination is typically furnished to children. It involves the use of physical aids and non-verbal communication to overcome barriers to therapeutic interaction between the clinician and a patient who has not yet developed, or has lost, either the expressive language communication skills to explain his/her symptoms and response to treatment, or the receptive communication skills to understand the clinician if he/she were to use ordinary adult language for communication.

The psychiatric diagnostic evaluation may include interactive complexity services when factors exist that complicate the delivery of the psychiatric procedure. These services should be reported with add-on code 90785 used in conjunction with the diagnostic psychiatric evaluation codes 90791, 90792.

Codes 90791, 90792 are used for the diagnostic assessment(s) or reassessment(s), if required, and do not include psychotherapeutic services. Psychotherapy services, including for crisis, may not be reported on the same day.

### **Psychiatric Therapeutic Procedures**

Psychotherapy is the treatment for mental illness and behavioral disturbances in which the clinician establishes a professional contract with the patient and, through definitive therapeutic communication, attempts to alleviate the emotional disturbances, reverse or change maladaptive patterns of behavior, and encourage personality growth and development. The codes for reporting psychotherapy are divided into two broad categories: Interactive Psychotherapy; and Insight Oriented, Behavior Modifying and/or Supportive Psychotherapy.

Interactive psychotherapy is typically furnished to children. It involves the use of physical aids and nonverbal communication to overcome barriers to therapeutic interaction between the clinician and a patient who has not yet developed, or has lost, either the expressive language communication skills to explain his/her symptoms and response to treatment, or the receptive communication skills to understand the clinician if he/she were to use ordinary adult language for communication.

Insight oriented, behavior modifying and/or supportive psychotherapy refers to the development of insight or affective understanding, the use of behavior modification techniques, the use of supportive interactions, the use of cognitive discussion of reality, or any combination of the above to provide therapeutic change.

Some patients receive psychotherapy only and others receive psychotherapy and medical evaluation and management services. These evaluation and management services involve a variety of responsibilities unique to the medical management of psychiatric patients, such as medical diagnostic evaluation (eg, evaluation of comorbid medical conditions, drug interactions, and physical examinations), drug management when indicated, physician orders, interpretation of laboratory or other medical diagnostic studies and observations.

In reporting psychotherapy, the appropriate code is chosen on the basis of the type of psychotherapy (interactive using non verbal techniques versus insight oriented, behavior modifying and/or supportive using verbal techniques), the place of service (office versus inpatient), the face-to-face time spent with the patient during psychotherapy, and whether evaluation and management services are furnished on the same date of service as psychotherapy. Face-to-face time when providing psychotherapy with medical evaluation and management services includes time spent providing both psychotherapy and evaluation and management services (ie, 90809, 90811, 90813, 90815, 90817, 90819, 90822, 90824, 90827, 90829).

To report medical evaluation and management services furnished on a day when psychotherapy is not provided, select the appropriate code from the **Evaluation and Management Services Guidelines**.

Office or Other Outpatient Facility  
Insight Oriented, Behavior Modifying  
and/or Supportive Psychotherapy

## **Psychotherapy**

Psychotherapy is the treatment of mental illness and behavioral disturbances in which the physician or other qualified health care professional, through definitive therapeutic communication, attempts to alleviate the emotional disturbances, reverse or change maladaptive patterns of behavior, and encourage personality growth and development.

The psychotherapy service codes 90832–90838 include ongoing assessment and adjustment of psychotherapeutic interventions, and may include involvement of family member(s) or others in the treatment process.

Psychotherapy times are for face-to-face services with patient and/or family member. The patient must be present for all or some of the service. For family psychotherapy without the patient present, use 90846. In reporting, choose the code closest to the actual time (ie, 16-37 minutes for 90832 and 90833, 38-52 minutes for 90834 and 90836, and 53 or more minutes for 90837 and 90838). Do not report psychotherapy of less than 16 minutes duration. (See instructions for the usage of Time in the Introduction of the CPT code set).

Psychotherapy provided to a patient in a crisis state is reported with codes 90839 and 90840 and cannot be reported in addition to the psychotherapy codes 90832-90838. For psychotherapy for crisis, see “Other Psychotherapy”.

Code 90785 is an add-on code to report interactive complexity services when provided in conjunction with the psychotherapy codes 90832-90838. The amount of time spent by a physician or other qualified health care professional providing interactive complexity services should be reflected in the timed service code for psychotherapy (90832, 90834, 90837) or the psychotherapy add-on code performed with an Evaluation and Management service (90833, 90836, 90838).

Some psychiatric patients receive a medical evaluation and management (E/M) service on the same day as a psychotherapy service by the same physician or other qualified health care professional. To report both E/M and psychotherapy, the two services must be significant and separately identifiable. These services are reported by using codes specific for psychotherapy when performed with Evaluation and Management services (90833, 90836, and 90838) as add-on codes to the Evaluation and Management service.

Medical symptoms and disorders inform treatment choices of psychotherapeutic interventions, and data from therapeutic communication are used to evaluate the presence, type, and severity of medical symptoms and disorders. For the purposes of reporting, the medical and psychotherapeutic components of the service may be separately identified as follows:

1. The type and level of E/M service is selected first based upon the key components of history, examination, and medical decision-making.

<p>2. <u>Time associated with activities used to meet criteria for the E/M service is not included in the time used for reporting the psychotherapy service (ie, time spent on history, examination and medical decision making <b>when used for the E/M service</b> is not psychotherapy time). Time may not be used as the basis of E/M code selection and Prolonged Services may not be reported when psychotherapy with E/M (90833, 90836, 90838) are reported.</u></p> <p>3. <u>A separate diagnosis is not required for the reporting of E/M and psychotherapy on the same date of service.</u></p>

Re: Tab 26, Psychotherapy

Dear Dr. Levy and Ms. Smith,

The American Psychiatric Association (APA), American Academy of Child and Adolescent Psychiatry (AACAP), American Psychological Association (APA-HCPAC), and National Association of Social Workers are submitting recommendations on 16\* new or revised codes within the Psychiatry section of CPT.

As you know, the above organizations originally put forward 36 codes as part of the fourth Five Year Review process in 2010. These codes comprised the bulk of the codes within the Psychiatry section of CPT. A pre-facilitation committee was assigned early in the process to assist the societies in their efforts. In June 2010 the pre-facilitation committee concurred with the recommendation of the RUC Research Subcommittee that the codes describing the psychiatric diagnostic examinations and psychotherapy with evaluation and management services be referred to the CPT Editorial Panel for review and revision to address changes in work.

Seventeen of the remaining codes were surveyed by the above named organizations, as well as by the American Psychiatric Nurses Association, and recommendations were presented for review by the RUC in October 2010. The RUC accepted the compelling evidence arguments put forward by the specialties as to a change in the work for these codes (see minutes of the October 2010 RUC meeting tab 52 page 87, Attachment 1). The specialties then requested that the 17 psychotherapy services that were to be reviewed at the October 2010 RUC meeting instead be referred to the CPT Editorial Panel for review and possible revision to address differences in work. This request was granted, and these codes were added to the work of a CPT Editorial Panel workgroup that was formed to address the earlier referral for revision of the CPT codes describing the psychiatric diagnostic exams and the codes describing the work when psychotherapy is performed in conjunction with an evaluation and management service.

The CPT Editorial Panel Workgroup on Psychological and Psychiatric Services (PPS), chaired by Patrick Cafferty, PA-C, and Boyd Buser, DO, met over the course of several months to develop a series of CPT codes that would more accurately describe the work performed. During that time, the workgroup determined that the description of work for Psychoanalysis (CPT code 90845) did not require changes and could move forward to the RUC. Recommendations based on the survey data from 2010 were submitted to

\*15 codes with 2012 survey data and 1 code, 90845, Psychoanalysis for reaffirmation

the RUC for review at its September 2011 meeting. The RUC accepted the societies' recommended values for 90845, (5 pre-service, 50 intra-service, 5 post-service time; 2.10 RVW) and forwarded that recommendation to CMS. In the 2012 Final Rule, published November XX, 2011, CMS elected not to finalize the RUC's recommended values until the remaining codes in the family were reviewed by the RUC. We are asking that the RUC reaffirm the previously approved values for 90845 at this meeting.

In February 2012, the CPT Editorial Panel approved a revised version of the workgroup's proposal that included 15 new or revised codes. We have submitted RUC recommendations on the following codes:

- 9080D1, Psychiatric diagnostic interview examination
- 9080D2, Psychiatric diagnostic evaluation with medical services
- 908P10 – 908P30 (30, 45, 60 minutes respectively) (XXX code), Psychotherapy with the patient and/or family member
- 908P10X-908P30X (30, 45, 60 minutes respectively) (ZZZ code), Psychotherapy with the patient and/or family member when performed with an evaluation and management service
- 90846, Family Therapy without the patient present
- 90847, Family Therapy with the patient present
- 90853, Group Therapy (other than multiple family group therapy)

As mentioned earlier we are requesting the RUC reaffirm the 2011 recommendation for the following code:

- 90845, Psychoanalysis – Reaffirmation of the RUC's 2011 recommendation

In addition to the recommendations for the codes listed above, we are requesting that the following codes be carrier priced. This will allow for education and experience with a significantly different coding structure than that in place for 2012. This will afford the RUC time to assess options for a survey and it will give providers experience with the codes prior to moving to an AMA RUC survey:

- 9080XE (ZZZ code), Interactive Complexity
- 908CP1, Psychotherapy for Crisis, first 60 minutes
- 908CP2 (ZZZ code), Psychotherapy for crisis, each additional 30 minutes
- 90862X (ZZZ code), Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services

### **Current RUC Recommendations**

The societies sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for the following items;

- Modification of the survey tools, including:
  - Adding the term "healthcare professional" to reflect varying educational backgrounds.
  - Adding a link to a PDF of the revised introductory language to the Psychiatry section
  - Modifying the XXX tool (XXX Group) used to survey the group psychotherapy code, 90853, for clarity
    - Adding a question asking for survey participants to indicate the typical number of patients they see in a group session.
    - Asking survey participants to base the time estimates and RVU estimates on the entire session rather than calculating them on a per patient basis.
  - Eliminating the moderate sedation section on the ZZZ tool (ZZZ) used to survey the add-on codes.
- Use of a common Reference Service list for all survey respondents, and approval to include a select number of reference service codes where the RVU calculation was done for the participant per the recommendation made by HCPAC at their September 2011 meeting.

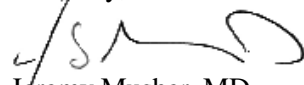

- Approval of a revised vignette for group psychotherapy (the current vignette in the RUC database was found to be typical by only 39% of survey respondents in the last survey process.)
- Modifications to the RUC educational tool, consistent with our requests regarding the healthcare professional and survey changes.
- Approval of a request by the American Psychological Association to conduct both a random survey and a proctored convenience sample of participants attending their March leadership conference.

As a result of the change noted above, the SOR for the group psychotherapy code, 90853, reflects a calculated RVW and times based on responses to the additional questions. The survey participants were asked to calculate the RVW and times based on the full length of the session rather than on a per patient basis. Those RVWs were then divided by the typical number of patients in a group therapy session as determined by respondents' answers to that additional survey question and those values were used in completing the SOR.

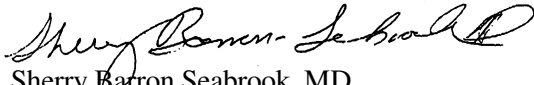

As we did in the 2011 presentation, we have included a breakdown of the survey results by physicians and non-physicians in those surveys where both groups jointly surveyed to facilitate RUC review of the data.

Thank you for your assistance throughout this process. We look forward to presenting our recommendations at the April RUC meeting in Chicago. We are available before then should you have any questions.

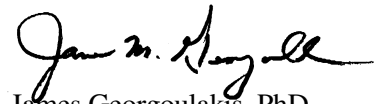

Sincerely,

**I. AMA/Specialty RVS Update Committee  
Meeting Minutes  
September 29 – October 3, 2010**

**II. Welcome and Call to Order**

Doctor Barbara Levy called the meeting to order on Thursday, September 30, 2010, at 8:00 am.  
The following RUC Members were in attendance:

Barbara Levy, MD (Chair)	Arthur Traugott, MD
Michael D. Bishop, MD	James Waldorf, MD
James Blankenship, MD	George Williams, MD
R. Dale Blasier, MD	Allan Anderson, MD*
Joel Bradley, MD	Gregory Barkley, MD*
Ronald Burd, MD	Dennis M. Beck., MD*
John Gage, MD	Bruce Deitchman, MD*
William Gee, MD	Gregory DeMeo, DO*
David Hitzeman, DO	Jane Dillon, MD*
Peter Hollmann, MD	Verdi DiSesa, MD*
Charles F. Koopmann, Jr., MD	Jeffrey Paul Edelstein, MD*
Robert Kossmann, MD	Emily Hill, PA-C*
Walt Larimore, MD	Robert Jansen, MD*
Brenda Lewis, DO	M. Douglas Leahy, MD*
J. Leonard Lichtenfeld, MD	William J. Mangold, Jr., MD*
Scott Manaker, MD, PhD	Daniel McQuillen, MD*
Geraldine McGinty, MD	Terry Mills, MD*
Bill Moran, Jr., MD	Scott D. Oates, MD*
Guy Orangio, MD	Julia Pillsbury, DO*
Gregory Przybylski, MD	Chad Rubin, MD*
Marc Raphaelson, MD	Steven Schlossberg, MD*
Sandra Reed, MD	Stanley Stead, MD*
Daniel Mark Siegel, MD	J. Allan Tucker, MD*
Lloyd Smith, DPM	Robert Stomel, DO*

**III. Chair's Report**

- Doctor Levy welcomed the CMS staff and representatives attending the meeting, including:
  - Edith Hambrick, MD, CMS Medical Officer
  - Ken Simon, MD, CMS Medical Officer
  - Ryan Howe
  - Ferhat Kassamali
- Doctor Levy welcomed Jeffrey Cozzens, MD of the CPT Editorial Panel who is observing this meeting.

**Gastric Emptying Study (Tab 51)**

**Kevin Donohoe, MD, SNM; Kenneth McKusick, MD, SNM; Zeke Silva, MD, ACR**

In the 4<sup>th</sup> Five-Year Review of the RBRVS, CMS identified CPT code 78264 *Gastric emptying study* as potentially misvalued through the Harvard-Valued – Utilization Over 30,000 screen.

***78264 Gastric emptying study***

The specialty society provided compelling evidence there has been a change in technology as the protocol to perform CPT code 78264 has been standardized, the procedure is different than it was 20 years ago and the Harvard methodology was flawed as it used extrapolation to determine physician time and the work RVU. The performance and interpretation of radionuclide solid phase gastric emptying was standardized in 2009. The new guideline standardized the radiolabeled meal, the preparation of the patient, the acquisition and processing of the imaging data and the interpretation criteria. The preparation of the patient requires a standard patient questionnaire, assessment of the patient's glucose level, assessment of patient's current medications to avoid an adverse reaction and determining women's menstrual cycle. The standardized procedure now requires that the interpreting physician be certain that there was or was not >90% gastric emptying of the radiolabeled meal by four hours. Additionally, the interpretation is more complex requiring both greater knowledge of the clinical conditions leading to the procedures as well as the limitations and causes of errors in the results. The RUC determined that there is compelling evidence that the physician work and time required to perform this service has changed.

The RUC review the survey results from 168 radiologists and nuclear medicine physicians for code 78264 and determined that the median work RVU of 0.95 appropriately maintains the relativity among similar services. The RUC compared 78264 to key reference service CPT code 78707 *Kidney imaging morphology; with vascular flow and function, single study without pharmacological intervention* (work RVU = 0.96 and total time = 22 minutes) and determined that this service is a code comparison because the total physician time is the same, 22 minutes. For further support, the RUC compared this service to CPT code 78453 *Myocardial perfusion imaging, planar (including qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); single study, at rest or stress (exercise or pharmacologic)* (work RVU = 1.00 and total time = 20 minutes) and determined that the total physician time is similar to the surveyed service,.22 and 20 minutes, respectively, and that the survey median work RVU of 0.95 is appropriate in relation to this service. **The RUC recommends a work RVU of 0.95 for CPT code 78264.**

**Psychotherapy (Tab 52)**

**Naakesh Dewan, MD, APA; Chester Schmidt, MD, APA; Sherry Barron-Seabrook, MD, AACAP; Mary Moller, DNP, ARNP, ANA; Eileen Carlson, RN, JD, ANA; James Georgoulakis, PhD, APA; Doris Tomer, LCSW, NASW**  
***Facilitation Committee #1***

In the 4<sup>th</sup> Five-Year Review of the RBRVS, CMS received comment letters from the providers of psychotherapy, CPT codes 90801-90880 as potentially misvalued. CMS forwarded these services to the RUC to be included in the fourth Five-Year Review process. CPT code 90849 was withdrawn by the original commenter as the specialties

indicated that very few of their members provide this service. This specialty recommendation was supported by the Medicare utilization data for this service which was very low in 2008, 343 claims. In April 2010 and May 2010, the Research Subcommittee met to review vignettes and reference service lists. The Subcommittee recommended that 90801 and 90802 be removed from the list of codes to be reviewed and be referred to the CPT Editorial Panel so that modifications could be made to the descriptors to reflect the different work performed by the physician and non-physician providers. In June 2010, the Pre-Facilitation Committee met with the sponsoring specialty societies. The Pre-Facilitation Committee agreed with the Research Subcommittee's recommendations to refer 90801 and 90802 to the CPT Editorial Panel. The Pre-Facilitation Committee recommended that all of the psychotherapy codes with Evaluation and Management components (90805, 90807, 90809, 90811, 90813, 90815, 90817, 90819, 90822, 90824, 90827, 90829, and 90862) be referred to the CPT Editorial Panel to potentially create a new coding structure based on the varying levels of evaluation and management within each code. The remainder of the CPT codes identified were surveyed for the October 2010 RUC Meeting.

At the October 2010 RUC Meeting, the specialties presented compelling evidence arguments to change the current value of the remaining psychotherapy services. The specialties indicated that the patient population receiving these services has dramatically changed since the codes were previously reviewed. Currently, according to a National Comorbidity Survey, 56% of patients receiving psychotherapy have comorbid conditions, meaning having more than one mental or physical disorder, including substance abuse. Due to the prevalence of co-morbid patients, the work of the provider has changed as most research treatment protocols were originally designed for patients with single disorders. Further, the specialties indicated that the site of service for patients receiving many of these services has changed. Patients, who were once treated in the hospital setting, are now more frequently being treated in the office setting as the number of psychiatric beds has dropped by more than 60% between 1970 and 2000. The RUC accepted these compelling evidence arguments to change the current value of these services.

The specialties requested that the remaining psychotherapy codes be referred to the CPT Editorial Panel along with the other psychotherapy codes for revision to address the differences in work performed by the physician and the non-physician providers. The RUC understands that a CPT Workgroup has been created to address all of these concerns with the psychotherapy codes and that a coding proposal will be issued from this Workgroup upon completion of their work to the CPT Editorial Panel for review. **The RUC recommends the psychotherapy codes be referred to the CPT Editorial Panel for revision.**

**Nasopharyngoscopy (Tab 53)**  
**Wayne Koch, MD, AAO-HNS**

In the 4<sup>th</sup> Five-Year Review of the RBRVS, CMS identified CPT code 92511 as potentially misvalued through the Harvard-Valued – Utilization over 30,000 screen.

***92511 Nasopharyngoscopy with endoscope (separate procedure)***

The RUC reviewed the survey results 30 otolaryngologists for CPT code 92511. The RUC noted that there is typically an Evaluation and Management services provided on the same day as this service. The specialties' explained that pre-service time of 11

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90791      Tracking Number LL2

Original Specialty Recommended RVU: **3.00**Presented Recommended RVU: **3.00**

Global Period: XXX

RUC Recommended RVU: **3.00**

CPT Descriptor: Psychiatric diagnostic evaluation code

(Do not report 90791 or 90792 in conjunction with 99201-99337, 99341-99350, 99366-99368, 99401-99444)

(Use 90785 in conjunction with 90791, 90792 when the diagnostic evaluation includes interactive complexity services)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Diagnostic evaluation of an adult with co-morbid medical conditions who reports increasing anxiety, irritability, and trouble sleeping. Although on antidepressant medication, the patient has been feeling increasingly depressed and helpless and is unable to go to work. The patient was referred by the primary care provider for psychotherapy services.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review reason for referral, usually involves discussion with person who initiated referral, e.g. physician, family, law enforcement, employer, or an initial phone conversation when self-referred. When possible, involves review of records from referral source and lab or consultation reports.

Description of Intra-Service Work: Explain and obtain informed consent, obtain a psychiatric history, including present illness, past history, family history, complete mental status examination; referrals for other tests and evaluations as needed; review and ordering of diagnostic studies; establishing a definitive diagnosis or at least a narrow enough differential to warrant a treatment plan; decision making concerning need for degree of supervision (e.g. hospitalization); counseling with patient concerning diagnosis and options for treatment and proposed options, including explaining the need for and process of psychotherapy. May also include communication with family or other informants in addition to or in lieu of the patient.

Description of Post-Service Work: Arrange for further studies and further care; report to or discussion with referral source; arrange getting additional information; write or dictate results of examination; and frequently involves additional communication with patient and/or family after results of studies are known or additional health care records reviewed. May include report and consultation with third party utilization manager to arrange for payment and funding for proposed treatment.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99205	XXX	3.17	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
99222	XXX	2.61	RUC Time	Most Recent 7,451,227

CPT Descriptor 1 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Physicians typically spend 50 minutes at the bedside and on the patient's hospital floor or unit.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
99223	XXX	3.86	RUC Time	Most Recent 11,496,707

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Physicians typically spend 70 minutes at the bedside and on the patient's hospital floor or unit.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99244	XXX	3.02	RUC Time

CPT Descriptor Office consultation for a new or established patient, which required these 3 key components: A comprehensive history; a comprehensive examination, and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code:** 86      **% of respondents:** 42.5 %

**TIME ESTIMATES (Median)**

	CPT Code: 90791	Key Reference CPT Code: 99205

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

90791, Psychiatric diagnostic evaluation, is a new code for a service that was previously reported using 90801, Psychiatric diagnostic interview examination. Psychologists and clinical social workers will typically use this code, while physicians and other medical professionals are expected to use 90792, although they may also use 90791 if medical services are not provided. These procedures can be reported in all settings (i.e., outpatient, inpatient, residential care, nursing facility) so the RVW recommended reflects the range of work necessary in order to appropriately provide the service in all settings.

As noted in our cover letter, the RUC accepted the compelling evidence arguments presented by the societies at the RUC's October 2010 meeting.

### Survey process

The survey was sent randomly to members of Psychiatry, Child Psychiatry, Psychology, and Social Work. In addition to the random sample, Psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. This in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC. The reference service list was the same list used in all of the other XXX surveys for this family of codes that was reviewed and approved by the RUC Research Subcommittee. The societies worked jointly to develop a typical vignette.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The review of the survey data by the expert panel showed that 82 percent of the survey respondents indicated that the vignette described the typical patient. The expert panel concluded the service performance rate was reasonable.

The expert panel supported the median survey time of 15 minutes pre-, 60 minutes intra-, and 20 minutes post-service work. The pre-service work includes locating and reviewing information from multiple sources, including notes from other professionals, correspondence from the patient or family members, symptom check lists, etc.

As noted earlier in the SOR, the intra-service work includes a variety clinical tasks and decision making functions. Given the nature and complexity of the patients and the need to generate comprehensive diagnostic reports, integrate information from multiple sources, follow up with referral sources when necessary, develop formal written treatment plans (typically required by insurers), and arrange appropriate disposition for the patient, and in light of the fact that the provider has no clinical staff to assist with these tasks, the expert panel agrees that 20 minutes accurately reflects the post-service time. **Therefore the expert panel recommends 15 minutes of pre-, 60 minutes intra-, and 20 minutes post-service for a total time of 95 minutes.**

The expert panel reviewed the survey median and 25<sup>th</sup> percentile data. The panel concluded that the median survey RVW of 3.00 was supported by the key reference service code, 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family* (7, 45, 15; RVW 3.17), which was chosen by 42% of the survey respondents. An analysis of the data on intensity and complexity measures shows that in most instances the survey respondents found the work of the surveyed code was slightly less intense/complex than that of the higher valued reference code. This held true for most of the measures, with the key exceptions being the measure addressing the outcome (dependent on the skill and judgment of the physician) and the intensity and complexity of the intra-service period. Overall, the panel concluded this provided support for the median value.

