Vignette Used in Survey: A 60-year-old obese male has a surgical history of a prior laparotomy with a resultant hernia in the incision. The prior hernia was repaired 5 years ago. He now has a bulge in the midepigastric area for 2 months that disappears when he lies down. Physical exam reveals a small recurrent reducible incisional hernia. He undergoes hernia repair of a defect that is less than 3 cm with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 93% , In the ASC 7%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 55% , Overnight stay-less than 24 hours 42% , Overnight stay-more than 24 hours 3%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 82%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The palpable edge of the hernia defect(s) and sites of the proposed skin incisions are marked with cooperation of patient. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar in the left upper quadrant. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. Adhesiolysis is performed to clear adhesions between omentum, small intestines and colon from the abdominal wall and prior mesh . The hernia defect is visualized. Adhesions to the abdominal wall are divided sharply to free the anterior abdominal wall completely. The falciform ligament and preperitoneal fat are cleared from the abdominal wall fascia to expose the posterior fascia. Peritoneal flaps are created for placement of mesh. The fascial defect is approximated with sutures. The hernia defect is measured at less than 3 cm in diameter. A mesh is selected to provide adequate overlap of the hernia defect. A mesh is introduced into the peritoneal cavity through a trocar and is oriented. Insufflation is reduced to facilitate mesh conformity to the anterior abdominal wall. The mesh is secured to

the abdominal wall utilizing sutures and/or tacks. The peritoneal flaps are then sutured over the mesh to protect it from the abdominal viscera. Completion camera survey is performed of the abdomen and contents to inspect for bleeding and visceral injury. Irrigation is performed as necessary. Fascial incisions for laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference.

Description of Post-Service Work: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. When safe to discharge patient to home, conduct final exam. Auscultate heart, lungs, and abdomen for bowel sounds. Assess for problems such as ileus, intestinal ischemia, and urinary retention. Assess pain status, write orders for follow-up visits, post-discharge laboratory tests, imaging, home care, and physical therapy. Order medications needed post-discharge. Discuss home restrictions and activity levels (ie, diet, bathing) with patient/family. Complete all appropriate medical records, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	0%	100%
Physical effort required	0%	20%	80%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	40%	0%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day.

We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49613

We recommend a work RVU of 7.75, which is the survey 25th percentile. The typical patient will be discharged on the same day of the procedure.

Pre-service time

Evaluation package time has been reduced so as to not exceed survey median data.
Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Post-service time

Package time has been reduced so as to not exceed survey median data.

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 49613 is similar to reference code 37225. Ref 2: The respondents indicated the intensity/complexity of survey code 49613 is somewhat more than reference code 49013.

MPC Code Comparison

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST
52353	Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy (ureteral catheterization is included)	**7.50**	0.101	0.056	133	53	60	20

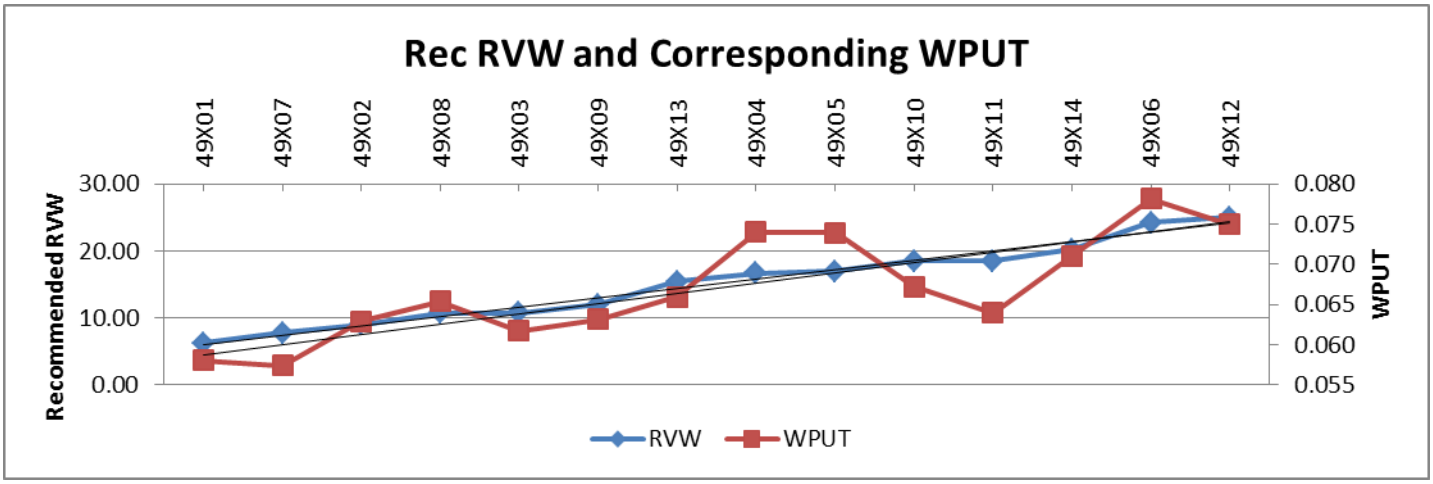
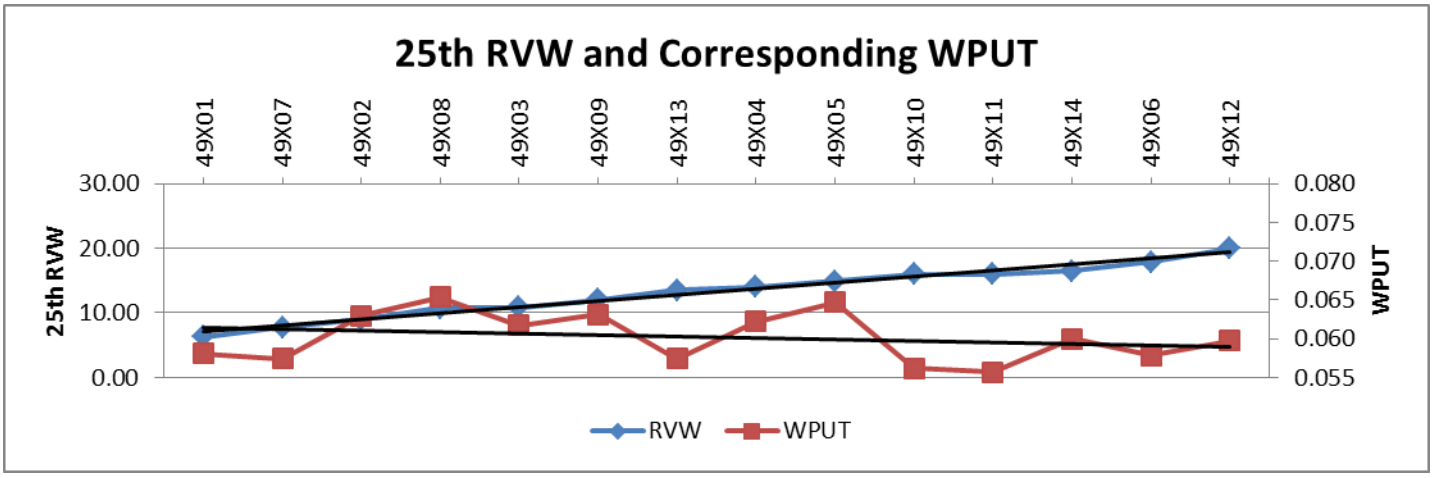
Relativity Assessment

Recommended RVW vs Total Time

The chart below that compares the recommended RVW and total time shows good correlation.





The data below that were used to create the chart above show appropriate relative rank order for work for this new set of hernia repair codes.

CPT	DESC		REC RVW	Total Time
49591	**Initial,** Reduc, < 3cm	25th	**6.27**	**108**
49613	**Recurrent,** Reduc, < 3cm	25th	**7.75**	**135**
49592	**Initial, I/S,** < 3cm	25th	**9.00**	**143**
49614	**Recurrent, I/S,** < 3cm	25th	**10.79**	**165**
49593	**Initial,** Reduc, 3-10cm	25th	**10.80**	**175**
49615	**Recurrent,** Reduc, 3-10cm	25th	**12.00**	**190**
49621	Parastomal, Reduc	median	**15.50**	**235**

49595	**Initial,** Reduc, > 10cm	median	**17.00**	**230**
49616	**Recurrent, I/S,** 3-10cm	median	**18.50**	**275**
49617	**Recurrent,** Reduc, > 10cm	median	**18.53**	**288**
49622	Parastomal, **I/S**	75th	**20.25**	**285**
49596	**Initial, I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize,

IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49565 Repair recurrent incisional or ventral hernia; reducible 090
49656 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); reducible 090
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,642
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 1478 Percentage 90.01 %

Specialty Colorectal Surgery Frequency 82 Percentage 4.99 %

Specialty Other Surgery Frequency 82 Percentage 4.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 11008

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general

surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49614 Tracking Number C9 Original Specialty Recommended RVU: **10.79**
Presented Recommended RVU: **10.79**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **10.79**

CPT Descriptor: Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed total length of defect(s); less than 3 cm, incarcerated or strangulated

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old obese male has a surgical history of a prior laparotomy with a resultant hernia in the incision. The prior hernia was repaired 5 years ago. He now has a small bulge in the midepigastric area for 2 months that previously disappeared when supine. The bulge is now irreducible and tender. Physical exam reveals a small recurrent incarcerated incisional hernia. He undergoes hernia repair of a defect that is less than 3 cm with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 98% , In the ASC 2%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 25% , Overnight stay-less than 24 hours 55% , Overnight stay-more than 24 hours 20%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 97%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The masses of material incarcerated in the hernia are palpated obscuring the edge of the hernia defect(s). The sites of the proposed skin incisions are marked with cooperation of patient. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar in the left upper quadrant. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. The incarcerated/strangulated bowel, mesentery and omentum are carefully reduced with dissection of the adhesions from any previous mesh to expose and to clear the defect for repair. This requires manipulation both intra-abdominally with minimally invasive instrumentation and extra-abdominally with palpation and pressure applied to the abdominal wall to reduce the incarcerated contents. The reduced tissue is examined for viability and any inadvertent injury. The hernia sac is reduced and resected as needed to expose the fascial edges of the defect(s). The hernia defect is visualized.. The falciform ligament and preperitoneal fat are cleared from the abdominal wall fascia to

expose the posterior fascia. Peritoneal flaps are created for placement of mesh. The fascial defect is sutured. A mesh is introduced into the peritoneal cavity through a trocar and is oriented. Insufflation is reduced to facilitate mesh conformity to the anterior abdominal wall. The mesh is secured to the abdominal wall utilizing sutures and/or tacks. The peritoneal flaps are then sutured over the mesh to protect it from the abdominal viscera. Completion camera survey is performed of the abdomen and contents to inspect for bleeding and visceral injury and perform a final viability assessment of the material once incarcerated in the hernia sac. Irrigation is performed as necessary. Fascial incisions from laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to observation or general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital observation care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day.

We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49614

We recommend a work RVU of 10.79, which is the survey 25th percentile median.

Pre-service time

Evaluation and scrub, dress, wait package time has been reduced so as to not exceed survey median data. Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will stay overnight or longer and there will typically be a visit later on the same day of the procedure at a level of 99231. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (straightforward or low-complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Per CMS policy for reporting postoperative work for 23-hour stay procedures, the intraservice time of 10 minutes for 99231 has been added to the survey immediate postoperative time (total = 30 min).

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 49614 is somewhat more than reference code 21811. Ref 2: The respondents indicated the intensity/complexity of survey code 49614 is somewhat more than reference code 11005.

49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49565 Repair recurrent incisional or ventral hernia; reducible 090
49657 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated 090
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,050
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 945 Percentage 90.00 %

Specialty Colorectal Surgery Frequency 53 Percentage 5.04 %

Specialty Other Surgery Frequency 53 Percentage 5.04 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the

Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49615 Tracking Number C10 Original Specialty Recommended RVU: **12.00**
Presented Recommended RVU: **12.00**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **12.00**

CPT Descriptor: Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed total length of defect(s); 3 cm to 10 cm, reducible

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old obese male presents with of a large bulge in midepigastric area that disappears when he lies down. His surgical history includes a prior laparotomy with resultant hernia that was repaired 5 years ago. Physical exam reveals a large recurrent reducible incisional hernia. He undergoes hernia repair of a defect that is 3 to 10 cm with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 16% , Overnight stay-less than 24 hours 51% , Overnight stay-more than 24 hours 33%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 94%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The palpable edge of the hernia defect(s) and sites of the proposed skin incisions are marked with cooperation of patient. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar in the left upper quadrant. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. A large field of adhesions occupies approximately half of the anterior abdominal wall correlating with the extent of the prior laparotomy and hernia repair. Adhesions to the abdominal wall are divided sharply to free the anterior abdominal wall completely. The careful process of adhesiolysis is performed to clear adhesions from between omentum, small intestines and colon and the abdominal wall and prior mesh. Each separate defect within the entire hernia defect contains adipose and intestinal components and requires a safe and effective clearance of tissue. The hernia defect is visualized. The falciform ligament and preperitoneal fat are cleared from the abdominal wall fascia to expose the posterior fascia. Peritoneal flaps are created for placement of mesh. The fascial defect is sutured the

entire length. A mesh is selected to provide adequate overlap of the hernia defect. A mesh is introduced into the peritoneal cavity through a trocar and is oriented. Insufflation is reduced to facilitate mesh conformity to the anterior abdominal wall. The mesh is secured to the abdominal wall utilizing sutures and/or tacks. The peritoneal flaps are then sutured over the mesh to protect it from the abdominal viscera. Completion camera survey is performed of the abdomen and contents to inspect for bleeding and visceral injury. Irrigation is performed as necessary. Fascial incisions for laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to observation or general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital observation care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	0%	71%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	14%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	0%	86%
Physical effort required	14%	43%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	43%	43%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	0%	86%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	14%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	14%	71%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	14%	71%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day.

We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49615

We recommend a work RVU of 12.00, which is the survey 25th percentile median.

Pre-service time

Evaluation and scrub, dress, wait package time has been reduced so as to not exceed survey median data. Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will stay overnight or longer and there will typically be a visit later on the same day of the procedure at a level of 99231. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (straightforward or low-complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Per CMS policy for reporting postoperative work for 23-hour stay procedures, the intraservice time of 10 minutes for 99231 has been added to the survey immediate postoperative time (total = 30 min).

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 49615 is somewhat more than reference code 11006. Ref 2: The respondents indicated the intensity/complexity of survey code 49615 is somewhat more than reference code 11005.

MPC Code Comparison

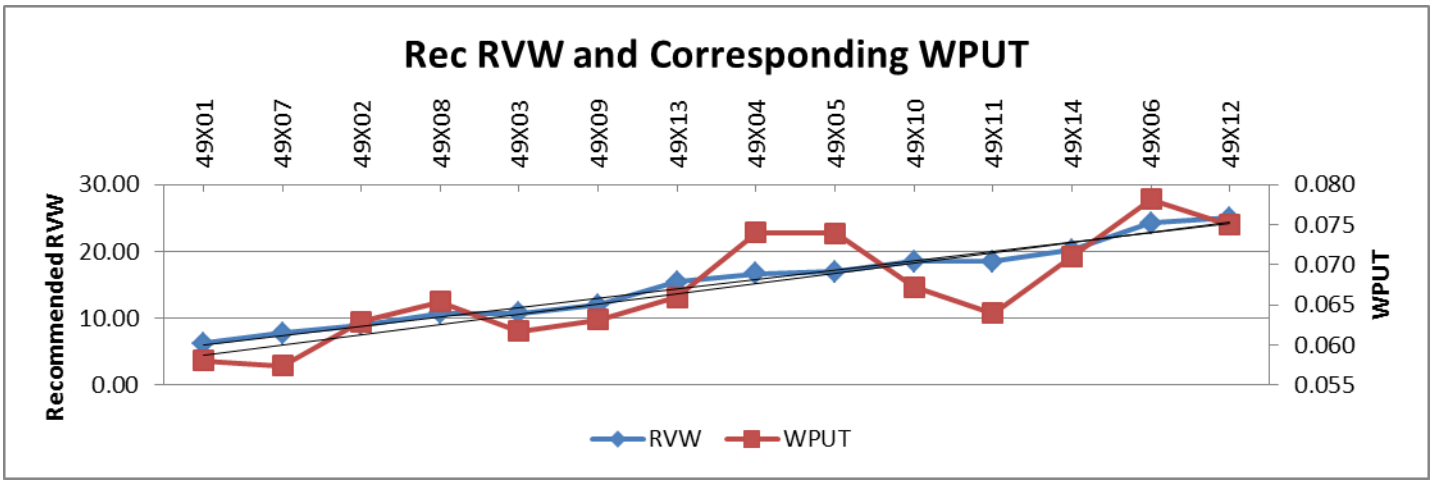
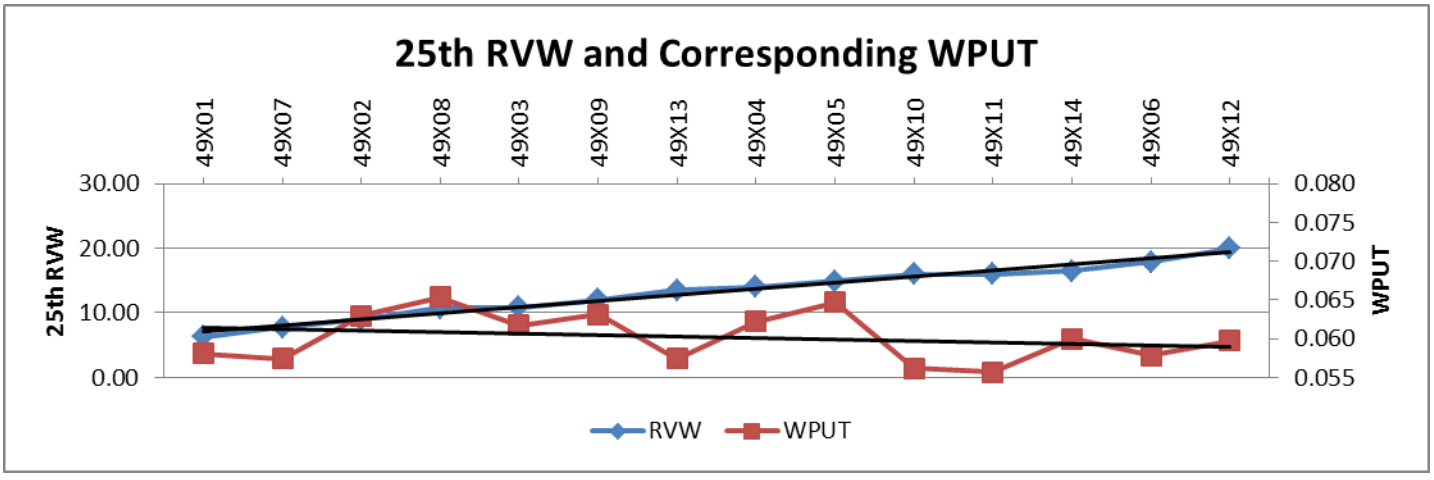
Relativity Assessment

Recommended RVW vs Total Time

The chart below that compares the recommended RVW and total time shows good correlation.



The data below that were used to create the chart above show appropriate relative rank order for work for this new set of hernia repair codes.



CPT	DESC		REC RVW	Total Time
49591	**Initial,** Reduc, < 3cm	25th	**6.27**	**108**

49613	**Recurrent,** Reduc, < 3cm	25th	**7.75**	**135**
49592	**Initial, I/S,** < 3cm	25th	**9.00**	**143**
49614	**Recurrent, I/S,** < 3cm	25th	**10.79**	**165**
49593	**Initial,** Reduc, 3-10cm	25th	**10.80**	**175**
49615	**Recurrent,** Reduc, 3-10cm	25th	**12.00**	**190**
49621	Parastomal, Reduc	median	**15.50**	**235**
49594	**Initial, I/S,** 3-10cm	median	**16.65**	**225**
49595	**Initial,** Reduc, > 10cm	median	**17.00**	**230**
49616	**Recurrent, I/S,** 3-10cm	median	**18.50**	**275**
49617	**Recurrent,** Reduc, > 10cm	median	**18.53**	**288**
49622	Parastomal, **I/S**	75th	**20.25**	**285**
49596	**Initial, I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

49565 Repair recurrent incisional or ventral hernia; reducible 090

49656 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); reducible 090

49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Sometimes

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,575
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 4118 Percentage 90.01 %

Specialty Colorectal Surgery Frequency 229 Percentage 5.00 %

Specialty Other Surgery Frequency 229 Percentage 5.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 11008

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The

ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49616 Tracking Number C11 Original Specialty Recommended RVU: **18.50**
Presented Recommended RVU: **18.50**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **16.50**

CPT Descriptor: Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed total length of defect(s); 3 cm to 10 cm, incarcerated or strangulated

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old obese male presents with an irreducible mass in the midline of the abdomen. He has a history of a previous laparotomy with an incisional hernia from that operation that was repaired 5 years ago. Over the course of the last few months, he has developed a recurrence that has been slowly increasing in size. Suddenly, the hernia is not reducible, and the mass is tender with severe, unremitting pain. He undergoes hernia repair of a defect that is 3 to 10 cm with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 7% , Overnight stay-less than 24 hours 35% , Overnight stay-more than 24 hours 58%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 95%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The masses of material incarcerated in the hernia are palpated obscuring the edge of the hernia defect(s). The sites of the proposed skin incisions are marked with cooperation of patient. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar in the left upper quadrant. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. A large field of adhesions occupies approximately half of the anterior abdominal wall correlating with the extent of the prior laparotomy and hernia repair. The incarcerated/strangulated bowel, mesentery and omentum are carefully reduced with dissection of the adhesions from prior mesh to expose and to clear the defects for repair. This requires manipulation both intra-abdominally with minimally invasive instrumentation and extra-abdominally with palpation and pressure applied to the abdominal wall to reduce the incarcerated contents. The reduced

tissue is examined for viability and any inadvertent injury. The hernia sac is reduced and resected as needed to expose the fascial edges of the defect(s). The hernia defect(s) is visualized. Peritoneal flaps are created for placement of mesh The falciform ligament and preperitoneal fat are cleared from the abdominal wall fascia to expose the posterior fascia. All of the defects are measured. The fascial defect is approximated with suture. A mesh is selected to provide adequate overlap of the hernia defect. A mesh is introduced into the peritoneal cavity through a trocar and is oriented. Insufflation is reduced to facilitate mesh conformity to the anterior abdominal wall. The mesh is secured to the abdominal wall utilizing numerous sutures and/or tacks. The peritoneal flaps are then sutured over the mesh to protect it from the abdominal viscera. Completion camera survey is performed of the abdomen and contents to inspect for bleeding and visceral injury and perform a final viability assessment of the material once incarcerated in the hernia sac. Irrigation is performed as necessary. Fascial incisions for laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	18%	18%	36%	27%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	18%	36%	45%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	36%	45%
Physical effort required	9%	10%	73%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	45%	18%	36%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	56%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	44%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	22%	78%
Physical effort required	0%	44%	56%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to

submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should

describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-

surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day. We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously

rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49616

We recommend a work RVU of 18.50, which is the survey median.

Pre-service time

Scrub, dress, wait package time has been reduced so as to not exceed survey median data.
Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will be admitted and a visit will occur later on the same day to monitor for postoperative complications including ileus, intestinal ischemia, and urinary retention. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (moderate complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 49616 is similar to somewhat more than reference code 33891. Ref 2: The respondents indicated the intensity/complexity of survey code 49616 is similar to somewhat more than reference code 21813.

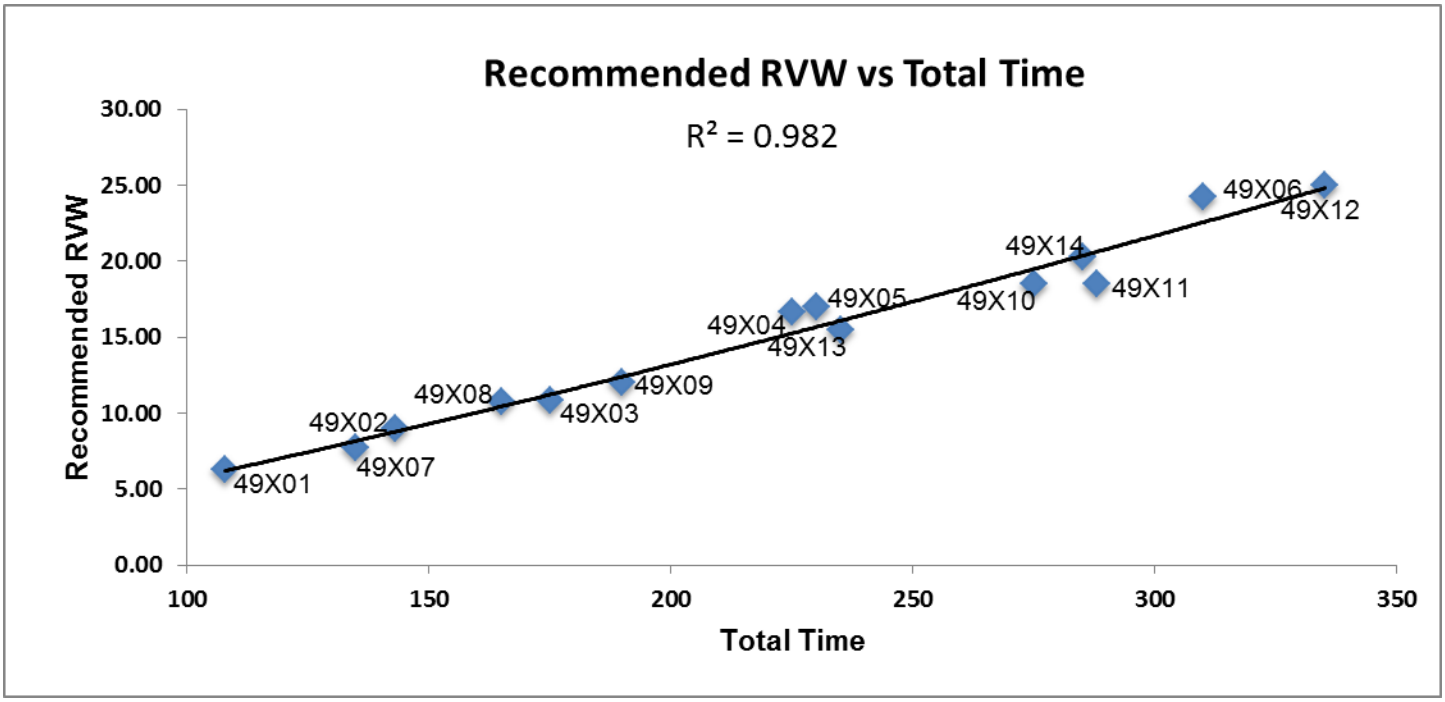
MPC Code Comparison

MPC code 37244 has the highest RVW for the set of 0-day global codes.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
37244	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	**13.75**	0.135	0.083	166	31	90	45	
49616	**Recurrent, I/S, 3-10cm**	**18.50**	**0.109**	**0.067**	**275**	**70**	**140**	**25**	**99232**

Other Code Comparison

The codes in the table below that include extensive, complex and intense 0-day global procedures, bracket the recommendation for the survey code and offer further support for the recommended work RVU.



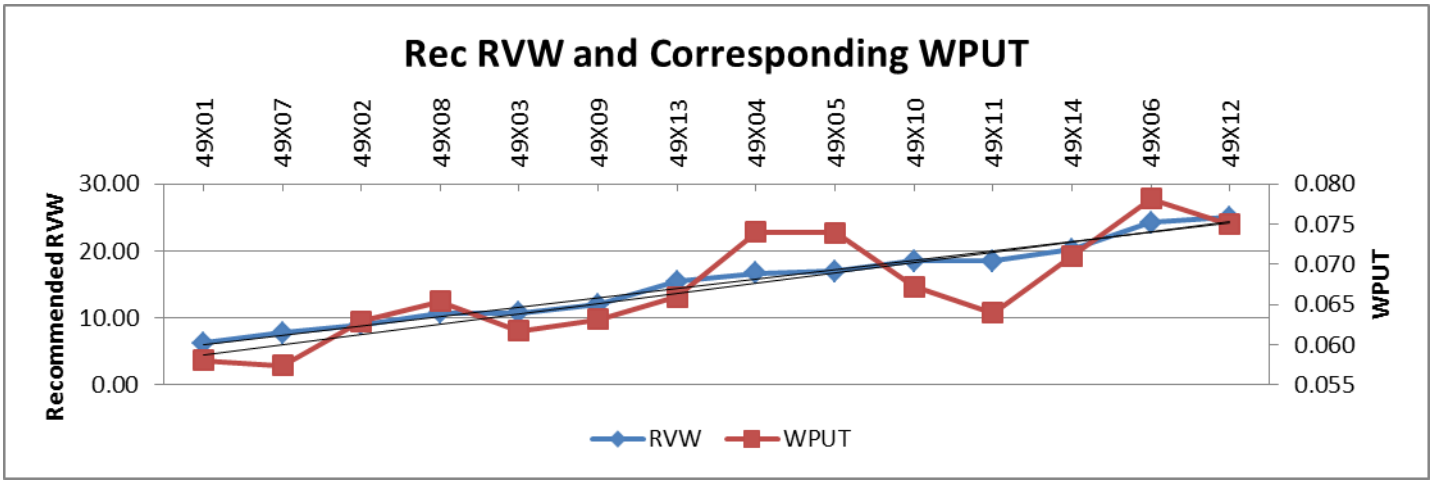
CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M

33956	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; insertion of central cannula(e) by sternotomy or thoracotomy, 6 years and older	**16.00**	0.108	0.064	250	60	90	30	99291
93591	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve	**17.97**	0.135	0.086	208	58	120	30	
49616	**Recurrent, I/S, 3-10cm**	**18.50**	**0.109**	**0.067**	**275**	**70**	**140**	**25**	**99232**
33745	Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, including all imaging guidance by the proceduralist, when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt	**20.00**	0.192	0.097	207	55	92	60	
93590	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve	**21.70**	0.148	0.097	223	58	135	30	

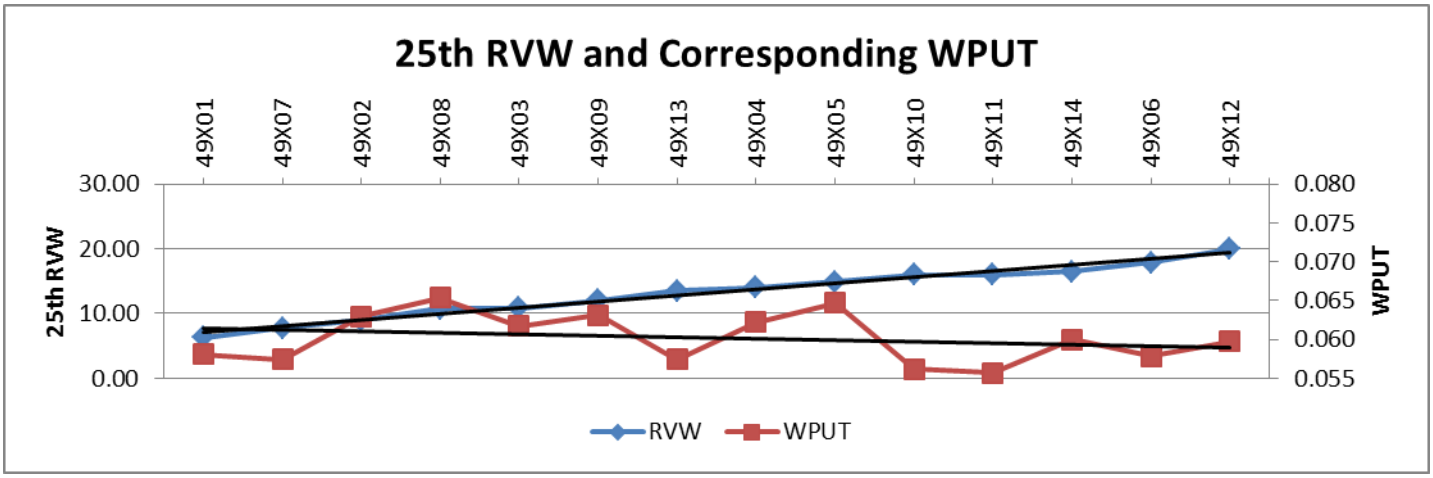
Relativity Assessment

Recommended RVW vs Total Time

The chart below that compares the recommended RVW and total time shows good correlation.



The data below that were used to create the chart above show appropriate relative rank order for work for this new set of hernia repair codes.



CPT	DESC		REC RVW	Total Time
49591	**Initial,** Reduc, < 3cm	25th	**6.27**	**108**
49613	**Recurrent,** Reduc, < 3cm	25th	**7.75**	**135**
49592	**Initial, I/S,** < 3cm	25th	**9.00**	**143**
49614	**Recurrent, I/S,** < 3cm	25th	**10.79**	**165**
49593	**Initial,** Reduc, 3-10cm	25th	**10.80**	**175**
49615	**Recurrent,** Reduc, 3-10cm	25th	**12.00**	**190**

49621	Parastomal, Reduc	median	**15.50**	**235**
49594	**Initial,** **I/S,** 3-10cm	median	**16.65**	**225**
49595	**Initial,** Reduc, > 10cm	median	**17.00**	**230**
49616	**Recurrent,** **I/S,** 3-10cm	median	**18.50**	**275**
49617	**Recurrent,** Reduc, > 10cm	median	**18.53**	**288**
49622	Parastomal, **I/S**	75th	**20.25**	**285**
49596	**Initial,** **I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent,** **I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the

IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49565 Repair recurrent incisional or ventral hernia; reducible 090
49657 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated 090
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Sometimes

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,676
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 3308 Percentage 89 %

Specialty Colorectal Surgery Frequency 184 Percentage 5.00 %

Specialty Other Surgery Frequency 184 Percentage 5.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 11008

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the

request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49617 Tracking Number C12 Original Specialty Recommended RVU: **18.53**
Presented Recommended RVU: **18.53**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **16.97**

CPT Descriptor: Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed total length of defect(s); greater than 10 cm, reducible

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old obese male presents with an irreducible mass in the midline of the abdomen. He has a history of a previous laparotomy with an incisional hernia from that operation that was repaired 5 years ago. Over the course of the last few months, he has developed a recurrence that has been slowly increasing in size but is reducible. He undergoes hernia repair of a defect that totals more than 10 cm with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 2% , Overnight stay-less than 24 hours 29% , Overnight stay-more than 24 hours 69%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 90%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The palpable edge of the hernia defect(s) and sites of the proposed skin incisions are marked with cooperation of patient. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar. As the hernia extends across the majority of the anterior abdominal wall, location for insertion of the needle/trocar is selected based on the prior surgical history and the safest location to avoid intra-abdominal injury. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, and in additional areas as needed, all under direct vision. A field of adhesions occupies the entire anterior abdominal wall correlating with the extent of the prior laparotomy and hernia repair. The careful process of adhesiolysis is performed to clear adhesions from between omentum, small intestines and colon and the abdominal wall and prior mesh. Each separate defect within the entire hernia defect contains adipose and intestinal components and requires a safe and effective clearance of tissue. The hernia defect is visualized. The falciform ligament and preperitoneal fat are cleared from the abdominal wall fascia to expose the posterior

fascia to include wide lateral clearance for adequate later mesh coverage. Peritoneal flaps are created for placement of mesh . The fascial defect is approximated with sutures placed along the entire length of the defect. The appropriate size mesh is calculated after total defect length is documented. Adequate overlap of at least 5 cm in all directions is included in the calculation. A trocar is removed from the abdominal wall and the track is dilated to allow insertion of the large mesh into the peritoneal cavity. The mesh is oriented intra-abdominally. Insufflation is reduced to facilitate mesh conformity to the anterior abdominal wall. The mesh is secured to the abdominal wall utilizing multiple sutures and numerous tacks. The peritoneal flaps are then sutured over the mesh to protect it from the abdominal viscera. Completion camera survey is performed of the abdomen and contents to inspect for bleeding and visceral injury. Irrigation is performed as necessary. Fascial incisions from laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	11%	44%	44%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	33%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	11%	89%
Physical effort required	0%	22%	78%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	33%	44%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	17%	67%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to

submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should

describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-

surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day. We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously

rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49617

We recommend a work RVU of 18.53, which is the survey median.

Pre-service time

Evaluation package time has been reduced so as to not exceed survey median data.
Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will be admitted and a visit will occur later on the same day to monitor for postoperative complications including ileus, intestinal ischemia, and urinary retention. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (moderate complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Key Reference Code Intensity/Complexity Comparison

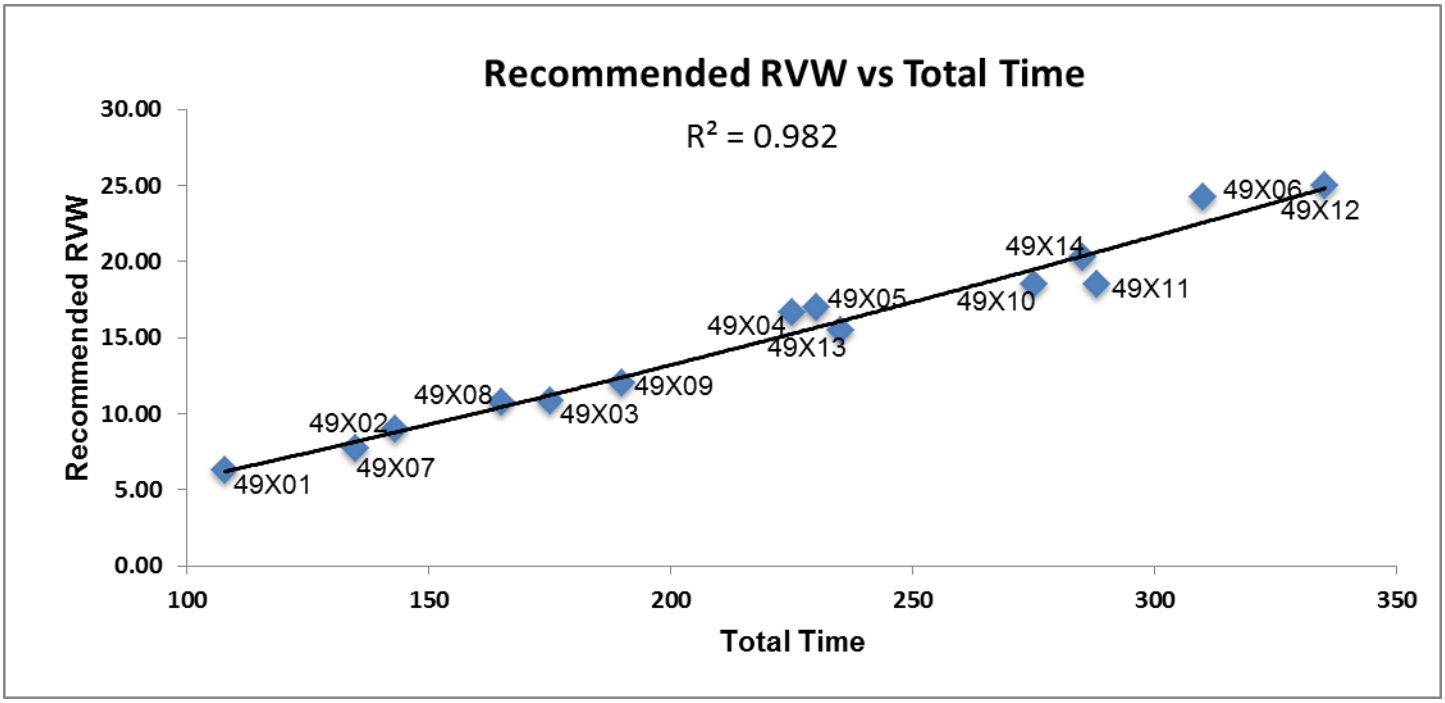
Ref 1: The respondents indicated the intensity/complexity of survey code 49617 is somewhat more than reference code 11005. Ref 2: The respondents indicated the intensity/complexity of survey code 49617 is somewhat/much more than reference code 11006.

MPC Code Comparison

MPC code 37244 has the highest RVW for the set of 0-day global codes.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
37244	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	**13.75**	0.135	0.083	166	31	90	45	
49617	**Recurrent, Reduc, > 10cm**	**18.53**	**0.101**	**0.064**	**288**	**70**	**150**	**28**	**99232**

Other Code Comparison



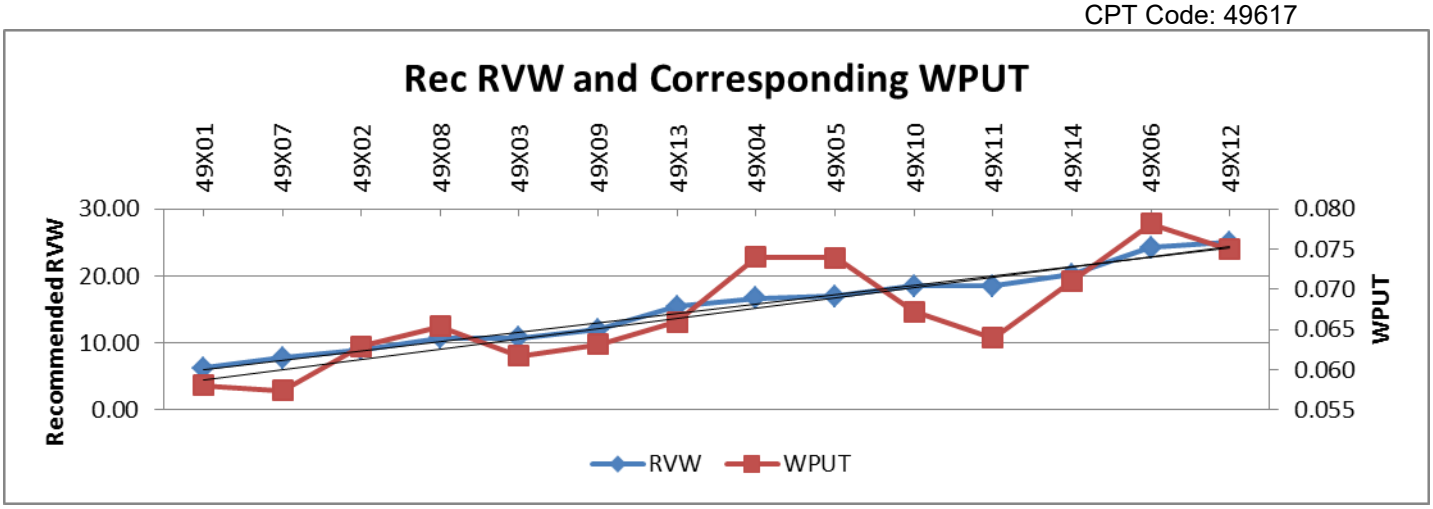
The codes in the table below that include extensive, complex and intense 0-day global procedures, bracket the recommendation for the survey code and offer further support for the recommended work RVU.

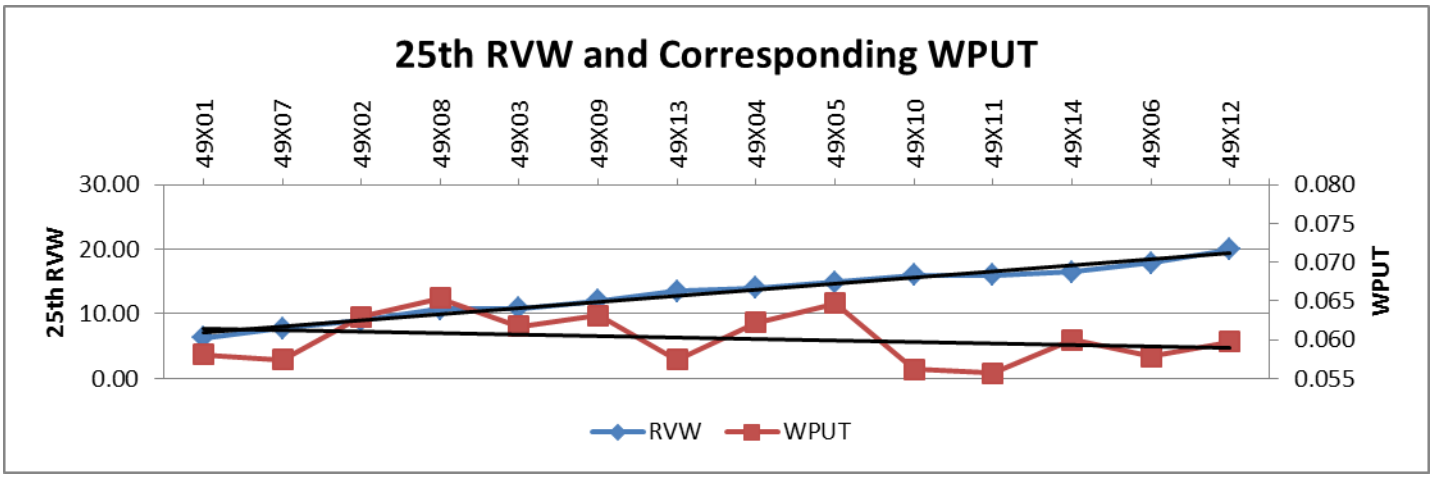
CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
33956	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; insertion of central cannula(e) by sternotomy or thoracotomy, 6 years and older	**16.00**	0.108	0.064	250	60	90	30	99291
93591	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve	**17.97**	0.135	0.086	208	58	120	30	
49617	**Recurrent, Reduc, > 10cm**	**18.53**	**0.101**	**0.064**	**288**	**70**	**150**	**28**	**99232**
33745	Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, including all imaging guidance by the proceduralist, when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt	**20.00**	0.192	0.097	207	55	92	60	
93590	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve	**21.70**	0.148	0.097	223	58	135	30	

Relativity Assessment

Recommended RVW vs Total Time

The chart below that compares the recommended RVW and total time shows good correlation.





The data below that were used to create the chart above show appropriate relative rank order for work for this new set of hernia repair codes.

CPT	DESC		REC RVW	Total Time
49591	**Initial,** Reduc, < 3cm	25th	**6.27**	**108**
49613	**Recurrent,** Reduc, < 3cm	25th	**7.75**	**135**
49592	**Initial, I/S,** < 3cm	25th	**9.00**	**143**
49614	**Recurrent, I/S,** < 3cm	25th	**10.79**	**165**
49593	**Initial,** Reduc, 3-10cm	25th	**10.80**	**175**
49615	**Recurrent,** Reduc, 3-10cm	25th	**12.00**	**190**
49621	Parastomal, Reduc	median	**15.50**	**235**
49594	**Initial, I/S,** 3-10cm	median	**16.65**	**225**
49595	**Initial,** Reduc, > 10cm	median	**17.00**	**230**
49616	**Recurrent, I/S,** 3-10cm	median	**18.50**	**275**
49617	**Recurrent,** Reduc, > 10cm	median	**18.53**	**288**
49622	Parastomal, **I/S**	75th	**20.25**	**285**
49596	**Initial, I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?
As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an

ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49565 Repair recurrent incisional or ventral hernia; reducible 090
49656 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); reducible 090
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 622
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 560 Percentage 90.03 %

Specialty Colorectal Surgery Frequency 31 Percentage 4.98 %

Specialty Other Surgery Frequency 31 Percentage 4.98 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 11008

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had

regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49618 Tracking Number C13 Original Specialty Recommended RVU: **25.00**
Presented Recommended RVU: **25.00**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **24.00**

CPT Descriptor: Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed total length of defect(s); greater than 10 cm, incarcerated or strangulated

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old obese male presents with an irreducible mass in the midline of the abdomen. He has a history of a previous laparotomy with an incisional hernia from that operation that was repaired 5 years ago. Over the course of the last few months, he has developed a recurrence that has been slowly increasing in size and is now tender and irreducible. He undergoes hernia repair of a defect that totals more than 10 cm with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 5% , Overnight stay-more than 24 hours 95%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 95%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The masses of the material incarcerated in the hernia are palpated obscuring the edge of the hernia defect(s). The sites of the proposed skin incisions are marked with cooperation of patient. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar. As the hernia extends across the majority of the anterior abdominal wall, location for insertion of the needle/trocar is selected based on the prior surgical history and the safest location to avoid intra-abdominal injury. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. A large field of adhesions occupies the entire anterior abdominal wall correlating with the extent of the prior laparotomy. The careful process of adhesiolysis is performed to clear adhesions from between omentum, small intestines and colon and the abdominal wall and prior mesh. Each separate defect within the entire hernia defect contains adipose and intestinal components and requires a safe and effective clearance of tissue. The incarcerated/strangulated bowel, mesentery and

omentum are carefully reduced with dissection of the adhesions and sac to clear all the defects for repair. Care is taken to avoid injury to the incarcerated tissue. This requires manipulation both intra-abdominally with minimally invasive instrumentation and extra-abdominally with palpation and pressure applied to the abdominal wall to reduce the incarcerated contents. The reduced tissue is examined for viability and any inadvertent injury. The falciform ligament and preperitoneal fat are cleared from the abdominal wall fascia to expose all defects and enough surface for mesh overlap. The hernia sac is reduced and resected as needed to expose the fascial edges of the defect(s). The hernia defect is visualized. The defects are measured with a minimum craniocaudal length greater than 10 cm. Peritoneal flaps are created for placement of mesh. The fascial defect is approximated with sutures placed along the entirety of the defect. The appropriate size mesh is calculated after total defect length is documented. Adequate overlap of at least 5 cm in all directions is included in the calculation. A trocar is removed from the abdominal wall and the track is dilated to allow insertion of the large mesh into the peritoneal cavity. The mesh is oriented intra-abdominally. Insufflation is reduced to facilitate mesh conformity to the anterior abdominal wall. The mesh is secured to the abdominal wall utilizing sutures and tacks. The peritoneal flaps are then sutured over the mesh to protect it from the abdominal viscera. Completion camera survey is performed of the abdomen and contents to inspect for bleeding and visceral injury and perform a final viability assessment of the material once incarcerated in the hernia sac. Irrigation is performed as necessary. Fascial incisions for laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	19%	25%	50%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	25%	69%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	19%	69%
Physical effort required	0%	13%	88%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	25%	69%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	40%	30%	30%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	40%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	40%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to

submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should

describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-

surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day. We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously

rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49618

We recommend a work RVU of 25.00, which is the survey 75th percentile. We believe the limited number of 0-day global codes that are familiar to general surgeons to be used on a reference service list hindered the ability for survey respondents to provide an accurate magnitude estimation of work.

Pre-service time

Evaluation package time has been reduced so as to not exceed survey median data.
Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will be admitted and a visit will occur later on the same day to monitor for postoperative complications including ileus, intestinal ischemia, and urinary retention. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (high complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family. Patients undergoing the repair of this size of hernia will require significant post-operative care on the same day to address pain control, review vital signs and fluid status commonly affected by repair of larger hernias, and eliminate concerns for bleeding and infection more common with larger or more numerous incisions.

Key Reference Code Intensity/Complexity Comparison

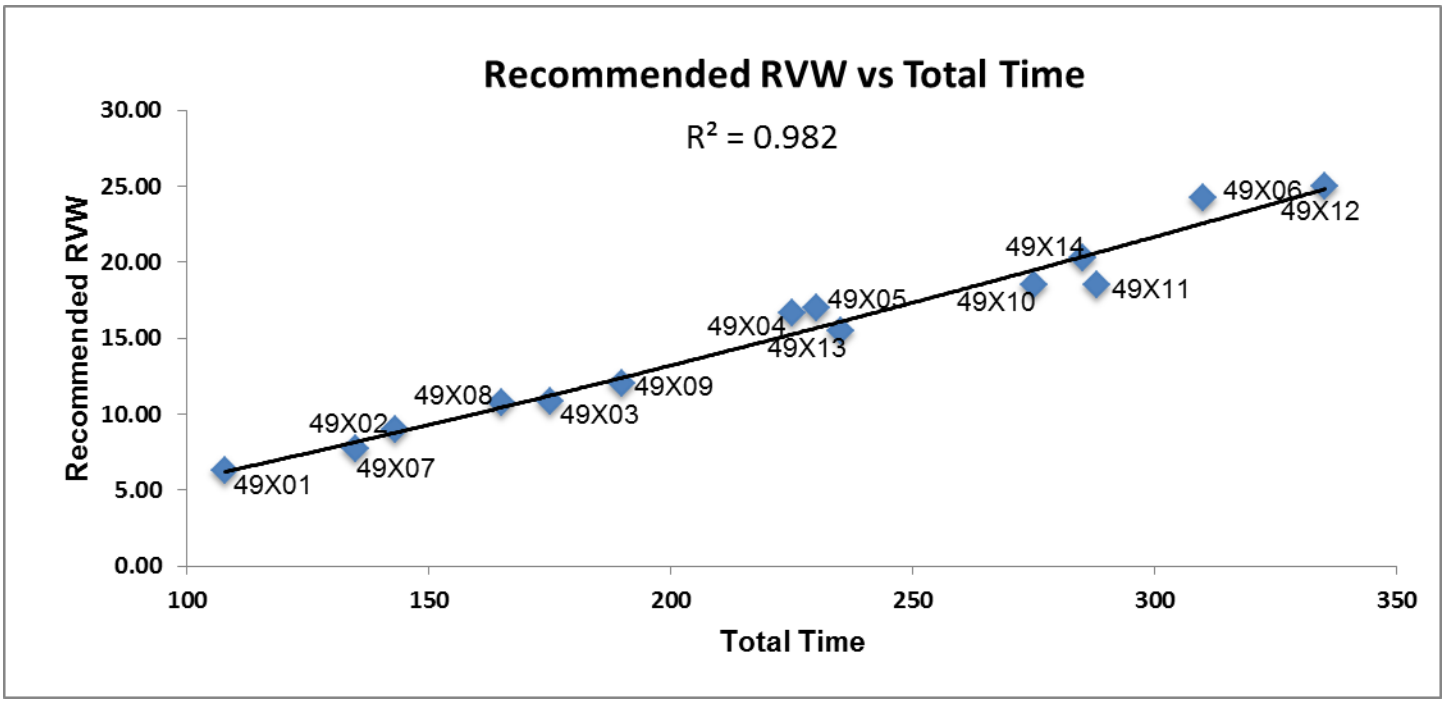
Ref 1: The respondents indicated the intensity/complexity of survey code 49618 is somewhat more than reference code 61624. Ref 2: The respondents indicated the intensity/complexity of survey code 49618 is similar to somewhat more than reference code 21813.

MPC Code Comparison

MPC code 37244 has the highest RVW for the set of 0-day global codes.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
37244	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	**13.75**	0.135	0.083	166	31	90	45	
49618	**Recurrent, I/S, > 10cm**	**25.00**	**0.117**	**0.075**	**335**	**70**	**180**	**30**	**99233**

Other Code Comparison



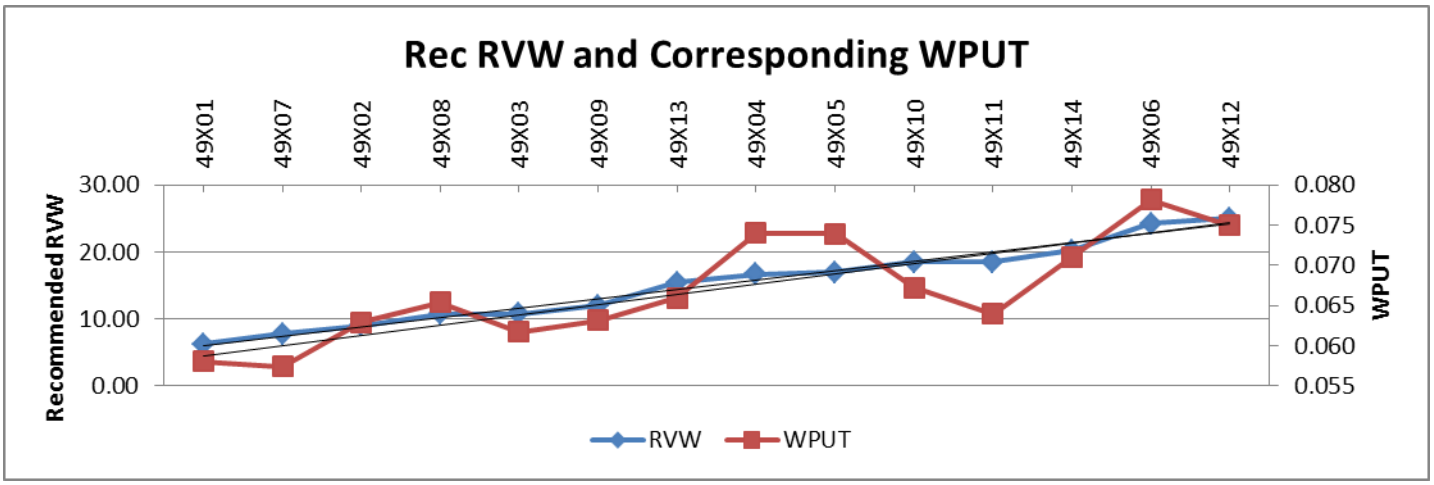
The codes in the table below that include extensive, complex and intense 0-day global procedures, bracket the recommendation for the survey code and offer further support for the recommended work RVU.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
93590	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve	**21.70**	0.148	0.097	223	58	135	30	
33477	Transcatheter pulmonary valve implantation, percutaneous approach, including pre-stenting of the valve delivery site, when performed	**25.00**	0.129	0.091	276	63	180	33	
49618	**Recurrent, I/S, > 10cm**	**25.00**	**0.117**	**0.075**	**335**	**70**	**180**	**30**	**99233**
33978	Removal of ventricular assist device; extracorporeal, biventricular	**25.00**	0.109	0.070	355	95	200	60	

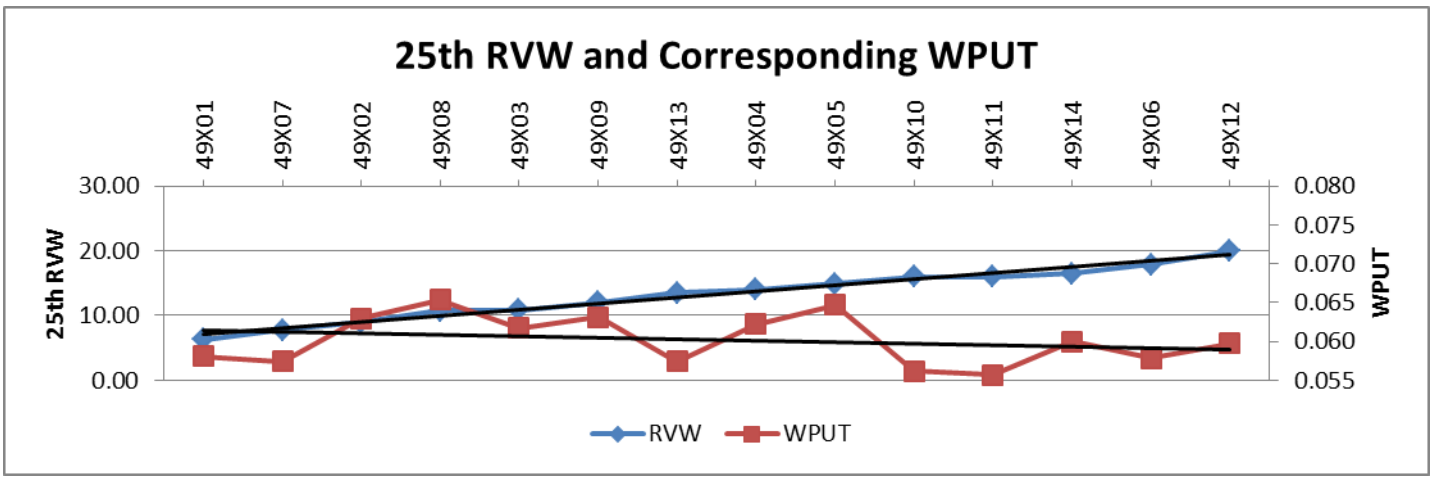
Relativity Assessment

Recommended RVW vs Total Time

The chart below that compares the recommended RVW and total time shows good correlation.



The data below that were used to create the chart above show appropriate relative rank order for work for this new set of hernia repair codes.



CPT	DESC		REC RVW	Total Time
49591	**Initial,** Reduc, < 3cm	25th	**6.27**	**108**
49613	**Recurrent,** Reduc, < 3cm	25th	**7.75**	**135**
49592	**Initial, I/S,** < 3cm	25th	**9.00**	**143**
49614	**Recurrent, I/S,** < 3cm	25th	**10.79**	**165**
49593	**Initial,** Reduc, 3-10cm	25th	**10.80**	**175**
49615	**Recurrent,** Reduc, 3-10cm	25th	**12.00**	**190**
49621	Parastomal, Reduc	median	**15.50**	**235**
49594	**Initial, I/S,** 3-10cm	median	**16.65**	**225**
49595	**Initial,** Reduc, > 10cm	median	**17.00**	**230**
49616	**Recurrent, I/S,** 3-10cm	median	**18.50**	**275**

49617	**Recurrent,** Reduc, > 10cm	median	**18.53**	**288**
49622	Parastomal, **I/S**	75th	**20.25**	**285**
49596	**Initial, I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation.

The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

49618	Recurrent, I/S, > 10cm	25.00	0.117	0.075	0.104	0.075	335	70	180	30	1			inpatient

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49565 Repair recurrent incisional or ventral hernia; reducible 090
49657 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated 090
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 473
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 426 Percentage 90.06 %

Specialty Colorectal Surgery Frequency 24 Percentage 5.07 %

Specialty Other Surgery Frequency 24 Percentage 5.07 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69

percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49621 Tracking Number C14 Original Specialty Recommended RVU: **15.50**
Presented Recommended RVU: **15.50**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **14.24**

CPT Descriptor: Repair of parastomal hernia, any approach (ie, open, laparoscopic, robotic), initial or recurrent, including placement of mesh or other prosthesis, when performed; reducible

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male with history of rectal cancer with subsequent abdominoperineal resection and end colostomy presents with a worsening bulge around his stoma when coughing, pain and discomfort around the stoma, and difficulty keeping the stoma appliance in place due to leakage. CT scan revealed small bowel in the hernia sac. He undergoes parastomal hernia repair with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 5% , Overnight stay-less than 24 hours 28% , Overnight stay-more than 24 hours 67%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 73%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The palpable edge of the hernia defect(s) and sites of the proposed skin incisions are marked with cooperation of patient. Location for a new and revised stoma site is marked if needed. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg). Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The colostomy appliance is removed and the areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. A temporary closure suture is placed in the stoma to avoid evacuation during the procedure. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. A large field of adhesions occupies the anterior abdominal wall surrounding the stoma site. Adhesions around the stoma are taken down sharply avoiding injury to the stoma intestinal component traversing the abdominal wall. The careful process of adhesiolysis is performed to clear adhesions from between omentum, small intestines and colon and the abdominal wall and prior mesh when present. The hernia sac is identified and adhesions within the sac are also taken down. The hernia sac is excised. The hernia defect is narrowed with suture taking care to leave the appropriate size fascial defect for the colostomy yet avoiding an opportunity for intestinal contents to traverse the abdominal wall beside it

allowing a recurrence. The colon proximal to the colostomy is mobilized to ensure that there is no tension on the colostomy. The appropriate size of mesh is inserted into the peritoneal cavity and fashioned around the colostomy to cover the hernia defect also avoiding narrowing of the colostomy or offering space for material to traverse the abdominal wall beside it allowing a recurrence. Sutures and tacks are used to anchor the mesh to the anterior abdominal wall. Completion laparoscopic survey is performed to inspect for bleeding and visceral injury. Irrigation is performed as necessary. Hemostasis is assured. Fascial incisions for laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference. The temporary closure suture is removed from the stoma. Patency of the stoma is assessed prior to completion of the procedure.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: A stoma appliance is applied. Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to

submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should

describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-

surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day. We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously

rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49621

We recommend a work RVU of 15.50, which is the survey median.

Pre-service time

Scrub, dress, wait package time has been reduced so as to not exceed survey median data.
Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will be admitted and a visit will occur later on the same day. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (straightforward or low-complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 49621 is similar to somewhat more than reference code 11005. Ref 2: The respondents indicated the intensity/complexity of survey code 49621 is similar to somewhat more than reference code 21813.

MPC Code Comparison

MPC code 37244 has the highest RVW for the set of 0-day global codes.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M

49596	**Initial, I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To

emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

49560 Repair initial incisional or ventral hernia; reducible 090
49565 Repair recurrent incisional or ventral hernia; reducible 090
49654 Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); reducible 090
49656 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); reducible 090
49659 Unlisted laparoscopy procedure, hernioplasty, herniorrhaphy, herniotomy YYY
49999 Unlisted procedure, abdomen, peritoneum and omentum YYY
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 709
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 638 Percentage 89.98 %

Specialty Colorectal Surgery Frequency 35 Percentage 4.93 %

Specialty Other Surgery Frequency 35 Percentage 4.93 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 11008

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49622 Tracking Number C15 Original Specialty Recommended RVU: **20.25**
Presented Recommended RVU: **20.25**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **18.00**

CPT Descriptor: Repair of parastomal hernia, any approach (ie, open, laparoscopic, robotic), initial or recurrent, including placement of mesh or other prosthesis, when performed; incarcerated or strangulated

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male with history of rectal cancer, colon resection and sigmoid colostomy presents with a worsening parastomal hernia associated with pain. The hernia cannot be reduced and a CT scan indicates incarcerated small bowel loops in the parastomal hernia sac. He undergoes parastomal hernia repair with placement of mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 3% , Overnight stay-less than 24 hours 3% , Overnight stay-more than 24 hours 95%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 82%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The mass of incarcerated material occupying the hernia is palpated obscuring the edge of the hernia defect(s). The sites of the proposed skin incisions are marked with cooperation of patient. A site for a new and revised stoma site is marked if needed. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic/robotic equipment and mesh. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient, including padding and securing patient to table that will adjust throughout procedure (eg, reverse Trendelenburg) Assist anesthesia team with line placement and induction of anesthesia and intubation, relative to all laparoscopic/robotic equipment. The colostomy appliance is removed and the areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. A temporary closure suture is placed in the stoma site to avoid evacuation during the procedure. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Abdominal access is obtained and a safe pneumoperitoneum is created with placement of a needle/trocar. The camera is inserted and safe entry is verified. Additional trocars are placed in the lateral abdomen, under direct vision. A large field of adhesions occupies the anterior abdominal wall surrounding the stoma site. Adhesions around the stoma are taken down sharply avoiding injury to the stoma intestinal component traversing the abdominal wall. The careful process of adhesiolysis is performed to clear adhesions from between omentum, small intestines and colon and the abdominal wall and prior mesh when present. Reduction of the incarcerated material is initiated. This requires manipulation both intra-abdominally with minimally invasive instrumentation and extra-abdominally with palpation and pressure applied to the abdominal wall to reduce the incarcerated contents. The reduced tissue is examined for viability and

any inadvertent injury. The hernia sac is identified and adhesions within the sac are taken down and the hernia sac is excised. The hernia defect is narrowed with suture taking care to leave the appropriate size fascial defect for the colostomy yet avoiding an opportunity for intestinal contents to traverse the abdominal wall beside it allowing a recurrence. The colon proximal to the colostomy is mobilized to ensure that there is no tension on the colostomy. The appropriate size of mesh is inserted into the peritoneal cavity and fashioned around the colostomy to cover the hernia defect also avoiding narrowing of the colostomy or offering space for material to traverse the abdominal wall beside it allowing a recurrence. Sutures and tacks are used to anchor the mesh to the anterior abdominal wall to secure the mesh. Completion laparoscopic survey is performed to inspect for bleeding and visceral injury and perform a final viability assessment of the material once incarcerated in the hernia sac. Irrigation is performed as necessary. Hemostasis is assured. Fascial incisions for laparoscopic ports larger than 1 cm are closed with a suture passer. Skin incisions are closed according to surgeon preference. The temporary closure suture is removed from the stoma. Patency of the stoma is assessed prior to completion of the procedure.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: A stoma appliance is applied. Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen for bowel sounds. Monitor fluid and electrolyte status and renal function; monitor for problems such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	90%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	10%	90%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	30%	70%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	10%	90%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	33%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	50%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	33%	50%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	33%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to

submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should

describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-

surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day. We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously

rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49622

We recommend a work RVU of 20.25, which is the survey 75th percentile. We believe a lack of recent or five year experience in conjunction with a challenging reference list may have resulted in an underestimation of work. One-third of the respondents had not performed this procedure in the past 12 months. The 12 month median experience was 2 and the 5 year median experience was only 6. This is not a common procedure. Incarcerated parastomal hernias can prove very challenging to identify which segment is the stoma component should remain penetrating through the abdominal wall and which loops are bowel that should be reduced adding to the complexity of the procedure.

Pre-service time

Scrub, dress, wait package time has been reduced so as to not exceed survey median data.
Laparoscopic/robotic anterior abdominal hernia repair positioning time: The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents.. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Postoperative E/M visit later on the day of surgery

The typical patient will be admitted and a visit will occur later on the same day. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (moderate complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Key Reference Code Intensity/Complexity Comparison

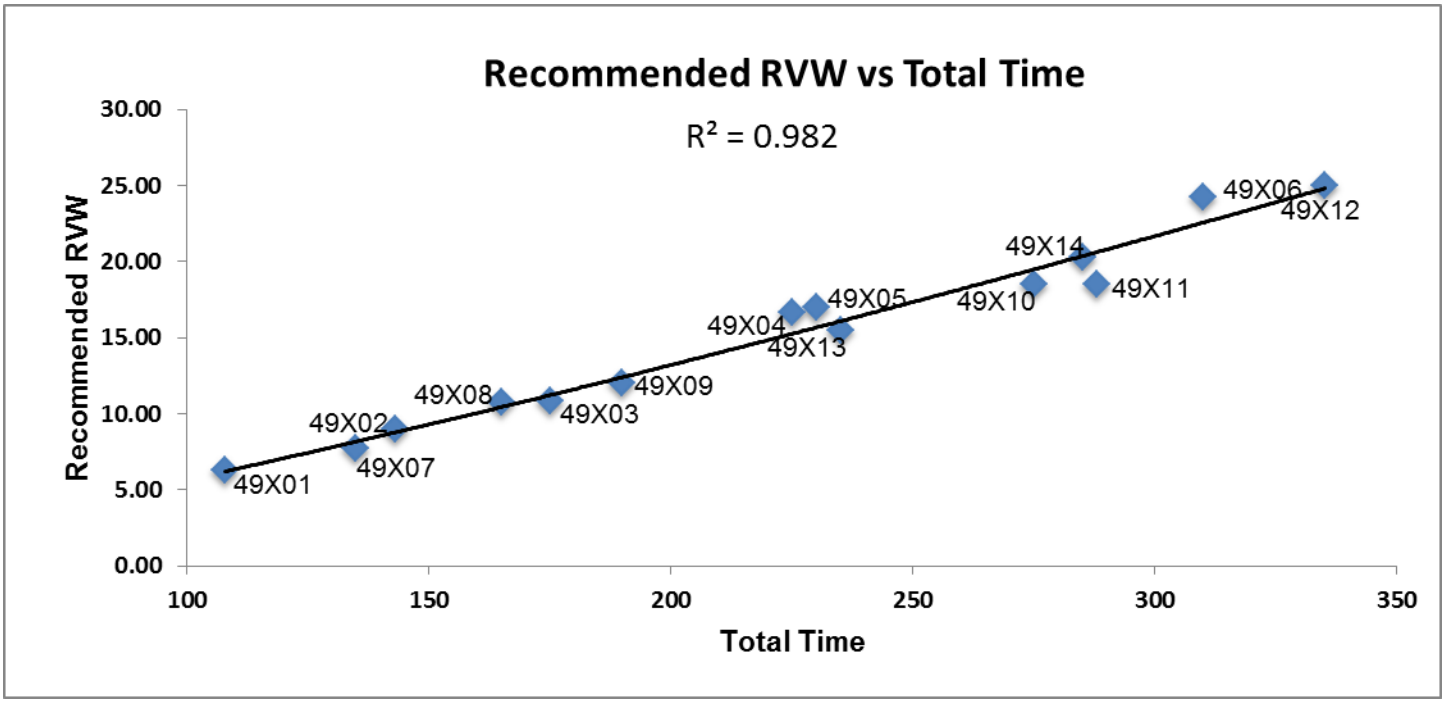
Ref 1: The respondents indicated the intensity/complexity of survey code 49622 is similar to somewhat more than reference code 21813. Ref 2: The respondents indicated the intensity/complexity of survey code 49622 is similar to somewhat more than reference code 33891.

MPC Code Comparison

MPC code 37244 has the highest RVW for the set of 0-day global codes.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
37244	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	**13.75**	0.135	0.083	166	31	90	45	
49622	**Parastomal, I/S**	**20.25**	**0.113**	**0.071**	**285**	**70**	**150**	**25**	**99232**

Other Code Comparison



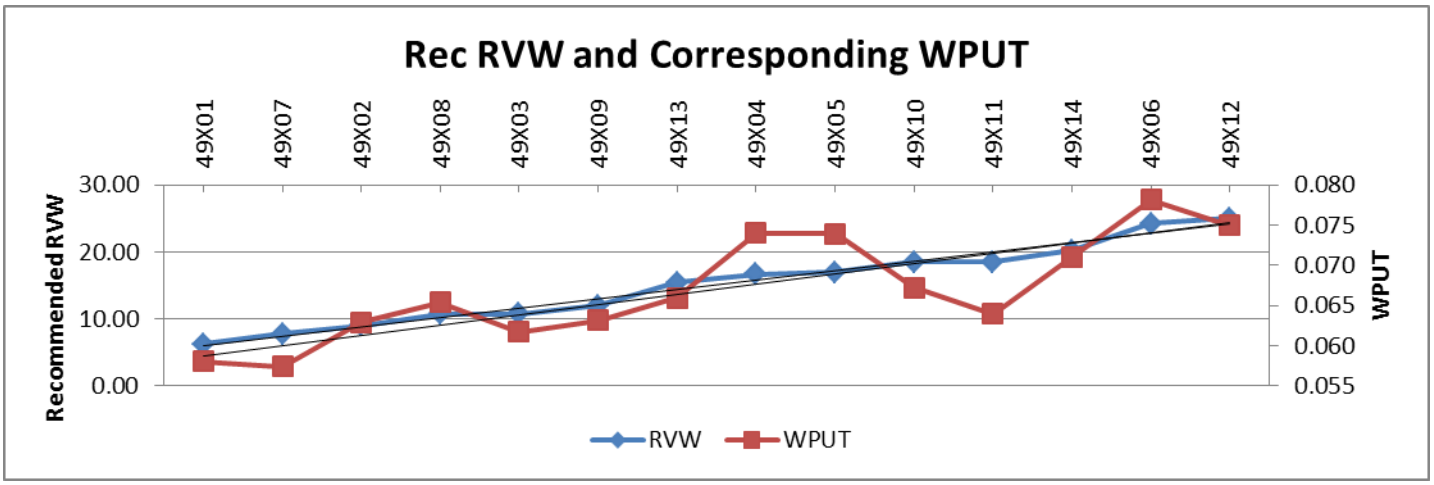
The codes in the table below that include extensive, complex and intense 0-day global procedures, bracket the recommendation for the survey code and offer further support for the recommended work RVU.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
33745	Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, including all imaging guidance by the proceduralist, when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt	**20.00**	0.192	0.097	207	55	92	60	
49622	Parastomal, I/S	**20.25**	0.113	0.071	285	70	150	25	99232
93590	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve	**21.70**	0.148	0.097	223	58	135	30	

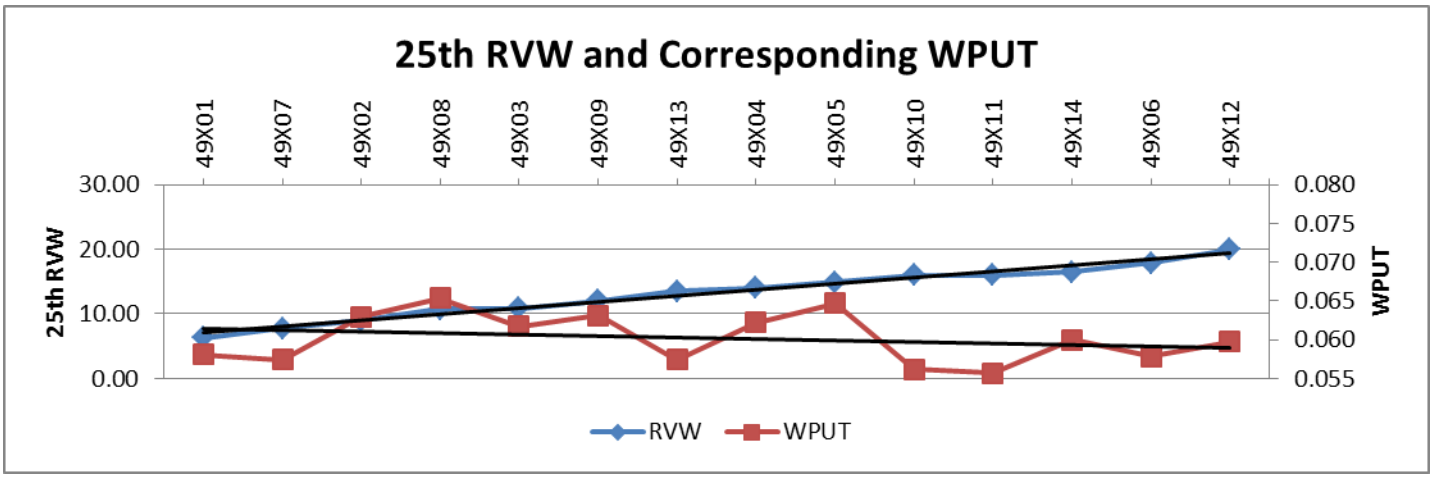
Relativity Assessment

Recommended RVW vs Total Time

The chart below that compares the recommended RVW and total time shows good correlation.



The data below that were used to create the chart above show appropriate relative rank order for work for this new set of hernia repair codes.



CPT	DESC		REC RVW	Total Time
49591	**Initial,** Reduc, < 3cm	25th	**6.27**	**108**
49613	**Recurrent,** Reduc, < 3cm	25th	**7.75**	**135**
49592	**Initial, I/S,** < 3cm	25th	**9.00**	**143**
49614	**Recurrent, I/S,** < 3cm	25th	**10.79**	**165**
49593	**Initial,** Reduc, 3-10cm	25th	**10.80**	**175**
49615	**Recurrent,** Reduc, 3-10cm	25th	**12.00**	**190**
49621	Parastomal, Reduc	median	**15.50**	**235**

49594	**Initial, I/S,** 3-10cm	median	**16.65**	**225**
49595	**Initial,** Reduc, > 10cm	median	**17.00**	**230**
49616	**Recurrent, I/S,** 3-10cm	median	**18.50**	**275**
49617	**Recurrent,** Reduc, > 10cm	median	**18.53**	**288**
49622	Parastomal, **I/S**	75th	**20.25**	**285**
49596	**Initial, I/S,** > 10cm	75th	**24.24**	**310**
49618	**Recurrent, I/S, > 10cm**	75th	**25.00**	**335**

Comparison of using the recommended RVW versus using the 25th percentile.

The first chart below shows reasonable correlation between the recommended RVW and WPUT—both trend lines have a similar slope. The second chart below shows no relationship of WPUT to the 25th percentile RVW—where WPUT decreases as work increases.

What if surgeon evaluation and management work were set equal to discrete E/M services?

As has been discussed by the RUC in the past, work intensities used for computation of IWPUT for time spent by physicians in the pre-service and immediate post-service period for surgical procedures have remained fixed since the early 1990s, while intensity of time for E/M values has received several increased values over several decades.

Recent increases for outpatient office E/M values were not allowed to be added to global codes by CMS. Because IWPUT is calculated by subtracting the pre- and post-work values from the RVW of a given CPT code, this has resulted in less value subtracted than would have occurred if the more appropriate pre- and post-work values were used for the IWPUT formula. This artificially increases the IWPUT and WPUT resulting in a decrease in relativity. This is especially true for codes that have a significant amount of pre-service and post-service work.

It has become difficult to compare IWPUT (and WPUT) for codes with different global periods because of the level of discounting of pre-service and post-service work. For example, for the top 34 high volume 10 and 90 day global codes, AMA staff recently calculated the difference in IWPUT if the office visit increases were used in the IWPUT equation. The AMA table, which is included in the Research Subcommittee agenda for this meeting, showed that the IWPUT would have decreased from -6% to -548% depending on the number of office visits included in the work/time file. To emphasize the importance of this information, the code which would have had the largest decrease (17000) has 3 minutes of intra-time and only one postop office visit (99212). In this table, it was also clear that relativity within a family of codes is lost, because each code within a family may have varying levels of post-service work. To summarize, IWPUT has become much less accurate when used as a comparator of intra-service work within and between families because of CMS actions (ie, not updating global RVW) and policy (ie, discounting postoperative work).

Using the discussion above, we have created the table below that presents the IWPUT and WPUT for the hernia set of codes using (1) the 2021 formulas, and (2) "full value" formulas. The note below the table describes each formula, but basically the full value formula sets pre- and post-service work equal to the same E/M work for non-surgical services. For comparison to facility non-surgical services, we have included codes 99283-99285 using the 2021 published RVW and time data. This table shows that most of the recommendations for 49591-49622 result in a WPUT that is less than an ED visit requiring moderate MDM (99284). This table also shows that those codes with similar WPUT to high MDM are appropriately the bigger and more complex procedures. Last, this table provides evidence that discounting pre- and post-work distorts and artificially impacts fair IWPUT and WPUT relativity comparison. However, if undiscounted work is applied, the recommendations for this set of codes are appropriately ranked.

CPT	DESC	REC RVW	2021 formula*		2021 full value**		Total Time	PRE	Intra	Imm Post	-33 -26	-32 -25	-31 -24	Facility Status
			IWPUT	WPUT	IWPUT	WPUT

* 2021 Formula: IWPUT calculation based on evaluation, positioning, immediate post intensity of 0.0224; scrub/dress/wait intensity of 0.0081; and discounted same-day outpatient postop visit (not shown in table) equal to intra-service time at 0.0224. WPUT calculation equal to total time (including discounted postop visit time not shown on table) divided by work.

**2021 Full Value Formula: IWPUT calculation based on pre-service and immediate post-service time intensity of 0.043 (equal to WPUT for 99213) and same-day post EM at full value instead of discounted time for outpatient procedure as shown on table (highlighted in red).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49561 Repair initial incisional or ventral hernia; incarcerated or strangulated 090
49566 Repair recurrent incisional or ventral hernia; incarcerated or strangulated 090
49655 Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated 090
49657 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated 090
49659 Unlisted laparoscopy procedure, hernioplasty, herniorrhaphy, herniotomy YYY
49999 Unlisted procedure, abdomen, peritoneum and omentum YYY
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Sometimes

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,035
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 932 Percentage 90.04 %

Specialty Colorectal Surgery Frequency 52 Percentage 5.02 %

Specialty Other Surgery Frequency 52 Percentage 5.02 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 11008

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the

Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:49623 Tracking Number C16 Original Specialty Recommended RVU: **5.00**
Presented Recommended RVU: **5.00**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **5.00**

CPT Descriptor: Removal of mesh or other prosthesis at the time of initial or recurrent anterior abdominal hernia repair or parastomal hernia repair, any approach (ie, open, laparoscopic, robotic) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: At the time of hernia repair, a 64-year-old obese male who had mesh placed with a prior hernia repair now requires removal of the mesh to allow for an adequate repair of a new hernia. Note: This is an add-on service. Only consider the additional work related to mesh removal.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Utilizing electrocautery and sharp dissection, the previously placed mesh is dissected from the abdominal wall fascia. Care is taken to prevent damage to the abdominal wall and intraabdominal contents while removing the mesh in its entirety. Prior sutures and tacks are identified and dissected from the abdominal wall. Hemostasis is obtained in the abdominal wall over the surface area of the excised mesh.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	67%	22%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	70%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	1%	65%	36%
Physical effort required	5%	61%	34%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	64%	29%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	50%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	33%	58%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	25%	67%
Physical effort required	8%	17%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	17%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day.

We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 49623 (add-on code)

We recommend a work RVU of 5.00, which is the survey median.

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 49623 is similar to somewhat more than reference code 11008. Ref 2: The respondents indicated the intensity/complexity of survey code 49623 is somewhat more than reference code 35572.

MPC Code Comparison

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST
34812	Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)	**4.13**	0.103	0.103	40	0	40	0
49623	**Removal of mesh**	**5.00**	**0.111**	**0.111**	**45**	**0**	**45**	**0**

Other Code Comparison

Codes 57267 and 63295, which bracket the recommendation for the survey code, offer further support for the recommended work RVU.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST
57267	Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)	**4.88**	0.108	0.108	45	0	45	0
49623	**Removal of mesh**	**5.00**	**0.111**	**0.111**	**45**	**0**	**45**	**0**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

49565-22 Repair recurrent incisional or ventral hernia; reducible 090
49566-22 Repair recurrent incisional or ventral hernia; incarcerated or strangulated 090
49656-22 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); reducible 090
49657-22 Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated 090
49659 Unlisted laparoscopy procedure, hernioplasty, herniorrhaphy, herniotomy YYY
49999 Unlisted procedure, abdomen, peritoneum and omentum YYY

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Sometimes

Specialty colorectal surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,931
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 2638 Percentage 90.00 %

Specialty Colorectal Surgery Frequency 147 Percentage 5.01 %

Specialty Other Surgery Frequency 147 Percentage 5.01 %

Do many physicians perform this service across the United States? Yes

Letter Referenced in Compelling Evidence Rationale

November 29, 2011

The Honorable Kathleen Sebelius
Secretary
Department of Health and Human Services
Hubert H. Humphrey Building
200 Independence Avenue SW
Washington, DC 20201

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:15778 Tracking Number C1 Original Specialty Recommended RVU: **8.50**
Presented Recommended RVU: **8.50**
Global Period: 000 Current Work RVU: RUC Recommended RVU: **8.00**

CPT Descriptor: Implantation of absorbable mesh or other prosthesis for delayed closure of defect(s) (ie, external genitalia, perineum, abdominal wall) due to soft tissue infection or trauma

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old obese male with a large abdominal wall defect as a result of necrotizing infection and extensive debridement of all involved skin, subcutaneous tissue, fascia, and muscle now undergoes delayed closure with implantation of absorbable mesh.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 92%

Description of Pre-Service Work: Interval tests (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. Verify that all required instruments and supplies are available, including mesh. Assistance is provided in transfer of the patient from gurney to operating table. Assist anesthesia team with line placement and induction of anesthesia and intubation. The dressing covering the wound from the previous debridement is removed. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Extent of the open wound is examined including assessment of adherence of intestine and intra-abdominal contents to the fascia. Adhesiolysis is performed separating these contents from the fascial boundaries to allow for mesh fixation. Care is taken during the lysis of adhesions to avoid injury to inflamed, exposed intra-abdominal contents including small intestine and colon. Omentum is draped across the exposed intestine. The abdominal wall defect resulting from the surgical debridement is measured. An absorbable mesh is sized to allow for closure of the abdominal wall defect and re-establishment of abdominal wall integrity. The mesh is sutured to the fascial edges circumferentially avoiding errant placement of sutures injuring the inflamed, exposed intra-abdominal contents.

Description of Post-Service Work:
Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy, as appropriate. Review postoperative labs. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final

operative note and place in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders and discuss ongoing care with nursing staff.
Later same day hospital inpatient care visit [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Monitor fluid and electrolyte status and renal function. Examine patient and assess status of newly placed mesh. Continue prophylaxis for DVT. Assess need for beta-blockers, order as required. Assess pain scores and adequacy of analgesia. Write orders for labs, films, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Physical effort required	0%	25%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	13%	88%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

RAW Screen

Code 49565, *Repair recurrent incisional or ventral hernia; reducible*, was identified by the RUC/RAW with a site of service anomaly: less than 50% inpatient status; includes inpatient visit codes; greater than 5,000 utilization. Prior to

submitting an Action Plan to the RAW, the societies reviewed the site of service data and found: almost even split of 48% between inpatient and outpatient – with a few percent in the ASC. At the January 2020 RUC meeting, the societies requested referral of code 49565 to CPT to update the descriptor to current standard of practice and typical patient presentation.

CPT Coding Changes

At the February 2021 CPT meeting the following changes were approved:

- Delete all the current open and laparoscopic codes for repair of anterior abdominal hernias.
- Delete add-on code 49568 for mesh for open ventral/incisional hernias and large defects as a result of necrotizing soft tissue infection.
- Add 12 new codes for anterior abdominal hernia repair by any approach (ie, open laparoscopic, robotic); by initial or recurrent; by total defect size; and by reducible or incarcerated/strangulated
- Add 2 codes for parastomal hernia repair - by reducible or incarcerated/strangulated
- Add 1 add-on code for removal of mesh/prosthesis – only with the new hernia repair codes
- Add 1 new code for mesh/prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma.

Coding Structure

Hernia repair for epigastric, incisional, ventral, umbilical, spigelian were merged as they all appear on the anterior abdomen. The location--upper, lower, midline—does not impact the work. But instead, the size and number of defects is the driving factor for work. For example, with respect to the code that was tagged by the RAW, a recurrent, incisional, reducible hernia can be anywhere from a small hernia at a port site from a prior laparoscopic procedure to an extremely large hernia with multiple defects clustered in a midline incision.

Initial versus recurrent differentiation was maintained. Recurrent hernias are re-reoperations. An initial hernia can be the result of a prior procedure (this is not a recurrent hernia) or weak muscles and fascia. A recurrent hernia is typically at least the third time the same site is being operated on.
For example,

- operation 1 might be an open colectomy
- operation 2 would be an initial midline hernia repair
- operation 3 would be a recurrent midline hernia involving the initial midline repair and may include other multiple hernias occurring in the same old incision, all needing to be repaired.

There are many examples in CPT that differentiate between a primary and secondary procedure: disarticulation of shoulder (23920-23921); amputation of arm through humerus (24900-24930) and other similar amputation families; tendon repair (eg, 25260-25274); CABG reoperation (33530); and revision total joint (eg, 23473, 23474, 24370, 24371, 27134-27138).

The hernia size ranges were based on a review of literature and expert panel. For example, an article published in the Journal of the American College of Surgeons reviewed technique and outcomes of abdominal incisional hernia repair and showed that the range of defect size was from less than 1 cm to more than 25 cm with a mean of 6 cm and a median of less than 3 cm. Other similar articles were submitted with the code change application, supporting different work for different defect size. David A. Iannitti, et.al, *Technique and Outcomes of Abdominal Incisional Hernia Repair Using a Synthetic Composite Mesh: A Report of 455 Cases,* Journal of the American College of Surgeons, Volume 206, Issue 1, 2008, Pages 83-88, ISSN 1072-7515, https://doi.org/10.1016/j.jamcollsurg.2007.07.030.

Differentiating the work of a procedure in relationship to size or extent is not new for CPT. For example, 36 skin repair codes by length of repair; 44 lesion excision codes by excised diameter; 46 soft tissue tumor excision codes by size of tumor; 23 hysterectomy codes by size of uterus (58260-58573); 3 myomectomy codes are differentiated by total weight of the myomas (58140-58146); and 10 nerve graft codes are based on length of graft. (64885-64898)

The CPT guidelines and illustrations that describe how to measure the total defect size are well understood by surgeons. This is not a new concept – surgeons are very familiar with measuring a hernia defect, and in fact the size of the hernia defect was included in some of the patient vignettes in 1993. Furthermore, measurement of hernia size is a necessary step for selecting and preparing the appropriately sized mesh for implantation.

Hernia repair coding has been complicated by changes in (1) technology and technique and (2) the recent implementation of ICD-10-PCS codes. For these reasons, the stakeholder societies believed this set of codes should

describe "any approach." The societies and the AMA Coding Network have received numerous coding questions about correct reporting for "hybrid" abdominal hernia repair procedures where parts of the procedure are performed via an open approach and parts of the procedure are performed via laparoscopy or with the use of a robot. These are not laparoscopic procedures converted to open procedures, but instead procedures that are more often begun open and then finished as laparoscopic/robotic under pneumoperitoneum.

Another issue that has recently caused confusion about coding has appeared on national coder websites and coder discussion boards referring to International Classification of Diseases Tenth Revision Procedure Coding System (ICD-10-PCS) codes which classifies procedures performed in the facility (ie, not CPT physician procedures). This, however, is important because facilities want the procedure codes reported to correspond with the descriptors of ICD-10-PCS codes that the facility is reporting. Unfortunately, the new ICD-10-PCS codes define various surgical approaches that do not correspond to CPT coding (open, closed, percutaneous, and laparoscopic). For example, the ICD-10-PCS "open endoscopic" approach is defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose a body part, and introduction of instrumentation to reach and visualize the site of the procedure." A second example is the "open with percutaneous endoscopic assistance" approach defined as "cutting through the skin or mucous membrane and any other body layers necessary to expose the site of the procedure, and entry, by puncture or minor incision, of instrumentation through the skin or mucous membrane and any other body layers necessary to aid in the performance of the procedure." These new ICD-10-PCS codes have resulted in coders stating that a procedure should be reported as open because the ICD-10-PCS code indicates open and to report any procedure that includes extension of a port incision (eg, for delivery of a specimen) to be reported as an open procedure --instead of being correctly reported as a laparoscopic procedure.

Mesh

- **Implantation of mesh is now typical and therefore was bundled into the new codes.** When code 49568 was created in 1993, mesh implantation with hernia repairs was not typical. This is supported by the typical patient described in 1993 as having a 10 cm midline incisional hernia – a very large hernia. With research on the causes of hernia recurrence, changes in technology and development of new types of mesh or other prosthesis, implantation of mesh is now typical for all types of hernias and all sizes to reduce the incidence of recurrence. This was supported by the literature submitted with the CCA.

- **Mesh removal is not always required and is not typical.** Technology and research have developed types of mesh that are now being implanted which are incorporated into the abdominal wall, reducing the risk of infection, complications, and recurrence. When mesh removal is indicated, it is typically due to hardening and fracturing of aged mesh, or when gross contamination and infection has occurred (eg, enterocutaneous fistula involving the mesh). For example, a recurrent hernia repair may require removal of fractured, brittle (old technology) mesh many years after an open repair following a colectomy. This work is typically significant, in that the mesh is often integrated with the abdominal wall or adhered to intestine, and involves removal of all of the mesh, not just a small portion. An add-on code to report mesh removal prior to hernia repair, when required, allows for accurate reporting of this work only when performed, which our expert panel believes is not typical of most hernia repairs.

- **Deletion of code 49658 resulted in rare "left over" work for implantation of mesh related to closure for a large open wound after debridement for necrotizing fasciitis.** Add-on code 46958 was reported for mesh placement for both open hernia repair and in relation to closure of wounds from necrotizing soft tissue infection. This code will be deleted and the work of mesh placement will be included in the work for all of the anterior abdominal hernia repair codes. The remaining use of code 46958 was for mesh placement for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma. As described in the vignette for 15778, necrotizing soft tissue infections typically result in a large open wound that cannot be closed primarily. When the infection has resolved, absorbable mesh or other prosthesis is placed to allow healing by secondary intent until such time that a skin graft or skin closure can be accomplished. The literature submitted with the CCA supports this work.

Compelling Evidence - Flawed methodology of previous reviews, New technology

Flawed Methodology: Codes 49560, 49561, 49565, 49566, 49570, 49572, 49580, 49582, 49585, and 49590 were last reviewed in 2000 during the 2nd 5-year-review. During this review, the American College of Surgeons argued that there was compression of work values for big procedures and there were rank order issues within families of codes. We developed a methodology using NSQIP data that was approved by the Research Subcommittee. However, to validate the methodology, the 5YR Workgroup instructed the ACS to group the codes into families and survey one or two CPT codes as full surveys per family to act as anchors for each family and the rest of the codes to be surveyed as mini-

surveys for only time and visits. After conducting all of the surveys, we believe we were able to validate the methodology that we proposed, however, the 5YR Workgroup did not agree. Instead, they decided that the value that they assigned to the anchor code (the full survey) would be extrapolated to all of the other codes grouped into the same survey. The hernia codes listed above were grouped with 49505 which was increased by 17% based on the survey data and compelling evidence. The 17% increase was applied to the other codes in the group without consideration of rank order, mini survey results or society recommendations. This resulted in continuation of compression and rank order issues. For example, although code 49572 was increased by 17%, the IWPUT for the code is negative. Other codes have near zero IWPUT. **We believe this was a flawed methodology of review of the codes and meets compelling evidence.**

Flawed Methodology: Codes 49587, 49652, 49653, 49654, and 49655 were last reviewed in 2011 based on a site of service anomaly screen. At that time, the RUC approved including a same day observation visit and full observation discharge on the subsequent day. The RUC noted that the typical patient requires close monitoring for problems such as ileus, intestinal ischemia and urinary retention. Additionally, there will be significant pain post-operatively requiring management before discharge. The specialty noted, and the RUC agreed, that the shift in patient facility status (in patient moving to outpatient—as determined by CMS) has little to do with healthier patients that require less physician work and everything to do with the recent OPPS changes related to facility reimbursement. This was substantiated by the survey data which showed that the typical patients stayed at least overnight and received a postoperative same-day E/M service. Given this data, the RUC enacted its (then current) policy to allocate the appropriate proxy for the postoperative visits which was categorized as either subsequent observation and/or observation discharge—both of which are outpatient codes. Importantly, the specialties argued and the RUC agreed that the work of providers who care for medical patients should not be discounted (eg, full observation E/M and full observation discharge E/M allowed for patient staying overnight for observation.)

CMS ignored the valid outpatient E/M visit code inputs that the RUC recommended and instead stated in the Rule that they have a policy of not allowing "inpatient" visits included in the details for outpatient services. These codes went through a Refinement Panel process [ie, a CMS convened group of Medical Officers and select physicians acting as a separate formal appeals process] that resulted in agreement with the RUC recommendations. Importantly, the Agency still maintained that inpatient visits would not be allowed (even though outpatient/observation visits were submitted by the RUC) and then used a reverse building block methodology to subtract work RVUs from the values. These values had been developed by magnitude estimation and approved by the RUC. The Agency deleted the observation visit code inputs and decreased discharge management by 50 percent even though it was performed on a subsequent date. **We believe this action by CMS resulted in a flawed methodology of review of these codes and meets compelling evidence.**

The rejection of equal value for equal work and rejection of the Refinement Panel results prompted the Executive Director of the American College of Surgeons to send a letter (see last page of SoR) to Kathleen Sebelius, then Secretary of the Department of Health and Human Services on November 29, 2011. This letter addressed the decision-making process for valuing procedure codes that have Medicare outpatient status, the use of refinement panels, and the arbitrary discount in physician work for the same work performed by any provider of a non-global service. Specifically, the letter included the following statement:

> *"CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. …we believe that this policy leads to a loss of validity and integrity of the current system."*

We continue to believe there is no valid justification for a 50% discount to discharge management services provided by a surgeon that is performed the day after a procedure when a non-surgical provider observing a medical patient who is kept overnight for any reason is allowed to bill a discharge management service at 100 percent for work on the next day. We also believe there is no valid justification for discounting a postoperative visit later the same day of surgery to equal only the intra-service time of the visit multiplied by an intensity of 0.0224. No surgeon would round on a postoperative patient the same day and not review interval chart notes prior to the face-to-face with the patient and not followup with charting the visit and confirming or modifying the current orders.

CMS implemented a 23-hour policy for discounting surgical postoperative work based on the argument that the Agency could not include impatient work in their time/work file. However, the fact is that the Agency has also erroneously

rejected RUC recommendations for outpatient / observation codes, stating "these inpatient codes" could not be included for procedure that are typically outpatient.

Change in Technology: Since the last review of the hernia repair codes (either in 2000 or in 2011), there has been introduction and application of new technology (ie, robotic assist) which adds work complexity and time with the goal of better patient outcomes. The diffusion of this new technology throughout this family of codes further meets compelling evidence.

Recommendation – 15778

We recommend a work RVU of 8.50, which is the survey median.

Pre-service time

Scrub, dress, wait package time has been reduced so as to not exceed survey median data.

Postoperative E/M visit later on the day of surgery

The typical patient will be inpatient and a visit will occur later on the same day. Review data (eg, diagnostic and imaging studies) not available at the unit. Communicate with other health care professionals and with patient and/or family. Review medical records and data available on the unit. Perform a medically appropriate examination. Consider relevant data, options, and risks; formulate and/or revise diagnosis and treatment plan(s) (moderate complexity MDM). Discuss diagnosis and treatment options with the patient and/or family. Consider discharge needs of patient. Communicate with other health care professionals as necessary. Write and/or review orders, including arranging for necessary diagnostic testing, consultation(s), and therapeutic intervention(s). Complete medical record documentation. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family.

Key Reference Code Intensity/Complexity Comparison

Ref 1: The respondents indicated the intensity/complexity of survey code 15778 is somewhat more than reference code 49013. Ref 2: The respondents indicated the intensity/complexity of survey code 15778 is somewhat/much more than reference code 15273.

MPC Code Comparison

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	INTRA	POST	SD E/M
52353	Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy (ureteral catheterization is included)	**7.50**	0.101	0.056	133	53	**60**	20	
15778	Implantation of absorbable mesh or other prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma	**8.50**	**0.061**	**0.040**	**213**	**58**	**90**	**25**	**99232**
36905	Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty	**9.00**	0.106	0.071	126	31	**75**	20	

Other Code Comparison

The table below presents codes reviewed by the RUC since 2005 with 90 minutes intra-service time. Unlike 15778, almost all of the codes on this list with an RVW less than 12 are typically performed in the outpatient setting and some are performed a significant amount of time in an office setting.

Year	CPT	Long Descriptor	RVW	IWPUT	WPUT	Total	PRE	INTRA	POST	91	33	32
2007	**55920**	Placement of needles or catheters into pelvic organs and/or genitalia (except prostate) for subsequent interstitial radioelement application	**8.31**	0.074	0.047	**175**	55	**90**	30			

2005	**37184**	Primary percutaneous transluminal mechanical thrombectomy, noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injection(s); initial vessel	**8.41**	0.080	0.056	**150**	30	**90**	30			
	15778	Implantation of absorbable mesh or other prosthesis for delayed closure of external genitalia, perineum and/or abdominal wall defect(s) due to soft tissue infection or trauma	**8.50**	0.061	0.040	**213**	58	**90**	25			1
2013	**37241**	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; venous, other than hemorrhage (eg, congenital or acquired venous malformations, venous and capillary hemangiomas, varices, varicoceles)	**8.75**	0.085	0.062	**142**	22	**90**	30			
2013	**37236**	Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; initial artery	**8.75**	0.083	0.058	**151**	31	**90**	30			
2015	**77778**	Interstitial radiation source application, complex, includes supervision, handling, loading of radiation source, when performed	**8.78**	0.085	0.061	**145**	25	**90**	30			
2007	**41019**	Placement of needles, catheters, or other device(s) into the head and/or neck region (percutaneous, transoral, or transnasal) for subsequent interstitial radioelement application	**8.84**	0.079	0.051	**175**	55	**90**	30			
2011	**52355**	Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with resection of ureteral or renal pelvic tumor	**9.00**	0.084	0.055	**163**	53	**90**	20			
2017	**32994**	Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation	**9.03**	0.082	0.054	**168**	48	**90**	30			
2010	**37221**	Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed	**9.75**	0.092	0.062	**158**	38	**90**	30			
2010	**37226**	Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed	**10.24**	0.098	0.065	**158**	38	**90**	30			

2016 **MPC**	**36906**	Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit	**10.42**	0.104	0.074	**141**	31	**90**	20			
2010	**37228**	Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with transluminal angioplasty	**10.75**	0.103	0.068	**158**	38	**90**	30			
2016	**61640**	Balloon dilatation of intracranial vasospasm, percutaneous; initial vessel	**12.32**	0.095	0.053	**233**	58	**90**	30		1	
2013 **MPC**	**37244**	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	**13.75**	0.135	0.083	**166**	31	**90**	45			
2013	**93583**	Percutaneous transcatheter septal reduction therapy (eg, alcohol septal ablation) including temporary pacemaker insertion when performed	**13.75**	0.133	0.077	**178**	48	**90**	40			
2016	**33340**	Percutaneous transcatheter closure of the left atrial appendage with endocardial implant, including fluoroscopy, transseptal puncture, catheter placement(s), left atrial angiography, left atrial appendage angiography, when performed, and radiological supervision and interpretation	**14.00**	0.136	0.077	**183**	63	**90**	30			
2014	**33988**	Insertion of left heart vent by thoracic incision (eg, sternotomy, thoracotomy) for ECMO/ECLS	**15.00**	0.097	0.060	**250**	60	**90**	30	1		
2014	**33955**	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; insertion of central cannula(e) by sternotomy or thoracotomy, birth through 5 years of age	**16.00**	0.108	0.064	**250**	60	**90**	30	1		
2014	**33956**	Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; insertion of central cannula(e) by sternotomy or thoracotomy, 6 years and older	**16.00**	0.108	0.064	**250**	60	**90**	30	1		

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)
49999 Unlisted procedure, abdomen, peritoneum and omentum YYY
49568 Implantation of mesh or other prosthesis for open incisional or ventral hernia repair or mesh for closure of debridement for necrotizing soft tissue infection (List separately in addition to code for the incisional or ventral hernia repair) ZZZ

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 291
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate - See supplemental file with details

Specialty General Surgery Frequency 262 Percentage 90.03 %

Specialty Colorectal Surgery Frequency 15 Percentage 5.15 %

Specialty Other Surgery Frequency 15 Percentage 5.15 %

Do many physicians perform this service across the United States? Yes

Re: CY 2012 Medicare Physician Fee Schedule Final Rule and CMS
Refinement Panels

Dear Secretary Sebelius:

On November 28, 2011, the Federal Register published the Centers for Medicare and Medicaid Services' (CMS) Calendar Year (CY) 2012 Medicare Physician Fee Schedule Final Rule. On behalf of the American College of Surgeons (ACS), I am writing to express concern regarding the decision making process and lack of transparency on the part of CMS related to the work relative value units (wRVUs) for 2012 reviewed under CMS' refinement panel process. The ACS, with over 78,000 members, is a scientific and educational organization of surgeons that was founded in 1913 to raise the standards of surgical practice and to improve the care of the surgical patient.

The ACS has participated in the efforts of the American Medical Association's Relative Value Scale Update Committee (AMA RUC) for years given the value we place on the AMA RUC process and our assumption that CMS will evaluate the RUC recommendations with fairness, transparency, and accuracy according to a process that has been set out via the Federal rulemaking process. As part of the work that led to the CY 2012 Medicare Physician Fee Schedule Final Rule, the ACS devoted significant resources to conducting AMA RUC surveys for over 100 new or existing codes at the request of CMS. The AMA RUC evaluated wRVU recommendations made by the ACS, based upon those surveys, and came to agreement on final recommended values to be submitted to CMS.

Fifty-seven of the aforementioned codes that the ACS surveyed were sent to the refinement panel. CMS accepted ***only 12 percent*** of those refinement panel recommendations.

For most of the 88 percent of refinement panel recommendations that CMS rejected, CMS lowered the wRVU by reducing the value of the post-operative evaluation and management work performed by surgeons in the hospital by 69 percent. However, if that same work is performed by any other physician other than the surgeon, that same service is paid at 100 percent. We believe that the refinement panel physicians completely rejected this concept as they agreed to a work RVU that did not discount post-surgical work in this fashion. We note that the multispecialty panel included

physicians from primary care, contractor medical directors (CMDs), physicians in related specialties, and general surgeons. At no time did the Agency's Medical Officer in charge of the panel process disagree with the presenters or offer a contrary opinion to the discussion.

Our concerns were piqued when CMS issued the CY 2011 Medicare Physician Fee Schedule Final Rule in which CMS stated that it could change wRVU recommendations of the refinement panel convened by CMS if "policy concerns warrant their modification," without providing additional clarification on what would trigger this ability of CMS to subvert the more transparent process of the refinement panel. However, we continued to participate in the process under the belief that CMS would operate fairly and transparently and that if there were indeed "policy concerns" that CMS had regarding the values of the codes under consideration that those concerns would be stated clearly so all parties could address them during the refinement panel reviews.

CMS has now implemented a policy by which it is creating differential payments for the same work performed by different physicians as a backdoor mechanism for reducing the work RVUs for surgical procedures. They have valued the worth of a surgeon for post-operative evaluation and management work at about 30 percent of a non-surgeon.. Non-surgeons are allowed to provide the same work to the same patient at 100 percent reimbursement. First, we believe that this policy leads to a loss of validity and integrity of the current system. In addition, this policy is prohibited by the Omnibus Budget Reconciliation Act of 1989, which states, "[t]he Secretary may not vary the conversion factor or the number of relative value units for a physicians' service based on whether the physician furnishing the service is a specialist or based on the type of specialty of the physician." (42 U.S.C. §1395w-4(c)(6)).

The ACS has been a vocal proponent of needed reforms in the delivery and payment of health care. We believe that the future of these reforms will be based on driving greater awareness of proven continuous quality improvement programs to achieve ongoing, tangible results for quality improvements. However, in order for these reforms to be effective, they must be built on a system that is consistent with previous Agency decisions, fair, and transparent, and it is our concern that many of the policy decisions made by CMS in the latest Medicare Physician Fee Schedule Final Rule move us away from those goals. The resource based relative value system (RBRVS) requires a resource basis for decisions on the valuation of physician services. We believe that the resource basis for the decision to reduce these values is not evident. We ask that under your authority as Secretary you will seek to have CMS define a more transparent process in the future for decisions that are not aligned with the RUC and refinement panel recommendations in order to help maintain the transparency and fairness of the current system and to restore the values of these services to the level that is supported by the RBRVS process.

Sincerely,
David B. Hoyt, MD, FACS
Executive Director

CPT	Vignette
	and local tenderness. He has had no history of incarceration or bowel obstruction. Physical exam reveals a reducible incisional hernia. He undergoes hernia repair of a defect that is 3 to 10 cm with placement of mesh.
49594	A 60-year-old obese male with a prior laparotomy has developed an incisional hernia in the midline incision. Over the past few months, the defect has become chronically protuberant. He reports increasing pain and discomfort. Physical exam reveals a hernia that is tender and nonreducible by manual manipulation. He undergoes hernia repair of a defect that is 3 to 10 cm with placement of mesh.
4959	A 64-year-old obese male with a prior laparotomy has developed incisional hernias with defects of varying sizes at multiple points. He has symptoms of pain and tenderness at the sites. Physical exam reveals multiple reducible incisional hernias. He undergoes hernia repair of a defect that totals more than 10 cm with placement of mesh.
49596	A 64-year-old obese male with a prior laparotomy has developed incisional hernias with defects of varying sizes at multiple points. The defects have been increasing in size during follow-up with increasing symptoms. Physical exam reveals multiple tender and nonreducible incisional hernias. He undergoes hernia repair of a defect that totals more than 10 cm with placement of mesh.
49613	A 60-year-old obese male has a surgical history of a prior laparotomy with a resultant hernia in the incision. The prior hernia was repaired 5 years ago. He now has a bulge in the midepigastric area for 2 months that disappears when he lies down. Physical exam reveals a small recurrent reducible incisional hernia. He undergoes hernia repair of a defect that is less than 3 cm with placement of mesh.
49614	A 60-year-old obese male has a surgical history of a prior laparotomy with a resultant hernia in the incision. The prior hernia was repaired 5 years ago. He now has a small bulge in the midepigastric area for 2 months that previously disappeared when supine. The bulge is now irreducible and tender. Physical exam reveals a small recurrent incarcerated incisional hernia. He undergoes hernia repair of a defect that is less than 3 cm with placement of mesh.
49615	A 60-year-old obese male presents with of a large bulge in midepigastric area that disappears when he lies down. His surgical history includes a prior laparotomy with resultant hernia that was repaired 5 years ago. Physical exam reveals a large recurrent reducible incisional hernia. He undergoes hernia repair of a defect that is 3 to 10 cm with placement of mesh.
49616	A 60-year-old obese male presents with an irreducible mass in the midline of the abdomen. He has a history of a previous laparotomy with an incisional hernia from that operation that was repaired 5 years ago. Over the course of the last few months, he has developed a recurrence that has been slowly increasing in size. Suddenly, the hernia is not reducible, and the mass is tender with severe, unremitting pain. He undergoes hernia repair of a defect that is 3 to 10 cm with placement of mesh.
49617	A 60-year-old obese male presents with an irreducible mass in the midline of the abdomen. He has a history of a previous laparotomy with an incisional hernia from that operation that was repaired 5 years ago. Over the course of the last few months, he has developed a recurrence that has been slowly increasing in size but is reducible. He undergoes hernia repair of a defect that totals more than 10 cm with placement of mesh.
49618	A 60-year-old obese male presents with an irreducible mass in the midline of the abdomen. He has a history of a previous laparotomy with an incisional hernia from that operation that

CPT	Vignette
	was repaired 5 years ago. Over the course of the last few months, he has developed a recurrence that has been slowly increasing in size and is now tender and irreducible. He undergoes hernia repair of a defect that totals more than 10 cm with placement of mesh.
49621	A 70-year-old male with history of rectal cancer with subsequent abdominoperineal resection and end colostomy presents with a worsening bulge around his stoma when coughing, pain and discomfort around the stoma, and difficulty keeping the stoma appliance in place due to leakage. CT scan revealed small bowel in the hernia sac. He undergoes parastomal hernia repair with placement of mesh.
49622	A 70-year-old male with history of rectal cancer, colon resection and sigmoid colostomy presents with a worsening parastomal hernia associated with pain. The hernia cannot be reduced and a CT scan indicates incarcerated small bowel loops in the parastomal hernia sac. He undergoes parastomal hernia repair with placement of mesh.
15778	A 60-year-old obese male with a large abdominal wall defect as a result of necrotizing infection and extensive debridement of all involved skin, subcutaneous tissue, fascia, and muscle now undergoes delayed closure with implantation of absorbable mesh.

No inputs recommended for this facility only ZZZ code:

+49623	At the time of hernia repair, a 64-year-old obese male who had mesh placed with a prior hernia repair now requires removal of the mesh to allow for an adequate repair of a new hernia. Note: This is an add-on service. Only consider the additional work related to mesh removal.	**ZZZ**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   ACS, SAGES, and ASCRS Advisors reviewed the PE details for the current codes to develop a recommendation for the new codes

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   Current codes used as reference

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   n/a

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

n/a

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

n/a

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

49591-49622

These 14 new anterior abdominal hernia repair codes are replacing 15 anterior abdominal hernia repair codes that have a 90-day global assignment.

When reviewing the details of the hernia codes that will be deleted, the specialties recognize that a vast majority of hernia repairs will be performed in the hospital, with very few cases performed in an ASC.

Of the cases performed in the hospital, the split between inpatient and outpatient will not be completely aligned with size of defect. For example, the second size group (3 to 10 cm) is still a wide variation in terms of postoperative care (overnight or admit). Similarly, very large hernias - over 10 cm - will all be inpatient, but there is variability in the length of stay depending on whether the defect is 12 cm or 25 cm.

The expert panel determined that a 0-day global would allow correct reporting of inpatient and outpatient postoperative work as medically necessary, without the need to create significantly more codes (eg, more sizes and separating incarcerated from strangulated) – similar to the 23 hysterectomy codes that include various sizes of uterus, various different approaches and various different bundled additional work.

As support of a 0-day global and the variability of postop work, the CMS DRG LOS MedPAR data for the 2021 IPPS Final Rule shows that even patients without CC/MCC, the LOS range is 1-5.

Table 7B - Medicare Prospective Payment System Selected Percentile Lengths of Stay; FY 2019 MedPAR Update - March 2020 Grouper V38 MS-DRGs - Correction Notice

MS_DRG	Number of Discharges	Arithmetic Mean LOS	10th pctl	25th pctl	Median	75th pctl	90th pctl
353 HERNIA PROCEDURES **EXCEPT** INGUINAL AND FEMORAL **WITH MCC**	2,743	7.69	**2**	4	**6**	10	**15**
354 HERNIA PROCEDURES **EXCEPT** INGUINAL AND FEMORAL **WITH CC**	7,265	4.52	**1**	2	**4**	6	**8**
355 HERNIA PROCEDURES **EXCEPT** INGUINAL AND FEMORAL **WITHOUT CC/MCC**	5,310	2.84	**1**	2	**2**	4	**5**

Changing the postoperative global payment package from 90-days to 0-days does not change the clinical staff preservice work. We strongly urge the PE Subcommittee to recognize this fact and to establish a pre-time clinical staff package for major surgical procedures that move from a 90-day to 0-day global.

CPT has recently defined "minor" and "major" surgery as:
Surgery—Minor or Major: The classification of surgery into minor or major is based on the common meaning of such terms when used by trained clinicians, similar to the use of the term “risk.” These

terms are not defined by a surgical package classification.

We are recommending the following clinical staff preservice times for codes 49591-49622. These times are consistent will all major surgical procedures and the hernia repair procedures represented by 49591-49622 are all major surgery.

Activity	Clinical Staff Work	TIME
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.	5
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.	20
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.	8
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.	20
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, reviews patient medical status and answers final pre-admission questions.	7

15778

The typical patient undergoing 15778 will have been in the hospital for many days to weeks. After resolution of the necrotizing infection and multiple debridements, mesh may be an option for closure. The pre-service clinical staff work will be limited to activities to coordinate the surgeon's schedule, timing of the procedure, arranging for supplies/equipment with the hospital and confirming approval with the payor. For these reasons, the recommendation for code 15778 is to crosswalk to the times assigned for emergent procedures.

Activity	Clinical staff work	TIME
Complete pre-service diagnostic and referral forms	Staff will ensure all diagnostic testing has been ordered and is available in the office medical record for the surgeon's review and that the procedure has been approved by the payor.	5
Coordinate pre-surgery services (including test results)	Staff will ensure collection and documentation of imaging/lab results, patient specific information and other relevant patient information, including conducting requisite pre-surgery assessment with the anesthesiologist, is available in the office medical record for the surgeon's review.	7
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.	4
Provide pre-service education/obtain consent		0
Complete pre-procedure phone calls and prescription	Staff confirms the surgeon's preoperative medication changes and new medication orders are documented in the facility and office medical records.	4

b. Service period (includes pre, intra and post):

n/a

c. Post-service period:

49591 and 49613

The typical patient for 49591 and 49613 will be discharged on the same day of the procedure. Office clinical staff will assist with necessary post-discharge care via phone or electronically, such as: responding to patient/family questions about home activity restrictions; confirmation of discharge antibiotics if needed, and pain medication; coordination with other physicians and QHPs involved in the care of the patient for transfer of records; and transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge. The total time of 6 minutes is consistent with the total time for same-day outpatient work assigned a discounted 0.5 x 99238 (ie, 6 minutes).

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

n/a

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

n/a

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

n/a

13. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

14. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

Chicago, IL 60611-5585

RE: January 2021 CPT Tab 18 / April 2021 RUC Tab 9

Dear Dr. Synovec:

As the RUC and CPT Advisors for the American College of Surgeons (ACS), Society of American Gastrointestinal Endoscopic Surgeons (SAGES), and American Society of Colon and Rectal Surgeons ASCRS), we request that the CPT Executive Committee consider an editorial change to the guidelines and code descriptor for new add-on code 49623 that was approved at the January 2021 CPT Panel meeting.

During RUC review at the April 2021 meeting, a concern was expressed that the intent of "how much mesh" needed to be removed to report 49623 was not clear. The stakeholder societies indicated that the intent was total or near total removal of the mesh. To clarify the intent of this code, we request two edits as shown on the attached page: (1) add the words "total or near total" to the guidelines; and (2) add the words "total or near total non-infected" to the 49623 code descriptor.

The words "total or near total" have been used by CPT previously (eg, see 43107, 43112, 43286, 43288, 48146, 48153), so this is not a precedent. With respect to adding "non-infected" to the code descriptor, it appears this was an inadvertent error since: (1) the guidelines stipulate removal of non-infected mesh; and (2) a parenthetical below code 49623 instructs what code to report for removal of "infected" mesh.

Thank you for consideration of this request. If you have any questions, please contact Ms. Jan Nagle at JNagle@facs.org.

Sincerely,

Samuel Smith, MD, FACS ACS CPT Advisor	William Harb, MD, FACS ASCRS CPT Advisor	John S. Roth, MD, FACS SAGES CPT Advisor
Charles Mabry, MD, FACS ACS RUC Advisor	Steven Sentovich, MD, FACS ASCRS RUC Advisor	Ketan Sheth, MD, FACS SAGES RUC Advisor

Anterior Abdominal Hernia Repair

Digestive System
Abdomen, Peritoneum, and Omentum
Repair
Hernioplasty, Herniorrhaphy, Herniotomy

Codes 49X01-49X12 describe repair of an anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian) by any approach (ie, open, laparoscopic, robotic). Codes 49X01-49X12 are reported only once, based on the total defect size for one or more anterior abdominal hernia(s), measured as the maximal craniocaudal or transverse distance between the outer margins of all defects repaired. For example, "Swiss cheese" defects (ie, multiple separate defects) would be measured from the superior most aspect of the upper defect to the inferior most aspect of the lowest defect. In addition, the hernia defect size should be measured prior to opening the hernia defect(s) (ie, during repair the fascia will typically retract creating a falsely elevated measurement).

When both reducible and incarcerated/strangulated anterior abdominal hernias are repaired at the same operative session, all hernias are reported as incarcerated/strangulated. For example, one 2 cm reducible initial incisional hernia and one 4 cm incarcerated initial incisional hernias separated by 2 cm would be reported as an initial incarcerated hernia repair with a maximum craniocaudad distance of 8 cm (49X04).

Inguinal, femoral, lumbar, omphalocele and/or parastomal hernia repair may be separately reported when performed at the same operative session as anterior abdominal hernia repair by appending modifier 59 as appropriate.

Codes 49X13, 49X14 describe repair of a parastomal hernia (initial or recurrent) by any approach (ie, open, laparoscopic, robotic). Code 49X13 is reported for repair of a reducible parastomal hernia and code 49X14 is reported for an incarcerated or strangulated parastomal hernia.

Implantation of mesh or other prosthesis, when performed, is included in 49X01-49X14 and may not be separately reported. For total or near total removal of non-infected mesh when performed, use 49623 in conjunction with 49X01-49X14. For removal of infected mesh, see 11004, 11005, 11006, 11008.

Measuring Total Length of Anterior Abdominal Hernia Defect(s)

Hernia measurements are performed either in the transverse or craniocaudal dimension. The total length of the defect(s) corresponds to the maximum width or height of an oval drawn to encircle the outer perimeter of all repaired defects. If the defects are not contiguous and are separated by greater than or equal to 10 cm of intact fascia, total defect size is the sum of each defect measured individually.

Codes 49X01-49X12 are reported only once, based on the total defect size for one or more anterior abdominal hernia(s), measured as the maximal craniocaudal or transverse distance between the outer margins of all defects repaired.

●49X01	Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial including placement of mesh or other prosthesis, when performed total length of defect(s); less than 3 cm, reducible
●49X02	less than 3 cm, incarcerated or strangulated
●49X03	3 cm to 10 cm, reducible
●49X04	3 cm to 10 cm, incarcerated or strangulated

●49X05 greater than 10 cm, reducible

●49X06 greater than 10 cm, incarcerated or strangulated

●49X07 Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed total length of defect(s); less than 3 cm, reducible

●49X08 less than 3 cm, incarcerated or strangulated

●49X09 3 cm to 10 cm, reducible

●49X10 3 cm to 10 cm, incarcerated or strangulated

●49X11 greater than 10 cm, reducible

●49X12 greater than 10 cm, incarcerated or strangulated

●49X13 Repair of parastomal hernia, any approach (ie, open, laparoscopic, robotic), initial or recurrent, includes placement of mesh or other prosthesis, when performed; reducible

●49X14+ incarcerated or strangulated

●49623 Removal of total or near total non-infected mesh or other prosthesis at the time of initial or recurrent anterior abdominal hernia repair or parastomal hernia repair, any approach (ie, open, laparoscopic, robotic) (List separately in addition to code for primary procedure)

(Use 49623 in conjunction with 49X01-49X14)

(For removal of infected mesh, use 11008)

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Harvard Valued – Utilization over 30,000*

April 2021

Orthoptic Training – Tab 10

CPT code 92065 was identified in October 2019 as Harvard Valued utilization over 30,000. The Workgroup requested action plans to examine this service. In January 2020, the RUC recommended that this service be referred to CPT May 2020. This service with an "and/or" connector should be two different codes given their different patient populations and techniques used for the treatment. For that reason, this code should go back to CPT for a descriptor edit as well as creation of separate codes. At the October 2020 RUC meeting, based on pre-facilitation by the RUC, the specialty societies indicated their intent to take this code back to the CPT Editorial Panel again to create two separate codes. The societies requested referral to CPT and plan to submit a new code change application for the February 2021 CPT Editorial Panel meeting. During review and analysis of the survey, it became evident that this service is delivered in two different ways. Because of this, it is necessary to create two codes to delineate when the training is provided directly by the physician/qualified healthcare professional (QHP) and when it is provided by a technician under the supervision of the physician/QHP. Doing so will ensure more accurate valuation of both work and practice expense associated with this service. The RUC supports creation of a companion code and concurs that code 92065 should be referred to the February 2021 CPT Editorial Panel meeting for CPT 2023. In February 2021, the CPT Editorial Panel revised code 92065 and created a new code to describe this service under the supervision of a physician or qualified health care professional.

Compelling Evidence
The RUC reviewed and agreed that there is compelling evidence to support a change in physician work for CPT code 92065.The compelling evidence is based on documentation in the peer-reviewed ophthalmological literature that there have been changes in physician work due to new techniques, knowledge, and technology that have added to the complexity of orthoptic training.

The Convergence Insufficiency Treatment Trial (CITT) was an NEI-sponsored multi-center randomized clinical trial which compared traditional pencil push-up therapy with three additional treatments for symptomatic convergence insufficiency: (1) home-based computer vergence and accommodation exercises, (2) office-based, supervised vergence and accommodative therapy plus computer training with home reinforcement, and (3) office-based placebo therapy with home reinforcement. With results first published in 2008, the CITT demonstrated that office-based vergence/accommodative therapy with home reinforcement was statistically significantly more effective than placebo and each of the other treatment regimens studied in improving both the symptoms and clinical signs associated with symptomatic convergence insufficiency. This transformed orthoptic training methodology. Today's office-based training employs new training exercises and computer equipment/software that differ from those manual and mechanical devices in use in 1992 when the procedure was first valued in the Harvard study. The training exercises and computer equipment/software also differ from those in use in 2002, prior to publication of the CITT, when the PE was last updated to include computer and VDT software.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Current therapy for non-strabismic accommodative and vergence disorders including convergence insufficiency involves highly specific, sequential, sensory-motor-perceptual stimulation paradigms and regimens. It incorporates purposeful, controlled, and scientifically based manipulations of target blur, disparity, and proximity, with the aim of normalizing the accommodative system, the vergence system, and their mutual interactions. In addition, other sources of sensory information, such as kinesthesia and audition correlated to the accommodative and vergence states (e.g., position, innervation, effort, etc.) can provide cue reinforcement. It involves oculomotor integration with the head (i.e., eye-head coordination), neck (i.e., proprioceptive information), limbs, and overall body, with information from the other sensory modalities, producing temporally efficient, coordinated behavior.

The RUC agreed that compelling evidence has been met due to a change in physician work because of new techniques, knowledge, and technology. However, it was noted that compelling evidence was not necessarily required considering the service is going to be performed only 45 percent of the time at the frequency it was done before, while 55 percent of the time it is going to be a PE-only service, resulting in a total reduction in work RVUs. That is, even though the value is increasing from the current work RVU of 0.37 to 0.71, the total expenditure will decrease. The estimate of the 45 percent and 55 percent split was considered tenuous, however, and the RUC proceeded with approval of compelling evidence.

92065 ***Orthoptic training; performed by a physician or other qualified health care professional***
CPT code 92065 involves the physician/QHP personally administering neurosensory and neuromuscular training activities to develop, rehabilitate and enhance visual skills and processing. The use of lenses, prisms, filters, specialized instruments, and computer programs is an integral part of the therapy protocol. The typical patient has convergence insufficiency resulting in discomfort, strain, blur, headache, diplopia and difficulty with reading and other near tasks. Exercises are taught to the patient by the physician/QHP, including physician review of the patient's understanding of the plan and ability to perform the exercises correctly.

The RUC reviewed the survey results from 34 ophthalmologists and optometrists and determined that the survey 25th percentile work RVU of 0.71 appropriately accounts for the physician work involved in this service. The RUC recommends 2 minutes pre-service time, 30 minutes intra-service time and 4 minutes post-service time. CPT code 92065 is not a time-based code; it is a training procedure that is reported only once a day, unlike therapy sessions that can be reported several times in 30-minute increments on a single day. Optometrists are the dominant specialty, with 97.4 percent of Medicare claims in 2019. They were also the dominant survey responders, with 73.5 percent of the responses. The recommendations are based on the entire survey dataset as a better reflection of the overall times and values for this code, including a median intra-service time of 30 minutes.

The RUC noted that the procedure is performed on the same day as an office or eye Evaluation and Management (E/M) visit 39 percent of the time and with a sensorimotor exam (CPT code 92060) 15 percent of the time, which includes pre- and post-service work like that of an office visit. Therefore, the survey pre- and post-times were reduced from 10 to 2 minutes to not duplicate any work provided with the E/M service. During the office visit or sensorimotor exam, the physician develops a treatment plan consisting of a sequence of neurosensory and neuromuscular activities for the patient. The survey post-time was reduced from 9 to 4 minutes. This time is required to record patient performance into the medical record, develop a treatment plan for the next training session, enter that plan into the medical record, and generate a letter to the referring physician.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To justify a work RVU of 0.71, the RUC compared the survey code to the key reference service codes 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter* (work RVU = 0.93, 2 minutes pre-service time, 15 minutes intra-service time and 3 minutes immediate post-service time) and 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.* (work RVU = 0.70, 2 minutes pre-service time, 11 minutes intra-service time and 3 minutes immediate post-service time) and noted that the intra-service times do not match and the survey code has both greater intra-service and total time than the reference services. The RUC also noted, however, that the survey code is closely bracketed by the work values of MPC code 99212 and MPC code 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 2 minutes pre-service time, 20 minutes intra-service time and 4 minutes immediate post-service time).

For additional support, the RUC compared the survey code to HCPCS code G0108 *Diabetes outpatient self-management training services, individual, per 30 minutes* (work RVU = 0.90, 2 minutes pre-service time, 30 minutes intra-service time and 5 minutes immediate post-service time) and noted the G-code is also a training code with identical intra-service time, nearly identical total time, yet a higher work value. The RUC noted that the recommended value is less than the median of the 37 XXX global codes in the RUC database with work values assigned within the last 10 years and 30 minute intra-service time (range 0.55 to 4.00, median 1.48 work RVUs). The RUC concluded that CPT code 92065 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.71 for CPT code 92065.**

92066 *Orthoptic training; under supervision of a physician or other qualified health care professional*
The new CPT code 92066 specifies training under supervision of a physician or other qualified health professional. The code has practice expense (PE) inputs only and was not surveyed for physician work. This PE-only code requires identical work and intra-service time as code 92065 but with a different health care professional, typically the technician, L038A *COMT/COT/RN/CST*, performing the service; thus, there are 30 minutes allocated to CA021 *Perform procedure/service---NOT directly related to physician work time.* Only one session per day is reported. The anticipated course of treatment is 1-2 sessions per week over a three-month period based upon the Convergence Insufficiency Treatment Trial (CITT).

The PE Subcommittee thoroughly reviewed the practice expense recommendations for the companion codes and approved the inputs with few modifications. For the medical supply inputs, the PE Subcommittee determined that they are not redundant and are disposable. There was one adjustment to supply item SK057 *Paper, laser* to accurately reflect the type of paper that is utilized for the patient to be working on cheiroscope and other visual motor skills. The updates to equipment reflect new changes in management of convergence insufficiency. The equipment location has changed from EL006 *lane, screening (oph)* to a room with table and 4 chairs to reflect the typical practice more accurately. The time applied for EF043 *Set of 8 chairs* was reduced by half to reflect the use of 4 chairs during the activities rather than the full 8 chairs. The PE Subcommittee recommends two new equipment inputs for this service, Pro Vision Therapy Starter System Model VTSSP and Sanet Vision Integrator display/software. The starter system contains several devices to stimulate fusion/convergence. Various components of this system are used as part of training for these vision activities. It is entirely reusable and thus considered as an equipment input for valuation. EQ232 *stereo trainer*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(wheatstone) was removed to avoid duplication with the contents of the starter system. The Sanet Vision Integrator display/software is used as part of visual activities to address near acuity and depth perception issues. This replaces ED009 *computer and VDT and software* which was a more generic equipment previously included when the code was initially valued. Two paid invoices are included with this recommendation for these items. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee for CPT codes 92066 and 92065.**

New Technology
CPT codes 92066 and 92065 will be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:92065 Tracking Number D1 Original Specialty Recommended RVU: **0.71**
Presented Recommended RVU: **0.71**
Global Period: XXX Current Work RVU: **0.37** RUC Recommended RVU: **0.71**

CPT Descriptor: Orthoptic training; performed by a physician or other qualified health care professional (Do not report 92065 in conjunction with 92066, 0687T, 0688T, when performed on the same day)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 25-year-old female is referred for orthoptic training by a physician or other qualified health care professional to address convergence insufficiency issues after a concussion.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Details of the treatment plan are discussed with the patient. The patient is brought into the treatment room.

Description of Intra-Service Work: The patient is positioned before specialized instruments which allow the systematic application of lenses, prisms and angular disparity designed to address the ocular motor defect and to treat the dysfunction. Prescribed treatment regimens include a series of interventions during the treatment period including convergence exercises using an accommodative target of letters, numbers, or pictures; vergence exercises with applied base in or base out prism; jump to near convergence training on a Brock string; stereogram convergence exercises; and 3-D vergence demand exercises applied with an interactive video display. The patient demonstrates understanding to the physician or other QHP by proper performance of each of the prescribed exercises.

Description of Post-Service Work: Patient performance on each instrument and activity addressed during the session is evaluated and entered into the medical record. A treatment plan for the next orthoptic training session is developed and entered into the medical record. A report to the referring provider is generated.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	16%	16%	42%	26%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	26%	21%	53%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	26%	63%
Physical effort required	5%	5%	89%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	32%	37%	32%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	50%	13%	38%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	50%	25%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	50%	38%
Physical effort required	0%	38%	63%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	25%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92065, *Orthoptic training performed by a physician or other qualified health care professional (do not report 92065 in conjunction with 92066, 0687T, 0688T when performed on the same day)* is an XXX code that was flagged by a screen for Harvard-valued procedures with utilization over 30,000. The code was taken to the CPT Editorial Panel to remove "and/or pleoptic" and "with continuing medical direction and evaluation" from the descriptor in order to update the service to current practice. It was then surveyed for the October 2020 meeting. Survey results indicated that respondents were valuing two separate services: training by the physician and training by a technician under supervision of the physician.

The RUC valuation was deferred so that the code could be taken to CPT to create separate codes for each service. CPT 92065 now specifies that training is performed by a physician or other qualified health care professional. A new CPT code, 92066, specifies training under supervision of a physician or other qualified health professional. The new code has PE only and was not surveyed for physician work. Survey results and work value recommendations are presented for CPT 92065.

The procedure is performed on the same day as an office visit 33% of the time and with a sensorimotor exam (CPT 92060) 18% of the time. We considered the sensorimotor exam similar enough to an office visit to treat the surveyed code as typically performed with a same-day office visit, and reduced survey pre- and post-times to eliminate duplicative work. During the office visit or sensorimotor exam, the physician develops a treatment plan consisting of a sequence of neurosensory and neuromuscular activities for the patient.

The intraservice work of CPT 92065 consists of the provider personally administering neurosensory and neuromuscular training activities to develop, rehabilitate and enhance visual skills and processing. The use of lenses, prisms, filters, specialized instruments, and computer programs is an integral part of the therapy protocol. The goals of orthoptic treatment are to achieve desired visual outcomes, alleviate signs and symptoms, meet the patient's needs and improve the patient's quality of life. The typical patient has convergence insufficiency resulting in discomfort, strain, blur, headache, diplopia and difficulty with reading and other near tasks. Exercises are taught to the patient by the provider, including physician review of the patient's understanding of the plan and ability to perform the exercises correctly.

COMPELLING EVIDENCE

There is compelling evidence to support an increase in the work value of CPT 92065, which also is supported by the survey results. The compelling evidence is based documentation in the peer-reviewed ophthalmological literature that there have been changes in physician work due to new techniques, knowledge, and technology that have added to the complexity of the training.

Change in Physician Work Due to New Techniques, Knowledge, and Technology

The Convergence Insufficiency Treatment Trial (CITT) was an NEI-sponsored multi-center randomized clinical trial which compared traditional pencil push-up therapy with three additional treatments for symptomatic convergence insufficiency: (1) home-based computer vergence and accommodation exercises, (2) office-based, supervised vergence and accommodative therapy plus computer training with home reinforcement, and (3) office-based placebo therapy with home reinforcement. With results first published in 2008, the CITT demonstrated that office-based vergence/accommodative therapy with home reinforcement was statistically significantly more effective than placebo and each of the other treatment regimens studied in improving both the symptoms and clinical signs associated with symptomatic convergence insufficiency.[1-7] This transformed orthoptic training methodology. Today's office-based training employs new training exercises and computer equipment/software that differ from those manual and mechanical devices in use in 1992 when the procedure was first valued using Hsaio's methodology. They also differ from those in use in 2002, prior to publication of the CITT, when the PE was last updated to include computer and VDT software.

Current therapy for nonstrabismic accommodative and vergence disorders including convergence insufficiency involves highly specific, sequential, sensory-motor-perceptual stimulation paradigms and regimens. It incorporates purposeful, controlled, and scientifically based manipulations of target blur, disparity, and proximity, with the aim of normalizing the accommodative system, the vergence system, and their mutual interactions. In addition, other sources of sensory information, such as kinesthesia and audition correlated to the accommodative and vergence states (e.g., position, innervation, effort, etc.) can provide cue reinforcement. It involves oculomotor integration with the head (i.e., eye-head coordination), neck (i.e., proprioceptive information), limbs, and overall body, with information from the other sensory modalities, producing temporally efficient, coordinated behavior.

SURVEY RESULTS

A survey was sent to a random selection of American Academy of Ophthalmology (AAO) and the American Optometric Association (AOA). There were 34 responses, 91% of whom found the vignette to be typical. The median WRVU was 0.93, and the 25th percentile was 0.71. The current value of the code is 0.37 WRVU. The median IST was 30 minutes, with 10 minutes of pre-service evaluation time and 9 minutes of immediate post-service time.

The survey data were analyzed by subgroup according to specialty (ophthalmology vs. optometry), whether the respondent performed the service or not, and excluding the three outliers who responded that they performed the service over 1,000 times annually. The subgroup data are listed in separate rows of the revised Summary Spreadsheet.

There was a significant difference in the 25th percentile WRVU between the OD and MD subgroups: 0.90 for ODs and 0.55 for MDs. The combined data 25th percentile WRVU is 0.71.

The median IST was also different between the OD and MD subgroups: 40 minutes for ODs and 10 minutes for MDs. The overall median IST is 30 minutes.

The panel considered the possibility of reporting the service with an IST as short as 10 minutes. CPT 92065 is not a time-based code. It is a training procedure that is reported only once a day, unlike therapy sessions that can be reported several times in 30-minute increments on a single day.

Optometrists are the dominant specialty, with 97.4% of claims in 2019. They were also the dominant survey responders, with 73.5% of the responses. The typical optometric training session is 40 minutes long. Some sessions may be shorter if the patient is too fatigued to continue, and some may be longer, but the 25th to 75th percentile range of IST was 30 to 45 minutes. The IST for 75% of the OD cases is 30 minutes.

Ophthalmologists accounted for 2.2% of claims (723) in 2019, and for only 9 survey responses. Although the median IST for MDs was 10 minutes, only about 350 claims would be expected from MDs with an IST of 10 minutes or less.

This might argue for use of the OD data exclusively. The panel chose to use the combined data as a better reflection of the overall times and values for this code, and to avoid over-valuing it.

Deleting the data from zero performers resulted in no significant difference in median IST or 25th percentile WRVU between performers and the full data set. The IST is 30 min in both groups. The 25th percentile WRVU is 0.71 for the entire data set and 0.69 for those who reported performing the procedure.

Eliminating the 3 hyperperformers did not change the analysis significantly.

We therefore based our recommendations on the entire data set. This includes a median IST of 30 minutes which is appropriate for training administered by the provider rather than delegated to a technician, a median work value of 0.93, and a 25th percentile work value of 0.71.

The top key reference service, chosen by 56% of respondents, was CPT 99202, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter,* (RUC 2019), with a WRVU of 0.93, an IST of 15 minutes, and a total time of 20 minutes. The second reference service, chosen by 24% of respondents, was CPT 99212, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.* (RUC 2019), with a WRVU of 0.70, an IST of 11 minutes, and total time of 16 minutes. The majority of respondents ranked the surveyed code higher or much higher than the top key reference service on overall intensity and complexity and all of the submeasures. Of the 24% who chose the second key reference service, half ranked the surveyed code somewhat lower than the second key reference service on overall intensity and complexity and psychological stress, and identical or higher on the other submeasures.

We treated the service as typically provided with a same-day office visit because it is performed 33% of the time with an office visit and 18% of the time with a sensorimotor exam (CPT 92060), which includes pre- and post-service work similar to that of an office visit. We therefore reduced the pre-time from the survey value of 10 minutes to 2 minutes. This time is required to review the plan with the patient and bring them to the treatment room. We reduced the survey post-time from 9 minutes to 4 minutes. This time is required to record patient performance into the medical record, develop a treatment plan for the next training session, enter that plan into the medical record, and generate a letter to the referring provider. The total time for the procedure is 36 minutes, with a 30-minute IST.

We recommend a work value equal to the survey's 25th percentile value: 0.71 WRVU. This is less than the median of the 37 XXX CPT codes in the RUC database with work values assigned within the last 10 years and 30-minute ISTs (median 1.48 WRVU, range 0.55 to 4.00 WRVU).

Although we are not recommending a crosswalk to this code, the recommended value is supported by HCPCS code G0108, *Diabetes outpatient self-management training services, individual, per 30 minutes* (RUC 2017). This is also a training code

with an identical 30-minute IST, an almost-identical 37-minute total time, and a higher work value of 0.90 WRVU. There is additional support from CPT 88365, *In situ hybridization (eg, FISH), per specimen; initial single probe stain procedure* (RUC 2014) and CPT 88368, *Morphometric analysis, in situ hybridization (quantitative or semi-quantitative), manual, per specimen; initial single probe stain procedure* (RUC 2014), both of which have 30-minute ISTs and higher valuations at 0.88 WRVU.

We recommend the survey 25th percentile work value of 0.71 WRVU for CPT 92065 with times of 2/30/4 and a total time of 36 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Typically billed with an office visit or sensorimotor measurements.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global Period	Work RVU	Pre	Intra	Post	% Billed Together
4.	92060	XXX	0.69	5	30	5	18.3%
5.	92012	XXX	0.92	5	15	5	12.8%
6.	99213	XXX	0.92	5	15	5	12.4%
7.	97530	XXX	0.44	2	15	2	10.7%
8.	97110	XXX	0.45	2	15	2	8.0%
9.							62.2%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92065

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty Optometry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 60000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate.

Specialty Ophthalmology Frequency 2000 Percentage 3.33 %

Specialty Optometry Frequency 58000 Percentage 96.66 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate.

Specialty Ophthalmology Frequency 1000 Percentage 5.00 %

Specialty Optometry Frequency 19000 Percentage 95.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
92066	Orthoptic training; under supervision of a physician or other qualified health care professional	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92066	A 25-year old female is referred for orthoptic training to address convergence insufficiency issues after concussion

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other healthcare providers who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The healthcare providers on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   This code is new and 92065 which is the same procedure when performed by the physician is used as a reference.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   New Code; We anticipate it being used similar to 92065. The answers provided for 92065 are listed below:

   No.
   No.
   However, because the procedure is performed on the same day as an office visit 33% of the time, and is also reported with a sensorimotor exam (CPT 92060) 18% of the time. We considered the sensorimotor exam similar enough to an office visit to treat the surveyed code as typically performed with a same-day office visit.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

New Code: We anticipate findings similar to 92065 whose findings are below:

Optometry (97%)
Non-facility Performance (100%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A

   b. Service period (includes pre, intra and post):

During the service period multiple activities (visual exercises) are taught to the patient and these activities are repeated to ensure proper performance, and adjust/enhance difficulties during the testing period. The person conducting all of this work varies by code 92065 (physician) and 92066 (technician).

Granular detail is provided below. Standard input times used for pre, intra, and post activities. Survey times used for intra-service activities.

Pre: (Standard Inputs)
Line CA011 – The technician provides education and obtains consent for the procedure.
Line CA013 – The technician prepares the room, equipment, and supplies. During this time, typically the first activity is setup for the patient. Since anywhere between 6-8 activities (visual exercises) are taught they are setup in succession during the intra-service period for the remaining activities.
Line CA016 – The patient is positioned and height of the table is adjusted to begin the first activity.

Intra: (Survey Time of Physician Time Input)
Line CA021 – The technician performs the following activities. The patient is positioned before specialized instruments which allow the systematic application of lenses, prisms and angular disparity designed to address the ocular motor defect and to treat the dysfunction. Prescribed treatment regimens include a series of interventions during the treatment period including convergence exercises using an accommodative target of letters, numbers, or pictures; vergence exercises with applied base in or base out prism; jump to near

convergence training on a Brock string; stereogram convergence exercises; and 3D vergence demand exercises applied with an interactive video display. The patient demonstrates understanding to the technician by proper performance of each of the prescribed exercises.

Post: (Standard Inputs)
Line CA024 – The technician will clean the room and pack up the equipment utilized.
Line CA031 – The technician will review with the healthcare provider the patient's performance on the activities, before the provider comes up with a finalize plan.
Line CA035 - Based on the providers plan, "homework" packets of the exercises needed to be performed are obtained and given to the patient.

c. Post-service period:

Line CA038 – Removed

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

The patient is positioned before specialized instruments which allow the systematic application of lenses, prisms and angular disparity designed to address the ocular motor defect and to treat the dysfunction. Prescribed treatment regimens include a series of interventions during the treatment period including convergence exercises using an accommodative target of letters, numbers, or pictures; vergence exercises with applied base in or base out prism; jump to near convergence training on a Brock string; stereogram convergence exercises; and 3D vergence demand exercises applied with an interactive video display. The patient demonstrates understanding to the technician by proper performance of each of the prescribed exercises.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

No.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

Supplies:
Line SG043 Dressing, eye pad – still used and kept in supply list
Line SK057 Paper, laser - still used for patient to be working on cheiroscope and other visual motor skills and kept in supply list
Line SJ053 Swab-pad, alcohol – Was omitted in error, but is utilized to sterilize equipment prior to patient use

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

Invoices will be provided for new supplies with standard/default formulas.

Pro Vision Therapy Starter System Model VTSSP – contains a number of devices to stimulate fusion/convergence. Various components of this system are used as part of training for these vision activities. Invoice attached. This is entirely reusable and thus considered as an equipment for valuation.

Sanet Vision Integrator display/software This is used as part of visual activities to address near acuity and depth perception issues. This *replaces* the computer VDT and software which was a more generic equipment previously included when the code was initially valued.

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

5 years

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Default formulas were used for all equipment, as there is no highly technical equipment. Time included for all supplies reflects time room occupied for the procedure. For the chairs listed as supplies we listed half the time the room is occupied in order to price the use of 4 (rather than 8 chairs) in the room.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Line 122 NEW Sanet Vision Integrator display/software – This is used as part of visual activities to address near acuity and depth perception issues. This *replaces* the computer VDT and software which was a more generic equipment previously included when the code was initially valued.
Line 123 NEW Pro Vision Therapy Starter System Model VTSSP – This system includes various devices to test and stimulate fusion and is integral for many of the visual activities performed
Line EQ165 Lens set, trial – Trial lenses allow for the increasing/decreasing the difficulties of the activities being performed
Line EQ232 Stereo Trainer – Removed
Line EQ236 Telebinocular, ophthalmic – Used as part of the visual activities. Time included reflects time room occupied for the procedure.
Line EQ049 Anomaloscope, diagnositc– *Removed* – No longer the typically used.
Line ED009 Computer and VDT and software – **Removed and replaced with Sanet Vision Integrator which is a more specific type of device utilized** as part of the visual activities. Time included reflects time room occupied for the procedure.
Line EL006 lane, screening (oph) – *Removed* – No longer typically performed in this room.
Line EF030 table, power – *Added* – A room with a power table and 4 chairs was added in place of an exam room as this is more typical
Line EF043 chairs (set of 8) – The time applied for the chairs was cut in half, to reflect the use of 4 chairs during the activities rather than the full 8 chairs.

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

The updates to equipment reflect new changes in management of convergence insufficiency. Moreover, the equipment location (exam room to a room with table and 4 chairs) reflects the current typical practice.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

For PLI information the best crosswalk is 92065 as the procedure is identical but performed by a technician. However since this code is being surveyed at this meeting alternative codes are below.

92083 would be an alternative if 92065 cannot be utilized.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to

the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

The changes in **RED** were made when submitting the amended spreadsheet. The changes in **GREEN** were the additional changes made AFTER the PE Meeting. The same color coding is used in PE spreadsheet.

1. Changed the type of paper utilized from SK059 to SK057. This paper more accurately reflects the type of paper used.
2. Changed Computer VDT and software (the more generic equipment input) to zero and instead put in a specific device, the Sanet Vision Integrator display/software as the device used in the plurality of cases. An invoice has been provided for this system.

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

NONFACILITY DIRECT PE INPUTS **CPT CODE(S):_92065_**

SPECIALTY SOCIETY(IES):_AAO, AOA__

PRESENTER(S):_ David Glasser, Ankoor Shah, Charlie Fitzpatrick, Harvey Richman_

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
92065	Orthoptic training; performed by a physician or other qualified health care professional	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92065	A 25-year old female is referred for orthoptic training to address convergence insufficiency issues after concussion

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other healthcare providers who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The healthcare providers on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The current code was used as a reference.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   No.
   No.
   However, because the procedure is performed on the same day as an office visit 33% of the time, and is also reported with a sensorimotor exam (CPT 92060) 18% of the time. We considered the sensorimotor exam similar enough to an office visit to treat the surveyed code as typically performed with a same-day office visit.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Optometry (97%)
   Non-facility Performance (100%)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A

   b. Service period (includes pre, intra and post):

During the service period multiple activities (visual exercises) are taught to the patient and these activities are repeated to ensure proper performance, and adjust/enhance difficulties during the testing period. The person conducting all of this work varies by code 92065 (physician) and 92066 (technician). Granular detail is provided below. Standard input times used for pre, intra, and post activities. Survey times used for intra-service activities. **Pre:** (Standard Inputs) Line CA011 – The technician provides education and obtains consent for the procedure. Line CA013 – The technician prepares the room, equipment, and supplies. During this time, typically the first activity is setup for the patient. Since anywhere between 6-8 activities (visual exercises) are taught they are setup in succession during the intra-service period for the remaining activities. Line CA016 – The patient is positioned and height of the table is adjusted to begin the first activity. **Intra:** (Survey Time of Physician Time Input) Line CA020 – Removed **Post:** (Standard Inputs) Line CA024 – The technician will clean the room and pack up the equipment utilized. Line CA031 – Removed Line CA035 - Based on the providers plan, "homework" packets of the exercises needed to be performed are obtained and given to the patient.

   c. Post-service period:

Line CA038 – Removed and moved to Line CA035

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

    The physician alone is performing the intraservice work.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    Does not apply.

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

    N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

    N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

    No.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

    Supplies:
    Line SG043 Dressing, eye pad – still used and kept in supply list
    Line SK057 Paper, laser - still used for patient to be working on cheiroscope and other visual motor skills and kept in supply list
    Line SJ053 Swab-pad, alcohol – Was omitted in error, but is utilized to sterilize equipment prior to patient use

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

Invoices will be provided for new supplies with standard/default formulas.

Pro Vision Therapy Starter System Model VTSSP – contains a number of devices to stimulate fusion/convergence. Various components of this system are used as part of training for these vision activities. Invoice attached. This is entirely reusable and thus considered as an equipment for valuation.

Sanet Vision Integrator display/software This is used as part of visual activities to address near acuity and depth perception issues. This *replaces* the computer VDT and software which was a more generic equipment previously included when the code was initially valued.

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

5 years

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Default formulas were used for all equipment, as there is no highly technical equipment. Time included for all supplies reflects time room occupied for the procedure. For the chairs listed as supplies we listed half the time the room is occupied in order to price the use of 4 (rather than 8 chairs) in the room.

Line 122 NEW Sanet Vision Integrator display/software – This is used as part of visual activities to address near acuity and depth perception issues. This *replaces* the computer VDT and software which was a more generic equipment previously included when the code was initially valued.
Line 123 NEW Pro Vision Therapy Starter System Model VTSSP – This system includes various devices to test and stimulate fusion and is integral for many of the visual activities performed
Line EQ165 Lens set, trial – Trial lenses allow for the increasing/decreasing the difficulties of the activities being performed
Line EQ232 Stereo Trainer – Removed
Line EQ236 Telebinocular, ophthalmic – Used as part of the visual activities. Time included reflects time room occupied for the procedure.
Line EQ049 Anomaloscope, diagnositc– *Removed* – No longer the typically used.
Line ED009 Computer and VDT and software – **Removed and replaced with Sanet Vision Integrator which is more specific type of device utilized** as part of the visual activities. Time included reflects time room occupied for the procedure.
Line EL006 lane, screening (oph) – *Removed* – No longer typically performed in this room.
Line EF030 table, power – *Added* – A room with a power table and 4 chairs was added in place of an exam room as this is more typical
Line EF043 chairs (set of 8) – The time applied for the chairs was cut in half, to reflect the use of 4 chairs during the activities rather than the full 8 chairs.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

The updates to equipment reflect new changes in management of convergence insufficiency. Moreover, the equipment location (exam room to a room with table and 4 chairs) reflects the current typical practice.
30 minutes of intraservice time while the physician is actually performing the training activities are included in the determining total equipment time. Ie we used the standard formula times to calculate equipment time, and then added the 30 minutes that the physician is using the equipment to determine the complete amount of time.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

The changes in **RED** were made when submitting the amended spreadsheet. The changes in **GREEN** were the additional changes made AFTER the PE Meeting. The same color coding is used in PE spreadsheet.

1. Changed the type of paper utilized from SK059 to SK057. This paper more accurately reflects the type of paper used.
2. Changed Computer VDT and software (the more generic equipment input) to zero and instead put in a specific device, the Sanet Vision Integrator display/software as the device used in the plurality of cases. An invoice has been provided for this system.

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2021

Caregiver Behavior Management Training – Tab 11

In February 2021, the CPT Editorial Panel created two new group caregiver behavior management training codes. CPT codes 96202 and 96203 are used to report the total duration of face-to-face time spent by the physician or other qualified healthcare professional (QHP) providing the group training session.

96202 ***Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes***

The RUC reviewed the survey results from 75 psychologists, child and adolescent psychiatrists, and dieticians with the understanding that the survey respondents were asked to evaluate the group service in total and not based on an individual group participant. Also, a custom survey question was added that asked respondents to provide the average number of patients that were represented at a typical caregiver behavior management group session. The question yielded a median response of six patients. The intent was to obtain per session data on the service, that could then be divided by the average number of patients to yield the per patient data. This methodology for surveying time-based group codes has recent precedent when it was relied on for group health behavior intervention codes 96164-96165; CMS accepted the HCPAC's recommendation in CY2020 rulemaking.

The purpose of this service is to train caregivers how to structure the environment to actively provide for and reinforce desired behaviors, reduce the negative impacts of the patient's diagnosis on patient's daily life, develop highly structured technical skills to better manage specific behaviors and support the compliance with the patient's treatment and clinical plan of care. While this service is performed without the patient present, the goals and outcomes are solely for the therapeutic benefit of the identified patient. This service is a skills training process; it is not a support group or a lecture. While the interventions are evidence-based, they are not scripted. The physician or other qualified healthcare professional must rely on their expertise and ability to integrate multiple factors, while effectively capitalizing upon the group dynamics to personalize the intervention and optimize treatment outcomes.

The specialty societies noted that although the median survey respondent has not performed this service in the past 12 months, likely due to the ongoing COVID-19 public health emergency, 2/3rds of the survey respondents have performed this service in the past 5 years and the other survey respondents were instructed to only complete the survey if they were sufficiently familiar with the service.

The RUC agreed that the median per session work value of 2.60 RVUs converted to the per patient work value of 0.43 RVUs by dividing by the typical six patients would appropriately value this service. The RUC recommends 2 minutes pre-service time, 10 minutes intra-service time, 3 minutes post-service time, for 15 minutes total time for survey code 96202. These physician/QHP times were a result of converting the median group survey times of 10 minutes pre-service, 60 minutes intra-service and 20 minutes post-service and converting them to per patient times and rounding to the nearest whole number. The RUC compared the survey code to 2nd key reference code 90847 *Family psychotherapy (conjoint*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

psychotherapy) (with patient present), 50 minutes (work RVU = 2.50, intra-service time of 50 minutes, total time of 76 minutes) and noted that for a typical group size, the survey code would involve 10 more minutes of intra-service time,14 more minutes of total time. In addition, 76 percent of the respondents that selected the 2nd key reference code indicated the survey code is more intense and complex to perform. For additional reference, the RUC compared the survey code to CPT code 90839 *Psychotherapy for crisis; first 60 minutes* (work RVU = 3.13, intra-service time of 60 minutes, total time of 90 minutes) and noted that for a typical group size both services would have identical intra-service and total times, though the reference code is somewhat less intense to perform for the typical group size of 6 patients represented.

The RUC also compared the survey code to CMS code G0109 *Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes* (work RVU = 0.25, intra-service time of 6 minutes and total time of 10 minutes), another time-based group service, which was valued based on a typical group size of 5 patients and is reported per 30 minutes instead of for the first hour of the group session (as is the case for the survey code). If G0109 was performed for 5 patients for a one hour session, the total aggregate work RVU would be 2.50; however, if the group size for G0109 was 6 patients for a one hour session, as is the case for the typical survey code, the total aggregate work RVU would be 3.00 for the reference. Group caregiver behavior management training is a somewhat more intense service to perform relative to diabetes management group training. Comparison to this reference code confirms that a value of 0.43 per patient for the survey code would not overvalue the typical physician or other QHP work. In addition, the RUC noted that unlike the reference code, which is reported in multiple units for the same patient, the survey code is structured as a base code; therefore, all the pre-service and post-service work for the entire session are included only in the base code. Also, although the median number of patients represented in a group is six, it is not uncommon for two parents/caregivers to attend a group session for the same patient for caregiver behavior management training. All else held equal, larger group sizes are somewhat more intense to lead. **The RUC recommends a work RVU of 0.43 for CPT code 96202.** The RUC noted that this recommendation is based on a median group size of six.

96203 ***Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes (List separately in addition to code for primary service)***
The RUC reviewed the survey results from 75 psychologists, child and adolescent psychiatrists, and dieticians with the understanding that the survey respondents were asked to evaluate the group service in total and not based on an individual group participant. Also, a custom survey question was added that asked respondents to provide the average number of patients that were represented at a typical caregiver behavior management group session. The question yielded a median response of six patients. The intent was to obtain per session data on the service, that could then be divided by the average number of patients to yield the per patient data. This methodology for surveying time-based group codes has recent precedent when it was relied on for group health behavior intervention codes 96164-96165; CMS accepted the HCPAC's recommendation in CY2020 rulemaking.

The specialty societies noted that although the median survey respondent has not performed this service in the past 12 months, likely due to the ongoing COVID-19 public health emergency, 2/3rds of the survey respondents have performed this service in the past 5 years and the other survey respondents were instructed to only complete the survey if they were at least sufficiently familiar with the service.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC agreed that the median per session work value of 0.73 RVUs converted to the per patient work value of 0.12 work RVUs by dividing by the typical six patients would appropriately value this service. The RUC recommends 3 minutes of intra-service and total time for this group-based add-on service. These physician/QHP times were a result of converting the median group survey times of 15 minutes of intra-service time and converting it to per patient times and rounding to the nearest whole number. To justify a work value of 0.12 per patient (or 0.73 for the typical group), the RUC compared the survey code to CPT code 90840 *Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)* (work RVU = 1.50, intra-service time of 30 minutes) and noted that, relative to a typical group session for the survey code reported for the same length of 30 minutes, the reference code is assigned a higher work value of 1.50 versus 1.46 for two units of the add-on survey code for 6 patients. The RUC also compared the survey code to another time-based group code 96165 *Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)* (work RVU = 0.10, intra-service time of 10 minutes). CPT code 96165 was valued assuming a larger group size of 7 patients. Using both services assumed typical group sizes, the survey code would represent a total aggregate work value of 0.73 compared to 0.70 for the reference code. As the survey code is slightly more intense to perform, in part because the actual number of people in the room is often higher due to the two parents commonly representing a single patient for the survey code, assigning a slightly higher value to the survey code is warranted. **The RUC recommends a work RVU of 0.12 for CPT code 96203.** The RUC noted that this recommendation is based on a median group size of 6.

Relativity Assessment Workgroup Flag
The RUC recommends that the Relativity Assessment Workgroup review these services in three years (October 2024) to review whether assumption of a median group size of 6 patients remains appropriate.

Practice Expense
The Practice Expense (PE) Subcommittee agreed to recommend a new direct supply input for a binder with dividers and noted that it is typical to provide the parent(s)/caregiver(s) with a 3-ring binder at the first session to store materials throughout the duration of the 8 sessions and there is no existing supply item that appropriately captures this resource. The PE Subcommittee also confirmed that for SK114 *tissues (Kleenex)* the number of assigned tissues is appropriate (2 tissues per patient per session (2/144 of a box)). **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Behavior Management Services** Behavior modification is the process of changing patterns of human behavior over the long-term using various motivational techniques, mainly consequences and rewards. More simply, behavior modification is the method of changing the way a person reacts either physically or mentally to a given stimulus.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Behavior modification treatment is based on the values of operant conditioning. The ultimate goal is to exchange objectionable, problematic, or disagreeable behaviors with more positive, desirable behaviors through the use of evidence-based techniques and methods.

The purpose of the group-based behavioral management/modification training services is to teach the parent(s)/caregiver(s) interventions that they can independently use to effectively manage the identified patient's illness(s)/disease(s). Codes 96202, 96203 are used to report the total duration of face-to-face time spent by the physician or other qualified health care professional providing group-based parent/caregiver behavioral management/modification training services. This service involves behavioral treatment training provided to a multiple-family group of parent(s)/caregiver(s), without the patient present. These services emphasize active engagement and involvement of the parent(s)/caregiver(s) in the treatment of a patient with a mental or physical health diagnosis. These services do not represent preventive medicine counseling and risk factor reduction interventions.

During these sessions, the parent(s)/caregiver(s) are trained, using verbal instruction, video and live demonstrations, and feedback from physician or other qualified health care professional or other parents in group sessions, to use skills and strategies to address behaviors impacting the patient's mental or physical health diagnosis. These skills and strategies help to support compliance with the identified patient's treatment and the clinical plan of care.

For counseling and education provided by a physician or other qualified health care professional to an individual and/or family, see the appropriate evaluation and management codes including office or other outpatient services (99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215), hospital *inpatient and observation* care *services* (99221, 99222, 99223, 99231, 99232, 99233), new or established patient office or other outpatient consultations (~~*99241,*~~ 99242, 99243, 99244, 99245), inpatient *or observation* consultations (~~*99251,*~~ 99252, 99253, 99254, 99255), emergency department services (99281, 99282, 99283, 99284, 99285), nursing facility services (99304, 99305, 99306, 99307, 99308, 99309, 99310, 99315, 99316~~*, 99318*~~), ~~*domiciliary, rest home, or custodial care services (99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337),*~~ home *and residence* services (99341, 99342, ~~*99343,*~~ 99344, 99345, 99347, 99348, 99349, 99350), and counseling risk factor reduction and behavior change intervention (99401-99429). See also **Instructions for Use of the CPT Codebook** for definition of reporting qualifications.

Counseling risk factor reduction and behavior change intervention codes (99401, 99402, 99403, 99404, 99406, 99407, 99408, 99409, 99411, 99412) are included and may not be separately reported on the same day as parent/caregiver training services codes 96202, 96203 by the same provider.

Medical nutrition therapy codes 97802, 97803, 97804, provided to the identified patient may be reported on the same date of service as parent/caregiver training service.

(For health behavior assessment and intervention that is not part of a standardized curriculum, see 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, 96171)

(For educational services that use a standardized curriculum provided to patients with an established illness/disease, see 98960, 98961, 98962)

(For education provided as genetic counseling services, use 96040. For education to a group regarding genetic risks, see 98961, 98962)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96202 Tracking Number E1 Original Specialty Recommended RVU: **0.50**
Presented Recommended RVU: **0.43**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.43**

CPT Descriptor: Multiple-family group behavior modification/management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified nonphysician health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey:
Vignette #1 - Used by APA & AACAP:
A 7-year-old male patient presents with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder. The patient's symptoms of inattention, hyperactivity and impulsiveness results in difficulties in social and psychological functioning. The patient's parent(s)/caregiver(s) is referred for group-based behavior management/modification training to learn strategies and techniques to improve monitoring and management of patient's behaviors, facilitate positive behavior changes, improved parent-child interactions, and improve overall symptom management and functioning.

Vignette #2 - Used by AND:
Parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity, and a family history of Type 2 diabetes are referred for group-based behavior management/modification training.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 16%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient records, including those from the patient's physician and other team members, and results of any prior diagnostic, evaluation and/or assessment services. Review findings from assessment tools and how they relate to the identified patient's treatment goals. Review and prepare materials to be presented during group behavior management/modification training session.

Description of Intra-Service Work: Initiate or continue the multiple-family group–based session of behavior training intervention for parent(s)/caregiver(s), training them on behavioral strategies and interventions that they can use independently, outside of treatment, and developing new skills to help improve functioning and better manage/reduce the identified patient's challenging behaviors that result from or impact the identified patient's diagnosis. Parent(s)/caregiver(s) are taught to engage via verbal instruction (didactic discussion and Socratic questioning), video, and live demonstrations, role-playing, and feedback sessions to learn how to: set realistic and age-appropriate expectations for the identified patient's behavior; reinforce positive/healthy behaviors to improve social and psychological functioning and physical health; and reduce or modify negative behaviors that are impairing function and treatment progress. Complete assessment of the identified patient's progress towards treatment goals.

Description of Post-Service Work: Documentation in the identified patient's medical record includes description of the parent(s)/caregiver(s) status and report of successes or challenges experienced with the patient, an overview of topics/skills (e.g. behavioral strategies, techniques and interventions) covered in the session, results of assessment tools completed by the parent(s)/caregiver(s), and progress toward and/or modification of treatment goals based on patient and/or

parent(s)/caregiver(s) progress or other confounding factors that arise. When applicable, coordinate with and provide feedback to the identified patient's referring provider or interdisciplinary team members. Facilitate follow-up care with identified patient and parent(s)/caregiver(s).