The expert panel also compared the work of the surveyed code to 99222, *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Physicians typically spend 50 minutes at the bedside and on the patient's hospital floor or unit* (15, 40, 20; RVW 2.61), with a total time of 75 minutes, which has a lower RVW and lower intra and total time, and to 99223, *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Physicians typically spend 70 minutes at the bedside and on the patient's hospital floor or unit* (15, 55, 20; RVW 3.86) with a total time of 90 minutes. The surveyed code fell between the two MPC codes, which both have intra times and total times less than the surveyed code.

In addition, the expert panel compared the work of the surveyed code to 99244, *Office consultation for a new or established patient, which required these 3 key components: A comprehensive history; a comprehensive examination, and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family* (10, 40, 15; RVW 3.02), with a total time of 65 minutes and medical decision making of moderate complexity.

Based on the review and comparisons above, the expert panel believes the median RVW of 3.00 correctly reflects the appropriate rank order of this procedure. They also compared it to the current value of 2.80, and believe that the survey median reflects the appropriate value based on the increased complexity of the patients and the increased intensity of the work as compared to when the current values were established.

### **Recommendation**

In summary, based on comparisons of the reference code, and MPCs, **we recommend a median RVW of 3.00 and median times of 10 minutes pre-, 60 minutes intra-, 20 minutes post-time for a total time of 95 minutes for code 90791.**

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90801

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Rarely

Specialty Psychology                      How often? Commonly

Specialty Social Work                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 2532026

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is based on the fact that Medicare accounts for approximately 25% of all physician and clinician payments in the US; and that psychiatrists will only provide this service 1% of the time

Specialty Psychiatry	Frequency 27470	Percentage 1.08 %
Specialty Psychology	Frequency 1796554	Percentage 70.95 %
Specialty Social Work	Frequency 708002	Percentage 27.96 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

753,593 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on the most recent RUC database and the assumption that psychiatrists will only provide this service approximately 1% of the time

Specialty Psychiatry	Frequency 7530	Percentage 0.99 %
Specialty Psychology	Frequency 527515	Percentage 69.99 %
Specialty Social Work	Frequency 211006	Percentage 27.99 %

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 90792      Tracking Number   LL3

Original Specialty Recommended RVU: **3.25**Presented Recommended RVU: **3.25**

Global Period: XXX

RUC Recommended RVU: **3.25**

CPT Descriptor: Psychiatric diagnostic evaluation with medical services

(Do not report 90791 or 90792 in conjunction with 99201-99337, 99341-99350, 99366-99368, 99401-99444)

(Use 90785 in conjunction with 90791, 90792 when the diagnostic evaluation includes interactive complexity services)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Diagnostic evaluation of an adult with co-morbid medical conditions who reports worsening depression and agitation. The patient has been feeling hopeless and sleeping poorly, and reports deteriorating work performance and marital problems. The patient was referred by the primary care provider after a six-week trial of an antidepressant medication with little improvement.

Percentage of Survey Respondents who found Vignette to be Typical: 71%

#### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

#### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review available information including records, reason for referral, outside information and other gathered information such as rating scales and intake data forms including medical review of systems.

Description of Intra-Service Work: Introduce self to patient and obtain informed consent, including discussion of mandatory reporting. The purposes of the evaluation may include assessing competence, assessing safety, establishing a presumptive diagnosis(es) and formulating a treatment plan, including consideration of additional medical evaluation, medication, psychotherapy, or both and the appropriate site of service based on acuity and level of risk for potentially harmful behaviors, among other criteria (in-patient, day treatment or outpatient).

In order to accomplish the above, an extensive history is obtained, including present illness, past psychiatric history, chemical dependency history, family history, social history, and treatments, as well as a medical history, review of systems, and focused questions related to safety, lethality, aggression, and/or competence, as indicated. A specialty specific examination is completed as well. A working therapeutic relationship is established.

The findings are integrated into a diagnostic formulation, including specific medical psychiatric diagnoses, personality considerations, contributing general medical factors, psychosocial stressors and current level of functioning.

Based on these multi-faceted diagnoses, a treatment plan is formulated including consideration of medications, psychotherapy, general medical laboratory or other tests as well as level of care (inpatient, day hospital, intensive outpatient

or outpatient). This plan is discussed with the patient (and other parties as indicated/appropriate), treatment options are reviewed and informed consent is obtained to begin treatment. Prescriptions are provided for medication and additional medical diagnostic tests, when indicated.

Description of Post-Service Work: Arrangements are made for further studies and care including psychotherapy and other scheduled follow-up appointments. Requests may be made for other outside records. Documentation of the visit is completed. Referral sources may be contacted, and records forwarded to them. Follow-up as needed to address questions regarding medications, titration of dosage, and side-effects and results of additional testing. Questions or issues related to the psychiatric reasons for the visit are addressed, including addressing general psychiatric status as well as dealing with subsequent crises.

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

#### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the MDs) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry).

90792, *Psychiatric diagnostic evaluation with medical services*, is a new code for a physician service that was previously reported by medical and nonmedical professionals using 90801. This new code, *Psychiatric diagnostic interview examination with medical services*, will be used by physicians and other qualified medical professionals. This procedure can be reported in all settings (i.e., outpatient, inpatient, residential care, nursing facility) so the RVW recommended reflects the range of work necessary in order to appropriately provide the service in all settings.

As noted in our cover letter, the RUC accepted the compelling evidence arguments presented by the societies at the RUC's October 2010 meeting.

#### Survey process

The survey was sent randomly to members of the American Psychiatric Association (APA) and the American Academy of Child and Adolescent Psychiatry (AACAP).

The reference service list was the same list used in all of the other XXX surveys for this family of codes that was reviewed and approved by the RUC Research Subcommittee. This new code 90792 will be used in all settings (i.e., outpatient, inpatient, residential care, nursing facility).

A typical vignette was developed with assistance of experts from APA and AACAP. It was agreed that while there are a considerable number of children and adolescents evaluated, the typical patient is an adult.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

#### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel concluded that 82 survey responses and the service performance rate of 100 per year are reasonable. They noted that while only 71 percent of those responding found the vignette to be typical, the majority of those who indicated the vignette was not typical stated that they worked with children and adolescents so their typical patient was simply not an adult.

The expert panel supported the median survey times of 10 minutes pre, 60 minutes intra, and 20 minutes post. As noted in the work descriptor, the 10 minutes of pre-service time is spent arranging for the appointment and collecting and reviewing medical records and other data, including correspondence from other professionals, the

patient and patient's family, symptom check lists, etc. prior to the first face-to-face visit. The 20 minutes of post-service time is spent scheduling the next appointment, developing a written treatment plan and documenting the visit, following up with others (providers/agencies/family members) to get collateral information and confirm any necessary information, providing verbal or written findings to referring providers, and seeking treatment authorizations. The pre- and post-service times are slightly higher than a higher level E/M office visit for a new patient, but equal to or slightly lower than the higher level initial hospital care code. Based on this comparison, **we recommend 10 minutes pre-, 60 minutes intra-, and 20 minutes post-service time for a total time of 90 minutes.**

We believe the median RVW result of 3.25 appropriately represents the current physician work for this code. This value is supported by an analysis of the intensity and complexity measures comparing the 90792 with the key reference service, 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family, with an RVW of 3.17 and a total time of 67 minutes (7, 45, 15 pre, intra, and post respectively), which was chosen by 42% of the survey respondents. In reviewing those figures, the survey respondents indicated that the intensity and complexity of the work of the 90792 was greater than the 99205 in every measure with the exception of physical effort and the pre-service time segment, where the differences between the two were 0.02 and 0.05 respectively.*

An additional comparison can be made to 99223, *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Physicians typically spend 70 minutes at the bedside and on the patient's hospital floor or unit. (15, 55, 20; RVW of 3.86) for a total time of 90 minutes. In comparing the two services, the expert panel noted that the total time was the same and the variation of the RVW could be accounted for by the increased intensity for inpatient care. They noted that the survey median RVW of 3.25 falls between the codes for the initial day inpatient service and a new patient outpatient visit.*

The expert panel also compared the typical work to the inpatient and outpatient consultation codes: 99254, *Inpatient consultation for a new or established patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 80 minutes at the bedside and on the patient's hospital floor or unit (15, 45, 20; RVW 3.29), with a total time of 80 minutes and medical decision making of moderate complexity; and 99244, *Office consultation for a new or established patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family, (10, 40, 15; RVW 3.02) with a total time of 65 minutes and medical decision making of moderate complexity.**

The 99254 and the 99244 codes are similar in work and level of medical decision making to the surveyed code and represent work performed in inpatient and outpatient settings. The survey median of 3.25 is greater than the shorter timed service of the 99244 and closer to the 80 minute service of the 99254. For 90792, in addition to completing an evaluation, the physician is also constructing a detailed treatment plan and discussing ongoing treatment options with the patient rather than writing a report back to the referring provider. We believe this comparison supports the median value.

### Recommendation

In summary, based on comparisons to the reference code, MPCs, and other codes, **we recommend the median RVW of 3.25, and median times of 10 minutes pre-, 60 minutes intra-, and 20 minutes post-time for a total time of 90 minutes for code 90792.**

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90801, 90802

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2719532

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on Medicare accounting for approximately 25% of all physician and clinical expenses, and the number of 90801 and 90802s done by psychiatrists in the latest RUC database, and assuming only 1% of them will do an initial evaluation without medical services (908D1).

Specialty Psychiatry                      Frequency 2719532                      Percentage 100.00 %

Specialty                      Frequency                      Percentage                      %

Specialty                      Frequency                      Percentage                      %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

753,593 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most recent RUC database, with the assumption that 99% of psychiatrists will use this new code for evaluation with medical services.

Specialty Psychiatry                      Frequency 753593                      Percentage 100.00 %

Specialty                      Frequency                      Percentage                      %

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

Description of Pre-Service Work: Prepare to see patient and/or family member. Review record. Communicate with other professionals and significant others such as guardians, caretakers, and family members.

Description of Intra-Service Work: Face-to-face therapeutic communication with patient and/or family member. Obtain objective information and interval history. Examine mental state. Evaluate and explore intensity and complexity of symptoms, feelings, thoughts, and behaviors in the context of psychosocial and health stressors and coping styles. Use a range of psychotherapy approaches to reduce distress, morbidity, and address ongoing behavioral and mental status changes in the patient.

Description of Post-Service Work: Arrange for further services. Coordinate care in writing or by telephone with patient, family, and other professionals such as a primary care provider. Document intra-service and post-service work activities. Provide written or telephone reports to third-party payers.

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99232	XXX	1.39	RUC Time	50,265,346

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Physicians typically spend 25 minutes at the bedside and on the patient's hospital floor or unit.

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

The 90832, Psychotherapy, 30 minutes with patient and/or family member had previously been reported as 90804 (Psychotherapy 20-30 minutes, outpatient) and 90816 (Psychotherapy, 20-30 minutes, facility). The 90832 will be used in all settings (i.e., outpatient, inpatient, residential care, nursing facility).

### Survey process

The survey was sent randomly to members of Psychiatry, Child Psychiatry, Psychology, and Social Work. In addition to a random sample, Psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. The in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC. The reference service list was the same list used in all of the other XXX surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee. The societies worked jointly to develop a typical vignette. The typical patient for this service is an adult patient.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations involved in this survey convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The review of the survey by the expert panel determined there were 185 survey responses. Sixty-nine percent of the survey respondents found the vignette typical. The panel noted that a variety of reasons were listed by those who did not find the vignette typical. The most frequent response was that they simply did not treat adult patients, some others noted they did not typically see patients for 30 minutes but rather for 45 minutes or that the vignette described a more complex patient than they would see for 30 minutes.

The median survey results regarding time are 10 minutes pre-service, 30 minutes intra-service, and 10 minutes post-service. The expert panel supports the survey results for the median time of 30 minutes for the intra-service. The panel also agreed that the survey result of 10 minutes of pre-service time is representative of what would typically occur with 90832. The panel noted that the post-service times from the survey varied across the three timed psychotherapy codes (90832, 90834, 90837). They believe the post-service time is typically consistent across the three services. They believe that the survey respondents likely underestimated the post-service time for the 90832. The panel believes 12 minutes is typical due to the range of services provided during the post-service period which include arranging for further service, coordinating care with the patient, family, and other professionals such as primary care providers, documenting intra-service and post-service work activities, and providing reports to third-party payers. These activities are typically performed directly by the psychotherapist without assistance of clinical staff. There is also increased documentation time because providers of psychotherapy services typically maintain a separate record from the medical record for psychotherapy process notes as allowed under HIPAA to protect patient privacy. **Therefore, the panel**

**recommends 10 minutes pre-service, 30 minutes intra-service, and 12 minutes post-service times for a total of 52 minutes.**

An analysis of the intensity and complexity measures of the surveyed code as compared to the key reference service, 96152, *Health and behavior intervention, each 15 minutes, face-to-face; individual* (4, 15, 5; RVW 0.46) shows that the surveyed code is greater in intensity and complexity in nine of the identified areas and the same for the tenth of the eleven measures. The panel agreed that 90832 and 96152 are different services. The skills and expertise required to provide a psychotherapy service exceed those for a health and behavior service. This increased intensity/complexity accounts for a higher RVW of 1.50 for the surveyed code.

Additional support for this is provided by the comparison of the surveyed code to 99214, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family* (5, 25, 10; RVW 1.50), which is similar in work with less total time.

The panel also compared the surveyed code with 99382, *Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; early childhood (age 1 through 4 years)* (5, 25, 5; RVW 1.60), with a total time of 35 minutes, which they believe supports the median RVW of 1.50 on the basis of increased time, and increased intensity of work of the surveyed code when compared with a preventive medicine visit with a higher RVW.

The panel further compared the 90833 to 99232, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Physicians typically spend 25 minutes at the bedside and on the patient's hospital floor or unit* (10, 20, 10; RVW 1.39), with a total time of 40 minutes. The panel believes the median survey value is supported by the increased time of the 90832 and the range of settings in which the service is delivered.

Finally, the expert panel reviewed the median RVW in the context of survey values for the range of timed psychotherapy codes and found that the relativity of the values of the codes across the family of codes was consistent.

### **Recommendation**

In summary, based on the comparisons to the MPCs and other codes, **the expert panel recommends an RVW of 1.50 and median values of 10 minutes pre-, 30 minutes intra-, 12 minutes post-time for a total time of 52 minutes for 90832.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90804, 90816

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Commonly

Specialty Social Work                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 8,822,536

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry	Frequency 711249	Percentage 8.06 %
Specialty Psychology	Frequency 5071281	Percentage 57.48 %
Specialty Social Work	Frequency 2759059	Percentage 31.27 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,214,469 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most recent RUC database

Specialty Psychiatry	Frequency 177157	Percentage 7.99 %
Specialty Psychology	Frequency 1273319	Percentage 57.49 %
Specialty Social Work	Frequency 686485	Percentage 30.99 %

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90833      Tracking Number   LL5

Original Specialty Recommended RVU: **1.50**Presented Recommended RVU: **1.50**

Global Period: ZZZ

RUC Recommended RVU: **1.50**

CPT Descriptor: Psychotherapy, 30 minutes with patient and/or family member when performed with an Evaluation and Management service

(List separately in addition to the code for primary procedure)

(Use 90833 in conjunction with 99201-99255, 99304-99337, 99341-99350)

(Use the 90785 in conjunction with (90832, 90833, 90834, 90836, 90837, 90838 when psychotherapy includes interactive complexity services)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Psychotherapy for a young adult with the diagnoses of depression, anxiety, and attention deficit disorder who has relationship problems and recently moved away from family. Patient is taking stimulant and antidepressant medications.

Percentage of Survey Respondents who found Vignette to be Typical: 70%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Description of Intra-Service Work: Data from various sources, including past interactions with the patient, current history and mental status findings, information which may have come to light from other historians or outside records, and the patient's behavior, descriptions, and responses to intra-session interventions, are all reviewed or considered and a working therapeutic interpretation, behavioral treatment plan or supportive intervention strategy is formulated and enacted. Examples of the focus of this intervention could include a current acute situation, suicidal thought/ safety plan, or a pattern of dysfunctional behavior. Evidence of behavioral change, demonstration of insight, or reduction in symptoms (anxiety, depression, irritability, etc.) is sought based on the psychotherapeutic interventions.

Description of Post-Service Work: Documentation of the symptoms and behaviors that are the focus of the treatment, as well as the specific psychotherapeutic intervention and work done in the session.

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99214	XXX	1.50	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99232	XXX	1.39	RUC Time	50,265,346

CPT Descriptor 1 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Physicians typically spend 25 minutes at the bedside and on the patient's hospital floor or unit.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99243	XXX	1.88	RUC Time	1

CPT Descriptor 2 Office consultation for a new or established patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99252	XXX	1.50	RUC Time

CPT Descriptor Inpatient consultation for a new or established patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Physicians typically spend 40 minutes at the bedside and on the patient's hospital floor or unit.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code:** 64      **% of respondents:** 56.1 %

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the MDs) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry).

The 90833, *psychotherapy, 30 minutes with patient and/or family member (list separately in addition to the code for primary service)* had previously been reported as a bundled service (90805, *Psychotherapy 20-30 minutes, office, with medical evaluation and management services*; and 90817, *Psychotherapy 20-30 minutes, facility, with medical evaluation and management services*) that captured the work of the psychotherapy and the E/M services in one code. The psychotherapy with medical evaluation and management codes varied only by time with the level of E/M work remaining constant. The newly approved framework describes the work more accurately, allowing for the differentiation of the E/M work based on the actual level of service provided. Psychiatrists will select the appropriate evaluation and management code based on the key elements, adding on the psychotherapy add-on code based only on the time spent providing psychotherapy. There is minimal overlap between the E/M service and the psychotherapy procedure. The information collected during the E/M portion of the service informs the psychotherapy process and the time spent collecting that data during the E/M portion is not counted in the time spent providing psychotherapy.

### Survey process

The survey for the 90833 was sent to a random sample of psychiatrist members of the American Psychiatric Association (APA) and the American Academy of Child and Adolescent Psychiatry (AACAP). This code can be used in all settings (i.e., outpatient, inpatient, residential care, nursing facility).

The reference service list was the same list used in all of the other ZZZ surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee. A typical vignette was developed with assistance of experts from APA and AACAP.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the number of responses and the service performance rate. Although there were a number of respondents who indicated they had never performed the service, the expert panel believes these individuals were unfamiliar with the survey process and did not recognize a current service being described in a different way. Of the 114 survey respondents, 70 percent found the vignette to be typical. As with the 9080D2, a significant number of those who said the patient described was not typical indicated that they specialized in child and adolescent or geriatric psychiatry, noting simply that their typical patient was not an adult.

The expert panel supports the median survey times of 30 minutes of intra service time. This code is an add-on code and as such typically has no pre or post time. The expert panel believes that additional documentation requirements for psychotherapy services adds additional time that is not captured in the evaluation and management codes billed with these services. It is typical for payers to require separate documentation of the psychotherapy session including a description of the modality used, the psychotherapeutic intervention, the focus of the session and the patient's response to treatment. The expert panel supports adding an additional 3 minutes post service time to account for that work, particularly in light of the fact that there is no clinical staff to assist in this work. Based on the above, **we recommend 0 minutes pre, 30 minutes intra, and 3 minutes post service time.**

We believe that the median survey RVW of 1.50 appropriately represents the typical work of this service. This is supported by a comparison of the intensity and complexity measures of the surveyed code with the key reference service. 56% of the survey respondents chose 99214, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family, (5, 25, 10; RVW 1.50)* with a total time of 40 minutes, as the key reference service. A comparison of the measures shows that the respondents found the surveyed code to be greater in intensity/complexity to the reference code a majority of the time including during the intra-service period.

In looking at other services, the expert panel compared the 90833 with 99242, *Office consultation for a new or established patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Physicians typically spend 30 minutes face-to-face with the patient and/or family. (5, 25, 10; RVW 1.34).* In addition to a slightly longer intra-service time, the expert panel believes that the typical presenting problems addressed in the 90833 are of greater severity than those typically addressed by the low level consultation code, thus supporting a higher RVW.

Additional comparisons were made between the surveyed code and CPT codes 99232, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. (10, 20, 10; RVW 1.39)* and 99252, *Inpatient consultation for a new or established patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Physicians typically spend 40 minutes at the bedside and on the patient's hospital floor or unit. (5, 25, 10; RVW 1.50).* The panel concluded that the intensity of the work of the surveyed code surpassed or equaled the work of these code which have slightly lower intra-service times, thus providing further support for the median RVW.

The expert panel also reviewed the survey data for the entire family of psychotherapy codes and found relativity across the survey results, including the results for 90845, psychoanalysis, which was reviewed by the RUC in September 2011 with reaffirmation requested at this meeting. The panel found that the median RVWs of the 90833, 90836, 90838 codes (psychotherapy when done in conjunction with an E/M service) were equal to or just below that of the 90832, 90834, 90837 codes (psychotherapy only) There is also relativity when compared with other forms of psychotherapy ( 90845, 90846 and 90847).

### **Recommendation**

In summary, based on comparisons to the reference code, MPC codes, and other codes, **we recommend the median RVW of 1.50, and median times of 0 minutes pre, 30 minutes intra, and 3 minutes post time for a total time of 33 minutes for the 90833.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90805, 90817

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 7636948

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry                      Frequency 6862470                      Percentage 89.85 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,439,350 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2010 Medicare Data from the RUC database. We do not anticipate a change.

Specialty Psychiatry                      Frequency 1295415                      Percentage 90.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency                      Percentage                      %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90834      Tracking Number   LL6

Original Specialty Recommended RVU: **2.00**Presented Recommended RVU: **2.00**

Global Period: XXX

RUC Recommended RVU: **2.00**

CPT Descriptor: Psychotherapy, 45 minutes with patient and/or family member

(Use the 90785 in conjunction with (90832, 90833, 90834, 90836, 90837, 90838 when psychotherapy includes interactive complexity services)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Psychotherapy for an adult suffering from co-morbid medical conditions, depression, and agitation of two months duration which resulted in loss of job after several emotional outbursts at work. Patient is anxious about loss of income and inability to find another job.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Prepare to see patient and/or family member. Review record. Communicate with other professionals and significant others such as guardians, caretakers, and family members.

Description of Intra-Service Work: Face-to-face therapeutic communication with patient and/or family member. Obtain objective information and interval history. Examine mental state. Evaluate and explore intensity and complexity of symptoms, feelings, thoughts, and behaviors in the context of psychosocial and health stressors and coping styles. Use a range of psychotherapy approaches to reduce distress, morbidity, and address ongoing behavioral and mental status changes in the patient.

Description of Post-Service Work: Arrange for further services. Coordinate care in writing or by telephone with patient, family, and other professionals such as a primary care provider. Document intra-service and post-service work activities. Provide written or telephone reports to third-party payers.

## **Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### **Background**

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

The 90834, Psychotherapy, 45 minutes with patient and/or family member had previously been reported as 90806 (Psychotherapy 45-50 minutes, outpatient) and 90816 (Psychotherapy, 45-50 minutes, facility). The 90834 will be used in all settings (i.e., outpatient, inpatient, residential, nursing facility).

### **Survey process**

The survey was sent randomly to members of Psychiatry, Child Psychiatry, Psychology, and Social Work. In addition to a random sample, Psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. The in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC.

The reference service list was the same list used in all of the other XXX surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee. The societies worked jointly to develop a typical vignette. The typical patient for this service is an adult patient.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### **Analysis and recommendations from the expert panel**

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the survey results citing that 82 percent of the 183 survey respondents found the vignette typical and the median service performance rate was 240, which is a reasonable number for this service.

The survey results regarding time are 10 minutes pre-service, 45 minutes intra-service, and 12 minutes post-service. The panel supported the survey results for the median time of 45 minutes for the intra-service. As with the 90832, there is typically increased documentation time as a result of maintaining a separate record from the medical record for psychotherapy process notes as allowed under HIPAA to protect patient privacy.

Support for the median RVW of 2.00 can be found in the comparison of the surveyed code with the key reference service. Twenty-eight percent of the survey respondents chose 96152, *Health and behavior intervention, each 15 minutes, face-to-face; individual*, as the key reference service. An analysis of the intensity and complexity measures shows that the respondents rated the surveyed code higher in every measure except two (physical effort and the pre-service time segment). The increased intensity and complexity in addition to the total time of the service supports the median value.

In addition, the panel compared the surveyed code to 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family* (5, 35, 15; RVW 2.11) with a total time of 55 minutes. The panel believes that increased time of the 90834 more than accounts for any variation in the intensity of the two services. The value is further supported by the fact that the surveyed code can be used in any setting (outpatient, inpatient, residential care, nursing facility) and the intensity of the patient encounter can vary greatly within each setting.