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90846	XXX	2.40	**RUC Time**

CPT Descriptor Family psychotherapy (without the patient present), 50 minutes

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90847	XXX	2.50	**RUC Time**

CPT Descriptor Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36455	XXX	2.43	**RUC Time**	49

CPT Descriptor 1 Exchange transfusion, blood; other than newborn

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99215	XXX	2.80	**RUC Time**	10,388,878

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.

Other Reference CPT Code	Global	Work RVU	Time Source
90839	XXX	3.13	**RUC Time**

CPT Descriptor Psychotherapy for crisis; first 60 minutes

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 57 **% of respondents:** 76.0 **%**

Number of respondents who choose 2nd Key Reference Code: 7 **% of respondents:** 9.3 **%**

TIME ESTIMATES (Median)

	CPT Code: 96202	Top Key Reference CPT Code: 90846	2nd Key Reference CPT Code: **90847**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	20%	55%	19%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	21%	73%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	27%	70%
Physical effort required	2%	45%	53%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	41%	53%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	17%	53%	24%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	73%	21%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	44%	52%
Physical effort required	6%	32%	62%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	40%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Caregiver Behavioral Management/Modification Training is a highly specialized service that requires the clinical expertise of a physician or qualified health care professional (QHP) to train parent(s)/caregiver(s) how to utilize behavioral interventions, strategies and techniques to address and effectively manage behavioral problems impacting an identified patient's mental and/or physical health diagnosis. The service is offered in cases where

the provider believes psychosocial intervention (typically and most effectively provided through parent/caregiver behavioral modification/management training) is needed for the benefit of the patient to help increase effectiveness and therapeutic benefit for the patient's condition.

While this service may seem similar to existing Psychotherapy or Health Behavior Assessment and Intervention (HBAI) services, parent/caregiver behavioral management/modification training services are unique for many reasons. Primarily, the surveyed codes represent a service that is provided to parent(s)/caregiver(s) from multiple families who meet for a series of group-based sessions, conducted by a physician/QHP. While the identified patients are not present during the service, the behavioral management/modification training the parent(s)/caregiver(s) receive is solely for the benefit of the patient. The emphasis is placed on helping parent(s)/caregiver(s) develop highly structured technical skills to deal with specific problem behaviors exhibited by the identified patients.

Behavioral management/modification training is also unique in that it is not a diagnosis-specific service. Psychotherapy services are intended to be used for patients who present with a primary mental health diagnosis, while Health Behavior Assessment and Intervention (HBAI) services are intended for patients who present with a primary physical health diagnosis. The surveyed codes are typically provided to a cohort of parent(s)/caregiver(s) from multiple families over a series of eight (8) to twelve (12) closed group sessions. The participants represent identified patients that share the same or similar diagnosis.

Using our vignettes as an example, a parent/caregiver of a patient diagnosed with ADHD attends group-based behavioral management/modification training with parent(s)/caregiver(s) from multiple other families, who represent patients who have also been diagnosed with ADHD. They would not be placed in a multi-family group dedicated to addressing behavioral management/modification training for pediatric patients with obesity.

That being said, while the two (2) vignettes used in our survey process both focused on pediatric patients, a large body of scientific literature exists which describes the efficacy and effectiveness of behavioral modification and management training for caregivers of patients across the lifespan. Caregiver training for patients with dementia for example, focuses on specific behaviors the patient exhibits, and involves approaches such as modifying patient and/or caregiver cognitions, behaviors, or environments, or strategies for reducing a patient's increased vulnerability to their environment.

A new base/add-on code pair was developed to reflect the physician/QHP work involved in providing multiple-family group-based services to parent(s)/caregiver(s) (without the patient present) for which there was no existing CPT code available to capture this provision of clinical service. The CPT Editorial Panel approved 96202; *Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes* and 96203; *Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes,* at their February 2021 meeting. The codes were then surveyed by the American Psychological Association (APA), Academy of Nutrition and Dietetics (AND), and American Academy of Child and Adolescent Psychiatry (AACAP) for the April 2021 RUC meeting.

Survey Process

APA, AND, and AACAP sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for modification of the survey tools, including the following items:

- Providing thorough review and feedback on appropriate codes to include in our Reference Service List. All codes recommended for deletion from our initial draft of the RSLs were removed and all codes recommended for addition were added to our final versions.
- Based on the subcommittee's recommendation, we conducted the survey with two (2) separate RSLs:
    - One dedicated for use with the base code (96202) which has an XXX global period, and
    - A second dedicated for use with the add-on code (96203) which has an ZZZ global period.

- Approval of our request to utilize a secondary vignette which described the service provided to parent(s)/caregiver(s) of a pediatric patient with obesity. This vignette was only approved for use by survey respondents from AND.
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey
- Replacing the term "physician" with "physician/qualified health care professional" to address all provider types being surveyed.
- Minor language changes throughout the survey to ask the respondents to base their time and RVU estimates on the entire group session rather than calculating them on a per patient basis.
- Adding two (2) custom questions to the survey tool:
    - The first custom question asked survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each group-based service.
    - The second custom question asked survey participants to indicate the typical number of identified patients represented by their parent(s)/caregiver(s) during a typical multi-family group behavioral management/modification training group session.

All three (3) specialty societies sent surveys to a random sample of applicable subsets within their membership base. The combined sample size for the survey was 10,906. APA's sample included 1,262 members randomly selected from Division 37 – Society for Child and Family Policy and Practice, Division 53 – Society of Clinical Child and Adolescent Psychology and Division 54 – Society for Pediatric Psychology. AND's overall sample size included 8,600 members, representing a random sampling of members from 11 Dietetic Practice Groups, representing individuals providing clinical services to patients of all ages and physical health diagnoses included in the CPT Code Change Application, including pediatric patients with obesity, and eating disorders. AACAP's survey sample combined a random sample the general membership and members of the Collaborative and Integrated Care, Family, and Systems of Care Committees with a sample size of 1,044 people.

Analysis and Recommendations from the Expert Panel – 96202

An expert panel was convened with the RUC and HCPAC advisors and alternate advisors from all three surveying specialty societies, as well as practitioners from academic, and hospital-based practices, who are currently offering these services in adult and pediatric patient populations. The expert panel reviewed survey data and developed the recommendations.

When combined, 84% (63/75) of our survey respondents found the vignettes to be typical; however, as previously stated, the Research Subcommittee approved the use of two (2) vignettes during our survey process. For survey respondents from APA and AACAP, 88% (53/60) found the following vignette, which describes a patient diagnosed with a mental health condition, to be typical: A 7-year-old male patient presents with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder. The patient's symptoms of inattention, hyperactivity and impulsiveness results in difficulties in social and psychological functioning. The patient's parent(s)/caregiver(s) is referred for group-based behavior management/modification training to learn strategies and techniques to improve monitoring and management of patient's behaviors, facilitate positive behavior changes, improved parent-child interactions, and improve overall symptom management and functioning.

For survey respondents from AND, 67% (10/15) found the following vignette, which describes a patient with a physical health diagnosis, to be typical: Parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity, and a family history of Type 2 diabetes are referred for group-based behavior management/modification training.

Of the 75 completed surveys, CPT code 90846; *Family psychotherapy (without the patient present), 50 minutes*, was selected as the key reference service by 76% (57/75) of respondents. Further, of the remaining 23 respondents, 39% selected CPT code 90847; *Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes* as their key reference service.

Time Recommendations

Based on review of the survey results, it is clear that the survey respondents saw an analogous relationship between the surveyed codes and existing Psychotherapy and Health Behavior Assessment and Intervention

(HBAI) services. The median survey results regarding time are 30 minutes pre-service, 60 minutes intra-service, and 30 minutes post-service. The expert panel felt that the survey median intra-service time of 60 minutes, was perfectly valued, likely because it is clearly stated in the code descriptor. However, they also believed that the median pre-service and post-service times may have been slightly overvalued.

The expert panel determined that this service should be consistent with pre-service and post-service times for similar existing services. Detailed in the table below are the pre-, intra-, post-, and total times for existing family and group-based services, some of which have been calculated to show relativity and consistency:

CPT® Code	Descriptor	Pre-Time	Intra-Time	Post-Time	Total Time
90846	*Family psychotherapy (without patient present), 50 minutes*	5 x 1.2 = **6**	50 x 1.2 = **60**	10 x1.2 = **12**	65 x1.2 = **78**
96167	*Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes*	5 x 2 = **10**	30 x 2 = **60**	10 x 2 = **20**	45 x 2 = **90**
96202	***Multiple-family group behavior modification / management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes***	1.67(6*) = **10**	10(6*) = **60**	3.33(6*) = **20**	15(6*) = **90**
96170	*Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes*	5 x 2 = **10**	30 x 2 = **60**	10 x 2 = **20**	45 x 2 = **90**
90847	*Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*	5 x 1.2 = **6**	50 x 1.2 = **60**	21 x 1.2 = **25**	76 x 1.2 = **91**
96164	*Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*	2(7*) = 14 x1.72= **24**	5(7*) = 35 x1.72= **60**	2(7*) = 14 x1.72 = **24**	9(7*) = 63 x1.72 = **108**
90853	Group psychotherapy (other than of a multiple-family group)	2(5*) = **10**	14(5*) = **70**	8(5*) = **40**	24(5*) = **120**

*To illustrate relativity, service time has been calculated to show each service with 60 minutes of intra time. *Additionally, for group-based services, the per patient time values have been multiplied by the RUC-determined typical number of patients in the group [96164 (7), 90853 (5)] to show time for the entire group.*

<u>*Response to reviewer comments*</u>: One reviewer asked if it was typical to review each identified patient's medical record prior to every session, or was the physician/QHP just reviewing the general tenor of the material that was to be covered in the upcoming session? The expert panel appreciates the reviewer comments and we have revised our pre- and post-service descriptors to provide greater detail on the activities performed by the physician/QHP prior to and following each session.

Our expert panel agreed that, based on relativity to existing services, and taking into account that our survey respondents indicated that there are typically six (6) patients represented in a group of parent(s)/caregiver(s) participating in behavior modification/management training, there is sufficient evidence to support our recommended times for this service, to allow the physician/QHP enough pre-service time to review each identified patient's medical record and review/prepare the materials to be presented for each session, as well as post-service time to complete coordination activities (when applicable) and complete session-specific documentation in each identified patient's record. **Therefore, the expert panel recommends 10 minutes pre-, 60 minutes intra-, and 20 minutes post-service times for a total of 90 minutes for the entire group, or 2 minutes pre-, 10 minutes intra-, and 3 minutes post-service time for a total time of 15 minutes per identified patient represented by their parent(s)/caregiver(s) during behavioral management / modification training services.**

RVU Recommendations

The expert panel reviewed the RVW survey data and conducted several searches of the RUC database to identify codes that were similar to the surveyed time and RVW data. The database searches resulted in identifying numerous codes for comparison, across the fee schedule, as well as the family and group-based services reviewed with our time recommendations. . An expanded version of the previous table, used to support our time

recommendations, is provided below which shows the surveyed code, valued at the survey median (2.60) and the survey 75th percentile (3.00), relative to the codes identified in our RUC database searches.

CPT Code	Descriptor	Pre-Time	Intra-Time	Post-Time	Total Time	wRVU
90792	*Psychiatric diagnostic evaluation with medical services*	**10**	**60**	**20**	**90**	**4.16**
90791	*Psychiatric diagnostic evaluation*	**10**	**60**	**20**	**90**	**3.84**
90839	*Psychotherapy for crisis; first 60 minutes*	**10**	**60**	**20**	**90**	**3.13**
96167	*Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes*	5 x2= **10**	30 x2= **60**	10 x2= **20**	45 x2= **90**	1.55 x2= **3.10**
90847 ***KRS 2***	*Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*	5 x1.2= **6**	50 x1.2= **60**	21 x1.2= **25**	76 x1.2= **91**	2.50 x1.2= **3.00**
96170	*Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes*	5 x2= **10**	30 x2= **60**	10 x2= **20**	45 x2= **90**	1.50 x2= **3.00**
96202	*Multiple-family group behavior modification / management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes*	1.67(6) = **10**	10(6) = **60**	3.33(6) = **20**	15(6) = **90**	**3.00** *Survey 75th*
74712	*Magnetic resonance (eg, proton) imaging, fetal, including placental and maternal pelvic imaging when performed; single or first gestation*	**15**	**60**	**15**	**90**	**3.00**
95912	*Nerve conduction studies; 11-12 studies*	**15**	**60**	**15**	**90**	**3.00**
90853	*Group psychotherapy (other than of a multiple-family group)*	2(5*) = **10**	14(5*) = **70**	8(5*) = **40**	24(5*) = **120**	0.59(5*) = **2.95**
90846 ***KRS 1***	*Family psychotherapy (without the patient present), 50 minutes*	5 x 1.2 = **6**	50 x1.2= **60**	10 x1.2 = 12	65 x1.2 = **78**	2.40 x1.2= **2.88**
96202	*Multiple-family group behavior modification / management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes*	1.67(6*) = **10**	10(6*) = **60**	3.33(6*) = **20**	15(6*) = **90**	0.43(6*) = **2.60** *Survey 50th* ***Recommended Value***
96164	*Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*	2(7*) = 14 x1.72= **24**	5(7*) = 35 x1.72= **60**	2(7*) = 14 x1.72 = **24**	9(7*) = 63 x1.72 = **108**	0.21(7*) = 1.47 x1.72= **2.53**
97804	*Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes*	2(6*) = 12 x1.67= **20**	6(6*) = 36 x1.67= **60**	2(6*) = 12 x1.67= **20**	10(6*) = 60 x1.67= **100**	0.25(6*) = 1.5x1.67= **2.51**
G0109	*Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes*	2(5*) = 10 x2 = **20**	6(5*) = 30 x2= **60**	2(5*) = 10 x2 = **20**	10(5*) = 50 x2= **100**	0.25(5*) = 1.25 x2 = **2.50**

To illustrate relativity, service RVW and time has been calculated to show each service with 60 minutes of intra time.
**Additionally, for each of the codes describing group-based services, the per patient time and wRVU values have been multiplied by the RUC-determined typical number of patients in the group [90853 (5), 96164 (7), G0109(5), 97804 (6)] to show RVW and time for the entire group.*

Response to reviewer comments: The expert panel determined that the 75th percentile value of 3.00 was the most appropriate value for this service; however, based on feedback from our reviewers as well as other members of Facilitation Committee #2, we have revised our original recommendation.

The expert panel recommends code 96202 be valued at the survey median RVW of 2.60 for the entire group, or 0.43 per identified patient represented by their parent(s)/caregiver(s), for the first 60 minutes of behavioral management/modification training services.

Additional Comments

Performance Rate

The surveying specialty societies conducted a RUC survey to value the newly created base/add-on code pair 96202 and 96203 which describe Caregiver Behavior Management/Modification Training. Upon initial analysis, the survey data revealed a median performance rate of zero for both 96202 and 96203.

Of the 75 total survey responses, 57 survey respondents selected code 90846 as the Top Key Reference Service, which had a median 12-month performance rate of 15. The Second Key Reference Service, code 90847, was selected by 7 survey respondents, and had a median 12-month performance rate of 18.

In the original version of the Survey Summary Spreadsheet, we presented the survey data in aggregate as well as for those survey respondents who had and had not performed the service in the last 12 months. For the subset of respondents who had performed the service in the last 12 months, the data showed a pre-time of 25 minutes, median intra-service time of 60 minutes, and post-service time of 30 minutes with a median RVW of 2.56 and the 75th percentile value at 2.75.

Subsequent to submission of our original recommendations, the surveying specialties felt that further analysis of the performance rate data was needed. Even though there currently is no mechanism for reporting the service, we believed this service was more commonly performed than indicated in the survey data.

Presented in the updated version of our Survey Summary Spreadsheet is recalculated performance rate information for 96202, showing the data in aggregate for all 75 survey respondents, as well as for the 50 survey respondents who said they had performed the service (either in the last 12 months and/or in the last 5 years), and those 25 survey respondents who indicated they have never performed this service. Additionally, we have included a second tab in the summary spreadsheet that only includes the 12-month performance rate data. We felt presenting the data as "performed" versus "not performed" as well as the 12-month data in isolation was a more valid and useful presentation to assist the RUC in its decision-making.

For the "performed" versus "not performed" recalculated data, time data for 96202 in aggregate showed median times of 30/60/30, totaling 120 minutes. These data points were exactly the same for those who have performed the service, and for those who indicated they have never performed the service, the only difference was a median pre-time of 27 minutes, which in turn brought the total time down to 117 minutes. For the data on the estimated RVW, the median value in the aggregate data for 96202 was 2.60 and the 75th percentile was 3.00. These RVW values were exactly the same for the 50 survey respondents who indicated they have performed the service, and for those 25 respondents who said they'd never performed the service, the 25th percentile RVW at 2.60, the median at 3.00 and the 75th percentile at 3.06. In summary, the updated performance rate data reveals that there is very little variation in the data across all three (3) cohorts. This also shows that the survey conducted yielded strong, consistent data, further supporting our time and valuation recommendations for this service.

Additionally, the re-calculated data for those survey respondents who indicated that they have performed the service results in a median service performance rate of 19 for 96202. It should be noted however, that although these service performance rates may still seem low, this service is provided over 8-12 sessions. Therefore, a performance rate of 19 means the service was provided to 19 groups, totaling 152-228 sessions provided by the physician/QHP.

We had 33 respondents who indicated they had performed 96202 in the last 12 months. The top and second KRS codes were the same as the overall data, with 90846 being selected by 64% (21/33) respondents and 90847 being selected by 21% (7/33) respondents. The aggregate data was consistent with the data from the overall survey, with the median RVW at 2.56, and median surveyed times of 25/60/30.

Additionally, the 12-month performance data showed a median service performance rate of 20 for 96202. It should be noted however, that although these service performance rates may still seem low, this service is

provided over 8-12 sessions. Therefore, a performance rate of 20 means the service was provided to 20 groups, totaling 160-240 sessions provided by the physician/QHP.

Custom Question Survey Results
As noted previously under the Survey Process section of our rationale, approval was granted by the RUC Research Subcommittee, to modify question 5 on the survey instrument to request that respondents value the service based on the entire group, not the individual patient. Approval was also granted to add custom questions to ascertain the typical time spent performing the entire service and the typical number of patients represented in the group.

Custom Question 1 – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)
The first custom question asked survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each group-based service.

For the typical group, how much time do you personally spend performing this entire service from start to finish (96202 and all increments of 96203)? Please answer in minutes. Please do not count pre-service time (e.g., chart review) or post-service time (e.g., documentation).

The intent of including this custom question was to determine the total time, in minutes, it takes to perform the service, as well as the typical number of add-on code units that would be reported, beyond the initial 60 minutes included in the base code, for a typical training session. The survey data collected is summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
30 minutes	60 minutes	90 minutes	90 minutes	180 minutes

Also, as seen in the table below, based on the 12-month performance rate data, the total time, in minutes, it takes to perform the service, was very consistent with the overall survey data:

Min.	25th Percentile	Median	75th Percentile	Max.
55 minutes	75 Minutes	90 minutes	90 minutes	180 minutes

Based on the responses from the survey respondents, the typical length of this service is between 60-90 minutes; therefore, it can be expected that the service will be reported with either a single unit of the 96202 for a 60 minute service, or one (1) unit of 96202, and two (2) units of the 96203 for a 90 minute service.

Custom Question 2 – Typical Number of Patients Represented in the Group
The second custom question asked survey participants to indicate the typical number of identified patients represented by their parent(s)/caregiver(s) during a typical multi-family group behavioral management/modification training group session.

What is the typical number of patients represented by their parent(s)/caregiver(s) in a typical group session for survey base code 96202 *Multiple-family group behavior modification/management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified nonphysician health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes*?

The responses to this custom question regarding the typical number patients represented by their parent(s)/caregiver(s) in a typical group session, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
1	4	6	8	15

Also, as seen in the table below, based on the 12-month performance rate data, the typical number patients represented by their parent(s)/caregiver(s) in a typical group session, was very consistent with the overall survey data:

Min.	25th Percentile	Median	75th Percentile	Max.
1	4	6	8	19

With six (6) identified patients represented in a group of parent(s)/caregiver(s) receiving behavior modification and management training, a typical series of training sessions would include two (2) parent(s)/caregiver(s) representing each identified patient, or a total of 12 parent(s)/caregiver(s) participating in the group-based series of sessions.

Response to reviewer comments: A comment was made by one of our reviewers related to how number of RVUs generated is dependent upon the number of patients represented in the group. Another reviewer asked whether there needed to be any limits on the number of patients that can be represented in a single group. Upon further analysis, the surveying specialties found when comparing the data in aggregate to those survey respondents who indicated they had "performed" or "not performed" this service, the typical number of patients represented in the group remained the same.

Recommendations

In summary, based on strong support from our overall survey data as well as consistency with the 12-month performance rate data, **we recommend the survey median RVW of 2.60 with 10 minutes pre-, 60 minutes intra-, and 20 minutes post-time for a total time of 90 minutes for 96202 (for the entire group). When divided by the typical number of patients represented in a group (6), the per patient recommendations are 0.43 RVUs with 2 minutes pre-, 10 minutes intra-, and 3 minutes post-time for a total time of 15 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT Code	Global	Work RVU	Pre-	Intra-	Post-
3.	96202	XXX	2.60	10	60	20
4.	+96203	ZZZ	0.73	0	15	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Registered Dietitian/Nutrition Professional How often? Commonly

Specialty Child & Adolescent Psychiatry How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 260000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A typical course of treatment is 8 sessions per cohort. If a physician/QHP provides 4 cohorts per year, that would be 32 sessions per year. With the survey median data showing that there are typically 6 patients represented in each of the annual 32 sessions then, if we assume that 10% of our combined survey sample (10,960) utilized the codes, then we estimate the national utilization to be 200,000 base units/year.

Specialty Clinical Psychology Frequency 75000 Percentage 28.84 %

Specialty Registered Dietitian Nutritionists Frequency 165000 Percentage 63.46 %

Specialty Child & Adolescent Psychiatry Frequency 20000 Percentage 7.69 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 100,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. When comparing utilization of existing codes, AND believes that 2019 utillization of G0109 would be similar to utilization of the new services while APA and AACAP believe currecnt utilization for 90846 would be similar. Calcualting for differences in time between the existing and surveyed codes yeild the estimated utilization in Medicare .

Specialty Clinical Psychology Frequency 25000 Percentage 25.00 %

Specialty Registered Dietitian Nutritionists Frequency 55000 Percentage 55.00 %

Specialty Child & Adolescent Psychiatry Frequency 20000 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Specialist

BETOS Sub-classification Level II:
Psychiatry

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. G0109

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96203 Tracking Number E2 Original Specialty Recommended RVU: **0.17**
Presented Recommended RVU: **0.12**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.12**

CPT Descriptor: Multiple-family group behavior modification/management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified nonphysician health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes (List separately in addition to code for primary service)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey:
Vignette #1 - Used by APA & AACAP:
During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 7-year-old male patient with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder, received training on monitoring and coping with the identified patient's symptoms of inattention, hyperactivity and impulsiveness, and facilitating positive behavior changes. An additional 15 minutes, beyond the first 60 minutes, was required to complete group behavior management/modification training on improving overall symptom management and functioning.
[Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 96202.]

Vignette #2 - Used by AND:
During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity and a family history of Type 2 diabetes received training. An additional 15 minutes was required.
[Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 96202.]

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 12%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Continue multiple-family group–based session of behavior training intervention for parent(s)/caregiver(s), including verbal instruction (didactic discussion and Socratic questioning), video, and live demonstrations, role-playing, and feedback sessions to learn how to: set realistic and age-appropriate expectations for the identified patient's behavior; reinforce positive/healthy behaviors to improve social and psychological functioning and physical health; and reduce or modify negative behaviors that are impairing function and treatment progress.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	60%	32%	50%	12%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	1%	36%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	31%	63%
Physical effort required	4%	49%	47%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	41%	50%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	1%	4%	24%	50%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	32%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	32%	64%
Physical effort required	1%	52%	47%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	49%	47%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Caregiver Behavioral Management/Modification Training is a highly specialized service that requires the clinical expertise of a physician or qualified health care professional (QHP) to train parent(s)/caregiver(s) how to utilize behavioral interventions, strategies, and techniques to address and effectively manage behavioral problems impacting an identified patient's mental and/or physical health diagnosis. The service is offered in cases where the provider believes psychosocial intervention (typically and most effectively provided through parent/caregiver behavioral modification/management training) is needed for the benefit of the patient to help increase effectiveness and therapeutic benefit for the patient's condition.

While this service may seem similar to existing Psychotherapy or Health Behavior Assessment and Intervention (HBAI) services, parent/caregiver behavioral management/modification training services are unique for many reasons. Primarily, the surveyed codes represent a service that is provided to parent(s)/caregiver(s) from multiple families who meet for a series of group-based sessions, conducted by a physician/QHP. While the identified patients are not present during the service, the behavioral management/modification training the parent(s)/caregiver(s) receive is solely for the benefit of the patient. The emphasis is placed on helping parent(s)/caregiver(s) develop highly structured technical skills to deal with specific problem behaviors exhibited by the identified patients.

Behavioral management/modification training is also unique in that it is not a diagnosis-specific service. Psychotherapy services are intended to be used for patients who present with a primary mental health diagnosis, while Health Behavior Assessment and Intervention (HBAI) services are intended for patients who present with a primary physical health diagnosis. The surveyed codes are typically provided to a cohort of parent(s)/caregiver(s) from multiple families over a series of eight (8) to twelve (12) closed group sessions. The participants represent identified patients that share the same or similar diagnosis.

Using our vignettes as an example, a parent/caregiver of a patient diagnosed with ADHD attends group-based behavioral management/modification training with parent(s)/caregiver(s) from multiple other families, who represent patients who have also been diagnosed with ADHD. They would not be placed in a multi-family group dedicated to addressing behavioral management/modification training for pediatric patients with obesity.

While the two (2) vignettes used in our survey process both focused on pediatric patients, a large body of scientific literature exists which describes the efficacy and effectiveness of behavioral modification and management training for caregivers of patients across the lifespan. Caregiver training for patients with dementia, for example, focuses on specific behaviors the patient exhibits, and involves approaches such as modifying patient and/or caregiver cognitions, behaviors, or environments, or strategies for reducing a patient's increased vulnerability to their environment.

The CPT Editorial Panel approved this new base/add code pair at their February 2021 meeting to reflect the physician/QHP work involved in providing multiple-family group-based services to parent(s)/caregiver(s) (without the patient present) for which there was no existing CPT code available to capture this provision of clinical service.

The surveyed code 96203; *Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes (List separately in addition to code for primary service)*, is an 15-minute add-on code to the base service, code 96202, which is reported for the first 60 minutes of behavior management/modification training. Based on feedback from those that completed the RUC survey, the survey median value for the length of a single session of this service was 90 minutes and the typical number of identified patients represented in a group was six (6); therefore, for a typical single session, we anticipate physicians/QHPs to report one unit of the base code (96202) and two units of the add-on code (96203) per patient.

Survey Process

APA, AND, and AACAP sought the approval of the RUC's Research Subcommittee prior to fielding their surveys. The subcommittee granted approval for modification of the survey tools, including the following items:

- Providing thorough review and feedback on appropriate codes to include in our Reference Service List. All codes recommended for deletion from our initial draft of the RSLs were removed and all codes recommended for addition were added to our final versions.
- Based on the subcommittee's recommendation, we conducted the survey with two (2) separate RSLs:
    - One dedicated for use with the base code (96202) which has an XXX global period, and
    - A second dedicated for use with the add-on code (96203) which has an ZZZ global period.
- Approval of our request to utilize a secondary vignette which described the service provided to parent(s)/caregiver(s) of a pediatric patient with obesity. This vignette was only approved for use by survey respondents from AND.
- Combining the XXX – Therapy survey tool with the standard ZZZ survey template and the time-based code template to survey
- Replacing the term "physician" with "physician/qualified health care professional" to address all provider types being surveyed.
- Minor language changes throughout the survey to ask the respondents to base their time and RVU estimates on the entire group session rather than calculating them on a per patient basis.
- Adding two (2) custom questions to the survey tool:
    - The first custom question asked survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each group-based service.
    - The second custom question asked survey participants to indicate the typical number of identified patients represented by their parent(s)/caregiver(s) during a typical multi-family group behavioral management/modification training group session.

All three (3) specialty societies sent surveys to a random sample of applicable subsets within their membership base. The combined sample size for the survey was 10,906. APA's sample included 1,262 members randomly selected from Division 37 – Society for Child and Family Policy and Practice, Division 53 – Society of Clinical Child and Adolescent Psychology and Division 54 – Society for Pediatric Psychology. AND's overall sample size included 8,600 members, representing a random sampling of members from 11 Dietetic Practice Groups, representing individuals providing clinical services to patients of all ages and physical health diagnoses included in the CPT Code Change Application, including pediatric patients with obesity….. AACAP's survey sample combined a random sample the general membership and members of the Collaborative and Integrated Care, Family, and Systems of Care Committees with a sample size of 1,044 people.

Analysis and Recommendations from the Expert Panel – 96203

An expert panel was convened with the RUC and HCPAC advisors and alternate advisors from all three surveying specialty societies, as well as practitioners from academic, and hospital-based practices, who are currently offering these services in adult and pediatric patient populations. The expert panel reviewed survey data and developed the recommendations.

The use of two (2) vignettes was approved by the Research Subcommittee for use in the survey of these services. The first vignette, used by survey respondents from APA and AACAP, described a patient with a mental health diagnosis, and 90% (53/59) of the respondents found the following described their typical patient: During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 7-year-old male patient with Attention Deficit Hyperactivity Disorder and Oppositional Defiant Disorder, received training on monitoring and coping with the identified patient's symptoms of inattention, hyperactivity and impulsiveness, and facilitating positive behavior changes. An additional 15 minutes, beyond the first 60 minutes, was required to complete group behavior management/modification training on improving overall symptom management and functioning.

The second vignette, used by survey respondents from AND, described a patient with a physical health diagnosis, and 73% (11/15) of the respondents found the following to describe their typical patient: During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity and a family history of Type 2 diabetes received training. An additional 15 minutes was required.

When combined, 86% (64/74)of our survey respondents found the vignettes to be typical; however, it should be noted that five (5) APA members commented that they did not find the vignette to be typical because they typically provide behavioral management/modification training to the parent(s)/caregiver(s) of patients with physical health diagnosis (e.g. obesity); therefore, given the option, the secondary vignette that was approved by the Research Subcommittee for use only by AND's survey respondents, would have been selected, increasing our combined approval rate to 95%.

Time Recommendations

Based on review of the survey results, our expert panel believed that the survey respondents saw an analogous relationship between the surveyed code and existing add-on codes in the family of Health Behavior Assessment and Intervention (HBAI) services. Of the 75 completed surveys, CPT code 96171; *Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes* (List separately in addition to code for primary service), was selected as the key reference service by 75% (56/75) of respondents. Of the remaining survey respondents, 74% (14/19) selected CPT code 96168; *Health behavior intervention, family (with the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) as their key reference service*. The intra-service survey median time for 96203 was 15 minutes, as is the intra-service time for each of the HBAI add-on codes.

When compared to the 12-month performance data, the intra-time estimation is very consistent with the overall survey data, yielding a median intra-time of 15 minutes.

For 96203, the expert panel recommends 15 minutes of intra-service time for the entire group, or 3 minutes intra-service time per identified patient represented by their parent(s)/caregiver(s) during behavioral management / modification training services.

RVW Recommendations

Response to reviewer comments: The expert panel determined that the 75th percentile value of 1.00 was the most appropriate value for this service; however, based on feedback from our reviewers as well as other members of Facilitation Committee #2, we have revised our original recommendation.

For 96203, the expert panel recommends the survey median RVW value of 0.73 for the entire group, or 0.12 per identified patient represented by their parent(s)/caregiver(s) during behavioral management / modification training services.

Additional Comments

Performance Rate

The surveying specialty societies conducted a RUC survey to value the newly created base/add-on code pair 96202 and 96203 which describe Caregiver Behavior Management/Modification Training. Upon initial analysis, the survey data revealed a median performance rate of zero for 96203. The median performance rate of zero for 96203.

Of the 75 total survey responses, 56 survey respondents selected code 96171 as the Top Key Reference Service, which had a median performance rate was 2. The Second Key Reference Service, code 96168, was selected by 14 survey respondents, and had a median performance rate of 10.

In the original version of the Survey Summary Spreadsheet, we presented the survey data in aggregate as well as for those survey respondents who had and had not performed the service in the last 12 months. . For the subset of respondents who had performed the service in the last 12 months, the data showed a pre-time of 25 minutes, median intra-service time of 60 minutes, and post-service time of 30 minutes with a median RVW of 2.56 and the 75th percentile value at 2.75.

Subsequent to submission of our original recommendations, the surveying specialties felt that further analysis of the performance rate data was needed. Even though there currently is no mechanism for reporting the service, we believed this service was more commonly performed than indicated in the survey data.

Presented in the updated version of our Survey Summary Spreadsheet is recalculated performance rate information for 96203, showing the data in aggregate for all 75 survey respondents, as well as for the 50 survey respondents who said they had performed the service (either in the last 12 months and/or in the last 5 years), and those 25 survey respondents who indicated they have never performed this service. Additionally, we have included a second tab in the summary spreadsheet that only includes the 12-month performance rate data for 96203. We felt presenting the data as "performed" versus "not performed" as well as the 12-month data in isolation was a more valid and useful presentation to assist the RUC in its decision-making. When compared to the data in aggregate, the updated performance rate data reveals significant consistency across all three (3) data sets, with very little variation in the estimated times or RVW values.

For the "performed" versus "not performed" recalculated data, the survey data for 96203 for all 75 survey respondents showed the median intra-time was 15 minutes, with the median RVW was 0.73, and the 75th percentile at 1.00. The median intra-time was the same for the 50 survey respondents who indicated they had performed the service, with the median RVU valued at 0,70. For those 25 respondents who indicated they had never performed the service, the 25th percentile intra-time was 15 minutes, and the median was 17 minutes, and the estimated RVW was 0.75. In summary, the updated performance rate data reveals that there is very little variation in the data across all three (3) cohorts. This also shows that the survey conducted yielded strong, consistent data, further supporting our time and valuation recommendations for of this service.

Additionally, the re-calculated data for those survey respondents who indicated that they have performed the service results in a median service performance rate of 20 for 96203. It should be noted however, that although these service performance rates may still seem low, this service is provided over 8-12 sessions. Therefore, a performance rate of 20 means the service was provided to 20 groups, totaling 160-240 sessions provided by the physician/QHP.

We had 30 respondents who indicated they had performed 96202 in the last 12 months. The top and second KRS codes were the same as the overall data, with 96171 being selected by 67% (20/30) respondents and 96168 being selected by 27% (8/30) respondents. The aggregate 12-month performance data was consistent with the data from the overall survey, with the median RVW at 0.70, and surveyed median intra-time at 15 minutes.

Additionally, the 12-month performance data showed a median service performance rate of 24 for 96203. It should be noted however, that although these service performance rates may still seem low, this service is provided over 8-12 sessions. Therefore, a performance rate of 24 means the service was provided to 24 groups, totaling 192-288 sessions provided by the physician/QHP.

Custom Question Survey Results

As noted previously under the Survey Process section of our rationale, approval was granted by the RUC Research Subcommittee, to modify question 5 on the survey instrument to request that respondents value the service based on the entire group, not the individual patient. Approval was also granted to add custom questions to ascertain the typical time spent performing the entire service and the typical number of patients represented in the group.

Custom Question – Total Time/Units for XXX base survey code and ZZZ add-on survey code(s)

The first custom question asked survey participants to indicate the total amount of time they spend performing the entire service from start to finish (including the base code and all units of the add-on code) to allow capturing the total time and work involved in each group-based service.

For the typical group, how much time do you personally spend performing this entire service from start to finish (96202 and all increments of 96203)? Please answer in minutes. Please do not count pre-service time (e.g., chart review) or post-service time (e.g., documentation).

The intent of including this custom question was to determine the total time, in minutes, it takes to perform the service, as well as the typical number of add-on code units that would be reported, beyond the initial 60 minutes included in the base code, for a typical training session. The survey data collected is summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.

30	60	90	90	180

The consistency in the data provided by our survey respondents allows us to better understand and anticipate how this service will be provided and reported by physicians/QHPs upon implementation.

Custom Question 2 – Typical Number of Patients Represented in the Group
The second custom question asked survey participants to indicate the typical number of identified patients represented by their parent(s)/caregiver(s) during a typical multi-family group behavioral management/modification training group session.

What is the typical number of patients represented by their parent(s)/caregiver(s) in a typical group session for survey base code 96202 *Multiple-family group behavior modification/management training for guardians/caregivers of a patient with a mental or physical health diagnosis, administered by physician or other qualified nonphysician health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes*?

The responses to this custom question regarding the typical number patients represented by their parent(s)/caregiver(s) in a typical group session, are summarized below:

Min.	25th Percentile	Median	75th Percentile	Max.
1	4	6	8	15

Also, as seen in the table below, based on the 12-month performance rate data, the typical number patients represented by their parent(s)/caregiver(s) in a typical group session, was very consistent with the overall survey data:

Min.	25th Percentile	Median	75th Percentile	Max.
1	4	6	8	19

Recommendations
In summary, based on our overall survey results, as well as consistency with the 12-month performance data, **we recommend the survey median RVW of 0.73 with 0 minutes pre-, 15 minutes intra-, and 0 minutes post-time for a total time of 15 minutes for 96203 (for the entire group), or 0.12 RVUs and 3 minutes of intra-time on a per patient basis.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work RVU	Pre-	Intra-	Post-
4.	96202	XXX	2.60	10	60	20
5.	+96203 ZZZ	0.73	0	15	0	

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Registered Dietitian/Nutrition Professional How often? Commonly

Specialty Child & Adolescent Psychiatry How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 400,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimated that the national utilization for the base code, 96202, to be 200,000 base units/year and considering our survey respondents indicated that the typical total time per session would be 90 minutes, we doubled that estimate for the add-on code units.

Specialty Clinical Psychology Frequency 150000 Percentage 37.50 %

Specialty Registered Dietitian Nutritionists Frequency 330000 Percentage 82.50 %

Specialty Child & Adolescent Psychiatry Frequency 40000 Percentage 10.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 200,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimated that the Medicare utilization for the base code, 96202, to be 100,000 base units/year and considering using the same methodology as we did for the national estimates, we doubled that esitmate to meet the survey respondent's indiciation that the typical total time per session would be 90 minutes.

Specialty Clinical Psychology Frequency 50000 Percentage 25.00 %

Specialty Registered Dietitian Nutritionists Frequency 110000 Percentage 55.00 %

Specialty Child & Adolescent Psychiatry Frequency 40000 Percentage 20.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Specialist

BETOS Sub-classification Level II:
Psychiatry

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. G0109

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
96202	A 7-year-old male patient presents with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder. The patient's symptoms of inattention, hyperactivity and impulsiveness results in difficulties in social and psychological functioning. The patient's parent(s)/caregiver(s) is referred for group-based behavior management/modification training to learn strategies and techniques to improve monitoring and management of patient's behaviors, facilitate positive behavior changes, improved parent-child interactions, and improve overall symptom management and functioning.
96202	Parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity, and a family history of Type 2 diabetes are referred for group-based behavior management/modification training.
96203	During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 7-year-old male patient with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder, received training on monitoring and coping with the identified patient's symptoms of inattention, hyperactivity and impulsiveness, and facilitating positive behavior changes. An additional 15 minutes, beyond the first 60 minutes, was required to complete group behavior management/modification training on improving overall symptom management and functioning. [Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 96202.]
96203	During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity and a family history of Type 2 diabetes received training. An additional 15 minutes was required. [Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 96202.]

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

A consensus panel of experts from the American Psychological Association (APA), Academy of Nutrition and Dietetics (AND), and the American Academy of Child and Adolescent Psychiatry (AACAP) met by video conference to develop the practice expense input recommendations The panel was comprised of the advisors and alternate advisors from the participating societies utilizing additional input obtained via email from experts from each of the societies providing the services in both facility and non-facility settings across the country.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

Reference for 96202: 90846; *Family psychotherapy (without the patient present), 50 minutes* which was the key reference service selected by 76% of our survey respondents.
Reference for 96203: 96171: *Health behavior intervention, family (without the patient present); face-to-face; each additional 15 minutes,* which was the key reference service selected by 73% of our survey respondents.

We also looked at PE for similar services deemed appropriate reference codes:
96164: Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes
96165: Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes
96167: Health behavior intervention, family (with patient present), face-to-face, initial 30 minutes
96168; Health behavior intervention, family (with patient present), face-to face, each additional 15 minutes
96170: Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes
96047: Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes
90849: Multiple-family group psychotherapy
90853: Group psychotherapy (other than of a multiple-family group)
G0109: Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes
97804: Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes

3. Is this code(s) typically reported with an E/M service?

No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence*

guidelines) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A

   b. Service period (includes pre, intra and post):

No clinical staff work. Standard pre-service PE activities such as greeting parent(s)/caregiver(s) performed by administrative staff.

   c. Post-service period:

N/A

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

13. Are you recommending a PE supply pack for this recommendation? Yes or No X
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

14. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

    N/A

15. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

    N/A

16. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

    N/A

17. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

    N/A

18. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

19. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

    N/A

CPT Code	Vignette
96202	A 7-year-old male patient presents with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder. The patient's symptoms of inattention, hyperactivity and impulsiveness results in difficulties in social and psychological functioning. The patient's parent(s)/caregiver(s) is referred for group-based behavior management/modification training to learn strategies and techniques to improve monitoring and management of patient's behaviors, facilitate positive behavior changes, improved parent-child interactions, and improve overall symptom management and functioning.
96202	Parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity, and a family history of Type 2 diabetes are referred for group-based behavior management/modification training.
96203	During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 7-year-old male patient with attention-deficit/hyperactivity disorder and Oppositional Defiant Disorder, received training on monitoring and coping with the identified patient's symptoms of inattention, hyperactivity and impulsiveness, and facilitating positive behavior changes. An additional 15 minutes, beyond the first 60 minutes, was required to complete group behavior management/modification training on improving overall symptom management and functioning. [Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 96202.]
96203	During the group-based behavior management/modification training, the parent(s)/caregiver(s) of a 10-year-old male patient with obesity, limited variety of food intake, limited physical activity and a family history of Type 2 diabetes received training. An additional 15 minutes was required. [Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 96202.]

NONFACILITY DIRECT PE INPUTS

CPT CODE(S):96202-96203
SPECIALTY SOCIETY(IES): American Psychological Association, Academy of Nutrition and Dietetics (AND), & American Academy of Child and Adolescent Psychiatry (AACAP)
PRESENTER(S): Stephen Gillaspy, PhD, Sherry Barron-Seabrook, MD, Kai-ping Wang, MD, Karen Smith, MS, MBA, RD, LD, FAND, Eileen Myers, MPH, LDN, RDN, FAND, Scott Sperling, PsyD, Melissa Santos, PhD, Richard E.A. Loren, PhD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A consensus panel of experts from the American Psychological Association (APA), Academy of Nutrition and Dietetics (AND), and the American Academy of Child and Adolescent Psychiatry (AACAP) met by video conference to develop the practice expense input recommendations The panel was comprised of the advisors and alternate advisors from the participating societies utilizing additional input obtained via email from experts from each of the societies providing the services in both facility and non-facility settings across the country.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   Reference for 96202: 90846; *Family psychotherapy (without the patient present), 50 minutes* which was the key reference service selected by 76% of our survey respondents.
   Reference for 96203: 96171: *Health behavior intervention, family (without the patient present); face-to-face; each additional 15 minutes,* which was the key reference service selected by 73% of our survey respondents.

   We also looked at PE for similar services deemed appropriate reference codes:
   96164: Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes
   96165: Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes
   96167: Health behavior intervention, family (with patient present), face-to-face, initial 30 minutes
   96168; Health behavior intervention, family (with patient present), face-to face, each additional 15 minutes
   96170: Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes
   96047: Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes
   90849: Multiple-family group psychotherapy
   90853: Group psychotherapy (other than of a multiple-family group)
   G0109: Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes
   97804: Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   No. New Codes.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   New codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

New codes. No vital signs are obtained for this service.

9. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

No clinical staff work. Standard pre-service PE activities such as greeting parent(s)/caregiver(s) performed by administrative staff.

    c. Post-service period:

N/A

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

N/A

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

See attached paid invoice for the 2 inch 3 ring binder and set of 8 divider tabs purchased from an office supply vendor under a corporate office supply account.

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Line 115: EF043 Set of 8 Chairs
In the non-facility setting, this service is typically performed in the practice's waiting room during non-office hours. Additional seating is needed for the entire duration of the service beyond what is typically available in the waiting room to accommodate the typical group size of 13 individuals (1 physician or QHP and 6 patients represented by 2 parents/caregivers each). In developing our recommendations, our expert panel felt it was typical to have 5 chairs available in the waiting room, hence we are requesting 8 additional chairs to accommodate the typical group size. In the facility setting, waiting rooms are typically larger or classroom/conference room space is typically available within the facility for use for this service. The total intra-service time of 60 minutes for the base code was divided by the typical group size (6) to yield 10 minutes. Similarly, the total intra-service time of 15 minutes for the add-on code was divided by the typical group size (6) to yield 2.5 minutes. This methodology is consistent with methodology used for the group reference service codes.

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

SK114 tissue (Kleenex): 2 tissues per patient represented per session (2/144 of a box).
SK005 assessment monitoring instruments: An important feature of this service is self-reported monitoring data used to assess parent(s)/caregiver(s) effectiveness at facilitating desired behavior changes to reach care plan goals. Standardized tools with simple scoring guidelines are used to support self-assessment by the parents/caregivers and support decision-making by the physician/QHP on the design of each service session. An instrument is used at the beginning and end of each session.
SK057: paper, laser printing: In a typical session, parent(s)/caregiver(s) are provided with printed materials, generally reproduced by the practice, on the behavior management/training techniques introduced and practiced during the session as a reference for use when applying/practicing the techniques with the patient. Written homework assignments are provided along with written tools for documenting these assignments (e.g., behavior logs, journals, other tracking tools).
New Items: 2" 3-ring binder and set of 8 dividers: Per our expert panel and providers they consulted who have provided this service, it is typical to provide the parent(s)/caregiver(s) with a 3-ring binder at the first session to store materials throughout the duration of sessions. With the typical service consisting of 8 sessions, dividers are used to separate content for each session. The binder with dividers is provided at the first session, hence we divided the total cost by 8. At the time we originally submitted our PE spreadsheet and SOR, while our expert panel felt a binder was

typical, since we did not have a paid invoice for this new supply we opted to use SK043 file labels-folder as an appropriate substitute from the supplies list. The question from a PE reviewer regarding the absence of a file folder prompted us to revisit the supplies and recommend the binder with dividers to represent the supplies truly typical for this service.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
April 2021

Emergency Department Services – Tab 12

Following the implementation of the revisions to the Evaluation and Management (E/M) office visits (99201-99215) for the CPT 2021 code set, the CPT/RUC Workgroup on E/M met twelve times in 2020 and early 2021 to standardize the rest of the E/M sections in the CPT code set. The CPT/RUC Workgroup on E/M was committed to changing the current coding and documentation requirements for E/M visits to simplify the work of the health care provider and improve the health of the patient. To achieve these goals, the Workgroup set forth the following guiding principles related to the group's ongoing work product:

1. To decrease administrative burden of documentation and coding and align CPT and CMS whenever possible
2. To decrease the need for audits
3. To decrease unnecessary documentation in the medical record that is not needed for patient care
4. To ensure that payment for E/M is resource-based and that there is no direct goal for payment redistribution between specialties.

In February 2021, the CPT Editorial Panel revised the five emergency department visit codes to align with the principles included in the E/M office visit services by documenting and selecting level of service based on medical decision making.

Compelling Evidence
RUC members expressed concern with comparing the specialty society proposed values with the 2021 CMS values which were increased by CMS prior to receiving any input from the RUC. Although the RUC recommendations below are budget neutral, if making no adjustments to utilization assumptions for these revised codes, the RUC had concurred that it would be beneficial for the societies to still present compelling evidence arguments. The specialty societies presented two points for compelling evidence that the work of providing emergency department services has changed. First, a flaw in the methodology used in the current valuation; and second, a change in technology due to the implementation and more recent changes to EHRs leading to an increase in workflow disruption and task switching for emergency department services.

Flaw in the Methodology Used in the Current Valuation
In 2021, the revisions and updated relative value units (RVUs) went into effect for E/M office visit codes (99202-99215). Concurrently, even though the emergency department Services were not revised for the CPT cycle or reviewed by the RUC for 2021, CMS decided to increase the RVUs of the emergency department services to remain either equal or slightly higher than the corresponding level of a new patient office visit codes. In February 2021, the CPT Editorial Panel revised the five emergency department visit codes to align with the principles included in the E/M office visit services by documenting and selecting level of service based on medical decision making. Hypothetically, had the 2020 valuation of emergency department services remained in effect for 2021, that would have resulted in a rank order anomaly between office visit services and emergency medicine services. The RUC noted that the level of decision making required for 99282-99285 mirrors the corresponding new patient office visit codes 99202-99215. However, the methodology employed by CMS did not rely on a standardized survey or a crosswalk methodology.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Change in Technology
According to National Medical Ambulatory Care Survey (NAMCS) data, in 2017, 90 percent of emergency physicians used electronic health records exclusively, 8 percent used them partially, and 2% used only paper records.[1] Relative to the 2016 data, which was not yet available when the emergency department services were reviewed by the RUC in 2018, the percentage of emergency physicians exclusively using electronic health records increased by 10 percent in only one year. Separately, in 2008, the corresponding numbers were 23 percent, 49 percent, and 28 percent. These differences demonstrate that the technology used to deliver emergency care has changed dramatically. The EHR contains more data than paper records, most of which must be reviewed including for drug-drug interactions and, with increasing use of homeopathic substances, drug-substance interactions. The use of EHRs has increased physician work by increasing the time physicians spend documenting the medical record. The centralization of data is in the best interest of patients and will help support quality care; however, this centralization does increase the time that physicians spend reviewing patient information.

The specialties claimed that EHR adoption has led to a decrease in workflow efficiency. Emergency physician workflow has been particularly impacted by relatively more recent updates to EHR systems; these systems now generate large numbers of alerts for the provider to review. According to a recent study published in the Journal of Emergency Medicine on the impact of EMR alerts on emergency physician workflow, 78 percent of emergency department patient encounters involved alerts. 70 percent of that subset of patient encounters trigger multiple alerts. In addition, just 2 percent of these alerts result in a change in clinical management.[2] The specialties noted that this recent increase in workflow disruption and task switching for emergency department services has increased their intensity and complexity, the stress for providers and the risk for patients.

The RUC agrees that there is compelling evidence of 1) flaw in the methodology used in the current 2021 valuation of the services and 2) technology changes with the growth in use of EHRs and more recent changes to EHRs leading to an increase in workflow disruption and task switching for emergency department services.

Intra-service Only time on Date of Encounter
Time is not a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time. Therefore, it is often difficult to provide accurate estimates of the time spent face-to-face with the patient. As was also done for the office visit services in 2019 and all other E/M services, all face-to-face and non-face-to-face physician or qualified healthcare professional (QHP) work on the date of the encounter was determined to be intra-service work and of the same intensity. In addition, as all the pre-service and post-service work for an emergency department visit would occur on the date of the encounter, all time is considered intra-time or total time. This is consistent with all inpatient and observation hospital codes, as the reporting of these inpatient services is based on total time on the date of encounter.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99281 ***Emergency department visit for the evaluation and management of a patient, that may not require the presence of a physician or other qualified health care professional***
The RUC reviewed the survey results from 158 emergency physicians, pediatricians and advanced practice nurses for the lowest level emergency department visit code, CPT code 99281, and determined that the survey median value of 0.25 work RVUs appropriately accounts for the physician work typically required to perform this service. The RUC recommended an intra-service and total time of 10 minutes for 99281, 3 minutes higher than the total time of reference code 99211 *Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal* (work RVU= 0.18, total time of 7 minutes). The RUC noted that the survey code has a disparate typical patient that may require slightly more time than the typical patient for 99211.

To further support a value of 0.25, the RUC compared the survey code to MPC code 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU= 0.24, intra-service and total time of 7 minutes) and noted that the survey code typically involves 3 more minutes of intra-service and total time, supporting a value of 0.25 for the survey code. The RUC concluded that CPT code 99281 should be valued at the median work RVU as supported by the survey. **The RUC recommends a work RVU of 0.25 for CPT code 99281.**

99282 ***Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making***
The RUC reviewed the survey results from 162 emergency medicine physicians, pediatricians and advanced practice nurses and determined that a value between the survey 25th percentile of 0.80 and survey median of 0.99 work RVUs would appropriately account for the work required to perform this service. Therefore, the RUC recommends crosswalking CPT code 99282 to top key reference service code 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter* (work RVU= 0.93, total time of 20 minutes). The RUC noted that this value is also the current CMS value. The RUC recommends 18 minutes of intra-service and total time, as supported by the survey. Although, both services involve straightforward medical decision making and would be assigned the same absolute work value, the emergency department service requires a higher work intensity due to the service typically involving somewhat less time. The acute and unscheduled care of multiple undifferentiated patients simultaneously make emergency department services relatively more intense and complex to perform relative to the analogous level of a new patient office visit. The physician/QHP has little to no control over incoming volume or workflow which increases psychological stress.

For additional support, the RUC compared the survey code to CPT code 73700 *Computed tomography, lower extremity; without contrast material* (work RVU= 1.00, total time of 20 minutes) and noted that the survey code typically involves slightly less time and slightly less physician work. The RUC concluded that CPT code 99282 should be valued based on a direct work RVU crosswalk to CPT code 99202 which falls between the survey median and 25th percentile. **The RUC recommends a work RVU of 0.93 for CPT code 99282.**

99283 ***Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making***

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey results from 163 emergency medicine physicians, pediatricians and advanced practice nurses and determined that a value between the survey 25th percentile of 1.50 and survey median of 1.75 would appropriately account for the work required to perform this service. Therefore, the RUC recommends a direct work RVU crosswalk for CPT code 99283 to top key reference service code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter* (work RVU= 1.60, total time of 35 minutes). The RUC noted that this value is also the current CMS value. The RUC recommends 30 minutes of intra-service and total time. Although, both services involve a low level of medical decision making and would be assigned the same absolute work value, the emergency department service requires a higher work intensity due to the service typically involving somewhat less time. The acute and unscheduled care of multiple undifferentiated patients simultaneously make emergency department services relatively more intense and complex to perform relative to the analogous level of a new patient office visit. The physician/QHP has little to no control over incoming volume or workflow which increases psychological stress.

For additional support, the RUC also compared the survey code to MPC code 78072 *Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization* (work RVU= 1.60, total time of 30 minutes) and noted that both services involve the same amount of total time and a similar amount of physician work. The RUC concluded that CPT code 99283 should be valued based on a direct work RVU crosswalk to CPT code 99203 which falls between the survey median and 25th percentile. **The RUC recommends a work RVU of 1.60 for CPT code 99283.**

99284 ***Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making***

The RUC reviewed the survey results from 163 emergency medicine physicians, pediatricians and advanced practice nurses and determined that the survey median overestimated the work typically required to perform this service. After thorough discussion, the RUC recommends the survey 25th percentile work RVU of 2.60 for CPT code 99284 which is also the same work value as top key reference code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter* (work RVU= 2.60, total time of 60 minutes). The RUC recommends 40 minutes of intra-service and total time as supported by the survey. The RUC compared the survey code to top key reference code 99204 and noted that, although it concurs with the presenting specialties that 99284 is a more intense service to perform, 99204 typically involves 20 more minutes of total time. Although both services involve moderate medical decision making and would be assigned the same absolute work value, the emergency department service requires a higher work intensity due to the service typically involving less time. The acute and unscheduled care of multiple undifferentiated patients simultaneously make emergency department services relatively more intense and complex to perform relative to the analogous level of a new patient office visit. The physician/QHP has little to no control over incoming volume or workflow which increases psychological stress. The RUC concluded that CPT code 99284 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 2.60 for CPT code 99284.**

99285 ***Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making***

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey results for 162 emergency medicine physicians, pediatricians and advanced practice nurses for the highest level emergency department visit code, CPT code 99285, and determined that the survey median value of 4.00 appropriately accounts for the physician work required to perform this service. The RUC noted that this value is also the current CMS value. The RUC recommends 60 minutes of intra-service and total time, 5 minutes more than the current time assigned to this service. The RUC noted that a work value of 4.00 would appropriately assign 99285 a work value that reflects an intensity higher than 99284. The RUC compared the survey code to critical care visits 99291 *Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes* (work RVU= 4.50, total time of 70 minutes) and add-on code 99292 *Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)* (work RVU=2.25, total time of 30 minutes) and noted that a value of 4.00 for the highest level ED visit code maintains appropriate relativity with critical care services. The RUC also compared the survey code to top key reference service code 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter* (work RVU=3.50, total time of 88 minutes) and noted that although both services involve a high level of medical decision making and the reference code involves more total time, it is appropriate to assign the highest level ED visit code a higher work value. 76 percent of the survey respondents that selected 99205 as their top key reference service had indicated that a level 5 emergency department visit is more intense and complex to perform (with another 11 percent rating 99285 as somewhat more intense/complex). The acute and unscheduled care of multiple undifferentiated patients simultaneously make emergency department services relatively more intense and complex to perform relative to the analogous level of a new patient office visit. The physician/QHP has little to no control over incoming volume or workflow which increases psychological stress. The RUC concluded that CPT code 99285 should be valued at the median work RVU as supported by the survey. **The RUC recommends a work RVU of 4.00 for CPT code 99285.**

Work Neutrality
The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Practice Expense
No direct practice expense inputs are recommended for CPT codes 99281-99285 as they are facility-only services.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Evaluation and Management
Emergency Department Services
New or Established Patient

The following codes are used to report evaluation and management services provided in the emergency department. No distinction is made between new and established patients in the emergency department.

An emergency department is defined as an organized hospital-based facility for the provision of unscheduled episodic services to patients who present for immediate medical attention. The facility must be available 24 hours a day.

For critical care services provided in the emergency department, see Critical Care notes and 99291, 99292. Critical care and emergency department services may both be reported on the same day when after completion of the emergency department service, the condition of the patient changes, and critical care services are provided.

For evaluation and management services provided to a patient in ~~an~~ observation status ~~area of a hospital,~~ see 99221, 99222, 99223 for the initial observation encounter and 99231, 99232, 99233, 99238, 99239 for subsequent observation or inpatient encounters.~~99217-99220.~~

For hospital inpatient or observation ~~or inpatient~~ care services (including admission and discharge services), see 99234-99236.

To report services when a patient is admitted to hospital inpatient, or observation status, or to a nursing facility in the course of an encounter in another setting, see **Initial Hospital Inpatient or Observation Care** or **Initial Nursing Facility Care**.

For procedures or services identified by a CPT code that may be separately reported on the same date, use the appropriate CPT code. Use the appropriate modifier(s) to report separately identifiable evaluation and management services and the extent of services provided in a surgical package.

If a patient is seen in the emergency department for the convenience of a physician or other qualified health care professional, use office or other outpatient services codes (99202-99215).

Coding Tip

Time as a Factor in the Emergency Department Setting

Time is **not** a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time. ~~Therefore, it is often difficult for physicians to provide accurate estimates of the time spent face-to-face with the patient.~~

Coding Tip

Emergency Department Classification of New vs Established Patient

No distinction is made between new and established patients in the emergency department. E/M services in the emergency department category may be reported for any new or established patient who presents for treatment in the emergency department.

CPT Coding Guidelines, Evaluation and Management, Guidelines Common to All E/M Services, New and Established Patient

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT 2023 E/M Guidelines

Category I
Evaluation and Management (E/M) Services Guidelines

In addition to the information presented in the Introduction, several other items unique to this section are defined or identified here.

E/M Guidelines Overview

The E/M guidelines have sections that are common to all E/M categories and sections that are category specific. Most of the categories and many of the subcategories of service have special guidelines or instructions unique to that category or subcategory. Where these are indicated, eg, "Hospital Inpatient and Observation Care," special instructions are presented before the listing of the specific E/M services codes. It is important to review the instructions for each category or subcategory. These guidelines are to be used by the reporting physician or other qualified health care professional to select the appropriate level of service. These guidelines do not establish documentation requirements or standards of care. The main purpose of documentation is to support care of the patient by current and future health care team(s). These guidelines are for services that require a face-to-face encounter. (For 99211 and 99281 the face-to-face services may be performed by clinical staff).

In the **Evaluation and Management** section (99202-99499) there are many code categories. Each category may have specific guidelines, or the codes may include specific details. These E/M guidelines are written for the following categories:

- Office or Other Outpatient Services
- Hospital Inpatient and Observation Care Services
- Consultations
- Emergency Department Services
- Nursing Facility Services
- Home and Residence Services
- Prolonged Service With or Without Direct Contact on the Date of an Evaluation and Management Service

Classification of Evaluation and Management (E/M) Services

The E/M section is divided into broad categories such as office visits, hospital inpatient or observation care visits, and consultations. Most of the categories are further divided into two or more subcategories of E/M services. For example, there are two subcategories of office visits (new patient and established patient) and there are two subcategories of hospital inpatient and observation care visits (initial and subsequent). The subcategories of E/M services are further classified into levels of E/M services that are identified by specific codes.

The basic format of codes with levels of E/M services based on medical decision making (MDM) or time is the same. First, a unique code number is listed. Second, the place and/or type of service is specified, eg, office or other outpatient visit. Third, the content of the service is defined. Fourth, time is specified. (A detailed discussion of time is provided following the Decision Tree for New vs Established Patients.)

The place of service and service type is defined by the location where the face-to-face encounter occurs. For example, service provided to a nursing facility resident brought to the office is reported with an office or other outpatient code.

New and Established Patients

Solely for the purposes of distinguishing between new and established patients, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. A new patient is one who has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years.

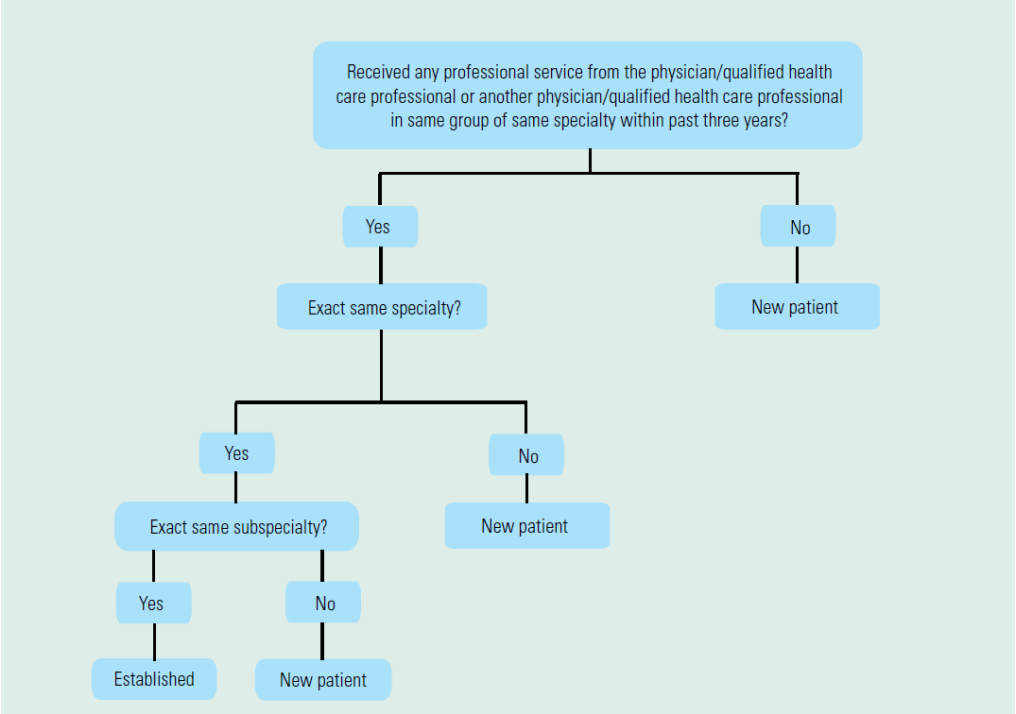
An established patient is one who has received professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years. See Decision Tree for New vs Established Patients.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

No distinction is made between new and established patients in the emergency department. E/M services in the emergency department category may be reported for any new or established patient who presents for treatment in the emergency department.

The Decision Tree for New vs Established Patients is provided to aid in determining whether to report the E/M service provided as a new or an established patient encounter.

Coding Tip



Instructions for Use of the CPT Codebook

When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialty as the physician. A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his or her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional, and who is allowed by law, regulation and facility policy to perform or assist in the performance of a specific professional service but does not individually report that professional service. Other policies may also affect who may report specific services.

CPT Coding Guidelines, Introduction, Instructions for Use of the CPT Codebook

---

Decision Tree for New vs Established Patients

Initial and Subsequent Services

Some categories apply to both new and established patients (eg, hospital inpatient or observation care). These categories differentiate services by whether the service is the initial service or a subsequent service. For the purpose of distinguishing between initial or subsequent visits, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. An initial service is when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the inpatient or observation or nursing facility admission and stay.

A subsequent service is when the patient has received professional service(s) from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the admission and stay.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

For reporting hospital inpatient or observation care services, a stay that includes a transition from observation to inpatient is a single stay. For reporting nursing facility services, a stay that includes transition(s) between skilled nursing facility and nursing facility level of care is the same stay.

Services Reported Separately

Any specifically identifiable procedure or service (ie, identified with a specific CPT code) performed on the date of E/M services may be reported separately.

The ordering and actual performance and/or interpretation of diagnostic tests/studies during a patient encounter are not included in determining the levels of E/M services when the professional interpretation

of those tests/studies is reported separately by the physician or other qualified health care professional reporting the E/M service. Tests that do not require separate interpretation (eg, tests that are results only) and are analyzed as part of MDM do not count as an independent interpretation and may be counted as ordered or reviewed for selecting an MDM level.

The performance of diagnostic tests/studies for which specific CPT codes are available may be reported separately, in addition to the appropriate E/M code. The interpretation of the results of diagnostic tests/studies (ie, professional component) with preparation of a separate distinctly identifiable signed written report may also be reported separately, using the appropriate CPT code and, if required, with modifier 26 appended.

See Instructions for Selecting a Level Based on MDM or Time.

The physician or other qualified health care professional may need to indicate that on the day a procedure or service identified by a CPT code was performed, the patient's condition required a significant separately identifiable E/M service. The E/M service may be caused or prompted by the symptoms or condition for which the procedure and/or service was provided. This circumstance may be reported by adding modifier 25 to the appropriate level of E/M service. As such, different diagnoses are not required for reporting of the procedure and the E/M services on the same date.

History and/or Examination

These E/M services include a medically appropriate history and/or physical examination, when performed. The nature and extent of the history and/or physical examination are determined by the treating physician or other qualified health care professional reporting the service. The care team may collect information, and the patient or caregiver may supply information directly (eg, by electronic health record [EHR] portal or questionnaire) that is reviewed by the reporting physician or other qualified health care professional. The extent of history and physical examination is not an element in selection of the level of these E/M service codes.

Levels of E/M Services

Select the appropriate level of E/M services based on the following:

1. The level of the MDM as defined for each service, **or**

2. The total time for E/M services performed on the date of the encounter.

Within each category or subcategory of E/M service based on MDM or time, there are three to five levels of E/M services available for reporting purposes. Levels of E/M services are **not** interchangeable among the different categories or subcategories of service. For example, the first level of E/M services in the subcategory of office visit, new patient, does not have the same definition as the first level of E/M services in the subcategory of office visit, established patient. Each level of E/M services may be used by all physicians or other qualified health care professionals.

Guidelines for Selecting a level service based on Medical Decision Making

Four types of MDM are recognized: straightforward, low, moderate, and high. The concept of the level of MDM does not apply to 99211 or 99281.

MDM includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option. MDM is defined by three elements. The elements are:

- ***The number and complexity of problem(s) that are addressed during the encounter***.
- ***The amount and/or complexity of data to be reviewed and analyzed.*** These data include medical records, tests, and/or other information that must be obtained, ordered, reviewed, and analyzed for the encounter. This includes information obtained from multiple sources or interprofessional communications that are not reported separately and interpretation of tests that are not reported

separately. Ordering a test is included in the category of test result(s) and the review of the test result is part of the encounter and not a subsequent encounter. Ordering a test may include those considered, but not selected after shared decision making. For example, a patient may request diagnostic imaging that is not necessary for their condition and discussion of the lack of benefit may be required. Alternatively, a test may normally be performed, but due to risk for a specific patient is not ordered. These considerations must be documented. Data are divided into three categories:

- Tests, documents, orders, or independent historian(s). (Each unique test, order, or document is counted to meet a threshold number.)
- Independent interpretation of tests (not separately reported)
- Discussion of management or test interpretation with external physician or other qualified health care professional or appropriate source (not separately reported)

- **The risk of complications and/or morbidity or mortality of patient management:** This includes decisions made at the encounter associated with the diagnostic procedure(s) and treatment(s). This includes the possible management options selected and those considered but not selected, after shared decision making with the patient and/or family. For example, a decision about hospitalization includes consideration of alternative levels of care. Examples may include a psychiatric patient with a sufficient degree of support in the outpatient setting or the decision to not hospitalize a patient with advanced dementia with an acute condition that would generally warrant inpatient care, but for whom the goal is palliative treatment.

Shared decision making involves eliciting patient and/or family preferences, patient and/or family education, and explaining risks and benefits of management options.

MDM may be impacted by role and management responsibility.

When the physician or other qualified health care professional is reporting a separate CPT code that includes interpretation and/or report, the interpretation and/or report is not counted toward the MDM when selecting a level of E/M services.

When the physician or other qualified health care professional is reporting a separate service for discussion of management with a physician or another qualified health care professional, the discussion is not counted toward the MDM when selecting a level of E/M services.

The Levels of Medical Decision Making (MDM) table (Table 2) is a guide to assist in selecting the level of MDM for reporting an E/M services code. The table includes the four levels of MDM (ie, straightforward, low, moderate, high) and the three elements of MDM (ie, number and complexity of problems addressed at the encounter, amount and/or complexity of data reviewed and analyzed, and risk of complications and/or morbidity or mortality of patient management). To qualify for a particular level of MDM, two of the three elements for that level of MDM must be met or exceeded.

Examples in the table may be more or less applicable to specific settings of care. For example, the decision to hospitalize applies to the outpatient or nursing facility encounters, whereas the decision to escalate hospital level of care (eg, transfer to ICU) applies to the hospitalized or observation care patient.

See also the introductory guidelines of each code family section.

Table 2: Levels of Medical Decision Making (MDM)

Level of MDM (Based on 2 out of 3 Elements of MDM)	Elements of Medical Decision Making		
	Number and Complexity of Problems Addressed at the Encounter	Amount and/or Complexity of Data to be Reviewed and Analyzed **Each unique test, order, or document contributes to the combination of 2 or combination of 3 in Category 1 below.*	Risk of Complications and/or Morbidity or Mortality of Patient Management
N/A	N/A	N/A	N/A
Straightforward	Minimal • 1 self-limited or minor problem	Minimal or none	Minimal risk of morbidity from additional diagnostic testing or treatment
Low	Low • 2 or more self-limited or minor problems; or • 1 stable, chronic illness; or • 1 acute, uncomplicated illness or injury or • 1 stable acute illness or • 1 acute, uncomplicated illness or injury requiring hospital inpatient or observation level of care	Limited *(Must meet the requirements of at least 1 of the 2 categories*) Category 1: Tests and documents • Any combination of 2 from the following: ○ Review of prior external note(s) from each unique source*; ○ Review of the result(s) of each unique test*; ○ Ordering of each unique test* or Category 2: Assessment requiring an independent historian(s) *(For the categories of independent interpretation of tests and discussion of management or test interpretation, see moderate or high)*	Low risk of morbidity from additional diagnostic testing or treatment

Moderate	Moderate
	• 1 or more chronic illnesses with exacerbation, progression, or side effects of treatment;
	or
	• 2 or more stable, chronic illnesses;
	or
	• 1 undiagnosed new problem with uncertain prognosis;
	or
	• 1 acute illness with systemic symptoms;
	or
	• 1 acute, complicated injury
		Moderate
		(Must meet the requirements of at least 1 out of 3 categories)
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			Moderate risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Prescription drug management
			• Decision regarding minor surgery with identified patient or procedure risk factors
			• Decision regarding elective major surgery without identified patient or procedure risk factors
			• Diagnosis or treatment significantly limited by social determinants of health

High	High
	• 1 or more chronic illnesses with severe exacerbation, progression, or side effects of treatment;
	or
	• 1 acute or chronic illness or injury that poses a threat to life or bodily function
		Extensive
		(Must meet the requirements of at least 2 out of 3 categories)
		
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			High risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Drug therapy requiring intensive monitoring for toxicity
			• Decision regarding elective major surgery with identified patient or procedure risk factors
			• Decision regarding emergency major surgery
			• Decision regarding hospitalization or escalation of hospital-level of care
			• Decision not to resuscitate or to de-escalate care because of poor prognosis
			• Parenteral controlled substances

Number and Complexity of Problems Addressed at the Encounter

One element used in selecting the level of services is the number and complexity of the problems that are addressed at the encounter. Multiple new or established conditions may be addressed at the same time and may affect MDM. Symptoms may cluster around a specific diagnosis and each symptom is not necessarily a unique condition. Comorbidities and underlying diseases, in and of themselves, are not considered in selecting a level of E/M services **unless** they are addressed, and their presence increases the amount and/or complexity of data to be reviewed and analyzed or the risk of complications and/or morbidity or mortality of patient management. The final diagnosis for a condition does not, in and of itself, determine the complexity or risk, as extensive evaluation may be required to reach the conclusion that the signs or symptoms do not represent a highly morbid condition. Therefore, presenting symptoms which are likely to represent a highly morbid condition may drive MDM even when the ultimate diagnosis is not highly morbid. The evaluation and /or treatment should be consistent with the likely nature of the condition. Multiple problems of a lower severity may, in the aggregate, create higher risk due to interaction.

The term "risk" as used in these definitions relates to risk from the condition. While condition risk and management risk may often correlate, the risk from the condition is distinct from the risk of the management.

Definitions for the elements of MDM (see Table 2, Levels of Medical Decision Making) are:

Problem: *A problem is a disease, condition, illness, injury, symptom, sign, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter.*

Problem addressed: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified health care professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in the patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or qualified health care professional and may not be the cause of admission or continued stay.

Minimal problem: A problem that may not require the presence of the physician or other qualified health care professional, but the service is provided under the physician's or other qualified health care professional's supervision (see 99211, 99281).

Self-limited or minor problem: *A problem that runs a definite and prescribed course, is transient in nature, and is not likely to permanently alter health status.*

Stable, chronic illness: A problem with an expected duration of at least one year or until the death of the patient. For the purpose of defining chronicity, conditions are treated as chronic whether or not stage or severity changes (eg, uncontrolled diabetes and controlled diabetes are a single chronic condition). "Stable" for the purposes of categorizing MDM is defined by the specific treatment goals for an individual patient. A patient who is not at his or her treatment goal is not stable, even if the condition has not changed and there is no short-term threat to life or function. For example, a patient with persistently poorly controlled blood pressure for whom better control is a goal is not stable, even if the pressures are not changing and the patient is asymptomatic. The risk of morbidity **without** treatment is significant.

Acute, uncomplicated illness or injury: A recent or new short-term problem with low risk of morbidity for which treatment is considered. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. A problem that is normally self-limited or minor but is not resolving consistent with a definite and prescribed course is an acute, uncomplicated illness.

Acute, uncomplicated illness or injury requiring hospital inpatient or observation level care: A recent or new short-term problem with low risk of morbidity for which treatment is required. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. The treatment required is delivered in a hospital inpatient or observation level setting.

Stable, acute illness: A problem that is new or recent for which treatment has been initiated. The patient is improved and while resolution may not be complete is stable with respect to this condition.

Chronic illness with exacerbation, progression, or side effects of treatment: A chronic illness that is acutely worsening, poorly controlled, or progressing with an intent to control progression and requiring additional supportive care or requiring attention to treatment for side effects.

Undiagnosed new problem with uncertain prognosis: A problem in the differential diagnosis that represents a condition likely to result in a high risk of morbidity without treatment.

Acute illness with systemic symptoms: An illness that causes systemic symptoms and has a high risk of morbidity without treatment. For systemic general symptoms, such as fever, body aches, or fatigue in a minor illness that may be treated to alleviate symptoms, see the definitions for **self-limited or minor problem** or **acute, uncomplicated illness or injury.** Systemic symptoms may not be general but may be single system.

Acute, complicated injury: An injury which requires treatment that includes evaluation of body systems that are not directly part of the injured organ, the injury is extensive, or the treatment options are multiple and/or associated with risk of morbidity.

Chronic illness with severe exacerbation, progression, or side effects of treatment: The severe exacerbation or progression of a chronic illness or severe side effects of treatment that have significant risk of morbidity and may require escalation in level of care.

Acute or chronic illness or injury that poses a threat to life or bodily function: An acute illness with systemic symptoms, an acute complicated injury, or a chronic illness or injury with exacerbation and/or progression or side effects of treatment, that poses a threat to life or bodily function in the near term without treatment. Some symptoms may represent a condition that is significantly probable and poses a potential threat to life or bodily function. These may be included in this category when the evaluation and treatment is consistent with this degree of potential severity.

Amount and/or Complexity of Data to be Reviewed and Analyzed

One element used in selecting the level of services is the amount and/or complexity of data to be reviewed or analyzed at an encounter.

Analyzed: Analyzed is a term describing the process of using the data as part of the MDM. The data element itself may not be subject to analysis (eg, glucose), but it is instead included in the thought processes for diagnosis, evaluation, or treatment. Tests ordered are presumed to be analyzed when the results are reported. Therefore, when they are ordered during an encounter, they are counted in that encounter. Tests that are ordered outside of an encounter may be counted in the encounter where they are analyzed. In the case of a recurring order, each new result may be counted in the encounter at which it is analyzed. For example, an encounter that includes an order for monthly prothrombin times would count for one prothrombin time ordered and reviewed. Additional future results, if analyzed in a subsequent encounter, may be counted as a single test in that subsequent encounter. Any service for which the professional component is separately reported by the physician or other qualified health care professional

reporting the E/M services is not counted as a data element ordered, reviewed, analyzed, or independently interpreted for the purposes of determining the level of MDM.

Test: Tests are imaging, laboratory, psychometric, or physiologic data. A clinical laboratory panel (eg, basic metabolic panel [80047]) is a single test. The differentiation between single or multiple tests is defined in accordance with the CPT code set. For the purposes of data reviewed and analyzed, pulse oximetry is not a test.

Unique: A unique test is defined by the CPT code set. When multiple results of the same unique test (eg, serial blood glucose values) are compared during an E/M service, only count one unique test. Tests that have overlapping elements are not unique, even if they are identified with distinct CPT codes. For example, a CBC with differential would incorporate the set of hemoglobin, CBC without differential, and platelet count. A unique source is defined as a physician or qualified heath care professional in a distinct group or different specialty or subspecialty, or a unique entity. Review of all materials from any unique source counts as one element towards MDM.

Combination of Data Elements: A combination of different data elements, for example a combination of notes reviewed, tests ordered, tests reviewed, or independent historian, allows these elements to be summed. It does not require each item type or category to be represented. A unique test ordered, plus a note reviewed and an independent historian would be a combination of three elements.

External: *External records, communications and/or test results are from an external physician, other qualified health care professional, facility, or health care organization.*

External physician or other qualified health care professional: *An external physician or other qualified health care professional who is not in the same group practice or is of a different specialty or subspecialty. This includes licensed professionals who are practicing independently. The individual may also be a facility or organizational provider such as from a hospital, nursing facility, or home health care agency.*

Discussion: Discussion requires an interactive exchange. The exchange must be direct and not through intermediaries (eg, clinical staff or trainees). Sending chart notes or written exchanges that are within progress notes does not qualify as an interactive exchange. The discussion does not need to be on the date of the encounter but is counted only once and only when it is used in the decision making of the encounter. It may be asynchronous (ie, does not need to be in person), but it must be initiated and completed within a short time period (eg, within a day or two).

Independent historian(s): An individual (eg, parent, guardian, surrogate, spouse, witness) who provides a history in addition to a history provided by the patient who is unable to provide a complete or reliable history (eg, due to developmental stage, dementia, or psychosis) or because a confirmatory history is judged to be necessary. In the case where there may be conflict or poor communication between multiple historians and more than one historian is needed, the independent historian requirement is met. It does not include translation services. The independent history does not need to be obtained in person but does need to be obtained directly from the historian providing the independent information.

Independent interpretation: The interpretation of a test for which there is a CPT code, and an interpretation or report is customary. This does not apply when the physician or other qualified health care professional who reports the E/M service is reporting or has previously reported the test. A form of interpretation should be documented but need not conform to the usual standards of a complete report for the test.

Appropriate source: *For the purpose of the* ***discussion of management*** *data element (see Table 2, Levels of Medical Decision Making), an appropriate source includes professionals who are not health care professionals but may be involved in the management of the patient (eg, lawyer, parole officer, case manager, teacher). It does not include discussion with family or informal caregivers.*

Risk of Complications and/or Morbidity or Mortality of Patient Management

One element used in selecting the level of services is the risk of complications and/or morbidity or mortality of patient management at an encounter. This is distinct from the risk of the condition itself.

Risk: The probability and/or consequences of an event. The assessment of the level of risk is affected by the nature of the event under consideration. For example, a low probability of death may be high risk, whereas a high chance of a minor, self-limited adverse effect of treatment may be low risk. Definitions of risk are based upon the usual behavior and thought processes of a physician or other qualified health care professional in the same specialty. Trained clinicians apply common language usage meanings to terms such as high, medium, low, or minimal risk and do not require quantification for these definitions (though quantification may be provided when evidence-based medicine has established probabilities). For the purposes of MDM, level of risk is based upon consequences of the problem(s) addressed at the encounter when appropriately treated. Risk also includes MDM related to the need to initiate or forego further testing, treatment, and/or hospitalization. The risk of patient management criteria applies to the patient management decisions made by the reporting physician or other qualified health care professional as part of the reported encounter.

Morbidity: *A state of illness or functional impairment that is expected to be of substantial duration during which function is limited, quality of life is impaired, or there is organ damage that may not be transient despite treatment.*

Social determinants of health: *Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.*

Surgery (minor or major, elective, emergency, procedure or patient risk):

> ***Surgery-Minor or Major:*** The classification of surgery into minor or major is based upon the common meaning of such terms when used by trained clinicians, similar to the use of the term "risk". These terms are not defined by a surgical package classification.
>
> ***Surgery-Elective or Emergency:*** Elective procedures and emergent or urgent procedures describe the timing of a procedure when the timing is related to the patient's condition. An elective procedure is typically planned in advance (eg, scheduled for weeks later), while an emergent procedure is typically performed immediately or with minimal delay to allow for patient stabilization. Both elective and emergent procedures may be minor or major procedures.
>
> ***Surgery-Risk Factors, Patient or Procedure:*** Risk factors are those that are relevant to the patient and procedure. Evidence-based risk calculators may be used, but are not required, in assessing patient and procedure risk.