Additional support comes from the comparison of the surveyed code to 99233, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit* (10, 30, 15; RVW 2.00) which has a similar time and RVW. The panel believes the increased time of 90834 more than accounts for any variation in the RVW of the two services. The value is further supported by the fact that the surveyed code can be used in any setting (inpatient, outpatient, residential care, nursing facility) where the intensity of the patient encounter can vary greatly.

Finally, the expert panel also compared the median survey results of the 90834 to the other median survey results and found that the median value maintains relativity within the family. Psychoanalysis, which has a slightly longer intra-service time, is valued at 2.10 based on the RUC's review of that code at the September 2011 RUC meeting. The expert panel believes the work of the two services is similar and thus supportive of the median RVW. The 90834 also maintains relativity with the other timed-psychotherapy codes.

### Recommendations

In summary, based on the comparisons to the key reference service and MPC codes **we recommend the median RVW of 2.00 with 10 minutes pre-, 45 minutes intra-, and 12 minutes post-time for a total time of 67 minutes for 90834.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90806, 90818

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Commonly

Specialty Social Work                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 30873016

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry	Frequency 1887479	Percentage 6.11 %
Specialty Psychology	Frequency 15058230	Percentage 48.77 %
Specialty Social Work	Frequency 13143397	Percentage 42.57 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,736,176 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most recent RUC database

Specialty Psychiatry	Frequency 472680	Percentage 6.10 %
Specialty Psychology	Frequency 3790726	Percentage 48.99 %
Specialty Social Work	Frequency 3293290	Percentage 42.56 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 90836      Tracking Number LL7

Original Specialty Recommended RVU: **1.90**Presented Recommended RVU: **1.90**

Global Period: ZZZ

RUC Recommended RVU: **1.90**

CPT Descriptor: Psychotherapy, 45 minutes with patient and/or family member when performed with an Evaluation and Management service

(List separately in addition to the code for primary procedure)

(Use 90836 in conjunction with 99201-99255, 99304-99337, 99341-99350)

(Use the 90785 in conjunction with (90832, 90833, 90834, 90836, 90837, 90838 when psychotherapy includes interactive complexity services)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Psychotherapy for an adult suffering from co-morbid medical conditions, depression, and agitation of two months duration which resulted in loss of job after several emotional outbursts at work. Patient is anxious about loss of income and inability to find another job.

Percentage of Survey Respondents who found Vignette to be Typical: 75%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Description of Intra-Service Work: Data from various sources, including past interactions with the patient, current history and mental status findings, information which may have come to light from other historians or outside records, and the patient's behavior, descriptions, and responses to intra-session interventions, are all reviewed or considered and a working therapeutic interpretation, behavioral treatment plan or supportive intervention strategy is formulated and enacted. Examples of the focus of this intervention could include a current acute situation, suicidal thought/ safety plan, or a pattern of dysfunctional behavior. Evidence of behavioral change, demonstration of insight, or reduction in symptoms (anxiety, depression, irritability, etc.) is sought based on the psychotherapeutic interventions.

Description of Post-Service Work: Documentation of the symptoms and behaviors that are the focus of the treatment, as well as the specific psychotherapeutic intervention and work done in the session.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status?

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service?

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99214	XXX	1.50	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99233	XXX	2.00	RUC Time	21,650,554

CPT Descriptor 1 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99243	XXX	1.88	RUC Time	1

CPT Descriptor 2 Office consultation for a new or established patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99221	XXX	1.92	RUC Time

CPT Descriptor Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Physicians typically spend 30 minutes at the bedside and on the patient's hospital floor or unit.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code:** 35      **% of respondents:** 30.7 %

**TIME ESTIMATES (Median)**

	<b>CPT Code: 90836</b>	<b>Key Reference CPT Code: 99214</b>	<b>Source of Time RUC Time</b>

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

#### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the MDs) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry).

The 90836, *psychotherapy, 45 minutes with patient and/or family member (list separately in addition to the code for primary service)* had previously been reported as a bundled service (90807, *Psychotherapy 45-50 minutes, office, with medical evaluation and management services*; and 90819, *Psychotherapy 45-50 minutes, facility, with medical evaluation and management services*) that captured the work of the psychotherapy and the E/M services in one code. The psychotherapy with medical evaluation and management codes varied only by time with the level of E/M work remaining constant. The newly approved framework describes the work more accurately, allowing for the differentiation of the E/M work based on the actual level of service provided. Psychiatrists will select the appropriate evaluation and management code based on the key elements, adding on the psychotherapy add-on code based only on the time spent providing psychotherapy. There is minimal overlap between the E/M service and the psychotherapy procedure. The information collected during the E/M portion of the service informs the psychotherapy process and the time spent collecting that data during the E/M portion is not counted in the time spent providing psychotherapy.

#### Survey process

The survey for the 90836 was sent to a random sample of psychiatrist members of the American Psychiatric Association (APA) and the American Academy of Child and Adolescent Psychiatry (AACAP). This code can be used in all settings (i.e., outpatient, inpatient, residential care, nursing facility). The reference service list was the same list used in all of the other ZZZ surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee. A typical vignette was developed with assistance of experts from APA and AACAP.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

#### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the number of responses and the service performance rate. As with the 90833, there were a number of respondents who indicated they had never performed the service. The expert panel believes these individuals were unfamiliar with the survey process and did not recognize a current service being described in a different way. Of the 114 survey respondents, 75 percent found the vignette to be typical. Those that did not find the vignette typical were primarily individuals who specialized in child and adolescent or geriatric psychiatry.

The expert panel supports the median survey times of 45 minutes of intra-service time. As with the 90833, the expert panel believes that additional post-service documentation requirements for psychotherapy services due to payer requirements adds additional time that is not captured in the evaluation and management codes billed with these services, particularly in light of not employing clinical staff. The expert panel supports adding an additional 3 minutes post-service time to the 90836 to account for that work. Based on the above, **we recommend 0 minutes pre-, 45 minutes intra-, and 3 minutes post- service time.**

The expert panel believes that the median survey RVW of 1.90 appropriately represents the typical work of this service. This is supported by a comparison of the intensity and complexity measures of the surveyed code with the key reference service. Thirty percent of the survey respondents chose 99214, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family, (5, 25, 10; RVW 1.50)* as the reference service. The expert panel reviewed the intensity and complexity measures and found that the respondents rated the surveyed code higher in every category with the exception of the post-service period, which was rated equally. The expert panel concurred that the higher measures of intensity and complexity coupled with the significantly longer intra-service time of the surveyed code supported the median value of 1.90 which is less than the current value for the codes this add-on replaces, 90807 (0,50,0; RVW 2.02) and 90819 (0, 45, 0; RVW 2.05)

In comparing the surveyed code with 99221, *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Physicians typically spend 30 minutes at the bedside and on the patient's hospital floor or unit. (10, 30, 10; RVW 1.92)*, the expert panel reported that the typical work of a 45 minute psychotherapy session is similar to that of the lowest level initial hospital care code.

The expert panel compared the 90836 to 99233, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit. (10, 30, 15; RVW 2.0)* and believes that the work in the surveyed code is similar given the increased service time of the surveyed code in comparison with the typical time of the 99233 code.

The expert panel also concluded that the 99243, *Office consultation for a new or established patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family (5, 28, 7; RVW 1.88)* was similar in work and the differences in RVWs could be accounted for due to the longer intra-service time of the surveyed code.

The expert panel also reviewed the survey data for the entire family of psychotherapy codes and found relativity across the survey results, including the results for 90845, psychoanalysis, which was reviewed by the RUC in September 2011 with reaffirmation requested at this meeting. The panel found that the median RVWs of the 90833, 90836, 90838 codes (psychotherapy when done in conjunction with an E/M service) were equal to or just below that of the 90832, 90834, 90837 codes (psychotherapy only). There is also relativity when compared with other forms of psychotherapy (90845, 90846 and 90847).

#### **Recommendation:**

In summary, based on comparisons to the reference code, MPC codes, and other codes, **we recommend the**

**median RVW of 1.90, and median times of 0 minutes pre, 45 minutes intra, and 3 minutes post time for a total time of 48 minutes for 90836.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.  
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.  
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.  
☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90807, 90819

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4231608

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry Frequency 3785326 Percentage 89.45 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

795,328 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on latest RUC database.

Specialty Psychiatry Frequency 715795 Percentage 89.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

---

Description of Pre-Service Work: Prepare to see patient and/or family member. Review record. Communicate with other professionals and significant others such as guardians, caretakers, and family members.

Description of Intra-Service Work: Face-to-face therapeutic communication with patient and/or family member. Obtain objective information and interval history. Examine mental state. Evaluate and explore intensity and complexity of symptoms, feelings, thoughts, and behaviors in the context of psychosocial and health stressors and coping styles. Use a range of psychotherapy approaches to reduce distress, morbidity, and address ongoing behavioral and mental status changes in the patient.

Description of Post-Service Work: Arrange for further services. Coordinate care in writing or by telephone with patient, family, and other professionals such as a primary care provider. Document intra-service and post-service work activities. Provide written or telephone reports to third-party payers.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
96152	XXX	0.46	RUC Time

CPT Descriptor Health and behavior intervention, each 15 minutes, face-to-face; individual

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99215	XXX	2.11	RUC Time	9,976,351

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99222	XXX	2.61	RUC Time	7,451,227

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Physicians typically spend 50 minutes at the bedside and on the patient's hospital floor or unit.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99204	XXX	2.43	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 45 minutes face-to-face with the patient and/or family.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code:** 62      **% of respondents:** 33.5 %

**TIME ESTIMATES (Median)**

	<u>CPT Code:</u>	<u>Key Reference CPT Code:</u>	<u>Source of Time</u>
	90837	96152	RUC Time

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

The 90837, Psychotherapy, 60 minutes with patient and/or family member had previously been reported as 90808 (Psychotherapy 75-80 minutes, outpatient) and 90819 (Psychotherapy, 75-80 minutes, facility). The 90837 will be used in all settings (i.e., outpatient, inpatient, residential care, nursing facility).

### Survey process

The survey was sent randomly to members of Psychiatry, Child Psychiatry, Psychology, and Social Work. In addition to a random sample, Psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. The in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC. The reference service list was the same list used in all of the other XXX surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee. The societies worked jointly to develop a typical vignette.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the survey results citing that 81 percent of the 185 survey respondents found the vignette typical and the median service performance rate was 100, which is a reasonable number for this service.

The survey results regarding time are 10 minutes pre-service, 60 minutes intra-service, and 15 minutes post-service. Support for the median RVW of 2.25 can be found in the comparison of the surveyed code with the key reference service. Thirty-three percent of the survey respondents chose 96152, *Health and behavior intervention, each 15 minutes, face-to-face; individual*, as the key reference service. An analysis of the intensity and complexity measures shows that the respondents rated the surveyed code higher in every measure except one - physical effort. The panel believes the increased intensity and complexity in addition to the total time of the service supports the median value.

In addition, the panel compared the surveyed code to 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family.*(5, 35, 15; RVW 2.11) with a total time of 55 minutes. The panel believes that substantially increased time of the 90837 more than accounts for any variation in the

intensity of the two services. The value is further supported by the fact that the surveyed code can be used in any setting (outpatient, inpatient, residential care, nursing facility) where the intensity of the patient encounter can vary greatly.

Additional support comes from the comparison of the surveyed code to 99222, *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Physicians typically spend 50 minutes at the bedside and on the patient's hospital floor or unit (15, 40, 20; RVW 2.61) which has a time that is similar to the surveyed code and with the larger RVW of the 99222 accounting for any increased intensity.*

Finally, the expert panel also compared the median survey results of the 90837 to the other median survey results and found that the median maintains relativity of values within the family of psychotherapy codes.

### Recommendations

In summary, based on the comparisons to the key reference service and MPC codes **we recommend an RVW of 3.00 with 5 pre-, 60 intra-, and 10 post-service minutes for a total time of 82 minutes for 90837.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90808, 90821

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Sometimes

Specialty Social Work                      How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1681744

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry	Frequency 89083	Percentage 5.29 %
Specialty Psychology	Frequency 631443	Percentage 37.54 %
Specialty Social Work	Frequency 886103	Percentage 52.68 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 421,766 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most current RUC database.

Specialty Psychiatry	Frequency 22271	Percentage 5.28 %
Specialty Psychology	Frequency 157861	Percentage 37.42 %
Specialty Social Work	Frequency 221526	Percentage 52.52 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:90838      Tracking Number LL9

Original Specialty Recommended RVU: **2.10**Presented Recommended RVU: **2.10**

Global Period: ZZZ

RUC Recommended RVU: **2.50**

CPT Descriptor: Psychotherapy, 60 minutes with patient and/or family member when performed with an Evaluation and Management service

(List separately in addition to the code for primary procedure)

(Use 90833 in conjunction with 99201-99255, 99304-99337, 99341-99350)

(Use the 90785 in conjunction with (90832, 90833, 90834, 90836, 90837, 90838 when psychotherapy includes interactive complexity services)

(Use the appropriate prolonged services code (99354-99357) for psychotherapy services 68 minutes or longer)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Psychotherapy for adult with anxiety and depressive symptoms who is on several medications for these conditions and two co-morbid medical conditions. Patient has returned to work after a recent psychiatric hospitalization for depression. Psychosocial stressors at work and home have increased anxiety and depression since discharge.

Percentage of Survey Respondents who found Vignette to be Typical: 74%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Description of Intra-Service Work: Data from various sources, including past interactions with the patient, current history and mental status findings, information which may have come to light from other historians or outside records, and the patient's behavior, descriptions, and responses to intra-session interventions, are all reviewed or considered and a working therapeutic interpretation, behavioral treatment plan or supportive intervention strategy is formulated and enacted. Examples of the focus of this intervention could include a current acute situation, suicidal thought/ safety plan, or a pattern of dysfunctional behavior. Evidence of behavioral change, demonstration of insight, or reduction in symptoms (anxiety, depression, irritability, etc.) is sought based on the psychotherapeutic interventions.

Description of Post-Service Work: Documentation of the symptoms and behaviors that are the focus of the treatment, as well as the specific psychotherapeutic intervention and work done in the session.

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99354	ZZZ	1.77	RUC Time

CPT Descriptor Prolonged service in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management service)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99387	XXX	2.50	RUC Time	0

CPT Descriptor 1 Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; 65 years and older

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99233	XXX	2.00	RUC Time	21,650,554

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit.

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99221	XXX	1.92	RUC Time

CPT Descriptor Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Physicians typically spend 30 minutes at the bedside and on the patient's hospital floor or unit.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 35      % of respondents: 30.7 %

**TIME ESTIMATES (Median)**

	CPT Code: 90838	Key Reference CPT Code: 99354	Source of Time RUC Time

Intra-Service intensity/complexity	4.55	4.55
Post-Service intensity/complexity	3.42	3.42

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The 90838, *psychotherapy, 60 minutes with patient and/or family member (list separately in addition to the code for primary service)* had previously been reported as a bundled service (90809, *Psychotherapy 75-80 minutes, office, with medical evaluation and management services*; and 90822, *Psychotherapy 75-80 minutes, facility, with medical evaluation and management services*) that captured the work of the psychotherapy and the E/M services in one code. The psychotherapy with medical evaluation and management codes varied only by time with the level of E/M work remaining constant. The newly approved framework describes the work more accurately, allowing for the differentiation of the E/M work based on the actual level of service provided. Psychiatrists will select the appropriate evaluation and management code based on the key elements, adding on the psychotherapy add-on code based only on the time spent providing psychotherapy. There is minimal overlap between the E/M service and the psychotherapy procedure. The information collected during the E/M portion of the service informs the psychotherapy process and the time spent collecting that data during the E/M portion is not counted in the time spent providing psychotherapy.

### Survey process

The survey for the 90838 was sent to a random sample of psychiatrist members of the American Psychiatric Association (APA) and the American Academy of Child and Adolescent Psychiatry (AACAP). This code can be used in all settings (i.e., outpatient, inpatient, residential care, nursing facility). The reference service list was the same list used in all of the other ZZZ surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee. A typical vignette was developed with assistance of experts from APA and AACAP.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

The expert panel reviewed the number of responses and the service performance rate. It was the opinion of the expert panel that this has not generally been a high volume service. As with the 90833 and the 90836, there were a number of respondents who indicated they had never performed the service however the expert panel believes these individuals were unfamiliar with the survey process and did not recognize a current service being described in a different way. Of the 114 survey respondents, 74 percent found the vignette to be typical. Many of those that did not find the patient typical were primarily individuals who specialized in child and adolescent or geriatric psychiatry who simply said their typical patient was not an adult.

The expert panel supports the median survey time of 60 minutes of intra service time. As with the 90833 and 90836, the expert panel believes that additional post-service documentation requirements for psychotherapy services due to payer requirements adds additional time that is not captured in the evaluation and management codes billed with these services, particularly in light of not employing clinical staff. The expert panel supports adding an additional 3 minutes post-service time to the 90838 to account for that work. Based on the above, **we recommend 0 minutes pre, 60 minutes intra, and 3 minutes post service time.**

Thirty percent of the survey respondents chose 99354, *Prolonged service in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or*

*other outpatient Evaluation and Management service*) (0, 60, 0; RVW 1.77), as the key reference service. A review of the intensity and complexity measures shows that the respondents rated the surveyed code the same or higher in a majority of the areas. The expert panel believes that this increased work substantiates the higher median RVW of 2.10 proposed by the survey respondents.

The expert panel compared 90838 to 99233, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit* (10, 30, 15; RVW 2.0), which was the second highest code chosen for comparison by the survey respondents. The panel believed this code supported the median value of the surveyed code, which is substantially longer in intra-service time than this reference code.

An additional comparison of 90838 to 99387, *Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; 65 years and older* (4, 45, 10; RVW 2.5), supports the median value of 2.10 of the surveyed code which has longer intra-service time and is focused on an existing illness and specific psychotherapeutic interventions.

And the expert panel believed that 99404, *Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 60 minutes* (0, 60, 0; RVW 1.95) provided another strong comparison.

The expert panel also compared 90838 to 90845, psychoanalysis, which has a slightly shorter intra-service time and a RUC recommended RVW of 2.10 based on the RUC's review of that code at its September 2011 meeting. The expert panel believes the work of the two services is similar and thus supportive of the median RVW.

As with the 90836, the median survey RVW of 2.10 is substantially less than the current values of the psychotherapy with E/M service codes this code is replacing, 90809 (0, 80, 0; RVW 2.95) and 90822 (0, 78, 0; RVW 2.99).

The expert panel also reviewed the survey data for the entire family of psychotherapy codes and found relativity across the survey results, including the results for 90845, psychoanalysis, which was reviewed by the RUC in September 2011 with reaffirmation requested at this meeting. The panel found that the median RVWs of the 90833, 90836, 90838 codes (psychotherapy when done in conjunction with an E/M service) were equal to or just below that of the 90832, 90834, 90837 codes (psychotherapy only). There is also relativity when compared with other forms of psychotherapy (90845, 90846 and 90847).

### Recommendation

In summary, based on comparisons to the reference code, MPC codes, and other codes, **we recommend an RVW of 2.50, and median times of 60 intra, and 3 post for a total time of 63 minutes for 90838.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.  
☐ Historical precedents.  
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90809, 90822

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 164976

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total payments for physician and clinical services in US

Specialty Psychiatry                      Frequency 139921                      Percentage 84.81 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

31,122 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most recent RUC database.

Specialty Psychiatry                      Frequency 26453                      Percentage 84.99 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90846

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
2010 FIVE YEAR REVIEW SUMMARY OF RECOMMENDATION**

CPT Code: 90845      Tracking Number  
Global Period: XXX

Specialty Society Recommended RVU: **2.10**  
RUC Recommended RVU: **2.10**

CPT Descriptor: Psychoanalysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 37-year-old man with dysthymia and narcissistic personality disorder manifested by entitlement, inability to be intimate, and extreme variability of self esteem is seen in the second year of psychoanalysis, just prior to going on a business trip. Argumentative and easily offended, he accuses the analyst of being insensitive and detached, and angrily rejects any effort to explore the basis of his mood or behavior.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 2%

Is moderate sedation inherent in your reference code (Office setting)? No

Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

Description of Pre-Service Work: Preparing to see patient; refreshing memory about recent sessions; assessing and managing one's own psychological reactions to the patient.

Description of Intra-Service Work: In person therapeutic communication with patient; implicitly obtaining information and observing the patient's mental state; evaluating and exploring the intensity of symptoms, feelings, thoughts, conflicts, fantasies, behaviors, and dreams as necessary; exploring the patient's and one's own feelings, fantasies and thoughts about the evolving therapeutic relationship as a model for gaining perspective on significant difficulties in the patient's other relationships (transference and countertransference); introducing the impact of the patient's engagement on the analyst as a data source for grasping the patient's effects on other relationships; providing psychological interpretations regarding defenses, conflicts and tendencies in patient's personality and relationships, including awareness of mental process, self-esteem, self-regulation, and impulse control; addressing impediments to ongoing behavioral change that could reduce distress and promote well-being.

Description of Post-Service Work: Documenting the services provided intra-service including reviewing content and process of session, reflection on the psychoanalyst's reactions to the patient's affects, communications and behavior in the session and identifying issues requiring follow-up at next/future sessions; related consultation with peers and review of literature pertinent to the case.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Psychoanalysis, CPT code 90845, was put forward along with a majority of the codes within the psychiatry section of CPT as part of the fourth Five-Year Review process. As noted in the attached letter from the specialty societies, we believe there has been a change in the work required in this service. Our letter to CMS highlights the changes in the patient population with references substantiating the increased complexity of the patients. We have also provided additional information under the section on compelling evidence for changes in technique since this code was last reviewed by the RUC in 1995.

Recommendations regarding this code were originally submitted for the September 2010 RUC meeting along with 16 additional codes that were identified as being misvalued. During that presentation the specialties requested that entire tab be referred to the CPT Editorial Panel to more accurately describe the service. The RUC supported the referral to CPT and a CPT Workgroup was established to address these issues.

During the review process, a recommendation was made to remove psychoanalysis from the CPT Workgroup process and forward it on to the RUC for review. It was the opinion of all of the provider groups that the work inherent in providing psychoanalysis was the same regardless of who was performing the procedure and there was no need to further refine the descriptor for that service. A request was made and granted by the AMA RUC staff to add this to code to the RUC's September agenda using the data from our original survey.

### Survey Process and Data

The following three groups surveyed 90845: the American Psychiatric Association (Psychiatry), the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work). The survey included two separate reference service lists (RSL), one used by the psychiatry, and one used by the psychology and social work. The separate RSL's were reviewed and approved by the RUC Research Subcommittee. Together the societies convened a joint society expert panel ("expert panel") to review the survey data and make recommendations.

### Analysis and recommendations from the expert panel

**Time:** The survey median results regarding time are 10 minutes pre, 50 minutes intra, and 10 minutes post service. The expert panel supported the median time of 50 minutes for the intra-service time however thought that the median values for the pre and post service times were an overestimation. According to the experts, the patient is typically seen face to face for 50 minutes and the total encounter lasts approximately 60 minutes. The panel reviewed the 25th percentile of 5 minutes of pre and 5 minutes for post service work and agreed these times were more representative of what typically occurs. The 5 minutes of pre and post time combined with the intra-service time of 50 minutes results in a total time of 60 minutes. **Therefore we recommend 5 minutes pre, 50 minutes intra and 5 minutes post service time for a total time of 60 minutes.**

**RVW:** As noted above, two separate reference service lists were used for this survey effort resulting in two different codes being selected as the key reference service. Responses by psychologists and social workers who were using a common reference service list outnumbered the responses by psychiatrists which impacted the selection of the key reference service.

The expert panel reviewed the number of times each specialty billed this code using the RUC database and compared it to the response rate by specialty to the RUC survey. They found that psychiatry was under-represented and psychology and social work over-represented in the results.

Specialty	2010 Medicare Claims (Frequency)		Percentage of Responses by Specialty	RVW Median	Median Time			
	%	# Claims			Pre	Intra	Post	Total Time
Psychiatry	50%	2709	36%	2.50	5	50	10	65
Psychology	36%	1950	43%	2.10	10	55	10	75
Social Work	0.12%	7	21%	1.95	15	50	15	80

The key reference service for the combined survey results was 99404, *Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 60 minutes* (RVW of 1.95 with time of 0, 60, 0, pre, intra and post respectively and a total time of 60 minutes) which was selected by 17 of the 34 psychologists and social workers completing the survey.

An analysis of the intensity and complexity measures shows that respondents thought the intensity and complexity of the work of psychoanalysis was greater in every measure – in particular technical skill (4.53 for 90845 and 3.65 for 99404) and

outcome (4.65 for 90845 and 3.76 for 99404) -- than the key reference service except one, physical effort, validating the median value of 2.10.

Six of the 19 psychiatrists responding to the survey chose CPT code 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family* (RVW of 2.11, with times of 5, 35, 15 pre, intra and post respectively and a total time of 55 minutes) as the key reference service.

Again, an analysis of the intensity and complexity measures show that respondents indicated that the work was more intense and/or complex in a majority of the categories, again with the greatest difference in the area of technical skill required (4.83 for 90845 and 3.83 for 99215) and outcome dependent on the skill and judgment of the physician (4.50 for 90845 and 3.50 for 99215), further substantiating the median RVW of 2.10.

The expert panel concurred with the survey median RVW of 2.10, agreeing that psychoanalysis was more intense, required greater technical effort and relied more heavily on the skill and judgment of the clinician than the key reference services cited.

The current RVW for 90845 is 1.79, we guide you to the compelling evidence section for details regarding two compelling evidence criteria which the expert panel believed were met - changes in physician work due to patient population and technique. In addition to the reference service codes identified above, the following service is provided for comparison to support our recommended RVW and times:

CPT 99233, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit, with a work RVW of 2.00 and 55 minutes of total time (10 pre, 30 intra, 15 post service).*

This comparison code, coupled with the median survey results, supports our recommendation of the median value of 2.10 for 90845, Psychoanalysis. **Therefore we recommend the median RVW of 2.10 with times of 5 pre, 50 intra and 5 post service for a total time of 60 minutes.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**Professional Liability Insurance Information (PLI)**

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? (ie. similar work RVU, and specialty) No

If no, please select another crosswalk and provide a brief rationale. 90845

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**Compelling Evidence**

The RUC operates with the initial presumption that the current values assigned to the codes under review are correct. The argument for a change must be substantial and meet the RUC's compelling evidence standards listed in the Instructions Document. Please list your compelling evidence below (if appropriate).

As noted in the letter to CMS, psychoanalysis and the other codes within the psychiatry section were identified by the specialty societies as being misvalued predominately because of changes in the patient population and in the case of psychoanalysis, due to changes to the technique since the code was originally valued in 1995 as described below. The following outlines those changes in addition to the original arguments in the letter to CMS as part of the five-year review process.

(1) Change in the patient population: Psychoanalysts traditionally treated a wide variety of conditions which included a considerable number of high functioning patients who came to treatment for what might be regarded today as relatively minor psychological problems. Patients with such conditions are now often treated in a variety of newer treatment modalities (such as short term cognitive-behavioral and psychodynamic psychotherapies, CPT 90806 or 90807) rather than psychoanalysis. As a result there has been a change in the overall severity of the clinical population engaged in full psychoanalytic treatment (CPT 90845) with an increased number of patients suffering from narcissistic and borderline conditions, as well as patients with dual diagnoses, including bipolar disorder and some forms of substance abuse. Such patients tend to be more unstable both within and outside the treatment setting, and may require a much more active approach on the part of the psychoanalyst. This change in the overall composition of the patient population has resulted in a greater degree of work effort on the part of psychoanalysts, as well as increased stress borne out of concern for possible transitory negative effects (including transitory increases in suicidal ideation) which may occur as an effect of such intensive treatment and which must be carefully managed.

(2) Change in the technique employed in psychoanalytic practice: Traditionally, psychoanalytic treatment (CPT 90845) had been based in a model originated in theoretical writings of Freud and carried into actual practice by psychoanalysts during the mid-20th century. In this model the analyst tended to be silent a great deal of the time, listening closely to the patient's associations and intervening sparsely with interpretations with the aim of augmenting the patient's self-understanding. As a result of growing understanding of the actual role of the psychoanalyst's presence in the session the focus has shifted to a greater emphasis on the interaction between the psychoanalyst and the patient as the data for gaining understanding of the patient's internal dynamics. Technically, this focus on the interpersonal process between them is a further development of the fundamental concepts of transference, counter-transference, and therapeutic change. This technical change had already started to become evident in the 1990's but is now a widely regarded important feature of psychoanalytic treatment. As a result of this technical change the psychoanalyst is required to be much more intently focused on the minute to minute interaction during the session, considerably more active during the session, and much more focused on his or her internal feeling states both within and between the analytic sessions. This substantially increases the psychoanalyst's intensity and complexity effort during the session, when compared with the earlier model.

**Five-Year Review Specific Questions**

Please indicate the number of survey respondent percentages responding to each of the following questions (for example 0.05 = 5%).

Has the work of performing this service changed in the past 5 years? Yes 40% No 60%

A. This service represents new technology? Yes 32% No 68%

Of survey respondents, who said yes, the new technology affected the work:

Less Work: 0% Same Work: 14% More Work: 86%

B. This service reflects new technology that has become more familiar: Yes 14% No 86%

C. Patients requiring this service are now:

More complex (more work) 91% Less complex (less work) 0% No change in complexity 9%

D. The typical site-of-service has changed:

From outpatient to inpatient 9% From inpatient to outpatient 9% No change 82%

Global Period: XXX

Presented Recommended RVU: **2.40**RUC Recommended RVU: **2.40**

CPT Descriptor: Family psychotherapy (without the patient present)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Parents of a 16 year old girl who is defiant, unruly, failing in school, and recently caught smoking marijuana seek help in managing the child. The child refuses to come in for treatment. The parents disagree on how to manage the child.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Prepare office for family; review patient's records, including information from outside sources; communicate with other professionals.

Description of Intra-Service Work: Face to face interaction with the patient's family; obtain interval history of the patient; provide psychoeducation regarding the patient's problems and the role family members have in perpetuating or diminishing them; formulation of treatment goals; and, development of systemic strategies to achieve desired goals.

Description of Post-Service Work: Arrange for further services; provide electronic, written or telephone communication with other family and other professionals (e.g., physicians, teachers, psychotherapists); document the services provided; provide written, electronic or telephone reports to Medicare or other third party payers.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.11	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99386	XXX	2.33	RUC Time	

CPT Descriptor 1 Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; 40-64 years

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99204	XXX	2.43	RUC Time	8,436,133

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 45 minutes face-to-face with the patient and/or family

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99310	XXX	2.35	RUC Time

CPT Descriptor Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 22      % of respondents: 17.8 %

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

This code, 90846, Family Psychotherapy (without the patient present) is an existing code and was not revised during the CPT process.

### Survey Process

The survey was sent randomly to members of Psychiatry, Child Psychiatry, Psychology, and Social Work. In addition to a random sample, psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. The in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC.

The reference service list was the same list used in all of the other XXX surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers, and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

82 percent of the 123 survey respondents indicated that the vignette described the typical patient.

As noted in the work descriptor, the pre-service time is spent collecting and reviewing medical records and other data prior to the family visit. The post time is spent scheduling the next appointment, developing a written treatment plan, following up with other providers/agencies regarding findings, writing referrals for other services, and any other activities that result from the treatment decisions made during the session, again, without benefit of clinical staff to assist. **Therefore we recommend 5 minutes pre-, 50 minutes intra-, and 10 minutes post-service time for a total time of 65 minutes.**

The key reference service for the survey results was 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's*

*needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family (5, 35, 15; RVW 2.11), which was selected by 18% of the survey respondents.*

An analysis of the intensity and complexity measures shows that respondents thought the intensity and complexity of the work of family therapy (without the patient present) was equal to or higher than the majority of the measures. In particular, the respondents indicated that the technical skill required and the risk of complications was greater in the surveyed code than in the reference code. They rated the intra-service intensity/complexity the same as the reference code with the pre- and post-service periods rated higher for the surveyed code. The expert panel reviewed this data, comparing the reference service code RVW and time to the surveyed code. They agreed that the difference in RVW could be accounted for by the increased time required, as well as by the increased intensity and complexity in specific measures and support the survey median RVW of 2.40.

An additional comparison can be made to 99386, *Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; 40-64 years, (5, 40, 10; RVW 2.33)* with a total time of 55 minutes. The increased RVW of the surveyed code accounts for the increased time of the service.

The expert panel also identified 99204, *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 45 minutes face-to-face with the patient and/or family, with a work RVW of 2.43 and 45 minutes of total time (5 pre, 30 intra, 10 post service).* In comparing the work of the surveyed code to 99204, the expert panel noted that the difference in time between the two codes supports the median RVW and makes up for any difference in intensity between work for the benefit of an established patient versus work associated with a new patient.

One last comparison was made with 99310, *Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention (15, 35, 20; RVW 2.35), with a total time of 70 minutes.* The times and RVW values are similar, again, with the increased intra-service time accounting for the slightly higher RVW of the surveyed code.

Finally, the expert panel compared the results from this survey process with the results from the 2010 survey of this code. The panel thinks that the differences in the median RVWs between the 2012 survey and the 2010 survey (2.40 RVWs vs. 2.00 RVWs) can be accounted for by the increased number of responses (123 responses in the 2012 survey as compared to 76 responses in the 2010 survey) and an increase in the median service performance rate. The expert panel thinks the current survey results are more reliable than the previous survey effort and there is appropriate relativity between the 2012 median value of 2.40 and the values for other psychotherapy services being presented at this meeting.

#### **Recommendation:**

The comparisons above support our recommendation of the median value of 2.40 for 90846, Family psychotherapy (without the patient present). **Therefore we recommend the median RVW of 2.40 with times of 10 pre-, 50 intra-, and 15 post-service for a total time of 65 minutes for code 90846.**

#### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90846

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Sometimes

Specialty Social Work                      How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 104808

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry	Frequency 30195	Percentage 28.80 %
----------------------	-----------------	--------------------

Specialty Psychology	Frequency 26621	Percentage 25.39 %
----------------------	-----------------	--------------------

Specialty Social Work	Frequency 42856	Percentage 40.89 %
-----------------------	-----------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 26,202 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most recent RUC database

Specialty Psychiatry	Frequency 7549	Percentage 28.81 %
----------------------	----------------	--------------------

Specialty Psychology	Frequency 6655	Percentage 25.39 %
----------------------	----------------	--------------------

Specialty Social Work	Frequency 10714	Percentage 40.89 %
-----------------------	-----------------	--------------------

Do many physicians perform this service across the United States? Yes

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99205	XXX	3.17	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99222	XXX	2.61	RUC Time	7,451,227

CPT Descriptor 1 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Physicians typically spend 50 minutes at the bedside and on the patient's hospital floor or unit.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99204	XXX	2.43	RUC Time	8,436,133

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordinatio

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99336	XXX	2.46	RUC Time

CPT Descriptor Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes with the patient and/or family or caregiver.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 28      % of respondents: 22.7 %

**TIME ESTIMATES (Median)**

	CPT Code: 90847	Key Reference CPT Code: 99205
Median Pre-Service Time	5.00	7.00
Median Intra-Service Time	55.00	45.00
Median Immediate Post-service Time	10.00	15.00
Median Critical Care Time	0.0	0.00
Median Other Hospital Visit Time	0.0	0.00
Median Discharge Day Management Time	0.0	0.00
Median Office Visit Time	0.0	0.00
Prolonged Services Time	0.0	0.00

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

### Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

This code, 90847, *Family psychotherapy (conjoint psychotherapy) (with patient present)* is an existing code and was not revised during the CPT process. This code can be used in all settings.

### Survey process

The survey was sent randomly to members of Psychiatry, Child Psychiatry, Psychology, and Social Work. In addition to a random sample, Psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. The in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC.

The reference service list was the same list used in all of the other XXX surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers, and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

### Analysis and recommendations from the expert panel

The associations involved in this survey convened a joint society expert panel expert panel with broad representation from each group to review the survey data and make recommendations.

84 percent of the survey respondents indicated that the vignette described the typical patient.

As noted in the work descriptor, the pre-service time is spent collecting and reviewing medical records and other data prior to the family visit. The post-service time is spent scheduling the next appointment, developing a written treatment plan, following up with other providers/agencies regarding findings, writing referrals for other services, and any other activities as a result of the treatment decisions from the session, again, without benefit of clinical staff to assist. **Therefore we recommend 5 minutes pre-, 55 minutes intra-, and 10 minutes post service time for a total time of 70 minutes.**

The key reference service chosen for this code was 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 60 minutes face-to-face with the*

*patient and/or family* (7, 45, 15 ; RVW 3.17) with a total time of 67 minutes, which was selected by 23% of the survey respondents.

An analysis of the intensity and complexity measures shows that respondents thought the intensity and complexity of the work of *Family psychotherapy (conjoint psychotherapy) (with patient present)* was greater than the reference code in many of the measures. In particular, the respondents indicated that the intensity/complexity was greater in each of the time segments than for 99205. The panel believes this data supports the median RVW of 2.50.

An additional comparison can be made to 99222, *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Physicians typically spend 50 minutes at the bedside and on the patient's hospital floor or unit* (15, 40, 20; RVW 2.61). In comparing the two services, the expert panel noted that the times were similar and the variation of the RVW was accounted for by the increased intensity of a new patient in an inpatient setting.

The expert panel also believes the 99336, *Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes with the patient and/or family or caregiver* (10, 40, 15; RVW 2.46), supports the median RVW of the surveyed code based on the similarities in time.

Finally, the expert panel compared the results of the 2012 survey with those of the 2010 survey. The median RVW increased from 1.94 in the 2010 survey to 2.50 in 2012. As with the 90846, there was an increase in the number of survey respondents from 2010 to 2012 (94 to 123). The panel noted that in 2010 there was variation in the median survey responses between the MD and Non-MD groups, which negatively affected the median RVW when the data was combined. The panel thinks that the use of the common reference service list in 2012 led to more reliable survey data with the difference in the median RVW between MDs and Non-MDs at 0.08. The panel also thinks the median value of 2.50 RVWs is in line with the median value for 90846, *Family psychotherapy (without the patient present)*, noting that the work involved is more difficult when the patient is present.

### Recommendation

These comparison codes and the median survey results support our recommendation of the median value of 2.50 for 90847, *Family psychotherapy (conjoint psychotherapy) (with patient present)*. **Therefore we recommend the median RVW of 2.50 with times of 5 pre-, 55 intra-, and 10 post- service minutes, for a total time of 70 minutes for 90847.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90847

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Sometimes

Specialty Psychology                      How often? Sometimes

Specialty Social Work                      How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 890852

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

## Background

We have provided a detailed cover letter regarding the background of this RUC submission which includes this code and the 10 others from the Psychiatry section that were surveyed in March 2012.

The physician specialty societies (the *MDs*) include the American Psychiatric Association (Psychiatry) and the American Academy of Child and Adolescent Psychiatry (Child Psychiatry). The psychologist and clinical social worker specialty societies (the *Non-MDs*) include the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work).

This code, 90853, *Group psychotherapy (other than of a multifamily group)* is an existing code and was not revised during the CPT process. This code can be used in all settings.

## Survey Process

The survey was sent to all psychiatrist members of the American Group Psychotherapy Association, and randomly to members of Child Psychiatry, Psychology, and Social Work. In addition to a random sample, Psychology conducted a convenience sample of 100 psychologists attending a conference in Washington, DC. This in-person survey was monitored by AMA RUC staff and the chair of the RUC HCPAC. The reference service list was the same list used in all of the other XXX surveys for this family of codes and was reviewed and approved by the RUC Research Subcommittee.

The RUC Research Subcommittee also approved adding to additional questions to the RUC survey regarding group psychotherapy. The societies asked to include a question as to the typical number of patients seen in a typical group session and they asked to include an instruction for the survey respondents to calculate the time and the RVW of the procedure as a whole rather than on a per patient basis. The societies were concerned that survey respondents many respond in an inconsistent way if those questions were not included. The RUC Research Subcommittee approved the request.

As noted in our submission to the Practice Expense Subcommittee, there has been a shift in practice over the years, and while approximately half of the practicing psychiatrists employ administrative staff, a lesser number employ clinical staff. These numbers are even lower for psychologists, clinical social workers, and other qualified healthcare providers. As a result, our PE submission did not include any clinical staff time. This is another argument for the RVW recommendation since this increased work is done entirely by the treating provider.

## Analysis and recommendations from the expert panel

The associations convened a joint society expert panel with broad representation from each group to review the survey data and make recommendations.

78 percent of the 82 survey respondents indicated that the vignette described the typical patient and the expert panel concluded that the service performance rate seemed reasonable

The expert panel noted that the median intra-service time of 60 minutes appeared less than what is typical. A review of the data from the 2010 RUC survey of this code shows that the intra-service time was 90 minutes at the median and 75<sup>th</sup> percentile. Further discussions with experts in group psychotherapy confirmed that the standard length of a typical group psychotherapy visit was 76 to 90 minutes which was reported in the results of a 2010 survey by the American Group Psychotherapy Association. The pre and post service times appeared to be in the appropriate range and in line with the current.

The expert panel does not believe the survey results accurately represent the work of these procedures. We believe that survey respondents were confused by this new way of considering time and work, by using the total work and time of the entire group, rather than considering it by individual patient work and time. This led to an under reporting of values. Despite the increased complexity of patients since the last survey, we don't have credible survey evidence to increase the values, and therefore recommend that the current values should be maintained. We also believe the research Subcommittee should investigate options for future surveys that address procedure codes that describe services provided to groups of patients. The panel requests that the current values be maintained on the basis of the following comparisons.

*In comparing 97804, Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes (2,6,2; RVW 0.25), and 99411, Preventive medicine counseling and/or risk factor reduction intervention(s) provided to individuals in a group setting (separate procedure); approximately 30 minutes 10, 30, 5; RVW 0.15) to 90853, Group Psychotherapy, the expert panel noted that the complexity of the intra-service work is greater with the surveyed code due to the interpersonal dynamic between participants in the psychotherapeutic process.*

The panel also believed that the work of the 90853 was similar to that of the 99223, Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Physicians typically spend 70 minutes at the bedside and on the patient's hospital floor or unit. (15, 55, 20; RVW 3.86) which has a similar total time and the higher RVW of the 99223 accounts for the increased intensity of the inpatient service.

### Recommendation

**We recommend maintaining the current RVW of 0.59 with times of 3 pre-, 10 intra-, and 3 post-service minutes for a total time of 16 minutes (per patient) for 90853.**

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90853

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychiatry                      How often? Commonly

Specialty Psychology                      How often? Commonly

Specialty Social Work                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 5061420

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare payments are approximately 25% of total physician and clinical services expenses in US.

Specialty Psychiatry	Frequency 1464775	Percentage 28.94 %
Specialty Psychology	Frequency 907513	Percentage 17.93 %
Specialty Social Work	Frequency 1912711	Percentage 37.79 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,265,355 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on most recent RUC database.

Specialty Psychiatry	Frequency 366194	Percentage 28.94 %
Specialty Psychology	Frequency 226878	Percentage 17.92 %
Specialty Social Work	Frequency 478178	Percentage 37.79 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 90853

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

Psychiatric diagnostic evaluation code

Global Period: XXX Meeting Date: April 2012

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Specialty Society Practice Expense Committee for the psychiatric codes consisted of representatives from the American Psychiatric Association, the Academy of Child and Adolescent Psychiatry, the American Psychological Association, and the National Association of Social Workers. An expert panel that included psychiatrists, psychologists, and clinical social workers, was developed to review practice expense across the spectrum of care for the psychiatric codes. It was agreed that there is no clinical service labor for any of the psychiatric codes. The groups will be requesting expenses related to medical supplies and equipment only.

A reference code must be provided for comparison to the practice expense inputs on your spreadsheet. Please provide a rationale for the selection of reference codes. Comparison Code Rationale: N/A

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: N/A

Service Clinical Labor Activities: N/A

Post-Service Clinical Labor Activities: N/A

CPT Long Descriptor:

Family psychotherapy (conjoint psychotherapy) (with patient present)

Global Period: XXX Meeting Date: April 2012

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The Specialty Society Practice Expense Committee for the psychiatric codes consisted of representatives from the American Psychiatric Association, the Academy of Child and Adolescent Psychiatry, the American Psychological Association, and the National Association of Social Workers. An expert panel that included psychiatrists, psychologists, and clinical social workers, was developed to review practice expense across the spectrum of care for the psychiatric codes. It was agreed that there is no clinical service labor for any of the psychiatric codes. The groups will be requesting expenses related to medical supplies and equipment only.

A reference code must be provided for comparison to the practice expense inputs on your spreadsheet. Please provide a rationale for the selection of reference codes. Comparison Code Rationale: N/A

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: N/A

Service Clinical Labor Activities: N/A

Post-Service Clinical Labor Activities: N/A

April 2013

**Evoked Potentials and Reflex**

In February 2010, CPT code pairs 95925 *Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in upper limbs*/95926 *Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in lower limbs* and 95928 *Central motor evoked potential study (transcranial motor stimulation); upper limbs*/95929 *Central motor evoked potential study (transcranial motor stimulation); lower limbs* were identified by the Codes Reported Together 75% or More screen. At the request of the RUC, the specialty societies submitted a coding proposal which was approved by the CPT Editorial Panel to create two bundled codes which will allow providers to report short latency somatosensory evoked potential studies of the upper and lower limbs and central motor evoked potential study of the upper and lower limbs. At the February 2011 RUC meeting, the RUC reviewed the survey results for new codes 95938 *Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in upper and lower limbs* and 95939 *Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs*. The specialty had obtained strong, valid survey results for code 95938, but not for 95939, as only 31% of the respondents indicated the vignette was typical. The RUC and specialty societies agreed that a new survey should be conducted and the survey results presented at the April 2011 RUC meeting with an inpatient vignette scenario. The RUC reviewed these services and submitted recommendations for CPT 2012.

In the Final Rule for 2013, CMS accepted the RUC recommended values on an interim basis, but determined that there are valuation and time inaccuracies, both across the evoked potential study codes and relative to the new bundled codes. For example, for CPT codes 95925 and 95926, CMS does not believe that the correct intra-service time for CPT code 95938 can be the sum of the intra-service times of CPT codes 95925 and 95926, as CMS is confident that there are efficiencies that result from performing these services together. Given these anomalous relationships, CMS requested public comments on the appropriate work and time values for codes 95925, 95926, 95928, 95929, 95938 and 95939.

The RUC agreed with the specialty society that these codes represent two distinct families. The RUC reaffirmed that there was an error in the time file for 95938 and the correct times are 10 minutes pre, 20 minutes intra and 10 minutes post. After correcting this error, the time for codes 95925, 95926 and 95938 are rational. For the second family, the RUC noted that code 95939 was surveyed in April 2011 and recommended that the specialty societies resurvey codes 95928 and 95929 and develop PE inputs for April 2013.

**95928 Central motor evoked potential study (transcranial motor stimulation); upper limbs**

The RUC reviewed the survey data for CPT code 95928 and determined that the survey 25<sup>th</sup> percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC agreed that 15 minutes pre-service, 40 minutes intra-service and 10 minutes immediate post-service time accurately accounts for the physician time required to perform this service alone. The RUC reiterated that due to the addition of 95939 *Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs* (work RVU = 2.25 and 15 minutes pre-service, 30 minutes intra-service and 15 minutes immediate post-service time) in CPT 2012, codes 95928 and 95929 are expected now to be performed predominately in the outpatient setting. CPT code 95939 would typically be performed in the inpatient setting where the overall number of muscle sites tested is lower, accounting for the lower intra-service time and a much greater level of intensity than 95928 or 95929. The existing codes, 95928 and 95929 would continue to shift toward being typically performed in non-facility settings, requiring a greater number of muscle sites tested per limb, requiring more intra-service time and physician work. The specialty societies indicated and the RUC agreed that 95939 is a different service, it is an electrical motor evoked potential study, in which the physician delivers 600 volts to the brain. CPT 95939 is more like electroconvulsive shock therapy, but with a much shorter duration so the entire body jerks and all four limbs are moving. Additionally, it is under general anesthesia so the physician can measure the motor pathways directly. CPT code 95939 is more straightforward than 95928 and 95929, but it is also dangerous, so the intensity is greater. Once 95939 was broken out, it described a different service and therefore was appropriately valued differently. The RUC noted that the utilization for 95928 has decreased by 10,000, down to an estimated 1,797 for 2012, as the correct service will now be reported with 95939. The creation of CPT code 95939 represented a 25% savings in work RVUs and substantial overall savings to the Medicare system in 2012.

The RUC compared 95928 to key reference service 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54 and 30 minutes intra-service time) and noted that 95928 requires slightly less work, less time and is less intense than 95861.

Therefore, the 25<sup>th</sup> percentile work RVU, which is the current work RVU of 1.50 appropriately places this service relative to other similar services.