Drug therapy requiring intensive monitoring for toxicity: A drug that requires intensive monitoring is a therapeutic agent that has the potential to cause serious morbidity or death. The monitoring is performed for assessment of these adverse effects and not primarily for assessment of therapeutic efficacy. The monitoring should be that which is generally accepted practice for the agent but may be patient-specific in some cases. Intensive monitoring may be long-term or short-term. Long-term intensive monitoring is not performed less than quarterly. The monitoring may be performed with a laboratory test, a physiologic test, or imaging. Monitoring by history or examination does not qualify. The monitoring affects the level of MDM in an encounter in which it is considered in the management of the patient. An example may be monitoring for cytopenia in the use of an antineoplastic agent between dose cycles. Examples of monitoring that do not qualify include monitoring glucose levels during insulin therapy, as the primary reason is the therapeutic effect (unless severe hypoglycemia is a current, significant concern); or annual electrolytes and renal function for a patient on a diuretic, as the frequency does not meet the threshold.

Guidelines for Selecting Level of Service Based on Time

Certain categories of time-based E/M codes that do not have levels of services based on MDM (eg, Critical Care Services) in the E/M section use time differently. It is important to review the instructions for each category.

Time is **not** a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time.

When time is used for reporting E/M services codes, the time defined in the service descriptors is used for selecting the appropriate level of services. The E/M services for which these guidelines apply require a face-to-face encounter with the physician or other qualified health care professional. For office or other outpatient services, if the physician's or other qualified health care professional's time is spent in the supervision of clinical staff who perform the face-to-face services of the encounter, use 99211.

For coding purposes, time for these services is the total time on the date of the encounter. It includes both the face-to-face and non-face-to-face time personally spent by the physician and/or other qualified health care professional(s) on the day of the encounter (includes time in activities that require the physician or other qualified health care professional and does not include time in activities normally performed by clinical staff). It does not include any time spent in the performance of other separately reported service(s).

A shared or split visit is defined as a visit in which a physician and other qualified health care professional(s) both provide the face-to-face and non-face-to-face work related to the visit. When time is being used to select the appropriate level of services for which time-based reporting of shared or split visits is allowed, the time personally spent by the physician and other qualified health care professional(s) assessing and managing the patient on the date of the encounter is summed to define total time. Only distinct time should be summed for shared or split visits (ie, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted).

When prolonged time occurs, the appropriate prolonged services code may be reported. The total time on the date of the encounter spent caring for the patient should be documented in the medical record when it is used as the basis for code selection.

Physician or other other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (when not separately reported) and communicating results to the patient family/caregiver
- care coordination (when not separately reported)

Do not count time spent on the following:

- the performance of other services reported separately

- travel
- teaching that is general and not limited to discussion that is required for the management of the specific patient

Unlisted Service

An E/M service may be provided that is not listed in this section of the CPT codebook. When reporting such a service, the appropriate unlisted code may be used to indicate the service, identifying it by "Special Report," as discussed in the following paragraph. The "Unlisted Services" and accompanying codes for the E/M section are as follows:

***99429 Unlisted preventive** medicine service*

***99499 Unlisted evaluation and management** service*

Special Report

An unlisted service or one that is unusual, variable, or new may require a special report demonstrating the medical appropriateness of the service. Pertinent information should include an adequate definition or description of the nature, extent, and need for the procedure and the time, effort, and equipment necessary to provide the service. Additional items that may be included are complexity of symptoms, final diagnosis, pertinent physical findings, diagnostic and therapeutic procedures, concurrent problems, and follow-up care.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99281 Tracking Number H1 Original Specialty Recommended RVU: **0.25**
Presented Recommended RVU: **0.25**
Global Period: XXX Current Work RVU: **0.48** RUC Recommended RVU: **0.25**

CPT Descriptor: Emergency department visit for the evaluation and management of a patient, that may not require the presence of a physician or other qualified health care professional.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents to the emergency department for suture removal after repair of a forearm laceration by a different provider in another location. There are no complaints, and the wound appears well healed.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: .

Description of Intra-Service Work: Obtain a medically appropraiate history, including interviews with patient, prehospital personnel, family members, and caregivers in person or by phone as needed, and perform a medcially appropropriate physical examination. Formulate a diagnosis and develop a treatment plan (MDM is not a component). Enter orders in the EHR during the evaluation of the patient and begin the documentation. Formulate a discharge plan. Discuss follow-up and reasons for return to the emergency department. Explain any prescriptions or other treatments and work, school, or activity restrictions. Answer patient and patient caregiver questions.

Description of Post-Service Work: .

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99211	XXX	0.18	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99212	XXX	0.70	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99406	XXX	0.24	**RUC Time**	532,709

CPT Descriptor 1 Smoking and tobacco use cessation counseling visit: intermediate, greater than 3 minutes up to 10 minutes

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
72074	XXX	0.25	**RUC Time**	4,505

CPT Descriptor 2 Radiologic examination, spine thoracic, minimum of 4 views

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 102 **% of respondents:** 64.9 **%**

Number of respondents who choose 2nd Key Reference Code: 21 **% of respondents:** 13.3 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	5%	5%	72%	15%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	70%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	77%	13%

Physical effort required	12%	74%	14%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	72%	17%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	9%	66%	23%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	76%	10%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	4%	71%	25%
Physical effort required	4%	66%	30%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	57%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The current 99281 RVUw is 0.48. Our combined survey median was 0.25 with a 25th percentile of 0.18. The intraservice time has increased from the current 8 minutes to the survey median of 10 minutes. The intensity has dropped with new code descriptor, which may not require the presence of a physician or other qualified health care professional, such as a well healed wound recheck. The WPUT is about the same for the first key reference

service 99211 (0.025 vs. 0.026). The majority of respondents, with seventy two percent, said the intensity of 99281 is the same as 99211. Only 15 % said it was somewhat more, and zero% said it was much more. Of note, the intensity dropped compared to the current 99281 intensity values (0.032 vs. 0.025). **We are asking for a slightly longer intraservice time of ten minutes and about half the current work value of 99281 (0.48) at 0.25.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 2019 Medicare claims data

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Emergency Medicine — How often? Commonly

Specialty Pediatric Medicine — How often? Sometimes

Specialty Nurse Practitioner — How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 270920

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents 20% of ED claims

Specialty Emergency Medicine Frequency 118635 Percentage 43.78 %

Specialty Nurse Practitioner Frequency 36818 Percentage 13.58 %

Specialty Pediatric Medicine Frequency 270 Percentage 0.01 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 67,730
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare claims data frequency

Specialty Emergency Medicine Frequency 29665 Percentage 43.79 %

Specialty Nurse Practitioner Frequency 9211 Percentage 13.59 %

Specialty Pediatric Medicine Frequency 677 Percentage 0.01 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Emergency room visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99281

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99282 Tracking Number H2 Original Specialty Recommended RVU: **0.93**
Presented Recommended RVU: **0.93**
Global Period: XXX Current Work RVU: **0.93** RUC Recommended RVU: **0.93**

CPT Descriptor: Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents to the emergency department with a self-limited or minor problem.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: .

Description of Intra-Service Work: Obtain a medically appropriate history, including interviews with patient, prehospital personnel, and family members in person or by phone as needed. Perform a medically appropriate examination; formulate a diagnosis and develop a treatment plan (MDM of straightforward complexity). Enter orders in the computer during the evaluation of the patient and begin the medical record. Explain any prescriptions required along with discharge instructions and any follow-up care required, including reasons to return to the ED. Answer patient and patient caregiver questions.

Description of Post-Service Work: .

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	3%	1%	56%	36%	1%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	55%	36%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	66%	28%
Physical effort required	9%	70%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	65%	28%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	53%	40%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	55%	41%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	59%	37%
Physical effort required	2%	68%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	57%	37%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The current 99282 RVUw is 0.93 Our combined survey median is 0.99 with a 25th percentile of 0.80. 99282 Intra time increased from 10 to 18 minutes while the total time dropped by one minute. The 99282 WPUT is greater than the forest key reference service 99202 (0.055 vs. 0.047). Thirty six percent of respondents said this intensity/complexity of 99282 was somewhat more than 99202. **We are asking to retain the current value of 99282 at 0.93 to maintain the current relativity with 99202 in 2021.** Both RUC and CMS have considered these services equivalent in multiple prior considerations of these codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 2019 Medicare claims data

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Emergency Medicine How often? Commonly

Specialty Pediatric Medicine How often? Sometimes

Specialty Nurse Practitioner How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1409984
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents 20% of all ED claims

Specialty Emergency Medicine	Frequency 802139	Percentage 56.88 %
Specialty Nurse Practitioner	Frequency 136627	Percentage 9.68 %
Specialty Pediatric Medicine	Frequency 1409	Percentage 0.01 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 352,496 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare claims data frequency

Specialty Emergency Medicine	Frequency 200570	Percentage 56.89 %
Specialty Nurse Practitioner	Frequency 34192	Percentage 9.69 %
Specialty Pediatric Medicine	Frequency 352	Percentage 0.01 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Emergency room visit

BETOS Sub-classification Level II:
NA

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: .

Description of Intra-Service Work: Obtain a medically appropriate history, including interviews with patient, physician office, nursing home, or EMS personnel, and family members in person or by phone as needed, and perform a medically appropriate examination. Formulate a diagnosis and treatment plan (MDM of low complexity). Enter orders in the computer during the evaluation of the patient and begin the medical record. Communicate with other health care professionals as necessary during the encounter. Evaluate response to therapy, review data from diagnostic testing, and reassess the patient. Formulate a discharge plan, including medication and other treatments as well as follow-up planning. Explain any prescriptions or other therapies required along with discharge instructions, activity limitations, and any follow-up care required, including reasons to return to the ED. Answer patient and patient caregiver questions.

Description of Post-Service Work: .

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99203	XXX	1.60	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	1.30	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95861	XXX	1.54	**RUC Time**	44,204

CPT Descriptor 1 Needle electromyography; 2 extremities with or without related paraspinal areas

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93351	XXX	1.75	**RUC Time**	151,068

CPT Descriptor 2 Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional

Median Total Time	**30.00**	**35.00**	**26.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	4%	17%	63%	14%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	27%	70%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	33%	63%
Physical effort required	4%	39%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	25%	72%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	37%	50%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	40%	51%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	34%	66%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The current 99283 RVUw is 1.60. Our combined survey median is 1.75 with a 25th percentile of 1.50 99283 Intra time is higher than the first key reference service 99203 at 30 vs. 25 minutes. WPUT for 99283 is greater than 99203 (0.058 vs. 0.046). Sixty three percent or respondents said this intensity/complexity was somewhat more than 99203. Fourteen percent said intensity/complexity was much more. **We are asking to maintain the current value of 99283 as compared to 99203 at 1.60 to maintain relativity across the code families as previously approved by RUC and CMS multiple times.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 2019 Medicare claims data

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Emergency Medicine How often? Commonly

Specialty Pediatric Medicine How often? Sometimes

Specialty Nurse Practitioner How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 10978840
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents 20% of ED claims

Specialty Emergency Medicine	Frequency 6630121	Percentage 60.38 %
Specialty Nurse Practitioner	Frequency 1107764	Percentage 10.08 %
Specialty Pediatric Medicine	Frequency 10978	Percentage 0.01 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,744,710 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare claims data frequency

Specialty Emergency Medicine	Frequency 1657804	Percentage 60.39 %
Specialty Nurse Practitioner	Frequency 277215	Percentage 10.09 %
Specialty Pediatric Medicine	Frequency 2744	Percentage 0.01 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Emergency room visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99283

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99284 Tracking Number H4 Original Specialty Recommended RVU: **2.74**
Presented Recommended RVU: **2.74**
Global Period: XXX Current Work RVU: **2.74** RUC Recommended RVU: **2.60**

CPT Descriptor: Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents to the emergency department with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Obtain a medically appropriate history, including interviews with patient, physician office, nursing home, or EMS personnel, and family members and caregivers present or by phone as needed. Perform a medicaly appropriate physical examination. Formulate a diagnosis and treatment plan (MDM of moderate complexity). Enter orders in the EHR during the evaluation of the patient and begin the medical record. Communicate with other health care professionals as necessary during the encounter. Review data from diagnostic testing and evaluate response to therapy by reassessing the patient and then adjusting the treatment plan accordingly. Formulate a discharge plan, included needed medications, therapies, and work or activity restrictions and recommendations. Arrange and review follow-up. Explain any prescriptions and treatments required along with discharge instructions and any follow-up care required, including reasons to return to the ED. Answer patient and patient caregiver questions.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The current 99284 RVUw is 2.74. Our combined survey median is 2.95 with a 25th percentile of 2.60. 99284 Intra time is the same as the first key reference service of 99204 at 40 minutes. Maintaining the current work RVU driven WPUT for 99284 at 0.069 (which is lower than the survey median of 0.074) is higher than that of 99204 at 0.43. This is supported as thirty six percent of respondents said this intensity/complexity of 99284 was somewhat more than 99204. And forty five

percent said it was much more intense/complex. In addition, to maintain historic relativity to 99204, 99284 should be raised by 6.9 percent to **2.74**. We are a**sking to maintain the current CMS value of 2.74 to maintain relativity across the families as previously approved by RUC and the value approved by CMS in 2021.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 2019 Medicare claims data

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Emergency Medicine — How often? Commonly

Specialty Pediatric Medicine — How often? Sometimes

Specialty Nurse Practitioner — How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 21,662,600
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare represents 20% of all ED claims

Specialty Emergency Medicine — Frequency 15293795 — Percentage 70.59 %

Specialty Nurse Practitioner — Frequency 1557540 — Percentage 7.18 %

Specialty Pediatric Medicine Frequency 21662 Percentage 0.01 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,415,650 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare claims data frequency

Specialty Emergency Medicine Frequency 3823448 Percentage 70.59 %

Specialty Nurse Practitioner Frequency 389926 Percentage 7.19 %

Specialty Pediatric Medicine Frequency 5415 Percentage 0.01 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Emergency room visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99284

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99285 Tracking Number H5 Original Specialty Recommended RVU: **4.00**
Presented Recommended RVU: **4.00**
Global Period: XXX Current Work RVU: **4.00** RUC Recommended RVU: **4.00**

CPT Descriptor: Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents to the emergency department with a chronic illness with severe exacerbation that poses a threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: .

Description of Intra-Service Work: Obtain a medically appropriate history, including interviews with patient, physician office, nursing home, or EMS personnel, and family members and caregivers present or by phone. Perform a medically appropriate physical examination. Formulate a diagnosis and treatment plan (MDM of high complexity). Enter orders in the EHR during the evaluation of the patient and begin the medical record. Review data from diagnostic testing, including labs, imaging, and imaging interpretation. Reassess the patient multiple times, order additional diagnostic tests as indicated, and adjust treatment plan accordingly. Communicate with other health care professionals as necessary for consultation or care coordination during the encounter. Formulate a disposition plan, including communication to and coordination with an inpatient team if appropriate, or more typically, prepare a discharge plan, with prescriptions and additional therapies, work or activity restrictions, and arrange follow-up appointments or testing as needed. Explain any prescriptions or other therapies as required along with discharge instructions, expected course, and any follow-up care required, including reasons to return to the ED. Answer patient and patient caregiver questions.

Description of Post-Service Work: .

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	1%	2%	8%	11%	76%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	12%	82%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	3%	15%	82%
Physical effort required	3%	15%	82%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	7%	90%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	15%	10%	75%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	25%	75%
Physical effort required	0%	20%	80%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	10%	85%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The current 99285 RVUw is 4.00. Our combined survey median is 4.00 with a 25th percentile of 3.71. 99285 Intra time is slightly higher than 99205 at 60 vs. 59 minutes. WPUT for 99285 is higher at 0.067 vs. 0.040. While eleven percent of respondents said this intensity/complexity was somewhat more than 99204 a robust Seventy six percent said it was much more intense/complex than 99205.

To maintain historic relativity of 99285to 99205, the RUC should raise the code by 10.41 percent to **4.20.** **However, we are asking for the current value at 4.00 as this is supported by both the 2021 and the 2018 RUC surveys, and this to maintains relativity across the ED and new office or other outpatient code families as previously approved by RUC and CMS multiple times, and as the value approved by CMS in 2021.**

RE: Direct Practice Expense Inputs for Tab 12 (99281-99285; H1-H5)

Dear Doctor Silva:

Codes 99281-99285 (*Emergency Department Services)* are among the codes being considered during the April 2021 RUC meeting.

The American Academy of Pediatrics (AAP), American College of Emergency Physicians (ACEP), and American Nurses Association (ANA) have conducted a physician and other qualified healthcare provider work survey for 99821-99825 and developed a work RVU recommendation based on the survey results. However, since the service described by codes 99821-99825 is one that typically occurs in the facility setting, we recommend no direct practice expense inputs for codes 99821-99825.

If you have any questions, please contact Linda Walsh, AAP staff at 630/626-6331 or lwalsh@aap.org.

Thank you.

Sincerely,
Steven Krug, MD, FAAP
AAP RUC Advisor

Jordan Celeste, MD, FACEP
ACEP RUC Advisor

ANA RUC/HPAC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2021

Nursing Facility Services – Tab 13

Following the implementation of the revisions to the Evaluation and Management (E/M) office visits (99201-99215) for the CPT 2021 code set, the CPT/RUC Workgroup on E/M met twelve times in 2020 and early 2021 to standardize the rest of the E/M sections in the CPT code set. The CPT/RUC Workgroup on E/M was committed to changing the current coding and documentation requirements for E/M visits to simplify the work of the health care provider and improve the health of the patient. To achieve these goals, the Workgroup set forth the following guiding principles related to the group's ongoing work product:

1. To decrease administrative burden of documentation and coding and align CPT and CMS whenever possible
2. To decrease the need for audits
3. To decrease unnecessary documentation in the medical record that is not needed for patient care
4. To ensure that payment for E/M is resource-based and that there is no direct goal for payment redistribution between specialties.

In February 2021, the CPT Editorial Panel deleted the annual nursing facility assessment code and revised seven nursing facility codes to align with the principles included in the E/M office visit services by documenting and selecting level of service based on total time or medical decision making.

Similar to the office visits, beginning in 2023, when total time on the date of encounter is used to select the appropriate level of a nursing facility visit service code, both the face-to-face and non-face-to-face time personally spent by the physician (or other qualified health care professional that is reporting the office visit) assessing and managing the patient are summed to select the appropriate code. The nursing facility services were surveyed for the April 2021 RUC meeting. The survey time captured includes pre-service time 1-day before the date of encounter, intra-service time is all the time on the date of encounter and post-service time is 3-days after the date of encounter.

The RUC noted that all the of these services are typically performed in the skilled nursing facility which requires a higher level of care than the nursing facility.

COMPELLING EVIDENCE

In April 2021, the RUC met to review the nursing facility changes. The specialty societies indicated that there is compelling evidence based on flawed methodology. The specialty societies reviewed the methodology used by the RUC in 2007 to arrive at the current values. That methodology was inconsistent among the codes in the family and was not based on survey values or direct crosswalks. For example, 99304, the initial nursing visit code requiring low level medical decision making was valued based on the sum of the value of 99203, a new patient visit also requiring a low level of medical decision making, plus one-fourth the value of 99374, physician supervision of a patient under the care of a home health

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

agency. The RUC justified its recommendations for all the initial nursing visit codes by dividing the median time of the nursing visit code by the median time of the comparable subsequent hospital visit code, multiplying that fraction by the work RVU of the hospital visit code and adding one-fourth of 99374. Similarly, the methodology for valuing the subsequent nursing visit codes was inconsistent and differed from the methodology used for the initial visit codes. The RUC agreed that there is compelling evidence that the previous valuation was based on flawed methodology.

INITIAL NURSING FACILITY CARE

99304 ***Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.***
The RUC reviewed the survey results from 203 physicians and determined that the survey 25th percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC recommends 6 minutes of pre-service time, 25 minutes of intra-service time and 5 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter* (work RVU = 1.60, 25 minutes intra-service time and 35 minutes total time) and determined that 99304 describing straightforward/low medical decision-making is appropriately slightly less physician work than CPT code 99203.

The RUC also compared 99304 to the second top key reference service 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter* (work RVU = 0.93, 15 minutes intra-service time and 20 minutes total time) and determined that CPT code 99304 requires much more physician work and time, thus is valued appropriately. The survey supports a value between the two new patient office visits and the RUC agrees CPT code 99304 is in the proper rank order among other similar services.

For additional support, the RUC referenced MPC code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54 and 29 minutes of intra-service time) and code 74181 *Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s)* (work RVU = 1.46 and 20 minutes of intra-service time), which require similar physician work and time. **The RUC recommends a work RVU of 1.50 for CPT code 99304.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99305 ***Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.***
The RUC reviewed the survey results from 204 physicians and determined that the survey 25th percentile work RVU of 2.50 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes of pre-service time, 35 minutes of intra-service time and 10 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter* (work RVU = 2.60, 40 minutes intra-service time and 60 minutes total time) and determined that 99305 requires slightly less physician work and time to perform.

The RUC also compared 99305 to the second top key reference service, 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter.* (work RVU = 1.60, 25 minutes intra-service time and 35 minutes total time) and determined that 99305 requires much more physician work and time than 99203. The survey supports a value between the two new patient office visits and the RUC agrees CPT code 99305 is in the proper rank order among other similar services.

For additional support, the RUC referenced MPC code 95810 *Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist* (work RVU = 2.50 and 36.5 minutes of intra-service time) and code 75574 *Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)* (work RVU = 2.40 and 30 minutes of intra-service time), which require similar physician work and time. **The RUC recommends a work RVU of 2.50 for CPT code 99305.**

99306 ***Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.***
The RUC reviewed the survey results from 208 physicians and determined that the survey 25th percentile work RVU of 3.50 appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes of pre-service time, 50 minutes of intra-service time and 15 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.* (work RVU = 3.50, 59 minutes intra-service time and 88 minutes total time) and determined that these services require the same physician work and should be valued the same. Although 99306 requires slightly less physician time, both require a high level of medical decision making and similar typical patients who require intensive management.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC referenced MPC code 90962 *End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month* (work RVU = 3.57 and 70 minutes of intra-service/total time) and code 50328 *Backbench reconstruction of cadaver or living donor renal allograft prior to transplantation; arterial anastomosis, each* (work RVU = 3.50 and 45 minutes of intra-service/total time), which require similar physician work and time. **The RUC recommends a work RVU of 3.50 for CPT code 99306.**

SUBSEQUENT NURSING FACILITY CARE

99307 ***Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.***
The RUC reviewed the survey results from 196 physicians and determined that the survey 25th percentile work RVU of 0.70 appropriately accounts for the work required to perform this service. The RUC recommends 1 minutes of pre-service time, 12 minutes of intra-service time and 1 minute of post-service time.

The RUC compared the surveyed code to the top key reference service 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter* (work RVU = 0.70, 11 minutes intra-service time and 16 minutes total time) and determined that these services require the same straightforward level of medical decision making, the same physician work and similar physician time to perform, thus should be valued the same.

The RUC also compared 99307 to the second top key reference service 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter* (work RVU = 1.30, 20 minutes intra-service time and 40 minutes total time) and determined that 99307 requires much less physician work, time and a lower level of medical decision making, thus is valued appropriately.

For additional support, the RUC referenced MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report* (work RVU = 0.70 and 15 minutes of intra-service time) and code 62368 *Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming* (work RVU = 0.67 and 15 minutes of intra-service time), which require similar physician work and time. **The RUC recommends a work RVU of 0.70 for CPT code 99307.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99308 ***Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.***
The RUC reviewed the survey results from 214 physicians and determined that the survey 25th percentile work RVU of 1.30 appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes of pre-service time, 18 minutes of intra-service time and 4 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter* (work RVU = 1.30, 20 minutes intra-service time and 40 minutes total time) and determined that these services require the same low level of medical decision making, the same physician work and similar physician time to perform.

The RUC also compared 99308 to the second top key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter* (work RVU = 1.92, 30 minutes intra-service time and 47 minutes total time) and determined that 99308 requires less physician work, time and level of medical decision making to perform than 99214, thus is valued appropriately.

For additional support, the RUC referenced MPC code 74170 *Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.40 and 18 minutes of intra-service time) and code 74280 *Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high density barium and air) study, including glucagon, when administered* (work RVU = 1.26 and 20 minutes of intra-service time), which require similar physician work and time.
The RUC recommends a work RVU of 1.30 for CPT code 99308.

99309 ***Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.***
The RUC reviewed the survey results from 217 physicians and determined that the 25th percentile work RVU of 1.92 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes of pre-service time, 30 minutes of intra-service time and 10 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter* (work RVU = 1.92, 30 minutes intra-service time and 47 minutes total time) and determined that these services require the same moderate level of medical decision making, physician work and physician time to perform.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC also compared 99309 to the second top key reference service 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter* (work RVU = 2.80, 45 minutes intra-service time and 70 minutes total time) and determined that 99309 requires less physician work, time and level of decision making, thus is valued appropriately.

For additional support, the RUC referenced MPC code 94002 *Ventilation assist and management, initiation of pressure or volume preset ventilators for assisted or controlled breathing; hospital inpatient/observation, initial day* (work RVU = 1.99 and 30 minutes of intra-service time) and code 95957 *Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)* (work RVU = 1.98 and 30 minutes of intra-service time), which require similar physician work and time. **The RUC recommends a work RVU of 1.92 for CPT code 99309.**

99310 *Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*
The RUC reviewed the survey results from 203 physicians and determined that the survey 25th percentile work RVU of 2.80 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes of pre-service time, 45 minutes of intra-service time and 15 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter* (work RVU = 2.80, 45 minutes intra-service time and 70 minutes total time) and determined that these services require the same high level of medical decision making, physician work and physician time to perform, thus should be valued the same.

The RUC also compared 99310 to the second top key reference service 99291 *Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes* (work RVU = 4.50, 40 minutes intra-service time and 70 minutes total time) and determined 99310 requires less physician work and the typical patient is less intense than the critical care service. Thus, CPT code 99310 is appropriately valued lower than 99291.

For additional support, the RUC referenced MPC code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter* (work RVU = 2.60 and 40 minutes of intra-service time) and code 75561 *Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences;* (work RVU = 2.60 and 45 minutes of intra-service time), which require similar physician work and time. **The RUC recommends a work RVU of 2.80 for CPT code 99310.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

NURSING FACILITY CARE DISCHARGE DAY MANAGEMENT

99315 ***Nursing facility discharge day management; 30 minutes or less***
99316 ***Nursing facility discharge day management; more than 30 minutes***
The RUC reviewed CPT codes 99315 and 99316 and determined to maintain the proper rank order, these services should be reviewed with the hospital discharge day management codes, 99238 and 99239, in October 2021**. The RUC recommends to table review of CPT codes 99315 and 99316 until October 2021.**

CPT Descriptor Time
The RUC recommends the following times for the CPT descriptors based on the survey medians. The time in the CPT descriptors are rounded or incremental between this family of services for the ease of those who may report these services based on time.

CPT Code		Time on the Date of Encounter Recommendation to CPT
99304	Initial nursing facility care, per day, straightforward or low MDM	**25**
99305	Initial nursing facility care, per day, moderate MDM	**35**
99306	Initial nursing facility care, per day, high MDM	**45**
99307	Subsequent nursing facility care, per day, straightforward MDM	**10**
99308	Subsequent nursing facility care, per day, low MDM	**15**
99309	Subsequent nursing facility care, per day, moderate MDM	**30**
99310	Subsequent nursing facility care, per day, high MDM	**45**

Practice Expense
The Practice Expense Subcommittee approved the direct practice expense inputs as recommended by the specialty societies without modification. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Evaluation and Management

Nursing Facility Services

The following codes are used to report evaluation and management services to patients in nursing facilities and skilled nursing facilities ~~(formerly called skilled nursing facilities [SNFs], intermediate care facilities [ICFs], or long-term care facilities [LTCFs])~~. These codes should also be used to report evaluation and management services provided to a patient in a psychiatric residential treatment center and intermediate care facility for individuals with intellectual disabilities. ~~(a facility or a distinct part of a facility for psychiatric care, which provides a 24-hour therapeutically planned and professionally staffed group living and learning environment). If procedures such as medical psychotherapy are provided in addition to evaluation and management services, these should be reported in addition to the evaluation and management services provided.~~

~~Nursing facilities that provide convalescent, rehabilitative, or long-term care are required to conduct comprehensive, accurate, standardized, and reproducible assessments of each resident's functional capacity using a Resident Assessment Instrument (RAI). All RAIs include the Minimum Data Set (MDS), Resident Assessment Protocols (RAPs), and utilization guidelines. The MDS is the primary screening and assessment tool; the RAPs trigger the identification of potential problems and provide guidelines for follow-up assessments.~~

Regulations pertaining to the care of nursing facility residents govern the nature and minimum frequency of assessments and visits. These regulations also govern who may perform the initial comprehensive visits.

These services are performed by the principal physician(s) and other qualified health care professional(s), overseeing the care of the patient in the facility. The principal physician is sometimes referred to as the admitting physician and is the physician who oversees the patient's care as compared to other physicians or other qualified health care professionals who may be furnishing specialty care. These services are also performed by physicians or other qualified health care professionals in the role of a specialist performing a consultation or concurrent care. Modifiers may be required to identify the role of the individual performing the service.

~~Physicians have a central role in assuring that all residents receive thorough assessments and that medical plans of care are instituted or revised to enhance or maintain the residents' physical and psychosocial functioning. This role includes providing input in the development of the MDS and a multi-disciplinary plan of care, as required by regulations pertaining to the care of nursing facility residents.~~

Two major subcategories of nursing facility services are recognized: Initial Nursing Facility Care and Subsequent Nursing Facility Care. Both subcategories apply to new or established patients.

The types of care (eg, skilled nursing facility and nursing facility care) are reported with the same codes. Place of service codes should be reported to specify the type of facility (and care) where the service(s) are performed.

*For definitions of commonly used terms, see **Evaluation and Management Services Guidelines.***

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

When selecting a level of medical decision making (MDM) for nursing facility services, the Nature and Complexity of Problems Addressed at the Encounter is considered. For this determination, a high level MDM type specific to Initial Nursing Facility Care by the principal physician or other qualified health care professional is recognized. This type is:

Multiple morbidities requiring intensive management: A set of conditions, syndromes or functional impairments that are likely to require frequent medication changes or other treatment changes and/or re-evaluations. The patient is at significant risk of worsening medical (including behavioral) status and risk for (re)admission to a hospital.

The definitions and requirements related to the Amount and Complexity of Data to be Reviewed and Analyzed and the Risk of Complications and/or Morbidity or Mortality of Patient Management are unchanged.

~~(For care plan oversight services provided to nursing facility residents, see 99379-99380)~~

Initial Nursing Facility Care
New or Established Patient

When the patient is admitted to the nursing facility in the course of an encounter in another site of service (eg, hospital emergency department, office), the services in the initial site may be separately reported. Modifier 25 may be added to the other evaluation and management service to indicate a significant, separately identifiable service by the same physician or qualified health care professional was performed on the same date. ~~all evaluation and management services provided by that physician in conjunction with that admission are considered part of the initial nursing facility care when performed on the same date as the admission or readmission. The nursing facility care level of service reported by the admitting physician should include the services related to the admission he/she provided in the other sites of service as well as in the nursing facility setting.~~

In the case when services in a separate site are reported and the initial nursing facility care service is a consultation service by the same physician or other qualified health care professional and reported on the same date, do not report 99304, 99305, 99306, 99252, 99253, 99254, 99255. The consultant reports the subsequent nursing facility care codes 99307, 99308, 99309, 99310 for the second service on the same date.

Hospital inpatient ~~discharge~~ or observation discharge services performed on the same date of nursing facility admission or readmission may be reported separately. For a patient discharged from inpatient or observation status on the same date of nursing facility admission or readmission, the hospital or observation discharge services ~~should~~ may be reported with codes 99238, 99239 as appropriate. ~~For a patient discharged from observation status on the same date of nursing facility admission or readmission, the observation care discharge services should be reported with code 99217.~~ For a patient admitted and discharged from observation or inpatient status on the same date, see codes 99234- 99236. Time related to ~~these~~ hospital inpatient or observation care services may not be used for code selection of any nursing facility service.

~~(For nursing facility care discharge, see 99315, 99316)~~

Initial nursing facility care codes 99304, 99305, 99306 may be used once per admission, per physician or other qualified health care professional, regardless of length of stay. They may be used for the initial comprehensive visit performed by the principal physician or other qualified health care professional. Skilled nursing facility initial comprehensive visits must be performed by a physician. Qualified health care professionals may report initial comprehensive nursing facility visits for nursing facility level of care patients, if allowed by state law or regulation. The principal physician or qualified health care professional may work with others (who may not always be in the same group) but are overseeing the overall medical care of the patient, in order to provide

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

timely care to the patient. Medically necessary assessments conducted by these professionals prior to the initial comprehensive visit are reported using subsequent care codes (99307, 99308, 99309, 99310).

Initial services by other physicians and other qualified health care professionals who are performing consultations may be reported using initial nursing facility care codes (99304, 99305, 99306) or inpatient consultations (99252, 99253, 99254, 99255). This is not dependent upon the principal care professionals completion of the initial comprehensive services first.

An initial service may be reported when the patient has not received any face-to-face professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice during the stay. When advanced practice nurses or physician assistants are working with physicians they are considered as working in the exact same specialty and subspecialty as the physician. An initial service may also be reported if the patient is a new patient as defined in the Evaluation and Management Guidelines.

For reporting initial nursing facility care, transitions between skilled nursing facility level of care ad nursing facility level of care do not constitute a new stay.

~~***Coding Tip***~~

~~**The Significance of Time as a Factor in Selection of an Evaluation and Management Code from This Section**~~

~~The inclusion of time as an explicit factor beginning in CPT 1992 was done to assist in selecting the most appropriate level of E/M services included in codes in this section. Beginning with CPT 2021, except for 99211, time alone may be used to select the appropriate code level for the office or other outpatient E/M services codes (99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215). Different categories of services use time differently. It is important to review the instructions for each category.~~

~~**Unit/floor time (hospital observation services [99218, 99219, 99220, 99224, 99225, 99226, 99234, 99235, 99236], hospital inpatient services [99221, 99222, 99223, 99231, 99232, 99233], inpatient consultations [99251, 99252, 99253, 99254, 99255], nursing facility services [99304, 99305, 99306, 99307, 99308, 99309, 99310, 99315, 99316, 99318]):**~~

~~For coding purposes, time for these services is defined as unit/ floor time, which includes the time present on the patient's hospital unit and at the bedside rendering services for that patient. This includes the time to establish and/or review the patient's chart, examine the patient, write notes, and communicate with other professionals and the patient's family.~~

~~CPT Coding Guidelines, Evaluation and Management, Guidelines Common to All E/M Services, Time~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

▲99304	I1	Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. ~~these 3 key components:~~ ~~• **A detailed or comprehensive history;**~~ ~~• **A detailed or comprehensive examination; and**~~ ~~• **Medical decision making that is straightforward or of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission are of low severity. Typically, 25 minutes are spent at the bedside and on the patient's facility floor or unit.~~ When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.	XXX	1.50
▲99305	I2	Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. ~~these 3 key components:~~ ~~• **A comprehensive history;**~~ ~~• **A comprehensive examination; and**~~ ~~• **Medical decision making of moderate complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission are of moderate severity. Typically, 35 minutes are spent at the bedside and on the patient's facility floor or unit.~~ When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded. CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

▲99308	I5	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. ~~at least 2 of these 3 key components:~~ • ~~**An expanded problem focused interval history;**~~ • ~~**An expanded problem focused examination;**~~ • ~~**Medical decision making of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.~~ When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX	1.30
▲99309	I6	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. ~~at least 2 of these 3 key components:~~ • ~~**A detailed interval history;**~~ • ~~**A detailed examination;**~~ • ~~**Medical decision making of moderate complexity**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient has developed a significant complication or a significant new problem. Typically, 25 minutes are spent at the bedside and on the patient's facility floor or unit.~~ When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	1.92

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

▲99310	I7	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. ~~at least 2 of these 3 key components:~~ • ~~**A comprehensive interval history;**~~ • ~~**A comprehensive examination;**~~ • ~~**Medical decision making of high complexity**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 35 minutes are spent at the bedside and on the patient's facility floor or unit.~~ When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded. (For services 60 minutes or longer, use prolonged services code 993X0)	XXX	2.80
Nursing Facility Discharge Services The nursing facility discharge day management codes are to be used to report the total duration of time spent by a physician or other qualified health care professional for the final nursing facility discharge of a patient. The codes include, as appropriate, final examination of the patient, discussion of the nursing facility stay, even if the time spent on that date is not continuous. Instructions are given for continuing care to all relevant caregivers, and preparation of discharge records, prescriptions and referral forms. These services require a face-to-face encounter ~~but~~ that may be performed on a calendar date prior to the actual discharge date. The time of the face-to-face encounter performed on a date prior to the discharge date is counted toward 99315, 99316 and not reported separately.				
(f)99315	I8	*Nursing facility discharge day management; 30 minutes or less*	XXX	Tabled until October 2021 RUC Meeting
(f)99316	I9	*more than 30 minutes*	XXX	Tabled until October 2021 RUC Meeting

CPT 2023 E/M Guidelines

Category I
Evaluation and Management (E/M) Services Guidelines

In addition to the information presented in the Introduction, several other items unique to this section are defined or identified here.

E/M Guidelines Overview

The E/M guidelines have sections that are common to all E/M categories and sections that are category specific. Most of the categories and many of the subcategories of service have special guidelines or instructions unique to that category or subcategory. Where these are indicated, eg, "Hospital Inpatient and Observation Care," special instructions are presented before the listing of the specific E/M services codes. It is important to review the instructions for each category or subcategory. These guidelines are to be used by the reporting physician or other qualified health care professional to select the appropriate level of service. These guidelines do not establish documentation requirements or standards of care. The main purpose of documentation is to support care of the patient by current and future health care team(s). These guidelines are for services that require a face-to-face encounter. (For 99211 and 99281 the face-to-face services may be performed by clinical staff).

In the **Evaluation and Management** section (99202-99499) there are many code categories. Each category may have specific guidelines, or the codes may include specific details. These E/M guidelines are written for the following categories:

- Office or Other Outpatient Services
- Hospital Inpatient and Observation Care Services
- Consultations
- Emergency Department Services
- Nursing Facility Services
- Home and Residence Services
- Prolonged Service With or Without Direct Contact on the Date of an Evaluation and Management Service

Classification of Evaluation and Management (E/M) Services

The E/M section is divided into broad categories such as office visits, hospital inpatient or observation care visits, and consultations. Most of the categories are further divided into two or more subcategories of E/M services. For example, there are two subcategories of office visits (new patient and established patient) and there are two subcategories of hospital inpatient and observation care visits (initial and subsequent). The subcategories of E/M services are further classified into levels of E/M services that are identified by specific codes.

The basic format of codes with levels of E/M services based on medical decision making (MDM) or time is the same. First, a unique code number is listed. Second, the place and/or type of service is specified, eg, office or other outpatient visit. Third, the content of the service is defined. Fourth, time is specified. (A detailed discussion of time is provided following the Decision Tree for New vs Established Patients.)

The place of service and service type is defined by the location where the face-to-face encounter occurs. For example, service provided to a nursing facility resident brought to the office is reported with an office or other outpatient code.

New and Established Patients

Solely for the purposes of distinguishing between new and established patients, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. A new patient is one who has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years.

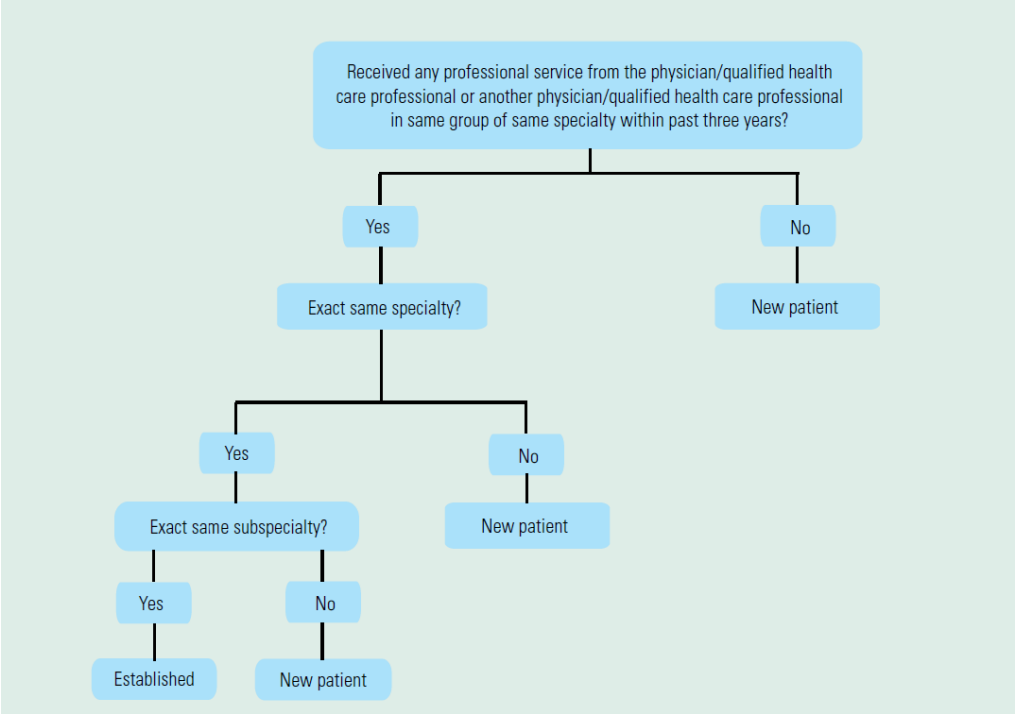
An established patient is one who has received professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years. See Decision Tree for New vs Established Patients.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

No distinction is made between new and established patients in the emergency department. E/M services in the emergency department category may be reported for any new or established patient who presents for treatment in the emergency department.

The Decision Tree for New vs Established Patients is provided to aid in determining whether to report the E/M service provided as a new or an established patient encounter.

Coding Tip



Instructions for Use of the CPT Codebook

When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialty as the physician. A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his or her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional, and who is allowed by law, regulation and facility policy to perform or assist in the performance of a specific professional service but does not individually report that professional service. Other policies may also affect who may report specific services.

CPT Coding Guidelines, Introduction, Instructions for Use of the CPT Codebook

---

Decision Tree for New vs Established Patients

Initial and Subsequent Services

Some categories apply to both new and established patients (eg, hospital inpatient or observation care). These categories differentiate services by whether the service is the initial service or a subsequent service. For the purpose of distinguishing between initial or subsequent visits, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. An initial service is when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the inpatient or observation or nursing facility admission and stay.

A subsequent service is when the patient has received professional service(s) from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the admission and stay.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

For reporting hospital inpatient or observation care services, a stay that includes a transition from observation to inpatient is a single stay. For reporting nursing facility services, a stay that includes transition(s) between skilled nursing facility and nursing facility level of care is the same stay.

Services Reported Separately

Any specifically identifiable procedure or service (ie, identified with a specific CPT code) performed on the date of E/M services may be reported separately.

The ordering and actual performance and/or interpretation of diagnostic tests/studies during a patient encounter are not included in determining the levels of E/M services when the professional interpretation

of those tests/studies is reported separately by the physician or other qualified health care professional reporting the E/M service. Tests that do not require separate interpretation (eg, tests that are results only) and are analyzed as part of MDM do not count as an independent interpretation and may be counted as ordered or reviewed for selecting an MDM level.

The performance of diagnostic tests/studies for which specific CPT codes are available may be reported separately, in addition to the appropriate E/M code. The interpretation of the results of diagnostic tests/studies (ie, professional component) with preparation of a separate distinctly identifiable signed written report may also be reported separately, using the appropriate CPT code and, if required, with modifier 26 appended.

See Instructions for Selecting a Level Based on MDM or Time.

The physician or other qualified health care professional may need to indicate that on the day a procedure or service identified by a CPT code was performed, the patient's condition required a significant separately identifiable E/M service. The E/M service may be caused or prompted by the symptoms or condition for which the procedure and/or service was provided. This circumstance may be reported by adding modifier 25 to the appropriate level of E/M service. As such, different diagnoses are not required for reporting of the procedure and the E/M services on the same date.

History and/or Examination

These E/M services include a medically appropriate history and/or physical examination, when performed. The nature and extent of the history and/or physical examination are determined by the treating physician or other qualified health care professional reporting the service. The care team may collect information, and the patient or caregiver may supply information directly (eg, by electronic health record [EHR] portal or questionnaire) that is reviewed by the reporting physician or other qualified health care professional. The extent of history and physical examination is not an element in selection of the level of these E/M service codes.

Levels of E/M Services

Select the appropriate level of E/M services based on the following:

1. The level of the MDM as defined for each service, **or**

2. The total time for E/M services performed on the date of the encounter.

Within each category or subcategory of E/M service based on MDM or time, there are three to five levels of E/M services available for reporting purposes. Levels of E/M services are **not** interchangeable among the different categories or subcategories of service. For example, the first level of E/M services in the subcategory of office visit, new patient, does not have the same definition as the first level of E/M services in the subcategory of office visit, established patient. Each level of E/M services may be used by all physicians or other qualified health care professionals.

Guidelines for Selecting a level service based on Medical Decision Making

Four types of MDM are recognized: straightforward, low, moderate, and high. The concept of the level of MDM does not apply to 99211 or 99281.

MDM includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option. MDM is defined by three elements. The elements are:

- ***The number and complexity of problem(s) that are addressed during the encounter***.
- ***The amount and/or complexity of data to be reviewed and analyzed.*** These data include medical records, tests, and/or other information that must be obtained, ordered, reviewed, and analyzed for the encounter. This includes information obtained from multiple sources or interprofessional communications that are not reported separately and interpretation of tests that are not reported

separately. Ordering a test is included in the category of test result(s) and the review of the test result is part of the encounter and not a subsequent encounter. Ordering a test may include those considered, but not selected after shared decision making. For example, a patient may request diagnostic imaging that is not necessary for their condition and discussion of the lack of benefit may be required. Alternatively, a test may normally be performed, but due to risk for a specific patient is not ordered. These considerations must be documented. Data are divided into three categories:

- Tests, documents, orders, or independent historian(s). (Each unique test, order, or document is counted to meet a threshold number.)
- Independent interpretation of tests (not separately reported)
- Discussion of management or test interpretation with external physician or other qualified health care professional or appropriate source (not separately reported)

- **The risk of complications and/or morbidity or mortality of patient management:** This includes decisions made at the encounter associated with the diagnostic procedure(s) and treatment(s). This includes the possible management options selected and those considered but not selected, after shared decision making with the patient and/or family. For example, a decision about hospitalization includes consideration of alternative levels of care. Examples may include a psychiatric patient with a sufficient degree of support in the outpatient setting or the decision to not hospitalize a patient with advanced dementia with an acute condition that would generally warrant inpatient care, but for whom the goal is palliative treatment.

Shared decision making involves eliciting patient and/or family preferences, patient and/or family education, and explaining risks and benefits of management options.

MDM may be impacted by role and management responsibility.

When the physician or other qualified health care professional is reporting a separate CPT code that includes interpretation and/or report, the interpretation and/or report is not counted toward the MDM when selecting a level of E/M services.

When the physician or other qualified health care professional is reporting a separate service for discussion of management with a physician or another qualified health care professional, the discussion is not counted toward the MDM when selecting a level of E/M services.

The Levels of Medical Decision Making (MDM) table (Table 2) is a guide to assist in selecting the level of MDM for reporting an E/M services code. The table includes the four levels of MDM (ie, straightforward, low, moderate, high) and the three elements of MDM (ie, number and complexity of problems addressed at the encounter, amount and/or complexity of data reviewed and analyzed, and risk of complications and/or morbidity or mortality of patient management). To qualify for a particular level of MDM, two of the three elements for that level of MDM must be met or exceeded.

Examples in the table may be more or less applicable to specific settings of care. For example, the decision to hospitalize applies to the outpatient or nursing facility encounters, whereas the decision to escalate hospital level of care (eg, transfer to ICU) applies to the hospitalized or observation care patient.

See also the introductory guidelines of each code family section.

Table 2: Levels of Medical Decision Making (MDM)

Level of MDM (Based on 2 out of 3 Elements of MDM)	Elements of Medical Decision Making		
	Number and Complexity of Problems Addressed at the Encounter	Amount and/or Complexity of Data to be Reviewed and Analyzed **Each unique test, order, or document contributes to the combination of 2 or combination of 3 in Category 1 below.*	Risk of Complications and/or Morbidity or Mortality of Patient Management
N/A	N/A	N/A	N/A
Straightforward	Minimal • 1 self-limited or minor problem	Minimal or none	Minimal risk of morbidity from additional diagnostic testing or treatment
Low	Low • 2 or more self-limited or minor problems; or • 1 stable, chronic illness; or • 1 acute, uncomplicated illness or injury or • 1 stable acute illness or • 1 acute, uncomplicated illness or injury requiring hospital inpatient or observation level of care	Limited *(Must meet the requirements of at least 1 of the 2 categories*) Category 1: Tests and documents • Any combination of 2 from the following: ○ Review of prior external note(s) from each unique source*; ○ Review of the result(s) of each unique test*; ○ Ordering of each unique test* or Category 2: Assessment requiring an independent historian(s) *(For the categories of independent interpretation of tests and discussion of management or test interpretation, see moderate or high)*	Low risk of morbidity from additional diagnostic testing or treatment

Moderate	Moderate
	• 1 or more chronic illnesses with exacerbation, progression, or side effects of treatment;
	or
	• 2 or more stable, chronic illnesses;
	or
	• 1 undiagnosed new problem with uncertain prognosis;
	or
	• 1 acute illness with systemic symptoms;
	or
	• 1 acute, complicated injury
		Moderate
		(Must meet the requirements of at least 1 out of 3 categories)
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			Moderate risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Prescription drug management
			• Decision regarding minor surgery with identified patient or procedure risk factors
			• Decision regarding elective major surgery without identified patient or procedure risk factors
			• Diagnosis or treatment significantly limited by social determinants of health

High	High
	• 1 or more chronic illnesses with severe exacerbation, progression, or side effects of treatment;
	or
	• 1 acute or chronic illness or injury that poses a threat to life or bodily function
		Extensive
		(Must meet the requirements of at least 2 out of 3 categories)
		
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			High risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Drug therapy requiring intensive monitoring for toxicity
			• Decision regarding elective major surgery with identified patient or procedure risk factors
			• Decision regarding emergency major surgery
			• Decision regarding hospitalization or escalation of hospital-level of care
			• Decision not to resuscitate or to de-escalate care because of poor prognosis
			• Parenteral controlled substances

Number and Complexity of Problems Addressed at the Encounter

One element used in selecting the level of services is the number and complexity of the problems that are addressed at the encounter. Multiple new or established conditions may be addressed at the same time and may affect MDM. Symptoms may cluster around a specific diagnosis and each symptom is not necessarily a unique condition. Comorbidities and underlying diseases, in and of themselves, are not considered in selecting a level of E/M services **unless** they are addressed, and their presence increases the amount and/or complexity of data to be reviewed and analyzed or the risk of complications and/or morbidity or mortality of patient management. The final diagnosis for a condition does not, in and of itself, determine the complexity or risk, as extensive evaluation may be required to reach the conclusion that the signs or symptoms do not represent a highly morbid condition. Therefore, presenting symptoms which are likely to represent a highly morbid condition may drive MDM even when the ultimate diagnosis is not highly morbid. The evaluation and /or treatment should be consistent with the likely nature of the condition. Multiple problems of a lower severity may, in the aggregate, create higher risk due to interaction.

The term "risk" as used in these definitions relates to risk from the condition. While condition risk and management risk may often correlate, the risk from the condition is distinct from the risk of the management.

Definitions for the elements of MDM (see Table 2, Levels of Medical Decision Making) are:

Problem: *A problem is a disease, condition, illness, injury, symptom, sign, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter.*

Problem addressed: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified health care professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in the patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or qualified health care professional and may not be the cause of admission or continued stay.

Minimal problem: A problem that may not require the presence of the physician or other qualified health care professional, but the service is provided under the physician's or other qualified health care professional's supervision (see 99211, 99281).

Self-limited or minor problem: *A problem that runs a definite and prescribed course, is transient in nature, and is not likely to permanently alter health status.*

Stable, chronic illness: A problem with an expected duration of at least one year or until the death of the patient. For the purpose of defining chronicity, conditions are treated as chronic whether or not stage or severity changes (eg, uncontrolled diabetes and controlled diabetes are a single chronic condition). "Stable" for the purposes of categorizing MDM is defined by the specific treatment goals for an individual patient. A patient who is not at his or her treatment goal is not stable, even if the condition has not changed and there is no short-term threat to life or function. For example, a patient with persistently poorly controlled blood pressure for whom better control is a goal is not stable, even if the pressures are not changing and the patient is asymptomatic. The risk of morbidity **without** treatment is significant.

Acute, uncomplicated illness or injury: A recent or new short-term problem with low risk of morbidity for which treatment is considered. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. A problem that is normally self-limited or minor but is not resolving consistent with a definite and prescribed course is an acute, uncomplicated illness.

Acute, uncomplicated illness or injury requiring hospital inpatient or observation level care: A recent or new short-term problem with low risk of morbidity for which treatment is required. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. The treatment required is delivered in a hospital inpatient or observation level setting.

Stable, acute illness: A problem that is new or recent for which treatment has been initiated. The patient is improved and while resolution may not be complete is stable with respect to this condition.

Chronic illness with exacerbation, progression, or side effects of treatment: A chronic illness that is acutely worsening, poorly controlled, or progressing with an intent to control progression and requiring additional supportive care or requiring attention to treatment for side effects.

Undiagnosed new problem with uncertain prognosis: A problem in the differential diagnosis that represents a condition likely to result in a high risk of morbidity without treatment.

Acute illness with systemic symptoms: An illness that causes systemic symptoms and has a high risk of morbidity without treatment. For systemic general symptoms, such as fever, body aches, or fatigue in a minor illness that may be treated to alleviate symptoms, see the definitions for **self-limited or minor problem** or **acute, uncomplicated illness or injury.** Systemic symptoms may not be general but may be single system.

Acute, complicated injury: An injury which requires treatment that includes evaluation of body systems that are not directly part of the injured organ, the injury is extensive, or the treatment options are multiple and/or associated with risk of morbidity.

Chronic illness with severe exacerbation, progression, or side effects of treatment: The severe exacerbation or progression of a chronic illness or severe side effects of treatment that have significant risk of morbidity and may require escalation in level of care.

Acute or chronic illness or injury that poses a threat to life or bodily function: An acute illness with systemic symptoms, an acute complicated injury, or a chronic illness or injury with exacerbation and/or progression or side effects of treatment, that poses a threat to life or bodily function in the near term without treatment. Some symptoms may represent a condition that is significantly probable and poses a potential threat to life or bodily function. These may be included in this category when the evaluation and treatment is consistent with this degree of potential severity.

Amount and/or Complexity of Data to be Reviewed and Analyzed

One element used in selecting the level of services is the amount and/or complexity of data to be reviewed or analyzed at an encounter.

Analyzed: Analyzed is a term describing the process of using the data as part of the MDM. The data element itself may not be subject to analysis (eg, glucose), but it is instead included in the thought processes for diagnosis, evaluation, or treatment. Tests ordered are presumed to be analyzed when the results are reported. Therefore, when they are ordered during an encounter, they are counted in that encounter. Tests that are ordered outside of an encounter may be counted in the encounter where they are analyzed. In the case of a recurring order, each new result may be counted in the encounter at which it is analyzed. For example, an encounter that includes an order for monthly prothrombin times would count for one prothrombin time ordered and reviewed. Additional future results, if analyzed in a subsequent encounter, may be counted as a single test in that subsequent encounter. Any service for which the professional component is separately reported by the physician or other qualified health care professional

reporting the E/M services is not counted as a data element ordered, reviewed, analyzed, or independently interpreted for the purposes of determining the level of MDM.

Test: Tests are imaging, laboratory, psychometric, or physiologic data. A clinical laboratory panel (eg, basic metabolic panel [80047]) is a single test. The differentiation between single or multiple tests is defined in accordance with the CPT code set. For the purposes of data reviewed and analyzed, pulse oximetry is not a test.

Unique: A unique test is defined by the CPT code set. When multiple results of the same unique test (eg, serial blood glucose values) are compared during an E/M service, only count one unique test. Tests that have overlapping elements are not unique, even if they are identified with distinct CPT codes. For example, a CBC with differential would incorporate the set of hemoglobin, CBC without differential, and platelet count. A unique source is defined as a physician or qualified heath care professional in a distinct group or different specialty or subspecialty, or a unique entity. Review of all materials from any unique source counts as one element towards MDM.

Combination of Data Elements: A combination of different data elements, for example a combination of notes reviewed, tests ordered, tests reviewed, or independent historian, allows these elements to be summed. It does not require each item type or category to be represented. A unique test ordered, plus a note reviewed and an independent historian would be a combination of three elements.

External: *External records, communications and/or test results are from an external physician, other qualified health care professional, facility, or health care organization.*

External physician or other qualified health care professional: *An external physician or other qualified health care professional who is not in the same group practice or is of a different specialty or subspecialty. This includes licensed professionals who are practicing independently. The individual may also be a facility or organizational provider such as from a hospital, nursing facility, or home health care agency.*

Discussion: Discussion requires an interactive exchange. The exchange must be direct and not through intermediaries (eg, clinical staff or trainees). Sending chart notes or written exchanges that are within progress notes does not qualify as an interactive exchange. The discussion does not need to be on the date of the encounter but is counted only once and only when it is used in the decision making of the encounter. It may be asynchronous (ie, does not need to be in person), but it must be initiated and completed within a short time period (eg, within a day or two).

Independent historian(s): An individual (eg, parent, guardian, surrogate, spouse, witness) who provides a history in addition to a history provided by the patient who is unable to provide a complete or reliable history (eg, due to developmental stage, dementia, or psychosis) or because a confirmatory history is judged to be necessary. In the case where there may be conflict or poor communication between multiple historians and more than one historian is needed, the independent historian requirement is met. It does not include translation services. The independent history does not need to be obtained in person but does need to be obtained directly from the historian providing the independent information.

Independent interpretation: The interpretation of a test for which there is a CPT code, and an interpretation or report is customary. This does not apply when the physician or other qualified health care professional who reports the E/M service is reporting or has previously reported the test. A form of interpretation should be documented but need not conform to the usual standards of a complete report for the test.

Appropriate source: *For the purpose of the* ***discussion of management*** *data element (see Table 2, Levels of Medical Decision Making), an appropriate source includes professionals who are not health care professionals but may be involved in the management of the patient (eg, lawyer, parole officer, case manager, teacher). It does not include discussion with family or informal caregivers.*

Risk of Complications and/or Morbidity or Mortality of Patient Management

One element used in selecting the level of services is the risk of complications and/or morbidity or mortality of patient management at an encounter. This is distinct from the risk of the condition itself.

Risk: The probability and/or consequences of an event. The assessment of the level of risk is affected by the nature of the event under consideration. For example, a low probability of death may be high risk, whereas a high chance of a minor, self-limited adverse effect of treatment may be low risk. Definitions of risk are based upon the usual behavior and thought processes of a physician or other qualified health care professional in the same specialty. Trained clinicians apply common language usage meanings to terms such as high, medium, low, or minimal risk and do not require quantification for these definitions (though quantification may be provided when evidence-based medicine has established probabilities). For the purposes of MDM, level of risk is based upon consequences of the problem(s) addressed at the encounter when appropriately treated. Risk also includes MDM related to the need to initiate or forego further testing, treatment, and/or hospitalization. The risk of patient management criteria applies to the patient management decisions made by the reporting physician or other qualified health care professional as part of the reported encounter.

Morbidity: *A state of illness or functional impairment that is expected to be of substantial duration during which function is limited, quality of life is impaired, or there is organ damage that may not be transient despite treatment.*

Social determinants of health: *Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.*

Surgery (minor or major, elective, emergency, procedure or patient risk):

> ***Surgery-Minor or Major:*** The classification of surgery into minor or major is based upon the common meaning of such terms when used by trained clinicians, similar to the use of the term "risk". These terms are not defined by a surgical package classification.
>
> ***Surgery-Elective or Emergency:*** Elective procedures and emergent or urgent procedures describe the timing of a procedure when the timing is related to the patient's condition. An elective procedure is typically planned in advance (eg, scheduled for weeks later), while an emergent procedure is typically performed immediately or with minimal delay to allow for patient stabilization. Both elective and emergent procedures may be minor or major procedures.
>
> ***Surgery-Risk Factors, Patient or Procedure:*** Risk factors are those that are relevant to the patient and procedure. Evidence-based risk calculators may be used, but are not required, in assessing patient and procedure risk.

Drug therapy requiring intensive monitoring for toxicity: A drug that requires intensive monitoring is a therapeutic agent that has the potential to cause serious morbidity or death. The monitoring is performed for assessment of these adverse effects and not primarily for assessment of therapeutic efficacy. The monitoring should be that which is generally accepted practice for the agent but may be patient-specific in some cases. Intensive monitoring may be long-term or short-term. Long-term intensive monitoring is not performed less than quarterly. The monitoring may be performed with a laboratory test, a physiologic test, or imaging. Monitoring by history or examination does not qualify. The monitoring affects the level of MDM in an encounter in which it is considered in the management of the patient. An example may be monitoring for cytopenia in the use of an antineoplastic agent between dose cycles. Examples of monitoring that do not qualify include monitoring glucose levels during insulin therapy, as the primary reason is the therapeutic effect (unless severe hypoglycemia is a current, significant concern); or annual electrolytes and renal function for a patient on a diuretic, as the frequency does not meet the threshold.

Guidelines for Selecting Level of Service Based on Time

Certain categories of time-based E/M codes that do not have levels of services based on MDM (eg, Critical Care Services) in the E/M section use time differently. It is important to review the instructions for each category.

Time is **not** a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time.

When time is used for reporting E/M services codes, the time defined in the service descriptors is used for selecting the appropriate level of services. The E/M services for which these guidelines apply require a face-to-face encounter with the physician or other qualified health care professional. For office or other outpatient services, if the physician's or other qualified health care professional's time is spent in the supervision of clinical staff who perform the face-to-face services of the encounter, use 99211.

For coding purposes, time for these services is the total time on the date of the encounter. It includes both the face-to-face and non-face-to-face time personally spent by the physician and/or other qualified health care professional(s) on the day of the encounter (includes time in activities that require the physician or other qualified health care professional and does not include time in activities normally performed by clinical staff). It does not include any time spent in the performance of other separately reported service(s).

A shared or split visit is defined as a visit in which a physician and other qualified health care professional(s) both provide the face-to-face and non-face-to-face work related to the visit. When time is being used to select the appropriate level of services for which time-based reporting of shared or split visits is allowed, the time personally spent by the physician and other qualified health care professional(s) assessing and managing the patient on the date of the encounter is summed to define total time. Only distinct time should be summed for shared or split visits (ie, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted).

When prolonged time occurs, the appropriate prolonged services code may be reported. The total time on the date of the encounter spent caring for the patient should be documented in the medical record when it is used as the basis for code selection.

Physician or other other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (when not separately reported) and communicating results to the patient family/caregiver
- care coordination (when not separately reported)

Do not count time spent on the following:

- the performance of other services reported separately

- travel
- teaching that is general and not limited to discussion that is required for the management of the specific patient

Unlisted Service

An E/M service may be provided that is not listed in this section of the CPT codebook. When reporting such a service, the appropriate unlisted code may be used to indicate the service, identifying it by "Special Report," as discussed in the following paragraph. The "Unlisted Services" and accompanying codes for the E/M section are as follows:

***99429 Unlisted preventive** medicine service*

***99499 Unlisted evaluation and management** service*

Special Report

An unlisted service or one that is unusual, variable, or new may require a special report demonstrating the medical appropriateness of the service. Pertinent information should include an adequate definition or description of the nature, extent, and need for the procedure and the time, effort, and equipment necessary to provide the service. Additional items that may be included are complexity of symptoms, final diagnosis, pertinent physical findings, diagnostic and therapeutic procedures, concurrent problems, and follow-up care.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99304 Tracking Number I1 Original Specialty Recommended RVU: **1.60**
Presented Recommended RVU: **1.50**
Global Period: XXX Current Work RVU: **1.64** RUC Recommended RVU: **1.50**

CPT Descriptor: Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Initial nursing facility visit for a patient with limited supports at home receiving post-acute care for an operative procedure that was uncomplicated.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see patient; review medical records, and communicate with other health professionals as necessary.

Description of Intra-Service Work: Obtain a detailed history and fluid intake and other health conditions from patient's family, assisted living staff, and other health care professionals as necessary. Vital signs are noted. Perform a comprehensive physical examination that includes inspecting skin for pre-ulcerations and ulcerations; evaluating patients oral hygiene; cardiovascular, pulmoary, abdominal and genitourinary (GU) exams for evidence of obstructive urinary retention and fecal impaction; evauating patient's ability to communicate; and assessing safety of patient's gait.

Description of Post-Service Work: Follow up with telehpone calls to the facility regarding diagnostic findings, intraservice coordination and documentation of care, and interaction with facility health care professionals associated with delivery of care to this patient until the next face-to-face physician encounter. Discuss with family and/or surrogate decsion maker the preferred intensity of care as it relates to do not resuscitate (DNR) orders for this patient.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	52%	48%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001
2014	2,639,292	9.178	0.006	2.144	0.001
2015	2,696,494	9.346	0.006	2.205	0.001
2016	2,687,022	9.341	0.006	2.287	0.001
2017	2,742,833	9.554	0.006	2.358	0.001
2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review

The expert panel reviewed the initial visit code 99304.

99304 requires straightforward or low-level medical decision making or is based on total time spent on the date of the encounter. There were 203 respondents of whom 79% found the vignette to be typical. The survey times and median work RVU were 6/25/5/36/1.70. The 25th percentile work RVU was 1.5. The key reference services were 99203, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter, with times and work RVU of 5/25/5/35/1.6, and 99202, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter, with times and work RVU of 2/15/3/20/0.93.

The expert panel reviewed the current times and work RVU for 99304, 10/23/10/43/1.64.

The panel agreed that while the survey median intra-service time was two minutes higher than the current intra-service time, the total time has decreased by seven minutes. In addition, the survey median intra-service time and total time were practically identical to 99203, the most commonly chosen reference service. Based on the survey times, the expert panel determined a crosswalk to the key reference service, 99203 would result in the most accurate valuation. Therefore, the expert panel recommends for 99304, times and work RVU of 6/25/5/36/1.60.

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6
99305	35	55	2.5
Ratio of 99305 to 99304	1.4	1.52	1.56
99305	35	55	2.5
99306	50	80	3.5
Ratio of 99306 to 99305	1.42	1.45	1.4
99307	12	14	0.70

99316	40	63	2.5
Ratio of 99316 to 99315	1.6	1.575	1.67

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99304

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Podiatry How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 449940
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate was based on total Medicare volume and Medicaid volume plus an additional 10% estimated for private and self-pay patients.

Specialty Podiatry Frequency 102586 Percentage 22.79 %

Specialty Family medicine Frequency 82789 Percentage 18.40 %

Specialty Internal Medicine Frequency 56242 Percentage 12.49 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 336,776 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 Medicare data from the RUC Database

Specialty Podiatry Frequency 76785 Percentage 22.80 %

Specialty Family Medicine Frequency 61967 Percentage 18.40 %

Specialty Internal Medicine Frequency 42097 Percentage 12.50 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99304

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99305 Tracking Number I2 Original Specialty Recommended RVU: **2.50**
Presented Recommended RVU: **2.50**
Global Period: XXX Current Work RVU: **2.35** RUC Recommended RVU: **2.50**

CPT Descriptor: Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Initial nursing facility visit for a patient recovering from an illness or acute injury that requires ongoing medical management of their multiple stable problems.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see the patient. Review medical records, laboratory results, and diagnostic findings. Communicate with facility health care professionals as necessary.

Description of Intra-Service Work: Obtain a comprehensive patient history and perform a comprehensive physical examination. Review patient's intake and hydration status, postoperative condition, initial rehabilitation results, and status of recent urosepsis and pressure ulcer. Evaluate status of patient's multiple chronic health problems. Examine patient's vision and hearing and neurological examination. Develop a multidisciplinary plan of care that includes physical therapy (PT) and occupational therapy (OT) services, initiation of a pressure wound care program, adjustments in diet, weaning off catheter, re-titration of medications, evaluation of dietary and fluid intake, and monitoring for mental status changes due to changes in environment.

Description of Post-Service Work: Follow up with telephone calls to patient's orthopedist and to SNF facility regarding diagnotic findings, post-service coordination and documentation of care, and interaction with facility health care professionals associated with delivery of care to this patient until the next face-to-face physician encounter. Discuss with family and/or surrogate decision maker the preferred intensity of care as it relates to DNR orders for this patient.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99204	XXX	2.60	**RUC Time**

CPT Descriptor Office or outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-49 mintues of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99203	XXX	1.60	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selction, 30-44 minutes of total time is spent on the date of the encounter.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99204	XXX	2.60	**RUC Time**	10,714,246

CPT Descriptor 1 Office or outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-49 mintues of total time is spent on the date of the encounter.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95810	XXX	2.50	**RUC Time**	272,131

CPT Descriptor 2 Polysomnography; age 6 or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist

Other Reference CPT Code	Global	Work RVU	Time Source
75574	XXX	2.40	**RUC Time**

CPT Descriptor Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 108 **% of respondents:** 52.9 **%**

Number of respondents who choose 2nd Key Reference Code: 25 **% of respondents:** 12.2 **%**

TIME ESTIMATES (Median)

	CPT Code: 99305	**Top Key Reference CPT Code:** 99204	**2nd Key Reference CPT Code:** **99203**
Median Pre-Service Time	10.00	10.00	5.00
Median Intra-Service Time	35.00	40.00	25.00
Median Immediate Post-service Time	10.00	10.00	5.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	2%	24%	57%	17%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	31%	64%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	54%	43%
Physical effort required	3%	51%	46%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	27%	70%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	36%	44%	16%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	48%	48%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	72%	20%
Physical effort required	0%	56%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	36%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001

2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review
The panel reviewed 99305.

99305, requires moderate level medical decision making or is based on total time spent on the date of the encounter. There were 204 respondents of whom 90% found the vignette to be typical. The survey times and median work RVU were 10/35/10/55/2.75. The 25th percentile work RVU was 2.50. The key reference services were 99204, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter, with times and work RVU of 10/40/10/60/2.60, and 99203, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter, with times and work RVU of 5/25/5/35/1.6.

The expert panel noted that the current times and work RVU for 99305 are 11/33/13/57/2.35.

The panel agreed that the increased patient acuity in the nursing facility setting and the shortened length of stay in acute care hospitals before patients are discharged into the nursing home setting supported the survey 25th percentile work RVU of 2.50 and the times of 10/35/10/55/ The panel reviewed the data for the key reference services and agreed that 99202 describes a patient population that is significantly less acute and complex then the patient population described by 99305. The expert panel also agreed that a work RVU of 2.50 placed 99305 in proper rank order with 99204 which has a work RVU of 2.60, a total time of 60 minutes and an intra-time of 40 minutes.

Therefore, the panel recommends times and work RVU of 10/35/10/55/ 2.50

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6
99305	35	55	2.5
Ratio of 99305 to 99304	1.4	1.52	1.56

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99305

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine	How often? Sometimes
Specialty Family Medicine	How often? Sometimes
Specialty Nurse Practitioner	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1333571
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate was based on total Medicare volument and Medicaid volume plus an additional 10% estimated for private payors

Specialty Internal Medicine	Frequency 397404	Percentage 29.79 %
Specialty Family Medicine	Frequency 257379	Percentage 19.29 %
Specialty Nurse Practitioner	Frequency 184033	Percentage 13.80 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,054,727 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 Medicare data from the RUC database

Specialty Internal Medicine	Frequency 314309	Percentage 29.80 %
Specialty Family Medicine	Frequency 203562	Percentage 19.29 %
Specialty Nurse Practitioner	Frequency 145552	Percentage 13.79 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99305

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99306 Tracking Number I3 Original Specialty Recommended RVU: **3.50**
Presented Recommended RVU: **3.50**
Global Period: XXX Current Work RVU: **3.06** RUC Recommended RVU: **3.50**

CPT Descriptor: Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Initial nursing facility visit for a patient with multiple morbidities requiring intensive management

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see the patient. Review medical records, laboratory results, and diagnostic findings. Communicate with facility health care professionals as necessary.

Description of Intra-Service Work: Obtain a comprehensive history and perform a comprehensive physical examination. Review patient's intake and hydration status and sliding scare insulin and psychotropic regimen. Discuss patient's multiple, still unstable, health problems with health care providers. Assess current status of cardiopilmonary function, swallowing and mobility function, and cognitive function. Review laboratory test findings including oxygenation, hydration, white blood cell count (WBC), cardiac rhythm, and glucose level trends. Initiate orders for O2, IV fluids, antibiotics, pain control, rehabilitation, and diagnostic testing to assess status. Develop a multidisciplinary care plan that includes PT, respiratory therapy (RT), and speech services; titration off insulin sliding scale; adjustments in diet and hydration; re-titration of psychotropic and analgesic medications; and monitoring for mental status changes.

Description of Post-Service Work: Follow up with telephone calls to the facility regarding diagnostic findings and intraservice coordination and documentation of care. Interact with facility health care professionals associated with delivery of care to this patient until the next face-to-face physician encounter. Discuss with family and/or surrogate decision maker the preferred intensity of care as it relates to DNR orders for this patient.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99496	XXX	3.79	**RUC Time**

CPT Descriptor Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical Decision making of high complexity during the service period face-to-face visits, within 7 calendar days of discharge.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99205	XXX	3.50	**RUC Time**	2,923,626

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90962	XXX	3.57	**RUC Time**	213,048

CPT Descriptor 2 End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified helath care professional per month

Other Reference CPT Code	Global	Work RVU	Time Source
50328	XXX	3.50	**RUC Time**

CPT Descriptor Backbench reconstruction of cadavar or living donor renal alograft prior to transplant; atrial anastomosis, each

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	2%	12%	36%	50%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	16%	81%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	38%	60%
Physical effort required	2%	44%	54%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	1%	14%	85%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	3%	0%	17%	33%	47%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	27%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	40%	53%
Physical effort required	3%	43%	54%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	10%	83%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001
2014	2,639,292	9.178	0.006	2.144	0.001
2015	2,696,494	9.346	0.006	2.205	0.001
2016	2,687,022	9.341	0.006	2.287	0.001
2017	2,742,833	9.554	0.006	2.358	0.001
2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting.

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review

Next, the panel reviewed 99306 which requires a high level of medical decision making or is based on the total time spent on the date of the encounter. There were 208 respondents of whom 94% found the vignette to be typical. The survey times and median work RVU were 15/50/15/80/3.75 and the 25th percentile work RVU was 3.50. The two key reference services were, 99205, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter, with times and work RVU of 14/59/15/88/3.5 and, 99496, Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge of medical decision making, with times and work RVU of 0/75/0/75/3.79.

The expert panel noted that the current times and work RVU for 99306 were 15/45/20/80/3.06.

The panel noted that while the total time for 99306 remained the same, the intra-service time increased by 5 minutes (more than 10%). The panel also noted that while the total times and intra-service times were less than for 99205, the patient population and acuity supported a work value at least equal to 99205. Further 99496 has a lower total time than 99406 - but a greater intra time. And the survey median of 3.50 places 99306 in proper rank order with 99496. The panel also reviewed MPC code 90962, End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month, which is an MPC code and has times and work RVU of 0/70/0/70/3.57

The expert panel noted that 90962 has less total time than 99306 but more intra-service time and that the survey 25th percentile work RVU for 99306 of 3.50 places it in correct rank order with 90962 and the key reference services.

Therefore, the expert panel recommends times and work RVU of 15/50/15/80/3.50.

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very

consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6
99305	35	55	2.5
Ratio of 99305 to 99304	1.4	1.52	1.56

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99306

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine	How often? Sometimes
Specialty Family Medicine	How often? Sometimes
Specialty Nurse Practitioner	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1751100
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate is based on total Medicare volume and Medicaid volume plus an additional 10% estimated for other payors.

Specialty Internal Medicine	Frequency 745969	Percentage 42.60 %
Specialty Family Medicine	Frequency 341464	Percentage 19.49 %
Specialty Nurse Practitioner	Frequency 171608	Percentage 9.80 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,389,990 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 Medicare data from the RUC database

Specialty Internal Medicine	Frequency 592136	Percentage 42.60 %
Specialty Family Medicine	Frequency 271048	Percentage 19.49 %
Specialty Nurse Practitioners	Frequency 136219	Percentage 9.79 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99306

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99307 Tracking Number I4 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: **0.76** RUC Recommended RVU: **0.70**

CPT Descriptor: Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Subsequent nursing facility visit for a patient with a self-limited or minor problem.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see the patient. Review records of previously attempted interventions. Communicate with facility health care professionals as necessary.

Description of Intra-Service Work: Obtain an interval history that reveals ongoing poor dietary intake and urinary incontinence in a patient who cannot participate in pressure relief activities because of cognitive impairment. Perform a focused physical examination that reveals an improving lesion with no peripheral inflammation and no evidence of systemic involvement. As a result, alter patient's topical regimen, order a new nutritional program, and authorize a support surface.

Description of Post-Service Work: Follow-up with telephone calls to the facility

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99212	XXX	0.70	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	1.30	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-19 minutes of total time is spent on the date of the encounter.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.70	**RUC Time**	10,729,531

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95251	XXX	0.70	**RUC Time**	248,288

CPT Descriptor 2 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report

Other Reference CPT Code	Global	Work RVU	Time Source
62368	XXX	0.67	**RUC Time**

CPT Descriptor Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming

---

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 130 **% of respondents:** 66.3 **%**

Number of respondents who choose 2nd Key Reference Code: 43 **% of respondents:** 21.9 **%**

TIME ESTIMATES (Median)

	CPT Code: 99307	**Top Key Reference CPT Code:** 99212	**2nd Key Reference CPT Code:** **99213**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	1%	7%	61%	27%	4%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	58%	29%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	74%	18%
Physical effort required	7%	68%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	60%	35%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	68%	21%	2%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	51%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	67%	19%
Physical effort required	5%	70%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	60%	31%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001
2014	2,639,292	9.178	0.006	2.144	0.001
2015	2,696,494	9.346	0.006	2.205	0.001
2016	2,687,022	9.341	0.006	2.287	0.001
2017	2,742,833	9.554	0.006	2.358	0.001
2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review

The panel reviewed 99307, which requires straightforward medical decision making or is based on total time spent on the date of the encounter. There were 196 respondents of whom 89% found the vignette to be typical. The survey times and median work RVU were 5/10/5/20/0.76 and the 25th percentile work RVU was 0.70. The two key reference services were 99212, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter, with times and work RVU of 2/11/3/0.70, and 99213, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter, with times and work RVU of 5/20/5/30/1.30.

The expert panel noted that the current times and work RVU for 99307 are 5/10/5/20/0.76.

The panel agreed that while the survey intra-service time was two minutes higher than the current time, the total time decreased by six minutes. Furthermore, the survey intra-service time was one minute more than intra-service time for 99212 and the total time was two minutes less. Given the increased acuity of nursing home patients, the expert panel agreed that the 25th percentile work RVU of 0.70 - which is identical to that of 99212 - placed 99307 In proper rank order with 99212. In addition, the work value of 0.70 places 99307 in proper rank order with 99213 which has a total time more than twice the survey total time for 99307, an intra-service time 66% higher than the 99307 survey median and a work RVU 85% higher than the 25th percentile than the survey 25th percentile work RVU for 99307.

Therefore, the expert panel recommends times and work RVU for 99307 of 1/12/1/14/0/70.

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6
99305	35	55	2.5
Ratio of 99305 to 99304	1.4	1.52	1.56
99305	35	55	2.5

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99307

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Nurse Practitioner	How often? Sometimes
Specialty Internal Medicine	How often? Sometimes
Specialty Family Medicine	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 4035247
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate was based on total Medicare volume and Medicaid volume plus an additional 10% estimated for other payors

Specialty Nurse Practitioner	Frequency 1000741	Percentage 24.79 %
Specialty Internal Medicine	Frequency 823190	Percentage 20.39 %
Specialty Family Medicine	Frequency 702133	Percentage 17.40 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,372,760 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 medicare data from the RUC Database

Specialty Nurse Practitioner	Frequency 588444	Percentage 24.79 %
Specialty Internal Medicine	Frequency 484043	Percentage 20.39 %
Specialty Family Medicine	Frequency 412860	Percentage 17.39 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99307

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99308 Tracking Number I5 Original Specialty Recommended RVU: **1.30**
Presented Recommended RVU: **1.30**
Global Period: XXX Current Work RVU: **1.16** RUC Recommended RVU: **1.30**

CPT Descriptor: Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Subsequent nursing facility visit for a patient with a stable chronic illness or recovering from an acute uncomplicated injury.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see the patient. Review medical records. Communicate with other facility health care professionals as necessary.

Description of Intra-Service Work: Obtain an expanded history that includes intake and hydration information, discussion of the suprapubic-localized discomfort, muscle spasm, and psychosocial review of patient's coping ability with underlying disease. Perform an expanding physical examination, which reveals no evidence of dehydration, additional gross hematuria, or focal neurological findings, however, increased patient depression is observed. After necessary laboratory tests are ordered, patient is treated for the UTI and started on anti-depression medication.

Description of Post-Service Work: Follow up with telephone calls to the NF regarding titration of anti-depressant. Review confirming diagnostic laboratory data and antibiotic effectiveness. Discuss coordination and documentation of care and interaction with facility health care professionals associated with delivery of care to this patient until the next face-to-face physician encounter.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	1.30	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99214	XXX	1.92	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.70	**RUC Time**	10,729,531

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74170	XXX	1.40	**RUC Time**	107,476

CPT Descriptor 2 Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections

Other Reference CPT Code	Global	Work RVU	Time Source
74280	XXX	1.26	**RUC Time**

CPT Descriptor Radiologic examination, colon, including scout absominal radiograph(s) and delayed image(s), when performed; double contrast (eg, high density barium and air) study, including glucagon, when administered

---

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 140 **% of respondents:** 65.4 **%**

Number of respondents who choose 2nd Key Reference Code: 38 **% of respondents:** 17.7 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	1%	47%	44%	8%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	56%	37%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	67%	29%
Physical effort required	4%	67%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	48%	50%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	55%	26%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	42%	44%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	16%	58%	26%
Physical effort required	11%	55%	34%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	50%	45%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001
2014	2,639,292	9.178	0.006	2.144	0.001
2015	2,696,494	9.346	0.006	2.205	0.001
2016	2,687,022	9.341	0.006	2.287	0.001
2017	2,742,833	9.554	0.006	2.358	0.001
2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting.

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review

The panel reviewed 99308 which requires low level medical decision making or is based on total time spent on the date of the encounter. There were 214 respondents of whom 95% found the vignette to be typical. The survey times and median work RVU were 5/18/4/27/1.44 with a 25th percentile work RVU of 1.30. The two key reference services were 99213, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter, with times and work RVU of 5/20/5/1.3, and 99214, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter, with times and work RVUs of 7/30/10/47/1.92.

The expert panel noted that the current times and work RVU for 99308 are 7/15/9/31/1.16.

The expert panel noted that while the survey median intra-service time was three minutes higher than the current time, the total time was four minutes less than the current time. Moreover, even though the total and intra-service time were slightly less than the comparable times for 99213 (the first key reference service), the increased acuity of nursing home patients supported an equivalent work RVU. Furthermore, the total and intra-service times for 99214 are 74% and 66% higher than the survey times for 99308 which supports a work RVU for 99308 of 1.30 which is 67% of the work value of 99214.

Therefore, the expert panel recommends times and work RVU for 99308 of 5/18/4/27/1.3.