**The RUC recommends a work RVU of 1.50 for CPT code 95928.**

**95929 Central motor evoked potential study (transcranial motor stimulation); lower limbs**

The RUC reviewed the survey data for CPT code 95929 and determined that the survey 25<sup>th</sup> percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC agreed that 15 minutes pre-service, 40 minutes intra-service and 10 minutes immediate post-service time accurately account for the physician time required to perform this service alone. The RUC reiterated that due to the addition of 95939 *Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs* (work RVU = 2.25 and 15 minutes pre-service, 30 minutes intra-service and 15 minutes immediate post-service time) in CPT 2012, codes 95928 and 95929 are expected now to be performed predominately in the outpatient setting. CPT code 95939 would typically be performed in the inpatient setting where the overall number of muscle sites tested is lower, accounting for the lower intra-service time and a much greater level of intensity than 95928 and 95929. The existing codes, 95928 and 95929 would continue to shift toward being typically performed in non-facility settings, requiring a greater number of muscle sites tested per limb, requiring more intra-service time and physician work. The specialty societies indicated and the RUC agreed that 95939 is a different service, it is an electrical motor evoked potential study, in which the physician delivers 600 volts to the brain. CPT 95939 is

more like electroconvulsive shock therapy but with a much shorter duration so the entire body jerks and all four limbs are moving. Additionally, it is under general anesthesia so the physician can measure the motor pathways directly. CPT code 95939 is more straightforward than 95928 and 95929, but it is also dangerous, so the intensity is greater. Once 95939 was broken out, it described a different service and was therefore valued differently. The RUC noted that the utilization for 95929 has decreased by approximately 18,000, down to an estimated 1,440 for 2012, as the correct service will now be reported with 95939. The creation of CPT code 95939 represented a 25% savings in work RVUs and substantial overall savings to the Medicare system in 2012.

The RUC compared 95929 to key reference service 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54 and 30 minutes intra-service time) and noted that 95929 requires slightly less work, less time and is less intense than 95861. Therefore, the 25<sup>th</sup> percentile work RVU, which is the current work RVU of 1.50 appropriately places this service relative to other similar services. **The RUC recommends a work RVU of 1.50 for CPT code 95929.**

#### Work Neutrality

The RUC's recommendation for this family of codes will result in an overall work savings and was redistributed back to the Medicare conversion factor in 2012.

#### Practice Expense:

The RUC accepted the direct PE inputs with minor modifications as recommended by the PE Subcommittee.

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
95928	Central motor evoked potential study (transcranial motor stimulation); upper limbs (Do not report 95928 in conjunction with 95929)	XXX	1.50 (No Change)
95929	lower limbs (Do not report 95929 in conjunction with 95928)	XXX	1.50 (No Change)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient presents with subacute arm weakness without sensory disturbances. Imaging shows spondylotic cervical myelopathy. After examination and EMG, the diagnosis remains uncertain. The differential includes cervical myelopathy, amyotrophic lateral sclerosis (ALS), and several peripheral neuromuscular disorders. The patient is referred for central motor evoked potential testing to determine whether there is a central motor pathway impairment and to provide a baseline for assessment of progression.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 6%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Review request to determine which muscles to evaluate and special needs to be met during testing. Consult with referring physicians to establish patient testing plan.

Description of Intra-Service Work: Apply silver-silver chloride electrodes over the biceps, triceps, abductor pollicis brevis and abductor digiti minimi muscles in belly-tendon recording derivation. Apply gel. Secure electrodes. Check impedances, and reapply electrodes as needed. Prior to performing transcranial magnetic stimulation, perform routine motor nerve conduction studies with F-waves in order to establish baseline compound muscle action potentials (CMAP) and determine peripheral conduction. This should include stimulation at Erb's point and distal segments of the nerve. Determine the optimal scalp location for head coil using stepwise stimulus location changes and adjustments of intensity. At the optimal location for the first muscle tested, usually abductor digiti minimi, determine the resting motor evoked potential (MEP) threshold using in 5% increments of maximal stimulator output. After determining the threshold, record MEPs during modest tonic isometric contraction using stimulation 25% of maximum output above threshold. Measure the transcranial MEP amplitude and onset latency and compare to baseline nerve conduction studies. Measure the abductor digiti minimi CMAP obtained with supramaximal electrical stimulation of the ulnar nerve. Calculate the relative abductor digiti minimi MEP amplitude as a percentage of the CMAP amplitude. Measure the MEP to cervical stimulation. Calculate central motor conduction time (CMCT) by subtracting latencies for scalp and cervical stimulation tests. Measure the dissociation between MEP threshold and the cortical stimulation silent period (CSSP) by reducing the stimulator output in 5% increments until stimulation no longer altered the appearance of the average rectified abductor digiti minimi EMG. Measure the dissociation between excitatory and inhibitory effects of transcranial stimulation (MEP facilitation failure) as EMG inhibition without a

preceding MEP at 2 or more stimulus intensities. Replicate data. Store the signals for later review and analysis. Repeat this procedure for 3-4 selected muscles on the same limb. Repeat this procedure on the other upper extremity.

Description of Post-Service Work: Review data, eliminate unreliable data, compare patient results to predetermined limits of normality using three criteria: (1) abnormal excitation using MEP threshold and MEP/CMAP ratio; (2) failure of MEP facilitation; (3) abnormal CMCT; and (4) CSSP. Determine appropriate clinical comments based on the patient's presenting problem and test results. Dictate, review and verify report. Verbal interpretation to referring physician if applicable. Respond to any questions from referring physician, or any patient problems.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

A new bundled code (95939) was established in 2012 for the reporting of combined upper and lower motor evoked potential study tests. The majority of the utilization of motor evoked potential studies (90%) utilization is seen in 95939, with 10% being represented in the separate upper and lower limb studies.

Prior to the survey the specialty societies requested the Research Subcommittee approve a survey sample as there is a limited number of physicians who perform the service. 2216 physicians were contacted via AAN Sections, only 21 of which responded they perform the service; a list of physician names was obtained from an equipment manufacturer, however only one physician responded to the initial email and that individual did not complete the survey. The remaining names were obtained from the societies by physicians self-reporting they perform the service. The final sample size was 65 with a total response number of 28.

A consensus panel representing members from the surveying specialties met via conference call to develop recommendations. Upon reviewing the survey data it became apparent, based upon comments, that several of the survey respondents (9) were reporting 95928 in conjunction with intra-operative monitoring which is not typical for the service. The panel performed a data analysis on the respondents (19) who perform the service separate from intra-operative monitoring, per current coding, as well. The societies agreed to remove data representing inaccurate reporting of the service to better reflect the time and intensity involved in 95928.

The small sample size led to poor survey data which is statistically inadequate, but the data we did gather is consistent with existing values. As a result we relied upon an expert panel to validate our recommendations.

The 25<sup>th</sup> percentile RVW of 1.50 from the 19 who report the service based upon current coding is consistent with the existing RVW as well as the Median RVW 1.54 of the entire survey respondent results (28). Therefore we recommend maintaining the existing RVW of 1.50.

The panel agreed with the survey median pre-service time of 15 minutes as well as the post-service time of 10 minutes. The survey median intra service time of 40 minutes is an appropriate representation of the work performed as well.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95928

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology                      How often? Rarely

Specialty Physical Medicine & Rehabilitation                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 7480

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimated the national frequency would be 4 times the Medicare frequency

Specialty Neurology	Frequency 5760	Percentage 77.00 %
---------------------	----------------	--------------------

Specialty PM&R	Frequency 598	Percentage 7.99 %
----------------	---------------	-------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1870

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is 10% of the 2011 Medicare claims data. We estimate that 90% of motor evoked potential studies are performed via the combined upper and lower limb code.

Specialty Neurology	Frequency 1440	Percentage 77.00 %
---------------------	----------------	--------------------

Specialty PM&R	Frequency 150	Percentage 8.02 %
----------------	---------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? No

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95928

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 6%

Description of Pre-Service Work: Review request to determine which muscles to evaluate and special needs to be met during testing. Consult with referring physicians to establish patient testing plan.

Description of Intra-Service Work: Apply silver-silver chloride electrodes over tibialis anterior, gastrocnemius, abductor hallucis, and abductor digiti minimi muscles in belly-tendon recording derivation. Apply gel. Secure electrodes. Check impedances, and reapply electrodes as needed. Obtain motor nerve conduction studies with F-waves and establish baseline compound muscle action potentials (CMAP) and determine peripheral conduction. Determine optimal scalp location for head coil using stepwise stimulus location changes and adjustments of intensity. Determine the resting motor evoked potential (MEP) threshold and record MEP during modest tonic isometric contraction. Also measure the transcranial MEP amplitude and onset latency and compare to baseline nerve conduction studies.

Measure CMAP obtained with supramaximal electrical stimulation and calculate the relative MEP amplitude. Measure the MEP to lumbar stimulation and calculate the relative MEP amplitude. Calculate central motor conduction time (CMCT) by subtracting latencies for scalp and lumbar stimulation tests or peripheral nerve conduction times using a formula. Measure the dissociation between MEP threshold and the cortical stimulation silent period (CSSP). Measure the dissociation between excitatory and inhibitory effects of transcranial stimulation (MEP facilitation failure).

Replicate data and store signals for later review and analysis. Repeat procedure for 3 other selected muscles on same limb. Repeat this procedure for other lower extremity.

Description of Post-Service Work: Review data, eliminate unreliable data, compare patient results to predetermined limits of normality using three criteria: (1) abnormal excitation using MEP threshold and MEP/CMAP ratio; (2) failure of MEP

facilitation; (3) abnormal CMCT; and (4) CSSP. Determine appropriate clinical comments based on the patient's presenting problem and test results. Dictate, review and verify report. Verbal interpretation to referring physician if applicable. Respond to any questions from referring physician, or any patient problems.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
95925	XXX	0.54	RUC Time

CPT Descriptor Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in upper limbs

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99203	XXX	1.42	RUC Time	9,479,309

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
95861	XXX	1.54	RUC Time	382,803

CPT Descriptor 2 Needle electromyography; 2 extremities with or without related paraspinal areas

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 6      % of respondents: 31.5 %

**TIME ESTIMATES (Median)**

	<b>CPT Code:</b> 95929	<b>Key Reference CPT Code:</b> 95925	<b>Source of Time</b> RUC Time
Median Pre-Service Time	15.00	6.50	
Median Intra-Service Time	40.00	15.00	
Median Immediate Post-service Time	10.00	10.00	
Median Critical Care Time	0.0	0.00	
Median Other Hospital Visit Time	0.0	0.00	

Median Discharge Day Management Time	0.0	0.00
Median Office Visit Time	0.0	0.00
Prolonged Services Time	0.0	0.00
Median Subsequent Observation Care Time	0.0	0.00
<b>Median Total Time</b>	<b>65.00</b>	<b>31.50</b>
<b>Other time if appropriate</b>		

**INTENSITY/COMPLEXITY MEASURES (Mean)****(of those that selected Key  
Reference code)****Mental Effort and Judgment (Mean)**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

A new bundled code (95939) was established in 2012 for the reporting of combined upper and lower motor evoked potential study tests. The majority of the utilization of motor evoked potential studies (90%) utilization is seen in 95939, with 10% being represented in the separate upper and lower limb studies.

Prior to the survey the specialty societies requested the Research Subcommittee approve a survey sample as there is a limited number of physicians who perform the service. 2216 physicians were contacted via AAN Sections, only 21 of which responded they perform the service; a list of physician names was obtained from an equipment manufacturer, however only one physician responded to the initial email and that individual did not complete the survey. The remaining names were obtained from the societies by physicians self-reporting they perform the service. The final sample size was 65 with a total response number of 28

A consensus panel representing members from the surveying specialties met via conference call to develop recommendations. Upon reviewing the survey data it became apparent, based upon comments, that several of the survey respondents (9) were reporting 95929 in conjunction with intra-operative monitoring which is not typical for the service. The panel performed a data analysis on the respondents (19) who perform the service separate from intra-operative monitoring, per current coding, as well. The societies agreed to remove data representing inaccurate reporting of the service to better reflect the time and intensity involved in 95929.

The small sample size led to poor survey data which is statistically inadequate, but the data we did gather is consistent with existing values. As a result we relied upon an expert panel to validate our recommendations.

The 25<sup>th</sup> percentile RVW of 1.50 from the 19 who report the service based upon current coding is consistent with the existing RVW as well as the Median RVW 1.54 of the entire survey respondent results (26). Therefore we recommend maintaining the existing RVW of 1.50.

The panel agreed with the survey median pre-service time of 15 minutes as well as the post-service time of 10 minutes. The survey median intra service time of 40 minutes is an appropriate representation of the work performed as well.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95929

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology                      How often? Rarely

Specialty Physical Medicine & Rehabilitation                      How often? Rarely

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 7736

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimated the national frequency would be 4 times the Medicare frequency.

Specialty Neurology                      Frequency 6034                      Percentage 77.99 %

Specialty PM&R                      Frequency 735                      Percentage 9.50 %

Specialty                      Frequency                      Percentage                      %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,934

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is 10% of the 2011 Medicare claims data. We estimate that 90% of motor evoked potential studies are performed via the combined upper and lower limb code.

Specialty Neurology                      Frequency 1511                      Percentage 78.12 %

Specialty PM&R                      Frequency 212                      Percentage 10.96 %

Specialty                      Frequency                      Percentage                      %

Do many physicians perform this service across the United States? No

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95929

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

**95928 Central motor evoked potential study (transcranial motor stimulation); upper limbs**

Global Period: XXX\_\_ Meeting Date: April 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**A consensus panel representing members from the surveying specialties met via conference call and email to develop recommendations.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**We provided the PE inputs for 95928 as they were approved at the April 2012 RUC meeting. The societies agree the inputs have not changed since that time.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Review requisition. Assess for contraindications. e.g. implanted devices, skull defects, history of seizures. Assess for confounding factors, e.g. diabetes, peripheral neuropathy, known neuromuscular disorders. Obtain authorization from insurance carrier. Give patient instructions for test preparation (regarding skin and hair lotion, anxiolytic instructions, etc.) and what to expect on the day of testing. Check availability of nurse to administer any medication. Prepare room, supplies, and equipment.

Intra-Service Clinical Labor Activities:

Greet and gown patient. Take history and perform brief exam of head and limbs. Establish patient testing strategy. Explain procedure. Review with supervising physician for special needs or problems. Position the patient on a comfortable exam table. Assist physician in conducting the test. Together, place electrodes in correct muscles and identify best places to try first as stimulation sites. Coach the patient to relax better despite the brain stimulation. Coach the patient to improve the test by slightly contracting muscle being tested. Test the first muscle in the first limb, requiring series of stimulation trials, excluding trials with muscle contamination. Continue trials with slight variations in stimulation site and stimulus

intensity. Identify the optimal stimulus sites and intensity for best motor responses. Repeat testing on first muscle in the first limb two or three times. Repeat the procedure with the stimulator moved to the spine. Repeat the procedure with the stimulator moved over the plexus. Measure distances among the stimulation sites and recording site. Repeat the three-site procedure for the second and the third muscles on the first limb. Repeat that whole procedure for second limb. Remove electrodes and clean up patient. Release patient. Give discharge instructions.

Post-Service Clinical Labor Activities:

Complete worksheets and technical interpretation. Clean room and equipment. Restock supplies. Prepare data for interpretation. Place data on storage disk. Complete medical records and other forms.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request Final Rule for 2013*

April 2013

**Negative Pressure Wound Therapy**

In the Final Rule for 2013, CMS created two HCPCS codes to provide a payment mechanism for negative pressure wound therapy services furnished to beneficiaries through means unrelated to the durable medical equipment benefit: G0456 *Negative pressure wound therapy, (eg vacuum assisted drainage collection) using a mechanically-powered device, not durable medical equipment, including provision of cartridge and dressing(s), topical application(s), wound assessment, and instructions for ongoing care, per session; total wound(s) surface area less than or equal to 50 square centimeters* and G0457 *Negative pressure wound therapy, (eg vacuum assisted drainage collection) using a mechanically-powered device, not durable medical equipment, including provision of cartridge and dressing(s), topical application(s), wound assessment, and instructions for ongoing care, per session; total wound(s) surface area greater than 50 sq cm*. The two new codes will be contractor priced on an interim basis for CY 2013. CMS requested comments on the appropriate value for this service.

In January 2013, the RUC noted that industry individuals developed a Coding Change Proposal (CCP) to describe the NPWT disposable device, however subsequently withdrew the proposal. The RUC recommended that codes G0456 and G0457 be placed on the LOI to allow specialties that may have an interest a chance to survey and develop new PE inputs. **No specialty indicated an interest in developing recommendations for the service.**

In April 2013, industry individuals have again submitted a CCP to create two category I codes to describe these services with the use of a disposable device. Depending on Panel Action, at the May CPT meeting, this issue may be on the LOI for the October 2013 RUC meeting.

<b>CPT Code (•New)</b>	<b>CPT Descriptor</b>	<b>Global Period</b>	<b>Work RVU Recommendation</b>
G0456	Negative pressure wound therapy, (e.g. vacuum assisted drainage collection) using a mechanically-powered device, not durable medical equipment, including provision of cartridge and dressing(s), topical application(s), wound assessment, and instructions for ongoing care, per session; total wounds(s) surface area less than or equal to 50 square centimeters	XXX	No Specialty Society Interest – No RUC recommendation at this time
G0457	Negative pressure wound therapy, (e.g. vacuum assisted drainage collection) using a mechanically-powered device, not durable medical equipment, including provision of cartridge and dressing(s), topical application(s), wound assessment, and instructions for ongoing care, per session; total wounds(s) surface area greater than 50 square centimeters	XXX	No Specialty Society Interest – No RUC recommendation at this time

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS High Expenditure Procedural Codes Screen*  
*CMS Request: Final Rule for 2013*

April 2013

**Pharmacologic Management with Psychotherapy**

Specific psychotherapy codes were identified through the CMS High Expenditure Procedural codes screen. However, the specialties were already in the process of revising this entire section as indicated from the Fourth Five-Year Review. In April 2012, the specialty societies indicated and the RUC and HCPAC agreed that codes 90785, 90839, 90840 and 90863 be carrier priced to allow for education and experience with a significantly different coding structure. This would allow providers to gain experience with the codes prior to conducting a HCPAC survey. After a year of experience with the new coding structure the specialties would conduct surveys for these services for review of work and direct PE inputs at the April 2013 HCPAC meeting. In the Final Rule for 2013 CMS assigned interim values to the new psychotherapy codes and indicated that they will re-review all assumptions when they review all recommended values for this family of CPT codes.

**90863 Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)**

The HCPAC reviewed the survey results from 32 psychologists who practice in the two states that allow clinical psychologists to perform pharmacologic management under state scope of practice laws, for CPT code 90863. The HCPAC noted that the respondents chose 99213 *Evaluation and Management Office Visit* (work RVU = 0.97 and 15 minutes intra-service time) as the key reference service. The HCPAC noted that when the RUC reviewed the Psychotherapy performed with an Evaluation and Management service (E/M), codes 90833, 90836 and 90838, the RUC assumed the typical E/M reported would be a 99212. The HCPAC determined that the survey median work RVU of 0.98 was not appropriate as this service is an add-on code for Psychotherapy codes 90832, 90834 and 90837 and would result in too high of a work RVU compared to the RUC recommended Psychotherapy with E/M codes. The HCPAC determined that the survey respondents 25<sup>th</sup> percentile intra-service time of 15 minutes and a cross-walk to the work of 99212 (work RVU=0.48 and 16 minutes total time) was more appropriate. Additionally, a work RVU of 0.48 would appropriately align this service relative to the Psychotherapy with E/M services. **The HCPAC recommends a work RVU of 0.48 for CPT code 90863.**

**Practice Expense:**

The HCPAC reviewed the direct practice expense inputs and recommends 5 minutes of clinical staff for the *Medical/Technical Assistant* (L026A) to obtain vital signs (blood pressure, respiratory rate, heart rate, height, weight and temperature) and 15 minutes of equipment time for *One Couch and Two Chairs* (EFO42).

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
90863	<p>Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)</p> <p>(Use 90863 in conjunction with 90832, 90834, 90837)</p> <p>(For pharmacologic management with psychotherapy services performed by a physician or other qualified health care professional who may report evaluation and management codes, use the appropriate evaluation and management codes 99201-99255 , 99281- 99285 ,99304- 99337 , 99341- 99350 and the appropriate psychotherapy with evaluation and management service 90833, 90836, 90838)</p> <p>(Do not count time spent on providing pharmacologic management services in the time used for selection of the psychotherapy service)</p>	ZZZ	0.48

SUMMARY OF RECOMMENDATION**

CPT Code: 90863	Tracking Number	Original Specialty Recommended RVU: <b>0.98</b>
		Presented Recommended RVU: <b>0.98</b>
Global Period: ZZZ		RUC Recommended RVU: <b>0.48</b>

CPT Descriptor: Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 66-year-old married female with Major Depressive Disorder diagnosis; established patient on anti-depressant medication with psychotherapy. Patient is experiencing increased lability, depressed mood, and sleep disturbance following recent move from independent living in family home to senior citizen apartments.

Percentage of Survey Respondents who found Vignette to be Typical: 66%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

Description of Intra-Service Work: A problem-focused single-system psychiatric examination is performed and medical decision making of a scope, nature and complexity necessary for the initiation, continuance, modification or discontinuance of psychopharmacologic management of the patient occurs. Therapeutic drug monitoring protocols are ordered and reviewed, as clinically indicated and in accordance to recognized and appropriate standards of care, and necessary changes to drug regimens, if any, are undertaken when required. Side-effects to drug therapies, other adverse drug effects or complications and potential drug-disease interactions are identified and managed as needed.

**Description of Post-Service Work:**

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.97	CMS Time File

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99202	XXX	0.93	RUC Time	3,072,627

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent face-to-face with the patient and/or family.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99213	XXX	0.97	RUC Time	100,268,622

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

Intra-Service intensity/complexity	3.25	3.20
Post-Service intensity/complexity		

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

The American Psychological Association Practice Organization (APAPO) is submitting recommendations to the HCPAC on one new code within the psychiatry family of CPT that is currently carrier priced: **CPT 90863, Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (Global ZZZ)**. In 2012, these services were reported with CPT 90862 *Pharmacologic management, including prescription use and review of medications with no more than minimal medical psychotherapy* (RVW 0.95, Pre time 5 minutes, Intra time 25 minutes, Post time 23 minutes, total 53 minutes) which was deleted effective January 1, 2013 as part of a restructure of the psychiatry family of services. The new service, 90863 is an add-on service primarily developed for licensed psychologists, and would be billed when performed, in addition to one of these three new psychotherapy services, CPT 90832 *Psychotherapy, 30 minutes with patient and/or family member*, 90834 *Psychotherapy, 45 minutes with patient and/or family member* or 90837 *Psychotherapy, 60 minutes with patient and/or family member*.

**History**

In 2010, the APAPO as part of a joint society group put forward 36 codes as part of the fourth Five Year Review process. These codes comprised the bulk of the services within the Psychiatry section of CPT. In October of 2010, the RUC accepted the compelling evidence arguments for the family of psychiatric services. The RUC also agreed to refer the majority of the codes to the newly-formed CPT Editorial Panel workgroup. In February, 2012, the CPT Editorial Panel approved a new coding framework of which 90863 was included. At the April 2012 RUC meeting, seventeen (one by reaffirmation from the Oct 2011 meeting) of the new or revised codes were reviewed with recommended work and PE values sent to CMS. The RUC also approved carrier pricing for the remaining four new/revised codes, (including 90863) to allow the societies time for education and for members to gain experience with the significantly different coding structure, and to afford the RUC and societies time to assess options for conducting the survey of the remaining codes, that would require survey tool modifications, as well as, distribution modifications.

**Survey process**

At the February 2013 research committee conference call, the APAPO requested and the research committee approval, survey tool modifications as requested, review of a proposed RSL (approved with modifications) and modifications to the typical random survey method for 90863. As described in our letter to the research committee the distribution method presented challenges; there is a limited pool of potential survey participants as only approximately 100 psychologists, in two states, can presently prescribe psychotropic medication(s). The APAPO obtained the lists of providers from the licensing boards, removed duplicates, compared to the members lists and then removed those identified as Department of Defense, the Indian Health System and the U.S. Public Health Service. The APAPO identified a total of 42 potential survey participants and sent these individuals our on-line survey. Additionally, we hired an outside company (with no clinical expertise) to make reminder phone calls to those that had not yet completed the survey to ensure that the small pool did complete the survey to reach the minimum required 30 completed surveys.

**Analysis and recommendations from the expert panel**

The societies convened an expert panel, with representation from the two states and from varying practice sizes to review the survey data and make recommendations. The expert panel reviewed the number of responses 32 compared to the distribution of 42 and were pleased with the 76 percent response rate. We note the reminder phone calls by the contractor is credited with the high response rate.

Sixty six percent of the survey respondents told us the vignette was typical, those 11 that did not say it was typical, either did not tell us why (left blank) or if they did tell us, there were no identified clinical indication patterns, four cited age of the patient for the reason. The expert panel reviewed the survey median performance rate of 100; the panel believes this supports the notion that those taking the survey are familiar with the service, only two responded they did not perform the survey code in the past year. At the request of the research committee, we run the additional report (see standard RUC summary excel file details) of those that performed the Ref. Service code (RC) chosen versus those that did not perform the RC they chose, as well, we are providing here the breakdown of the selected RC; only eight of the 32 survey respondents told us they did not perform the RC chosen, of those 1 chose 96150, 1 chose 99213, 2 choose 99214, 2 choose 99359 and finally 2 choose 99355. Of note, the 25 percentile remained essentially unchanged, as the RUC summary excel table shows.

The expert panel reviewed the survey times and agreed that the median Intra time of 20 minutes, correctly represents the time of the service. The expert panel then reviewed the RVW survey data compared to the Key Reference service chosen 99213 with (RVW 0.97 3, 15, 5 total time 23 minutes) MPC service, they also reviewed the 2012 service 90862 RVW 0.95 5, 25, 23 total 23) and 99202 RVW 0.93, 2, 15, 5, total time 22 minutes) MPC service. In general, the expert panel believes that the survey median RVW 1.50 overstates the value in comparison to the other services reviewed however, the survey 25<sup>th</sup> percentile represents the work and the relativity between the services. The expert panel also stated that the work of the 99213 is a very close match to the work of 90863 and commented that the complexity of the specialty of psychotropic medications added a slight added complexity therefore justifying this add on service with a slightly higher RVW to the XXX global service. Finally as another comparator outside our specialty we offer, CPT 76810 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)* global ZZZ add on service, RVW 0.98, intra time 20 minutes.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT 90832, 90834, 90837.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90863

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Psychology                      How often? Sometimes

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 175000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Our expert panel, in combination with the frequency of those taking the survey assisted in providing our estimates.

Specialty Psychology                      Frequency 175000                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare status indicator I.

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? No

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90832

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Facility Direct Inputs**

CPT Long Descriptor:

**Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)**

Global Period: **ZZZ** Meeting Date: **April 2013**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**An expert panel of psychologists was convened to review practice expenses for this code submission. The panel included practicing psychologists from Louisiana and New Mexico, the two states in the U.S. where psychologists are licensed to prescribe. These members of the expert panel are engaged in large institutional practices as well as smaller private practices.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**The expert panel chose the 2012 CPT code 90862 as the comparator as this is the code providers used prior to 2013. Additionally, we have provided the most likely psychotherapy base service 90832 since this code (90863) is an add-on code to be reported only with psychotherapy services.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: **Does not apply**

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: **Does not apply**

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities:

Post-Service Clinical Labor Activities: **Phone calls between visits with patient, family, pharmacy.**

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor:

**Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)**

Global Period: **ZZZ** Meeting Date: **April 2013**

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*CMS Request/Speech-Language Pathology Request*

January 2013

**Speech Evaluation**

CPT Code 92506 *Evaluation of speech, language, voice, communication, and/or auditory processing* was requested to be reviewed via Speech-Language Pathology Request/CMS Request. In February 2010, after reviewing the survey data for this service, ASHA agreed that more than one service is being represented under this code and requested the service be referred to the CPT Editorial Panel for further clarification. The HCPAC recommended that 92506 be referred to the CPT Editorial Panel to clearly describe the services being performed. In October 2012, the CPT Editorial Panel deleted 92506 and created four new codes to more accurately describe and differentiate speech-language pathology evaluation services.

**92521 Evaluation of speech fluency (eg, stuttering, cluttering)**

The HCPAC reviewed the survey results of 91 speech-language pathologists and determined that the survey median work RVU of 1.75 and 5 minutes pre-time, 90 minutes intra-time and 15 minutes immediate post-service time appropriately accounts for the work and time required to perform this service. The HCPAC compared the surveyed code to key reference service 96105 *Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour* (work RVU = 1.75 and 4 minutes pre-time, 60 minutes intra-time and 5 minutes post-time) and determined that 92521 requires 30 minutes more intra-service to assess the impact of stuttering, measure the frequency, duration and type of stuttering, administer fluency test measures, obtain and analyze a speech sample and identify other deficits all in a slow and calm pace to allow a proper response time for the patient. Additionally, the HCPAC agreed that immediate post-service time is appropriate to communicate the information to the parent as the typical patient is a child. **The HCPAC recommends a work RVU of 1.75 for CPT code 92521.**

**92522 Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria)**

The HCPAC reviewed the survey results of 165 speech-language pathologists and determined 92609 *Therapeutic services for the use of speech-generating device, including programming and modification* (work RVU = 1.50 and 60 minutes intra-service time) requires the same work and intra-service time to perform and recommends crosswalking 92522 to 92609. The HCPAC determined that 92522 requires 5 minutes more immediate post-service time than 92521 to account for the additional number of tests included in the protocol for evaluation of speech sound production, resulting in 5 minutes pre-time, 60 minutes intra-time, and 20 minutes immediate post-time. **The HCPAC recommends a work RVU of 1.50 for CPT code 92522.**

**92523 Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)**

The HCPAC reviewed the survey results from 151 speech-language pathologists for CPT 92523 and determined that the survey respondents appropriately accounted for the time required to perform this service with time components of: 7 minutes pre-time, 120 minutes intra-time and 30 minutes immediate post-service time. However, they did not appropriately value the work compared to the key reference service. Key reference service 96105 *Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour* (work RVU = 1.75 and 4 minutes pre-time, 60 minutes intra-time and 5 minutes post-time) describes 60 minutes of work, whereas 92523 requires 120 minutes. The survey respondents did not take into account the timed code when calculating the work RVU. The HCPAC noted that 92523 includes the work described in 92522 as well as evaluation of language comprehension and expression. ASHA indicated and the HCPAC agreed that the intensity of 92523 is different from the first hour of evaluation of speech sound production and the second hour of evaluation of language comprehension. Therefore, the HCPAC recommends a work RVU of 3.36 based on the recommended work RVU for 92522 plus the survey median work of 92523 ( $1.50 + 1.86 = 3.36$ ). For additional support, the HCPAC noted that the recommended work and times for 92522 plus 96116 *Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), per hour of the psychologist's or physician's time, both face-to-face time with the patient and time interpreting test results and preparing the report* (work RVU = 1.86 and 7 minutes pre-time and 60 minutes intra-service time) also equal 3.36, supporting the work and time required to perform this service. **The HCPAC recommends a work RVU of 3.36 for CPT code 92523.**

**92524 Behavioral and qualitative analysis of voice and resonance**

The HCPAC reviewed the survey results from 59 speech- language pathologists for CPT code 92524 and determined that the survey median work RVU of 1.75 and 5 minutes pre-time, 60 minutes intra and 10 minutes post-service appropriately accounts for the work and time required to perform this service. The specialty indicated and the HCPAC agreed that 10 minutes immediate post-service time is appropriate to account for the treatment recommendations, prognosis and referrals. The HCPAC noted that this procedure is reported approximately 12% of the time with another code (e.g., swallowing evaluation - 92610) on the same date of service. The HCPAC compared the surveyed code to key reference service 92610 *Evaluation of oral and pharyngeal swallowing function* (work RVU = 1.30 and 7 minutes pre-time, 35 minutes intra-time and 10 minutes post-time) and determined that 92524 requires almost twice the time to perform. For additional support, the HCPAC compared the survey code to 96105 *Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour* (work RVU = 1.75 and 4 minutes pre-time, 60 minutes intra and 5 minutes post-time) and determined that these services require the same work and intra-service time. **The HCPAC recommends a work RVU of 1.75 for CPT code 92524.**

**Practice Expense:**

The RUC recommends the direct practice expense inputs as approved by the Practice Expense Subcommittee with no modifications.

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Category I Medicine Special Otorhinolaryngologic Services</b>				
<p>Diagnostic or treatment procedures that are reported as evaluation and management services (eg, otoscopy, anterior rhinoscopy, tuning fork test, removal of non-impacted cerumen) are not reported separately.</p> <p>Special otorhinolaryngologic services are those diagnostic and treatment services not included in an Evaluation and Management service. These services are reported separately, using codes 92502- 92700.</p> <p>Codes <u>92521, 92522, 92523, 92524</u> <del>92506 is</del> <u>are</u> used to report evaluation of speech production, receptive language, and expressive language abilities. Tests may examine speech sound production, <u>voice production, speech fluency</u>, articulatory movements of oral musculature, the patient's ability to understand the meaning and intent of written and verbal expressions, and the appropriate formulation and utterance of expressive thought. In contrast, 92626 and 92627 are reported for an evaluation of auditory rehabilitation status determining the patient's ability to use residual hearing in order to identify the acoustic characteristics of sounds associated with speech communication.</p> <p>(For laryngoscopy with stroboscopy, use 31579)</p>				
D92506		<del>Evaluation of speech, language, voice, communication, and/or auditory processing</del> (92506 has been deleted. To report, see 92521, 92522, 92523, or 92524)	XXX	N/A

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 7-year-old male presents with stuttering that includes behavioral (e.g., repetitions, prolongations, and blocks) and affective (e.g., avoidance and/or reduction of communication interaction) responses that negatively impact his communication function.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

- Review available intake materials
  - Referral information
  - Medical, developmental and/or educational records
  - Prior assessment and treatment records (e.g., speech, language, and hearing testing, previous speech interventions, etc.)
- Consult with other professionals
- Select and prepare appropriate evaluation tools

**Description of Intra-Service Work:**

- Interview patient and/or parent/caregiver to review and clarify the information provided by the intake materials
- Obtain a complete case history
- Determine patient and/or parent/caregiver concerns and expectations
- Assess the emotional, cognitive, and attitudinal impact of stuttering for information concerning speaking frequency and socialization (e.g., Behavior Assessment Battery, Overall Assessment of Speaker's Experience with Stuttering)

- Measure frequency, duration, and type of stuttering, and identify the presence of secondary behaviors (e.g., eye blinking, jaw tremor, facial grimaces, etc.) by:
  - Administering and scoring standardized fluency test measures (e.g., Stuttering Severity Instrument-Fourth Edition, Real Time Frequency Count)
  - Obtaining (e.g., audio or video recording) and analyzing a spontaneous speech sample
- Identify other deficits including speech sound production, language comprehension and expression, voice, swallowing, and hearing
- Analyze and integrate pre-service and intra-service information to formulate findings and recommendations
- Document results

Description of Post-Service Work:

- Provide information to patient and/or parent/caregiver regarding preliminary conclusions, treatment recommendations, and prognosis
- Make referrals for additional assessments and/or treatments as appropriate
- Communicate final findings and recommendations to referral source(s)

Urgency of medical decision making	2.81	3.25

**Technical Skill/Physical Effort (Mean)**

Technical skill required	4.33	4.43
Physical effort required	2.62	2.73
<b><u>Psychological Stress (Mean)</u></b>		
The risk of significant complications, morbidity and/or mortality	1.78	2.08
Outcome depends on the skill and judgment of physician	4.10	4.05
Estimated risk of malpractice suit with poor outcome	2.18	2.55

**INTENSITY/COMPLEXITY MEASURES****CPT Code****Reference  
Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	2.62	2.78
Intra-Service intensity/complexity	4.26	4.29
Post-Service intensity/complexity	3.52	3.59

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

We are recommending a work RVU of 1.75 based on the median of the survey responses and pre, intra and post times of 5, 90, and 15 minutes respectively. We think this value is supported by the reference code, 96105, which is assigned a work

RVU of 1.75 and intra time of 60 minutes. While the intensity measures for the surveyed code is slightly less than that of the reference code, the intra time for the surveyed code is 50% higher. Additionally, with respect to the intensity measures, we would note that the overall assessment of intra time intensity for the surveyed code as compared to the reference code is quite close--4.26 as compared with 4.29. Thus, even at slightly lower intensity, considering the fact that the intra time for the surveyed code is significantly higher, we think the recommended RVW is reasonable in relation to the reference code.

The work RVU of 1.75 is also supported by the two MPC codes we cited, both of which are performed primarily by non-physicians. Specifically, code 97001 (physical therapy evaluation) is assigned a work RVU of 1.20 with 30 minutes of intra time. Our requested RVU is less than 50% higher than code 97001 with 3 times the intra time. The other MPC code we cite is code 90847 (family psychotherapy) with an RVW of 2.21 and 50 minutes of intra time. Code 90847 is performed most frequently by clinical social workers

Finally, the recommended RVW for code 92521 is in line with other evaluation codes in the family of codes used by speech-language pathologists, as illustrated in the table below. In fact, given the recommended RVU and times, we believe the IWP/UT for code 92521 is very low. However, we are accepting the results of the survey and would note that this code will rarely be used in the Medicare population.

CPT Code	Descriptor	IWP/UT	RVW	Total Time	Pre	Intra	Post
<b>92521</b> <b>Survey</b> <b>RVW</b>	<b>Evaluation of speech fluency (eg, stuttering, cluttering)</b>	<b>0.0144</b>	<b>1.75</b>	<b>105</b>	<b>5</b>	<b>90</b>	<b>15</b>
92605	Evaluation for prescription of non-speech-generating augmentative and alternative communication device	0.0180	1.75	90	10	60	20
92607	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour	0.0196	1.85	90	10	60	20
92597	Evaluation for use and/or fitting of voice prosthetic device to supplement oral speech	0.0203	1.26	60	7	40	13
96125	Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	0.0257	1.70	67	7	60	0
92610	Evaluation of oral and pharyngeal swallowing function	0.0263	1.30	52	7	35	10
92611	Motion fluoroscopic evaluation of swallowing function by cine or video recording	0.0320	1.34	47	7	30	10

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. n/a

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92506

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-Language Pathology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 11250

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used a combination of ASHA membership numbers, caseload information derived from major speech & hearing clinics, and Medicare frequency data to arrive at this estimate.

Specialty Speech-Language Pathology                      Frequency 11250                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 721

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2011 Medicare claims data for the existing code, 92506, and estimated that only a small percentage of cases billed using 92506 would be for fluency cases (approx. 3.6%), since the typical is patient is a child. The 2011 frequency data for 92506 is 20,721.

Specialty Speech-Language Pathology                      Frequency 721                      Percentage 100.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96105

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 92522      Tracking Number M2      Original Specialty Recommended RVU: **1.70**  
 Presented Recommended RVU: **1.50**  
 Global Period: XXX      RUC Recommended RVU: **1.50**

CPT Descriptor: Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 6-year-old male presents with age-appropriate language comprehension and expression; yet, his speech sound production is unintelligible and negatively impacts his abilities to successfully communicate with others.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

### Description of Pre-Service Work:

- Review available intake materials
  - Referral information
  - Medical, developmental and/or educational records
  - Prior assessment and treatment records (e.g. speech, language, and hearing testing, previous speech interventions, etc.)
- Consult with other professionals
- Select and prepare appropriate evaluation tools

### Description of Intra-Service Work:

- Interview parent/caregiver to review and clarify the information provided by the intake materials
- Obtain a complete case history, including the impact of deficits on daily function.
- Determine parent/caregiver concerns and expectations
- Administer and score a standardized evaluation of speech sound production (e.g., *Goldman-Fristoe Test of Articulation, 2<sup>nd</sup> Edition*)

- Evaluate capability to approximate correct production of deficit sounds to determine potential for improved speech sound production
- Evaluate intelligibility and consistency of speech sound production in conversation
- Evaluate precision of rapid articulatory movements
- Identify signs of abnormal oral function and craniofacial abnormalities
- Evaluate the ability to detect and discriminate speech sound components (e.g., Test of Phonological Awareness)
- Identify other deficits including language comprehension and expression, fluency, voice, swallowing, and hearing
- Analyze and integrate pre-service and intra-service information to make a differential diagnosis (e.g., articulation impairment, phonological impairment, motor-speech disorder, etc.)
- Document results

Description of Post-Service Work:

- Provide information to parent/caregiver regarding preliminary conclusions, treatment recommendations, and prognosis
- Make referrals for additional assessments and/or treatments as appropriate
- Communicate final findings and recommendations to referral source(s)

-----------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

We are recommending a work RVU of 1.50 based on the median of the survey responses and pre, intra and post times of 5, 60, and 20 minutes respectively. The intra time is consistent with the median survey time. We think this value is supported by the reference code, 96105, which is assigned a work RVU of 1.75, with pre time of 4 minutes, intra time of 60 minutes, and post time of 5 minutes. We recognize that the intensity measures for the surveyed code are valued somewhat less than that of the reference code. However we think the recommended RVW is reasonable in relationship to the surveyed code (1.70 vs. 1.75) in light of the fact that the post time is considerably higher—20 minutes vs. 5 minutes. This time is needed to discuss the results of the evaluation with the parents and to review therapeutic options. We would point out that other SLP evaluation codes reviewed by the HCPAC or the RUC have been assigned comparable post times including code 92607, evaluation for speech generating device, which was assigned post time of 20 minutes and code 96111, developmental testing, with 30 minutes of approved post time.

The work RVU of 1.50 is also supported by the two MPC codes we cited, both of which are performed primarily by non-physicians. Specifically, code 97001 (physical therapy evaluation) is assigned a work RVU of 1.20 with 30 minutes of intra time. Our requested RVU is about 40% higher, but the surveyed code has twice the intra time of 97001. The other MPC code we cite is code 90847 (family psychotherapy) with an RVW of 2.21 and 50 minutes of intra time. Code 90847 is performed most frequently by clinical social workers.

Finally, the recommended RVW for code 92522 is in line with other evaluation codes in the family of codes used by speech-language pathologists, including the following:

CPT Code	Descriptor	IWPUT	RVW	Total Time	Pre	Intra	Post
92605	Evaluation for prescription of non-speech-generating augmentative and alternative communication device	0.0180	1.75	90	10	60	20
<b>92522 ASHA Rec</b>	<b>Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria)</b>	<b>0.0190</b>	<b>1.50</b>	<b>85</b>	<b>5</b>	<b>60</b>	<b>20</b>
92607	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour	0.0196	1.85	90	10	60	20
92597	Evaluation for use and/or fitting of voice prosthetic device to supplement oral speech	0.0203	1.26	60	7	40	13
96125	Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	0.0257	1.70	67	7	60	0
92610	Evaluation of oral and pharyngeal swallowing function	0.0263	1.30	52	7	35	10
92611	Motion fluoroscopic evaluation of swallowing function by cine or video recording	0.0320	1.34	47	7	30	10

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. n/a

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92506

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-Language Pathology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 21600

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used a combination of ASHA membership numbers, caseload information derived from major speech & hearing clinics, and Medicare frequency data to arrive at this estimate.

Specialty Speech-Language Pathology                      Frequency 21600                      Percentage 100.00 %

Specialty                      Frequency                      Percentage                      %

Specialty                      Frequency                      Percentage                      %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2011 Medicare claims data for the existing code, 92506, and estimated that approximately 40% of cases billed using 92506 would be for speech-sound production cases. The 2011 frequency data for 92506 is 20,721.

Specialty Speech-Language Pathology                      Frequency 8000                      Percentage 100.00 %

Specialty                      Frequency                      Percentage                      %

Specialty                      Frequency                      Percentage                      %

Do many physicians perform this service across the United States?

## Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96105

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 92523      Tracking Number M3      Original Specialty Recommended RVU: **3.72**  
 Presented Recommended RVU: **3.72**  
 Global Period: XXX      RUC Recommended RVU: **3.36**

CPT Descriptor: Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 5-year-old male presents with significant deficits of receptive, expressive, and social language and highly unintelligible speech sound production that limit his abilities to understand and communicate effectively in daily social and educational activities with family and peers.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

- Review available intake materials
  - Referral information
  - Medical, developmental and/or educational records
  - Prior assessment and treatment records (e.g. speech, language, and hearing testing, previous speech interventions, etc.)
- Consult with other professionals
- Select and prepare appropriate evaluation tools

**Description of Intra-Service Work:**

- Interview parent/caregiver to review and clarify the information provided by the intake materials
- Obtain a complete case history, including the impact of deficits on daily function.
- Determine parent/caregiver concerns and expectations
- Speech Sound Production

- Administer and score a standardized evaluation of speech sound production (e.g., Goldman-Fristoe Test of Articulation, 2nd Edition)
- Evaluate capability to approximate correct production of deficit sounds to determine potential for improved speech sound production
- Evaluate intelligibility and consistency of speech sound production in conversation
- Evaluate precision of rapid articulatory movements
- Identify signs of abnormal oral function and craniofacial abnormalities
- Evaluate the ability to detect and discriminate speech sound components (e.g., Test of Phonological Awareness)
- Language
  - Administer and score standardized language test measures (e.g., Preschool Language Assessment Instrument-2, Clinical Evaluation of Language Fundamentals, Comprehensive Assessment of Spoken Language, Test of Language Development, Peabody Picture Vocabulary Test)
  - Administer and score criterion-referenced assessments (e.g., , Children Communication Checklist)
  - Obtain (e.g., audio or video recording) and analyze a spontaneous language sample (e.g., mean length of utterance, complexity of sentence structure, pragmatics, etc.)
- Identify other deficits including fluency, voice, swallowing, and hearing
- Analyze and integrate pre-service and intra-service information to formulate findings and recommendations
- Document results

#### Description of Post-Service Work:

- Provide information to parentt/caregiver regarding preliminary conclusions, treatment recommendations, and prognosis
- Make referrals for additional assessments and/or treatments as appropriate
- Communicate final findings and recommendations to referral source(s)

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

We are recommending a professional work value of 3.36 RVUs and pre, intra, and post times of 7, 120, and 30 minutes respectively.

We recognize that the recommended work value exceeds the median RVW in the survey data (1.86). However, we are convinced that there was a common error made by the survey respondents which led to a severe underestimation of the work RVU for this code. Specifically, in valuing 92523 in relation to the time-based code (96105) which was selected as the reference procedure by the majority of survey respondents, we believe that respondents did not perform the magnitude estimation needed to make a fair comparison of two codes with similar complexity measures yet very different intra-service times.

Code 96105 is defined as assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, e.g., by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour. This code is assigned a work value of 1.75 and pre, intra and post times of 4, 60 and 5 minutes. The report writing is included in the intra time.

The median intra time from the survey for 92523 was 120 minutes and the median recommended work value was 1.86 RVU. A panel of SLPs that was convened to consider the survey data and assist us in developing the professional work value recommendation agreed that 120 minutes was an accurate estimate of the typical intra time required to perform this service.

In further support of the 120 minutes of intra-service time, we have listed examples of standardized tests that are typically performed during an evaluation of speech sound production and language comprehension and expression. The time needed to administer each test can easily fill an interval of 60 to 120 minutes for the language portion alone. Also included in this overall evaluation is an assessment of speech production which can take up to 60 minutes in accordance to the survey specific to speech production evaluation (92522). It is important to emphasize that the language assessment consists of a battery of tests designed to be administered consecutively on the same date of service to create an overall picture of the child's language ability from the perspective of different linguistic domains, when combined with other assessment activities, justify the median intra-time of 120 minutes.

- Goldman-Fristoe Test of Articulation (5 to 15 minutes)
- Test of Phonological Awareness, Second Edition (30-45 minutes)
- Clinical Evaluation of Language Fundamentals, Fourth Edition (30-60 minutes)
- Peabody Picture Vocabulary Test (10-15 minutes)

A battery of tests represents the standard of practice around the country for speech-language pathologists seeing patients with this combination of speech and language problems. We listed the above four tests as an illustrative example. There are many other standardized tests that can be incorporated into the evaluation depending on the age and abilities of the patient. Moreover, the standardized tests may be supplemented by non-standardized tests (such as recording and analyzing a spontaneous speech and language sample) used to explore in greater depth certain domain characteristics noted from the standardized measurements. Note that these tests are not separately billable services but are part of the evaluation.

Since the median intra time was 120 minutes as compared with 60 minutes for the reference code, a work value of 1.86 compared to the 1.75 for the reference makes little sense given the fact that the intra time is twice that of the reference code and the surveyed services had been rated of roughly similar complexity. Therefore, we propose to increase the survey RVW of 1.86 to 3.36 as we are certain this was intended to represent a recommended value on a per hour basis.

In further support of our conclusion that 120 minutes is a reasonable estimate, we would note that the median intra time for 92522, Evaluation of speech sound production (e.g., articulation, phonological process, apraxia, dysarthria), was 60 minutes. As noted above, code 92523 includes that service plus an evaluation of language comprehension and expression.

Use of the median survey RVW of 1.86 with our recommended pre, intra, and post times of 7, 120, and 30 would result in a rank order anomaly, with an IWPOT well below that of other SLP codes of comparable or lesser complexity, as illustrated in the table below. We have also included in this table the data for code 92523 with our recommended RVW of 3.36 and with the RVW of 1.86 with the time recommendations.