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6
99305	35	55	2.5

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99308

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Nurse Practitioner	How often? Sometimes
Specialty Internal Medicine	How often? Sometimes
Specialty Family Medicine	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 15664105
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate was based on total Medicare volume and Medicaid volume plus an additional 10% estimated for other payors

Specialty Nurse Practitioner	Frequency 5874039	Percentage 37.49 %
Specialty Internal Medicine	Frequency 3461039	Percentage 22.09 %
Specialty Family Medicine	Frequency 2036334	Percentage 13.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,312,117 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 Medicare data from the RUC Database, plus 10% from deleted code 99318.

Specialty Nurse Practitioner	Frequency 4239781	Percentage 37.47 %
Specialty Internal Medicine	Frequency 2499977	Percentage 22.09 %
Specialty Family Medicine	Frequency 1470575	Percentage 12.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99308

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99309 Tracking Number I6 Original Specialty Recommended RVU: **1.92**
Presented Recommended RVU: **1.92**
Global Period: XXX Current Work RVU: **1.55** RUC Recommended RVU: **1.92**

CPT Descriptor: Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Subsequent nursing facility visit for a patient with a new or progressing illness or acute injury that requires diagnostic evaluation, medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see the patient. Review telephonic orders associated with recently reported URI; changes in dietary, bowel, and psychotropic regimens; and treatment of non-infected skin tear. Communicate with facility health care professionals as necessary..

Description of Intra-Service Work: Obtain a detailed interval history of each organ system that has an acute or active medical problem, including review of patient's multiple medications and recent laboratory and diagnostic testing ordered to evaluate patient's comprised respiratory condition. Perform a detailed physical examination and update the nursing plan of care.

Description of Post-Service Work: Evaluate additional diagnostic testing to determine hydration and pulmonary status and further changes in patient's psychotropic regimen. Follow up with telephone calls to facility staff, discussing coordination and documentation of care and interaction with facility health care professionals associated with delivery of care to this patient until the next face-to-face physician encounter.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	25%	54%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	1%	36%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	51%	47%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	1%	23%	75%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	15%	15%	50%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	32%	59%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	53%	39%
Physical effort required	6%	47%	47%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	21%	73%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001
2014	2,639,292	9.178	0.006	2.144	0.001
2015	2,696,494	9.346	0.006	2.205	0.001
2016	2,687,022	9.341	0.006	2.287	0.001
2017	2,742,833	9.554	0.006	2.358	0.001
2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting.

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review

The expert panel reviewed 99309 which requires a moderate level of medical decision making or is based on the total time spent on the date of the encounter. There were 217 respondents of whom 86% found the vignette to be typical. The times and median work RVU were 7/30/10/47/2.09 and the 25th percentile work RVU was 1.92. The two key reference services were 99214, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter, with times and work RVUs of 7/30/10/47/1.92, and 99215, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter, with times and work RVU of 10/45/15/70/2.80.

The panel noted that the current times and work RVU for 99309 are 10/25/10/45/1.55.

The survey median intra time is five minutes longer than the current intra time and the total time is two minutes higher. Furthermore, the survey times and survey 25th percentile work RVU are identical to the times and work RVU for 99214, the key reference services chosen by 149 of the 217 respondents. Because the survey data for 99309 was a direct crosswalk to the key reference service at the 25th percentile the expert panel agreed to recommend the 25th percentile work RVU of 1.92. This also places 99309 in correct rank order to 99215 which has 50% more intra time (45 min. vs. 30 min.) and 49% more total time (70 min. vs. 47 min.) and 2.80 is 46% higher than 1.92.

Therefore, the expert panel recommends for 99309 times and work RVU of 7/30/10/47/1.92.

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99309

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Nurse Practitioner	How often? Sometimes
Specialty Internal Medicine	How often? Sometimes
Specialty Family Medicine	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 13567069
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate was based on total Medicare volume and Medicaid volume plus an additional 10% estimated for other payors

Specialty Nurse Practitioner	Frequency 6146335	Percentage 45.30 %
Specialty Internal Medicine	Frequency 2930703	Percentage 21.60 %
Specialty Family Medicine	Frequency 1628168	Percentage 12.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,094,874 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 Medicare data from the RUC Database plus 85% of deleted 99318

Specialty Nurse Practitioner	Frequency 4571968	Percentage 45.28 %
Specialty Internal Medicine	Frequency 2180492	Percentage 21.59 %
Specialty Family Medicine	Frequency 1222384	Percentage 12.10 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99309

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99310 Tracking Number I7 Original Specialty Recommended RVU: **2.80**
Presented Recommended RVU: **2.80**
Global Period: XXX Current Work RVU: **2.35** RUC Recommended RVU: **2.80**

CPT Descriptor: Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Subsequent nursing facility visit for a patient with a chronic illness with severe exacerbation that poses a threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prepare to see the patient. Review medical records and previously ordered diagnostic laboratory tests. Communicate with facility health care professionals as necessary.

Description of Intra-Service Work: Obtain a comprehensive history. Perform a comprehensive physical examination. Formulate a multidisciplinary treatment plan (MDM of moderate-complexity) that includes IV hydration and antibiotic therapy; nursing instructions regarding monitoring of respiratory, mental, functional, and diabetic status; respiratory and physical therapy assessments with treatment as indicated; and further laboratory monitoring to track effectiveness of treatment.

Description of Post-Service Work: Evaluate results of additionally ordered laboratory and diagnostic testing. Follow up with telephone calls to the facility to adjust interventions as indicated. Document coordination of care and interaction with facility health care professionals associated with delivery of care to this patient until the next face-to-face physician encounter. Discuss end-of-life issues with family members.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99215	XXX	2.80	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99291	XXX	4.50	**RUC Time**

CPT Descriptor Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99215	XXX	2.80	**RUC Time**	10,388,878

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99204	XXX	2.60	**RUC Time**	10,714,246

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter

Other Reference CPT Code	Global	Work RVU	Time Source
75561	XXX	2.60	**RUC Time**

CPT Descriptor Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	1%	21%	31%	47%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	1%	30%	69%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	44%	54%
Physical effort required	1%	45%	54%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	22%	76%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	42%	11%	42%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	32%	58%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	58%	37%
Physical effort required	5%	58%	37%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	32%	68%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The CPT codes for initial and subsequent nursing facility services were surveyed because the CPT editorial panel changed the descriptors of the codes so that the choice of code to report is based on either medical decision making or the total time spent on the date of the encounter. The total time will be based on the results of the surveys for each code. The CPT codes for discharge services were not changed by were surveyed because they are part of the nursing facility services family. CPT also deleted 99318 which was used to report annual nursing facility assessment because such assessments may be required by law. In the future these annual assessments will be reported using the appropriate initial or subsequent care code.

The codes were surveyed by the American Geriatrics Society (AGS), the American Medical Directors Association (AMDA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Nurses Association (ANA), the American Podiatric Medical Association (APMA), and the American College of Physicians (ACP). The surveying societies convened an expert panel to review the survey results and make work and time recommendations to the RUC.

Compelling Evidence

The last time the nursing facility services codes were reviewed by the RUC was in February 2007. The expert panel reviewed peer-reviewed literature (see attached articles) that documented that there have been changes in physician work due to patient population and length of hospital stay. After its review the expert panel agreed that these codes met these compelling evidence criteria.

Specifically, the acuity of patients admitted to nursing home after being discharged from an acute care hospital has increased significantly from 2011 to 2018. The table below shows the increase in patient acuity upon hospital discharge (Elixhauser scale) and the Hierarchical Condition Category (HCC) score on SNF admission. Note that a SNF patient is the typical patient for nursing home visits.

All Hospital Discharges to SNFs

		Elixhauser		HCC	
Year	N	Mean/Estimate	Std. Error	Mean/Estimate	Std. Error
2011	2,617,881	8.839	0.006	2.028	0.001
2012	2,579,944	8.951	0.007	2.067	0.001
2013	2,585,660	9.102	0.007	2.107	0.001
2014	2,639,292	9.178	0.006	2.144	0.001
2015	2,696,494	9.346	0.006	2.205	0.001
2016	2,687,022	9.341	0.006	2.287	0.001
2017	2,742,833	9.554	0.006	2.358	0.001
2018	2,673,328	9.706	0.006	2.402	0.001

The Elixhauser index is a well-established tool that categorizes 30 patient comorbidities based on ICD diagnosis, in this case upon hospital discharge, and is used in a variety of ways including predicting adverse events and utilization of resources. The HCC is a risk adjustment model which calculates risk scores for aged and disable Medicare beneficiaries, often used to represent the expected costs of a Medicare member in the coming year. This data was supplied by Dr Vincent Mor, Brown University Center for Gerontology and Healthcare Research, using LTCFocus.org, a research data base from the Shaping Long-Term Care in America Project sponsored by Brown University and the National Institute on Aging.

Fashaw et. al. (JAMDA 21 (2020) 233-239, reviewed comprehensive data in US Nursing Homes from 1985-2015 and found that in 2015, as opposed to 1985, among other things, the resident cognitive function has decreased (e.g., percent of residents with dementia increased from 39% in 1995 to 45% in 2015), the percent of patients with a psychiatric diagnosis increased from 11% in 1995 to 31% in 2015, the percent of residents receiving antidepressants increased from 20% in 1995 to 49% in 2015, and the need to assistance with activities of daily living has increased,

Teno, et. al. (JAMA 2017) reviewed Medicare Part B claims data and showed that the care of SNF patients has shifted from physicians to nurse practitioners and physician assistances and that those physicians, NPs, and PAs who provide SNF care are SNFists - i.e., providers who bill more than 90% of all their visits in the nursing home setting.

Werner (JAMA 2018) reviewed MEDPAR data and determined that the length of acute care hospital stay before discharge to a post-acute facility decreased from 9.0 days in 2000 to 7.3 days in 2015 and length of stay in the post-acute care facility increased from 21.7 days in 2000 to more than 25 days in 2014 and 2015.

McCarthy et. al. (JAMA 2020) reviewed the nationwide Minimum Data Set (MDS) to look at transfers from nursing homes to acute care hospitals. They found that the number of transfers decreased from 2011 to 2016, especially for patients with dementia, heart failure, and chronic obstructive pulmonary disease - without an increased mortality rate in nursing homes.

After reviewing these data, the expert panel concluded that due to changes in patient population, changes in specialty mix, and the reduced length of acute care hospital stay before discharge to a nursing home, that the compelling evidence criteria were met.

Survey Data Review

The panel reviewed 99310 which requires high level medical decision making or is based on the total time spent on the day of the encounter. There were 203 respondents of whom 86% found the vignette to be typical. The survey times and median work RVU were 10/45/15/70/3.00 and the 25th percentile work RVU was 2.80. The two key reference services were 99215, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter, with times and work RVU of 10/45/15/70/2.80, and 99291, Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes, with times and work RVU of 15/40/15/70/4.5.

The expert panel noted that the current times and work RVU for 99310 are 15/35/20/70/2.35.

The expert panel noted that the survey intra time was 10 minutes longer than the current intra time even though the total time was the same. In addition, the survey times and 25th percentile RVU were identical to the times and work RVU for 99215 which was chosen as the key reference service by 147 of the 203 respondents. The survey times and 25th percentile work RVU also place 99310 in correct rank order with 99291 because while the times are similar, 99291 is much more intense service which is reflected by the work RVU for 99291 which is 60% higher then the recommended work RVU for 99310.

Therefore, the expert panel recommends for 99310, times and work RVU of 10/45/15/70/2.8.

Finally, the expert panel reviewed its recommendations for all the surveyed codes to determine whether the recommendations placed the codes in proper rank order with each other.

The panel reviewed the total times, intra times and work RVUs among the subsequent visit codes, among the initial visit codes, and between the discharge codes to determine if the ratios (i.e., percent) differences of those parameters were consistent. They were very consistent. The expert panel also reviewed these data for the comparable initial visit and subsequent visit codes (e.g., 99306 and 99310) to determine if the percent differences were consistent. They were very consistent. Similarly, the date between the two discharge codes were very consistent. The expert panel agreed that this analysis supported all the recommendations for time and work RVUs.

Code	Intra-time	Total Time	Work RVU
99304	25	36	1.6
99305	35	55	2.5
Ratio of 99305 to 99304	1.4	1.52	1.56

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99310

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Nurse Practitioner	How often? Sometimes
Specialty Internal Medicine	How often? Sometimes
Specialty Family Medicine	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2142752
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate was based on total Medicare volume and Medicaid volume plus an additional 10% estimated for other payors

Specialty Nurse Practitioner	Frequency 1075661	Percentage 50.19 %
Specialty Internal Medicine	Frequency 402837	Percentage 18.79 %
Specialty Family Medicine	Frequency 227132	Percentage 10.60 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,676,670 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimates are based on 2019 Medicare data from the RUC Database, plus 5% from deleted code 99318.

Specialty Nurse Practitioner	Frequency 841520	Percentage 50.18 %
Specialty Internal Medicine	Frequency 315046	Percentage 18.78 %
Specialty Family Medicine	Frequency 177727	Percentage 10.59 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Nursing home visit

BETOS Sub-classification Level II:

Quality
Nursing Home Reform Act
OBRA 1987
nursing home characteristics

A B S T R A C T

Objective: In 1987, the Omnibus Reconciliation Act (OBRA) called for a dramatic overhaul of the nursing home (NH) quality assurance system. This study examines trends in facility, resident, and quality characteristics since passage of that legislation.
Methods: We conducted univariate analyses of national data on US NHs from 3 sources: (1) the 1985 National Nursing Home Survey (NNHS), (2) the 1992-2015 Online Survey Certification and Reporting (OSCAR) Data, and (3) LTCfocUS data for 2000-2015. We examined changes in NH characteristics, resident composition, and quality.
Setting and participants: US NH facilities and residents between 1985 and 2015.
Results: The proportion of NHs that are Medicare and Medicaid certified, members of chains, and operating not-for-profit has increased over the past 30 years. There have also been reductions in occupancy and increases in the share of residents who are racial or ethnic minorities, admitted for post-acute care, in need of physical assistance with daily activities, primarily supported by Medicare, and diagnosed with a psychiatric condition such as schizophrenia. With regard to NH quality, direct care staffing levels have increased. The proportion of residents physically restrained has decreased dramatically, coupled with changes in inappropriate antipsychotic (chemical restraint) use.
Conclusions and implications: Together with changes in the long-term care market, the NHs of today look very different from NHs 30 years ago. The 30th anniversary of OBRA provides a unique opportunity to reflect, consider what we have learned, and think about the future of this and other sectors of long-term care.

For more than 30 years, the quality of nursing home (NH) care has been a continuous concern.[1] In 1984, following published reports and concerns about resident abuse, neglect, and a lack of regulation and oversight, Congress asked the Institute of Medicine (IOM) to investigate the quality of NHs and make recommendations for improvement. The resulting report proposed radical NH reforms,[2] many of which were codified by Congress as part of the Nursing Home Reform Act of the Omnibus Budget Reconciliation Act of 1987 (OBRA 1987).

OBRA 1987 created regulations for NHs in an effort to improve the quality of care delivered to residents. OBRA included a minimum set of care standards and rights for people residing in Medicare- and Medicaid-certified NHs. OBRA 1987 had a focus on residents' quality of life and care, expectations for improved or maintained resident health, as well as residents' rights to banking, organized family councils, and freedom from unnecessary physical and chemical restraints. The Act also standardized certification standards and enforcement strategies. As such, OBRA 1987 was an overhaul of the NH industry and marked a new beginning for NH care and regulation.

In the 30+ years since OBRA 1987, there have been a number of other changes that have directly affected the NH industry. In response

to consumer preferences to remain in the community, "age-in-place," and efforts to rebalance states' long-term care budgets,[3–5] there has been a considerable increase in home- and community-based services (HCBS). HCBS were seen as mechanisms to divert or delay expensive, and often undesired, NH placement. Over the last several decades, states have begun funding more HCBS, primarily through Medicaid waiver programs; and, for the first time in 2013, states spent more on HCBS than care provided in NHs.[6] Accompanying these care delivery, market, and financing changes has been growth of an aging and diversifying population, as well as a number of laws and regulations directly impacting the NH industry (eg, the Balanced Budget Act of 1997 and the introduction of case-mix reimbursement).

The purpose of this study was to summarize changes in the NH industry in the 30 years since the seminal regulatory change affecting NHs. Specifically, we use historical data from 3 national sources and describe changes in NH facility characteristics, resident characteristics, and quality of care from 1985 through 2015. The 30th Anniversary of OBRA provides a unique opportunity to examine the changes within this vitally important industry. This article can aid in understanding long-term trends, as well as provide insight into what changes we might expect in the future.

Methods

Data

We analyzed data from 3 sources to examine resident and facility characteristics, longitudinally: (a) National Nursing Home Survey, (b) Online Survey Certification and Reporting Data/Certification and Survey Provider Enhanced Reporting, and (c) LTCFocUS data.

National Nursing Home Survey (NNHS)

The National Center for Health Statistics conducted the NNHS. The NNHS consists of a nationally representative sample of more than 1,000 NHs and their residents. NHs included in the surveys had at least 3 or more beds and were Medicare or Medicaid certified or had a state license to operate as an NH. The facilities and residents were selected by a stratified 2-stage probability design. In the first stage, NHs were selected, and in the second stage, residents were sampled from the selected NHs. NNHS data were used to describe facility and aggregated resident characteristics. Data for these analyses came from the University of Michigan ICPSR public use NNHS data files for 1985.[7]

Online Survey Certification and Reporting Data (OSCAR)/ Certification and Survey Provider Enhanced Reporting (CASPER)

CMS' OSCAR/CASPER database is a national database of all NH data elements collected by state survey agencies during the required annual onsite Medicare and Medicaid Certification inspection. The inspections occur at least once during a 15-month period. OSCAR/CASPER data are used to determine facility characteristics, deficiencies in care noted during the survey, and aggregated resident data. Data included all certified NHs between the years 1992 and 2015. Variables in OSCAR/CASPER have been validated for research purposes.[8]

Long-Term Care FocUS (LTCFocUS)

We used LTCFocUS.org, a product of the Shaping Long-Term Care in America Project at the Brown University Center for Gerontology and Healthcare Research and supported, in part, by the National Institute on Aging (www.ltcfocus.org). This data set included information for years 2000-2015 and combined variables from the OSCAR data; the Minimum Data Set (MDS), resident-level data related to resident clinical and functional status; the Area Resource File (ARF), a national county-level health resources database maintained by the Health Resources and Services Administration that contains data about the health professionals and facilities in each county; and the Residential History File, a data resource built using Medicare Enrollment data, Medicare claims data, and assessment data to track individuals as they move through the long-term care system.[9] For these analyses, we used the LTCFocUS data to describe the aggregated characteristics of residents served in NHs between 2000 and 2015.

Variables

We included the following facility characteristics to describe changes in the NH market over time: dual certification for Medicare and Medicaid, multifacility chain membership, for-profit status (vs nonprofit or government), presence of an Alzheimer's special care unit, facility size (ie, total number of beds), and occupancy rate.

To describe the resident composition, we included demographic characteristics, length of stay, admission source, physical function, mental health diagnoses, and medication use measures. Demographic variables from LTCfocUS included the percentage of female residents in each facility; the percentage of blacks, whites, and Hispanics in each facility; and the average age for residents residing in each facility. Also from the LTCfocUS, we included the percentage of long-stay residents, defined as the percentage of residents in the NH at least 90 of the last 100 days. We also include the percentage of residents admitted to the NH directly from the hospital vs the community or other LTC setting. From the OSCAR/CASPER, we included information about residents' primary payer as the percentage of residents whose primary support was Medicaid or Medicare. Measures of resident physical and cognitive function included the facility's average Activities of Daily Living (ADL) scale score, bed/chair bound measures, individual early-, middle-, and late-loss ADL, and the percentage of residents with dementia. The ADL scale score comes from LTCFocUS, ranges from 0 to 28, and is created by summing 7 ADL items on a scale from 0 to 4 (with 0 = complete independence and 4 = total dependence for each item). The facility average represents the average across all residents in the facility. Chairbound and bedbound measures come from the NNHS and OSCAR/CASPER data and refer to the percentage of residents unable to leave their chair or bed, respectively, at the time of the survey. The individual ADL of interest from the NNHS and OSCAR/CASPER data include dressing, bathing, transferring, toileting, and eating, and represent the percentage of residents who were not completely independent in each of these activities at the time of the survey. From the NNHS and OSCAR/CASPER data, we also included a measure for the percentage of residents with dementia within the facility. Measures of resident mental health and medication use included the percentage of residents with a psychiatric diagnosis (excluding dementia and depression), a schizophrenia diagnosis, receiving antianxiety medications, receiving antidepressants, and receiving antipsychotics.

Information on facility quality consisted of structure, process, and outcome measures.[10] As a measure of structure, we included the number of certified nursing aides, licensed professional nurses, and registered nurse hours per resident per day from the OSCAR/CASPER data. We obtained information about facilities' quality process measures including the percentage of residents in a facility who were physically restrained, received tube feeding, had a catheter, received antipsychotic medications without a diagnosis of schizophrenia or bipolar disorder at the time of the survey, and the percentage of facilities experiencing medication errors. Medication error refers to the percentage of facilities cited for drug error rates higher than 5% reported during the annual survey. Quality outcome measures included the percentage of residents within a facility with pressure ulcers, and the percentage of residents within a facility experiencing incontinence. Values for pressure ulcers indicate the percentage of residents during the annual survey with pressure sores. The incontinence measures indicate the percentage of residents with bladder or bowel incontinence at the time of the survey.

Table 1
Changes Over Time in Facility Characteristics (1985-2015)

Year	1985, Mean (CI)	1995, % or Mean (SD)	2005, % or Mean (SD)	2015, % or Mean (SD)
Number of nursing homes, n	19,068*	16,824	16,091	15,686
Percentage dual (Medicare + Medicaid) certified	33.3 (28.9, 37.8)	78.6	93.4	97.1
Percentage member of a chain		51.24	52.43	56.81

Analyses

Univariate analyses of the above variables were completed using Stata, version 14 (StataCorp, College Station, TX). Data from the NNHS were weighted using the facility, bed, and current resident weights provided. OSCAR/CASPER and LTCFocUS data are available at the facility level. Facility-level variables are averaged for each study year. We do not include inferential statistics in this article because we are presenting data for the entire population of NHs in the United States for the majority of years.

Results

Facility Characteristics

In the past 30 years, the NH industry has decreased in size, from 19,068 facilities in 1985 to 15,686 in 2016 (Table 1). There has also been an increase in the percentage of facilities that are nonprofit (25% in 1985 and 31% in 2015) and that are dually certified by both Medicare and Medicaid (33% in 1985 and up to 97% 2015). Between 1995 and 2015, chain membership increased from 51% to 57%, the percentage of facilities with an Alzheimer's special care unit increased from 11% to 15%, and the overall NH occupancy rates declined from 87% to 81%.

Resident Composition

The population that NHs serve has changed over the last 30 years (Table 2). Data from the NNHS and LTCFocUS suggest that although the average age of residents has remained constant, the percentage of residents who are racial and ethnic minorities has increased from 7.8% in 1985 to 20.7% in 2015. The average percentage of females decreased from 72% of residents in 1985 to 67% in 2015. The prevalence of long-stay residents within NHs has remained stable at 69% of all residents over this time period. However, the percentage of residents admitted from the hospital increased from 67% in 2000 to 85% in 2015. There has also been a shift of payer types over time (Figure 1). Between 1992 and 2015, the average percentage of residents with Medicaid as a primary payer decreased from 64% to 58%, whereas the average percentage of residents with Medicare as the primary payer rose from 9% to 15%.

Resident physical and cognitive function has decreased over the years (Table 3). According to LTCFocUS data, the average ADL dependency score among NH residents increased slightly, from 15 to 17, between 2000 and 2015. According to NNHS and OSCAR/CASPER data, residents who required assistance in bathing increased from a national average of 89% in 1985 to an average facility average of 96% in 2015. The same trend is demonstrated by the increased share of residents who need assistance with the other ADL from 1985 to 2015: assistance with dressing rose from 74% to 92%, assistance with transferring from 60% to 85%, assistance with toileting from 49% to 88%, and assisting with eating increased from 38% to 56%. However, there was a decrease in the percentage of residents who were bed-bound from 6% in 1985 to 4% in 2015, whereas being chair bound rose from 39% to 64%. The percentage of residents with dementia increased from an average of 39% in 1995 to an average of 45% across the facilities in 2015.

The share of residents with psychiatric diagnoses has increased over the years, as has the use of psychotropic medications. According to the OSCAR/CASPER data, there was an almost 3-fold increase in the share of residents with a psychiatric diagnosis, from 11% in 1995 to 31% by 2015. Between 1985 and 2015, the average percentage of

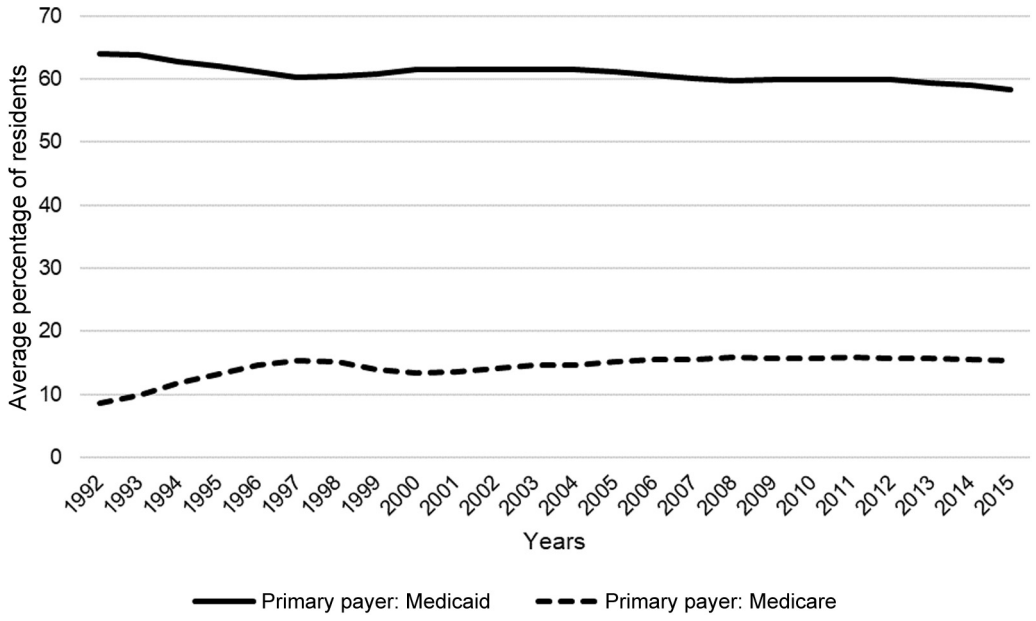

Fig. 1. Primary payment source using OSCAR/CASPER Data (1992-2015).

residents with schizophrenia increased from 6% to 11%. The percentages of residents receiving antianxiety, antidepressant, and antipsychotic medications in 1995 were 15%, 20%, and 16%, respectively, and by 2015 increased to 23%, 49%, and 20%, respectively.

Quality of Care

The average direct care staffing hours have increased over time, with the greatest increases observed among CNAs (see Table 4). Overall, quality process measures have also improved since the passage of OBRA 1987. Notably, the average proportion of residents being physically restrained decreased dramatically from 19% to 1%, and the percentage of residents receiving antipsychotic medications inappropriately, as a chemical restraint, decreased from 16% in 2000 to 12% in 2015, although there was a peak of 22% in 2005. However, there was not much change in the proportion of facilities cited for medication errors over this time period.

Quality outcome measures also improved over time. The proportion of residents with pressure ulcers decreased from 8% to 6%. Lastly, congruent with increased need for assistance, bowel and bladder incontinence increased from 42% to 44% and 49% to 62%, respectively.

Discussion

Within this 30-year period, there were facility, resident, and quality of care changes that can be linked to regulations adopted through the OBRA 1987 and other policy shifts in the long-term care sector.

Certification

Over the last 30 years, we witnessed a change in NH certification. This change is consistent with the OBRA 1987 requirement for NHs to be certified and meet the federal participation requirements in order to receive Medicaid and Medicare payments.[11] Previously, Medicare-certified facilities had more stringent requirements, but seeing that the majority of government spending came from Medicaid, OBRA 1987 stipulated that all Medicaid-certified facilities met a set of standards that were similar to that of Medicare.[1] Additionally, noting Medicare's generous reimbursement for skilled care, many Medicaid-only NHs became dually certified in both Medicare and Medicaid.[12] These policy and financing incentives likely contributed to the increase in the proportion of facilities that were dually certified during this time period.

Changing Demand and Supply, and Lower Occupancy

Concurrent with shifting US demographics (eg, an aging and increasingly diverse population), NHs in the last 30 years have witnessed increases in the proportion of minorities and decreases in the proportion of white residents. Recognizing the aging population, the long-term care market began to appear more lucrative and attracted a greater number of investors to NH operations.[13] This is evidenced by the percentage of NHs that were owned and operated by a chain. Stevenson, Grabowski, and Coots (2006) posit that chain facilities increased because of the interplay of certificate of need laws and resulting acquisitions.

Despite the aging of the population, there was a decrease in the number of NHs and facility occupancy rates during this time period. This decrease in NH supply and occupancy is likely attributable to the rise of community options such as assisted living and other HCBS.[14,15] In 2000, Medicaid spent about 27% of its total Medicaid long-term services and supports expenditures on HCBS and 73% on institutional care; by 2016, 57% of the expenditures were for HCBS and 43% for NH care.[6] It can be difficult to quantify the increase in community-based services due to data challenges; however, the National Survey of Resident Care Facilities identified approximately 31,100 residential facilities in 2010 and researchers have suggested a continued growth in the market.[16–18] The growth of long-term care alternatives allows individuals to remain in their homes and communities longer, in many cases delaying NH placement or diverting it altogether.[19–23] These trends may also explain some of the reasons behind the increase in functional impairment among NH residents over this time period.

Another potential explanation for the increase in functional impairment witnessed over this 30-year period may be the increase in post-acute, rehabilitative care provided in NHs. Recognizing the profitability associated with providing Medicare-reimbursed services,[24] NHs began to accept more post-acute care patients, with a large number of NHs choosing to specialize in the care of post-acute patients.[12,25] This shift in the orientation of NHs over this time period, from providing typically long-term custodial care to post-acute, rehabilitative care, may contribute to the increase in resident acuity witnessed in this study. It is evident from our findings that there is an increased percentage of residents being admitted directly from the hospital, presumably for post-acute care, which may contribute to higher levels of functional impairment as residents may be leaving hospitals "quicker and sicker."[26,27]

Quality Improvement

Despite higher resident levels of need, NH quality appears to have improved over time. Our data show modest gains in quality indicators between 1995 and 2015. The literature around drivers of quality improvement in NHs is vast and includes mechanisms such as NH ownership, nurse staffing, public reporting, and quality improvement initiatives. The quality improvement that we witnessed during this time period could have been attributable to the increase in nonprofit NHs, which have consistently shown to have higher quality ratings.[13] Quality improvement could also be directly related to the increase in nursing hours witnessed over this time period. OBRA 1987 improved the standards for nursing hours, and we observed these increases over time. Although it is possible that the increase in nursing hours may be in direct response to increasing need among residents, prior research has concluded that increasing nursing hours improves patient outcomes.[28–30] It is also plausible that new inspection, survey, enforcement efforts, and public reporting prompted improvements in quality

measures.[1,31] Although it can be argued that NHs still have room to improve in their quality indicators, it is important to note that despite an increasingly vulnerable and higher need population, we still observe quality gains among NHs during this time period.

One of the direct effects of OBRA 1987 was a substantial decrease in the use of physical restraints. Physical restraints were initially used on residents with serious mental illness to manage behaviors, but began to be used more widely on residents with behavioral symptoms, including residents with dementia.[32] Prior research indicates that physical restraints are associated with worse outcomes for residents, such as increased depression, less social engagement among NH residents,[33–35] reduced muscle strength,[33] and pressure ulcers.[33,34,36] Parts of OBRA 1987 focused directly on the residents' rights to be free from all restraints. Unfortunately, decreases in physical restraints were coupled with initial increases in chemical restraint use, such as inappropriate antipsychotic use. Antipsychotic medications increase the risk of falls[37] and death.[38,39] In 2005, the FDA released a Black Box warning to decrease the use of antipsychotics among older adults.[40] This warning is consistent with the 2005 peak in antipsychotic use that is present in our data. In 2011, CMS launched a national partnership to further reduce inappropriate antipsychotic use, which has been largely successful.[41] With the increase in dementia residents and initiatives to improve dementia care in NHs, there was a simultaneous increase in Alzheimer's SCUs, with a peak in the percentage of facilities with an Alzheimer's SCU in 2005. Literature suggests that residents within facilities with SCUs have significantly more challenging behaviors and have increased risk for chemical restraint use.[42,43] The presence of these units may also account for the increased resident impairment.

It is also important to note the dramatic increase in residents with serious mental illnesses (SMI), as this could be a direct result of state psychiatric facilities closures in the 1960s and 1970s. The increase in the SMI population creates a new and increased burden for NHs and their staff that may negatively affect the quality of care that NHs are able to provide.[44,45]

Despite the success of several prompted voiding interventions,[46,47] we observed increases into the share of NH residents experiencing incontinence over the past 30 years, potentially reflective of the increasing needs of the NH population. Prompting toileting interventions can be labor intensive, and it is often more convenient to diaper a resident than toilet.[48] More work is needed in this important quality of life area.

Limitations

This work provides a high-level look at national trends in NH characteristics, resident composition, and quality measures. Data are averaged across all facilities for the available study years. We do not have access to annual data available between 1986 and 1994, and because of the facility-level nature of our data we are unable to summarize resident-level changes over time. For example, it would be interesting to examine changes in acuity, separately for long-stay vs short-stay residents, or changes in residents' lengths of stay. This would help us understand if the increase in acuity over time is due to an increased focus on post-acute care, or attributable to higher levels of acuity among long-term residents who may delay entry into NHs through home- and community-based alternatives. Future work in this area would be beneficial to understanding additional impacts of OBRA on the long-term care industry as a whole.

Conclusions and Implications

Overall, OBRA 1987 is positively associated with the quality of care improvements in NHs despite increasing impairment of NH residents. OBRA 1987 was also successful in implementing and enforcing the MDS resident assessment survey, and without that this research would not be possible. Because of the aging-in-place movement, we are seeing lower occupancy rates in NHs. Older adults without financial resources, disproportionality minority older adults, are becoming an increasing proportion of NH residents, as they may not be able to as readily access these care alternatives. Current and future policies should focus on expanding equitable access to the remaining long-term care services and supports in the continuum of care, particularly given the policies and initiatives focused on decreasing NH utilization through support of home and community based alternatives.[49] Although NHs continue to focus more on short-stay post-acute care residents and long-stay residents with dementia, more work will need to be done in community-based settings to ensure the highest quality care and life. Improving quality is also about improving equity, and it is important for future work to examine access to quality care for our most vulnerable older adults who are sometimes triply and doubly vulnerable because of their cognitive status, race, and/or socioeconomic position. As our work shows, much of the quality progress made in NHs has been because of regulation and oversight over the years. The same level of oversight does not exist for all community alternatives, but the evidence presented here is indicative of effective practices.

Future research is also needed to understand whether these improvements in quality over the past 30 years have been equitable on the basis of race, socioeconomic status, gender, and geography. In sum, our findings document the 30-year history of NHs since the passage of the seminal legislation: OBRA 1987. As we look toward the future of long-term care, it is important that we reflect on the past.

JAMA Internal Medicine | Original Investigation

Hospital Transfer Rates Among US Nursing Home Residents With Advanced Illness Before and After Initiatives to Reduce Hospitalizations

Ellen P. McCarthy, PhD, MPH; Jessica A. Ogarek, MS; Lacey Loomer, MSPH; Pedro L. Gozalo, MSc, PhD; Vincent Mor, PhD; Mary Beth Hamel, MD, MPH; Susan L. Mitchell, MD, MPH

IMPORTANCE Hospital transfers among nursing home residents in the United States who have been diagnosed with advanced illnesses and have limited life expectancy are often burdensome, costly, and of little clinical benefit. National initiatives, introduced since 2012, have focused on reducing such hospitalizations, but little is known about the consequences of these initiatives in this population.

OBJECTIVE To investigate the change in hospital transfer rates among nursing home residents with advanced illnesses, such as dementia, congestive heart failure (CHF), and chronic obstructive pulmonary disease (COPD), from 2011 to 2017—before and after the introduction of national initiatives to reduce hospitalizations.

DESIGN, SETTING, AND PARTICIPANTS In this cross-sectional study, nationwide Minimum Data Set (MDS) assessments from January 1, 2011, to December 31, 2016 (with the follow-up for transfer rates until December 31, 2017), were used to identify annual inception cohorts of long-stay (>100 days) nursing home residents who had recently progressed to the advanced stages of dementia, CHF, or COPD. The data were analyzed from October 24, 2018, to October 3, 2019.

MAIN OUTCOMES AND MEASURES The number of hospital transfers (hospitalizations, observation stays, and emergency department visits) per person-year alive was calculated from the MDS assessment from the date when residents first met the criteria for advanced illness up to 12 months afterward using Medicare claims from 2011 to 2017. Transfer rates for all causes, potentially avoidable conditions (sepsis, pneumonia, dehydration, urinary tract infections, CHF, and COPD), and serious bone fractures (pelvis, hip, wrist, ankle, and long bones of arms or legs) were investigated. Hospice enrollment and mortality were also ascertained.

RESULTS The proportions of residents in the 2011 and 2016 cohorts who underwent any hospital transfer were 56.1% and 45.4% of those with advanced dementia, 77.6% and 69.5% of those with CHF, and 76.2% and 67.2% of those with COPD. The mean (SD) number of transfers per person-year alive for potentially avoidable conditions was higher in the 2011 cohort vs 2016 cohort: advanced dementia, 2.4 (14.0) vs 1.6 (11.2) (adjusted risk ratio [aRR], 0.73; 95% CI, 0.65-0.81); CHF, 8.5 (32.0) vs 6.7 (26.8) (aRR, 0.72; 95% CI, 0.65-0.81); and COPD, 7.8 (30.9) vs 5.5 (24.8) (aRR, 0.64; 95% CI, 0.57-0.72). Transfers for bone fractures remained unchanged, and mortality did not increase. Hospice enrollment was low across all illness groups and years (range, 23%-30%).

CONCLUSIONS AND RELEVANCE The findings of this study suggest that concurrent with new initiatives aimed at reducing hospitalizations, hospital transfers declined between 2011 and 2017 among nursing home residents with advanced illnesses without increased mortality rates. Opportunities remain to further reduce unnecessary hospital transfers in this population and improve goal-directed care for those residents who opt to forgo hospitalization.

A central objective of the Patient Protection and Affordable Care Act (ACA) of 2010 was to transform health care by ensuring that patients receive high-value, effective care.[1] Toward this objective, there has been particular focus on reducing potentially avoidable hospital transfers from the long-term care setting. The opportunity and need to reduce avoidable hospitalizations are greatest among people with advanced chronic illnesses[2] for whom the burdens of hospitalization often outweigh the benefits.[3-5] Little is currently known about how hospital transfer rates have changed among this population since broad initiatives were introduced.

Approximately 50% of nursing home residents experience 1 or more hospitalization in their last year of life.[6] At least half of these hospitalizations are estimated to be potentially avoidable because the acute condition could be managed effectively in the nursing home or the hospital-level care is not aligned with patient preferences.[7-11] Decisions regarding hospital transfers should be guided by the primary goal of care (eg, prolongation of life vs comfort), which is comfort for most nursing home residents with advanced illness.[12-15] With rare exceptions (eg, serious bone fractures), hospitalization seldom promotes the goal of comfort.

Since 2012, several new approaches have emerged from the ACA to try to reduce hospital transfers of nursing home residents. Care models that enhance the nursing home's on-site capability to manage specific targeted conditions (sepsis, pneumonia, urinary tract infections, dehydration, congestive heart failure [CHF], and chronic obstructive pulmonary disease [COPD]) have shown promise through the quality initiative program of the Centers for Medicare & Medicaid Services (CMS) to reduce avoidable hospitalizations.[9,10] Evaluation of the initiative's first phase in 7 states demonstrated estimated net reductions in 2015 of 2.2% to 9.3% in the probability of an all-cause hospitalization and 1.4% to 7.2% in the probability of a potentially avoidable hospitalization for participating residents compared with comparison groups.[1] Alternative payment models, such as accountable care organizations and bundled payments, also create financial incentives for nursing homes to reduce hospital transfers.[16] The Hospital Readmissions Reduction Program (HRRP) implemented financial penalties for hospitals with excess readmissions for target conditions including pneumonia, CHF, and COPD.[17,18] These concurrent initiatives raised national awareness and forged collaborations around transitional care to avoid unnecessary hospitalizations.[19] The consequences of such initiatives on hospital transfer rates, specifically among residents with advanced illnesses, have not been reported, to our knowledge.

The present study used Minimum Data Set (MDS) assessments linked to Medicare data to examine the national trends of hospital transfer rates from 2011 to 2017 among long-stay, fee-for-service nursing home residents with advanced dementia, CHF, or COPD. We specifically examined transfers for conditions that were deemed to be potentially avoidable and were the target of recent policy initiatives. For comparison, we also examined hospital transfer rates for serious bone fractures, which we hypothesized would be less affected by such initiatives. Finally, we assessed mortality and hospice enrollment rates.

Key Points

Question How did the hospital transfer rates change between 2011 and 2017 among nursing home residents diagnosed with advanced illness and limited life expectancy before and after the introduction of national initiatives to reduce hospitalizations?

Findings In this US nationwide cross-sectional study of 6 cohorts of nursing home residents with advanced illness, such as dementia, congestive heart failure, and chronic obstructive pulmonary disease, although hospital transfers for all causes and for potentially avoidable conditions were common, such transfers were found to have declined considerably from 2011 to 2017, and concurrent hospice use was low across all cohorts.

Meaning The findings of this study suggest that hospital transfer rates among nursing home residents with advanced illness declined from 2011 to 2017 and that opportunities remain to reduce unnecessary hospital transfers among residents with advanced illness.

Methods

Advanced Illness Cohorts

In this cross-sectional study, the MDS version 3.0 assessments[20] from federally licensed nursing homes in the United States were used from January 1, 2011, to December 31, 2016, to construct annual inception cohorts of long-stay residents (ie, >100 days) aged 65 years or older who were diagnosed with advanced dementia, CHF, or COPD. The MDS version 3.0 is a standardized, comprehensive assessment conducted on all nursing home residents at admission and at routine intervals (eg, quarterly) and was implemented in 2011.[20] Key differences between MDS 3.0 and MDS 2.0 precluded us from using MDS before 2011.[21] To construct these cohorts, we identified residents from the first MDS assessment at which they met the full criteria for advanced dementia, CHF, or COPD (hereafter, baseline assessment) in each calendar year. Residents may have had the illness, such as CHF, on a prior MDS assessment but were not included in the cohort until they first met the criteria for advanced disease, as described below. Residents had to be continuously enrolled in the Medicare Parts A and B fee-for-service program for up to 12 months after their baseline assessment and could belong to more than 1 advanced illness group. Residents enrolled in hospice at the baseline assessment were excluded. The institutional review board at Brown University approved this study under expedited review and waived informed consent under 45 CFR 46.116.

We defined advanced dementia, CHF, and COPD using criteria adapted from previous studies[5,22,23] using MDS to approximate hospice eligibility criteria, thus implying limited life expectancy. Advanced dementia criteria included the following: diagnosis of Alzheimer disease or other dementia, advanced cognitive impairment as defined by a score of 3 (moderate impairment) or 4 (severe impairment) on the Cognitive Function Scale,[24] and extensive or total assistance needed for eating and transferring. Advanced CHF was defined as follows: CHF diagnosis, shortness of breath while sitting or supine, and extensive or total assistance needed for transferring. Advanced COPD was

© 2019 American Medical Association. All rights reserved.

Downloaded From: https://jamanetwork.com/ by Charles Crecelius on 03/22/2021

defined as follows: diagnosis of COPD (including emphysema and asthma), shortness of breath while sitting or supine, and extensive or total assistance needed for transferring.

Covariates

Age, sex, nonwhite race, dual-eligible status indicating beneficiaries qualifying for both Medicare and Medicaid, MDS 3.0 mortality risk score (MRS3),[25] and cohort year were ascertained from the baseline MDS assessment. The MRS3 (0-39) is a validated risk score based on demographic, clinical, and functional characteristics, with higher values indicating greater 30- and 60-day mortality risk. An MRS3 score of 8 or higher is associated with a 5.4 times increased odds of 30-day mortality compared with scores lower than 8.[25]

Outcomes

Residents were followed for up to 12 months from their baseline MDS assessment using Medicare claims from January 1, 2011, to December 31, 2017, to ascertain the occurrence of hospital transfers for all causes, potentially avoidable conditions, and serious bone fractures. Thus, person-time and outcomes spanned 2 calendar years (eg, for the 2016 cohort, outcomes were assessed in both 2016 and 2017). Hospital transfers included acute hospitalizations, observation stays, and emergency department (ED) visits. Hospitalizations were identified from the Medicare Provider Analysis and Review file.[26] Observation stays were defined as any outpatient facility claim for observation services using Healthcare Common Procedure Codes G0378-G0379,[27] *Current Procedural Terminology* codes 99217-99220,[28] or hospital outpatient revenue center code 0762. Emergency department visits were ascertained using outpatient facility claims with revenue center codes 0450-0459 or 0981, Healthcare Common Procedure Codes G0380-G0385, or carrier claims for ED services using *Current Procedural Terminology* codes 99281-99285. Observation stays that became admissions were considered to be hospitalizations. Emergency department visits that became hospitalizations or observation stays were classified accordingly.

Potentially avoidable transfers were identified using ambulatory care-sensitive conditions,[7-11] including sepsis, pneumonia, dehydration, urinary tract infections, heart failure, and COPD (including emphysema and asthma) (eTable 1 in the Supplement). These conditions account for 78% of the potentially avoidable hospitalizations among nursing home residents.[9] Serious bone fractures were examined as counterfactual conditions that usually result in hospital transfers regardless of existing policies and included fractures of the pelvis, hip, long bones of arms (humerus, ulna, and radius) and legs (femur, tibia, and fibula), wrists, and ankles (eTable 1 in the Supplement). We classified hospital transfers for these conditions using the claim's principal diagnosis. Mortality and hospice enrollment within 12 months after the baseline assessment were identified from the Medicare Master Beneficiary Summary File[29] and the 2011 to 2017 hospice claims, respectively.

Statistical Analysis

The data were analyzed from October 24, 2018, to October 3, 2019. Descriptive analyses were performed for resident characteristics and outcomes using means with SDs for continuous variables and proportions for categorical variables. Descriptive results were generated for each advanced illness group stratified by cohort year. Hospital transfers were further described by type (hospitalizations, observation stays, and ED visits) and by condition (all causes, potentially avoidable, and serious bone fractures). The proportion of potentially avoidable transfers attributable to specific diagnoses (eg, sepsis, pneumonia) were also calculated and presented graphically. Outliers defined as residents with all-cause hospital transfer rates exceeding 365 transfers per person-year alive across 12 months were removed (<1% of residents across all cohorts combined). Hospital transfer outcomes across 12 months were measured as the proportion of residents who experienced at least 1 transfer and the number of transfers per person-year alive. Mortality and hospice enrollment outcomes across 12 months were measured as the proportion of residents who experienced the event and the time to event. For all models, the main independent variable was the cohort year, with 2011 as the referent category. All models were adjusted for age, sex, nonwhite race, and MRS3 score. All models were fitted using generalized estimating equations to account for clustering within nursing homes and included an offset for log-transformed person-time.

Binary outcomes (any hospital transfers, hospice enrollment, and mortality) were analyzed using log-linked binomial models to estimate relative risk with cohort year. Zero-inflated Poisson regression models were used to analyze outcomes measured as number of transfers per person-year alive to allow for overdispersion owing to the high proportion of residents without a hospital transfer.[30] Adjusted risk ratios (aRRs) and 95% CIs were generated for these analyses. Finally, Cox proportional hazards regression models were used to analyze time-to-event outcomes (hospice enrollment, mortality) across 12 months of follow-up. In the hospice model, death without hospice was considered to be a competing risk. Adjusted hazard ratios and 95% CIs were estimated from these analyses. Analyses were performed using SAS, version 9.4 (SAS Institute Inc).

Results

Table 1 gives the characteristics of the nursing home residents by cohort year and advanced illness group. The 2011 cohort sizes were smaller for all illness groups compared with those of other years because residents had to be in the nursing home for at least 100 days and MDS data before 2011 were not used. Nonetheless, the overall distributions of age and sex were similar across cohort years within illness groups. Residents with advanced CHF (10.1-10.9) and COPD (9.0-9.6) generally had higher MRS3 scores (higher mortality risk) compared with residents with advanced dementia (7.5-8.4). All cohorts were predominately female, white, and dually eligible for Medicare and Medicaid.

Table 2 provides hospital transfer outcomes. All-cause hospital transfers were common in all illness groups across all years and were consistently lower for residents with advanced dementia compared with other groups. The most pronounced reduction in transfers occurred from the 2011 to 2012 cohort and

Table 1. Characteristics of Nursing Home Residents With Advanced Illness by Cohort Year[a]

Characteristic	Cohort Year[a] 2011[b]	2012	2013	2014	2015	2016
Advanced Dementia						
Residents, No.	18 178[b]	44 385	50 725	53 078	53 418	52 221
Follow-up, mean (SD), d	232.5 (146.0)	238.2 (143.6)	242.8 (143.0)	241.8 (142.4)	243.6 (142.7)	238.7 (143.5)
Age, mean (SD), y	85.0 (7.6)	85.4 (7.6)	85.6 (7.8)	85.8 (7.8)	85.9 (7.9)	85.8 (8.0)
Female, No. (%)	12 400 (68.2)	30 760 (69.3)	35 630 (70.2)	37 303 (70.3)	37 906 (71.0)	36 572 (70.0)
Nonwhite race, No. (%)	3196 (17.6)	7312 (16.5)	8140 (16.0)	8508 (16.0)	8467 (15.9)	8464 (16.2)
Dual eligible, No. (%)[c]	12 654 (69.6)	32 238 (72.6)	37 522 (74.0)	39 462 (74.3)	39 558 (74.1)	39 280 (75.2)
MRS3, mean (SD)[d]	8.4 (3.6)	8.1 (3.6)	7.9 (3.5)	7.7 (3.4)	7.6 (3.4)	7.5 (3.3)
Advanced Congestive Heart Failure						
Residents, No.	8866[b]	16 667	17 782	17 392	17 562	18 931
Follow-up, mean (SD), d alive	207.8 (149.3)	217.8 (148.1)	228.5 (146.7)	226.1 (146.1)	223.9 (148.0)	218.9 (149.5)
Age, mean (SD), y	84.2 (8.1)	84.5 (8.2)	84.5 (8.3)	84.5 (8.5)	84.5 (8.6)	84.3 (8.6)
Female, No. (%)	5994 (67.6)	11 484 (68.9)	12 247 (68.9)	11 999 (69.0)	12 183 (69.4)	12 865 (68.0)
Nonwhite race, No. (%)	1417 (16.0)	2429 (14.6)	2544 (14.3)	2454 (14.1)	2338 (13.3)	2812 (14.9)
Dual eligible, No. (%)[c]	6447 (73.1)	12 665 (76.0)	13 437 (75.6)	13 216 (76.0)	13 097 (74.6)	14 224 (75.1)
MRS3, mean (SD)[d]	10.7 (3.3)	10.9 (3.1)	10.8 (3.0)	10.5 (3.0)	10.7 (3.0)	10.1 (2.9)
Advanced Chronic Obstructive Pulmonary Disease						
Residents, No.	8467[b]	16 597	17 806	17 166	17 409	19 154
Follow-up, mean (SD), d alive	220.5 (148.3)	233.8 (144.8)	243.7 (143.3)	241.9 (142.7)	242.1 (143.9)	239.5 (144.8)
Age, mean (SD), y	82.8 (8.2)	83.1 (8.2)	83.1 (8.4)	83.2 (8.6)	83.1 (8.5)	83.1 (8.6)
Female, No. (%)	5584 (64.6)	10 818 (65.2)	11 788 (66.2)	11 303 (65.8)	11 573 (66.5)	12 668 (66.1)
Nonwhite race, No. (%)	1386 (16.0)	2422 (14.6)	2523 (14.2)	2441 (14.2)	2310 (13.3)	2775 (14.5)
Dual eligible, No. (%)[c]	6566 (75.9)	12 933 (77.9)	14 019 (78.7)	13 499 (78.6)	13 414 (77.1)	15 121 (78.9)
MRS3, mean (SD)[d]	9.6 (3.3)	9.6 (3.2)	9.6 (3.0)	9.4 (3.0)	9.3 (2.9)	9.0 (3.0)

Abbreviations: MDS, Minimum Data Set; MRS3, MDS 3.0 mortality risk score.

[a] Cohort year refers to the calendar year of the inception cohort constructed for each advanced illness using MDS 3.0 assessments from 2011 to 2016.

[b] Cohort sizes from 2011 were smaller compared with those of other years because residents had to be in the nursing home for at least 100 days and MDS data before 2011 were not used.

[c] Beneficiaries who qualify for both Medicare and Medicaid benefits.

[d] MDS 3.0 mortality risk score, range 0-39; higher scores indicate higher risk of mortality.

then from the 2012 to 2013 cohort. Data showed no further reduction after 2013 and higher rates in 2016 than in 2015, particularly in the CHF and COPD cohorts. The adjusted proportions of residents who had at least 1 hospital transfer for any cause in the 2011 and 2016 cohorts were 56.1% and 45.4% for those with advanced dementia, 77.6% and 69.5% for those with CHF, and 76.2% and 67.2% for those with COPD. The mean (SD) number of hospital transfers per person-year alive for any cause was higher in the 2011 vs 2016 cohorts for nursing home residents with advanced dementia, 5.8 (22.7) vs 3.9 (17.9); CHF, 16.8 (43.9) vs 13.5 (38.9); and COPD, 15.6 (42.4) vs 11.2 (35.8). For each illness, the decrease in transfer rates between the 2011 and 2016 cohorts remained significant (advanced dementia [aRR, 0.72; 95% CI, 0.67-0.78]; CHF [aRR, 0.74; 95% CI, 0.68-0.80]; and COPD [aRR, 0.66; 95% CI, 0.61-0.72]) after adjustment for baseline characteristics. As demonstrated in **Figure 1**, reductions in hospital transfer rates over time were almost entirely attributable to declines in acute hospitalizations in each illness group.

Transfers for potentially avoidable conditions were common and decreased over time in each illness group in patterns similar to those of transfers for all causes (Table 2). The adjusted proportions of residents having at least 1 hospital transfer for a potentially avoidable condition in the 2011 and 2016 cohorts, respectively, were 26.5% and 20.4% for those with advanced dementia; 50.0% and 42.9% for those with CHF; and 49.2% and 40.7% for those with COPD. The mean (SD) number of hospital transfers per person-year alive for potentially avoidable conditions for the 2011 vs 2016 cohorts were 2.4 (14.0) vs 1.6 (11.2) (aRR, 0.73; 95% CI, 0.65-0.81) for those with advanced dementia; 8.5 (32.0) vs 6.7 (26.8) (aRR, 0.72; 95% CI, 0.65-0.81) for those with CHF; and 7.8 (30.9) vs 5.5 (24.8) (aRR, 0.64; 95% CI, 0.57-0.72) for those with COPD. Sepsis was the most frequent condition attributed to potentially avoidable transfers in all cohort years for all groups (**Figure 2**). The next most frequent conditions documented for potentially avoidable transfers were pneumonia and urinary tract infections for advanced dementia and CHF and pneumonia for both advanced CHF and COPD.

Hospital transfers for a primary diagnosis of serious bone fractures were relatively uncommon and, as hypothesized, remained unchanged for all advanced illness groups across all years (Table 2). **Table 3** gives the mortality and hospice enrollment outcomes. Hospice enrollment was low across all illness groups and years (range, 23%-30%). Mortality within 1 year exceeded 50% for all advanced illness groups across all years but did not increase over time in any illness group. Hospice use

Abbreviations: COPD, chronic obstructive pulmonary disease; MDS, Minimum Data Set; MRS3, MDS 3.0 mortality risk score; RR, relative risk.

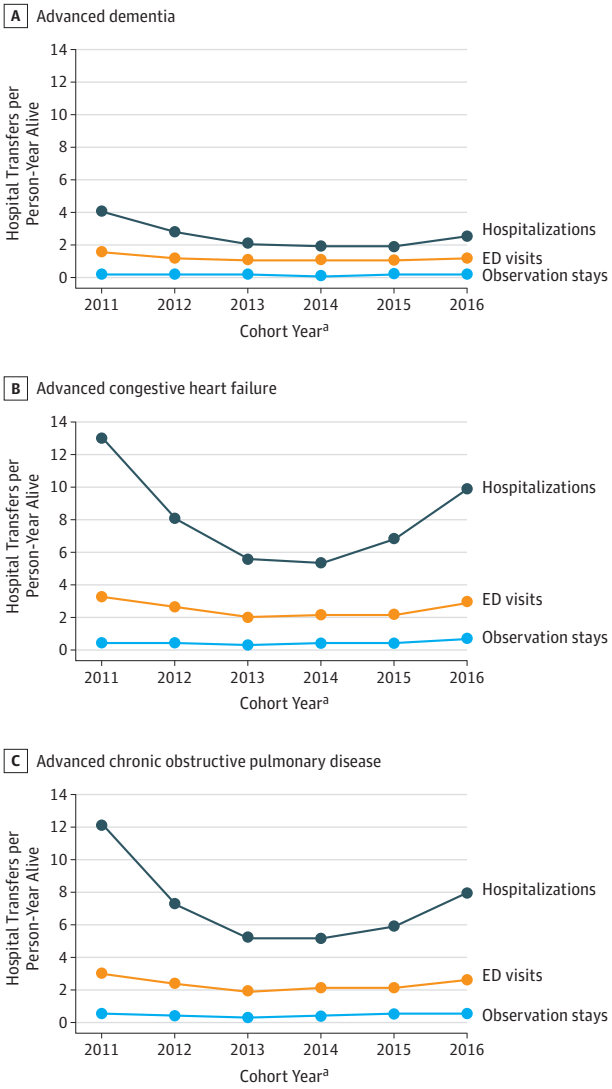
[a] Cohort year refers to the calendar year of the inception cohort constructed for each advanced illness using MDS assessments from 2011 to 2016. Medicare data from 2011 to 2017 were used to identify transfers occurring within 12 months of meeting the criteria for advanced illness for each cohort. Thus, person-time and transfers were assessed for up to 12 months and spanned 2 calendar years (eg, for the 2016 cohort, transfers were assessed in both 2016 and 2017).

[b] All models were adjusted for age, sex, nonwhite race, and MRS3 and included an offset for log(person-time).

[c] Transfers for primary diagnosis of sepsis, pneumonia, dehydration, urinary tract infections, heart failure, and COPD or asthma.

[d] Fractures of pelvis, hip, wrist, ankle, and long bone fractures of arms (humerus, ulna, and radius) and legs (femur, tibia, and fibula).

was low for all illnesses across all years but increased slightly for the 2016 cohort of residents with advanced dementia.



Discussion

We examined changes in national hospital transfer rates among long-stay nursing home residents with advanced dementia, CHF, and COPD from 2011 to 2017, a period during which national initiatives were introduced to reduce hospital transfers across care settings, including the long-term care setting. Transfers for all causes and potentially avoidable conditions declined for each advanced illness group during these years without adversely affecting mortality. This decline was almost entirely attributable to a reduction in hospitalizations rather than in observation stays or ED visits. In contrast, transfer rates for serious bone fractures, which are less likely to be associated with policy changes, remained stable. Sepsis and pneumonia were common reasons for potentially avoidable hospital transfers across all groups. Although the hospital transfer rates for all causes and potentially avoidable conditions declined, they remained common. In the 2016 cohorts, 45% of the residents with advanced

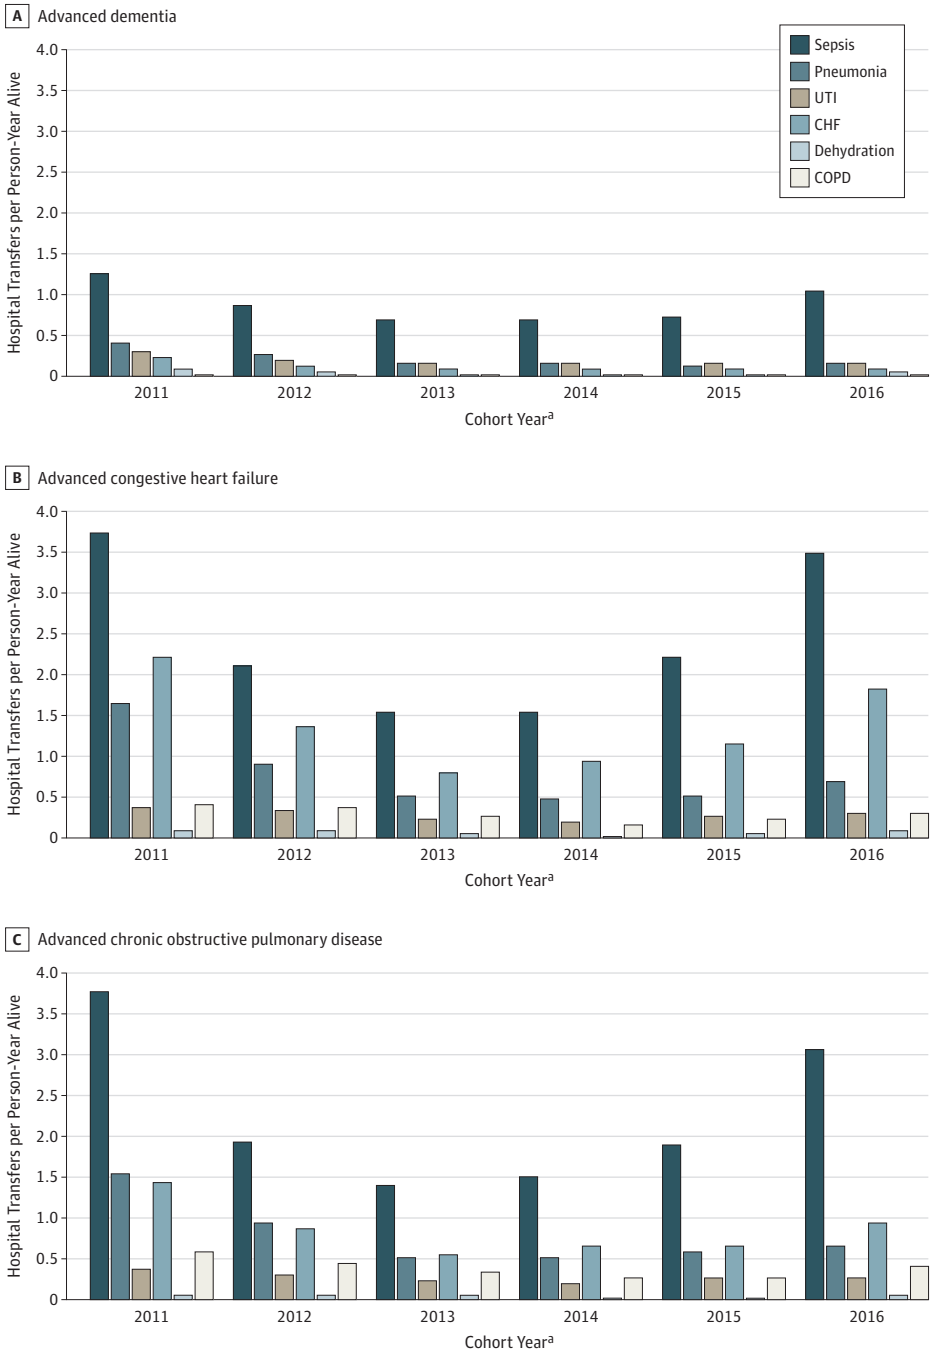
Figure 1. Transfer Rates for Hospitalizations, Emergency Department (ED) Visits, and Observation Stays for Illness Groups by Cohort Year

[a] Cohort year refers to the calendar year of the inception cohort constructed for each advanced illness using Minimum Data Set assessments from 2011 to 2016. Medicare data from 2011 to 2017 were used to identify transfers occurring within 12 months of meeting the criteria for advanced illness for each cohort. Thus, person-time and transfers were assessed for up to 12 months and spanned 2 calendar years (eg, for the 2016 cohort, transfers were assessed in both 2016 and 2017).

dementia and roughly two-thirds of those with advanced CHF and COPD experienced at least 1 transfer despite the greater than 50% mortality rate across all groups. These observations, coupled with low hospice enrollment throughout all years, suggest that opportunities remain to further reduce hospital transfers and improve end-of-life care for nursing home residents with advanced illnesses.

Although several studies describe changes in hospitalization rates in the United States in 2014 and 2015,[17,18,31-33] the present study focused on long-term care residents with advanced illness. The issue is particularly pertinent for this population because hospital transfers can be especially burdensome, of little clinical benefit, and distressing for family members.[3-5,34] Treatment decisions should be guided by patient preferences. Thus, if the decline in transfer rates observed in this study reflect, in part, decisions to avoid hospitalizations in favor of comfort-focused care, then such care should be available in the nursing home. High-quality palliative care is currently lacking in many US nursing homes.[35-37] Palliative care and hospice improve the quality of end-of-life care among nursing home residents, including reducing hospitalization rates.[32,36-39] Although we could not ascertain whether residents received palliative care outside the Medicare Hospice Benefit, we observed low rates of hospice enrollment and no concurrent uptake of hospice as hospital transfer rates declined. Given the increased scrutiny and federal audits of nursing homes with long hospice stays, the present study suggests that most residents with advanced dementia, CHF, and COPD are not receiving hospice care near the end of life.

Potentially avoidable hospital transfers among dual-eligible beneficiaries are key quality measures in long-term care and cost Medicare an estimated $2.6 billion annually.[9,40] Infections accounted for most potentially avoidable hospital transfers across advanced illness groups. Among residents with advanced CHF and COPD, exacerbations of these underlying conditions were also common reasons for transfers. Consequently, advance care planning among providers, residents, and family members presents a critical opportunity for informed decision-making about wishes for future hospitalizations in anticipation of expected clinical complications, and online resources are available to help guide these discussions.[41] Proxies of residents with advanced dementia should understand that recurrent infections are a hallmark of the end stage of the disease. Among residents with advanced illness for whom curative care remains aligned with their preferences, infections and cardiopulmonary decompensations can often be managed in the nursing home.[3,42-45] Of note, mortality did not increase across the cohort years in any group despite the decline in hospital transfers.



Programmatic initiatives, such as Interventions to Reduce Acute Care Transfers (INTERACT),[46] have been adopted widely to avoid unnecessary hospitalizations by improving the nursing home's capacity to provide on-site evaluation and management of acute changes through early recognition, monitoring, and staff training. Although a recent cluster randomized clinical trial of INTERACT demonstrated no effect on hospitalizations or ED visits, the trial highlighted the complexities of implementing and sustaining such interventions in nursing homes.[16]

This study's findings are consistent with those of studies documenting prominent declines in hospitalization and readmission rates between 2010 and 2012 after the enactment of the ACA and announcement of the HRRP, a Medicare value-based purchasing program that financially penalizes hospitals with excess readmissions for specific conditions.[17,18,47-49] Health care systems may have made systemic preparations in anticipation of the HRRP penalty phase in October 2012. Our findings also support the possible spillover effect of HRRP onto nonspecific conditions.[17,18,47,48,50] Consistent with other studies, we

Figure 2. Hospital Transfer Rates for Potentially Avoidable Conditions by Cohort Year

CHF indicates congestive heart failure; COPD, chronic obstructive pulmonary disease; and UTI, urinary tract infection.

[a] Cohort year refers to the calendar year of the inception cohort constructed for each advanced illness using Minimum Data Set assessments from 2011 to 2016. Medicare data from 2011 to 2017 were used to identify transfers occurring within 12 months of meeting the criteria for advanced illness for each cohort. Thus, person-time and transfers were assessed for up to 12 months and spanned 2 calendar years (eg, for the 2016 cohort, transfers were assessed in both 2016 and 2017).

observed a leveling off of hospital transfer rates during 2014 to 2016.[17,18,47,48] Chhabra and colleagues[48] suggest that this pattern may reflect a floor effect—a point at which achieving additional reductions in rates becomes more difficult. Regression to the mean may also partly explain the marked decline observed in transfer rates compared with those in 2011.[33]

Several factors acting in parallel may contribute to the observed declines in potentially avoidable transfers. Increased attention and quality and performance improvement initiatives have targeted unnecessary hospital transfers. Recent studies demonstrate reductions in hospital readmissions for potentially avoidable conditions after implementation of the HRRP.[17,18] Although nursing homes were not subject to financial penalties under HRRP, many nursing homes across the United States adopted quality improvement programs, such as INTERACT, in anticipation of CMS quality assurance and performance improvement regulations.[46] In addition, nursing homes included in accountable care organizations or other preferred referral

Abbreviations: CHF, congestive heart failure; COPD, chronic obstructive pulmonary disease; HR, hazard ratio; MDS, Minimum Data Set; MRS3, MDS 3.0 mortality risk score.

[a] Cohort year refers to the calendar year of the inception cohort constructed for each advanced illness using MDS assessments from 2011 to 2016. Medicare data from 2011 to 2017 were used to identify outcomes occurring within 12 months of meeting the criteria for advanced illness for each cohort. Thus, person-time and outcomes were assessed for up to 12 months and spanned 2 calendar years (eg, for the 2016 cohort, outcomes were assessed in both 2016 and 2017).

[b] Adjusted for age, sex, nonwhite race, and MRS3 and offset for person-time.

[c] Adjusted for age, sex, nonwhite race, and MRS3. Mortality: HR <1.00 indicates lower rate of death relative to rate in 2011.

[d] Adjusted for age, sex, nonwhite race, and MRS3. Death was considered a competing risk. Hospice: HR <1.00 indicates lower rate of hospice enrollment relative to rate in 2011.

networks were further incentivized to reduce hospitalizations to remain in network.[16] The CMS is conducting demonstration projects to examine payment models that include value-based purchasing incentives as part of the initiative to reduce avoidable hospitalizations among nursing home residents.[10] The Skilled Nursing Facility (SNF) value-based purchasing program took effect in October 2018 to extend penalties for excess readmissions to SNFs; preliminary data suggest that 73% of SNFs face financial penalties after failing to achieve benchmarks.[51]

Previous research in long-term care settings has focused almost exclusively on potentially avoidable hospitalizations. The present study extends prior work to include all potentially avoidable hospital transfers, including ED visits and observation stays. We found that declines in all-cause hospital transfer rates were almost exclusively associated with reductions in acute hospitalizations, and the rates of observation stays remained low between 2011 and 2017. Thus, concerns that hospitals may shift admissions to observation stay status to avoid HRRP penalties[18] appear to be unfounded in this population. In addition, rates of decline were similar for all-cause and potentially avoidable transfers, suggesting that broader efforts are being made to reduce hospital transfers or that there is a spillover effect from the focus on potentially avoidable conditions. Although we observed reductions in potentially avoidable hospital transfers, several thousand nursing home residents with advanced illness continue to be transferred to hospitals near the end of life. We estimated 708 096 transfers for all-cause transfers across the 3 advanced illness cohorts from 2011 to 2017, of which 259 339 (36.8%) were potentially avoidable. Moreover, despite the initial reduction in potentially avoidable transfers from 39.1% in 2011 to 35.1% in 2013, the rate appears to have rebounded to 37.7% by 2016 (eTable 2 and eFigure in the Supplement).

Limitations

This study has limitations. The application of claims-based measures of potentially avoidable conditions to nursing home populations remains controversial because they do not capture the complex health status of frail, older nursing home residents with multimorbid conditions or the specific challenges of managing acute illnesses in this population and setting.[7,45] Moreover, insurance claims and MDS 3.0

assessments do not fully capture the circumstances leading to decisions for hospital transfer, including advance directives. Important drivers of decisions to transfer are associated with decisional processes and organizational factors, including communication, family preferences, and nursing home resources.[52-56] Furthermore, the principal diagnoses listed on hospital claims are assigned at discharge as the diagnosis that was chiefly responsible for the admission, whereas the diagnosis assigned to an ED visit or observation stay is based on more limited information.[57] However, we focused on long-term care residents with advanced illness for whom care decisions should align with values and goals of care and for whom the harms associated with hospital transfers usually outweigh possible benefits.[3-5]

Conclusions

Hospital transfer rates for all causes and for potentially avoidable causes declined in 2017 compared with 2011 for long-stay nursing home residents with advanced dementia, CHF, or COPD, with no increase in mortality. Reductions in potentially avoidable transfers are encouraging, yet many residents still experienced multiple transfers for infections and CHF or COPD exacerbations. These findings indicate important opportunities to improve care of nursing home residents with advanced illness through improvements in advance care planning, acute care management, and the delivery of high-quality palliative care.

RESEARCH LETTER

Temporal Trends in the Numbers of Skilled Nursing Facility Specialists From 2007 Through 2014

Residents of nursing homes (NHs) comprise a medically complex and vulnerable population with many persons experiencing multiple comorbid conditions, frailty, and advanced dementia. Health care professionals such as physicians, nurse practitioners (NPs), and physician assistants (PAs) play an important role in managing their care. An Office of Inspector General Report[1] noted that specialization of health care professionals in NH care could potentially improve care through increased presence of health care professionals in NHs, enhanced knowledge in the care of patients with medically complex conditions, and better understanding of the regulatory environment. On the contrary, specialization in 1 setting of care could result in increased fragmentation of care, giving rise to concerns about medical errors and lack of care coordination. Little empirical research is available about the number of clinicians who primarily practice in NHs or the proportion of NH care delivered by these clinicians.[2] Using national Medicare Part B claims from 2007, 2010, and 2014, we characterized temporal trends in the number of physicians, NPs, and PAs concentrating their practice in the NH or skilled nursing facility (SNF) setting (ie, SNFists), the fraction of all NH and SNF claims generated by SNFists, and state variation in this phenomenon in 2014.

Editor's Note

Methods | The Medicare Part B Carrier File includes Evaluation and Management codes based on common sites of service: the nursing home, outpatient office, hospital, emergency department, a patient's home, and assisted living, custodial care facilities. Using Evaluation and Management codes from 20% of all Medicare Part B Carrier file claims from 2007, 2010, and 2014, we identified all physicians, NPs, and PAs who billed more than 90% of all their visits in the NH setting. The 90% threshold is consistent with a prior study of hospitalist care in the United States[3]; in a sensitivity analysis, we relaxed this threshold to 50%. Temporal trend comparisons for 2007, 2010, and 2014 were performed using variance-weighted least squares. We further characterized, in each state, the fraction of all outpatient visits in NHs that were accounted for by SNFists. An institutional review board waiver was obtained from Brown University.

Results | Between 2007 and 2014, the proportion of physicians ever billing in an NH decreased from 13.7% to 9.8% (test of trend, $P < .001$) while the number of physicians classified as SNFists increased by 48.2% (1496 vs 2225), increasing from 0.34% to 0.49% of all physicians (**Table**). The number of NPs or PAs classified as SNFists nearly doubled (1678 vs 3074). The proportion of NPs and PAs classified as SNFists remained stable because of increasing numbers of these clinicians. The proportion of all Evaluation and Management bills for care in an NH or SNF submitted by clinicians classified as SNFists increased from 11.6% to 14.3% among physicians (test of trend, $P < .001$) and from 10.4% to 17.2% among NPs and PAs (test of trend, $P < .001$). Between 2007 and 2014, the proportion of total SNF billing accounted for by SNFist clinicians increased from 22.0% to 31.5% (test of trend, $P < .001$). The SNFists' proportion of total NH billing varied by state, amounting to nearly 50% in Delaware, Hawaii, Tennessee, Connecticut, and Massachusetts. In a sensitivity analysis using a threshold of more than 50% of visits in the SNF, the number of physician SNFists increased from 2551 to 3529 and the number of NP or PA SNFists increased from 3267 to 5477.

Table. Physician, Nurse Practitioner, and Physician Assistant Billing in 2007, 2010, and 2014

Billing Category	2007	2010	2014
Physicians, No.	435 943	419 299	459 895
Ever billing in an SNF,[a] No. (%)	59 724 (13.7)	50 814 (12.1)	45 070 (9.8)
Billing ≥90% in an SNF,[a] No. (%)	1496 (0.34)	1697 (0.40)	2225 (0.49)
Nurse practitioners or physician assistants, No.	64 393	80 029	131 986
Ever billing in an SNF,[b] No. (%)	7528 (11.7)	8309 (10.4)	12 470 (9.5)
Billing ≥90% in an SNF,[b] No. (%)	1678 (2.6)	2031 (2.5)	3074 (2.3)
Evaluation and management code bills at SNF, No.	4 731 367	4 538 967	5 205 865
By physician billing ≥90% in an SNF,[c] No. (%)	550 425 (11.6)	584 952 (12.9)	747 106 (14.3)
By nurse practitioner or physician assistant billing ≥90% in an SNF,[c] No. (%)	49 145 (10.4)	581 235 (12.8)	895 830 (17.2)

Abbreviation: SNF, skilled nursing facility.

[a] For the physicians ever billing in an SNF or physicians billing 90% or more in an SNF, the denominator is physicians billing Medicare in that year.

[b] For nurse practitioner or physician assistant billing, the denominator is nurse practitioners or physician assistants billing Medicare in that year.

[c] The denominator for physicians, nurse practitioners, and physician assistants billing at 90% or more is the number of evaluation and management codes billed in a nursing home or SNF in the year 2007, 2010, or 2014.

Discussion | The care of frail and medically complex NH residents is increasingly performed by NPs and PAs who focus nearly exclusively in this site of care. In some states, SNFists accounted for nearly half of the total billing in the NH setting of care. Future research is needed to understand how this specialization of care affects not only care delivery but the overall experience of frail, elderly patients.

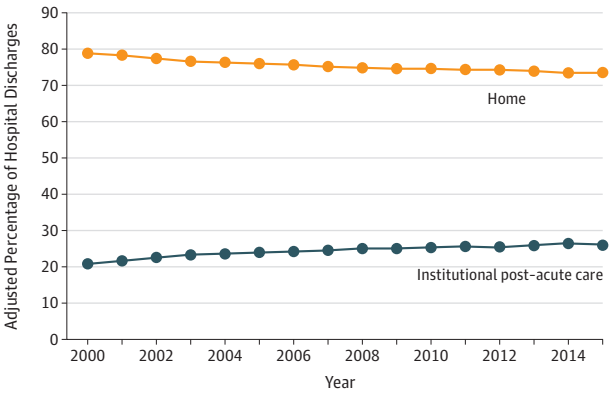
RESEARCH LETTER



Trends in Post-Acute Care Use Among Medicare Beneficiaries: 2000 to 2015

Since Medicare's adoption of the inpatient prospective payment system in 1983, hospitals have sought ways to reduce costs, resulting in a decrease in hospital length of stay and an increase in the use of institutional post-acute care,[1] making it a major Medicare expenditure.[2] Since the Affordable Care Act passed in 2010, Medicare has implemented payment reforms designed to make hospitals and clinicians accountable for the cost and quality of care delivered. Examples include the Hospital Readmissions Reduction Program (implemented in 2012), accountable care organizations (2012), and bundled payments (2013). How these payment reforms affect the use of post-acute care is unknown.[3] The expense of post-acute care may diminish its use under cost-containment incentives.[4] Alternatively, pressure to reduce costs by reducing unnecessary readmissions may encourage its use. Our objective was to document recent trends in use of institutional post-acute care (including the 2 most common sites: skilled nursing facilities [SNFs] and inpatient rehabilitation facilities [IRFs]) and, simultaneously, hospital and post-acute care length of stay.

Methods | We used the 100% MedPAR file[5] to identify Medicare beneficiaries discharged alive from an acute care hospital between January 2000 and December 2015 (n = 199 069 327), excluding discharges younger than 65 years or discharged to hospice (n = 39 036 324 or 19.6%), enrolled in Medicare Advantage (n = 20 250 852 or 10.2%), or discharged to institutional settings other than SNF or IRF (eg, psychiatric hospital; n = 1 808 518 or 0.9%). We identified each discharge's first post-hospitalization destination (home vs institutional post-acute care) and the number of days in the hospital and post-acute care. We used multivariable regression to predict risk-adjusted annual outcomes adjusted for age, sex, race, and 31 Elixhauser comorbidities. We tested for the statistical significance of differences over time using *t* tests (2-tailed with an α of .05). All analyses were performed using Stata (StataCorp), version 15. This study was approved by the institutional review board of the University of Pennsylvania with a waiver of informed consent.

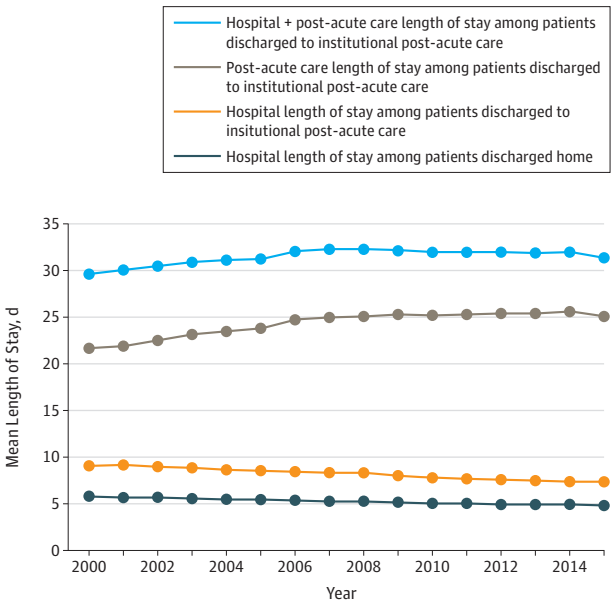
Results | Among 137 973 633 hospital discharges, 20.3% were discharged to SNFs and 3.7% were discharged to IRFs. The adjusted percentage of hospital discharges to post-acute care increased from 21.0% in 2000 to 26.3% in 2015 (increase of 5.36 percentage points [95% CI, 5.32 to 5.40]; *P* <.001), whereas the adjusted percentage of discharges home decreased from 79.0% in 2000 to 73.6% in 2015 (decrease of 5.36 percentage points [95% CI ,−5.40 to −5.32]; *P* <.001) (**Figure 1**).

Figure 1. Proportion of Medicare Beneficiaries Discharged to Institutional Post-Acute Care vs Discharged Home

Estimates are adjusted for patient age, sex, race, and Elixhauser comorbidities. The median number of hospital discharges to home per year was 6 664 718 (interquartile range [IQR], 5 768 018-7 367 173) and the median number of discharges to post–acute care per year was 2 151 959 (IQR, 1 978 709-2 199 801).

Among patients discharged to post-acute care, hospital length of stay decreased from 9.0 days in 2000 to 7.3 days in 2015 (decrease of 1.70 days [95% CI, −1.71 to −1.69]; *P* <.001) (**Figure 2**). Among patients discharged home, hospital stays decreased from 5.7 days in 2000 to 4.8 days in 2015 (decrease of −0.91 days [95% CI, −0.92 to −0.91]; *P* <.001). At the same time, length of stay in post-acute care increased from 21.7 days in 2000 to 25.7 days in 2014 (increase of 3.98 days [95% CI, 3.93 to 4.02]; *P* < .001) and then decreased to 25.1 days in 2015 (decrease of 0.54 days [95% CI, 0.50 to 0.59]; *P* < .001).

Discussion | The use of institutional post-acute care increased between 2000 and 2015 and was accompanied by increasing length of post-acute care stays through 2014. These trends did not appear to change when payment reform was implemented under the Affordable Care Act. SNFs (which accounted for 85% of institutional post-acute care) are paid per diem and thus may have strong incentives to maintain longer lengths of stay. This study was limited by the exclusion of Medicare Advantage enrollees. If policy incentives are to effectively reduce SNF length of stay, they might need to align SNF payment with the goal of reducing SNF use.