CPT Code	Descriptor	IWPOT	RVW	Total Time	Pre	Intra	Post
----------	------------	-------	-----	------------	-----	-------	------

CPT Code	Descriptor	IWPUT	RVW	Total Time	Pre	Intra	Post
<b>92523 - Survey RVW Rec</b>	<b>Evaluation of speech sound...;with evaluation of language comprehension and expression (eg, receptive and expressive language)</b>	<b>0.0090</b>	<b>1.86</b>	<b>157</b>	<b>7</b>	<b>120</b>	<b>30</b>
92605	Evaluation for prescription of non-speech-generating augmentative and alternative communication device	0.0180	1.75	90	10	60	20
92607	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour	0.0196	1.85	90	10	60	20
92597	Evaluation for use and/or fitting of voice prosthetic device to supplement oral speech	0.0203	1.26	60	7	40	13
92608	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; each additional 30 minutes (List separately in addition to code for primary procedure)	0.0233	0.70	30	0	30	0
<b>92523 - ASHA RVW Rec</b>	<b>Evaluation of speech sound...;with evaluation of language comprehension and expression (eg, receptive and expressive language)</b>	<b>0.0240</b>	<b>3.36</b>	<b>157</b>	<b>7</b>	<b>120</b>	<b>30</b>
96125	Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	0.0257	1.70	67	7	60	0
96105 (reference code)	Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour	0.0258	1.75	69	4	60	5
92610	Evaluation of oral and pharyngeal swallowing function	0.0263	1.30	52	7	35	10
96111	Developmental testing; extended (includes assessment of motor, language, social, adaptive and/or cognitive functioning by standardized developmental instruments) with interpretation and report	0.0303	2.60	95	5	60	30
92611	Motion fluoroscopic evaluation of swallowing function by cine or video recording	0.0320	1.34	47	7	30	10

In further support we would cite MPC code 90847. This service is defined as family psychotherapy and is assigned an RVW of 2.21 with pre, intra and post time of 5, 50 and 21 minutes respectively. This code is billed predominantly by clinical social workers and clinical psychologists. If one doubled the intra time and RVW for code 90847 this would yield an intra-time of 100 minutes which is lower than the surveyed code but an RVW of 4.42, substantially in excess of the recommended RVW. We think from a rank order perspective this MPC code clearly is supportive of the recommended RVW. We were unable to find an MPC code performed commonly by non-MDs which is assigned intra time or an RVW that would “bracket” the recommended RVW on the high side. However, for another code that would support our recommended RVW which is not an MPC code, we would cite Code 96116. This code, defined as neurobehavioral status exam, is assigned an RVW of 1.86 and pre time of 7 minutes and intra time of 60 minutes. Clinical psychologists perform

the majority of the services. If one doubled the intra time of 96116 to equate it to a 120 minute service and doubled the RVW.

Before initiating the survey of this series of codes, we anticipated that ASHA members would frequently select 96105 (or another time based code) as the reference code largely because there were few non time-based codes with values comparable to the surveyed code which were sufficiently familiar to practicing speech-language pathologists. We also anticipated that there might be substantial misunderstanding by our members taking the survey as to how one should appropriately value the surveyed code to a time based code. With the approval of the Research Subcommittee, we added some language to Question 7 of the survey instrument in an attempt to provide some guidance on this issue. Unfortunately, we do not think our guidance removed the confusion of using a time-based code as the reference code for a non time-based service and we firmly believe the majority of survey respondents estimated the recommended RVW without taking the time into consideration. Due to the survey timeline, we did not have time after getting approval from the Research Committee to “vet” the language and determine if it was sufficiently clear.

We certainly recognize that requesting a value substantially above the median is unusual. However, in this case, we think our request is clearly justified by the survey time data, the relative complexity in comparison with the reference code, and the fact that a rank order anomaly would result from use of the median survey RVW.

If the HCPAC is not convinced by our arguments that the median RVW represented a per hour estimate and not a work value recommendation for a 120 minute service, we would entertain any suggestions to resolve this dilemma including a resurvey of this code by different participants (with clearer explanations) or a targeted resurvey of the respondents who completed the current survey.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. n/a

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92506

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-Language Pathology

How often? Commonly

Specialty

How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 188000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We used a combination of ASHA membership numbers, caseload information derived from major speech & hearing clinics, and Medicare frequency data to arrive at this estimate.

Specialty Speech-Language Pathology	Frequency 188000	Percentage 100.00 %
-------------------------------------	------------------	---------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We used 2011 Medicare claims data for the existing code, 92506, and estimated that approximately 20% of cases billed using 92506 would be for speech-language cases. The 2011 frequency data for 92506 is 20,721.

Specialty Speech-Language Pathology	Frequency 4000	Percentage 100.00 %
-------------------------------------	----------------	---------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96105

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 92524      Tracking Number M4      Original Specialty Recommended RVU: **1.75**  
 Presented Recommended RVU: **1.75**  
 Global Period: XXX      RUC Recommended RVU: **1.75**

CPT Descriptor: Behavioral and qualitative analysis of voice and resonance

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 38-year-old female diagnosed with bilateral vocal cord nodules was referred for an evaluation of functional voice use and resonance to facilitate the design of a voice therapy/behavioral treatment plan. The patient complains of progressive hoarseness, inadequate projection, altered resonance, vocal fatigue, and tightness and pain in her throat which compromises her ability to communicate effectively.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

**Description of Pre-Service Work:**

- Review available intake materials
  - Referral information
  - Medical records
  - Prior assessment and treatment records (e.g., previous voice/speech interventions)
  - Patient's self-assessment of the impact of voice and/or resonance status on daily function (e.g., Voice Handicap Index, Voice-Related Quality of Life)
- Consultation with other professionals
- Select and prepare appropriate evaluation tools

**Description of Intra-Service Work:**

- Interview patient to review and clarify the information provided by the intake materials
- Obtain a complete case history relative to changes of voice, including:
  - Complaint/symptoms, onset, and development

- Causal/contributory/perpetuating factors (e.g., health/medical, lifestyle, environmental)
- Determine patient/caregiver concerns and expectations
- Identify signs of abnormal oral function and craniofacial abnormalities (e.g., cleft lip or palate, occult submucous cleft, neurogenic velopharyngeal dysfunction)
- Perform a systematic auditory-perceptual evaluation of voice and resonance quality while having the patient produce a structured protocol comprised of voice and speech tasks that are designed to elicit salient features to differentiate voice and resonance disorders:
  - Use standard scaling techniques to formally rate the resonance and vocal attributes of overall severity of dysphonia, roughness, breathiness, strain, pitch, and loudness
  - Document/describe the presence of any additional vocal abnormalities (e.g., hard glottal attack, diplophonia, tremor, spasm, etc.)
  - Document/describe the nature (e.g., hyper- or hyponasality) and severity of any abnormalities in resonance
- Assess upper body and extrinsic laryngeal muscle tension through observation and palpation
- Use voice and/or speech facilitating techniques to assess the potential effectiveness of intervention strategies
- Identify other deficits including speech sound production, language comprehension and expression, fluency, swallowing, and hearing
- Analyze and integrate pre-service and intra-service information to formulate findings and recommendations
- Document results

#### Description of Post-Service Work:

- Provide information to patient regarding preliminary conclusions, treatment recommendations, and prognosis
- Make referrals for additional assessments and/or treatments as appropriate
- Communicate final findings and recommendations to referral source(s)

------------------------------------	------	------

Post-Service intensity/complexity	3.66	3.54
-----------------------------------	------	------

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

We are recommending a work RVU of 1.75 based on the median of the survey responses and pre, intra and post times of 5, 60, and 10 minutes respectively. We think this value is supported by the reference code, 92610, which is assigned a work

value of 1.30 and pre time of 7 minutes, intra time of 35 minutes, and post time of 10 minutes. The intensity measures are fairly comparable, with the surveyed code ranked slightly higher on 6 of the 11 measures and the reference code ranked higher on 5 of the measures. The intra time intensity of the surveyed code was ranked higher. Given the substantial difference in intra time—60 vs. 35 minutes—and roughly similar intensity, we think the recommended work value of 1.75 is appropriate. Essentially, this means we are requesting a work value 35% higher for a service of similar intensity with 70% more intra time.

The work RVU of 1.75 is also supported by the two MPC codes we cited, both of which are performed primarily by non-physicians. Specifically, code 97001 (physical therapy evaluation) is assigned a work RVU of 1.20 with 30 minutes of intra time. Our requested RVU is about 40% higher but the surveyed code has twice the intra time of 97001. The other MPC code we cite is code 90847, family psychotherapy, with an RVW of 2.21 and 50 minutes of intra time. Code 90847 is performed most frequently by clinical social workers.

Finally, the recommended RVW for code 92524 is in line with other evaluation codes in the family of codes used by speech-language pathologists, including the following:

CPT Code	Descriptor	IWPUT	RVW	Total Time	Pre	Intra	Post
92605	Evaluation for prescription of non-speech-generating augmentative and alternative communication device	0.0180	1.75	90	10	60	20
92607	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour	0.0196	1.85	90	10	60	20
92597	Evaluation for use and/or fitting of voice prosthetic device to supplement oral speech	0.0203	1.26	60	7	40	13
<b>92524 ASHA Rec</b>	<b>Behavioral and qualitative analysis of voice and resonance</b>	<b>0.0240</b>	<b>1.75</b>	<b>75</b>	<b>5</b>	<b>60</b>	<b>10</b>
96125	Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report	0.0257	1.70	67	7	60	0
92610	Evaluation of oral and pharyngeal swallowing function	0.0263	1.30	52	7	35	10
92611	Motion fluoroscopic evaluation of swallowing function by cine or video recording	0.0320	1.34	47	7	30	10

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. n/a

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92506

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-Language Pathology	How often? Commonly
-------------------------------------	---------------------

Specialty	How often?

Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

CPT Long Descriptor: **Evaluation of speech fluency (eg, stuttering, cluttering)**

Global Period: XXX Meeting Date: January 24, 2013

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**The practice expense elements were determined by a consensus panel of speech-language pathologists. The panel drew upon the current practice expense information from the RUC database for CPT code 92506. Specialists in the area of speech fluency were also consulted. New items were added to take into account the use of forms for standardized assessments related to speech fluency.**

**The consensus panel consisted of five certified speech-language pathologists and ASHA's RUC HCPAC Advisor, all of whom are members of ASHA's Health Care Economics Committee. Geographic areas include Florida, Texas, Connecticut, Massachusetts, and Michigan. Practice settings include private practice, large group practice, hospital, academic, and university clinic. Members of the panel include generalists as well as experts in voice, cognitive communication, and speech sound disorders.**

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

**We have chosen CPT 92506 (Evaluation of speech, language, voice, communication, and/or auditory processing) as the reference code because it is the previously-reported code that will be replaced by 92521-92524.**

**Note that there are clinical labor inputs for 92506 because historically, speech-language pathology time was found under practice expense. However, we are not proposing clinical labor time for 92521 because this proposal moves speech-language pathology out of practice expense and into the work RVU column, as has been done over the past few years with the family of speech-language pathology related codes.**

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities: N/A

Intra-Service Clinical Labor Activities: N/A

Post-Service Clinical Labor Activities: N/A

**AMA/Specialty Society Update Process

**AMA/Specialty Society RVS Update Committee  
Practice Expense Subcommittee  
Migration from Film to Digital Imaging Workgroup  
March 20, 2013 Conference Call  
7pm-8pm CST**

**Conference Call Report**

**Members participating on call:** *David Han, MD (Chair), Gregory Barkley, MD, James Blankenship, MD, Margaret Neal, MD, Guy Orangio, MD, Zeke Silva, MD*

The Migration from Film to Digital Imaging Workgroup met on March 20, 2013 via conference call to discuss clinical labor inputs for digital imaging, both with regards to time and equipment for these clinical labor activities. For the purposes of the discussion, the workgroup used CPT code 70450 *Computed tomography, head or brain; without contrast material* as an example.

The Workgroup reviewed potential clinical labor activities and the equipment types associated with them based on recommendations provided by The American College of Radiology (ACR). Based on the previous call, pre-service line 18 and post-service line 41 were identified as the clinical labor inputs that would be impacted by the film to digital migration. ACR suggested, and the workgroup agreed that two separate activities should be broken out from line 18 (see detail below) and three separate activities should be broken out from line 41 (see detail below). These breakdowns were necessary because the various film-related activities in the existing clinical labor activities require different equipment types in the digital practice environment. Equipment types are listed in the document attached to this report entitled *Clinical Labor Activities*. The Workgroup discussed and agreed that this example is representative of what would occur in a typical imaging service and the equipment was added to the existing set of equipment in the equipment overview document attached to this report and entitled *Digital Imaging Equipment Overview*. With regards to the supply and equipment inputs, the Workgroup discussed grouping equipment as a PACS room in the same way that a CT room is grouped but it was acknowledged that certain components of the larger PACS room may involve different times so maintaining the individual components may be preferable. The Workgroup understands that from the PACS equipment overview CMS will determine what items it deems appropriate and inappropriate to include as direct practice expense inputs for digital imaging services.

Based on the need for different equipment types, ACR identified the following two clinical labor activities to potentially replace the current one clinical activity on line 18, Pre-service activity: *Retrieve prior appropriate imaging exams and hang for MD review, verify orders, review the chart to incorporate relevant clinical information and confirm contrast protocol with interpreting MD* performed by a CT technologist.

1. Pre-service activity: *Availability of Prior Images Confirmed* performed by a CT technologist.
2. Pre-service activity: *Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist*, performed by a CT technologist.

ACR also identified the following three clinical labor activities to potentially replace the current one clinical activity on line 41, Post-service activity: *Process films, hang films and review study with interpreting MD prior to patient discharge* performed by a CT technologist.

1. Post-service activity: *Technologist QC's images in PACS, checking for all images, reformats, and dose page.*

2. Post-service activity: *Review examination with interpreting MD.*
3. Post-service activity: *Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.*

The Workgroup agreed that each new or reviewed code brought before the RUC in the future will have its corresponding clinical labor and equipment inputs broken down into these separate items, and staff times appropriate to each event will be assigned at the Practice Expense Subcommittee meeting as is the current practice. The Workgroup noted that pre and post clinical labor activities could blend into the intra-service time of the service period and that the specialty society will have to use their judgment on a code by code basis to determine the appropriate category for the activity.

The Workgroup then discussed the task of applying these five new line items into each code as they presently exist. Concerns were raised regarding the practicality of going through this process for each of the 604 identified codes with film related inputs. Because of the unique nature of each code, the Workgroup agreed that the only solution would be an individual code-by-code reassessment of clinical labor practice expense inputs and agreed that this would be an inappropriately onerous task. The workgroup agreed that at this point, the most appropriate solution appears to be leaving the clinical labor inputs as they exist for the identified 604 codes. This is in contradistinction to the recommendation below for the supply and equipment inputs, where the workgroup agreed that the new supply and equipment practice expense inputs should be retrofitted to the identified 604 imaging codes. The Workgroup noted that equipment time is determined by clinical staff time and will work to ensure that the clinical labor times for the existing codes will be allocated appropriately to the new digital inputs.

### Recommendations

The Workgroup makes the following recommendations for the migration of film to digital imaging:

- For existing codes:
  - Remove recommended supplies and equipment as noted on spreadsheet from 604 imaging CPT codes (see *Film to Digital Codes-Supplies-Equipment-Final* attached).
  - Replace supplies and equipment for 604 imaging CPT codes with recommended PACS equipment. Invoices will be provided by specialties (see *Digital Imaging Equipment Overview* attached).
  - No modification to clinical labor activities at this time.
- For new codes and codes undergoing review:
  - Clinical labor activities for imaging codes will be replaced with more detailed activities. These detailed activities specified below are specific to CPT code 70450, *Computed tomography, head or brain; without contrast material*. Using these as a guide, specialty societies will need to determine the allocated clinical labor equipment and time recommendations based on previous inputs and current clinical practice. These recommendations will be reviewed at the Practice Expense Subcommittee on a code by code basis.
  - For Pre-service activity: *Retrieve prior appropriate imaging exams and hang for MD review, verify orders, review the chart to incorporate relevant clinical information and confirm contrast protocol with interpreting MD* performed by a CT technologist, or similar list:
    - Pre-service activity: *Availability of Prior Images Confirmed* performed by a CT technologist.
    - Pre-service activity: *Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist*, performed by a CT technologist.

- For Post-service activity: *Process films, hang films and review study with interpreting MD prior to patient discharge* performed by a CT technologist, or similar list:
  - Post-service activity: *Technologist QC's images in PACS, checking for all images, reformats, and dose page.*
  - Post-service activity: *Review examination with interpreting MD.*
  - Post-service activity: *Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.*

## Digital Imaging Equipment Overview

- PACS Network (Modality to PACS)
  - Jack on wall
  - Cable from jack to closet
  - Crossconnect twisted pairs from closet panel to port on network switch
  - Fiber to switch in data center
  - Connection from data center switch to DICOM server
  - Q/A station
    - In technologist areas to check imaging studies for completeness, accuracy and adequate image quality prior to completing the study in Radiology Information System (RIS) and making it available for radiologist to interpret
  - Tech Interface Hardware
    - PC
    - RIS Computer and Software
    - Document Scanner
- PACS infrastructure
  - Servers
    - DICOM server(s)
    - Database server(s)
    - Web Server(s)
    - File server(s)
    - Load Balancer or Content Switch to distribute the load evenly across all the DICOM / Web servers.
  - Storage
    - Online Storage (approximately 185TB of fast hard drives)
    - Nearline Storage (tape or other backup for disaster recovery)
  - CD/DVD Burner and Software
    - For creation of tangible image media for imaging exchange (capability required by MQSA for Mammography)
  - Digital Film Scanner
  - PACS Software
    - RIS (to index storage of films)
    - HL7 Interfaces providing HL7 feeds between RIS and PAC
    - Connectivity to HIS for patient data etc.
- PACS Network (PACS to workstation)
  - Jack on wall
  - Cable from jack to closet
  - Crossconnect twisted pairs from closet panel to port on network switch
  - Fiber to switch in data center
  - Connection from data center switch to DICOM server
  - Q/A station
    - In technologist areas to check imaging studies for completeness, accuracy and adequate image quality prior to completing the study in RIS and making it available for radiologist to interpret
- PACS workstation
  - CPU
  - 2-4 DICOM calibrated diagnostic display
  - 1 General purpose display
  - 2-3 high end graphics cards
  - Input Devices (Mouse, keyboard, microphone, headset, foot switch, etc.)
  - PACS workstation software (Win OS, Antivirus, PACS application)
  - Other software as applicable (Dictation, 3D, CAD, Office, Screen Capture, Macro Player, etc.)

#### Pre-Service

Clinical Activity	Staff Type	Time	Equipment Type	Comments
Availability of Prior Images Confirmed	CT Technologist(L046A)		PC ED021 Digital Film Scanner	Line 18 in existing PE spreadsheet split into 2 lines
Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist .	CT Technologist(L046A)		RIS Computer and Software	Currently pre-service (ie.. Following visit when decision for procedure made) but could be considered service period (when patient enters office for procedure)

#### Post-Service

Clinical Activity	Staff Type	Time	Equipment Type	Comment
Technologist QC's images in PACS, checking for all images, reformats, and dose page.	CT Technologist(L046A)		PC - ED021 Q/C Station and PACS Software	Line 41 in previous PE spreadsheet divided into several lines
Review examination with interpreting MD	CT Technologist(L046A)		PACS Viewing Station and PACS software	
Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.	CT Technologist(L046A)		Document Scanner(connected to PACS) PC (ED021) RIS Computer and Software	

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*July 19<sup>th</sup> NPRM Screen*

January 2012

**Pathology Consultations-PE Only**

In the CY 2012 proposed rule CMS requested a review of both the direct PE inputs and work values of CPT code 88305 in accordance with the consolidated approach to reviewing potentially misvalued codes. It was determined that a review of the work was not necessary because the most recent extensive review of the professional component was conducted by the RUC in April of 2010, and that a review of the direct PE inputs alone is appropriate.

The RUC reviewed the direct PE inputs for CPT code 88300 *Level I - Surgical pathology, gross examination only* (work RVU=0.08); CPT code 88302 *Level II - Surgical pathology, gross and microscopic examination* (work RVU=0.13); CPT code 88304 *Level III - Surgical pathology, gross and microscopic examination* (work RVU=0.22); CPT code 88305 *Level IV - Surgical pathology, gross and microscopic examination* (work RVU=0.75); CPT code 88307 *Level V - Surgical pathology, gross and microscopic examination* (work RVU=1.59) and CPT code 88309 *Level VI - Surgical pathology, gross and microscopic examination* (work RVU=2.80). **The PE Subcommittee carefully reviewed the supply inputs to ensure there is no overlap with the indirect expenses and made necessary adjustments. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
88300		<b>Level I</b> - Surgical pathology, gross examination only	XXX	0.08 (No Change)

88302		<b>Level II</b> - Surgical pathology, gross and microscopic examination	XXX	0.13 (No Change)
88304		<b>Level III</b> - Surgical pathology, gross and microscopic examination	XXX	0.22 (No Change)
88305		<b>Level IV</b> - Surgical pathology, gross and microscopic examination	XXX	0.75 (No Change)
88307		<b>Level V</b> - Surgical pathology, gross and microscopic examination	XXX	1.59 (No Change)
88309		<b>Level VI</b> - Surgical pathology, gross and microscopic examination	XXX	2.80 (No Change)

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

Global Period: \_XXX Meeting Date: \_ February 2012

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The College of American Pathologists contacted interested specialties (American Academy of Dermatology, American Society for Gastrointestinal Endoscopy, American Gastroenterological Association, and the American Urological Association) for their recommendations and comments regarding the direct practice inputs for codes 88300 – 88309. A conference call was convened and the practice expense recommendations were reviewed and agreed upon by all specialties.

If you have provided any comparison practice expense inputs on your spreadsheet, please provide a rationale for the selection of codes. Comparison Code Rationale:

No good comparison code is available; the entire family of services is under review.

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities - where applicable.

Order, fill, label, restock and distribute specimen containers.

Intra-Service Clinical Labor Activities:

Accession specimen in lab computer system including the following: Unwrap and/or remove specimen bottle and requisition slip from plastic bag. Check demographics to ensure they are correct and to ensure proper billing. Check requisition slip against bottle to see if the patient's name and/or specimen location (s) match each other. Distribute requisition form and specimen to grossing station.

Prepare tissue cassettes. When appropriate, photograph gross specimen, download file into lab computer system (88307-9 only)

Obtain and display applicable specimen radiographs.

Assist pathologist with gross specimen examination, cleaning grossing area between specimens.

Load solutions into tissue processor. Load and sort cassettes into tissue processor includes drain cassette basket, place basket in processor, put lid on basket, close lid, set processor. Confirm settings. Take requisitions to administrative staff.

Confirm specimen ID. Embed tissue in paraffin includes: Review applicable gross information (number of fragments, orientation, size) Take cassette out of embedding chamber, open cassette, put paraffin in bottom of embedding mold, embed tissue, put cassette on top of mold and fill mold with paraffin. Put mold on cold plate. Take

**Anatomic Pathology Services 88300 – 88309**  
**Specialty Society – Pathology**

embedded specimen out of mold, transfer to cutting cold plate. Add paraffin to embedding melting pot and clean embedding center.

Retrieve paraffin block from freezer and place on ice tray at microtome. Place paraffin block in microtome. Change and insert knife. Rough-cut block. Place block on ice. Retrieve block and section. Place section on water bath. Confirm specimen ID. Label microscopic slides with slide labeler and place section on microscopic slide from water bath. Put on drain tray. Put in staining basket and put staining basket in oven. Remove from oven, set clock for cool time, and put handle on basket.

Prepare automated stainer with solutions and load microscopic slides. Set and confirm stainer program.

Prepare automated coverslipper, remove slides from stainer and place on coverslipper. Complete workload recording logs. Collate slides and paperwork. Deliver to pathologist.

Clean grossing station; includes Load dirty cutting board, knives, forceps, etc. (instrument pack) in dishwasher, clean counter, clean sink, dispose of and package trash, restock, set up gross area for next day. Pack specimens for short term storage prior to disposal.

Post-Service Clinical Labor Activities: where applicable.

Thoroughly clean all of the equipment, tissue processor, and embedding and staining areas. Recycle the xylene and dispose of chemicals, specific specimens after designated period and the case is signed out. File the blocks, slides and requisitions.