It is uncertain whether the use of post-acute care benefits patients. Despite its proliferation, there is little evidence that post-acute care improves key patient outcomes—preventing rehospitalizations or improving functional recovery. Further investigating how post-acute care affects patient outcomes is essential.

COMMENT & RESPONSE

Diagnosis and Treatment of Hidradenitis Suppurativa

To the Editor Drs Saunte and Jemec performed an illustrative review focused on the advances in diagnosis and treatment of hidradenitis suppurativa (HS).[1] However, the advances in imaging of the disease were not discussed.

For example, regarding the pathogenesis, ultrasound studies have allowed visualization of the hidden connections between the tunnels or fistulous tracts and fluid collections and the dilated and ruptured base of the hair follicles, which were illustrated in Figure 3 in the article.[1-3] Regarding the staging of hidradenitis, ultrasonography has also demonstrated that clinical evaluation and commonly used clinical scoring systems can miscategorize as healthy skin corporal segments with fluid collections or fistulous tracts underneath.[3] The latter findings on imaging can be critical because, as pointed out by the authors, the choice of therapy is guided by disease severity. Currently, color Doppler ultrasound can support the detection of key subclinical lesions, the staging of the disease, and the assessment of activity and has been added to the clinical evaluation of hidradenitis in many centers around the world.[3,4] Moreover, ultrasound is also being used in ongoing trials.

In patients with indications for local or systemic treatments, imaging can be a noninvasive tool for monitoring the response. In patients with a surgical indication, an image-guided mapping of the extent of the abnormalities can be performed. Ultrasound has the ability to detect, categorize, and measure the lesions in all the corporal regions affected by hidradenitis.[3] This imaging information may allow better selection of the type of medical treatment or the location and extent of the surgical incision.[3]

CLINICAL INVESTIGATION

Successful Discharge to Community Gap of FFS Medicare Beneficiaries With and Without ADRD Narrowed

Barbara H. Bardenheier, PhD,†‡ Momotazur Rahman, PhD,*‡ Cyrus Kosar, MS,*‡ Rachel M. Werner, MD, PhD,§¶ and Vincent Mor, PhD*‡*

BACKGROUND/OBJECTIVES: We sought to compare the post-acute and long-term care experience of Medicare beneficiaries with and without Alzheimer Disease and Related Dementias (ADRD), and whether differences changed from January 1, 2007 to September 30, 2015.

DESIGN: Retrospective cross-sectional trend study using Medicare claims linked to the Centers for Medicare & Medicaid Services' (CMS) Minimum Data Set.

SETTING: CMS-certified skilled nursing facilities (skilled nursing facility (SNF), n = 17,043).

PARTICIPANTS: Fee-for-service Medicare beneficiaries aged ≥66 years (n = 6,614,939) discharged from a hospital to a SNF who had not lived in a nursing home during the year before hospitalization.

MEASUREMENTS: ADRD was defined by the Chronic Condition Data Warehouse. Outcome measures included: (1) successful discharge defined as being in SNF less than 90 days, then discharged back to the community, alive without subsequent inpatient health care for 30 continuous days; (2) became long-stay resident in SNF; (3) death in SNF within 90 days; (4) hospital readmission within 30 days of entering SNF; and (5) transferred to another nursing home within 30 days of entering SNF.

RESULTS: Successful discharge of beneficiaries with ADRD increased from 43.4% in 2007 to 53.9% in 2015 (average annual percent change (AAPC) = 2.1 (95% CI = 2.0–2.2)); those without ADRD also increased (from 59.1% to 63.6%, AAPC = 0.9 (95% CI = 0.7–1.1)) but not as fast as those with ADRD ($P < .01$). The proportion of all beneficiaries who became long-stay or were readmitted to the hospital decreased ($P < .05$). The proportion with ADRD who became long-stay was nearly three times higher than those without throughout the study (15.0% vs 5.5% in 2007; 11.3% vs 4.3% in 2015).

CONCLUSION: Though disparity in ADRD in becoming long-stay residents remains, the increase in successful discharges among those with ADRD also stresses the increasing importance of community as a care setting for adults with ADRD. **J Am Geriatr Soc 00:1-7, 2020.**

Keywords: ADRD; successful discharge; disparity

INTRODUCTION

Between 2010 and 2016 20.3% of Medicare beneficiaries received post-acute care (PAC) services in a skilled nursing facility (SNF) after being discharged from the hospital.[1] The improving Medicare Post-Acute-Care Transformation Act of 2014 mandated addition of a national quality measure for successful community discharge from PAC services. Although the goal of PAC rehabilitation is to maximize independence and facilitate a safe community transition, some SNF patients may be awaiting family arrangements to provide care at home or for selection of a long-term nursing facility. Some may need to stabilize and to get their numerous medical conditions to a manageable care plan. But generally, returning to and remaining in the community after an illness, injury, or surgery reflects the quality of PAC[2] (https://impactcollaboratory.org/). Although some studies have assessed inpatient rehabilitation facilities patients' success in

community discharge,[3,4] little is known about SNF patients' success in returning and staying home post-discharge.

SNF admission is often the gateway to becoming a long-term nursing home resident. And, Alzheimer Disease and Related Dementias (ADRD) patients are more likely to become long-stay residents. The Affordable Care Act (ACA) and other policy initiatives strongly encourage community based long-term care for ADRD patients.[5] In 2012, under the ACA the Centers for Medicare & Medicaid Services (CMS) could penalize hospitals for readmissions in less than 30 days for certain conditions. Successful transitioning from the hospital to a SNF is even more complicated for persons with ADRD. For example, patients with ADRD whose behavioral problems surpass the SNF's capacity to accommodate them are at high risk of rehospitalization or transfer to a different SNF.[6] For this reason, SNF administrators may be less likely to accept patients with ADRD after acute hospitalization. Indeed, one study reported that SNF personnel believe hospital personnel downplay ADRD patients' behavioral problems to increase their chances of SNF admission.[6] For these reasons, real and perceived about patients with ADRD, we hypothesized that Medicare beneficiaries with ADRD would experience more negative outcomes than those without ADRD, in terms of their likelihood of successfully returning home, experiencing rehospitalization, dying in the SNF, becoming a permanent nursing home resident, or transferring to another SNF, and we assessed whether the differences changed between 2007 and 2015.

METHODS

Study Population

Our sample was drawn from 100% of Medicare SNF claims linked to the CMS Minimum Data Set, which are mandatory clinical assessments for all nursing home residents of Medicare-certified nursing homes, from January 1, 2007 through September 30, 2015 (with follow-up for post-discharge outcomes dated through December 31, 2015). The study period was chosen to include only events occurring before the introduction of the ICD-10 coding system. We included fee-for-service Medicare beneficiaries aged ≥66 years who were discharged alive from the hospital and admitted to a SNF within 1 day of hospital discharge. We excluded those with history of being in a nursing home within the 12 months (using the MDS) before hospital admission because they were likely to be sicker and/or more severely demented.[7]

Main Exposure Measure

We identified Medicare beneficiaries with ADRD using the Chronic Condition Data Warehouse (CCW) flag in the Medicare beneficiary summary file as of the day of hospital discharge. The CCW algorithm identifies beneficiaries as having ADRD if they have one of 24 ICD-9 codes present on one or more inpatient, SNF, HHA, outpatient, or carrier claim over a 3-year look-back period.[8] This definition has a sensitivity (0.85) and specificity (0.89).[9] We believe this is sufficient to assess changes in trends because (1) the measure did not change during the study period (ICD-9 codes were used throughout) and (2) we hypothesized post-discharge outcomes of ADRD patients may differ from those without ADRD, in part due to perceptions of ADRD patients. In other words, regardless of truly having ADRD, if beneficiaries' have an ADRD diagnosis, then healthcare providers perceive that they have ADRD.

Outcome Measures

We assessed trends over our study period in seven outcome measures. First, we defined successful discharge as being discharged alive from a SNF to the community within 90 days of SNF admission without subsequent inpatient healthcare utilization for 30 continuous days. Second, we defined becoming a long-stay resident as remaining in the SNF more than 90 days after SNF admission. Third, we defined dying in the SNF as dying within 90 days of SNF admission. Fourth, we assessed death within 90 days after discharge from the SNF (after being in the SNF at least 90 days). We assessed rehospitalization two ways: within 30 days and within 90 of hospital discharge. For both rehospitalization measures, those who died in the same

Note: All years are from January 1 to December 31, except 2015 is from January 1 to September 30. Adjusted for age, sex, race, dual eligible status, % MA penetration in zipcode, % dual eligible in zipcode. AAPC, average annual percentage change; CI, confidence interval; died in SNF, within 30 days of entering SNF; FFS, fee-for-service; long-stay, still in SNF after 90 days of entering; SNF, skilled nursing facility; successful discharge, in SNF 90 days, then they were discharged back to the community, alive without subsequent inpatient healthcare utilization for 30 continuous days.

timeframe were censored. Finally, we assessed transfer to another NH within 30 days of entering the SNF. To clarify "SNF," our focus is not on SNF coverage for payment, but rather PAC in a SNF which is typically short-stay or ≤90 days. We used the sequence of claims and the MDS to identify outcomes.

Statistical Analyses

First, we assessed the overall change in number of beneficiaries with and without ADRD from 2007 to 2014 (for this we excluded 2015 because it was a partial year). Trends for each outcome were then assessed on annual cohorts of beneficiaries who were discharged from the hospital to a SNF, adjusting for age, sex, race, dual-eligibility, Medicare Advantage penetration (zipcode of residence), and percent dual-eligible (zipcode of residence). We used STATA version 16 software to obtain adjusted predictive margins and standard errors. We evaluated monotonic trends by joinpoint regression using Joinpoint software,[10] which has the same underlying assumptions as simple regression and allows for input of estimates and standard errors. To determine if the trend was statistically significant we used the average annual percent change (AAPC) and its associated *P*-value. We also compared AAPC differences in trends between those with and without ADRD. All analyses were stratified by beneficiary ADRD status.

Sensitivity Analyses

Because our analyses included all FFS beneficiaries discharged from the hospital to a SNF, we wanted to determine if results would be similar for a more homogenous group or if our findings were driven by certain subgroups. Therefore, we performed the same trend analyses for patients hospitalized for hip fractures and were discharged from the hospital to a SNF. Codes used to define hip fractures were 820.xx.

All analyses were conducted after establishing a data use agreement with CMS and obtaining final approval from Brown University's Institutional Review Board.

RESULTS

We identified 2,134,798 beneficiaries with prevalent ADRD (243,321 or 11.4% were included in multiple years) and 3,582,546 without (654,274 or 18.3% were included in multiple years) who otherwise met study eligibility criteria. The average age of beneficiaries with ADRD discharged from hospital to SNF was close to 84 years in 2007, 2011, and 2015; the average age of those without ADRD was approximately 80 years at the beginning, middle, and end of the study (Table 1). About two-thirds of those with and without ADRD were female. The average proportion with Medicare Advantage penetration in the residents' zip code increased from 2007 to 2015 for those with (17.8%–28.7%) and without ADRD (17.6%–28.1%). A few (7.4% n = 486,715) of beneficiaries were referred to a hospice within 90 days of entering the SNF or in the 90 days following SNF discharge; of those, 85.2% died.

The number of beneficiaries with ADRD discharged from the hospital to a SNF increased 36.3% from 211,518 in 2007 to 288,361 in 2014 (2015 was a partial year, AAPC = 3.1 (0.3, 5.9)). There was no significant change in the number of beneficiaries without ADRD discharged from the hospital to a SNF from 2007 to 2014 (AAPC = 1.1 (−1.6, 3.9)). The proportion of traditional Medicare beneficiaries with ADRD who had a successful discharge from the SNF to the community increased from 43.5% in 2007 to 50.9% in 2015 (AAPC = 2.0 (1.8, 2.2)) (Table 2 and Figure 1). Successful discharge for those without ADRD also increased (from 59.0% to 62.9%, AAPC = 1.0 (0.8, 1.2)), but not as fast as for those with ADRD (AAPC difference (ADRD − No ADRD) = 1.0 (0.8, 1.2), $P < .01$). The proportion of beneficiaries with ADRD who became long-stay nursing home residents decreased (from 15.0% in 2007 to 11.3% in 2015, AAPC = −3.6 (−4.4, −2.8)); those without ADRD decreased also (from 5.5% to 4.3%, AAPC = −3.4 (−4.3, −2.6)) similar to those with ADRD ($P = .70$). However, the proportion of those with ADRD who became long-stay was nearly three times higher than those without. The proportion of beneficiaries with ADRD who died within 90 days of entering the SNF decreased from 2007 (16.9%) to 2015 (15.8%, AAPC = −0.7 (−1.2, −0.2)); those without ADRD decreased as well from 13.9% in 2007 to 12.8% in 2015 (AAPC = −1.4 (−1.8, −0.9)), faster than those with ADRD (AAPC difference (ADRD − No ADRD) = 0.9 (1.7, 0.1), $P < .01$). The proportion of beneficiaries with ADRD who died within 90 days of discharge from the SNF did not change from 2007 (8.9%) to 2015 (8.2%, $P = .7$); those without ADRD decreased from 6.3% in 2007 to 5.7% in 2015 (AAPC = −1.1 (−1.5, −0.6)), faster than those with ADRD (AAPC difference (ADRD − No ADRD) = 0.9 (1.7, 0.1), $P < .01$). The

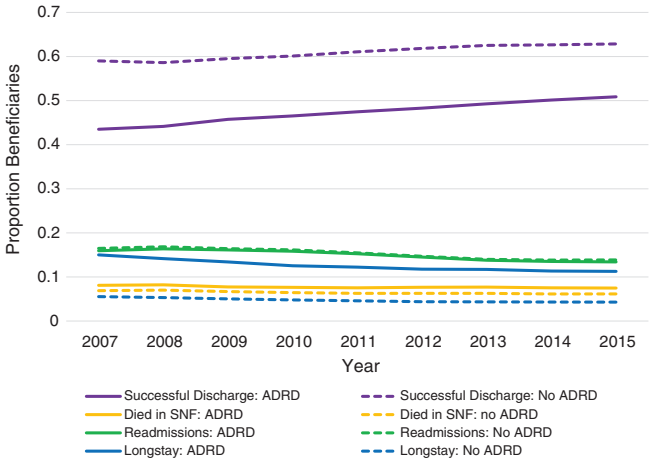

Figure 1. Adjusted proportion of FFS Medicare Beneficiaries aged >65 years discharged from hospital to SNF by ADRD status, January 1, 2007 through September 30, 2015. Adjusted for age, sex, race, dual eligible status, % MA penetration in zipcode, % dual eligible in zipcode. ADRD, Alzheimer's disease and related dementias; died in SNF, within 30 days of entering SNF; FFS, fee-for-service; long-stay, still in SNF after 90 days of entering; readmissions, readmitted to hospital within 30 days of entering SNF; SNF, skilled nursing facility; successful discharge, in SNF 90 days, then they were discharged back to the community, alive without subsequent inpatient healthcare utilization for 30 continuous days.

Note: All years are from January 1 to December 31, except 2015 is from January 1 to September 30. Adjusted for age, sex, race, dual eligible status, % MA penetration in zipcode, % dual eligible in zipcode. AAPC, average annual percentage change; CI, confidence interval; died in SNF, within 30 days of entering SNF; FFS, fee-for-service; long-stay, still in SNF after 90 days of entering; SNF, skilled nursing facility; successful discharge, in SNF 90 days, then they were discharged back to the community, alive without subsequent inpatient healthcare utilization for 30 continuous days.

proportion of beneficiaries discharged and rehospitalized within 30 days and 90 days decreased among both those with (AAPC = −2.8 (−3.6, −2.0) and AAPC = −1.7 (−2.3, −1.2)) and without ADRD (APC = −2.9 (−3.6, −2.1) and AAPC = −2.1 (−2.7, −1.5)) during the study period, though not significantly different from each other (P = .90 and P = .20, respectively). The proportion of beneficiaries discharged to SNF and transferred to another nursing facility decreased among both those with ADRD from 5.0% to 4.3% (AAPC = −2.0 (−3.3, −0.7)) and without ADRD from 3.5% to 2.8% (AAPC = −3.1 (−4.4, −1.8)), though not significantly different from each other (P = .20).

Results of Sensitivity Analyses

Overall, 9.5% of patients discharged had claims for being hospitalized with hip fracture. The number of beneficiaries discharged from the hospital to a SNF increased 35.8% from 23,485 in 2007 to 31,882 in 2014 (2015 was a partial year and therefore excluded, AAPC = 3.1 (0.7, 5.6)). There was no significant change in beneficiaries without ADRD discharged from the hospital to a SNF (AAPC = 0.6 (−1.8, 3.1). Those hospitalized for hip fracture, with and without ADRD, experienced more successful SNF-to-community discharges after acute hospitalization, fewer deaths, rehospitalizations, long-stays, and transfers to other nursing facilities within 30 days of entering the SNF from 2007 to 2015 (P < .05) (Table 3). The gap between those with and without ADRD in successful SNF-to-community discharges after acute hospitalization narrowed, as rates of successful discharges increased faster among those with ADRD (AAPC difference (ADRD − No ADRD) = 0.9 (0.6, 1.2)).

DISCUSSION

In general, traditional Medicare beneficiaries with ADRD have worse outcomes than those without ADRD, but the gap is narrowing with respect to returning home from the SNF, surviving and not being rehospitalized. From 2007 to 2015, Medicare beneficiaries experienced more successful SNF-to-community discharges after acute hospitalization, due to fewer rehospitalizations, long-stays, and transfers to other nursing facilities within 30 days of entering the SNF. The gap between those with and without ADRD in successful SNF-to-community discharges after acute hospitalization narrowed, as the rates of successful discharges increased faster among those with ADRD. Deaths within 90 days of discharge to SNF did not change among beneficiaries with ADRD, yet the mortality rate decreased among the non-ADRD group. Notably, the gap between those with and without ADRD in becoming long-stay remained; those with ADRD were nearly three times as likely to become long-stay residents.

Studies have reported an increase in the number of adults living with ADRD.[11] This is reflected in our study showing an increase in ADRD patients discharged from the hospital to the SNF overall and also in our sensitivity analysis among hospitalizations for hip fractures. Our results may indicate that the greater number of patients with ADRD discharged home may reflect healthier people being diagnosed with ADRD at earlier stages.

Higher rates of successful discharge from SNF to the community and fewer rehospitalizations, long-stays, and transfers to other nursing facilities among beneficiaries with ADRD over a decade are quite encouraging. Previous studies have reported persons with ADRD experience frequent transitions across the range of care, especially into and out of hospital and SNF settings.[12,13] And, nearly half of long-stay nursing home residents suffer from ADRD.[14,15] Our data suggest that the proportion of patients with ADRD who become long-stay residents after entering the SNF after being hospitalized is decreasing.

It is not surprising that rates of rehospitalization after hospital discharge to SNF decreased for all beneficiaries. In October 2012 a policy was mandated by the ACA to penalize hospitals with high readmission rates for certain conditions.[16] Readmission rates for some SNFs may have been high before 2012 because of the change in use of SNF care. Most SNFs (>90%) are dually certified as a SNF and as a nursing home.[17] Thus, a facility that offers skilled care often also provides long-term care services that Medicare does not cover. Ideally, SNF care is provided to restore function to patients discharged from acute hospital care before transitioning back to the community. In the decade before 2012, use of SNF care after acute hospitalization had greatly increased in part because of the shift of nursing homes from serving life long residents to facilities treating increasingly medically complex patients seeking PAC for recuperation after hospitalization. This may in part have been driven by a financial incentive to take advantage of the short-term Medicare benefit. Medicare covers up to 100 days after 3 days of hospitalization whereas Medicaid pays for most of long-term care, the Medicare payment for SNF services being higher than that for Medicaid. In other words, some patients may have been sent to the SNF as long as the financial benefit was available and then sent back to the hospital. Yet since the 2012 policy, that practice likely diminished.

Our result of decline in long-stay residents, with and without ADRD, helps to explain why occupancy in nursing homes continues to decline even though the number of beds has been steadily declining.[18-20] In nursing homes in states with no or nursing home-specific certificate-of-need programs (designed to curb healthcare spending), the number of beds has decreased since 1992.[21] The decline in long-stay residents may also be a reflection of the number of nursing home closures. Facilities with large proportions of long-stay residents tended to have high Medicaid occupancy,[22] and those facilities were most at risk of closure.[23]

Our study was subject to several limitations. First, discharge data for the Medicare Advantage population are not reliable and therefore were not included. Given the rapid growth of Medicare Advantage, which has a strong disincentive for hospital use, the results observed may not reflect the overall population aged 66 years and older. Second, the proportion of ADRD we reported likely includes some false-positive and false-negative ADRD cases; however, the CCW algorithm is the only approach that can identify a broad sample of beneficiaries with ADRD across community and nursing home settings in hospitalization data. Still, regardless of how ADRD is diagnosed, the trends reveal an increase in successful discharges but a steady gap in becoming long-stay residents with a nearly threefold risk among

those with ADRD. Third, we did not assess the geographic availability of PAC services; hence some patients may have been discharged to the community because of access rather than recovery. Fourth, we could not account for health beliefs, financial resources, availability of an appropriate caregiver (paid or unpaid), or cultural differences which may have influenced discharge to and remaining in the community. Finally, a potential limitation is that certain cohorts of beneficiaries discharged from the hospital to SNFs could have driven the results. However, sensitivity analyses confirmed overall results with a homogenous group. Among patients who had been hospitalized for hip fractures, trends for those with and without ADRD were in the same direction and the same estimates were statistically significant as were found for the overall group of beneficiaries with two exceptions.

We examined the trends in outcomes among Medicare beneficiaries discharged to SNF with and without a diagnosis of ADRD and found that many outcomes improved for all persons but that successful discharge rates, going home and remaining there, improved more rapidly for persons living with dementia than for persons without dementia. It may be that practices with regard to hospitalization may have influenced the trends in addition to practices in the SNF. Thus, more research is needed to understand what is driving the reduction in transfers, deaths, and long-stays among patients with ADRD discharged from hospital to SNF. In addition, the increase in successful SNF to community discharges stresses the increasing importance of community as the care setting for adults with ADRD.

ACKNOWLEDGMENTS

Conflict of Interest: BHB, MR, CK, and RMW have no conflicts of interest to report. VM receives compensation for his role as Chair of the Scientific Advisory Committee of naviHealth, a post-acute care convening company serving managed care companies and integrated hospital systems.

Author Contributions: VM and MR conceived and designed the study. BHB drafted the manuscript and did the statistical analyses. MR and CK obtained and compiled the data. All authors revised the report for intellectual content and contributed to the literature search. VM and RMW provided administrative, technical and material support.

Sponsor's Role: This research was supported, in part, by NIH P01AG027296.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April, 2021

CPT Code	Long Descriptor	Global Period
99304	Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.	XXX
99305	Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.	XXX
99306	Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded. (For services ZZ minutes or longer, use prolonged services code 993X0)	XXX
99307	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of encounter for code selection, XX minutes must be met or exceeded.	XXX
99308	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of encounter for code selection, XX minutes must be met or exceeded.	XXX
99309	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of encounter for code selection, XX minutes must be met or exceeded.	XXX
99310	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of encounter for code selection, XX minutes must be met or exceeded. (For services ZZ minutes or longer, use prolonged services code 993X0)	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99304	Initial nursing facility visit for a patient with limited supports at home receiving post-acute care for an operative procedure that was uncomplicated.
99305	Initial nursing facility visit for a patient with recovering from an illness or acute injury that requires ongoing medical management of their multiple stable problems.
99306	Initial nursing facility visit for patient with multiple morbidities requiring intensive management
99307	Subsequent nursing facility visit for a patient with a self-limited or minor problem

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

99308	Subsequent nursing facility visit for a patient with a stable chronic illness or recovering from an acute uncomplicated injury.
99309	Subsequent nursing facility visit for a patient with a new or progressing illness or acute injury that requires diagnostic evaluation, medical management, or potential surgical treatment.
99310	Subsequent nursing facility visit for a patient with a chronic illness with severe exacerbation that poses a threat to life or bodily function.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty society expert panel, comprised of advisors from the participating specialties, met and discussed recommendations for practice expense both via phone and over email. The expert panel reviewed the existing PE inputs for the code family and made revisions as necessary to reflect current practice.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   Existing PE inputs from 2005 (99304-99310) were used as reference.

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

   Pre-Service
   All codes include time for an activity described in 2005 PE spreadsheets as "phone calls between visits with patient, family, pharmacy." This has been rolled into CA005 Complete pre-procedure phone calls and prescription.
   Several codes, specifically 99308, 99309 and 99310, include time for an activity described in the 2005 PE spreadsheets a "review/read x-ray, lab and pathology reports." This has been rolled into CA006 Confirm availability of prior images/studies.

Post-Service
All codes include time for an activity described in 2004 and 2005 PE spreadsheets as "phone calls between visits with patient, family, pharmacy." This has been rolled into CA037 Conduct patient communications.
Codes 99304-99310 included time for an activity described in the 2005 PE spreadsheet as "review/read x-ray, lab, and pathology reports" as well as "respond to consultant pharmacist or nutritionist reviews and recommendations" and "monitoring patient/notifying physician of change in condition" which have all be rolled into CA038 Coordinate post-procedure services.

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

99304	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver and confirms medications. Relevant data is transferred from facility EMR to provider EMR.
99305	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver and confirms medications. Relevant data is transferred from facility EMR to provider EMR.
99306	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver and confirms medications. Relevant data is transferred from facility EMR to provider EMR.
99307	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit.
99308	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit. **CA006 3 minutes** Clinical staff confirms availability of any imaging completed since the last visit as well as any reports related to services or procedures provided.
99309	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit. **CA006 3 minutes** Clinical staff confirms availability of any imaging completed since the last visit as well as any reports related to services or procedures provided.
99310	**CA005 6 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit.

	CA006 3 minutes Clinical staff confirms availability of any imaging completed since the last visit as well as any reports related to services or procedures provided.

b. Service period (includes pre, intra and post):

c. Post-service period:

99304	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99305	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99306	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99307	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99308	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.

99309	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99310	**CA037 6 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

13. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

14. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if

available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

15. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:

N/A

16. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

17. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

N/A

18. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

N/A

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

19. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

   Existing PE inputs from 2005 (99304-99310) were used as reference.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   No

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Non-Facility Dominant Specialties

99304	Non-Facility Dominant Specialties – podiatry (31.4%), family medicine (17%) and nurse practitioner (13.5%)
99305	Non-Facility Dominant Specialties – internal medicine (23.6%), nurse practitioner (22.6%), family medicine (19.2%)
99306	Non-Facility Dominant Specialties – internal medicine (38.9%), family medicine (19.1%) and nurse practitioner (17.2%)
99307	Non-Facility Dominant Specialties – podiatry (22.4%), nurse practitioner (20.9%), family medicine (19.1%), internal medicine (17.4%)
99308	Non-Facility Dominant Specialties – nurse practitioner (41.5%), internal medicine (19.1%), family medicine (15.5%)

99309	Non-Facility Dominant Specialties – nurse practitioner (48.4%), internal medicine (18.8%), family medicine (14%)
99310	Non-Facility Dominant Specialties – nurse practitioner (49.5%), internal medicine (17.3%), family medicine (12.9%)

There are small differences in the percentages and order of the dominant specialties when comparing non-facility to global dominant specialties.

Global Dominant Specialties

99304	Non-Facility Dominant Specialties – podiatry (22.8%), family medicine (18.4%) and internal medicine (12.5%)
99305	Non-Facility Dominant Specialties – internal medicine (29.8%), family medicine (19.3%), nurse practitioner (13.8%)
99306	Non-Facility Dominant Specialties – internal medicine (42.6%), family medicine (19.5%) and nurse practitioner (9.8%)
99307	Non-Facility Dominant Specialties –nurse practitioner (24.8%), family medicine (19.1%), internal medicine (17.4%)
99308	Non-Facility Dominant Specialties – nurse practitioner (37.5%), internal medicine (22.1%), family medicine (13%)
99309	Non-Facility Dominant Specialties – nurse practitioner (45.3%), internal medicine (21.6%), family medicine (12%)
99310	Non-Facility Dominant Specialties – nurse practitioner (50.2%), internal medicine (18.8%), family medicine (10.6%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

Pre-Service
All codes include time for an activity described in 2004 and 2005 PE spreadsheets as "phone calls between visits with patient, family, pharmacy." This has been rolled into CA005 Complete pre-procedure phone calls and prescription.
Several codes, specifically 99308, 99309 and 99310, include time for an activity described in the 2005 PE spreadsheets a "review/read x-ray, lab and pathology reports." This has been rolled into CA006 Confirm availability of prior images/studies.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Post-Service
All codes include time for an activity described in 2004 and 2005 PE spreadsheets as "phone calls between visits with patient, family, pharmacy." This has been rolled into CA037 Conduct patient communications.
Codes 99304-99310 included time for an activity described in the 2005 PE spreadsheet as "review/read x-ray, lab, and pathology reports" as well as "respond to consultant pharmacist or nutritionist reviews and recommendations" and "monitoring patient/notifying physician of change in condition" which have all be rolled into CA038 Coordinate post-procedure services.

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

99304	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver and confirms medications. Relevant data is transferred from facility EMR to provider EMR.
99305	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver and confirms medications. Relevant data is transferred from facility EMR to provider EMR.
99306	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver and confirms medications. Relevant data is transferred from facility EMR to provider EMR.
99307	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit.
99308	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit. **CA006 3 minutes** Clinical staff confirms availability of any imaging completed since the last visit as well as any reports related to services or procedures provided.
99309	**CA005 3 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit. **CA006 3 minutes**

	Clinical staff confirms availability of any imaging completed since the last visit as well as any reports related to services or procedures provided.
99310	**CA005 6 minutes** Clinical staff completes phone calls with family/caregiver or nurse/care coordinator at the facility, confirms any procedures or services provided since last visit, and confirms medication changes since last visit. **CA006 3 minutes** Clinical staff confirms availability of any imaging completed since the last visit as well as any reports related to services or procedures provided.

b. Service period (includes pre, intra and post):

c. Post-service period:

99304	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99305	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99306	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99307	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99308	**CA037 3 minutes**

	Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99309	**CA037 3 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.
99310	**CA037 6 minutes** Clinical staff completes follow-up phone calls with family/caregiver and/or facility nurse/therapist/care coordinator. **CA038 8 minutes** Staff confirms new procedure/therapy/DME orders and medication updates/prior authorizations are directed correctly. Staff assists in coordination of care between providers. Staff assists in interfacing between documentation in facility EMR and physician EMR.

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

N/A

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
    N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    N/A

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
    N/A

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:
    N/A

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?
    N/A

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:
    N/A

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:
    N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2021

Home and Residence Services – Tab 14

Following the implementation of the revisions to the Evaluation and Management (E/M) office visits (99201-99215) for the CPT 2021 code set, the CPT/RUC Workgroup on E/M met twelve times in 2020 and early 2021 to standardize the rest of the E/M sections in the CPT code set. The CPT/RUC Workgroup on E/M was committed to changing the current coding and documentation requirements for E/M visits to simplify the work of the health care provider and improve the health of the patient. To achieve these goals, the Workgroup set forth the following guiding principles related to the group's ongoing work product:

1. To decrease administrative burden of documentation and coding and align CPT and CMS whenever possible
2. To decrease the need for audits
3. To decrease unnecessary documentation in the medical record that is not needed for patient care
4. To ensure that payment for E/M is resource-based and that there is no direct goal for payment redistribution between specialties.

In February 2021, the CPT Editorial Panel deleted twelve of the domiciliary, rest home (e.g., boarding home) and custodial care services to merge these services with the home visit services. The eight revised codes describe home and residence services to align with the principles included in the office or other outpatient E/M office visits by documenting and selecting level of service based on total time or medical decision making.

In April 2021, the specialty societies surveyed the eight home and residence codes but did not obtain the required number of survey responses for the established patients (99347, 99348, 99349 and 99350). More importantly, responses from the predominant provider, such as nurse practitioners, for some of the services was not achieved (99344, 99345, 99349 and 99350). The specialty societies intend to work with the Research Subcommittee to develop a targeted survey, using the Medicare Claims database to identify qualified healthcare professionals, focusing on nurse practitioners, who predominantly perform home visit services and match them with societies to survey those individuals. The specialty societies also would like to ask the Research Subcommittee if it would be possible to limit the additional surveys to focus on obtaining valid responses and from the predominant providers (99344-99450).

The RUC recommends that the home and residence services be postponed until October 2021, and the specialty societies work with the Research Subcommittee to obtain valid and representative responses.

Home and Residence Services

The following codes are used to report evaluation and management services provided in a home or residence. Home may be defined as a private residence, temporary lodging, or short term accommodation (eg, hotel, campground, hostel, or cruise ship).

For definitions of ~~key components and~~ commonly used terms, ~~please~~ see **Evaluation and Management Services Guidelines.**

~~(For care plan oversight services provided to a patient in the home under the care of a home health agency, see 99374, 99375, and for hospice agency, see 99377, 99378. For care plan oversight provided to a patient under hospice or home health agency care, see 99339, 99340)~~

These codes are also used when the residence is an assisted living facility, group home (that is not licensed as an intermediate care facility for individuals with intellectual disabilities), custodial care facility, or residential substance abuse treatment facility.

For services in an intermediate care facility for individuals with intellectual disabilities and services provided in a psychiatric residential treatment center, see **Nursing Facility Services**.

When selecting code level using time, do not count any travel time.

To report services when a patient is admitted to hospital inpatient, observation status, or to a nursing facility in the course of an encounter in another setting, see **Initial Hospital Inpatient and Observation Care** or **Initial Nursing Facility Care**.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

New Patient

Chicago, IL 60611

March 26, 2021

RE: Home and Residence Services (Tab 14) CPT 2023

Dear Dr. Silva,

The undersigned medical societies submitted an LOI of 1 for the revised home visit codes. We have kept the survey open as long as we could in order to get as many responses as possible. However, we did not reach our required minimum for all the codes in time to send summary data to the RUC by the deadline. As you can see, in spite of our best efforts, which included daily, RUC approved, reminders to surveyees, (as well as adding more potential surveyees) we have been unable to obtain the required number of responses for the subsequent home visit codes.

More important, the breakout of completed responses not date, for some of these codes are missing the predominant users, the nurse practitioners (NP).

Data as of 3-24-2021	Code 1 99341	Code 2 99342	Code 3 99344	Code 4 99345	Code 5 99347	Code 6 99348	Code 7 99349	Code 8 99350
Total Responses	51	53	38	39	43	43	41	41
Required Responses	30	30	30	30	50	50	75	50
# to achieve valid	-21	-23	-8	-9	7	7	34	9
Predominant User	Podiatry	Podiatry	NP	NP	Podiatry	Podiatry	NP	NP
% in RUC database	87%	77%	52%	55%	72%	40%	50%	55%

The undersigned societies believe it is imperative that all eight codes be presented to the RUC at the same time. Therefore, we are writing to request more time so we can reach the required number of responses and to focus on the predominant users the nurse practitioners. We are not sure how long that will take but we do have a proposal that should maximize our chance for success. Specifically, we would like to use the Medicare Claims database to identify QHPs focusing on nurse practitioners who predominantly perform home visit services and match them with societies and ask the Research Committee if we can send the survey to those individuals. We need time to review this targeted list against our member lists. We also would like to ask the Research Committee if it would be possible to limit the additional surveys to the four subsequent visit codes or to two of the new services codes and either two or four of the subsequent codes again focusing on the predominant users, Nurse Practitioners, Family Medicine and Internal Medicine. We look forward to successfully completing these surveys and presenting to the RUC in October.

Sincerely,

American Geriatrics Society

American Nurses Association

American Podiatric Medical Association

American Academy of Home Care Medicine

Attachment: Survey data as of March 24, 2021

Preliminary Survey Data- as of 3-24-2021 Survey Remains Open

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2021

Prolonged Services – Clinical Staff Services (PE Only) – Tab 15

In May 2014, the CPT Editorial Panel established two new add-on codes to describe prolonged office observation in conjunction with an evaluation and management (E/M) service, specifically to address additional clinical staff resources in the office or outpatient setting. CPT code 99415 was created to describe the first hour of prolonged clinical staff services provided in addition to an office E/M visit, while CPT code 99416 was created to describe each additional 30 minutes beyond that first hour of prolonged clinical staff service time that was provided in addition to the office E/M. CPT codes 99415 and 99416 are now under consideration by the RUC and Practice Expense (PE) Subcommittee due to the recent changes by the Panel to the prolonged services family code set.

As part of its deliberations, the PE Subcommittee first reviewed and concurred that there is compelling evidence to support an increase in the clinical staff time based on flawed methodology. When the RUC initially valued these add-on codes in September 2014, they assumed a one clinical staff to four patient ratio for these services. Meaning that the clinical staff time was divided among four patients due to anticipated multi-tasking. For 99415, 60 minutes was divided by four patients, hence 15 minutes each. Similarly, the clinical staff time that was included in the original recommendation for 99416 was reached by dividing four patients by 30 minutes for roughly 8 minutes of time. However, since the RUC's original valuation in 2014, changes to CPT language have specifically clarified that the time reported for these codes are for a single patient. This is contradictory to the 1:4 multi-tasking ratio used by the RUC to value these codes and as such, the specialties presented compelling evidence based on flawed methodology which passed unanimously.

The PE Subcommittee thoroughly reviewed the practice expense recommendations for these two codes and approved the inputs with no modifications. The PE Subcommittee noted that the 30 minutes of clinical staff time for 99415 and the 15 minutes for 99416 were appropriately shifted from CA020 *Assist physician or other qualified healthcare professional---directly related to physician work time (other%)* to CA021 *Perform procedure/service---NOT directly related to physician work time.* There are no additional clinical activities recommended and no medical supply inputs. There are only two equipment items, EQ189 *otoscope-ophthalmoscope (wall unit)* and EF023 *table, exam,* which were deemed appropriate as they are standard inputs for use in the physician office setting.

The PE Subcommittee agreed that the practice expense inputs for CPT codes 99415 and 99416 were appropriate and that the recommended clinical staff times are correctly valued. **The RUC recommends the direct practice expense inputs as submitted by the specialty society for CPT codes 99415 and 99416.**

RUC Referral to CPT

The PE Subcommittee asked for additional clarification about how these time-based codes will be tracked and whether these services are required to be provided face-to-face. There was discussion at both the PE Subcommittee meeting and the RUC regarding discrepancies between the long

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

descriptors for these codes and the introductory CPT language. The descriptors for 99415 and 99416 state "direct patient contact with physician supervision;" while the preparatory paragraph for these codes describes "face-to-face time." Given these inconsistencies, there was confusion as to whether the two codes could be used for non-face-to-face (asynchronous) patient encounters. The CPT representative stated that the CPT Editorial Panel is working to reconcile the language.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Prolonged Clinical Staff Services With Physician or Other Qualified Health Care Professional Supervision Codes 99415, 99416 are used when an ~~prolonged~~ evaluation and management (E/M) service is provided in the office or outpatient setting that involves prolonged clinical staff face-to-face time ~~beyond the highest total time of the E/M service, as stated in the ranges of time in the code descriptions~~. The physician or qualified health care professional is present to provide direct supervision of the clinical staff. This service is reported in addition to the designated E/M services and any other services provided at the same session as E/M services. *Codes 99415, 99416 are used to report the total duration of face-to-face time spent by clinical staff on a given date providing prolonged service in the office or other outpatient setting, even if the time spent by the clinical staff on that date is not continuous. Time spent performing separately reported services other than the E/M service is not counted toward the prolonged services time.* Code 99415 is used to report the first hour of prolonged clinical staff service on a given date. Code 99415 should be used only once per date, even if the time spent by the clinical staff is not continuous on that date. Prolonged service of less than 30 minutes total duration on a given date is not separately reported ~~because the clinical staff time involved is included in the E/M codes. The highest total time in the time ranges of the code descriptions is used in defining when prolonged services time begins. For example, prolonged clinical staff services for 99214 begin after 39 minutes, and 99415 is not reported until at least 69 minutes total face-to-face clinical staff time has been performed~~. When face-to-face time is noncontiguous, use only the face-to-face time provided to the patient by the clinical staff. Codes 99415, 99416 may be reported for no more than two simultaneous patients and the time reported is the time devoted only to a single patient. ~~The use of the time-based add-on codes requires that the primary E/M service has a time published in the CPT code set.~~ For prolonged services by the physician or other qualified health care professional, see ~~99354, 99355,~~ 99417. Do not report 99415, 99416 in conjunction with ~~99354, 99355,~~ 99417. *Facilities may not report 99415, 99416.*				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(f)✚99415	K3	Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; first hour (List separately in addition to code for outpatient Evaluation and Management service) (Use 99415 in conjunction with 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215) (Do not report 99415 in conjunction with ~~99354, 99355,~~ 99417)	ZZZ	0.00 PE Only
(f)✚99416	K4	each additional 30 minutes (List separately in addition to code for prolonged service) (Use 99416 in conjunction with 99415) (Do not report 99416 in conjunction with ~~99354, 99355,~~ 99417)	ZZZ	0.00 PE Only

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The Total Duration of Prolonged Services Table illustrates the correct reporting of prolonged services provided by clinical staff with physician supervision in the office setting beyond the initial 30 minutes of clinical staff time:

Total Duration of Prolonged Services	***Code(s)***
less than 30 minutes	*Not reported separately*
30-74 minutes *(30 minutes - 1 hr. 14 min.)*	*99415 X 1*
75-104 minutes *(1 hr. 15 min. - 1 hr. 44 min.)*	*99415 X 1 AND 99416 X 1*
105 or more *(1 hr. 45 min. or more)*	*99415 X 1 AND 99416 X 2* *or more for each additional30 minutes.*

The Time Range by Code Table provides the time ranges specific to the office or other outpatient primary service code that are used to report 99415 and the starting point for the first unit of 99416. The starting point for 99415 is 30 minutes beyond the typical clinical staff time for the office visit.

Codes	**99415 time range (minutes)**	**99416 start point (minutes)**
99202	59-103	104
99203	64-108	109
99204	71-115	116
99205	76-120	121
99211	46-90	91
99212	54-98	99
99213	57-101	102
99214	70-114	115
99215	75-119	120

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
99415	Prolonged clinical staff service (the service beyond the highest time in the range of total time of the service) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; first hour	ZZZ
99416	Prolonged clinical staff service (the service beyond the highest time in the range of total time of the service) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; each additional 30 minutes	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99415	A 52-year-old female presents with gastroenteritis and persistent vomiting. She presents with signs and symptoms of clinical dehydration.
99416	A 52-year-old female presents with gastroenteritis and persistent vomiting. She presents with signs and symptoms of clinical dehydration.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC advisors from the surveying societies acted as an expert panel and met by video conferencing and email to develop the inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   We used the current codes as reference codes for 99415 and 99416.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Yes. 99415 is typically reported with E/M codes 99213, 99214, 99215, and 99416 in the non-facility setting.99416 is typically reported with 99415.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

(Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

99415:

Hematology/Oncology is the dominant provided in the non-facility setting at 21.4% of all claims. The dominant provider is not different for the global period.

99416:

Psychiatry is the dominant provider in the non-facility setting at 36.8% of all claims. The dominant provider is not different for the global period.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

Flawed Methodology

The guidelines preceding these codes in *Current Procedural Terminology* (CPT) state, in part:

Code 99415 is used to report the first hour of prolonged clinical staff service on a given date. Code 99415 should be used only once per date, even if the time spent by the clinical staff is not continuous on that date. Prolonged service of less than 30 minutes total duration on a given date is not separately reported because the clinical staff time involved is included in the E/M codes.

Thus, per CPT, the clinical staff time required to report 99415 must be a **minimum** of 30 minutes. However, the current clinical staff time assigned to 99415 is only 15 minutes, which implies there was a flaw in the methodology used to assign that clinical staff time.

Similarly, for 99416, the CPT guidelines state:

Code 99416 is used to report each additional 30 minutes of prolonged clinical staff service beyond the first hour. Code 99416 may also be used to report the final 15-30 minutes of prolonged service on a given date. Prolonged service of less than 15 minutes beyond the first hour or less than 15 minutes beyond the final 30 minutes is not reported separately.

Thus, per CPT, the clinical staff time required to report 99416 must be a **minimum** of 15 minutes. However, the current clinical staff time assigned to 99416 is only 8 minutes, which implies there was a flaw in the methodology used to assign that clinical staff time as well.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A

   b. Service period (includes pre, intra and post):

The clinical staff is spending this time following up on the patient's care plan, providing care to the patient, and helping the patient understand their care plan.

   c. Post-service period:

N/A

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

When the provider enters the room, the clinical staff presents the history to the provider in front of the patient, allowing the provider to clarify details. At this point, the clinical staff switches to a scribe role, documenting the provider's physical exam, assessment, and plan. After the provider moves on to the next patient encounter, the clinical staff reviews the care plan and provides appropriate education with the patient.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
    N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    N/A

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
    N/A

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:
    N/A

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?
    N/A

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

CPT 2023 E/M Guidelines

Category I
Evaluation and Management (E/M) Services Guidelines

In addition to the information presented in the Introduction, several other items unique to this section are defined or identified here.

E/M Guidelines Overview

The E/M guidelines have sections that are common to all E/M categories and sections that are category specific. Most of the categories and many of the subcategories of service have special guidelines or instructions unique to that category or subcategory. Where these are indicated, eg, "Hospital Inpatient and Observation Care," special instructions are presented before the listing of the specific E/M services codes. It is important to review the instructions for each category or subcategory. These guidelines are to be used by the reporting physician or other qualified health care professional to select the appropriate level of service. These guidelines do not establish documentation requirements or standards of care. The main purpose of documentation is to support care of the patient by current and future health care team(s). These guidelines are for services that require a face-to-face encounter. (For 99211 and 99281 the face-to-face services may be performed by clinical staff).

In the **Evaluation and Management** section (99202-99499) there are many code categories. Each category may have specific guidelines, or the codes may include specific details. These E/M guidelines are written for the following categories:

- Office or Other Outpatient Services
- Hospital Inpatient and Observation Care Services
- Consultations
- Emergency Department Services
- Nursing Facility Services
- Home and Residence Services
- Prolonged Service With or Without Direct Contact on the Date of an Evaluation and Management Service

Classification of Evaluation and Management (E/M) Services

The E/M section is divided into broad categories such as office visits, hospital inpatient or observation care visits, and consultations. Most of the categories are further divided into two or more subcategories of E/M services. For example, there are two subcategories of office visits (new patient and established patient) and there are two subcategories of hospital inpatient and observation care visits (initial and subsequent). The subcategories of E/M services are further classified into levels of E/M services that are identified by specific codes.

The basic format of codes with levels of E/M services based on medical decision making (MDM) or time is the same. First, a unique code number is listed. Second, the place and/or type of service is specified, eg, office or other outpatient visit. Third, the content of the service is defined. Fourth, time is specified. (A detailed discussion of time is provided following the Decision Tree for New vs Established Patients.)

The place of service and service type is defined by the location where the face-to-face encounter occurs. For example, service provided to a nursing facility resident brought to the office is reported with an office or other outpatient code.

New and Established Patients

Solely for the purposes of distinguishing between new and established patients, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. A new patient is one who has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years.

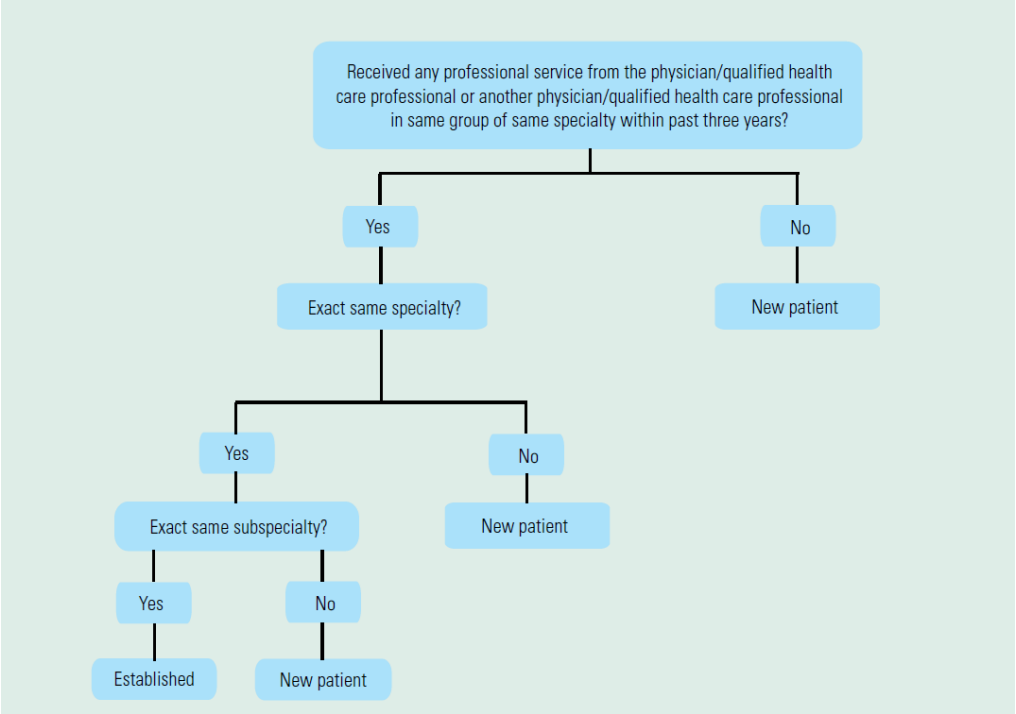
An established patient is one who has received professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years. See Decision Tree for New vs Established Patients.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

No distinction is made between new and established patients in the emergency department. E/M services in the emergency department category may be reported for any new or established patient who presents for treatment in the emergency department.

The Decision Tree for New vs Established Patients is provided to aid in determining whether to report the E/M service provided as a new or an established patient encounter.

Coding Tip



Instructions for Use of the CPT Codebook

When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialty as the physician. A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his or her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional, and who is allowed by law, regulation and facility policy to perform or assist in the performance of a specific professional service but does not individually report that professional service. Other policies may also affect who may report specific services.

CPT Coding Guidelines, Introduction, Instructions for Use of the CPT Codebook

---

Decision Tree for New vs Established Patients

Initial and Subsequent Services

Some categories apply to both new and established patients (eg, hospital inpatient or observation care). These categories differentiate services by whether the service is the initial service or a subsequent service. For the purpose of distinguishing between initial or subsequent visits, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. An initial service is when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the inpatient or observation or nursing facility admission and stay.

A subsequent service is when the patient has received professional service(s) from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the admission and stay.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

For reporting hospital inpatient or observation care services, a stay that includes a transition from observation to inpatient is a single stay. For reporting nursing facility services, a stay that includes transition(s) between skilled nursing facility and nursing facility level of care is the same stay.

Services Reported Separately

Any specifically identifiable procedure or service (ie, identified with a specific CPT code) performed on the date of E/M services may be reported separately.

The ordering and actual performance and/or interpretation of diagnostic tests/studies during a patient encounter are not included in determining the levels of E/M services when the professional interpretation

of those tests/studies is reported separately by the physician or other qualified health care professional reporting the E/M service. Tests that do not require separate interpretation (eg, tests that are results only) and are analyzed as part of MDM do not count as an independent interpretation and may be counted as ordered or reviewed for selecting an MDM level.

The performance of diagnostic tests/studies for which specific CPT codes are available may be reported separately, in addition to the appropriate E/M code. The interpretation of the results of diagnostic tests/studies (ie, professional component) with preparation of a separate distinctly identifiable signed written report may also be reported separately, using the appropriate CPT code and, if required, with modifier 26 appended.

See Instructions for Selecting a Level Based on MDM or Time.

The physician or other qualified health care professional may need to indicate that on the day a procedure or service identified by a CPT code was performed, the patient's condition required a significant separately identifiable E/M service. The E/M service may be caused or prompted by the symptoms or condition for which the procedure and/or service was provided. This circumstance may be reported by adding modifier 25 to the appropriate level of E/M service. As such, different diagnoses are not required for reporting of the procedure and the E/M services on the same date.

History and/or Examination

These E/M services include a medically appropriate history and/or physical examination, when performed. The nature and extent of the history and/or physical examination are determined by the treating physician or other qualified health care professional reporting the service. The care team may collect information, and the patient or caregiver may supply information directly (eg, by electronic health record [EHR] portal or questionnaire) that is reviewed by the reporting physician or other qualified health care professional. The extent of history and physical examination is not an element in selection of the level of these E/M service codes.

Levels of E/M Services

Select the appropriate level of E/M services based on the following:

1. The level of the MDM as defined for each service, **or**

2. The total time for E/M services performed on the date of the encounter.

Within each category or subcategory of E/M service based on MDM or time, there are three to five levels of E/M services available for reporting purposes. Levels of E/M services are **not** interchangeable among the different categories or subcategories of service. For example, the first level of E/M services in the subcategory of office visit, new patient, does not have the same definition as the first level of E/M services in the subcategory of office visit, established patient. Each level of E/M services may be used by all physicians or other qualified health care professionals.

Guidelines for Selecting a level service based on Medical Decision Making

Four types of MDM are recognized: straightforward, low, moderate, and high. The concept of the level of MDM does not apply to 99211 or 99281.

MDM includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option. MDM is defined by three elements. The elements are:

- ***The number and complexity of problem(s) that are addressed during the encounter***.
- ***The amount and/or complexity of data to be reviewed and analyzed.*** These data include medical records, tests, and/or other information that must be obtained, ordered, reviewed, and analyzed for the encounter. This includes information obtained from multiple sources or interprofessional communications that are not reported separately and interpretation of tests that are not reported

separately. Ordering a test is included in the category of test result(s) and the review of the test result is part of the encounter and not a subsequent encounter. Ordering a test may include those considered, but not selected after shared decision making. For example, a patient may request diagnostic imaging that is not necessary for their condition and discussion of the lack of benefit may be required. Alternatively, a test may normally be performed, but due to risk for a specific patient is not ordered. These considerations must be documented. Data are divided into three categories:

- Tests, documents, orders, or independent historian(s). (Each unique test, order, or document is counted to meet a threshold number.)
- Independent interpretation of tests (not separately reported)
- Discussion of management or test interpretation with external physician or other qualified health care professional or appropriate source (not separately reported)

- **The risk of complications and/or morbidity or mortality of patient management:** This includes decisions made at the encounter associated with the diagnostic procedure(s) and treatment(s). This includes the possible management options selected and those considered but not selected, after shared decision making with the patient and/or family. For example, a decision about hospitalization includes consideration of alternative levels of care. Examples may include a psychiatric patient with a sufficient degree of support in the outpatient setting or the decision to not hospitalize a patient with advanced dementia with an acute condition that would generally warrant inpatient care, but for whom the goal is palliative treatment.

Shared decision making involves eliciting patient and/or family preferences, patient and/or family education, and explaining risks and benefits of management options.

MDM may be impacted by role and management responsibility.

When the physician or other qualified health care professional is reporting a separate CPT code that includes interpretation and/or report, the interpretation and/or report is not counted toward the MDM when selecting a level of E/M services.

When the physician or other qualified health care professional is reporting a separate service for discussion of management with a physician or another qualified health care professional, the discussion is not counted toward the MDM when selecting a level of E/M services.

The Levels of Medical Decision Making (MDM) table (Table 2) is a guide to assist in selecting the level of MDM for reporting an E/M services code. The table includes the four levels of MDM (ie, straightforward, low, moderate, high) and the three elements of MDM (ie, number and complexity of problems addressed at the encounter, amount and/or complexity of data reviewed and analyzed, and risk of complications and/or morbidity or mortality of patient management). To qualify for a particular level of MDM, two of the three elements for that level of MDM must be met or exceeded.

Examples in the table may be more or less applicable to specific settings of care. For example, the decision to hospitalize applies to the outpatient or nursing facility encounters, whereas the decision to escalate hospital level of care (eg, transfer to ICU) applies to the hospitalized or observation care patient.

See also the introductory guidelines of each code family section.

Table 2: Levels of Medical Decision Making (MDM)

Level of MDM (Based on 2 out of 3 Elements of MDM)	Elements of Medical Decision Making		
	Number and Complexity of Problems Addressed at the Encounter	Amount and/or Complexity of Data to be Reviewed and Analyzed **Each unique test, order, or document contributes to the combination of 2 or combination of 3 in Category 1 below.*	Risk of Complications and/or Morbidity or Mortality of Patient Management
N/A	N/A	N/A	N/A
Straightforward	Minimal • 1 self-limited or minor problem	Minimal or none	Minimal risk of morbidity from additional diagnostic testing or treatment
Low	Low • 2 or more self-limited or minor problems; or • 1 stable, chronic illness; or • 1 acute, uncomplicated illness or injury or • 1 stable acute illness or • 1 acute, uncomplicated illness or injury requiring hospital inpatient or observation level of care	Limited *(Must meet the requirements of at least 1 of the 2 categories*) Category 1: Tests and documents • Any combination of 2 from the following: ○ Review of prior external note(s) from each unique source*; ○ Review of the result(s) of each unique test*; ○ Ordering of each unique test* or Category 2: Assessment requiring an independent historian(s) *(For the categories of independent interpretation of tests and discussion of management or test interpretation, see moderate or high)*	Low risk of morbidity from additional diagnostic testing or treatment

Moderate	Moderate
	• 1 or more chronic illnesses with exacerbation, progression, or side effects of treatment;
	or
	• 2 or more stable, chronic illnesses;
	or
	• 1 undiagnosed new problem with uncertain prognosis;
	or
	• 1 acute illness with systemic symptoms;
	or
	• 1 acute, complicated injury
		Moderate
		(Must meet the requirements of at least 1 out of 3 categories)
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			Moderate risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Prescription drug management
			• Decision regarding minor surgery with identified patient or procedure risk factors
			• Decision regarding elective major surgery without identified patient or procedure risk factors
			• Diagnosis or treatment significantly limited by social determinants of health

High	High
	• 1 or more chronic illnesses with severe exacerbation, progression, or side effects of treatment;
	or
	• 1 acute or chronic illness or injury that poses a threat to life or bodily function
		Extensive
		(Must meet the requirements of at least 2 out of 3 categories)
		
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			High risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Drug therapy requiring intensive monitoring for toxicity
			• Decision regarding elective major surgery with identified patient or procedure risk factors
			• Decision regarding emergency major surgery
			• Decision regarding hospitalization or escalation of hospital-level of care
			• Decision not to resuscitate or to de-escalate care because of poor prognosis
			• Parenteral controlled substances

Number and Complexity of Problems Addressed at the Encounter

One element used in selecting the level of services is the number and complexity of the problems that are addressed at the encounter. Multiple new or established conditions may be addressed at the same time and may affect MDM. Symptoms may cluster around a specific diagnosis and each symptom is not necessarily a unique condition. Comorbidities and underlying diseases, in and of themselves, are not considered in selecting a level of E/M services **unless** they are addressed, and their presence increases the amount and/or complexity of data to be reviewed and analyzed or the risk of complications and/or morbidity or mortality of patient management. The final diagnosis for a condition does not, in and of itself, determine the complexity or risk, as extensive evaluation may be required to reach the conclusion that the signs or symptoms do not represent a highly morbid condition. Therefore, presenting symptoms which are likely to represent a highly morbid condition may drive MDM even when the ultimate diagnosis is not highly morbid. The evaluation and /or treatment should be consistent with the likely nature of the condition. Multiple problems of a lower severity may, in the aggregate, create higher risk due to interaction.

The term "risk" as used in these definitions relates to risk from the condition. While condition risk and management risk may often correlate, the risk from the condition is distinct from the risk of the management.

Definitions for the elements of MDM (see Table 2, Levels of Medical Decision Making) are:

Problem: *A problem is a disease, condition, illness, injury, symptom, sign, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter.*

Problem addressed: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified health care professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in the patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or qualified health care professional and may not be the cause of admission or continued stay.

Minimal problem: A problem that may not require the presence of the physician or other qualified health care professional, but the service is provided under the physician's or other qualified health care professional's supervision (see 99211, 99281).

Self-limited or minor problem: *A problem that runs a definite and prescribed course, is transient in nature, and is not likely to permanently alter health status.*

Stable, chronic illness: A problem with an expected duration of at least one year or until the death of the patient. For the purpose of defining chronicity, conditions are treated as chronic whether or not stage or severity changes (eg, uncontrolled diabetes and controlled diabetes are a single chronic condition). "Stable" for the purposes of categorizing MDM is defined by the specific treatment goals for an individual patient. A patient who is not at his or her treatment goal is not stable, even if the condition has not changed and there is no short-term threat to life or function. For example, a patient with persistently poorly controlled blood pressure for whom better control is a goal is not stable, even if the pressures are not changing and the patient is asymptomatic. The risk of morbidity **without** treatment is significant.

Acute, uncomplicated illness or injury: A recent or new short-term problem with low risk of morbidity for which treatment is considered. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. A problem that is normally self-limited or minor but is not resolving consistent with a definite and prescribed course is an acute, uncomplicated illness.

Acute, uncomplicated illness or injury requiring hospital inpatient or observation level care: A recent or new short-term problem with low risk of morbidity for which treatment is required. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. The treatment required is delivered in a hospital inpatient or observation level setting.

Stable, acute illness: A problem that is new or recent for which treatment has been initiated. The patient is improved and while resolution may not be complete is stable with respect to this condition.

Chronic illness with exacerbation, progression, or side effects of treatment: A chronic illness that is acutely worsening, poorly controlled, or progressing with an intent to control progression and requiring additional supportive care or requiring attention to treatment for side effects.

Undiagnosed new problem with uncertain prognosis: A problem in the differential diagnosis that represents a condition likely to result in a high risk of morbidity without treatment.

Acute illness with systemic symptoms: An illness that causes systemic symptoms and has a high risk of morbidity without treatment. For systemic general symptoms, such as fever, body aches, or fatigue in a minor illness that may be treated to alleviate symptoms, see the definitions for **self-limited or minor problem** or **acute, uncomplicated illness or injury.** Systemic symptoms may not be general but may be single system.

Acute, complicated injury: An injury which requires treatment that includes evaluation of body systems that are not directly part of the injured organ, the injury is extensive, or the treatment options are multiple and/or associated with risk of morbidity.

Chronic illness with severe exacerbation, progression, or side effects of treatment: The severe exacerbation or progression of a chronic illness or severe side effects of treatment that have significant risk of morbidity and may require escalation in level of care.

Acute or chronic illness or injury that poses a threat to life or bodily function: An acute illness with systemic symptoms, an acute complicated injury, or a chronic illness or injury with exacerbation and/or progression or side effects of treatment, that poses a threat to life or bodily function in the near term without treatment. Some symptoms may represent a condition that is significantly probable and poses a potential threat to life or bodily function. These may be included in this category when the evaluation and treatment is consistent with this degree of potential severity.

Amount and/or Complexity of Data to be Reviewed and Analyzed

One element used in selecting the level of services is the amount and/or complexity of data to be reviewed or analyzed at an encounter.

Analyzed: Analyzed is a term describing the process of using the data as part of the MDM. The data element itself may not be subject to analysis (eg, glucose), but it is instead included in the thought processes for diagnosis, evaluation, or treatment. Tests ordered are presumed to be analyzed when the results are reported. Therefore, when they are ordered during an encounter, they are counted in that encounter. Tests that are ordered outside of an encounter may be counted in the encounter where they are analyzed. In the case of a recurring order, each new result may be counted in the encounter at which it is analyzed. For example, an encounter that includes an order for monthly prothrombin times would count for one prothrombin time ordered and reviewed. Additional future results, if analyzed in a subsequent encounter, may be counted as a single test in that subsequent encounter. Any service for which the professional component is separately reported by the physician or other qualified health care professional

reporting the E/M services is not counted as a data element ordered, reviewed, analyzed, or independently interpreted for the purposes of determining the level of MDM.

Test: Tests are imaging, laboratory, psychometric, or physiologic data. A clinical laboratory panel (eg, basic metabolic panel [80047]) is a single test. The differentiation between single or multiple tests is defined in accordance with the CPT code set. For the purposes of data reviewed and analyzed, pulse oximetry is not a test.

Unique: A unique test is defined by the CPT code set. When multiple results of the same unique test (eg, serial blood glucose values) are compared during an E/M service, only count one unique test. Tests that have overlapping elements are not unique, even if they are identified with distinct CPT codes. For example, a CBC with differential would incorporate the set of hemoglobin, CBC without differential, and platelet count. A unique source is defined as a physician or qualified heath care professional in a distinct group or different specialty or subspecialty, or a unique entity. Review of all materials from any unique source counts as one element towards MDM.

Combination of Data Elements: A combination of different data elements, for example a combination of notes reviewed, tests ordered, tests reviewed, or independent historian, allows these elements to be summed. It does not require each item type or category to be represented. A unique test ordered, plus a note reviewed and an independent historian would be a combination of three elements.

External: *External records, communications and/or test results are from an external physician, other qualified health care professional, facility, or health care organization.*

External physician or other qualified health care professional: *An external physician or other qualified health care professional who is not in the same group practice or is of a different specialty or subspecialty. This includes licensed professionals who are practicing independently. The individual may also be a facility or organizational provider such as from a hospital, nursing facility, or home health care agency.*

Discussion: Discussion requires an interactive exchange. The exchange must be direct and not through intermediaries (eg, clinical staff or trainees). Sending chart notes or written exchanges that are within progress notes does not qualify as an interactive exchange. The discussion does not need to be on the date of the encounter but is counted only once and only when it is used in the decision making of the encounter. It may be asynchronous (ie, does not need to be in person), but it must be initiated and completed within a short time period (eg, within a day or two).

Independent historian(s): An individual (eg, parent, guardian, surrogate, spouse, witness) who provides a history in addition to a history provided by the patient who is unable to provide a complete or reliable history (eg, due to developmental stage, dementia, or psychosis) or because a confirmatory history is judged to be necessary. In the case where there may be conflict or poor communication between multiple historians and more than one historian is needed, the independent historian requirement is met. It does not include translation services. The independent history does not need to be obtained in person but does need to be obtained directly from the historian providing the independent information.

Independent interpretation: The interpretation of a test for which there is a CPT code, and an interpretation or report is customary. This does not apply when the physician or other qualified health care professional who reports the E/M service is reporting or has previously reported the test. A form of interpretation should be documented but need not conform to the usual standards of a complete report for the test.

Appropriate source: *For the purpose of the* ***discussion of management*** *data element (see Table 2, Levels of Medical Decision Making), an appropriate source includes professionals who are not health care professionals but may be involved in the management of the patient (eg, lawyer, parole officer, case manager, teacher). It does not include discussion with family or informal caregivers.*

Risk of Complications and/or Morbidity or Mortality of Patient Management

One element used in selecting the level of services is the risk of complications and/or morbidity or mortality of patient management at an encounter. This is distinct from the risk of the condition itself.

Risk: The probability and/or consequences of an event. The assessment of the level of risk is affected by the nature of the event under consideration. For example, a low probability of death may be high risk, whereas a high chance of a minor, self-limited adverse effect of treatment may be low risk. Definitions of risk are based upon the usual behavior and thought processes of a physician or other qualified health care professional in the same specialty. Trained clinicians apply common language usage meanings to terms such as high, medium, low, or minimal risk and do not require quantification for these definitions (though quantification may be provided when evidence-based medicine has established probabilities). For the purposes of MDM, level of risk is based upon consequences of the problem(s) addressed at the encounter when appropriately treated. Risk also includes MDM related to the need to initiate or forego further testing, treatment, and/or hospitalization. The risk of patient management criteria applies to the patient management decisions made by the reporting physician or other qualified health care professional as part of the reported encounter.

Morbidity: *A state of illness or functional impairment that is expected to be of substantial duration during which function is limited, quality of life is impaired, or there is organ damage that may not be transient despite treatment.*

Social determinants of health: *Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.*

Surgery (minor or major, elective, emergency, procedure or patient risk):

> ***Surgery-Minor or Major:*** The classification of surgery into minor or major is based upon the common meaning of such terms when used by trained clinicians, similar to the use of the term "risk". These terms are not defined by a surgical package classification.
>
> ***Surgery-Elective or Emergency:*** Elective procedures and emergent or urgent procedures describe the timing of a procedure when the timing is related to the patient's condition. An elective procedure is typically planned in advance (eg, scheduled for weeks later), while an emergent procedure is typically performed immediately or with minimal delay to allow for patient stabilization. Both elective and emergent procedures may be minor or major procedures.
>
> ***Surgery-Risk Factors, Patient or Procedure:*** Risk factors are those that are relevant to the patient and procedure. Evidence-based risk calculators may be used, but are not required, in assessing patient and procedure risk.

Drug therapy requiring intensive monitoring for toxicity: A drug that requires intensive monitoring is a therapeutic agent that has the potential to cause serious morbidity or death. The monitoring is performed for assessment of these adverse effects and not primarily for assessment of therapeutic efficacy. The monitoring should be that which is generally accepted practice for the agent but may be patient-specific in some cases. Intensive monitoring may be long-term or short-term. Long-term intensive monitoring is not performed less than quarterly. The monitoring may be performed with a laboratory test, a physiologic test, or imaging. Monitoring by history or examination does not qualify. The monitoring affects the level of MDM in an encounter in which it is considered in the management of the patient. An example may be monitoring for cytopenia in the use of an antineoplastic agent between dose cycles. Examples of monitoring that do not qualify include monitoring glucose levels during insulin therapy, as the primary reason is the therapeutic effect (unless severe hypoglycemia is a current, significant concern); or annual electrolytes and renal function for a patient on a diuretic, as the frequency does not meet the threshold.

Guidelines for Selecting Level of Service Based on Time

Certain categories of time-based E/M codes that do not have levels of services based on MDM (eg, Critical Care Services) in the E/M section use time differently. It is important to review the instructions for each category.

Time is **not** a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time.

When time is used for reporting E/M services codes, the time defined in the service descriptors is used for selecting the appropriate level of services. The E/M services for which these guidelines apply require a face-to-face encounter with the physician or other qualified health care professional. For office or other outpatient services, if the physician's or other qualified health care professional's time is spent in the supervision of clinical staff who perform the face-to-face services of the encounter, use 99211.

For coding purposes, time for these services is the total time on the date of the encounter. It includes both the face-to-face and non-face-to-face time personally spent by the physician and/or other qualified health care professional(s) on the day of the encounter (includes time in activities that require the physician or other qualified health care professional and does not include time in activities normally performed by clinical staff). It does not include any time spent in the performance of other separately reported service(s).

A shared or split visit is defined as a visit in which a physician and other qualified health care professional(s) both provide the face-to-face and non-face-to-face work related to the visit. When time is being used to select the appropriate level of services for which time-based reporting of shared or split visits is allowed, the time personally spent by the physician and other qualified health care professional(s) assessing and managing the patient on the date of the encounter is summed to define total time. Only distinct time should be summed for shared or split visits (ie, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted).

When prolonged time occurs, the appropriate prolonged services code may be reported. The total time on the date of the encounter spent caring for the patient should be documented in the medical record when it is used as the basis for code selection.

Physician or other other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (when not separately reported) and communicating results to the patient family/caregiver
- care coordination (when not separately reported)

Do not count time spent on the following:

- the performance of other services reported separately

- travel
- teaching that is general and not limited to discussion that is required for the management of the specific patient

Unlisted Service

An E/M service may be provided that is not listed in this section of the CPT codebook. When reporting such a service, the appropriate unlisted code may be used to indicate the service, identifying it by "Special Report," as discussed in the following paragraph. The "Unlisted Services" and accompanying codes for the E/M section are as follows:

***99429 Unlisted preventive** medicine service*

***99499 Unlisted evaluation and management** service*

Special Report

An unlisted service or one that is unusual, variable, or new may require a special report demonstrating the medical appropriateness of the service. Pertinent information should include an adequate definition or description of the nature, extent, and need for the procedure and the time, effort, and equipment necessary to provide the service. Additional items that may be included are complexity of symptoms, final diagnosis, pertinent physical findings, diagnostic and therapeutic procedures, concurrent problems, and follow-up care.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2021

Cognitive Assessment and Care Plan Services – Tab 16

Following the implementation of the revisions to the Evaluation and Management (E/M) office visits (99201-99215) for the CPT 2021 code set, the CPT/RUC Workgroup on E/M met twelve times in 2020 and early 2021 to standardize the rest of the E/M sections in the CPT code set. The CPT/RUC Workgroup on E/M was committed to changing the current coding and documentation requirements for E/M visits to simplify the work of the health care provider and improve the health of the patient. To achieve these goals, the Workgroup set forth the following guiding principles related to the group's ongoing work product:

1. To decrease administrative burden of documentation and coding and align CPT and CMS whenever possible
2. To decrease the need for audits
3. To decrease unnecessary documentation in the medical record that is not needed for patient care
4. To ensure that payment for E/M is resource-based and that there is no direct goal for payment redistribution between specialties.

In February 2021, the CPT Editorial Panel revised code 99483 to replace "50 minutes" from its descriptor with "XX minutes of total time is spent on the date of the encounter", as determined by the RUC survey, to align with the principles included in the E/M office visits.

Due to the increase in office visits for 2021, CMS finalized a proposal to increase CPT code 99483 from 3.44 to 3.80 work RVUs. CMS indicated that 99483 includes an evaluation of a patient's cognitive functioning and requires collecting pertinent history and current cognitive status, all of which require medical decision making of moderate or high complexity. To not create a rank order anomaly with 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter* (work RVU = 3.50), CMS increased 99483 by using the ratio of the increase between the CY 2020 and CY 2021 values for 99205 to commensurate with the increase to CPT code 99205.

99483 ***Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements:***

- **Cognition-focused evaluation including a pertinent history and examination,**
- **Medical decision making of moderate or high complexity,**
- **Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity,**
- **Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]),**
- **Medication reconciliation and review for high-risk medications,**
- **Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s),**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

- **Evaluation of safety (eg, home), including motor vehicle operation,**
- **Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks,**
- **Development, updating or revision, or review of an Advance Care Plan,**
- **Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neurocognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support.**

Typically, 60 minutes of total time is spent on the date of the encounter.

The RUC reviewed the survey results from 74 neurologists, geriatricians and internal medicine physicians and determined that the survey 25th percentile work RVU of 3.50 appropriately accounts for the work required to perform this service. The RUC recommends 11 minutes of pre-service time, 60 minutes of intra-service time and 15 minutes of post-service time.

The RUC compared the surveyed code to the top key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter* (work RVU = 3.50, 59 minutes intra-service time and 88 minutes total time) and determined the surveyed code is appropriately valued the same because the vignette for 99205 describes *a new patient with a chronic illness with severe exacerbation that poses a threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function*, which is an extremely intense patient. The RUC did not believe that the typical patient for 99483*, a patient with hypertension, diabetes, arthritis, and coronary artery, disease presents with confusion, weight loss, and failure to maintain her house, where she lives alone*, is more intense. Additionally, the medical decision making (MDM) for CPT code 99205 is at a high level, whereas for CPT code 99483 the MDM is at a moderate/high level of complexity. Lastly, the physician time required for these services is almost identical, 86 minutes (99483) and 88 minutes (99205) total time. Therefore, the RUC determined 99483 should be valued the same as 99205.

The RUC compared 99483 to the second top key reference service 90792 *Psychiatric diagnostic evaluation with medical services* (work RVU = 4.16, 60 minutes intra-service time and 90 minutes total time) and determined that the surveyed code requires less physician time and work and thus is appropriately valued lower.

For additional support, the RUC referenced MPC code 90962 *End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month* (work RVU = 3.57 and 70 minutes intra-service and total time). The RUC concluded that CPT code 99483 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 3.50 for CPT code 99483.**

CPT Descriptor Time
The RUC recommends that the CPT Editorial Panel insert the "60 minutes of total time is spent on the date of the encounter" based on the survey median.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs as submitted by the specialty societies and modified the clinical staff time, moving 6 minutes of CA006 *Confirm availability of prior images/studies* to CA048 *Identify need for imaging, lab or other test result(s) and ensure information has been obtained - three days prior (to be used with E/M only).* The specialty societies consolidated and reduced the clinical staff time for CA021 *Perform procedure/service---NOT directly related to physician work time* to 45 minutes, as outlined in the PE summary of recommendation (SOR) form. The PE Subcommittee adjusted the equipment calculation to the default formula for EQ189 *otoscope-ophthalmoscope (wall unit)* and EF023 *table, exam*. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee.**

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT 2023 E/M Guidelines

Category I
Evaluation and Management (E/M) Services Guidelines

In addition to the information presented in the Introduction, several other items unique to this section are defined or identified here.

E/M Guidelines Overview

The E/M guidelines have sections that are common to all E/M categories and sections that are category specific. Most of the categories and many of the subcategories of service have special guidelines or instructions unique to that category or subcategory. Where these are indicated, eg, "Hospital Inpatient and Observation Care," special instructions are presented before the listing of the specific E/M services codes. It is important to review the instructions for each category or subcategory. These guidelines are to be used by the reporting physician or other qualified health care professional to select the appropriate level of service. These guidelines do not establish documentation requirements or standards of care. The main purpose of documentation is to support care of the patient by current and future health care team(s). These guidelines are for services that require a face-to-face encounter. (For 99211 and 99281 the face-to-face services may be performed by clinical staff).

In the **Evaluation and Management** section (99202-99499) there are many code categories. Each category may have specific guidelines, or the codes may include specific details. These E/M guidelines are written for the following categories:

- Office or Other Outpatient Services
- Hospital Inpatient and Observation Care Services
- Consultations
- Emergency Department Services
- Nursing Facility Services
- Home and Residence Services
- Prolonged Service With or Without Direct Contact on the Date of an Evaluation and Management Service

Classification of Evaluation and Management (E/M) Services

The E/M section is divided into broad categories such as office visits, hospital inpatient or observation care visits, and consultations. Most of the categories are further divided into two or more subcategories of E/M services. For example, there are two subcategories of office visits (new patient and established patient) and there are two subcategories of hospital inpatient and observation care visits (initial and subsequent). The subcategories of E/M services are further classified into levels of E/M services that are identified by specific codes.

The basic format of codes with levels of E/M services based on medical decision making (MDM) or time is the same. First, a unique code number is listed. Second, the place and/or type of service is specified, eg, office or other outpatient visit. Third, the content of the service is defined. Fourth, time is specified. (A detailed discussion of time is provided following the Decision Tree for New vs Established Patients.)

The place of service and service type is defined by the location where the face-to-face encounter occurs. For example, service provided to a nursing facility resident brought to the office is reported with an office or other outpatient code.

New and Established Patients

Solely for the purposes of distinguishing between new and established patients, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. A new patient is one who has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years.

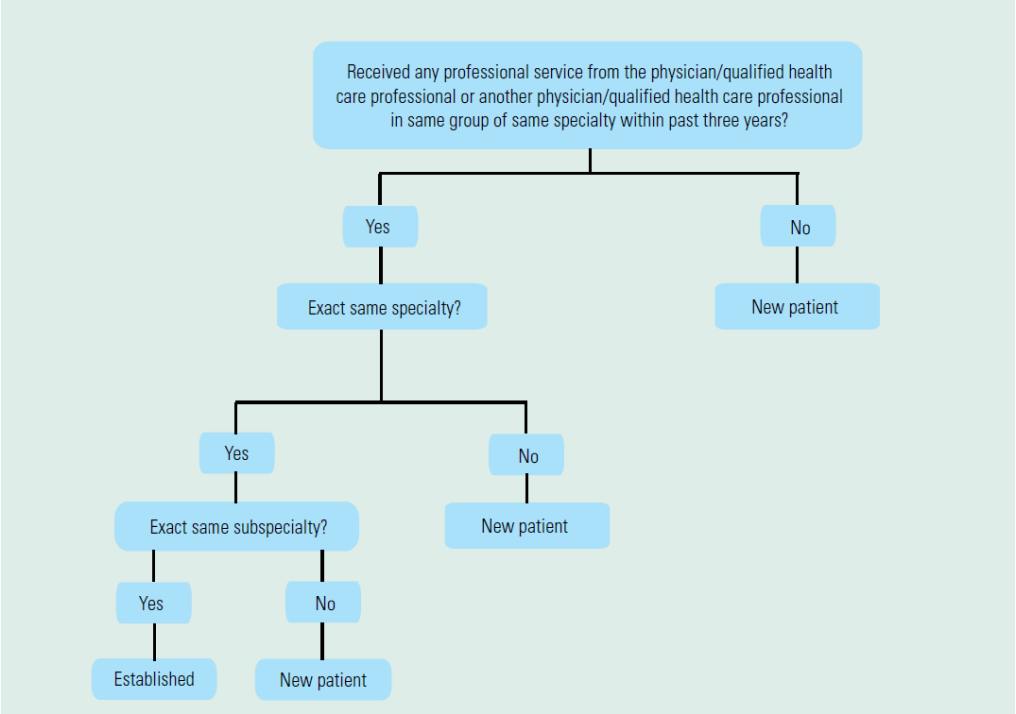
An established patient is one who has received professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years. See Decision Tree for New vs Established Patients.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

No distinction is made between new and established patients in the emergency department. E/M services in the emergency department category may be reported for any new or established patient who presents for treatment in the emergency department.

The Decision Tree for New vs Established Patients is provided to aid in determining whether to report the E/M service provided as a new or an established patient encounter.

Coding Tip



Instructions for Use of the CPT Codebook

When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialty as the physician. A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his or her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional, and who is allowed by law, regulation and facility policy to perform or assist in the performance of a specific professional service but does not individually report that professional service. Other policies may also affect who may report specific services.

CPT Coding Guidelines, Introduction, Instructions for Use of the CPT Codebook

---

Decision Tree for New vs Established Patients

Initial and Subsequent Services

Some categories apply to both new and established patients (eg, hospital inpatient or observation care). These categories differentiate services by whether the service is the initial service or a subsequent service. For the purpose of distinguishing between initial or subsequent visits, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. An initial service is when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the inpatient or observation or nursing facility admission and stay.

A subsequent service is when the patient has received professional service(s) from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the admission and stay.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

For reporting hospital inpatient or observation care services, a stay that includes a transition from observation to inpatient is a single stay. For reporting nursing facility services, a stay that includes transition(s) between skilled nursing facility and nursing facility level of care is the same stay.

Services Reported Separately

Any specifically identifiable procedure or service (ie, identified with a specific CPT code) performed on the date of E/M services may be reported separately.

The ordering and actual performance and/or interpretation of diagnostic tests/studies during a patient encounter are not included in determining the levels of E/M services when the professional interpretation

of those tests/studies is reported separately by the physician or other qualified health care professional reporting the E/M service. Tests that do not require separate interpretation (eg, tests that are results only) and are analyzed as part of MDM do not count as an independent interpretation and may be counted as ordered or reviewed for selecting an MDM level.

The performance of diagnostic tests/studies for which specific CPT codes are available may be reported separately, in addition to the appropriate E/M code. The interpretation of the results of diagnostic tests/studies (ie, professional component) with preparation of a separate distinctly identifiable signed written report may also be reported separately, using the appropriate CPT code and, if required, with modifier 26 appended.

See Instructions for Selecting a Level Based on MDM or Time.

The physician or other qualified health care professional may need to indicate that on the day a procedure or service identified by a CPT code was performed, the patient's condition required a significant separately identifiable E/M service. The E/M service may be caused or prompted by the symptoms or condition for which the procedure and/or service was provided. This circumstance may be reported by adding modifier 25 to the appropriate level of E/M service. As such, different diagnoses are not required for reporting of the procedure and the E/M services on the same date.

History and/or Examination

These E/M services include a medically appropriate history and/or physical examination, when performed. The nature and extent of the history and/or physical examination are determined by the treating physician or other qualified health care professional reporting the service. The care team may collect information, and the patient or caregiver may supply information directly (eg, by electronic health record [EHR] portal or questionnaire) that is reviewed by the reporting physician or other qualified health care professional. The extent of history and physical examination is not an element in selection of the level of these E/M service codes.

Levels of E/M Services

Select the appropriate level of E/M services based on the following:

1. The level of the MDM as defined for each service, **or**

2. The total time for E/M services performed on the date of the encounter.

Within each category or subcategory of E/M service based on MDM or time, there are three to five levels of E/M services available for reporting purposes. Levels of E/M services are **not** interchangeable among the different categories or subcategories of service. For example, the first level of E/M services in the subcategory of office visit, new patient, does not have the same definition as the first level of E/M services in the subcategory of office visit, established patient. Each level of E/M services may be used by all physicians or other qualified health care professionals.

Guidelines for Selecting a level service based on Medical Decision Making

Four types of MDM are recognized: straightforward, low, moderate, and high. The concept of the level of MDM does not apply to 99211 or 99281.

MDM includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option. MDM is defined by three elements. The elements are:

- ***The number and complexity of problem(s) that are addressed during the encounter***.
- ***The amount and/or complexity of data to be reviewed and analyzed.*** These data include medical records, tests, and/or other information that must be obtained, ordered, reviewed, and analyzed for the encounter. This includes information obtained from multiple sources or interprofessional communications that are not reported separately and interpretation of tests that are not reported

separately. Ordering a test is included in the category of test result(s) and the review of the test result is part of the encounter and not a subsequent encounter. Ordering a test may include those considered, but not selected after shared decision making. For example, a patient may request diagnostic imaging that is not necessary for their condition and discussion of the lack of benefit may be required. Alternatively, a test may normally be performed, but due to risk for a specific patient is not ordered. These considerations must be documented. Data are divided into three categories:

- Tests, documents, orders, or independent historian(s). (Each unique test, order, or document is counted to meet a threshold number.)
- Independent interpretation of tests (not separately reported)
- Discussion of management or test interpretation with external physician or other qualified health care professional or appropriate source (not separately reported)

- **The risk of complications and/or morbidity or mortality of patient management:** This includes decisions made at the encounter associated with the diagnostic procedure(s) and treatment(s). This includes the possible management options selected and those considered but not selected, after shared decision making with the patient and/or family. For example, a decision about hospitalization includes consideration of alternative levels of care. Examples may include a psychiatric patient with a sufficient degree of support in the outpatient setting or the decision to not hospitalize a patient with advanced dementia with an acute condition that would generally warrant inpatient care, but for whom the goal is palliative treatment.

Shared decision making involves eliciting patient and/or family preferences, patient and/or family education, and explaining risks and benefits of management options.

MDM may be impacted by role and management responsibility.

When the physician or other qualified health care professional is reporting a separate CPT code that includes interpretation and/or report, the interpretation and/or report is not counted toward the MDM when selecting a level of E/M services.

When the physician or other qualified health care professional is reporting a separate service for discussion of management with a physician or another qualified health care professional, the discussion is not counted toward the MDM when selecting a level of E/M services.

The Levels of Medical Decision Making (MDM) table (Table 2) is a guide to assist in selecting the level of MDM for reporting an E/M services code. The table includes the four levels of MDM (ie, straightforward, low, moderate, high) and the three elements of MDM (ie, number and complexity of problems addressed at the encounter, amount and/or complexity of data reviewed and analyzed, and risk of complications and/or morbidity or mortality of patient management). To qualify for a particular level of MDM, two of the three elements for that level of MDM must be met or exceeded.

Examples in the table may be more or less applicable to specific settings of care. For example, the decision to hospitalize applies to the outpatient or nursing facility encounters, whereas the decision to escalate hospital level of care (eg, transfer to ICU) applies to the hospitalized or observation care patient.

See also the introductory guidelines of each code family section.

Table 2: Levels of Medical Decision Making (MDM)

Level of MDM (Based on 2 out of 3 Elements of MDM)	Elements of Medical Decision Making		
	Number and Complexity of Problems Addressed at the Encounter	Amount and/or Complexity of Data to be Reviewed and Analyzed **Each unique test, order, or document contributes to the combination of 2 or combination of 3 in Category 1 below.*	Risk of Complications and/or Morbidity or Mortality of Patient Management
N/A	N/A	N/A	N/A
Straightforward	Minimal • 1 self-limited or minor problem	Minimal or none	Minimal risk of morbidity from additional diagnostic testing or treatment
Low	Low • 2 or more self-limited or minor problems; or • 1 stable, chronic illness; or • 1 acute, uncomplicated illness or injury or • 1 stable acute illness or • 1 acute, uncomplicated illness or injury requiring hospital inpatient or observation level of care	Limited *(Must meet the requirements of at least 1 of the 2 categories*) Category 1: Tests and documents • Any combination of 2 from the following: ○ Review of prior external note(s) from each unique source*; ○ Review of the result(s) of each unique test*; ○ Ordering of each unique test* or Category 2: Assessment requiring an independent historian(s) *(For the categories of independent interpretation of tests and discussion of management or test interpretation, see moderate or high)*	Low risk of morbidity from additional diagnostic testing or treatment

Moderate	Moderate
	• 1 or more chronic illnesses with exacerbation, progression, or side effects of treatment;
	or
	• 2 or more stable, chronic illnesses;
	or
	• 1 undiagnosed new problem with uncertain prognosis;
	or
	• 1 acute illness with systemic symptoms;
	or
	• 1 acute, complicated injury
		Moderate
		(Must meet the requirements of at least 1 out of 3 categories)
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			Moderate risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Prescription drug management
			• Decision regarding minor surgery with identified patient or procedure risk factors
			• Decision regarding elective major surgery without identified patient or procedure risk factors
			• Diagnosis or treatment significantly limited by social determinants of health

High	High
	• 1 or more chronic illnesses with severe exacerbation, progression, or side effects of treatment;
	or
	• 1 acute or chronic illness or injury that poses a threat to life or bodily function
		Extensive
		(Must meet the requirements of at least 2 out of 3 categories)
		
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			High risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Drug therapy requiring intensive monitoring for toxicity
			• Decision regarding elective major surgery with identified patient or procedure risk factors
			• Decision regarding emergency major surgery
			• Decision regarding hospitalization or escalation of hospital-level of care
			• Decision not to resuscitate or to de-escalate care because of poor prognosis
			• Parenteral controlled substances

Number and Complexity of Problems Addressed at the Encounter

One element used in selecting the level of services is the number and complexity of the problems that are addressed at the encounter. Multiple new or established conditions may be addressed at the same time and may affect MDM. Symptoms may cluster around a specific diagnosis and each symptom is not necessarily a unique condition. Comorbidities and underlying diseases, in and of themselves, are not considered in selecting a level of E/M services **unless** they are addressed, and their presence increases the amount and/or complexity of data to be reviewed and analyzed or the risk of complications and/or morbidity or mortality of patient management. The final diagnosis for a condition does not, in and of itself, determine the complexity or risk, as extensive evaluation may be required to reach the conclusion that the signs or symptoms do not represent a highly morbid condition. Therefore, presenting symptoms which are likely to represent a highly morbid condition may drive MDM even when the ultimate diagnosis is not highly morbid. The evaluation and /or treatment should be consistent with the likely nature of the condition. Multiple problems of a lower severity may, in the aggregate, create higher risk due to interaction.

The term "risk" as used in these definitions relates to risk from the condition. While condition risk and management risk may often correlate, the risk from the condition is distinct from the risk of the management.

Definitions for the elements of MDM (see Table 2, Levels of Medical Decision Making) are:

Problem: *A problem is a disease, condition, illness, injury, symptom, sign, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter.*

Problem addressed: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified health care professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in the patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or qualified health care professional and may not be the cause of admission or continued stay.

Minimal problem: A problem that may not require the presence of the physician or other qualified health care professional, but the service is provided under the physician's or other qualified health care professional's supervision (see 99211, 99281).

Self-limited or minor problem: *A problem that runs a definite and prescribed course, is transient in nature, and is not likely to permanently alter health status.*

Stable, chronic illness: A problem with an expected duration of at least one year or until the death of the patient. For the purpose of defining chronicity, conditions are treated as chronic whether or not stage or severity changes (eg, uncontrolled diabetes and controlled diabetes are a single chronic condition). "Stable" for the purposes of categorizing MDM is defined by the specific treatment goals for an individual patient. A patient who is not at his or her treatment goal is not stable, even if the condition has not changed and there is no short-term threat to life or function. For example, a patient with persistently poorly controlled blood pressure for whom better control is a goal is not stable, even if the pressures are not changing and the patient is asymptomatic. The risk of morbidity **without** treatment is significant.

Acute, uncomplicated illness or injury: A recent or new short-term problem with low risk of morbidity for which treatment is considered. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. A problem that is normally self-limited or minor but is not resolving consistent with a definite and prescribed course is an acute, uncomplicated illness.

Acute, uncomplicated illness or injury requiring hospital inpatient or observation level care: A recent or new short-term problem with low risk of morbidity for which treatment is required. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. The treatment required is delivered in a hospital inpatient or observation level setting.

Stable, acute illness: A problem that is new or recent for which treatment has been initiated. The patient is improved and while resolution may not be complete is stable with respect to this condition.

Chronic illness with exacerbation, progression, or side effects of treatment: A chronic illness that is acutely worsening, poorly controlled, or progressing with an intent to control progression and requiring additional supportive care or requiring attention to treatment for side effects.

Undiagnosed new problem with uncertain prognosis: A problem in the differential diagnosis that represents a condition likely to result in a high risk of morbidity without treatment.

Acute illness with systemic symptoms: An illness that causes systemic symptoms and has a high risk of morbidity without treatment. For systemic general symptoms, such as fever, body aches, or fatigue in a minor illness that may be treated to alleviate symptoms, see the definitions for **self-limited or minor problem** or **acute, uncomplicated illness or injury.** Systemic symptoms may not be general but may be single system.

Acute, complicated injury: An injury which requires treatment that includes evaluation of body systems that are not directly part of the injured organ, the injury is extensive, or the treatment options are multiple and/or associated with risk of morbidity.

Chronic illness with severe exacerbation, progression, or side effects of treatment: The severe exacerbation or progression of a chronic illness or severe side effects of treatment that have significant risk of morbidity and may require escalation in level of care.

Acute or chronic illness or injury that poses a threat to life or bodily function: An acute illness with systemic symptoms, an acute complicated injury, or a chronic illness or injury with exacerbation and/or progression or side effects of treatment, that poses a threat to life or bodily function in the near term without treatment. Some symptoms may represent a condition that is significantly probable and poses a potential threat to life or bodily function. These may be included in this category when the evaluation and treatment is consistent with this degree of potential severity.

Amount and/or Complexity of Data to be Reviewed and Analyzed

One element used in selecting the level of services is the amount and/or complexity of data to be reviewed or analyzed at an encounter.

Analyzed: Analyzed is a term describing the process of using the data as part of the MDM. The data element itself may not be subject to analysis (eg, glucose), but it is instead included in the thought processes for diagnosis, evaluation, or treatment. Tests ordered are presumed to be analyzed when the results are reported. Therefore, when they are ordered during an encounter, they are counted in that encounter. Tests that are ordered outside of an encounter may be counted in the encounter where they are analyzed. In the case of a recurring order, each new result may be counted in the encounter at which it is analyzed. For example, an encounter that includes an order for monthly prothrombin times would count for one prothrombin time ordered and reviewed. Additional future results, if analyzed in a subsequent encounter, may be counted as a single test in that subsequent encounter. Any service for which the professional component is separately reported by the physician or other qualified health care professional

reporting the E/M services is not counted as a data element ordered, reviewed, analyzed, or independently interpreted for the purposes of determining the level of MDM.

Test: Tests are imaging, laboratory, psychometric, or physiologic data. A clinical laboratory panel (eg, basic metabolic panel [80047]) is a single test. The differentiation between single or multiple tests is defined in accordance with the CPT code set. For the purposes of data reviewed and analyzed, pulse oximetry is not a test.

Unique: A unique test is defined by the CPT code set. When multiple results of the same unique test (eg, serial blood glucose values) are compared during an E/M service, only count one unique test. Tests that have overlapping elements are not unique, even if they are identified with distinct CPT codes. For example, a CBC with differential would incorporate the set of hemoglobin, CBC without differential, and platelet count. A unique source is defined as a physician or qualified heath care professional in a distinct group or different specialty or subspecialty, or a unique entity. Review of all materials from any unique source counts as one element towards MDM.

Combination of Data Elements: A combination of different data elements, for example a combination of notes reviewed, tests ordered, tests reviewed, or independent historian, allows these elements to be summed. It does not require each item type or category to be represented. A unique test ordered, plus a note reviewed and an independent historian would be a combination of three elements.

External: *External records, communications and/or test results are from an external physician, other qualified health care professional, facility, or health care organization.*

External physician or other qualified health care professional: *An external physician or other qualified health care professional who is not in the same group practice or is of a different specialty or subspecialty. This includes licensed professionals who are practicing independently. The individual may also be a facility or organizational provider such as from a hospital, nursing facility, or home health care agency.*

Discussion: Discussion requires an interactive exchange. The exchange must be direct and not through intermediaries (eg, clinical staff or trainees). Sending chart notes or written exchanges that are within progress notes does not qualify as an interactive exchange. The discussion does not need to be on the date of the encounter but is counted only once and only when it is used in the decision making of the encounter. It may be asynchronous (ie, does not need to be in person), but it must be initiated and completed within a short time period (eg, within a day or two).

Independent historian(s): An individual (eg, parent, guardian, surrogate, spouse, witness) who provides a history in addition to a history provided by the patient who is unable to provide a complete or reliable history (eg, due to developmental stage, dementia, or psychosis) or because a confirmatory history is judged to be necessary. In the case where there may be conflict or poor communication between multiple historians and more than one historian is needed, the independent historian requirement is met. It does not include translation services. The independent history does not need to be obtained in person but does need to be obtained directly from the historian providing the independent information.

Independent interpretation: The interpretation of a test for which there is a CPT code, and an interpretation or report is customary. This does not apply when the physician or other qualified health care professional who reports the E/M service is reporting or has previously reported the test. A form of interpretation should be documented but need not conform to the usual standards of a complete report for the test.

Appropriate source: *For the purpose of the* ***discussion of management*** *data element (see Table 2, Levels of Medical Decision Making), an appropriate source includes professionals who are not health care professionals but may be involved in the management of the patient (eg, lawyer, parole officer, case manager, teacher). It does not include discussion with family or informal caregivers.*

Risk of Complications and/or Morbidity or Mortality of Patient Management

One element used in selecting the level of services is the risk of complications and/or morbidity or mortality of patient management at an encounter. This is distinct from the risk of the condition itself.

Risk: The probability and/or consequences of an event. The assessment of the level of risk is affected by the nature of the event under consideration. For example, a low probability of death may be high risk, whereas a high chance of a minor, self-limited adverse effect of treatment may be low risk. Definitions of risk are based upon the usual behavior and thought processes of a physician or other qualified health care professional in the same specialty. Trained clinicians apply common language usage meanings to terms such as high, medium, low, or minimal risk and do not require quantification for these definitions (though quantification may be provided when evidence-based medicine has established probabilities). For the purposes of MDM, level of risk is based upon consequences of the problem(s) addressed at the encounter when appropriately treated. Risk also includes MDM related to the need to initiate or forego further testing, treatment, and/or hospitalization. The risk of patient management criteria applies to the patient management decisions made by the reporting physician or other qualified health care professional as part of the reported encounter.

Morbidity: *A state of illness or functional impairment that is expected to be of substantial duration during which function is limited, quality of life is impaired, or there is organ damage that may not be transient despite treatment.*

Social determinants of health: *Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.*

Surgery (minor or major, elective, emergency, procedure or patient risk):

> ***Surgery-Minor or Major:*** The classification of surgery into minor or major is based upon the common meaning of such terms when used by trained clinicians, similar to the use of the term "risk". These terms are not defined by a surgical package classification.
>
> ***Surgery-Elective or Emergency:*** Elective procedures and emergent or urgent procedures describe the timing of a procedure when the timing is related to the patient's condition. An elective procedure is typically planned in advance (eg, scheduled for weeks later), while an emergent procedure is typically performed immediately or with minimal delay to allow for patient stabilization. Both elective and emergent procedures may be minor or major procedures.
>
> ***Surgery-Risk Factors, Patient or Procedure:*** Risk factors are those that are relevant to the patient and procedure. Evidence-based risk calculators may be used, but are not required, in assessing patient and procedure risk.

Drug therapy requiring intensive monitoring for toxicity: A drug that requires intensive monitoring is a therapeutic agent that has the potential to cause serious morbidity or death. The monitoring is performed for assessment of these adverse effects and not primarily for assessment of therapeutic efficacy. The monitoring should be that which is generally accepted practice for the agent but may be patient-specific in some cases. Intensive monitoring may be long-term or short-term. Long-term intensive monitoring is not performed less than quarterly. The monitoring may be performed with a laboratory test, a physiologic test, or imaging. Monitoring by history or examination does not qualify. The monitoring affects the level of MDM in an encounter in which it is considered in the management of the patient. An example may be monitoring for cytopenia in the use of an antineoplastic agent between dose cycles. Examples of monitoring that do not qualify include monitoring glucose levels during insulin therapy, as the primary reason is the therapeutic effect (unless severe hypoglycemia is a current, significant concern); or annual electrolytes and renal function for a patient on a diuretic, as the frequency does not meet the threshold.

Guidelines for Selecting Level of Service Based on Time

Certain categories of time-based E/M codes that do not have levels of services based on MDM (eg, Critical Care Services) in the E/M section use time differently. It is important to review the instructions for each category.

Time is **not** a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time.

When time is used for reporting E/M services codes, the time defined in the service descriptors is used for selecting the appropriate level of services. The E/M services for which these guidelines apply require a face-to-face encounter with the physician or other qualified health care professional. For office or other outpatient services, if the physician's or other qualified health care professional's time is spent in the supervision of clinical staff who perform the face-to-face services of the encounter, use 99211.

For coding purposes, time for these services is the total time on the date of the encounter. It includes both the face-to-face and non-face-to-face time personally spent by the physician and/or other qualified health care professional(s) on the day of the encounter (includes time in activities that require the physician or other qualified health care professional and does not include time in activities normally performed by clinical staff). It does not include any time spent in the performance of other separately reported service(s).

A shared or split visit is defined as a visit in which a physician and other qualified health care professional(s) both provide the face-to-face and non-face-to-face work related to the visit. When time is being used to select the appropriate level of services for which time-based reporting of shared or split visits is allowed, the time personally spent by the physician and other qualified health care professional(s) assessing and managing the patient on the date of the encounter is summed to define total time. Only distinct time should be summed for shared or split visits (ie, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted).

When prolonged time occurs, the appropriate prolonged services code may be reported. The total time on the date of the encounter spent caring for the patient should be documented in the medical record when it is used as the basis for code selection.

Physician or other other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (when not separately reported) and communicating results to the patient family/caregiver
- care coordination (when not separately reported)

Do not count time spent on the following:

- the performance of other services reported separately

- travel
- teaching that is general and not limited to discussion that is required for the management of the specific patient

Unlisted Service

An E/M service may be provided that is not listed in this section of the CPT codebook. When reporting such a service, the appropriate unlisted code may be used to indicate the service, identifying it by "Special Report," as discussed in the following paragraph. The "Unlisted Services" and accompanying codes for the E/M section are as follows:

***99429 Unlisted preventive** medicine service*

***99499 Unlisted evaluation and management** service*

Special Report

An unlisted service or one that is unusual, variable, or new may require a special report demonstrating the medical appropriateness of the service. Pertinent information should include an adequate definition or description of the nature, extent, and need for the procedure and the time, effort, and equipment necessary to provide the service. Additional items that may be included are complexity of symptoms, final diagnosis, pertinent physical findings, diagnostic and therapeutic procedures, concurrent problems, and follow-up care.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99483 Tracking Number L1 Original Specialty Recommended RVU: **3.80**
Presented Recommended RVU: **3.50**
Global Period: XXX Current Work RVU: **3.80** RUC Recommended RVU: **3.50**

CPT Descriptor: Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination;
-Medical decision making of moderate or high complexity,
-Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity,
-Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]),
-Medication reconciliation and review for high-risk medications,
-Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s),
-Evaluation of safety (eg, home), including motor vehicle operation,
-Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks,
-Development, updating or revision, or review of an Advance Care Plan,
-Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support.

Typically, 60 minutes of total time is spent on the date of the encounter

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 83-year-old female with hypertension, diabetes, arthritis, and coronary artery disease presents with confusion, weight loss, and failure to maintain her house, where she lives alone.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The medical history form is reviewed, and rating scales are completed by the patient and/or family or caregiver. Any medical records obtained from other physicians and other sources (eg, caregiver) are reviewed. Other healthcare professionals are contacted, as necessary.

Description of Intra-Service Work: A complete history, including a focus on the patient's decline, is obtained from the patient, family, and/or caregiver to include identification of potential symptoms that may indicate confounding underlying disease. Vital signs are reviewed. A pertinent physical examination and assessment of affect, cognition, and functional status (basic activities of daily living and instrumental activities of daily living) are performed, including decision-making capacity, mobility, balance, vision, hearing, psychosocial function, and safety (ie, at home and/or driving). The patient is evaluated for neuropsychiatric and behavioral symptoms, including depression, mood instability, psychotic symptoms,

aggression, apathy, and other behavioral disturbance. The stage of dementia is assessed using standardized instruments. A medication reconciliation is completed, and a review for high-risk medications that may affect cognition (separate from rating scales noted in preservice) is performed. The values and preferences of the patient and caregiver for care and goals of care (eg, quality of life, advance care planning) are discussed. The caregivers' relationship to the patient, availability, knowledge, general capability (eg, any physician limitation), and ability and willingness to implement a care plan are evaluated and discussed. Relevant data, options, and risks are considered. A diagnosis is formulated, and a care plan (moderate to high-complexity medical decision making) is developed. A meeting with the clinical care team is held to review findings and develop a care plan. Based on medication reconciliation, a prescription(s) is written, and arrangements for diagnostic testing or referral are made, as necessary. The written care plan is created, and a copy is provided to the patient and/or family or caregiver. Findings and the care plan are reviewed with the patient and/or family or caregiver, to include the etiology and severity of the cognitive impairment, goals of treatment, changes in medication, and recommendations for physical and/or occupational therapy. Safety issues are addressed, caregiving issues are discussed, and recommendations for appropriate community services (eg, rehabilitation services, adult day programs, support groups) are made.

Description of Post-Service Work: Medical record documentation is completed. Other physicians are contacted as necessary to review findings and the care plan. If requested by clinical staff, the patient and/or caregiver are contacted to discuss test results, adverse reactions to medication, and new clinical issues. The care plan is revised, if needed, based on test results.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2021					
Presenter(s):	Kevin Kerber, MD; Katherine, Coerver, MD, PhD; Joshua Liao, MD; Tanvir Hussain, MD, MBA, MHS, MSc, FACP; Audrey Chun, MD; Michael Peskin, MD					
Specialty Society(ies):	American Academy of Neurology, American College of Physicians, American Geriatrics Society

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90792	XXX	4.16	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation with medical services.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90962	XXX	3.57	**RUC Time**	213,048

CPT Descriptor 1 End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
49405	000	4.00	**RUC Time**	5,880

CPT Descriptor 2 Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous.

Other Reference CPT Code	Global	Work RVU	Time Source
95720	XXX	3.86	**RUC Time**

CPT Descriptor Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; with video (VEEG).

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 45 **% of respondents:** 60.8 **%**

Number of respondents who choose 2nd Key Reference Code: 12 **% of respondents:** 16.2 **%**

TIME ESTIMATES (Median)

	CPT Code: 99483	Top Key Reference CPT Code: 99205	2nd Key Reference CPT Code: 90792

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	16%	57%	24%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	40%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	38%	55%
Physical effort required	11%	69%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	49%	44%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	42%	41%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	42%	58%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	33%	59%
Physical effort required	0%	25%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT code 99483 was surveyed as the code description was revised by the CPT Editorial Panel to replace "50" from its descriptor with "XX minutes (to be determined via RUC survey) of total time on the date of the encounter is spent on the date of the encounter" to align with the principles included in the office or other outpatient E/M services (99202-99215).

The code was surveyed by the American Academy of Neurology (AAN), the American Geriatrics Society (AGS), and the American College of Physicians (ACP). The survey results were reviewed by an expert panel comprised of the surveying specialties which formulated its recommendations based on that review.

There were 74 respondents, of whom 93% found the vignette to be typical. The survey median RVU was 4.00 with a pre-time of 11 minutes, intra-time of 60 minutes, and post-time of 15 minutes and total time of 86 minutes. The 25th percentile work RVU was 3.5. The first key reference service (chosen by 45 respondents) was 99205, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter, with times and work RVU of 14/59/15/88/3.5. The second key reference service was 90792, Psychiatric diagnostic evaluation with medical services, with times and work RVU of 10/60/20/90/4.16.

As a threshold matter, the expert panel agreed that the QHP work for 99483 is still greater than the work of 99205 and agreed with CMS that the increase in work for 99205 (from 3.17 to 3.5) required an increase in work to maintain appropriate rank order. Then the expert panel reviewed the survey data and noted that while the total time went up by one minute, the intra-service time increased by 10 minutes (20%) which supports maintaining the current work RVU of 3.8. The expert panel also noted that while the survey times were very similar to the times for 99205, the current work RVU of 3.8, which is between the 25th percentile and the median, places 99483 in proper rank order with 99205. The panel also noted that 90792 has the same intra-service time as the survey median and four minutes more total time with a work RVU of 4.16 which places it in the correct rank order with 99483 at a work RVU of 3.8.

The expert panel reviewed other RUC reviewed XXX global codes with intra-time between 40 and 75 minutes, total time between 75 and 100 minutes, and work RVU between 3.4 and 4.1. Sixteen codes fit these parameters. Several were codes that are currently undergoing RUC review. The expert panel noted that the other codes supported maintaining the current work RVU. Specifically, 99496, Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge, was RUC reviewed in 2018, and has times and work RVU of 0/75/0/75/3.79 and 95720, Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; with video (VEEG), which was RUC reviewed in 2018, has times and work RVU of 10/55/10/75/3.86.

Therefore, the expert panel recommends the survey times: pre-service time of 11 minutes, intra-service time of 60 minutes, and post-service time of 15 minutes and to maintain the current work RVU of 3.8.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99483

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 136935
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 3 times the annual Medicare utilization; based on 2019 utilization data.

Specialty Neurolgoy Frequency 41081 Percentage 30.00 %

Specialty Internal Medicine Frequency 28757 Percentage 21.00 %

Specialty Nurse Practitioner Frequency 23279 Percentage 17.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 45,645
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare utilization from the RUC database.

Specialty Neurology Frequency 13694 Percentage 30.00 %

Specialty Internal Medicine Frequency 9586 Percentage 21.00 %

Specialty Nurse Practitioner Frequency 7760 Percentage 17.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99483

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 99483**

SPECIALTY SOCIETY(IES): AAN, ACP, AGS

PRESENTER(S): Kevin Kerber, MD; Katherine, Coerver, MD, PhD; Joshua Liao, MD; Tanvir Hussain, MD, MBA, MHS, MSc, FACP; Audrey Chun, MD; Michael Peskin, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April, 2021
Revised 4-21-21

CPT Code	Long Descriptor	Global Period
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: • Cognition-focused evaluation including a pertinent history and examination, • Medical decision making of moderate or high complexity, • Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity, • Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]), • Medication reconciliation and review for high-risk medications, • Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s), • Evaluation of safety (eg, home), including motor vehicle operation, • Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks, • Development, updating or revision, or review of an Advance Care Plan, • Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support.	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99483	The medical history form is reviewed, and rating scales are completed by the patient and/or family or caregiver. Any medical records obtained from other physicians and other sources (eg, caregiver) are reviewed. Other healthcare professionals are contacted, as necessary

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The practice expense survey tool was approved by the AMA Research Subcommittee. 58 respondents completed Survey Part 2 "Direct practice expense detail" of the 98943 RUC survey.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Advisors and subject matter experts from AAN, ACP and AGS met by phone and via email to review the survey data and existing PE inputs to develop final recommendations presented in the PE spreadsheet. The expert panel agreed that the service has not significantly changed since last surveyed in 2018 and as such agreed it is appropriate to maintain the existing PE inputs.
3 clinical activities that were part of the PE Survey have been added:

- CA049 (identify need for imaging, lab or other test result(s) and ensure information has been obtained – day of
- CA050 (review and document history, systems, and medications
- CA052 (coordinate home or outpatient care)

70% of PE survey respondents listed 0 minutes of clinical staff time as typical for the intra-service (of the service period.) The expert panel did not agree with the survey median time of 0 as there are numerous activities performed by clinical staff as explained in detail in Question #10. As such, the expert panel agreed some PE survey respondents may have interpreted the question asking about "*other clinical activity on the calendar day of the cognitive assessment and care plan services visit"* to mean duties outside of 99483, and 0 minutes is not typical.

In response to questions from the pre-facilitation PE Reviewers, the specialty societies further clarified with survey participants if clinical staff are present with the physician or QHP when performing their duties and the feedback was no. The expert panel asserts CA021 is the appropriate clinical staff activity for the intra service period and are recommending 45 minutes (as outlined in question #10).

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

99205 was selected as the reference code for practice expense as it was the key reference service chosen by respondents on the RUC survey.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?
(Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

No

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different than for the global?
(Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

Neurology – 32%.
Neurology is dominant provide for global as well.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

CA006-confirm availability of prior images / studies.
Standard time is 2 minutes for use in imaging services. The current RUC approved input is 6 minutes and includes gathering medical records obtained from other sources (including history, x-rays and labs if applicable) and referral (where applicable) and prepare for physician review prior to visit. It is typical that a patient being seen for this service will have previous CT and/or MRI scan(s) given the extent of their cognitive impairment.
Also gathering any pre-existing advance care directives and surrogate decision maker forms.

During the RUC PE Subcommittee meeting there was a suggestion to move the 6 minutes to CA048 (Identify need for imaging, lab or other test result(s) and ensure information has been obtained - three days prior (to be used with E/M only)) as CA006 is for imaging services only. The specialty societies agreed CA048 more accurately describes the activities.

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A – code was established in 2018. The current RUC approved input for CA010 for 99483 is 3 minutes. Vitals obtained when performing the service include weight, blood pressure, heart rate and respiratory rate.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

- Conduct initial phone call for preliminary assessment of cognitive function to determine if cognitive assessment is appropriate, identify caregivers, who should be present at the visit to provide additional information and with whom the care plan should be shared, and explain what the assessment entails, schedule the visit (and convince patient to come, if necessary).
- Gather medical records obtained from other sources (including history, x-rays and labs if applicable) and referral (where applicable) and prepare for physician review prior to visit.
- Gather any pre-existing advance care directives, surrogate decision maker forms.

   b. Service period (includes pre, intra and post):

Pre-Service Clinical Labor Activities (of Service Period):

- Greet patient (and caregiver, if applicable) and direct to exam room.
- Administer and collate forms for assessing mood, cognitive status, nutrition, functional status for the provider to use.
- Obtain vital signs.

Intra-Service Clinical Labor Activities (of Service Period):

- Gather additional history from caregiver when patient is being examined in a different room including assessing nutritional status, additional caregiver history, ability to participate in activities of daily living, ability to participate in social activities (e.g. adult day memory care center.)
- Administer initial dementia staging screen with standardized instrument prior to physician review.
- Initial medication reconciliation and preparation for physician review
- Administer screen for behavioral symptoms including depression (e.g., PHQ9) for physician review.
- Conduct initial safety screen (e.g., home) including motor vehicle operation.
- Meet with physician and clinical care team to develop written care plan. Compile written care plan inputs from provider include advance care documents. (conveyed in results / outcomes of activities above)
- Meet with family to share and discuss care plan and to educate patient and caregiver on care plan including use of community resources.

Post-Service Clinical Labor Activities (of Service Period):

- Clean room and any utilized equipment

c. Post-service period:

- Follow up phone calls between visits with patient, family, community resources, pharmacy.
- Coordinate future care including home or outpatient care.

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Intra-Service Clinical Labor Activities (of Service Period):

- Gather additional history from caregiver when patient is being examined in a different room including assessing nutritional status, additional caregiver history, ability to participate in activities of daily living, ability to participate in social activities (e.g., adult day memory care center.) (10 min)
- Administer initial dementia staging screen with standardized instrument prior to physician review (5 min)
- Initial medication reconciliation and preparation for physician review (10 min)
- Administer screen for behavioral symptoms including depression (e.g., PHQ9) for physician review (10 min)
- Conduct initial safety screen (e.g., home) including motor vehicle operation (5 mins)

- Meet with physician and clinical care team to develop written care plan. Compile written care plan inputs from provider include advance care documents. (conveyed in results / outcomes of activities above)
- Meet with family to share and discuss care plan and to educate patient and caregiver on care plan including use of community resources. (5 min)
- Coordinate future care including home or outpatient care.
- **Total 45 minutes**

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Are you recommending a PE supply pack for this recommendation? **Yes** or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes – SA047

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

SA047
(*% indicates percentage of survey responses that found supply typical*)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Cover thermometer probe (1 item) – 71% Drape, non-sterile, 40in x 60 in (1 item) – 21% Gloves, non-sterile (2 pair) – 78% Gown, patient (1 item) – 28% Paper, exam table (7 foot) - 86% Patient education booklet (1 item) – 69% Pillowcase (1 item) - 64% Specula tips, otoscope (1 item) – 53% Swab-pad, alcohol (2 item) – 45% Tongue depressor (1 item) – 48%

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:

N/A

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EQ189 otoscope-ophthalmoscope (wall unit): "office visits" equipment formula EF023 table, exam: "office visits" equipment formula EF048 portable stand-on scale: "other" equipment formula

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

23. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
New Technology/New Services

April 2021

Insertion of Spinal Stability Distractive Device – Tab 17

In July 2020, the Relativity Assessment Workgroup reviewed an action plan for 22867 and 22868 and recommended to remove them from new technology list because there was no demonstrated technology diffusion that impacts work or practice expense. The primary performers of these services did not comment on 22869/22870, as those services are typically performed by other providers. The Workgroup requested an action plan from the primary performers of code 22869 and 22870 (interventional pain management, pain management, anesthesiology and physical medicine and rehabilitation) for review. In December 2020, the Relativity Assessment Workgroup noted that these services are now performed predominantly by a specialty(s) other than the specialty(s) that initially surveyed making the review for new technology difficult to assess. The RUC recommended that CPT codes 22869 and 22870 be surveyed for the April 2021 RUC meeting.

22869 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level***
The RUC reviewed the survey results from 75 physicians and determined that a value between the survey 25th percentile of 6.75 and survey median of 8.00 would most accurately reflect the typical physician work necessary to perform this service. Therefore, the RUC recommends maintaining the current work value for this service of 7.03. The RUC recommends 33 minutes of pre-service evaluation, 12 minutes of pre-service positioning, 10 minutes of pre-service scrub/dress/wait time, 45 minutes of intra-service time, 17 minutes of immediate post-service time, a ½ 99238 discharge visit, 1-99213 and 1-99212 post-operative office visits. The specialties noted that the current work for the procedure, as well as the typical patient, has not changed since the previous survey in 2016, only the dominant specialty has changed from surgeon to anesthesiologist and pain physician.

To justify a value of 7.03, the RUC compared 22869 to CPT code 22511 *Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral* (work RVU= 7.33, intra-service time of 45 minutes, total time of 150 minutes) and noted that both services have identical intra-service times, though the survey code involves more total time. The RUC also compared the survey code to 2nd key reference code 29880 *Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU= 7.39, intra-service time of 45 minutes, total time of 199 minutes) and noted that both services are typically outpatient, involve an identical amount of intra-service time and a similar overall amount of physician work. The RUC concluded that the value of CPT code 22869 should be maintained at 7.03 work RVUs, between the 25th percentile and median of the survey. **The RUC recommends a work RVU of 7.03 for CPT code 22869.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

22870 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 75 physicians and concurred that maintaining the current work value of 2.34 appropriately accounts for the work required to perform this service and is substantially below the survey 25th percentile. The RUC noted that the survey 25th percentile work value of 3.63 supports this recommendation. The RUC recommends 45 minutes of intra-service time for this add-on code.

The RUC compared the survey code to CPT code 15772 *Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50 cc injectate, or part thereof (List separately in addition to code for primary procedure)* (work RVU= 2.50, intra-service and total time of 45 minutes) and noted that both add-on services involve the same amount of time to perform. The RUC also compared the survey code to CPT code 13153 *Repair, complex, eyelids, nose, ears and/or lips; each additional 5 cm or less (List separately in addition to code for primary procedure)* (work RVU= 2.38, intra-service and total time of 45 minutes), which also requires the same amount of physician time to further support a value of 2.34 for the survey code. The RUC concluded that the current value of CPT code 22870, which falls below the 25th percentile of the survey, should be maintained. **The RUC recommends a work RVU of 2.34 for CPT code 22870.**

Practice Expense
The RUC recommends the direct practice expense inputs as submitted by the specialty society.

RUC Database Flag
The RUC noted that CPT code 22870 should be flagged as "Do not use to validate for physician work."

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	090	7.03 (No change)
22870	second level (List separately in addition to code for primary procedure)	ZZZ	2.34 (No change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:22869 Tracking Number Original Specialty Recommended RVU: **7.03**
Presented Recommended RVU: **7.03**
Global Period: 090 Current Work RVU: **7.03** RUC Recommended RVU: **7.03**

CPT Descriptor: Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A skeletally mature adult with progressive low-back pain and leg pain due to a history of neurogenic claudication is unresponsive to conservative treatments. The patient achieves some relief from symptoms in flexion. Imaging confirms mild to moderate spinal stenosis at the L4-L5 level, with approximately 50% reduction in spinal canal area. The implantation of a posterior interspinous process distraction device at one level without an open decompression or a fusion is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 32% , In the ASC 67%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 92% , Overnight stay-less than 24 hours 8% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Perform a targeted H&P. Write orders for preoperative medications and performance standards. Review the surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) with the patient and family. Sign and mark the operative site. Obtain informed consent. Verify that all necessary surgical instruments, supplies, and devices are available in the operative suite Review imaging, and select and display appropriate pictures. Review the length and type of anesthesia with the anesthesiologist. Monitor initial patient positioning for induction of anesthesia. Following induction of anesthesia, assist with repositioning of patient prone with the lumbar spine in flexion. Verify and/or assist with padding of patient to prevent pressure on neurovascular structures and placement of chin straps and arm traction devices to facilitate intraoperative imaging. Supervise prepping/draping of the patient. Scrub and gown. Perform a time out to confirm patient and procedure with the OR staff.

Description of Intra-Service Work: Intraoperative imaging is used to identify the correct level and plan the surgical incision. A posterior lumbar incision is made through the skin, subcutaneous tissue, and lumbosacral fascia. A dilator is inserted through the incision and advanced between the spinous processes and into the interspinous process space under fluoroscopic guidance to confirm levels, position and depth. Additional larger dilators are inserted until the space is distracted to the correct degree. A gauge is used to determine the distance between the two spinous processes, and determine the appropriate implant size. The implant is selected and size verified. The implant is inserted and fixed into place. Final imaging (AP and lateral fluoroscopy) is obtained to confirm proper implant position. Copious irrigation is used and the wound is closed in layers.

Description of Post-Service Work: Hospital: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and outcome with family in

waiting area. Write brief operative note or complete final operative note in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with floor nurses.

Later same day and on each day patient is in the facility, monitor and document patient progress. Assess pain scores and adequacy of analgesia. Review nursing/other staff patient chart notes. Write orders for labs, imaging, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Next day or several days later. Write orders for follow-up, post-discharge labs, imaging, home care, and physical therapy. Write prescriptions for medications needed post-discharge. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

In Office: Write orders for medications and follow-up films. Review post-discharge films. Examine patient, performing periodic neurological exams. Monitor wounds and remove sutures. Review use and proper fit of brace with patient. Review physical therapy progress and revise orders as needed. Dictate patient progress notes for the medical chart. Answer questions (oral and written) from patient, family and insurance staff. Discuss patient progress with referring physician.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	19%	44%	26%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	56%	37%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	22%	52%	26%
Physical effort required	7%	56%	37%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	48%	19%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	36%	36%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	36%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	57%	36%
Physical effort required	0%	58%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	29%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In June 2020, the RUC's Relativity Assessment Workgroup (RAW) flagged four CPT codes (22867, 22868, 22869 and 22870) for review under the New Technology Screen. The four codes were originally surveyed in 2015 for inclusion in the 2016 CPT and the Medicare Physician Fee Schedule (PFS). In 2015, the RUC recommended 7.39 work RVUs for 22869 and 2.34 wRVUs for 22870. Subsequently, in the 2016 Medicare PFS CMS finalized a reduced value of 7.03 work RVUs for 22869 but accepted the RUC recommendation of 2.34 work RVUs for 22870.

The initial RAW Action Plan for the four codes was developed by the specialty societies that surveyed the codes in 2015: the American Academy of Neurological Surgeons/Congress of Neurological Surgeons (AANS/CNS), the American Academy of Orthopaedic Surgeons (AAOS), the North American Spine Society (NASS) and the International Society for the Advancement of Spine Surgery (ISASS). In their action plan the original surveying societies noted that codes 22869 *(Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level*) and 22870 *(Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure))* were performed predominately by interventional pain physicians and anesthesiologists; and therefore recommended these societies review the codes and present an action plan for the next RAW meeting.

For the RAW's December 2020 meeting, anesthesiology and the interventional pain societies (American Society of Anesthesiologists-ASA, American Academy of Physical Medicine and Rehabilitation –(AAPM&R), North American Spine Society (NASS), and the American Society of Interventional Pain Physicians (ASIPP)) presented an action plan recommending no action and maintaining current value. The RUC disagreed and requested the societies resurvey the codes.

The societies, along with the North American Neuromodulation Society (NANS) proceeded with a survey of the two codes. In preparing the survey, the societies submitted a request to the RUC Research Subcommittee (RSC) to use a list from the vendor of physicians trained to perform the service as well as random samples of members from the surveying societies. The RSC approved the request at their February 2021 meeting. The surveying societies noted that their members do not report other 90-day global codes so would have a difficult time using one as an accurate reference code. The societies requested approval to include 10-day global codes in the RSL. The RSC did not approve this request and advised the specialties to use 90-day global codes that their members may be familiar with from training. The societies followed this guidance and the RSL that was used did not include any 010 global codes per the RSC guidance.

The societies conducted their survey in March 2021, using the approved vendor contact list and blending this with random samples from respective societies.

There were a total of 75 non-conflicted responses, of which 56 were from the vendor list and 19 were from society lists. The median experience in the previous 12 months for all respondents was 10 for 22869 and 5 for 22870. For the trained physicians who responded the median experience in the previous 12 months was 10 for 22869 and 2 for 22870.

Recommendation – 22869

Work RVU

The Survey median work RVU was 8.00 and the survey 25th % was 6.75.

We recommend maintaining the current work RVU of 7.03 which sits in-between the survey 25th% and the median.

Pre-Service Time

The societies recommend package 3 for pre-service package time which was also the recommended package in the original survey.

We recommend 33 minutes of pre-service evaluation time with no change from package 3.

We recommend 12 minutes of pre-service positioning time, which is the survey median. As this is a spine procedure/prone position 9 minutes are recommended in addition to the 3 minutes package time. Current positioning time is 15 minutes.

We recommend 10 minutes of pre-service Scrub, Dress and Wait (SDW) time, which is 5 minutes less than the SDW time for package 3 and 5 minutes less than the current SDW time. 10 minutes was the median time from the survey.

Intra-Service Time

The societies recommend 45 minutes intra-service time, which is the survey median. This is nearly identical to the current/previous intra-service time of 43 minutes.

Immediate Post-Service Time

The societies recommend Immediate Post-Service package 9a but recommend subtracting 12 minutes to equal the 17 minutes median survey time. This is less than the current post-service time of 30 minutes, but the previous survey median immediate post-service time was 20 minutes. An additional 10 minutes of immediate post-service time was added by recommendation to reflect the previous survey respondents indicating the primary site-of-service as outpatient with a follow-up E/M visit on the same day as the procedure. The RUC database billed together data indicates that no other services (other than the add-on code 22870) are billed on the same day.

Post-Service Visits and Site-of-Service

Survey respondents indicated the primary site-of-service as ASC, with 67% indicating they typically perform the procedure in this facility setting. 32% indicated they typically perform the procedure in a hospital setting and 1% indicated office as their typical site of service.

Societies recommend a half-day discharge for the facility ASC setting with no additional time for a visit on the same day of service.

Survey respondents indicated a median of 3 level 3 post-operative office visits. The societies, however, recommend maintaining the current post-operative office visits at 1-99213 and 1-99212 to maintain consistency with the current values and times.

Key Reference Code Comparison

KRS1: The most typical KRS was CPT code 63655*(Laminectomy for implantation of neurostimulator electrodes, plate/paddle, epidural*) with respondents who chose 63655 as a reference indicated the intensity/complexity of 63655 as less or much less than 22867.

KRS2: The second most common KRS was CPT code 29880 (*Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed*). 29880 has the same intra-service time as 22867 at 45 minutes and a very similar work RVU at 7.39. 29880 was also the code the RUC used to crosswalk 22867 to in the 2015 RUC review and is equal to the 2015 RUC recommended value. Survey respondents indicated its intensity and complexity to be less than the survey code of 22867.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	7.03	0.076	178	63	45	17 immed 0.5-99238 1-99213 1-99212
29880	Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed.	7.39	0.065	199	58	45	15-immed 0.5-99238 2-99213 1-99212
63655	Laminectomy for implantation of neurostimulator electrodes, plate/paddle, epidural	10.92	0.069	254	63	90	20-immed 0.5-99238 2-99213 1-99212

MPC Codes

22869's current value and our recommended work RVU of 7.03 is well bracketed by MPC codes with the same intra-service time and similar intensities and total times. The two MPC codes are CPT 15823 with a work RVU of 6.82 and CPT 26115 with a work RVU of 7.07.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
15823	Blepharoplasty, upper eyelid; with excessive skin weighting down lid	6.82	0.072	161	17	45	10-immed 0.5-99238 1-99213 3-99212
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	7.03	0.076	178	63	45	17 immed 0.5-99238 1-99213 1-99212
67904	Repair of blepharoptosis; (tarso) levator resection or advancement, external approach	7.97	0.089	185	35	45	15-immed 0.5-99238 1-99213 3-99212

Other Code Comparison

CPT code 29881 (*Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed*) represents the CMS crosswalk code for 22867 and the societies believe is currently a good crosswalk to support the current 7.03 work RVU. The two codes have identical intra-service time, similar pre-service times, and 22867 is appropriately slightly higher in intensity.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
29881	Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed	7.03	0.064	194	58	40	15-immed 0.5-99238 2-99213 1-99212
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	7.03	0.076	178	63	45	17 immed 0.5-99238 1-99213 1-99212

Summary

The societies recommend for CPT code 22869 (*Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level*) the following:

Work RVU: 7.03 (current value)

Pre-Service Package: 3

Evaluation: 33 minutes

Positioning: 12 minutes (spine/prone)

SDW: 10 minutes

Intra-Service Time: 45 minutes

Immediate Post Service Package: 9A -13 minutes to equal 17 minutes (survey median SDW time)

Hospital Discharge: 0.5 - 99238

Office Visits: 1-99213, 1-99212

Total Time: 178 minutes

The societies believe the survey data supports the current value and shows that the work performed by anesthesiology and interventional pain physicians to be identical to the previous work survey performed by spine surgeons in 2015 and

recommend current value with time inputs either remaining the same as current or adjusted to median survey results when appropriate.

The current work for the procedure, as well as the typical patient, has not changed since the previous survey, only the dominant specialty has changed from surgeon to anesthesiologist and pain physician. It is also not surprising for there to be shifts in the type of physician performing a procedure that is relatively new such as 22869 and 22870 while the patient and work remains the same. Furthermore, there would be no reason to expect the pre-service or post-service physician work to change substantially based on the type of physician performing the service. The survey data, showing the same or slightly more time in the pre, intra, and post-service periods, confirms this relative consistency even as the type of physician performing the procedure has changed.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 22869

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Pain Management How often? Rarely

Specialty Pain Management How often? Rarely

Specialty Anesthesiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 20385
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Interventional Pain Management Frequency 6279 Percentage 30.80 %

Specialty Pain Management Frequency 5688 Percentage 27.90 %

Specialty Anesthesiology Frequency 4933 Percentage 24.19 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,795
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Interventional Pain Management Frequency 2093 Percentage 30.80 %

Specialty Pain Management Frequency 1896 Percentage 27.90 %

Specialty Anesthesiology Frequency 1644 Percentage 24.19 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 22869

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION

CPT Code:22870 Tracking Number Original Specialty Recommended RVU: **2.34**
Presented Recommended RVU: **2.34**
Global Period: ZZZ Current Work RVU: **2.34** RUC Recommended RVU: **2.34**

CPT Descriptor: Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A skeletally mature adult with progressive low-back pain and leg pain due to a history of neurogenic claudication is unresponsive to conservative treatments. The patient achieves some relief from symptoms while in flexion. Imaging confirms mild to moderate spinal stenosis at the L3-L4 level with 25% reduction in the canal area and at L4-L5 with a 50% reduction. The implantation of a posterior interspinous process distraction device without an open decompression or a fusion at both levels is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: After insertion of the initial lumbar interlaminar/interspinous process stabilization/distraction device with decompression (reported separately), the incision is extended to expose the adjacent level. A dilator is inserted through the incision and advanced between the spinous processes and into the interspinous process space under fluoroscopic guidance to confirm position and depth. Additional larger dilators are inserted until the space is distracted to the correct degree. A gauge is used to determine the distance between the two spinous processes, and determine the appropriate implant size. The implant is selected and size verified. The implant is inserted and fixed into place. Final imaging (AP and lateral fluoroscopy) is obtained to confirm proper implant position. Copious irrigation is used and the wound is closed in layers.

Description of Post-Service Work: N/A

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
22515	ZZZ	4.00	**RUC Time**

CPT Descriptor Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (eg, kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; each additional thoracic or lumbar vertebral body (List separately in addition to code for primary procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
63048	ZZZ	3.47	**RUC Time**

CPT Descriptor Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36476	ZZZ	2.65	**RUC Time**	7,170

CPT Descriptor 1 Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
		0.00		

CPT Descriptor 2

Other Reference CPT Code	Global	Work RVU	Time Source
15772	ZZZ	2.50	**RUC Time**

CPT Descriptor Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50 cc injectate, or part thereof (List separately in addition to code for primary procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 35 **% of respondents:** 46.6 **%**

Number of respondents who choose 2nd Key Reference Code: 13 **% of respondents:** 17.3 **%**

TIME ESTIMATES (Median)

	CPT Code: 22870	**Top Key Reference CPT Code:** 22515	**2nd Key Reference CPT Code:** **63048**
Median Pre-Service Time	0.00	1.00	0.00

Median Total Time	**45.00**	**32.00**	**45.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	14%	35%	37%	14%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	26%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	59%	32%
Physical effort required	6%	54%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	49%	34%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	54%	23%	15%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	46%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	31%	38%	32%
Physical effort required	8%	25%	67%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	39%	46%	15%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In June 2020, the RUC's Relativity Assessment Workgroup (RAW) flagged four CPT codes (22867, 22868, 22869 and 22870) for review under the New Technology Screen. The four codes were originally surveyed in 2015 for inclusion in the 2016 CPT and the Medicare Physician Fee Schedule (PFS). In 2015, the RUC recommended 7.39 work RVUs for 22869 and 2.34 wRVUs for 22870. Subsequently, in the 2016 Medicare PFS CMS finalized a reduced value of 7.03 work RVUs for 22869 but accepted the RUC recommendation of 2.34 work RVUs for 22870.

The initial RAW Action Plan for the four codes was developed by the specialty societies that surveyed the codes in 2015: the American Academy of Neurological Surgeons/Congress of Neurological Surgeons (AANS/CNS), the American Academy of Orthopaedic Surgeons (AAOS), the North American Spine Society (NASS) and the International Society for the Advancement of Spine Surgery (ISASS). In their action plan the original surveying societies noted that codes 22869 *(Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level*) and 22870 *(Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure))* were performed predominately by interventional pain physicians and anesthesiologists; and therefore recommended these societies review the codes and present an action plan for the next RAW meeting.

For the RAW's December 2020 meeting, anesthesiology and the interventional pain societies (American Society of Anesthesiologists-ASA, American Academy of Physical Medicine and Rehabilitation –(AAPM&R), North American Spine Society (NASS), and the American Society of Interventional Pain Physicians (ASIPP)) presented an action plan recommending no action and maintaining current value. The RUC disagreed and requested the societies resurvey the codes.

The societies, along with the North American Neuromodulation Society (NANS) proceeded with a survey of the two codes. In preparing the survey, the societies submitted a request to the RUC Research Subcommittee (RSC) to use a list from the vendor of physicians trained to perform the service as well as random samples of members from the surveying societies. The RSC approved the request at their February 2021 meeting. The surveying societies noted that their members do not report other 90-day global codes so would have a difficult time using one as an accurate reference code. The societies requested approval to include 10-day global codes in the RSL. The RSC did not approve this request and advised the specialties to use 90-day global codes that their members may be familiar with from training. The societies followed this guidance and the RSL that was used did not include any 010 global codes per the RSC guidance.

The societies conducted their survey in March 2021, using the approved vendor contact list and blending this with random samples from respective societies.

There were a total of 75 non-conflicted responses, of which 56 were from the vendor list and 19 were from society lists. The median experience in the previous 12 months for all respondents was 10 for 22869 and 5 for 22870. For the trained physicians who responded the median experience in the previous 12 months was 10 for 22869 and 2 for 22870.

Recommendation – 22870

Work RVU

The survey median work RVU was 5.00 and the survey 25th% work RVU was 3.63.

We recommend maintaining the current work RVU of 2.34 which is substantially below the 25th% survey work RVU.

Pre-Service Time

N/A, 22870 is a ZZZ code

Intra-Service Time

The societies recommend 45 minutes intra-service time, which is the survey median. This is an increase from the previous survey median and current time of 30 minutes

Immediate Post-Service Time

N/A, 22870 is a ZZZ code

Post-Service Visits and Site-of-Service

N/A, 22870 is a ZZZ code

Key Reference Code Comparison

KRS1: The most typical KRS was CPT code 22515 (*Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (eg, kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; each additional thoracic or lumbar vertebral body (List separately in addition to code for primary procedure)*).

KRS2: The second most common KRS was CPT code 63048 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)).*

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
22870	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)	2.34	0.052	45		45	
63048	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure).	3.48	0.077	45		45	
22515	Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (eg, kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; each additional thoracic or lumbar vertebral body (List separately in addition to code for primary procedure)	4.00	0.132	32	1	30	1

MPC Codes

There is a dearth of ZZZ codes on the MPC list and only one code with the same intra-service time and under 4.00 which is 63048, one of the survey key reference codes.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
22870	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance	2.34	0.052	45		45	

	when performed, lumbar; second level (List separately in addition to code for primary procedure)						
36476	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)	2.65	0.883	30		30	
63048	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure).	3.48	0.077	45		45	

Other Code Comparison

CPT code 15772 (*Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50 cc injectate, or part thereof (List separately in addition to code for primary procedure*)) is one of several ZZZ codes that has the same or lower time but a similar or higher work RVU and support the recommended value of 2.34.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
15772	Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50 cc injectate, or part thereof (List separately in addition to code for primary procedure)	2.50	.055	45		45	
22870	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)	2.34	0.052	45		45	

Summary

The societies recommend for CPT code 22870 (*nsertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)*) the following:

Work RVU: 2.34 (current value)

Intra-Service Time: 45 minutes

Total Time: 45 minutes

The societies believe the survey data supports the current value and shows that the work performed by anesthesiology and interventional pain physicians to be identical to the previous work survey performed by spine surgeons in 2015 and recommend current value with time inputs adjusted to median survey intra-service time of 45 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Report with code 22869.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 22870

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Pain Management How often? Rarely

Specialty Pain Management How often? Rarely

Specialty Anesthesiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 8652
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Interventional Pain Management Frequency 2890 Percentage 33.40 %

Specialty Pain Management Frequency 2509 Percentage 28.99 %

Specialty Anesthesiology Frequency 2007 Percentage 23.19 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,884
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Interventional Pain Management Frequency 963 Percentage 33.39 %

Specialty Pain Management Frequency 836 Percentage 28.98 %

Specialty Anesthesiology Frequency 669 Percentage 23.19 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 22870

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

ISSUE: Insertion of Spinal Stability Distractive Device

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 21, 2021

CPT Code	Long Descriptor	Global Period
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	090
22870	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
22869	A skeletally mature adult with progressive low-back pain and leg pain due to a history of neurogenic claudication is unresponsive to conservative treatments. The patient achieves some relief from symptoms in flexion. Imaging confirms mild to moderate spinal stenosis at the L4-L5 level, with approximately 50% reduction in spinal canal area. The implantation of a posterior interspinous process distraction device at one level without an open decompression or a fusion is recommended.
22870	A skeletally mature adult with progressive low-back pain and leg pain due to a history of neurogenic claudication is unresponsive to conservative treatments. The patient achieves some relief from symptoms while in flexion. Imaging confirms mild to moderate spinal stenosis at the L3-L4 with 25% reduction in the canal area and at L4-L5 with a 50% reduction. The implantation of a posterior interspinous process distraction device at one level without an open decompression or a fusion is recommended.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened an expert panel of advisors from the presenting specialties via telephone to discuss recommendations for practice expense for codes 22869 and 22870. The panel reviewed existing inputs for these codes and considered any necessary modifications.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The expert panel used the existing inputs for codes 22869 and 22870 as reference for the new recommendations.

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

For code 22869

Complete pre-service diagnostic and referral forms	**5 minutes (standard)** Staff reviews all forms with patient and/or caregiver to ensure all relevant history and diagnostic information is included
Coordinate pre-surgery services (including test results)	**20 minutes (standard)** Staff coordinates collection and documentation of test results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Staff coordinate requisite pre-surgery appointments and visits. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	**8 minutes (standard)** Staff interacts with facility to schedule space, supplies, equipment, and review checklists
Provide pre-service education/obtain consent	**20 minutes (standard)** Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions. Staff conduct a pre-clearance assessment and final clearance for surgery
Complete pre-procedure phone calls and prescription	**7 minutes (standard)** Staff reviews preoperative medication changes, reviews patient medical status, confirms preoperative cleansing protocol, and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

6 minutes (standard)
Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as:

- Responding to patient/family questions about home activity restrictions/WB status, therapy questions
- Telephonic or electronic communication assistance with the office, and other necessary management assistance related to the hospitalization.

- Transitioning discharge information to the office medical record, including correspondence and imaging or lab results pending at discharge

c. Post-service period:

63 minutes – standard clinical staff time for current office visit E/Ms (one 99213, one 99212) Clinical staff will greet the patient, provide gowning, and ensure that all appropriate medical records are available including interval imaging and labs, physical therapy reports, and chart notes from other physicians. Clinical staff will obtain vital signs, prepare the room and necessary supplies, assist with patient positioning for exam, review and document history, systems and medications. Clinical staff will assist the physician during the exam which may include wound and drain (if present) assessment, neurovascular assessment, and ROM assessment. Clinical staff will clean the room and answer any patient/family questions about home care including activity limitations and reinforcement of physical therapy activities. Clinical staff will assist the physician with orders for medication and physical therapy changes. Clinical staff will assist with answering patient, family, caregiver, therapist, other clinician questions and help process changes in care.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

13. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, two supply packs are used.
The supply packs are established packs as defined by CMS.

14. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if

available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**2.1122**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (staple)	**SA052**	**pack**		**4.992**
kit, staple removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

15. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:

N/A

16. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

17. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Time is equal to office visit total time based on current database time.

18. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

N/A

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

19. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service Anomaly*

April 2021

Knee Arthroplasty – Tab 18

In October 2020, the Relativity Assessment Workgroup identified CPT code 27446 with Medicare data from 2017-2019e that was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management (E/M) services within the global period and 2019e Medicare utilization over 10,000. The Workgroup concluded that CPT code 27446 represents a site of service anomaly since visits are currently included in the valuation of this service that are not typically occurring. The RUC recommended that CPT code 27446 be surveyed for January 2021 with the appropriate code family. At the January 2021 meeting, the specialty societies submitted a request to defer survey until April 2021 due to logistical reasons including timing and a desire to be placed on the Research Subcommittee agenda "to review a proposed revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work." The RUC recommended that CPT code 27446 be surveyed for April 2021 with the appropriate code family.

Pre-Service Work
In October 2019 during review of CPT code 27447 *Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*, the specialties noted that considerable work by the clinical staff, surgeons, and qualified healthcare providers (QHPs) is required to facilitate, coordinate, validate and document the assessment and optimization of patients prior to total joint replacement surgery. The service has also evolved in that patients are more frequently discharged home rather than to inpatient rehabilitation or skilled nursing facilities. This deliberate reduction in post-acute care service requires considerable work by the surgeon and QHPs prior to surgery.

The RUC agreed that the pre-service planning activities are being performed on a routine basis for the typical patient; however, the 090-day global period structure does not allow inclusion of this work. In addition, the current code does not include this additional work in the descriptor. The RUC discussed options on how to capture these pre-service activities performed by the physician or QHP. The RUC indicated that separate planning codes may be developed, or current codes such as the prolonged service codes may be reported for these activities. It was recognized that such codes are intended to capture a single episode of time and that the added work in the preoperative period does not occur in such units of time (e.g., 30 minutes in one session as opposed to over the course of a few days/calls).

The RUC affirmed the October 2019 recommendation for CPT code 27447 and noted that the pre-service time discussion also applies to family code 27446. The RUC recommends that the specialty, and other interested parties, consider developing a CPT coding application to address this preoperative period issue.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

27446 ***Arthroplasty, knee, condyle and plateau; medial OR lateral compartment***
The RUC reviewed the survey results from 126 orthopaedic and hip/knee surgeons and concurred that the survey median (19.60) and 25th percentile (18.60) work RVU overvalued the physician work for this service. Therefore, the RUC determined that a direct work RVU crosswalk to CPT code 67108 *Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique* (work RVU= 17.13, 90 minutes intra-service time and 295 minutes total time) appropriately accounts for relative physician work. The crosswalk code was surveyed in 2015 and has identical intra-service time as 27446 and similar total time and intensity. The RUC notes that the crosswalk value of 17.13 work RVUs includes three key considerations: no change in intraoperative time, one day less of hospital E/M work, and an increase in level of postoperative office work.

The RUC recommends the following physician time components: 40 minutes pre-service evaluation, 15 minutes pre-service positioning, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, and 45 minutes immediate post-service time, 0.5-99238 discharge visit, 2-99213 and 1-99214 office visits, 310 minutes total time. Pre-service time package 4 is recommended with an increase of 12 minutes to positioning time (total = 15 minutes) to account for assisting with appropriately positioning the patient, padding bony prominences, and applying thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; placing the patient's leg properly on the table and positioning with proper bolstering to aid surgical exposure; placing a tourniquet on the proximal thigh; confirming tourniquet settings and validating function. This is consistent with both the survey median and historical RUC precedent for many similar orthopaedic extremity surgical codes. In addition, the package time for scrub/dress/wait was reduced to 15 minutes to be consistent with the survey median.

The RUC discussed the CMS 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy as it relates to the post-service time for the survey code. This policy excludes inclusion of inpatient visit codes in the global payment for services that are typically reported as outpatient services. CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow codes with outpatient claims status to include bundled subsequent inpatient hospital visits (eg 99231-99233) into the surgical global payment. Instead, the Agency permits the allocation of the intra-service portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure. For code 27446, per the CMS policy, the intra-service time is reallocated from the same-day E/M code 99232 to the immediate post-service time of the outpatient service (adding 20 minutes of intra-service time from 99232). Though the median survey immediate post-service time was 25 minutes, the CMS 23-hour stay policy was applied resulting in 45 total post-service minutes. The RUC recommends post-service time package 9b and, following the CMS 23-hour policy, the E/M same day visit is not shown and instead the intra-service time of 20 minutes has been added to the median survey post time of 25 minutes (total=45 minutes). In addition, following the CMS 23-hour policy, the next day final evaluation of the patient and discharge management work is indicated as a discounted 0.5 x 99238 – or one-half of an E/M service (0.64 RVUs; 19 min).

For the post-service office visits, the RUC recommends the survey median response of three total office visits: 1-99214 and 2-99213. The first office visit is typically at 2 weeks following surgery; both the estimated total time and medical decision-making support 99214. The subsequent office visits are typically at 6 weeks and 10 weeks after surgery; both the estimated total time and medical decision-making support 99213 for both

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

visits. Discussion around the 99214-visit clarified that there is management of medication, particularly at that first visit when there is often increased pain that necessitates an opioid adjustment and justifies the level 4 office visit.

To justify the crosswalk value of 17.13 work RVUs, the RUC compared the survey code to the key reference service codes 27130 *Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft* (work RVU = 19.60, 100 minutes intra-service time and 377 minutes total time) and 23472 *Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))* (work RVU = 22.13, 140 minutes intra-service time and 448 minutes total time) and noted that the physician work and intra-service and total time of the survey code are lower than the two reference services while the intensity of the survey code is slightly higher than either reference service. The RUC further noted that the CMS 23-hour policy impacts the intensity of work per unit time and may falsely elevate the IWPUT because, if the recommendation included the full discharge day visit time of 38 minutes rather than 19 minutes (0.5-99238) and if the 99232 hospital visit remained at the full time (40 minutes), rather than adding only 20 minutes to the immediate post service time, the total time would have been 349 minutes (similar to current value of 345), with a final IWPUT of 0.101 and WPUT of 0.049, both of which are below the current values.

In addition to the comparison to total hip arthroplasty, the RUC also compared CPT code 27446 to CPT code 27447 *Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)* (work RVU = 19.60, 97 minutes intra-service time and 374 minutes total time) which was recently approved by the RUC in October 2019 and re-affirmed at this meeting. The RUC noted that a value below 17.13 RVUs would create a rank order anomaly between 27446 unicompartmental knee arthroplasty (UKA) and 27447 total knee replacement (TKA). Below is a comparison of CPT codes 27446 to 27447:

	27446 (UKA)	**27447 (THA)**
Work RVU	17.13	19.60
Pre-time	70	70
Intra-time	90	97
Post-time	150	207
Total time	310	374
IWPUT	0.119	0.112
WPUT	0.055	0.052

The RUC agreed that UKA is more complex and intense than TKA for several reasons:

1. UKA is less common than TKA; default is total knee, while preserving natural structure with a partial knee when appropriate is more complex.
2. UKA has higher failure and revision rate compared to TKA (~ 2X) requiring more complex considerations for repair.
3. Smaller incisions are employed to limit injury to the quadriceps mechanism, but must still allow visualization of the other compartments to assess articular cartilage damage (which might preclude UKA and require TKA).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

4. The cruciate ligaments (ACL and PCL) are retained, compared to TKA where the ACL +/-PCL are resected; this makes exposure and stability/balancing more difficult.
5. Although basic alignment devices and cutting guides are used for the bone resection, like TKA, free-hand refinements and/or use of additional technology (e.g., computer-aided, robotic assisted) that add complexity to the procedure are typically employed.
6. In a TKA, the entire articular surface of both tibia and femur are resected and replaced; in a UKA, only part of the joint is resected and replaced; alignment of the prosthetic surface with the native articular cartilage is required which adds complexity.

For additional support, the RUC compared CPT code 27446 to MPC codes 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time and 283 minutes total time) and 37215 *Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection* (work RVU = 17.75, 103 minutes intra-service time and 337 minutes total time) and noted that the multi-specialty points of comparison code values appropriately bracket the survey code recommendation. The RUC concluded that CPT code 27446 should be valued based on a direct work RVU crosswalk to CPT code 67108 which falls below the survey 25th percentile. **The RUC recommends a work RVU of 17.13 for CPT code 27446.**

Affirm RUC Recommendations
The RUC affirms its October 2019 work RVU recommendation of 19.60 for CPT code 27447.

Office Visits Included in Codes with a Surgical Global Period
The RUC strongly believes that it is appropriate to apply the increased valuation of the office visits to the visits incorporated in the surgical global packages. The RUC recommends that CMS apply the office visit increases uniformly across all services and specialties. CMS should not hold specific specialties to a different standard. The RUC urges CMS to apply the 2021 office visit increases to the office visits included in surgical global payment, as it has done historically.

Practice Expense
The Practice Expense (PE) Subcommittee discussed and accepted the compelling evidence argument that the clinical work involved in the service had changed. Based on acceptance of compelling evidence, the PE Subcommittee carefully considered the clinical staff activities and discussed the specialty society recommendation of an additional 15 minutes for CA002 *Coordinate pre-surgery services (including test results)* and CA004 *Provide pre-service education/obtain consent*. The PE Subcommittee noted that the standard pre-service time package is 60 minutes for 090-day global period services and questioned the justification for the additional preclinical time. After thorough discussion, the PE Subcommittee reduced the recommendation to the standard 090-day pre-service clinical staff times for CPT code 27446 and affirmed the standard times for 27447. The PE Subcommittee with guidance from the CPT Editorial Panel representative also provided some potential options for the specialties to consider capturing any additional preclinical staff time, including possibly using existing codes including the 99415 prolonged services clinical staff code (under consideration at this meeting) or alternatively, generating a new CPT code description to truly capture the additional work. **The RUC recommends the direct practice expense inputs for CPT code 27446 as modified by the PE Subcommittee**.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The Practice Expense Subcommittee reviewed and affirmed the direct practice inputs for CPT code 27447 from October 2019 without modification. **The RUC recommends the direct practice expense inputs for CPT code 27447 as affirmed by the Practice Expense Subcommittee.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090	17.13
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	090	19.60 (Affirmed October 2019 RUC recommendation)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Descriptor: Arthroplasty, knee, condyle and plateau; medial OR lateral compartment

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old obese female (BMI > 30) with osteoarthritis of the knee joint presents with increased varus of the right knee affecting activities of daily living. She is a non-insulin-dependent diabetic. At operation, she undergoes a unicompartmental knee replacement.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 87% , In the ASC 13%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 27% , Overnight stay-less than 24 hours 64% , Overnight stay-more than 24 hours 9%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 94%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered; timing and administration are confirmed. Appropriate selection, timing and administration of DVT prophylaxis are assured. Appropriate selection of preemptive multimodal analgesic medications performed and timing and admistration are confirmed in conjunction with coordination of supplemental regional blocks and/or planned local anesthetic infiltration. Results of preadmission testing are reviewed, including laboratory tests, X rays, CT scans, and/or MRIs, with special attention to radiographs and scaled radiographs that were used for sizing and ordering of special implants. The patient is re-examined to make sure that physical findings have not changed and history and physical are updated. The patient and family are met with to review planned procedure and postoperative management, including an opioid sparing pain management protocol. Informed consent is reviewed with the patient. It is verified that all required instruments and supplies are available, including intraoperative imaging/fluoroscopy. It is ensured that an array of implants is available for possible use in the operating room. An estimate of the appropriate-size component is determined by templating with radiographs. The patient is positioned, bony prominences are padded, and thermal regulation drapes are applied. The position of the extremities and head are assessed and adjusted as needed. The patient's leg is placed properly on the table and positioned with proper bolstering to aid surgical exposure. A tourniquet is placed on the proximal thigh. Areas of skin to be prepared are indicated, and surgical incisions are marked. A surgical "time out" is performed with the operating surgical team.

Description of Intra-Service Work: After limb exsanguination, the tourniquet is elevated. An appropriate incision for unicompartmental knee arthroplasty is used. After exposure, the knee is carefully inspected visually for the presence of arthritis in the two nonoperative compartments. The ACL is inspected and tested. The remnant meniscus and the osteophytes of the operative compartment are removed. The tibia is exposed sufficiently to allow proximal (usually medial) resection of the tibia without injury to the ACL, PCL, or MCL. After adequate distal femoral resection has been made, the femur is sized, and the appropriate jig to complete the posterior and posterior chamfer cut is used to cut and drill the femur. Posterior femoral osteophytes can then be removed. Then the improved visualization allows proper sizing and preparation of the tibial surface. Once the trial implants have been placed, a complete examination of the alignment, ligamentous balance, range of motion, and patellar tracking is done. The appropriate implants are then selected. The knee is prepared for cementing with careful retractor placement, pulsatile lavage, and suction to dry the cut bony surface. Cement is applied to the tibial surface, and the tibial component is impacted. Excess cement is then removed from the posterior tibial recess. Then the femoral component is cemented as well. A trial polyethylene is used to pressurize the components onto the bony surface. After the cement has cured, excess cement is carefully removed from around the components. Then the correct

polyethylene is placed, the knee is again tested, the tourniquet is deflated, and hemostasis is achieved. The knee wound is closed in layers

Description of Post-Service Work:

Immediate postoperative work through discharge from recovery room includes: Application of sterile dressings; removal of drapes; assessing limb alignment compared to the opposite extremity; assessing limb perfusion and pulses; waiting for reversal of anesthesia and extubation; assisting in transfer of the patient from the OR table to a stretcher or bed; assisting in transport of patient from operating room to recovery room; monitoring patient stabilization in the recovery room; completing a careful neurologic and vascular examination of the extremity; discussing postoperative recovery care with anesthesia and nursing staff, including regional blocks discussing procedure and outcome with patient and family and answering questions; entering a brief operative note and a full operative report in the medical record; calling referring physician and/or sending a copy of the operative note; writing comprehensive orders for PACU and floor care; completing medication reconciliation; ordering and reviewing postoperative radiographs; and entering procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Hospital visit #1 (day of surgery later in the day) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing vital signs, I/O, labs, and other related data; reviewing findings and outcome with patient and/or family; assessing pain control and response to current medications; modify orders accordingly; assessing urinary function; examining the surgical site; reinforce dressing as needed; assessing limb position and alignment, repositioning the limb needed ; checking neurovascular status; counseling the patient and/or family regarding therapy protocol; answer questions; counseling the patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed and use of sequential compressive devices; communicating and coordinating care with medical consult and other physicians; communicating and coordinating pain control with anesthesia, including status of current modalities (eg, blocks); updating orders; and writing “postoperative check” progress note.

Hospital discharge management (postoperative day #1) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing PT/OT notes; discussing status and progress with PT/OT staff; reviewing discharge plan notes; discussing status and progress with case management; finalizing and confirming discharge plans; reviewing notes from other physicians and discussing as appropriate; reviewing vital signs, I/O, labs and other related data; interviewing patient and obtaining interval history; assessing pain control and response to current medications; assessing gastrointestinal and urinary function; examining surgical site; changing dressing as needed; assessing limb alignment and ROM; checking neurovascular status; repositioning limb as needed; finalizing and confirming discharge plans with patient and/or family; counselling patient and/or family regarding therapy protocol and activity limitations after discharge; reviewing postoperative instructions (eg, wound care, pain medications, VTE prophylaxis); completing daily progress note; completing discharge summary and associated forms and documents; writing prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); checking narcotic prescription registries; writing orders for discharge home.; completing medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicating and coordinating follow-up care with other physicians; and entering postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Post-operative office visits: the work is performed by the physician and QHP; the detailed times are provided in the supplementary table.

Office visit #1 (99214): this visit typically occurs 2 weeks after surgery.

Review PT/OT and/or rehab/SNF/VNA notes to assess progress with therapy; review results of labs related to anticoagulation for DVT prophylaxis (e.g. INR, Hb, Plts); to assess therapeutic response and/or monitor for side effects; discuss findings at surgery, review procedure details and answer questions; review post-operative radiographs with patient and/or family; interview patient and obtain history and/or review data obtained by clinical staff; assess pain control, response to current medications and side-effects; assess function, mobility and progress with ambulation and compare with reports from PT/OT/rehab; discuss gastrointestinal and urinary function to assess for medication side effects; remove dressing; examine surgical site; assess limb alignment, swelling, strength and ROM; check neurovascular status; remove sutures or staples; apply steri-strips, sterile dressing and compressive wrap or stockings; counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation); counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet; Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering; check narcotic prescription registries; write order for narcotic prescription, re-fill or new medication; write order

for non-narcotic prescription as appropriate (e.g. NSAIDs, gabapentin); write order for prescriptions for continued VTE prophylaxis based on patient risk assessment and mobilization, re-fill or new medication; vomplete medication reconcillation; counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression; complete forms/referrals for continued PT/OT and/or home care services (e.g. VNA); complete disability, FMLA, out of/return to work and other related forms; communicate and coordinate care with other physicians and health care providers (eg, PT/OT, PCP); enter diagnosis code(s) and office visit codes in the EHR or other similar system; write or dictate and sign progress note; enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry).

Office visit #1: Level of service determination based upon medical decision making (LOS = 99214)

(1) Number and complexity of problems = MODERATE: 1 chronic illness (osteoarthritis of knee) with side effects (pain and limited mobility) of treatment (surgery) is assessed and managed; OR 1 acute complicated injury (surgical trauma) is assessed and managed, including body systems that are not directly part of the injured organ (e.g. GI, neurologic, vascular); treatment options are associated with morbidity

(2) Amount and complexity of data = LIMITED: review external notes and review results of tests

(3) Risk of complications from testing and/or treatment = MODERATE: (a) prescription drug management - assessment and plan for multi-modal pain management, including use of narcotic pain medication with tapering, as well as non-narcotic medicationsrenew, adjust and/or change medications; (b) prescription drug management - assessment and plan for VTE prophylaxis; renew, adjust and/or change medications

Post-operative office visit #2 (99213): this visit typically occurs six weeks after surgery

Review PT/OT notes to assess progress with therapy; interview patient and obtain history and/or review data obtained by clinical staff; assess pain control, response to current medications and side-effects; assess function, mobility and progress with ambulation and compare with reports from PT/OT; assess gastrointestinal to assess for medication side effects; examine surgical site to assess wound healing and signs of infection; assess limb alignment, swelling, strength and ROM; counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation); counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics and provide/review instruction sheet; counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering; write order for non-narcotic prescription as appropriate (e.g. NSAIDs); complete medication reconcillation; counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression; complete forms/referrals for continued PT/OT; complete disability, FMLA, out of/return to work and other related forms; enter diagnosis code(s) and office visit codes in the EHR or other similar system; order radiographs for next visit; write or dictate and sign progress note; enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry).

Office visit #2: Level of service determination based upon medical decision making (LOS = 99213)

(1) Number and complexity of problems = LOW: stable chronic illness (knee osteoarthritis) or acute uncomplicated illness (major surgery)

(2) Amount and complexity of data = LIMITED: review external notes and ordering test (radiographs)

(3) Risk of complications from testing and/or treatment = LOW; non-narcotic medications and PT

Post-operative office visit #3 (99213): this visit typically occurs 10 weeks after surgery

Review PT/OT notes to assess progress with therapy; interview patient and obtain history and/or review data obtained by clinical staff; assess pain control, response to current medications and side-effects; assess function, mobility and progress with ambulation and compare with reports from PT/OT; examine surgical site to assess wound healing and signs of infection; assess limb alignment, swelling, strength and ROM; review radiographs with independent interpretation; counsel patient and/or family regarding therapy protocol and activity (e.g. driving, exercise, sports); counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics and provide/ review instruction sheet; counsel patient/family regarding timing of next office visit and communicate interval care plan

based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression; complete forms/referrals for continued PT/OT; complete disability, FMLA, out of/return to work and other related forms; enter diagnosis code(s) and office visit codes in the EHR or other similar system; write or dictate and sign progress note; enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)

Office visit #3: Level of service determination based upon medical decision making (LOS = 99213)

(1) Number and complexity of problems = LOW: stable chronic illness (knee osteoarthritis) or acute uncomplicated illness (major surgery)

(2) Amount and complexity of data = MODERATE: review external notes, review results of tests (radiographs) and independent interpretation of test (radiographs)

(3) Risk of complications from testing and/or treatment = LOW: non-narcotic medications and PT

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
27130	090	19.60	**RUC Time**

CPT Descriptor Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
23472	090	22.13	**RUC Time**

CPT Descriptor Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
19303	090	15.00	**RUC Time**	25,487

CPT Descriptor 1 Mastectomy, simple, complete

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
37215	090	17.75	**RUC Time**	10,340

CPT Descriptor 2 Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection

Other Reference CPT Code	Global	Work RVU	Time Source
67107	090	16.00	**RUC Time**

CPT Descriptor Repair of retinal detachment; scleral buckling (such as lamellar scleral dissection, imbrication or encircling procedure), including, when performed, implant, cryotherapy, photocoagulation, and drainage of subretinal fluid

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 71 **% of respondents:** 56.3 **%**

Number of respondents who choose 2nd Key Reference Code: 21 **% of respondents:** 16.6 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	59%	27%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	58%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	38%	49%	13%
Physical effort required	8%	61%	31%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	58%	34%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	81%	14%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	81%	19%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	76%	19%
Physical effort required	0%	81%	19%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	76%	24%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2020, the Relativity Assessment Workgroup (RAW) flagged code 27446 as including inpatient E/M visits from the RUC review in 2013, but 2019 Medicare utilization showed the procedure being performed less than 50% of the time with an inpatient facility status. The RAW recommended that 27446 be surveyed.

At the January 2021 RUC meeting, AAOS and AAHKS submitted a letter indicating code 27446 would be surveyed for the April 2021 meeting after the Research Subcommittee reviewed a revised survey instrument to address additional preoperative time and resources.

During discussion, the RUC also asked the societies to present a recommendation for reaffirmation of code 27447.

The societies instead requested that 27447 be allowed on the reference service list since this code was surveyed in 2019 and the RUC recommendation was accepted and implemented by CMS in 2021.

However, the RUC asked that the code not be listed on the RSL and that the data for the code be included in the recommendation for re-affirmation.

Recommendation – 27446

The survey median work RVU of 19.60 and the 25th percentile work RVU of 18.60 are both above the current work RVU of 17.48 for code 27446. There is no compelling evidence to support an increase in work RVU.

The intraoperative time of 90 minutes for this procedure has not changed with the new survey.

Although there is a decrease of one day in the hospital, there is an increase in the level of office visits.

We recommend work RVU of 17.13 using a direct crosswalk to code 67108, *Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique,* which was surveyed in 2015 and has the same intra-service time as 27446 and similar total time.

CPT code 27446 requires more pre-service and more same-day post-operative work; while CPT code 67108 has a greater number of post-operative visits. The intra-service times are exactly the same. The total times are quite similar – 310 minutes for 27447 and 295 minutes for 67108.

The following table compares 27446 and 67108:

	Crosswalk Comparison	
	27446	**67108**
	Uni-knee joint replacement	Repair retinal detachment
wRVU	17.13	17.13
2019 Utilization	15,803	16,523
Facility Status	typically admitted or overnight	typically same-day discharge
Inpatient	31%	<1%
Outpatient Hosp	31%	52%
ASC	18%	46%
Pre-time	70 (package 4)	51 (package 3)
Intra-time	90	90
Immed post time	45	20
Other Hosp time	0[1]	0
Discharge day	0.5 x 99238[2]	0.5 x 99238[3]
Office visit time	86	115
Total time	310	295
IWPUT	0.119	0.114
WPUT	0.055	0.058

Notes:
1. Separate hospital E/M visit time discounted and shifted to immediate post-time component
2. Next day (or later) discharge management work discounted by 50%
3. Discharge management work discounted due to overlap with immediate postop time on same day

Pre-Service Time

We recommend package 4 for pre-service package time which is the current pre-service package.

Adjustments have been made to the package times for evaluation and scrub/dress/wait time to be consistent with the survey median times.

Twelve minutes have been added to the standard package time of 3 minutes (total of 15 minutes) to assist with positioning the patient, pad bony prominences, and apply thermal regulation drapes; assess position of the extremities and head and adjust as needed; place patient's leg properly on the table and position with proper bolstering to aid surgical exposure; place a tourniquet on the proximal thigh; confirm tourniquet settings and validate function. This is consistent with both the survey median and historical RUC precedent for many similar orthopaedic codes for extremity operations.