RE: Multispecialty Anatomic Pathology Block Study

Dear Doctor Collins;

As requested by CMS, the College of American Pathologists, and other stakeholders, conducted a national anatomic pathology study of the number of blocks typically produced for CPT codes 88302-88309 during the months of November and December 2012. The methodology and the results of this study are summarized below and were included in the CAP's comment letter to CMS regarding their Final Rule on the Payment Policies Under the Physician Fee Schedule, CMS – 1590-FC, November 16, 2012. In that rule, CMS asked for comment and data on the number of blocks assumed in the determination of practice expense recommendations for those codes. As part of that process, the RUC has been asked to review the number of blocks assumed in the evaluation of practice expense recommendations for those codes.

#### **Typical Number of Blocks Assumption for Anatomic Pathology Services**

CMS stated in its final ruling that the "number of blocks used has a significant impact on the quantity of other supplies and the number of clinical labor and equipment minutes assigned as direct PE inputs." ... CMS is concerned that the number of blocks assumed for each code may be inaccurate." CMS therefore requested public comment regarding "the appropriate number of blocks and urges the AMA RUC and interested medical specialty societies to provide corroborating, independent evidence that the number of blocks assumed in the current direct PE input recommendations is typical."

In response to CMS' request, the College of American Pathologists joined with the following stakeholders and medical specialties in a data collection effort:

1. American Academy of Dermatology (AAD)
2. American Clinical Laboratory Association (ACLA)
3. Association of Pathology Chairs (APC)
4. American Society of Dermatopathology (ASDP)

Over 1,000 laboratories of various sizes and locations were asked to review number of blocks typically used for the CPT codes 88302-88309 using RUC approved vignettes. AAD, ACLA, APC, and ASDP provided assistance in obtaining laboratory participants for the study. The patient age and gender did not need to be matched exactly, but the specimens had to be otherwise strictly comparable to those described in the vignette. CAP asked that participants review their service logs from the last month to provide data. Each case was examined for the number of blocks created. Each lab was asked to

# College of American Pathologists

provide the vignette specific data on a minimum of five cases.

## Clinical Vignettes:

Current Medicare ICD9 data were a major factor employed in developing the vignettes for each of the five services. The vignettes represent the typical specimen type associated with each of these codes. The vignettes for 88304 and 88305 were developed in conjunction with the dermatology specialty societies. Through the RUC process, the vignettes for this family of codes were reviewed and approved by the RUC's Research Subcommittee and the full RUC prior to surveying these services for physician work. The RUC and the specialties involved agreed that the vignettes were correct for valuing these services. In addition, when CAP surveyed the codes using the RUC approved survey instrument, over 90% of the respondents for each vignette indicated that the vignette was typical for the service. Below are the respondent percentages of those who indicated the chosen vignette was typical.

CPT Code	Percent indicating typicality of Vignette
88302	92%
88304	97%
88305	92%
88307	99%
88309	96%

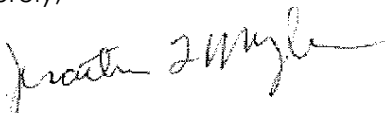

Subsequent to the RUC survey and the 2013 final rule, the CAP and other specialty societies collated data on the typical number of blocks associated with each of the previously approved vignettes. In addition to the CAP, other specialty societies involved included AAD, ACLA, APC, and ASDP. All of the individual lab data was sent to and compiled by CAP staff. The data was compiled for each CPT code and the following statistical data resulted.

CPT Code	Cases Reviewed	Median Number of Blocks
88302	128	1
88304	371	3
88305	411	4
88307	151	14
88309	120	21

This independent evidence confirms the conservative estimation by the CAP of the appropriate typical number of blocks associated with each of these services and which the RUC recommended, based on the data presented and on their own clinical knowledge. **Based on this additional independent evidence, it is the considered opinion of the CAP that the current (2013) CMS assumptions about the numbers of blocks for CPT codes 88302-88309, originally approved by the RUC, have now been thoroughly substantiated.**

At the January 2013 RUC meeting, CAP representatives look forward to discussing the methodology and results of this study with the AMA RUC and CMS representatives. If you have any questions before the meeting, please contact, Todd Klemp, Assistant Director of Economic and Regulatory Affairs at (847) 832-7403 or [tklemp@cap.org](mailto:tklemp@cap.org)

Sincerely,

# College of American Pathologists

Jonathan L. Myles, MD, FCAP  
RUC Advisor  
College of American Pathologists

The AMA RUC submitted direct PE input recommendations for CPT code 86153 (Cell enumeration using immunologic selection and identification in fluid specimen (eg, circulating tumor cells in blood); physician interpretation and report, when required) that describes a laboratory physician interpretation code. As we discuss in section III.M.3.a. of this final rule with comment period, CPT code 86153 is a professional component-only CPT code that will be considered a “clinical laboratory interpretation service,” which is one of the current categories of PFS pathology services under the definition of physician pathology services at §415.130(b)(4). This code must be billed with the “26” modifier to be paid under the PFS. Therefore, CPT code 86153 -26 should be valued exclusively without direct practice expense inputs. Therefore, we are not accepting the recommended direct PE inputs for CPT code 86153.

(i) Pathology and Laboratory: Surgical Pathology (CPT Codes 88300, 88302, 88304, 88305, 88307, 88309)

For surgical pathology CPT codes 88300, 88302, 88304, 88305, 88307, 88309 (Surgical Pathology, Levels I through VI), the AMA RUC recommended creating several new supply and equipment items in direct PE input database that we will not incorporate for CY 2013 in addition to several new direct PE inputs that we are adopting on an interim basis. The new supply items that we will not incorporate were called “specimen, solvent, and formalin disposal cost,” and “courier transportation costs.” We do not believe that specimen and supply disposal or courier costs for transporting specimens are appropriately considered as disposable medical supplies. Instead, we believe the costs described by these recommendations are incorporated into the PE RVUs for these services through the indirect PE allocation. We note that the current direct PE inputs for these and similar services across the PFS do not include these kinds of costs as disposable supplies.

In addition to the recommendation to include these new supply items, the AMA RUC

recommended that we create new equipment items called “equipment maintenance cost,” “Copath System with maintenance contract,” and “Copath software” as direct PE inputs for these codes. Our standard equipment cost per minute calculation includes a maintenance factor to incorporate costs related to maintenance in amortizing the cost of the equipment itself. Therefore, we will not incorporate separate maintenance costs for particular items. Regarding the “Copath” system and software equipment, the AMA RUC forwarded materials from a manufacturer that included a description of a computer system that is used to interface with other data systems to provide inbound demographic information and export laboratory results and billing information. Based on the way those functionalities were presented in this information, we believe that this computer system and associated software reflects an indirect practice expense since the clerical and other administrative functionality seem central to its purpose. We note that no similar equipment is currently included as a direct PE input for these services. All direct PE inputs for these services are interim for CY 2013 and open to comment. We would consider additional information regarding whether this computer system and associated software might be considered a direct cost as medical equipment associated with furnishing the technical component of these surgical pathology services for CY 2014 rulemaking. We are especially interested in understanding the clinical functionality of the equipment in relation to the services being furnished.

In addition to this information, we are also seeking additional public comment regarding the appropriate assumptions regarding the direct PE inputs for these services. We note that the AMA RUC recommendations for these potentially misvalued codes were developed based on an underlying assumption regarding the typical number of blocks used each time a service is reported. The number of blocks assumed to be used has significant impact on the quantity of other supplies and the number of clinical labor and equipment minutes assigned as direct PE

inputs to each code. After conducting an initial clinical review of these direct PE inputs, we are concerned that the number of blocks assumed for each code may be inaccurate. For 88300, no blocks are assumed. For 88302, one block is assumed. For 88304 and 88305, the assumed number of blocks typically used is 2. For 88307, the assumed number of blocks is 12 and for 88309, the typical number of blocks is assumed to be 18. We are accepting the AMA RUC's recommended direct PE inputs that derive from these assumptions on an interim basis for CY 2013, but we are seeking independent evidence regarding the appropriate number of blocks to assume as typical for each of these services. We are requesting public comment regarding the appropriate number of blocks and urge the AMA RUC and interested medical specialty societies to provide corroborating, independent evidence that the number of blocks assumed in the current direct PE input recommendations is typical prior to finalizing the direct PE inputs for these services.

(j) Pathology and Laboratory: Cytopathology (CPT Codes 88120 and 88121)

The CPT Editorial Panel created CPT codes 88120 (Cytopathology, in situ hybridization (eg, FISH), urinary tract specimen with morphometric analysis, 3-5 molecular probes, each specimen; manual) and 88121 (Cytopathology, in situ hybridization (eg, FISH), urinary tract specimen with morphometric analysis, 3-5 molecular probes, each specimen; using computer-assisted technology) to describe in situ hybridization testing using urine samples, effective for CY 2011.

As we explain in section III.M.3.a. of this final rule with comment period, we believe that the work and direct PE inputs for existing CPT codes 88365, 88367, and 88368 should be reviewed alongside CPT codes 88120 and 88121 to ensure the appropriate relativity between these two sets of services (76 FR 73153 through 73154). The AMA RUC has stated that it intends to do so after CY 2012 utilization data are available to assess how these services are

November 30, 2012

Dear Valued Member:

The American Academy of Dermatology (AAD) and the College of American Pathologists (CAP) is in immediate need of your assistance to gather important advocacy data. CAP is conducting a study to determine the number of paraffin blocks typically produced for six specified anatomic pathology vignettes associated with CPT codes 88304-88305.

We ask that you review your service logs from the last month to complete this study on the attached Excel worksheet. Each service has designated a common or typical vignette as a reference. Please review your logs and identify the most recent 5 cases from your service logs that fit these vignettes. The patient's age and gender need not be matched exactly and data on more than 5 cases is encouraged. Smaller laboratories in which less than 5 cases can be identified are also encouraged to submit data.

Please complete the attached spreadsheet and email your responses by December 12<sup>th</sup> to:

Todd Klemp  
Assistant Director of Economic and Regulatory Affairs  
College of American Pathologists  
[tklemp@cap.org](mailto:tklemp@cap.org)

If you have questions please contact Todd at 847-832-7403

December 5, 2012

Dear Valued Member:

The College of American Pathologists (CAP) is in immediate need of your assistance to gather important advocacy data. The CAP is conducting a study to determine the number of paraffin blocks typically produced for six specified anatomic pathology vignettes associated with CPT codes 88302-88309.

We ask that you review your service logs from the last month to complete this study on the attached Excel worksheet. Each service has designated a common or typical vignette as a reference. Please review your logs and identify the most recent 5 cases from your service logs that fit these vignettes. The patient's age and gender need not be matched exactly and data on more than 5 cases is encouraged. Smaller laboratories in which less than 5 cases can be identified are also encouraged to submit data.

Please complete the attached spreadsheet and email your responses by December 12<sup>th</sup> to:

Todd Klemp  
Assistant Director of Economic and Regulatory Affairs  
College of American Pathologists  
[tklemp@cap.org](mailto:tklemp@cap.org)

If you have questions please contact Todd at 847-832-7403

CAP is conducting a study of the number of blocks typically used for the following service vignettes. The patient age and gender need not be matched exactly, but the specimens must be strictly comparable to those described in terms of their processing. We ask that you review your service logs from the last month and complete the table below, providing data from the most recent 5 cases per CPT code. Smaller laboratories in which less than 5 cases can be identified are also encouraged to submit data.

Your participation is important. Please complete this project and return your results to Todd Klemp at [Tklempe@cap.org](mailto:Tklempe@cap.org) by December 12th.

Thank you; if you have questions, please contact Todd at 847-832-7403.

CPT Code	Vignettes	Number of blocks for case #1	Number of blocks for case #2	Number of blocks for case #3	Number of blocks for case #4	Number of blocks for case #5
88302	Ventral hernia specimen from a 48 year old female.					
88304	5 cm subcutaneous lipoma excised from the thigh of a 50 year old male.					
88305	Excision of a 1 cm pigmented skin lesion with irregular borders from the back of a 35 year old female.					
88307	5 cm breast lumpectomy specimen following needle localization of microcalcifications and requiring assessment of margins removed from a 55 year old female.					
88309	A 67-year-old male presents with rectal bleeding. He undergoes low anterior resection of an adenocarcinoma of the rectum. The pathologist performs the gross and microscopic examination of the specimen and issues a written report of the results.					

Members: Scott Collins, MD (Chair), M. Douglas Leahy, MD (Vice Chair), Charles Koopmann, Jr, MD, James Georgoulakis, PhD, JD, David Hitzeman, DO, Walt Larimore, MD, Brenda Lewis, DO, Marc Raphaelson, MD, Christopher Senkowski, MD, George Williams, MD, Sandra Reed, MD, Lawrence Martinelli, MD

**I. Research Subcommittee October 24, 2012 Conference Call Meeting Report**

**The Research Subcommittee report from the October 24, 2012 Conference Call is included in Tab 33 of the January 2013 agenda materials for approval by the RUC.**

**II. Research Subcommittee November 5, 2012 Conference Call Meeting Report**

**The Research Subcommittee report from the November 5, 2012 Conference Call is included in Tab 33 of the January 2013 agenda materials for approval by the RUC.**

**III. Review of Vignettes**

**Cholecystectomy (47600 & 47605)**

*American College of Surgeons*

CPT Codes 47600 *Cholecystectomy* and 47605 *Cholecystectomy; with cholangiography* were identified as part of the CMS Request - NPRM for 2012 screen and surveyed in April 2012.

In the Final Rule for 2013, CMS noted that the AMA RUC agreed that the typical patient undergoing an open cholecystectomy begins with a laparoscopic approach and is then converted to an open procedure for clinical reasons. CMS expressed concern that the vignettes associated with these procedures imply that the work of the failed laparoscopic approach is included in the work of the cholecystectomy. CMS requested that the AMA RUC review the vignettes for these services.

The Research Subcommittee noted that these vignettes along with medical literature were thoroughly reviewed and discussed in November 2011. The Subcommittee continues to acknowledge that nearly all patients are scheduled for a laparoscopic approach and the majority of open procedures would appropriately include the work of the failed laparoscopic approach. It is rare that a cholecystectomy is scheduled as an open procedure. The ACS presented data that this occurs for less than 10% of all cases.

Dr. Hambrick noted that the Agency was concerned that they would be seeing more vignettes for open procedures that are laparoscopic to open conversions. The Subcommittee agreed with the general surgeons that laparoscopic to open conversion is typical for open gallbladder removal cases, but not typical for any other open general surgery procedures. There is no anticipation that the RUC (or CMS) will be seeing other open general procedures with vignettes that are laparoscopic to open conversion. The RUC is aware of CMS' concern and will be diligent in monitoring vignettes.

**The Research Subcommittee recommends the vignettes for CPT codes 47600 and 47605 as submitted to accurately describe the typical patient.**

**IV. Review of Alternative Methodology**

**Pathology Consultations (88300-88307)**

*College of American Pathologists*

Approved by the RUC-Saturday, January 26, 2013

CPT codes 88300-88309 were surveyed for physician work at the April 2010 RUC meeting. These codes were then identified as part of the July 19<sup>th</sup> 2012 NPRM Screen and surveyed only for direct practice expense at the January 2012 RUC meeting. The RUC submitted the following recommendations for typical number of blocks assumed for anatomic pathology services:

CPT Code 88300: 0  
CPT Code 88302: 1  
CPT Code 88304: 2  
CPT Code 88305: 2  
CPT Code 88307: 12  
CPT Code 88309: 18

In the Final Rule for 2013, CMS requested public comment regarding the appropriate number of blocks and urged the RUC and medical specialty societies to provide evidence that the number of blocks assumed is indeed typical. In response to this request, CAP along with AAD, ACLA, APC and ASDP contacted over 1,000 laboratories of various sizes and locations to confirm number of blocks typically used for CPT codes 88302-88309 using RUC approved vignettes during November and December 2012. The Research Subcommittee reviewed two survey instruments with cover memos: one for CPT codes 88304-88305 and a second for CPT codes 88302-88309. The Subcommittee noted that each laboratory was asked to review service logs from the previous month and provide data on a minimum of five cases, if available. **The Research Subcommittee recommends the methodology utilized to confirm number of blocks. The PE Subcommittee will review the survey data at the April 2013 RUC meeting.**

### **Ultrasound (76645, 76705, 76770, 76775 and 76856)**

#### *American College of Radiology*

American The College of Radiology (ACR) submitted a request to crosswalk Ultrasound codes which were identified on the RAW's screen of CMS/Other codes with Medicare utilization of 500,000 or more to recently RUC validated ultrasound codes. Specifically, the ACR proposed to crosswalk CPT codes: 76645 (*Ultrasound, breast(s) (unilateral or bilateral), real time with image documentation*), 76705 (*Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)*), 76770 (*Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete*), 76775 (*Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; limited*) and 76856 (*Ultrasound, pelvic (nonobstetric), real time with image documentation; complete*). The Subcommittee members agreed that a crosswalk may be inappropriate for these high volume codes which also include high intra service time. In addition, the current time of these codes is based on CMS/Other rather than RUC survey data; therefore, it would be difficult to validate time. **The Research Subcommittee recommends that the specialty society use the standard survey methodology and present survey data and direct practice expense inputs at the October 2013 RUC meeting, time certain.**

### **Breast Biopsy (191XX1-191XX6, 1929XX1-1929XX8)**

#### *American College of Radiology*

The Research Subcommittee reviewed and discussed a request submitted by ACR to use a targeted sample in addition to random survey sample. The ACR, American College of Surgeons and American Society of Breast Surgeons conducted a random RUC survey for the breast biopsy codes which were scheduled to be presented at the January 2013 RUC meeting. The specialty societies were delayed launching their surveys due to several CPT issues and also received an insufficient number of survey responses. The specialty societies intend to present the data collected at the April 2013 RUC meeting and

will also identify members who are familiar with this service and randomly send surveys to those physicians. **The Research Subcommittee recommends the use of the targeted survey sample in addition to the random sample and expects the specialty societies to present both the combined and separated data to the RUC at the April 2013 meeting.**

## V. Review of Reference Service List, Survey Instrument, Survey Sample

### Psychotherapy (90785, 90839 & 90840)

#### *American Psychiatric Association*

The Research Subcommittee reviewed and discussed a request from several specialty societies involved in surveying three psychotherapy codes, +90785 *Interactive complexity (List separately in addition to the code for primary procedure)*, 90839 *Psychotherapy for crisis; first 60 minutes* and +90840 *Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)* to modify the survey tools as follows:

- Add “Physician/Healthcare Professional” throughout to be consistent with CPT language
- Allow survey respondents to identify their specialty society. Results will be sorted by specialty
- Defining “organization” in the financial disclosure section and noting that if the survey respondent affirmatively answers any of the questions, they do not have to complete the survey. The Subcommittee recommended that the specialty societies do not allow the survey respondent to continue if they check “yes” to any of the questions.
- Eliminating language regarding hospital and E/R work
- Eliminating moderate sedation section
- Include CPT approved introductory language/guidelines
- Modify Q2 on ZZZ survey instrument regarding time to include definitions for pre, intra and post

**The Research Subcommittee recommends modifications to the survey instruments which are consistent with the previously approved and utilized psychotherapy surveys.**

The Research Subcommittee reviewed and discussed the reference service list for each of the three codes. The Subcommittee members determined that CPT code 92618 *Evaluation for prescription of non-speech-generating augmentative and alternative communication device, face-to-face with the patient; each additional 30 minutes (List separately in addition to code for primary procedure)* should be removed from the RSL for CPT code 90840. In addition, CPT code 99244 *Office consultation for a new or established patient* should be removed from the RSL for CPT code 90839. The Subcommittee suggested that the specialty societies consider combining the RSLs for CPT code 90839 and 90840. The Subcommittee reviewed the RSL for CPT code 90785 and agreed that the previously approved ZZZ RSL which was used to survey psychotherapy in April 2012 should be used for this code. **With these modifications, the Research Subcommittee recommends the reference service list as submitted by the specialty societies.**

The Research Subcommittee discussed the request for a convenience sample. The society would like to administer a survey at an upcoming state leadership meeting scheduled in March 2013. The society will also develop a random survey sample. **The Research Subcommittee recommends the use of a convenience sample under the condition that it is proctored.**

The Research Subcommittee discussed an alternative proposal to survey CPT code 90785. This add-on code describes interactive complexity added to certain psychiatric procedures. It does not include intra service time, but rather adds only intensity/complexity and pre and post service time. The Research Subcommittee considered the use of an expert panel; however, this alone would not satisfy RUC standards. The specialty societies may consider using an expert panel in conjunction with a RUC survey. **The Research Subcommittee recommends surveying psychotherapy with and without interactive**

**complexity and psychotherapy with an E/M with and without interactive complexity to determine the appropriate increment.**

## **VI. Request to Modify Survey Instrument**

### **Insertion of Anterior Segment Device (6618X1)**

#### **Aqueous Shunt (66180 and 66185)**

*American Academy of Ophthalmology*

The Research Subcommittee reviewed a request submitted by AAO to modify the survey instrument to require attestation from each survey respondent that the survey was completed independently of outside coaching. This request was driven after the specialty society detected a thread that encouraged survey respondents to provide higher valuations through the use of specific reference codes while monitoring listserv discussions. The specialty society immediately addressed the issue and collated two data sets. There was consensus that language should be added to ensure surveys are completed independently without external coaching; however, the Subcommittee determined that it would be more appropriate to add this language to the cover memo rather than modify the survey instrument. **The Research Subcommittee recommends development of language to be used by specialty societies in their survey cover memos. The Research Subcommittee will draft this language and share with specialty societies.**

## **VII. Review of Extant Databases**

The Research Subcommittee reviewed [www.radiologyinfo.org](http://www.radiologyinfo.org) as a potential source of extant data. There was consensus that this site does not meet the extant database criteria and should therefore not be used to support or validate physician work or time. The website is not a database, but rather a source for general background and practical information on various radiology procedures. **The Research Subcommittee does not recommend [www.radiologyinfo.org](http://www.radiologyinfo.org) as an extant database.**

At the October 2012 RUC meeting, the Research Subcommittee was charged with exploring the use and availability of extant databases among specialty societies and how databases that meet our criteria can be incorporated into future recommendations. The Research Subcommittee will solicit specialty societies to determine how many databases are currently available or in development that may or may not meet our criteria and plans to submit for approval. The Subcommittee reviewed the following questions for the survey to specialty societies:

- 1) **Does your specialty society currently have a database that meets these criteria?**  
Yes (see Q2)  
No  
No, but in development
- 2) **If yes, does your specialty society plan on submitting your database for use and approval to the RUC?**
- 3) **If yes to Q2, when do you expect to submit your request to use the database?**

The Subcommittee recommended two additional questions:

- If your specialty society currently has a database, but it does not meet the above defined criteria, please specify which standards are not met and why.

- Are there databases available that have not been developed by the specialty society? If yes, please list below and provide specific details, if appropriate.

**With these modifications, the Research Subcommittee recommends the survey to be approved and disseminated to specialty societies. After completing the solicitation, the Subcommittee will reassess other potential sources of extant data.**

#### **VIII. Practice Expense Subcommittee Items**

At the October 2012 RUC meeting, the Practice Expense Subcommittee referred a request to Research to approve a formal process based on RUC standards to require compelling evidence for increases to practice expense. Compelling evidence will be required if a specialty society is requesting an increase over the standard or current PE inputs. The specialty society must present compelling evidence to the PE Subcommittee that the standard or current PE input is not appropriate for the codes in question in writing on the Practice Expense Summary of Recommendation form. The Research Subcommittee reviewed compelling evidence criteria and recommends the following modifications for practice expense purposes:

Delete:

Comparison to similar services. For example, a similar service consistently has higher times for clinical staff than the PE standards.

Add:

“Evidence that there has been a change in equipment or practice expense cost”

“Evidence that there has been a change in clinical staff type”

“Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data”

**With these modifications, the Research Subcommittee recommends the compelling evidence criteria for practice expense inputs.**

The Practice Expense Subcommittee also referred a request to develop a mechanism for societies to provide representative schedules from one or more practices or institutions as supplemental validation of the reported staff and equipment times. The Research Subcommittee expressed concern that scheduling logs can be problematic in that they may not always reflect time, but rather could be representative of demand. **The Research Subcommittee recommends that if specialty societies are interested in using scheduling logs to support recommendations, they must seek and obtain approval from the Research Subcommittee. If the Practice Expense Subcommittee is requesting scheduling logs, the society does not need approval from the Research Subcommittee.**

#### **IX. Other Business**

The Research Subcommittee discussed strategies to streamline and improve RSL development. The demand for Research Subcommittee review and approval of RSLs has increased over the years. The Subcommittee has noted several problems with the current process including lack of comparable codes the specialties can select, especially when an entire family is under review; limited number of high and low valued codes; minimal use of Multi-Specialty Points of Comparison (MPC) codes; etc. **The Research Subcommittee recommends the creation of a workgroup to address standardization of Reference Service Lists.**