Intraoperative (Intraservice) Time

The societies recommend 90 minutes intraoperative time, which is the survey median. This is also the current intraoperative time

Post-Service Facility Work

The societies recommend Immediate Post-Service package 9b but following the CMS 23-hour policy, the E/M same day visit is not shown and instead the intraservice time of 20 minutes has been added to the median survey post time of 25 minutes (total=45 minutes). In addition, following the CMS 23-hour policy, the next day final evaluation of the patient and discharge management work is indicated as a discounted 0.5 x 99238 – or one-half of an E/M service.

The RUC has accepted what we believe to be a flawed 23-hour policy for (a) adding only the intra-time for the same day post-operative visit to the immediate post-service time and (b) allowing only 50% of the time for discharge day service code 99238. However, the full and complete E/M work is still provided the day of surgery and the day of discharge. This adjustment of survey data results in an artificial increase in the IWPUT, which alone cannot be the basis for a work RVU recommendation.

A facility E/M visit is not just intra-service time, there is typically pre- and post-service work necessary for review of records, documentation and discussions with family and other health care providers. Similarly, on the next day for an overnight stay after surgery, the final evaluation and discharge management work is not less work compared with a patient on the medicine service. If there were any logic and consistency to this policy, then a physician should only be able to report one-half unit of a discharge code for next day discharge after an overnight stay for observation – but instead the physician reports a full unit of the code. We believe that postoperative work by the surgeon is being inappropriately discounted.

If our recommendation included the full discharge day visit time of 38 minutes rather than 19 minutes (0.5 x 99238) and if we kept the 99232 hospital visit at the full time (40 minutes), rather than deleting it and adding only 20 minutes to the immediate post service time, the final time would have been 349 minutes (similar to current value of 345), with a final IWPUT of 0.101 and WPUT of 0.049, both of which are below the current values.

If we included a full discharge day service for 99238 (38 minutes), but maintained the transfer of only 20 minutes for 99232 to the immediate post-service time, the final time would have been 329 minutes, with an IWPUT of 0.112 and WPUT of 0.052. These values are similar to the current values.

In essence, the increases in IWPUT and WPUT for our recommended value of 17.13, are an artifact of the current RUC methodology and is not reflective of the intrinsic intensity and complexity inherent to the procedure.

Post-Service Office Visits

The societies recommend the survey median response of three total office visit; 1 x 99214 and 2 x 99213. These visits are described in the post-service description of work.

The work at the post-operative office visits is typically performed by the physician and QHP. The total estimated times listed in the supplementary tables below reflect this combined work.

The first office visit is typically at 2 weeks following surgery; both the estimated total time and medical decision-making support 99214.

The subsequent office visits are typically at 6 weeks and 10 weeks after surgery; both the estimated total time and medical decision-making support 99213 for both visits.

Tables With Estimated Times For Office Visits

OFFICE VISIT #1: two weeks after surgery (LOS = 99214)		
Work completed by the physician and/or QHP		**Minutes**
1.	Review PT/OT and/or rehab/SNF/VNA notes to assess progress with therapy	1-2
2.	Review results of labs related to anticoagulation for DVT prophylaxis (e.g. INR, Hb, Plts); to assess therapeutic response and/or monitor for side effects	1-2
3.	Discuss findings at surgery and review procedure details; answer questions	2
4.	Review post-operative radiographs with patient and/or family	
5.	Interview patient and obtain history and/or review data obtained by clinical staff	2-3
6.	Assess pain control, response to current medications and side-effects	
7.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
8.	Assess gastrointestinal and urinary function to assess for medication side effects	
9.	Remove dressing; examine surgical site	3-3
10.	Assess limb alignment, swelling, strength and ROM	
11.	Check neurovascular status	
12.	Remove sutures or staples; apply steri-strips, sterile dressing and compressive wrap or stockings	4
13.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
14.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	
15.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	
16.	Check narcotic prescription registries	4
17.	Write order for narcotic prescription; re-fill or new medication	
18.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs, gabapentin)	
19.	Write order for prescriptions for continued VTE prophylaxis based on patient risk assessment and mobilization; re-fill or new medication	
20.	Complete medication reconcillation	
21.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
22.	Complete forms/referrals for continued PT/OT and/or home care services (e.g. VNA)	2-3
23.	Complete disability, FMLA, out of/return to work and other related forms	
24.	Communicate and coordinate care with other physicians and health care providers (e.g., PT/OT, PCP)	2-3
25.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
26.	Write or dictate and sign progress note	
27.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**32-40**
	REQUIRED TIME	**30-39**

OFFICE VISIT #2: six weeks after surgery (LOS = 99213)		
Work completed by the physician and/or QHP		**Minutes**
1.	Review PT/OT notes to assess progress with therapy	1-2
2.	Interview patient and obtain history and/or review data obtained by clinical staff	3
3.	Assess pain control, response to current medications and side-effects	
4.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
5.	Assess gastrointestinal to assess for medication side effects	
6.	Examine surgical site; assess wound healing and signs of infection	2-3
7.	Assess limb alignment, swelling, strength and ROM	
8.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
9.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	
10.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	

11.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs)	2-3
12.	Complete medication reconcillation	
13.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
14.	Complete forms/referrals for continued PT/OT	2-3
15.	Complete disability, FMLA, out of/return to work and other related forms	
16.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
17.	Order radiographs for next visit	
18.	Write or dictate and sign progress note	
19.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**21-27**
	REQUIRED TIME	**20-29**

OFFICE VISIT #3: ten weeks after surgery (LOS = 99213)		
Work completed by the physician and/or QHP		**Minutes**
1.	Review PT/OT notes to assess progress with therapy	1-2
2.	Interview patient and obtain history and/or review data obtained by clinical staff	3
3.	Assess pain control, response to current medications and side-effects	
4.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
5.	Examine surgical site; assess wound healing and signs of infection	2-3
6.	Assess limb alignment, swelling, strength and ROM	
7.	Review radiographs; independent interpretation	2-3
8.	Counsel patient and/or family regarding therapy protocol and activity (e.g. driving, exercise, sports)	2-3
9.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	2-3
10.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
11.	Complete forms/referrals for continued PT/OT	2-3
12.	Complete disability, FMLA, out of/return to work and other related forms	
13.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
14.	Write or dictate and sign progress note	
15.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**22-29**
	REQUIRED TIME	**20-29**

Comparison to Total Knee Arthroplasty (27447)

Total knee arthroplasty (27447) was recently approved by the RUC in October 2019 and will be re-affirmed at this meeting.

CPT code 27447 was not permitted to be on the RSL, so survey respondents did not compare 27446 to 27447.

The table below compares 27446 (unicompartmental knee arthroplasty) to 27447 (total knee arthroplasty).

	27446 (UKA)	27447 (THA)
wRVU	17.13	19.60
Pre-time	70	70
Intra-time	90	97
Post-time	150	207
Total time	310	374
IWPUT	0.119	0.112
WPUT	0.055	0.052

The IWPUT of 0.119 for 27446 is greater than 27447 (TKA) of 0.112.

We believe UKA is in fact more complex and intense than TKA for several reasons:

1. UKA is less common than TKA; Medicare volume in 2019 was 20X for TKA v UKA
2. UKA has higher failure and revision rate compared to TKA (~ 2X)
3. Smaller incisions are employed to limit injury to the quadriceps mechanism, but must still allow visualization of the other compartments to assess articular cartilage damage (which might preclude UKA and require TKA)
4. The cruciate ligaments (ACL and PCL) are retained, compared to TKA where the ACL +/-PCL are resected; this makes exposure and stability/balancing more difficult
5. Although basic alignment devices and cutting guides are used for the bone resection, similar to TKA, free-hand refinements and/or use of additional technology (e.g. computer-aided, robotic assisted) are typically employed
6. In a TKA, the entire articular surface of the both tibia and femur are resected and replaced; in a UKA, only part of the joint is resected and replaced; alignment of the prosthetic surface with the native articular cartilage is required

A value below 17.13 would create a ***rank order anomaly*** with 27447 (TKA).

Key Reference Code Comparison

Respondents who chose 27130 as a reference indicated the intensity/complexity of 27446 to be similar/more complex and intense than 27130. Respondents who chose 23472 as a reference indicated the intensity/complexity of 27446 to be similar/more than 23472.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	17.13	0.119	310	70	90	150
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft	19.60	0.109	377	70	100	207
23472	Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder)).	22.13	0.089	448	75	140	233

MPC Code Comparison

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
19303	Mastectomy, simple, complete	15.00	0.102	283	58	90	135
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	17.13	0.119	310	70	90	150
37215	Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection	17.75	0.109	322	80	103	139

Other Code Comparison

Codes 63620 and 67108 bracket and offer further support of the recommended wRVU of 17.13 for 27446.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
63620	Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 spinal lesion	15.60	0.136	195	25	90	80
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	17.13	0.119	310	70	90	150
67108	Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique	17.13	0.114	295	51	90	154

Summary

The survey data is valid and robust.

The current wRVU is greater than the median and 25th percentile; there is no compelling evidence for an increase.

Given the decrease in total time (which we believe has methodological flaws and is artificially low), we do not recommend maintaining the current value.

We recommend the cross walked wRVU of 17.13, which takes into account three key considerations:

(1) No change in intraoperative time
(2) One day less of hospital E/M work
(3) Increase level of postoperative office work

Work RVU below 17.13 would create a rank order anomaly with CPT code 27447 (total knee replacement).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27446

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency Percentage %

Orthopedic - Knee replacement

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 27446

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Tables With Estimated Times For Office Visits

OFFICE VISIT #1: two weeks after surgery (LOS = 99214)		
Work completed by the physician and/or QHP		**Minutes**
28.	Review PT/OT and/or rehab/SNF/VNA notes to assess progress with therapy	1-2
29.	Review results of labs related to anticoagulation for DVT prophylaxis (e.g. INR, Hb, Plts); to assess therapeutic response and/or monitor for side effects	1-2
30.	Discuss findings at surgery and review procedure details; answer questions	2
31.	Review post-operative radiographs with patient and/or family	
32.	Interview patient and obtain history and/or review data obtained by clinical staff	2-3
33.	Assess pain control, response to current medications and side-effects	
34.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
35.	Assess gastrointestinal and urinary function to assess for medication side effects	
36.	Remove dressing; examine surgical site	3-3
37.	Assess limb alignment, swelling, strength and ROM	
38.	Check neurovascular status	
39.	Remove sutures or staples; apply steri-strips, sterile dressing and compressive wrap or stockings	4
40.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
41.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	
42.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	
43.	Check narcotic prescription registries	4
44.	Write order for narcotic prescription; re-fill or new medication	
45.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs, gabapentin)	
46.	Write order for prescriptions for continued VTE prophylaxis based on patient risk assessment and mobilization; re-fill or new medication	
47.	Complete medication reconcillation	
48.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
49.	Complete forms/referrals for continued PT/OT and/or home care services (e.g. VNA)	2-3
50.	Complete disability, FMLA, out of/return to work and other related forms	
51.	Communicate and coordinate care with other physicians and health care providers (e.g., PT/OT, PCP)	2-3
52.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
53.	Write or dictate and sign progress note	
54.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**32-40**
	REQUIRED TIME	**30-39**

OFFICE VISIT #2: six weeks after surgery (LOS = 99213)		
Work completed by the physician and/or QHP		**Minutes**
20.	Review PT/OT notes to assess progress with therapy	1-2
21.	Interview patient and obtain history and/or review data obtained by clinical staff	3
22.	Assess pain control, response to current medications and side-effects	
23.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
24.	Assess gastrointestinal to assess for medication side effects	
25.	Examine surgical site; assess wound healing and signs of infection	2-3
26.	Assess limb alignment, swelling, strength and ROM	
27.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
28.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental,	

	GI) about need for prophylactic antibiotics; review instruction sheet	
29.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	
30.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs)	2-3
31.	Complete medication reconcillation	
32.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
33.	Complete forms/referrals for continued PT/OT	2-3
34.	Complete disability, FMLA, out of/return to work and other related forms	
35.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
36.	Order radiographs for next visit	
37.	Write or dictate and sign progress note	
38.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**21-27**
	REQUIRED TIME	**20-29**

OFFICE VISIT #3: ten weeks after surgery (LOS = 99213)	
Work completed by the physician and/or QHP	**Minutes**
16. Review PT/OT notes to assess progress with therapy	1-2
17. Interview patient and obtain history and/or review data obtained by clinical staff	3
18. Assess pain control, response to current medications and side-effects	
19. Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
20. Examine surgical site; assess wound healing and signs of infection	2-3
21. Assess limb alignment, swelling, strength and ROM	
22. Review radiographs; independent interpretation	2-3
23. Counsel patient and/or family regarding therapy protocol and activity (e.g. driving, exercise, sports)	2-3
24. Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	2-3
25. Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
26. Complete forms/referrals for continued PT/OT	2-3
27. Complete disability, FMLA, out of/return to work and other related forms	
28. Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
29. Write or dictate and sign progress note	
30. Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
TOTAL TIME	**22-29**
REQUIRED TIME	**20-29**

FACILITY DIRECT PE INPUTS **CPT CODE(S): 27446, 27447**
SPECIALTY SOCIETY(IES):AAOS, AAHKS
PRESENTER(S): Adolph Yates, MD; William Creevy, MD; Hussein Elkousy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 04/2021

CPT Code	Long Descriptor	Global Period
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
27446	A 67-year-old obese female (BMI > 30) with osteoarthritis of the knee joint presents with increased varus of the right knee affecting activities of daily living. She is a non-insulin-dependent diabetic. At operation, she undergoes a unicompartmental knee replacement.
27447	A 74-year-old female has knee osteoarthritis not responding to nonoperative treatment. A total knee arthroplasty (TKA) is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   A panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):
   Current codes are used for reference.

3. Is this code(s) typically reported with an E/M service?
   NO

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:
   N/A

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

n/a

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and/or caregiver to ensure all relevant history and diagnostic information is included
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, reviews patient medical status, confirms preoperative cleansing protocol, and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

6 minutes (standard)
Office clinical staff will assist with necessary post-discharge care via phone or electronically, such as: responding to patient/family questions about home activity restrictions; confirmation of discharge antibiotics if needed, and pain medication; coordination with other physicians and QHPs involved in the care of the patient for transfer of records; and transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge.

-

   c. Post-service period:

125 minutes - standard time for <u>current</u> (2021) office visit E/Ms
Clinical staff will greet the patient, provide gowning, and ensure that all appropriate medical records are available including interval imaging and labs, physical therapy reports, and chart notes from other physicians. Clinical staff will obtain vital signs, prepare the room and necessary supplies, assist with patient positioning for exam, review and document history, systems and medications. Clinical staff will assist the physician during the exam which may include wound and drain (if present) assessment, neurovascular assessment, ROM assessment, and staple removal when appropriate. Clinical staff will clean the room and answer any patient/family questions about home care including activity limitations and reinforcement of physical therapy activities. Clinical staff will assist the physician

with orders for medication and physical therapy changes. Clinical staff will assist with answering patient, family, caregiver, therapist, other clinician questions and help process changes in care.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

n/a

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

n/a

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

n/a

13. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

SA048	pack, minimum multi-specialty visit
SA052	pack, post-op incision care (staple)

14. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**4.0507**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (staple)	**SA052**	**pack**		**4.864**
kit, staple removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

15. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:

n/a

16. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

n/a

17. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Time is equal to office visit total time based on 2019 E/M visit time – not based on actual E/M visit time.

18. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

n/a

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

19. If this is a PE only code please select a crosswalk based on a similar specialty mix:

n/a

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise

the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service Anomaly*

January 2021

Knee Arthroplasty – Tab 27

In October 2020, the Relativity Assessment Workgroup identified CPT code 27446 *Arthroplasty, knee, condyle and plateau; medial OR lateral compartment* with Medicare data from 2017-2019e that was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period and 2019e Medicare utilization over 10,000. The Workgroup reviewed hospital outpatient claims data to confirm that this service is typically performed in the outpatient setting without any observation or overnight stay. Of 414 carrier line items (from the 5% physician claim files) for CPT code 27446 that were matched to a hospital outpatient claim, just 44 (11 percent) appear to have involved observation care with an overnight stay. The Workgroup noted that CPT code 27446 is a site of service anomaly and visits are currently included in this service that are not typical of what is occurring. The RUC recommended that CPT code 27446 be surveyed for January 2021 with the appropriate code family.

At the January 2021 meeting, the specialty societies submitted a request to defer survey until April 2021 due to logistical reasons including timing and a desire to be placed on the Research Subcommittee agenda "to review a proposed revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work." It is the RUC's understanding that the specialty societies will survey the code family and develop recommendations for presentation at the April 2021 RUC meeting. The RUC notes that the family of services should be identified on the level of interest (LOI). **The RUC recommends that CPT code 27446 be surveyed for April 2021 with the appropriate code family.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090	Request to Survey April 2021 RUC Meeting

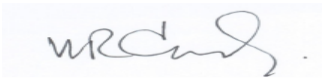
Peter K. Smith, MD
Chair, AMA Relative Value Update Committee
AMA Plaza
330 N Wabash Avenue, Suite 3930
Chicago, IL 60611-5885

Dear Dr. Smith,



The RUC placed CPT code 27446, Arthroplasty, knee, condyle and plateau; medial OR lateral compartment on the CMS/RAW Level of Interest form for the January 2021 RUC meeting (Tab 27). 27446 was flagged by the RAW in the October 2020 RUC cycle for a site-of-service anomaly with more than 50% of current Medicare utilization outpatient . The RAW report to the full RUC automatically elevated the code to survey, without an action plan, for the January 2021 meeting.

The AAOS and AAHKS have responded to the LOI and indicated we will develop recommendations for the RUC for the code. At this time, our societies recommend survey for presentation at the April 2021 RUC meeting.

We also request at this time that CPT code 27446 be placed on the Research Committee agenda to review a proposed revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work.

Thank you for your time and attention and please let us know if you have any questions.

Sincerely,

William R. Creevy, MD
AAOS RUC Advisor

Adolph Yates, MD
AAHKS RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Final Rule for 2019 – Public Nominations*

October 2019

Hip/Knee Arthroplasty – Tab 11

In the Final Rule for 2019, CMS indicated that seven CPT codes were nominated by Anthem for review. In its request, Anthem hypothesized a systemic overvaluation of work RVUs in certain procedures and tests based "on a number of GAO and MedPAC reports, media reports regarding time inflation of specific services, and the January 19, 2017 Urban Institute report for CMS." Anthem suggested that the physician time CMS assumes in estimating work RVUs are inaccurate for procedures, especially due to substantial overestimates of pre-service and post-service time, including follow-up inpatient and outpatient visits that do not take place. According to Anthem, the intra-time estimates for tests and some other procedures are also overstated. Anthem stated that previous RUC reviews of these services did not result in reductions in valuation that adequately reflected reductions in surveyed times. The RUC noted that they recommended reductions in 2013 and CMS did not accept the RUC recommendation. However, the CMS accepted values did result in decreases of 2.53 for 27447 and 1.07 for 27130 from the current values at that time. The RUC placed these services on the LOI for review at the April 2019 RUC meeting. The specialty societies did not survey these services for April 2019 citing a lack of compelling data to justify the request and recommended maintaining the 2013 CMS values and times. At the April RUC, the RUC recommended that these services be surveyed for October 2019 and the specialty surveyed the services in the summer of 2019.

Pre-Service Work
In October 2019, the RUC discussed the change in the way total hip and knee arthroplasties are provided. Total hip and knee arthroplasty are increasingly part of a mandatory Medicare bundled payment program (Comprehensive Care for Joint Replacement [CJR]) or an optional Medicare bundled payment program (Bundled Payment for Care Initiative [BPCI]). Similar alternative payment models are employed in many states by both Medicaid and private insurers. Physicians are also more commonly participating in accountable care organizations (shared savings programs) with Medicare, Medicaid and other payors. All hospitals, regardless of participating in a bundle, are being measured for the 90-day episode of cost for total hip and knee surgery for Medicare patients, affecting both the value based program and hospital quality reporting processes. In all these programs, physicians and hospitals have financial incentives to reduce costs and improve quality.

For total joint replacement, one of the key strategies has been improving preoperative identification and optimization of medical co-morbidities to shorten hospital length of stay and reduce complications, including readmissions. In a 2019 New England Journal of Medicine (NEJM) study on the outcomes of patients in the CJR program, the mean number of chronic medical conditions was seven. Considerable work by the clinical staff, surgeons, and qualified healthcare providers (QHPs) is required to facilitate, coordinate, validate and document the assessment and optimization of patients prior to total joint replacement surgery. The service has also evolved in that patients are more frequently discharged home rather than to inpatient rehabilitation or skilled nursing facilities. This deliberate reduction in post-acute care service requires considerable work by the surgeon and QHPs prior to surgery.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC agreed that all this work is not explicitly captured in the standard RUC survey, nor is it included in the current RUC pre-time packages, but the work is certainly being performed on a routine basis for the typical patient.

Prior to surveying, the specialty societies requested to modify the standard 090-day survey to include language regarding pre-operative planning physician time, care coordination time, non-face-to-face post-operative physician time, the impacts of bundled care initiatives (e.g., ACE demonstration, CJR, and BPCI Advanced) and clinical staff time. The specialty societies noted these arthroplasty procedures typically require additional planning time that is often performed more than 24 hours prior to the procedure. The current survey tool and CMS policy defines the pre-operative period as the day before the procedure and, therefore, precludes the survey respondent from being able account for this pre-planning time. The RUC maintains the current CMS pre-service period definition and did not modify the pre-service period question. The RUC noted that the clinical staff pre-service period time in the PE determinations begins after the decision for surgery. Therefore, the Research Subcommittee did approve a question asking how much time the clinical staff (e.g., RN, LPN, MA) spends per patient on planning, preparation, optimization and care coordination activities prior to surgery.

The specialty societies noted that the individual performing the work to prepare the patient for surgery and the processes and protocols is different in various practices or institutions. However, it is typical that the physician/QHP will spend 30 minutes after the decision for surgery but prior to surgery for these planning activities.

The RUC agreed that the pre-service planning activities occur, however the current code and 090-day global period structure is not the way to capture it. The RUC discussed options on how to capture these pre-service activities performed by the physician or QHP. The RUC indicated that separate planning codes may be developed or the current prolonged services, CPT codes 99358 *Prolonged evaluation and management service before and/or after direct patient care; first hour* or 99359 *Prolonged evaluation and management service before and/or after direct patient care; each additional 30 minutes (List separately in addition to code for prolonged service)* may be reported for these activities. It was recognized that such codes are intended to capture a single episode of time and that the added work in the preoperative period does not occur in such units of time (e.g., 30 minutes in one session as opposed to over the course of a few days/calls). The RUC also noted that the additional clinical staff activities would not be captured within the prolonged service codes.

The RUC reviewed the current description of pre-service work and acknowledged additional pre-service work may be occurring. However, the specialty societies revised the description of work to include only the work of the physician or QHP on the day of surgery or the day prior to surgery.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Median Intra-Service Time Data
Anthem's letter to CMS cited an Urban Institute study "*Collecting Empirical Physician Time Data Piloting an Approach for Validating Work Relativity Value Units*; *Zuckerman, 2016"* as part of their rationale for nominating these services as potentially misvalued. This study was based on a very limited data set. The study indicated a median of 87 minutes for total hip arthroplasty and a median of 83 minutes for total knee arthroplasty.

The specialty societies quoted three studies from large institutions on over 20,000 total hip and knee arthroplasty services, provided by over 100 surgeons, which support the current and recommended median intra-service time of 100 (THA) and 97 (TKA) minutes.

1. *Surgeon Mean Operative Times in Total Knee Arthroplasty in a Variety of Settings in a Health System; Khanuja, 2019*
    - Median Operative Time: **103 minutes (TKA)**
    - The Johns Hopkins University – 4 hospitals 2 community centers and 2 academic medical centers
    - 6,003 cases, primary TKA
    - 41 surgeons
    - EHR data from 2015-2018

2. *Is operative Time a Predictor for Post-Operative Infection in Primary Total Knee Arthroplasty?; Anis, 2019*
    - Median Operative Time: **102 minutes (TKA)**
    - Cleveland Clinic and Lenox Hill: 16 centers
    - 11,840 cases primary TKA
    - EHR data 2014-2017

3. *Average Operative Times for 1,313 Primary TKA and 1,300 TKA over 39 Months Are Roughly Equal to Medicare Attributed Operative Times; Shah, 2019*
    - Median Operative Time: **113 minutes (TKA) and 99 minutes (THA)**
    - Columbia University
    - 4 surgeons
    - Data from 2015-March 2019

27130 ***Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft***
The RUC reviewed the survey results from 206 orthopaedic and hip/knee surgeons and determined a work RVU of 19.60 appropriately accounts for the work required to perform 27130. The RUC developed this recommendation by crosswalking 27130 to the work of 63075 *Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace* (work RVU = 19.60 and 90 minutes intra-service time, 355 minutes of total time). These two services require similar total time and complexity. The RUC also noted that the work of 27130 and 27447 require the same physician time and complexity to perform and therefore should be valued the same. For further

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

support, the RUC reviewed CPT codes 45400 *Laparoscopy, surgical; proctopexy (for prolapse)* (work RVU = 19.44 and 100 minutes intra-service time), 44188 *Laparoscopy, surgical, colostomy or skin level cecostomy* (work RVU=19.35 and 90 minutes intra-service time) and CPT code 35650 *Bypass graft, with other than vein; axillary-axillary* (work RVU = 20.16 and 110 minutes intra-service time) and agreed that these services require similar work and intensity. The RUC also reviewed key reference service 23472 *Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))* (work RVU=22.13) and agreed that the physician work and time is greater for CPT 23472, thus appropriately valued higher.
The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning, 15 minutes scrub/dress/wait time, 100 minutes intra-service time, 20 minutes immediate post-service time. The RUC indicated that the intra-service time of 100 minutes is confirmed by the RUC survey of 206 physician performing this service as well as the three studies sited above, from three large institutions and over 20,000 total hip/knee arthroplasties.

The RUC reviewed and discussed the appropriate number and level of post-operative visits and determined that two hospital visits (2) 99232, one discharge day (1) 99238, and three office visits (3) 99213 were appropriate. The RUC noted that one of the currently bundled hospital visits (1) 99231 is no longer typical. The RUC noted that the typical length of stay, thus hospital visits, have decreased from four visits prior to 2013 to two visits now in 2019 due to the pre-operative identification and optimization of medical co-morbidities work not explicitly captured in the standard survey or pre-service time. The survey data confirmed that it is typical for the physician to perform an Evaluation and Management (E/M) service later the same day of surgery to evaluate wound, complete neuromuscular exam and assess the need for continued antibiotics. A second hospital visit occurs on post-operative day 1 and the patient is typically discharged on post-operative day 2. **The RUC recommends a work RVU of 19.60 for CPT code 27130.**

27447 ***Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)***
The RUC reviewed the survey results from 206 orthopaedic and hip/knee surgeons and determined a work RVU of 19.60 appropriately accounts for the work required to perform 27447. The RUC developed this recommendation by crosswalking 27447 to the work of 63075 *Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace* (work RVU = 19.60, 90 minutes intra-service time, 355 minutes of total time). These two services require similar total time and complexity. The RUC also noted that the work of 27130 and 27447 require the same physician time and complexity to perform and therefore should be valued the same. For further support, the RUC reviewed CPT codes 45400 *Laparoscopy, surgical; proctopexy (for prolapse)* (work RVU = 19.44 and 100 minutes intra-service time), 44188 *Laparoscopy, surgical, colostomy or skin level cecostomy* (work RVU=19.35 and 90 minutes intra-service time) and CPT code 35650 *Bypass graft, with other than vein; axillary-axillary* (work RVU = 20.16 and 110 minutes intra-service time) and agreed that these services require similar work and intensity. The RUC also reviewed key reference service 23472 *Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))* (work RVU=22.13) and agreed that the physician work and time is greater for CPT 23472, thus appropriately valued higher.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning, 15 minutes scrub/dress/wait time, 97 minutes intra-service time, 20 minutes immediate post-service time. The RUC indicated that the intra-service time of 97 minutes is confirmed by the RUC survey of 206 physician performing this service as well as the three studies sited above, from three large institutions and over 20,000 total hip/knee arthroplasties.

The RUC reviewed and discussed the appropriate number and level of post-operative visits and determined that two hospital visits (2) 99232, one discharge day (1) 99238, and three office visits (3) 99213 were appropriate. The RUC noted that one of the currently bundled hospital visits (1) 99231 is no longer typical. The RUC noted that the typical length of stay, thus hospital visits, have decreased from four visits prior to 2013 to two visits now in 2019 due to the pre-operative identification and optimization of medical co-morbidities work not explicitly captured in the standard survey or pre-service time. The survey data confirmed that it is typical for the physician to perform an Evaluation and Management (E/M) service later the same day of surgery to evaluate wound, complete neuromuscular exam and assess the need for continued antibiotics. A second hospital visit occurs on post-operative day 1 and the patient is typically discharged on post-operative day 2. **The RUC recommends a work RVU of 19.60 for CPT code 27447.**

Practice Expense
The Practice Expense Subcommittee thoroughly discussed the clinical staff time for pre-service pre-operative planning activities. The survey respondents indicated, and the specialty societies recommended the median of 90 minutes to provide these services. The PE Subcommittee accepted the compelling evidence that the clinical work involved in the services had changed. Based on acceptance of compelling evidence. The PE Subcommittee entertained accepting the specialty society recommendation of an additional 30 minutes or an alternative of 15 minutes for these activities. The PE Subcommittee noted that the standard pre-service time package is 60 minutes for 090-day global period services, which was the survey 25th percentile. The PE Subcommittee entertained accepting the specialty society recommendation of an additional 30 minutes or an alternative of 15 minutes for these activities. The Subcommittee questioned who is performing the pre-operative planning work and at what setting: the orthopaedic practice, the consulting physician's practice or hospital employees. The PE Subcommittee noted that adding additional clinical staff time for these services would create an anomaly and provide discrepancies with other 090-day global services. Ultimately, the PE Subcommittee did not accept additional clinical staff time for these pre-service activities. The RUC also discussed capturing this additional clinical staff time and agreed with the PE Subcommittee not to capture any additional pre-operative planning time for clinical staff. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee**.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:27130 Tracking Number Original Specialty Recommended RVU: **20.72**
Presented Recommended RVU: **20.72**
Global Period: 090 Current Work RVU: **20.72** RUC Recommended RVU: **19.60**

CPT Descriptor: Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female has hip osteoarthritis not responding to non-operative treatment. A total hip arthroplasty (THA) is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 83%

Description of Pre-Service Work: On the day before and/or the day of surgery, the surgeon and/or qualified health care provider will complete the following work: Interview and examine the patient to confirm that the medical status and physical findings have not changed; update and sign the H&P; review the planned procedure and postoperative management with the patient and family; confirm or update the consent; sign or mark the operative site; re-review results of preadmission testing, including laboratory studies, X-rays and/or CT scans, with special attention to radiographs that were used for sizing and ordering of special implants or allografts; confirm timing and administration of antibiotics; assure appropriate selection, timing, and administration of DVT prophylaxis; verify all required instruments and supplies are available, including intraoperative fluoroscopy and cell saver; confirm all potential implants are available for possible use in the OR; prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team; place Foley catheter when indicated and/or requested by anesthesia; assist with positioning patient (lateral decubitus or supine traction table); pad bony prominences and apply thermal regulation drapes; prep and drape; mark surgical incision; and perform a second brief time out with the surgical team.

Description of Intra-Service Work: After incising the skin and the fascia, dissection is completed for exposure of the femur and acetabulum. The limb length is assessed by placing markers in the pelvis and the femur. A capsulotomy is performed and the femoral head is dislocated. A femoral neck osteotomy at the proper height is performed. The femoral canal is opened and reamed and then sequential rasping is performed with the broach/trial femoral component until correct rotational and axial stability is achieved. A calcar planer is used on the femoral neck osteotomy, when indicated, to fashion the bone. Additional dissection and releases are performed as needed to expose the acetabulum. Appropriate retractors are placed anteriorly as well as posteriorly. All excess capsule and redundant labrum is removed. All osteophytes are removed. The base of the acetabulum identified by utilizing a small reamer. Once the reamer is placed down to the medial wall of the acetabulum, sequential reamers are used in 1-2 mm increments up to the correct size based on the axial and off-center loading of the reamers. Trial acetabular implants are inserted and the hip is reduced. The stability of the leg is checked. The length of the leg is measured and the implants are adjusted as necessary. Once the proper implant sizing and joint stability are confirmed, the final femoral and acetabular components are inserted. The hip joint is reduced. A final check is made for stability, limb length, ROM and impingement. Sponge and needle counts are confirmed. The wound is copiously irrigated with saline and/or other solutions. The wound is closed in multiple layers, being careful to reattach the muscles to the proper structures.

Description of Post-Service Work: Immediate postoperative work through discharge from recovery room includes: application of sterile dressings; removal of drapes; waiting for reversal of anesthesia and extubation; assisting in transfer of the patient from the OR table to a stretcher or bed; assessing limb length and rotational alignment; assisting in transport of patient from operating room to recovery room; monitoring patient stabilization in the recovery room; completing a careful neurologic and vascular examination of the extremity; discussing postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient controlled analgesia; discussing procedure and outcome with patient and family and answering questions; entering a brief operative note and a full operative report in the medical record; calling referring physician and/or sending a copy of the operative note; writing comprehensive orders for PACU and floor care; completing medication reconciliation; ordering and reviewing postoperative radiographs; and entering procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Hospital visit #1 (day of surgery later in the day) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing vital signs, I/O, labs, and other related data; reviewing findings and outcome with patient and/or family; assessing pain control and response to current medications; modify orders accordingly; assessing urinary function; examining the surgical site; reinforce dressing as needed; assessing limb length, position and alignment; checking neurovascular status; assessing function of drains; repositioning the limb and/or immobilization devices as needed; counseling the patient and/or family regarding therapy protocol; answer questions; counseling the patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; reviewing postoperative radiographs; communicating and coordinating care with medical consult and other physicians; communicating and coordinating pain control with anesthesia, including status of current modalities (eg, blocks, catheters); updating orders; and writing “postoperative check” progress note.

Hospital visit #2 (postoperative day 1) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing PT/OT notes; discussing status and progress with PT/OT staff; reviewing discharge plan notes; discussing status and progress with case management; coordinating discharge plans; reviewing notes from other physicians; discussing status as appropriate; reviewing vital signs, I/O, labs and other related data; interviewing patient and obtaining interval history; assessing pain control and response to current medications; assessing gastrointestinal and urinary function; examining surgical site; change or reinforce dressing as needed; assessing limb alignment, position and ROM; checking neurovascular status; repositioning limb and/or immobilization devices as needed; assessing function of drain and remove as indicated; counseling patient and/or family regarding therapy protocol and answering questions;; counselling patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; discussing discharge plans with patient and/or family as well as case manager and nursing staff; communicating and coordinating care with other physicians (eg, medical consult, anesthesia/pain, critical care); writing daily progress notes; and updating orders.

Hospital discharge management (postoperative day #2) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing PT/OT notes; discussing status and progress with PT/OT staff; reviewing discharge plan notes; discussing status and progress with case management; finalizing and confirming discharge plans; reviewing notes from other physicians and discussing as appropriate; reviewing vital signs, I/O, labs and other related data; interviewing patient and obtaining interval history; assessing pain control and response to current medications; assessing gastrointestinal and urinary function; examining surgical site; changing dressing as needed; assessing limb alignment and ROM; checking neurovascular status; repositioning limb and/or immobilization devices as needed; finalizing and confirming discharge plans with patient and/or family; counselling patient and/or family regarding therapy protocol and activity limitations after discharge; reviewing postoperative instructions (eg, wound care, pain medications, VTE prophylaxis); completing daily progress note; completing discharge summary and associated forms and documents; writing prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); checking narcotic prescription registries; writing orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility, or home.; completing medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicating and coordinating follow-up care with other physicians; and entering postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit #1: Review PT/OT and/or rehab/SNF notes; review results of labs (eg, INR, Hb, Plts); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility and progress with PT/OT; assess gastrointestinal and urinary function; remove/change dressing; examine surgical site; remove sutures or staples; apply steri-strips; assess limb length, alignment, swelling, strength and ROM; check neurovascular status; review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg,

colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry)

Office visit #2: Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility and progress with PT/OT; assess gastrointestinal and urinary function; examine surgical site; assess limb length, alignment swelling, strength and ROM; check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding return to driving; complete temporary handicap parking forms; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back-to-work and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visits #3: Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility and progress with PT/OT; assess gastrointestinal and urinary function; examine surgical site; assess limb length, alignment swelling, strength and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back-to-work and other related forms; communicate and coordinate care with other physicians (eg, PCP, Rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

A public nomination was submitted to CMS in February 2018 indicating seven CPT codes as potentially misvalued, including total hip arthroplasty (27130). This nomination was made by Anthem, Inc., the largest for-profit managed care health insurance company in the Blue Cross and Blue Shield Association. Anthem administers Medicare, Medicaid and commercial health insurance plans.

Prior to publication of the CY 2019 MPFS final rule, at the October 2018 RUC meeting, the RAW noted that "this is a process issue and without more information on how these services were identified and rationale to review these services, the Workgroup will wait until the final rule for more information to determine whether to review these services." In the final rule, CMS stated there is value in consistent and routine review of high-volume services, because a minor adjustment to a high volume code may have a significant financial impact. RUC then placed the codes identified by Anthem on an LOI to survey for the April 2019 RUC meeting.

At the April 2019 RUC meeting, the American Academy of Orthopaedic Surgeons (AAOS) and the American Association of Hip and Knee Surgeons (AAHKS) recommended that the RUC reaffirm the current value of 20.72 for code 27130 and also reaffirm the current time and visits. The RUC voted against this proposal and requested that AAOS and AAHKS conduct a standard RUC survey and present a recommendation at the October 2019 RUC meeting.

June 2019 Request to Research Subcommittee for a Revised Survey Instrument

During preparation for the survey, the AAOS and AAHKS determined that the current standard 90-day global survey instrument does not adequately capture the extent of work performed by surgeons and other qualified health care providers (QHPs) in the pre- and postoperative period for the hip and knee total joint arthroplasty codes (27130, 27447). The societies also provided a compelling argument that there was significant clinical staff preoperative work related to patient optimization. A request was submitted for a revised survey instrument for discussion during the June 4, 2019 Research Subcommittee conference call. Several peer reviewed articles and extensive information on time required for pre- and postoperative work by physicians/QHPs and clinical staff were provided to support this request.

The Research Subcommittee agreed to add a question about clinical staff preoperative time, but did not agree to add questions about preoperative time for planning and optimization and postoperative work independent of hospital and office face-to-face visits. The rationale provided by the subcommittee was that the additional questions requested are not used for other codes with a 90-day global period. However, the Research Subcommittee noted that the specialties can recommend additional time beyond the pre-service package times if they believe it is supported by the literature, the survey, and is typical.

Subsequent to the June 2019 Research Subcommittee, AAOS and AAHKS finalized the approved survey instrument and conducted a random survey of AAOS and AAHKS members.

A total of 2,650 survey requests were sent out and 206 non-conflicted responses were received.

RECOMMENDATIONS

Work RVU

The current work RVU of 20.72 is recommended. This is below the survey median of 24.00 and below the survey 25th percentile of 22.50.

Pre-service time

Pre-time package 4 is selected: difficult patient / difficult procedure.

Evaluation time: We recommend adding 30 minutes to the standard package time of 40 minutes (total of 70 minutes) to account for significant additional preoperative time to optimize a patient prior to total joint replacement surgery.

Total hip arthroplasty is increasingly part of a mandatory Medicare bundled payment program (Comprehensive Care for Joint Replacement [CJR]) or an optional Medicare bundled payment program (Bundled Payment for Care Initiative [BPCI]). Similar alternative payment models are employed in many states by both Medicaid and private insurers. Physicians are also more commonly participating in accountable care organization programs with Medicare, Medicaid and private insurers. In all of these programs, physicians and hospitals have financial incentives to reduce costs and improve quality.

Preoperative identification and optimization of medical co-morbidities has been shown to shorten hospital length of stay and reduce complications, including readmissions. In a 2019 New England Journal of Medicine (NEJM) study on the outcomes of patients in the CJR program, the mean number of chronic medical conditions was seven. Considerable work by the surgeon and QHPs is required to facilitate, coordinate, validate and document the assessment and optimization of patients prior to total joint replacement surgery. Patients are more frequently discharged home rather than to inpatient rehabilitation or skilled nursing facilities. This deliberate reduction in post-acute care service requires considerable work by the surgeon and QHPs prior to surgery.

All of this work is not explicitly captured in the standard RUC survey, nor is it included in the current RUC pre-time packages, but the work is certainly being performed on a routine basis for the typical patient. The specific tasks are noted above in the description of the pre-service work.

Positioning: Twelve minutes have been added to the standard package time of 3 minutes (total of 15 minutes) to account for positioning the patient lateral decubitus or supine on a traction top table. This is consistent with both the survey median and historical RUC precedent for many similar orthopaedic codes.

Scrub, dress and wait: Five minutes have been subtracted from the standard package of 20 minutes (total time of 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected: general anesthesia or complex regional block / complex procedure. Thirteen minutes have been subtracted to be consistent with the survey median.

Hospital Visits

We recommend 99232 x 2 and 99238 x 1 which is consistent with the survey median. This is a decrease of one hospital visit compared to the 2013 data which is the result of the considerable pre-service time expended on optimizing the patient for total joint replacement surgery. The first hospital visit occurs later on the same day as surgery; 83% of respondents reported that they completed this E/M encounter. The second hospital visit occurs on postoperative day #1. The specific tasks for both visits are detailed in the section for the description of the post-service work and support a level 99232 for both encounters. The patient is typically discharged on postoperative day #2 which is indicated by the discharge day code 99238. Patients may be seen more than once on these days (eg, morning and afternoon) to coordinate care and facilitate discharge.

Office Visits

We recommend 99213 x 3 which is consistent with the survey median.

SUMMARY

The transition to value-based alternative payment models has facilitated care delivery redesign for total hip arthroplasty, resulting in a shorter hospital length of stay, diminished utilization of post-acute care facilities, lower rates of hospital readmissions and reduced costs. A key change in this evolution is an increasing emphasis on preoperative optimization of patients prior to surgery with a corresponding shift in resource utilization to the pre-service period.

AAOS and AAHKS recommend the current work RVU of 20.72, which is below the survey 25th percentile; this is well supported by the survey results from a representative and robust survey with 206 respondents.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27130

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 83%

Description of Pre-Service Work:

On the day before and/or the day of surgery, the surgeon and/or qualified health care provider will complete the following work: Interview and examine the patient to confirm that the medical status and physical findings have not changed; update and sign the H&P; review the planned procedure and postoperative management with the patient and family; confirm or update the consent; sign or mark the operative site; re-review results of preadmission testing, including laboratory studies, X-rays and/or CT scans, with special attention to radiographs that were used for sizing and ordering of special implants or allografts; confirm timing and administration of antibiotics; assure appropriate selection, timing, and administration of DVT prophylaxis; verify all required instruments and supplies are available, including intraoperative fluoroscopy and cell saver; confirm all potential implants are available for possible use in the OR; prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team; place Foley catheter when indicated and/or requested by anesthesia; assist with positioning patient, pad bony prominences, and apply thermal regulation drapes; assess position of the extremities and head and adjust as needed; place patient's leg properly on the table and position with proper bolstering to aid surgical exposure; place a tourniquet on the proximal thigh; prep and drape; mark surgical incision; and perform a second brief time out with the surgical team.

Description of Intra-Service Work: After the tourniquet is elevated and following exsanguination, an acceptable surgical incision is utilized to expose the joint. After everting or subluxating the patella, appropriate soft tissue elevation and removal is performed to expose and visualize the joint. Care and attention are utilized to evaluate the ligament balance of the knee. Final ligament balancing usually occurs after the bony cuts are performed. The remnant meniscal tissue and overlying osteophytes are removed and if indicated, the cruciate ligaments are released. The patella is measured and then the articular surface is resected at the appropriate depth. The optimal component size is selected and the fixation holes drilled. The femur intramedullary canal is drilled and the distal femoral cutting block is applied. The alignment of the block is confirmed and the distal femoral resection is made. The AP and ML size of the distal femur is evaluated and the appropriate implant size selected following which the remaining chamfer and AP bone cuts of the distal femur are made. The tibia is subluxated forward and the tibial cutting guide is applied, the optimal position in all planes confirmed and the bone cut made. The tibia is sized for the appropriate implant and the bone prepared. The trial components are inserted and a trial reduction of the prosthetic knee is performed. Overall limb alignment, soft tissue and ligamentous balance and prosthetic interactions are assessed. Further refinement of the soft tissue balance, the bone resections for alignment and the

prosthetic implant interaction are performed as indicated to optimize the prosthetic longevity. Trials are then removed. The bony surfaces are cleaned with pulsatile lavage. The final implants are cemented into place. Trial tibial inserts are placed to confirm appropriate sizing. The final polyethylene insert is then placed onto the tibial prosthesis. Knee stability, range of motion and alignment are again confirmed. The tourniquet is released, hemostasis obtained, a deep drain placed and the wound closed in layers.

Description of Post-Service Work:
Immediate postoperative work through discharge from recovery room includes: application of sterile dressings; removal of drapes; waiting for reversal of anesthesia and extubation; assisting in transfer of the patient from the OR table to a stretcher or bed; assessing limb length and rotational alignment; assisting in transport of patient from operating room to recovery room; monitoring patient stabilization in the recovery room; completing a careful neurologic and vascular examination of the extremity; discussing postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient controlled analgesia; discussing procedure and outcome with patient and family and answering questions; entering a brief operative note and a full operative report in the medical record; calling referring physician and/or sending a copy of the operative note; writing comprehensive orders for PACU and floor care; completing medication reconciliation; ordering and reviewing postoperative radiographs; and entering procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Hospital visit #1 (day of surgery later in the day) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing vital signs, I/O, labs, and other related data; reviewing findings and outcome with patient and/or family; assessing pain control and response to current medications; modify orders accordingly; assessing urinary function; examining the surgical site; reinforce dressing as needed; assessing limb length, position and alignment; checking neurovascular status; assessing function of drains; repositioning the limb and/or immobilization devices as needed; counseling the patient and/or family regarding therapy protocol; answer questions; counseling the patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; reviewing postoperative radiographs; communicating and coordinating care with medical consult and other physicians; communicating and coordinating pain control with anesthesia, including status of current modalities (eg, blocks, catheters); updating orders; and writing “postoperative check” progress note.

Hospital visit #2 (postoperative day 1) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing PT/OT notes; discussing status and progress with PT/OT staff; reviewing discharge plan notes; discussing status and progress with case management; coordinating discharge plans; reviewing notes from other physicians; discussing status as appropriate; reviewing vital signs, I/O, labs and other related data; interviewing patient and obtaining interval history; assessing pain control and response to current medications; assessing gastrointestinal and urinary function; examining surgical site; change or reinforce dressing as needed; assessing limb alignment, position and ROM; checking neurovascular status; repositioning limb and/or immobilization devices as needed; assessing function of drain and remove as indicated; counseling patient and/or family regarding therapy protocol and answering questions;; counselling patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; discussing discharge plans with patient and/or family as well as case manager and nursing staff; communicating and coordinating care with other physicians (eg, medical consult, anesthesia/pain, critical care); writing daily progress notes; and updating orders.

Hospital discharge management (postoperative day #2) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing PT/OT notes; discussing status and progress with PT/OT staff; reviewing discharge plan notes; discussing status and progress with case management; finalizing and confirming discharge plans; reviewing notes from other physicians and discussing as appropriate; reviewing vital signs, I/O, labs and other related data; interviewing patient and obtaining interval history; assessing pain control and response to current medications; assessing gastrointestinal and urinary function; examining surgical site; changing dressing as needed; assessing limb alignment and ROM; checking neurovascular status; repositioning limb and/or immobilization devices as needed; finalizing and confirming discharge plans with patient and/or family; counselling patient and/or family regarding therapy protocol and activity limitations after discharge; reviewing postoperative instructions (eg, wound care, pain medications, VTE prophylaxis); completing daily progress note; completing discharge summary and associated forms and documents; writing prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); checking narcotic prescription registries; writing orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility, or home.; completing medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicating and coordinating follow-up care with other physicians; and entering postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit #1: Review PT/OT and/or rehab/SNF notes; review results of labs (eg, INR, Hb, Plts); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility and progress with PT/OT; assess gastrointestinal and urinary function; remove/change dressing; examine surgical site; remove sutures or staples; apply steri-strips; assess limb length, alignment, swelling, strength and ROM; check neurovascular status; review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry)

Office visit #2: Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility and progress with PT/OT; assess gastrointestinal and urinary function; examine surgical site; assess limb length, alignment swelling, strength and ROM; check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding return to driving; complete temporary handicap parking forms; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back-to-work and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visits #3: Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility and progress with PT/OT; assess gastrointestinal and urinary function; examine surgical site; assess limb length, alignment swelling, strength and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back-to-work and other related forms; communicate and coordinate care with other physicians (eg, PCP, Rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	72%	22%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

A public nomination was submitted to CMS in February 2018 indicating seven CPT codes as potentially misvalued, including total knee arthroplasty (27447). This nomination was made by Anthem, Inc., the largest for-profit managed care health insurance company in the Blue Cross and Blue Shield Association. Anthem administers Medicare, Medicaid and commercial health insurance plans.

Prior to publication of the CY 2019 MPFS final rule, at the October 2018 RUC meeting, the RAW noted that "this is a process issue and without more information on how these services were identified and rationale to review these services, the Workgroup will wait until the final rule for more information to determine whether to review these services." In the final rule, CMS stated there is value in consistent and routine review of high-volume services, because a minor adjustment to a high volume code may have a significant financial impact. RUC then placed the codes identified by Anthem on an LOI to survey for the April 2019 RUC meeting.

At the April 2019 RUC meeting, the American Academy of Orthopaedic Surgeons (AAOS) and the American Association of Hip and Knee Surgeons (AAHKS) recommended that the RUC reaffirm the current value of 20.72 and also reaffirm the current time and visits. The RUC voted against this proposal and requested that AAOS and AAHKS conduct a standard RUC survey and present a recommendation at the October 2019 RUC meeting.

June 2019 Request to Research Subcommittee for a Revised Survey Instrument

During preparation for the survey, the AAOS and AAHKS determined that the current standard 90-day global period survey instrument does not adequately capture the extent of work performed by physicians and qualified health care providers (QHPs) in the pre- and post-operative period for the hip and knee total joint arthroplasty codes (27130, 27447). The societies also provided a compelling argument that there was significant clinical staff pre-service work related to patient optimization. A request was submitted for a revised survey instrument for discussion during the June 4, 2019 Research Subcommittee conference call.

Several peer reviewed articles and extensive information on time required for pre- and post-operative work by physicians/QHPs and clinical staff were provided to support this recommendation. The Research Subcommittee agreed to add a question about clinical staff pre-service time but did not agree to add questions about pre-service time for planning and optimization and post-operative work independent of hospital and office face-to-face visits. The rationale was that the same questions are not used for other codes with a 90-day global period. However, the Research Subcommittee noted that the specialties can recommend additional time beyond the pre-service package times, if they believe it is supported by the literature, the survey, and is typical.

Subsequent to the June 2019 Research Subcommittee, AAOS and AAHKS finalized the approved survey instrument and conducted a random survey of AAOS and AAHKS members.

A total of 2,650 survey requests were sent out and 206 non-conflicted responses were received.

RECOMMENDATIONS

Work RVU:

The current work RVU of 20.72 is recommended. This is below the survey median of 24.00 and below the survey 25th percentile of 22.14.

Pre-service time:

Pre-time package 4 is selected: difficult patient / difficult procedure.

Evaluation time: We recommend adding 30 minutes to the standard package time of 40 minutes (total of 70 minutes) to account for significant additional pre-operative time to optimize a patient prior to total joint replacement surgery.

Total knee arthroplasty is increasingly part of a mandatory Medicare bundled payment program (Comprehensive Care for Joint Replacement [CJR]) or an optional Medicare bundled payment program (Bundled Payment for Care Initiative [BPCI]). Similar alternative payment models are employed in many states by both Medicaid and private insurers. Physicians are also more commonly participating in accountable care organization programs with Medicare, Medicaid and private insurers. In all of these programs, physicians and hospitals have financial incentives to reduce costs and improve quality.

Pre-operative identification and optimization of medical co-morbidities has been shown to shorten hospital length of stay and reduce complications, including readmissions. In a 2019 New England Journal of Medicine (NEJM) study on the outcomes of patients in the CJR program, the mean number of chronic medical conditions was seven. Considerable work by the surgeon and QHPs is required to facilitate, coordinate, validate and document the assessment and optimization of patients prior to total joint replacement surgery. Patients are more frequently discharged home rather than to inpatient rehabilitation or skilled nursing facilities. This deliberate reduction in post-acute care service requires considerable work by the surgeon and QHPs prior to surgery.

All of this work is not explicitly captured in the standard RUC survey, nor is it included in the current RUC pre-time packages, but the work is certainly being performed on a routine basis for the typical patient. The specific tasks are noted above in the description of the pre-service work.

Positioning: Twelve minutes have been added to the standard package time of 3 minutes (total of 15 minutes) to account for positioning the patient supine; apply a tourniquet; confirm tourniquet settings and validate function. This is consistent with both the survey median and historical RUC precedent for many similar orthopaedic codes.

Scrub, dress and wait: Five minutes have been subtracted from the standard package of 20 minutes (total time of 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected: general anesthesia or complex regional block / complex procedure. Thirteen minutes have been subtracted to be consistent with the survey median.

Hospital Visits

We recommend 99232 x 2 and 99238 x 1 which is consistent with the survey median. This is a decrease of one hospital visit compared to the 2013 data which is the result of the considerable pre-service time expended on optimizing the patient for total joint replacement surgery. The first hospital visit occurs later on the same day as surgery; 83% of respondents reported that they completed this E/M encounter. The second hospital visits occurs on post-operative day #1. The specific tasks for both visits are detailed in the section for the description of the post-service work and support a level 99232 for both encounters. The patient is typically discharged on post-operative day #2 which is indicated by the discharge day code 99238. Patients may be seen more than once on these days (e.g. morning and afternoon) to coordinate care and facilitate discharge.

Office Visits

We recommend 99213 x 3 which is consistent with the survey median.

SUMMARY

The transition to value-based alternative payment models has facilitated care delivery redesign for total hip arthroplasty, resulting in a shorter hospital length of stay, diminished utilization of post-acute care facilities, lower rates of hospital readmissions and reduced costs. A key change in this evolution is an increasing emphasis on pre-operative optimization of patients prior to surgery with a corresponding shift in resource utilization to the pre-service period.

AAOS and AAHKS recommend the current work RVU of 20.72, which is below the survey 25th percentile; this is well supported by the survey results from a representative and robust survey with 206 respondents.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27447

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. nationale data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
306,305 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2018 RUC database

Specialty orthopaedic surgery Frequency 306000 Percentage 99.90 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - Knee replacement

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 27447

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION

Meeting Date: 10/2019

CPT Code	Long Descriptor	Global Period
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft	090
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
27130	A 72-year-old female has hip osteoarthritis not responding to non-operative treatment. A total hip arthroplasty (THA) is performed.
27447	A 74-year-old female has knee osteoarthritis not responding to non-operative treatment. A total knee arthroplasty (TKA) is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   A panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The specialty societies also submitted a request to the RUC Research Subcommittee to add an additional question to the standard RUC survey regarding pre-service clinical staff time. The Research Subcommittee approved the request and the following question was added to the survey:

Background for Question 7: Clinical Staff Time

The purpose of this question is to capture the clinical staff time provided by health care professionals who are paid by your practice and cannot bill separately, such as registered nurses (RNs), licensed practical nurses (LPNs), and certified medical assistants (MA), or other clinical staff employed in your practice. Do not count the clinical staff time for any separately reported services performed on the same date or other dates (eg, chronic care management services performed during the month).

Clinical staff activities DO NOT INCLUDE time for any administrative activities no matter who performs these services, including:

- Obtain referral documents
- Schedule patient/remind patient of appointment
- Obtain medical records/manage patient database/develop chart
- Pre-certify patient/conduct pre-service billing
- Verify insurance/register patient
- Transcribe results/file and manage patient records
- Schedule subsequent post service follow-up visits
- Conduct billing and collection activities

QUESTION 7: Pre-operative CLINICAL STAFF TIME: How much total time does your clinical staff (eg, RN, LPN, MA) spend per patient on the following planning, preparation, optimization and care coordination activities prior to surgery?

Please include the CLINICAL STAFF TIME for planning the case and preparation of the patient prior to the procedure, but separate and after the decision-for-surgery visit, which may include the following activities:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION

- Schedule space and equipment in the operating room.
- Coordinate pre-operative services (including test results).
- Coordinate pre-operative assessment with anesthesia.
- Coordinate pre-operative services with physical therapy, case manager and/or social worker.
- Provide pre-operative education.
- Coordinate final clearance assessment.
- Complete pre-operative phone calls, e-mails, or other communications with patient, family and other providers to coordinate care and optimization.
- Complete pre-operative phone calls, e-mails, or other communications with patient or family to review preparation and instructions (eg, NPO, medications, antibiotic shower).

	27447	27130
TOTAL Pre-operative CLINICAL STAFF TIME (minutes)		

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

Current codes are used for reference.

3. Is this code(s) typically reported with an E/M service?

No

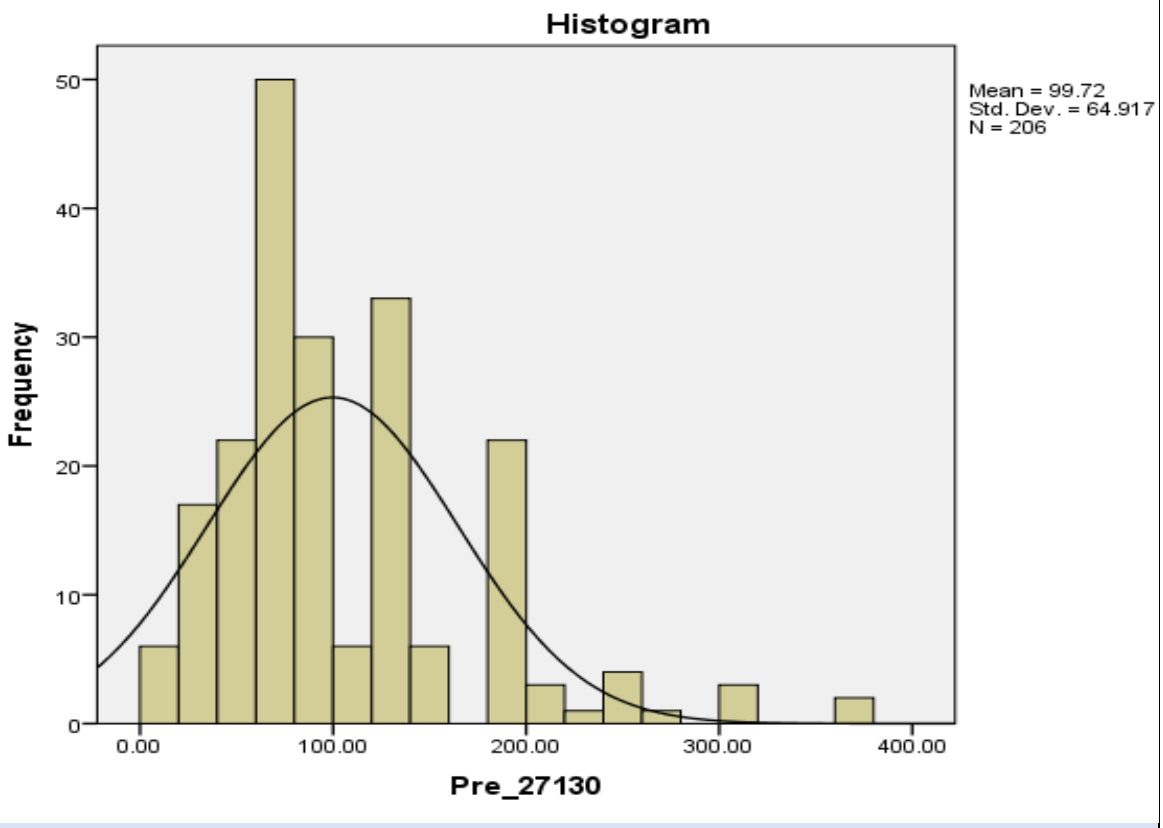
4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

The clinical staff time involved in providing total joint arthroplasty has changed considerably in the past six plus years since 27130 and 27447 were last surveyed (2012/2013). Since 2013 the use of pre-operative optimization protocols for Total Joint patients has become typical and involves a considerable change in work done by clinical staff prior to surgery.

These activities include

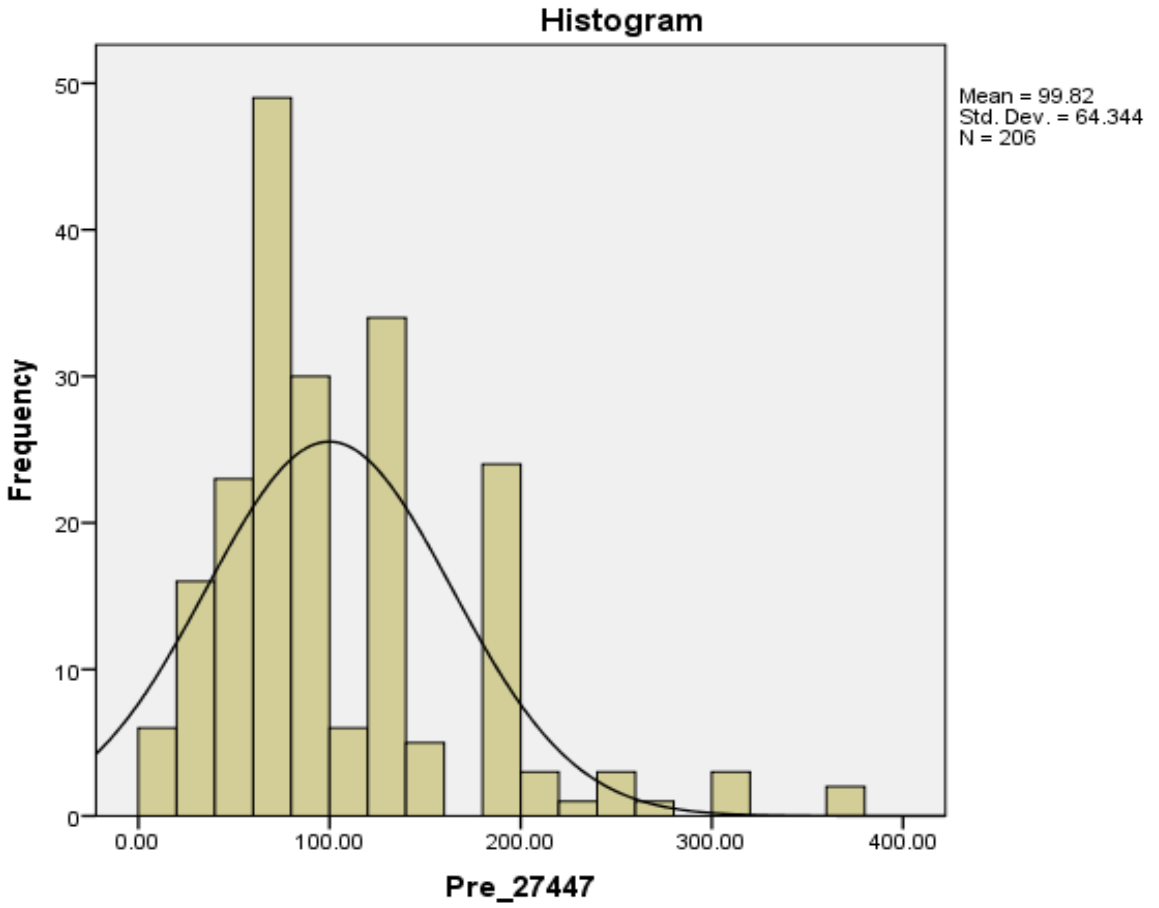
- Schedule space and equipment in OR.
- Coordinate pre-surgery services (including test results).
- Coordinate pre-operative assessment with anesthesia.
- Coordinate pre-operative services with physical therapy, case manager and/or social worker.
- Provide pre-operative education.
- Coordinate final clearance assessment.
- Complete pre-operative phone calls, e-mails, or other communications with patient, family and other providers to coordinate care and optimization.
- Complete pre-operative phone calls, e-mails, or other communications with patient or family to review preparation and instructions (eg, NPO, medications, antibiotic shower).

Previous surveys did not address this work, and we believe the additional work merited survey, which compelled the societies to request the additional question. We believe the survey results illustrate that indeed the clinical work is greater in the pre-service period than in previous years and is



AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION

sufficiently different from the clinical standard. Please see the following literature on pre and post-service work done non face-to-face in Total Hip Arthroplasty and Total Knee Arthroplasty.



SUMMARY OF SURVEY RESPONDENTS TO CLINICAL STAFF QUESTION

Summary of Data for Question 7, Tab 11-Hip/Knee Arthroplasty in minutes

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

See response to Question 4. Increase in aggregate cost is reflective of increase in pre-service patient optimization time.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

	Complete pre-service diagnostic and referral forms	**5 minutes (standard)**

	Staff reviews all forms with patient and/or caregiver to ensure all relevant history and diagnostic information is included
Coordinate pre-surgery services (including test results)	**30 minutes (20 min standard plus 10 add'l min)** Staff coordinates collection and documentation of test results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Staff coordinate requisite pre-surgery appointments and visits with physical therapy, psychology, and social worker/case worker. Staff receive records from requisite pre-operative visits and incorporate information into optimization protocols and records. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	**8 minutes (standard)** Staff interacts with facility to schedule space, supplies, equipment, and review checklists
Provide pre-service education/obtain consent	**40 minutes (20 min standard plus 20 add'l min)** Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions. Staff conduct in-person pre-surgery course for patients. Staff conduct a pre-clearance assessment and final clearance for surgery
Complete pre-procedure phone calls and prescription	**7 minutes (standard)** Staff reviews preoperative medication changes, reviews patient medical status, confirms preoperative cleansing protocol, and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

12 minutes (standard)

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as:

- Responding to patient/family questions about home activity restrictions/WB status, therapy questions
- Answer questions regarding dressing/wound management, showering/bathing, personal grooming
- Confirmation of home equipment
- Confirmation of discharge ABX if needed, pain medication, use of anticoagulation
- Coordination with PCP's office for transfer of records
- Telephonic or electronic communication assistance with the office, and other necessary management assistance related to the hospitalization.
- Transitioning discharge information to the office medical record, including correspondence and imaging or lab results pending at discharge

c. Post-service period:

108 minutes - standard time for <u>current</u> (2019) office visit E/Ms

Clinical staff will greet the patient, provide gowning, and ensure that all appropriate medical records are available including interval imaging and labs, physical therapy reports, and chart notes from other

physicians. Clinical staff will obtain vital signs, prepare the room and necessary supplies, assist with patient positioning for exam, review and document history, systems and medications. Clinical staff will assist the physician during the exam which may include wound and drain (if present) assessment, neurovascular assessment, ROM assessment, and staple removal when appropriate. Clinical staff will clean the room and answer any patient/family questions about home care including activity limitations and reinforcement of physical therapy activities. Clinical staff will assist the physician with orders for medication and physical therapy changes. Clinical staff will assist with answering patient, family, caregiver, therapist, other clinician questions and help process changes in care.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

13. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

14. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Time is equal to office visit total time based on current (2019) database time.

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS Request – Final Rule for 2021

April 2021

Immunization Administration – Tab 19

After considering public comments to the Proposed Rule for the CY 2021 Medicare Physician Payment Schedule, CMS did not finalize the proposal to crosswalk the valuation of CPT codes 90460, 90471, 90473 and HCPCS codes G0008, G0009, and G0010 to CPT code 36000 *Introduction of needle or intracatheter, vein* (work RVU = 0.18). CMS instead finalized a policy to maintain the CY 2019 payment for nine of the services in the immunization administration family, including the add-on codes. Maintaining the CY 2019 rates for these services also maintained the historical relationship between the base administration codes and the add-on CPT codes 90461, 90472, and 90474, instead of the proposal to value the add-on codes at 50 percent of the base codes. As previously discussed in the Proposed Rule, CMS approximated a cost for these services, but acknowledged the concerns that were raised in the public rulemaking comments received and will continue to seek additional information that specifically reflects the resource costs and inputs that should be considered to establish payment for these services on a long-term basis. CMS welcomes the results of an updated formal review of these services as well as any additional information that may be helpful for valuation in the immediate future. Based on CMS' comments, the RUC reviewed these services at the April 2021 RUC meeting.

Compelling Evidence
The specialties provided compelling evidence that the current values for these services were derived via flawed methodology. The pediatric immunization administration codes, 90460 and 90461, were developed to promote physician counseling of hesitant parents and use of combination vaccines to address decline in national immunization rates and subsequently valued by the RUC in October 2009. However, in the 2011 Medicare Physician Payment Schedule, CMS did not accept the RUC recommendations for 90460 and 90461. Instead, CMS applied the same methodology used for the existing immunization administration codes (90471-90474) to establish the values for 90460 and 90461. CMS valued codes 90471 and 90473 (base) codes by hard coding them to code 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular* and then setting the RVUs for the add-on codes (90472 and 90474) at approximately half the value of the base codes. While the CMS values in and of themselves do not create flawed methodology, the process associated with valuing these codes is flawed for several reasons.

In contrast from how the RUC uses crosswalks to recommend a one-time value for a service for physician work, CMS hard-coded the physician work, PE and PLI RVUs for 90460 to 96372. As a result, when PE inputs for code 96372 were subsequently reduced by the RUC in January 2017, CMS automatically reduced the PE values for 90460 even though the same reductions in clinical staff time did not pertain to 90460. These reductions threatened the US national vaccination program by reducing the value below the Medicaid minimum payment rate for immunization administration. The specialties then began working with CMS to identify an alternative crosswalk methodology to reflect the physician counseling work and practice expense inherent in the service.

As noted above, code 96372 was the same code used by CMS years earlier to value immunization administration code 90471. Both 96372 and 90471 describe the physician work of direct supervision whereas 90460 and 90461 describe a more intense level of physician work involving patient counseling.
CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

In addition to flawed methodology, there is a change in the patient population reflecting growing vaccine hesitancy. Although coverage levels for most childhood vaccines remain relatively high in the United States, numerous studies have documented that vaccine-related confidence has been decreasing among US parents over the past several years[1]. In 2011, only one in five physicians reported that a significant percentage of parents asked to spread out vaccines in a typical month. By 2014, that percentage had grown to 58% of respondents who reported frequent requests for alternative vaccination schedules[2]. Because altered vaccine schedules are associated with reduced vaccine rates and increase in vaccine administration errors, physician counseling is required to confront requests for alternative scheduling. **The RUC agreed that there is compelling evidence that the physician work has changed for these services due to flawed methodology in the recent CMS valuation and the patient population has changed.**

90460 ***Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered***
The RUC reviewed the survey results from 94 physicians and nurse practitioners and determined that the 25th percentile work RVU of 0.24 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes of intra-service time as supported by the survey. The RUC noted that the immunization administration services are typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time recommended is not duplicative from that which is included in the E/M visit.

The pediatric immunization administration codes, 90460 and 90461, require more physician work than the adult immunization administration codes 90471-90474, because they require physician/qualified health care professional counseling. Counseling is typically provided with the adult codes, but it is not required. Secondly, as indicated in the compelling evidence statement, there has been an increase in vaccination hesitancy, which requires counseling with the parents by reviewing a 5-page vaccination information sheet (VIS), discussing the safety, efficacy and health benefits of the vaccinations.

The specialty societies indicated that CPT code 90460 requires slightly more work and is more intense than the recent COVID-19 immunization administration services (work RVU = 0.20 and 7 minutes intra-service time). There are currently four COVID-19 vaccinations in the market, whereas there are approximately 30 different preparations of childhood vaccines on the market. Due to concerns that are often product specific, it increases the intensity and the breadth of the discussion/counseling with the parent for CPT codes 90460 and 90461.

The RUC compared the surveyed code to the top key reference service 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service time) and determined that these services both involve counseling on health risks for patients, require the exact same physician work and time, and therefore should be valued the same.

The RUC also compared 90460 to the second top key reference service 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When*

[1] https://www.tandfonline.com/doi/full/10.4161/hv.25085
[2] https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7242184/
CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

using time for code selection, 10-19 minutes of total time is spent on the date of the encounter (work RVU = 0.70, 11 minutes intra-service time and 16 minutes total time) and determined 90460 requires much less physician work and time to perform, thus is appropriately valued lower.

For additional support, the RUC referenced MPC codes 74019 *Radiologic examination, abdomen; 2 views* (work RVU = 0.23, 4 minutes of intra-service time and 6 minutes total time) and 93922 *Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)* (work RVU = 0.25, 5 minutes of intra-service time and 10 minutes of total time), which require similar physician work and time. The RUC concluded that CPT code 90460 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.24 for CPT code 90460.**

90461 ***Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)*** The RUC reviewed the survey results from 91 physicians and nurse practitioners and determined that the 25th percentile work RVU of 0.18 appropriately accounts for the work required to perform this add-on service. The RUC recommends 5 minutes of intra-service time as supported by the survey. The RUC noted that the immunization administration services are typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time recommended is not duplicative from what is included in the E/M visit.

The pediatric immunization administration codes, 90460 and 90461, require more physician work than the adult immunization administration codes 90471-90474, because they require physician/qualified health care professional counseling. Counseling is typically provided with the adult codes, but it is not required. Secondly, as indicated in the compelling evidence statement, there has been an increase in vaccination hesitancy, which requires counseling with the parents by reviewing a 5-page VIS, discussing the safety, efficacy and health benefits of the vaccinations.

The RUC compared the surveyed code to the top key reference service 96375 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.10- and 4-minutes intra-service time) and determined 90461 requires more physician work, time and intensity, thus should be valued higher.

The RUC also compared 90461 to the second top key reference service 96411 *Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.20, 4 minutes intra-service time and 7 minutes total time) and determined 90461 requires slightly less physician work and time to perform.

For additional support, the RUC referenced MPC codes 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU = 0.17, 3 minutes of intra-service time and 6 minutes total time) and 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.19, 5 minutes of intra-service time and 6 minutes of total time), which require similar physician work and

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

time. The RUC concluded that CPT code 90461 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.18 for CPT code 90461.**

90471 ***Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)***

The RUC reviewed the survey results from 100 physicians and nurse practitioners and determined that the current work RVU of 0.17 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes of intra-service time. The RUC discussed that the survey respondents indicated the median time had decreased. However, after further inspection of the survey results, the specialty societies indicated that the survey median time was skewed by those who completed the survey because it was not representative of those who typically perform this service. Of the 100 survey responses, 83 were from pediatrics and only 17 were from other primary care organizations. The pediatricians are atypical users of the adult codes and do not spend the same amount of time counseling since they would report 90460 and 90461 in those instances. The 17 responses from other primary care organizations support the current time of 7 minutes, thus the RUC agreed there is no evidence to change the physician time. The specialty societies indicated that counseling is typical and provided in over 50% of the adult immunization administration codes 90471 and 90472; however, it is not required.

Survey Data Breakdown

CPT	Specialty	Responses	Response %	Median Time	2019 Medicare Claims Performance
90471	Pediatrics (AAP)	83	83%	3 min	0.5%
	Internal Med (ACP)	6	6%	5 min	26%
	Nurse Practitioners (ANA)	6	6%	9 min	17%
	Ob/Gyn (ACOG)	5	5%	9 min	0.3%
	Family Medicine (AAFP)	0			35%
	Total	100			

The RUC determined that the surveyed was flawed because the respondents who are not the predominant performers of this service skewed the results and further, there is no evidence that the current physician work or time has changed. The RUC concurred that the current work RVU of 0.17 and 7 minutes of intra-service time appropriately account for the work and time required to perform CPT code 90471. This valuation maintains the relativity and rank order with the pediatric immunization administration code, with 90471 being appropriately lower, as there is slightly less education and discussion about vaccination hesitancy that is required for CPT code 90460. The RUC noted that the immunization administration services are typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time recommended is not duplicative from what is included in the E/M visit.

For additional support, the RUC referenced CPT codes 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular* (work RVU = 0.17, 3 minutes intra-service time and 7 minutes total time), 99211 *Office or other outpatient visit*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. (work RVU = 0.18, 5 minutes intra-service and 7 minutes total time) and MPC code 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16, 4 minutes of intra-service time and 6 minutes total time), all which require similar physician work and total time. The RUC concluded that the current value and time of CPT code 90471 should be maintained. **The RUC recommends a work RVU of 0.17 for CPT code 90471.**

90472 ***Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)***
The RUC discussed CPT code 90472 and came to the same determination, as for 90471, that the survey was flawed because the respondents who are not the predominant performers of this service skewed the results. Of the 97 survey responses, 81 were from pediatrics and only 16 were from other primary care organizations. The pediatricians are atypical users of the adult codes and do not spend the same amount of time counseling since they would report 90460 and 90461 in those instances. The 16 responses from other primary care organizations support the current time of 7 minutes, thus the RUC agreed there is no evidence to change the physician time. The specialty societies indicated that counseling is typical and provided in over 50% of the adult immunization administration codes 90471 and 90472; however, it is not required.

Survey Data Breakdown

CPT	Specialty	Responses	Response %	Median Time	2019 Medicare Claims Performance
90472	Pediatrics (AAP)	81	84%	3 min	0.4%
	Internal Med (ACP)	6	6%	5 min	32%
	Nurse Practitioners (ANA)	5	5%	5 min	12%
	Ob/Gyn (ACOG)	5	5%	8 min	0.4%
	Family Medicine (AAFP)	0			42%
	Total	97			

The RUC determined that there is no evidence that the current physician work or time has changed. The RUC concurred that the current work RVU of 0.15 appropriately accounts for the work required to perform this add-on service. The RUC recommends 7 minutes of intra-service time. This valuation maintains the relativity with the pediatric immunization administration code, with 90472 being appropriately lower as there is slightly less education and discussion about vaccination hesitancy that is required for CPT code 90461. The RUC noted that the immunization administration services are typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time recommended is not duplicative from what is included in the E/M visit.

For additional support, the RUC referenced 78730 *Urinary bladder residual study (List separately in addition to code for primary procedure)* (work RVU = 0.15 and 5 minutes of intra-service and total time) and MPC code 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16, 4 minutes of intra-service time and 6 minutes total time). The RUC concluded that the current value and time of CPT code 90472 should be maintained. **The RUC recommends a work RVU of 0.15 for CPT code 90472.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

90473 ***Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid)***
The RUC determined that the survey was flawed because the respondents who are not the predominant performers of this service skewed the results and there is no evidence that the physician work and time has changed for this service.

The RUC agreed with the specialty societies that the work required for the intranasal/oral immunization administration is the same as the intramuscular immunization administration services. The RUC determined that the current work RVU of 0.17 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes of intra-service time. This valuation maintains the relativity and rank order with the pediatric immunization administration code, with 90473 being appropriately lower, as there is slightly less education and discussion about vaccination hesitancy as is required for CPT code 90460. The RUC noted that the immunization administration services are typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time recommended is not duplicative from what is included in the E/M visit.

For additional support, the RUC referenced CPT codes 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular* (work RVU = 0.17, 3 minutes intra-service time and 7 minutes total time), 99211 *Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal.* (work RVU = 0.18, 5 minutes intra-service and 7 minutes total time) and MPC code 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16, 4 minutes of intra-service time and 6 minutes total time), all which require similar physician work and time. The RUC concluded that the current value and time of CPT code 90473 should be maintained. **The RUC recommends a work RVU of 0.17 for CPT code 90473.**

90474 ***Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)***
The RUC determined that the survey was flawed because the respondents who are not the predominant performers of this service skewed the results and there is no evidence that the physician work and time has changed for this service.

The RUC agreed with the specialty societies that the work required for the intranasal/oral immunization administration services are the same as the intramuscular immunization administration services. The RUC determined that the current work RVU of 0.15 appropriately accounts for the work required to perform this add-on service. The RUC recommends 7 minutes of intra-service time. This valuation maintains the relativity with the pediatric immunization administration code, with 90474 being appropriately lower as there is slightly less education and discussion about vaccination hesitancy as is required for CPT code 90461.

For additional support, the RUC referenced 78730 *Urinary bladder residual study (List separately in addition to code for primary procedure)* (work RVU = 0.15 and 5 minutes of intra-service/total time) and MPC code 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16, 4 minutes of intra-service time and 6 minutes total time). The RUC concluded that the current value and time of CPT code 90474 should be maintained. **The RUC recommends a work RVU of 0.15 for CPT code 90474.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

G0008 ***Administration of influenza virus vaccine***
G0009 ***Administration of pneumococcal vaccine***
G0010 ***Administration of hepatitis b vaccine***
HCPCS codes G0008, G0009 and G0010 for the administration of the vaccines are not paid on the Medicare Physician Fee Schedule. The Medicare Claims Processing Manual instructs that beginning March 1, 2003, HCPCS codes G0008, G0009, and G0010 are to be reimbursed at the same rate as HCPCS code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* (recommended work RVU = 0.17 and 7 minutes intra-service time). The specialty societies indicated, and the RUC recommends maintaining that link. **The RUC recommends 7 minutes intra-service time and a work RVU of 0.17 for codes G0008, G0009 and G0010.**

Practice Expense
The Practice Expense (PE) Subcommittee discussed and accepted compelling evidence based on flawed methodology due to CMS hard coding as well as change in technique, as detailed in the PE summary of recommendation (SOR). Based on acceptance of compelling evidence, the PE Subcommittee reviewed the direct practice expenses for these services. It was clarified that 3 minutes of CA011 *Provide education/obtain consent* is typical for all these immunization administration services. The specialty societies explained, and the PE Subcommittee agreed, that a vaccination information statement (VIS) is required by Federal law to be presented and reviewed with patients for every vaccine administered. Even if it is a yearly vaccination, individuals must be presented and informed of both the benefits and risks of the vaccine. The PE Subcommittee approved the direct practice expense inputs as recommended by the specialty societies without modification. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Immunization Administration for Vaccines/Toxoids Report vaccine immunization administration codes 90460, 90461, 90471-90474 in addition to the vaccine and toxoid code(s) 90476-90749. Report codes 90460 and 90461 only when the physician or qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine. For immunization administration of any vaccine that is not accompanied by face-to-face physician or qualified health care professional counseling to the patient/family or for administration of vaccines to patients over 18 years of age, report codes 90471-90474. (See also Instructions for Use of the CPT Codebook for definition of reporting qualifications.) If a significant separately identifiable evaluation and management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99241-99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.			

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.			
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX	0.24
90461	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure) (Use 90460 for each vaccine administered. For vaccines with multiple components [combination vaccines], report 90460 in conjunction with 90461 for each additional component in a given vaccine)	ZZZ	0.18
90471	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid) (Do not report 90471 in conjunction with 90473)	XXX	0.17 (No change)
90472	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure) (Use 90472 in conjunction with 90460, 90471, 90473) (For immune globulins, see 90281-90399. For administration of immune globulins, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96374) (For intravesical administration of BCG vaccine, see 51720, 90586)	ZZZ	0.15 (No change)
90473	Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid) (Do not report 90473 in conjunction with 90471)	XXX	0.17 (No change)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

90474	Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure) (Use 90474 in conjunction with 90460, 90471, 90473)	ZZZ	0.15 (No change)
G0008	Administration of influenza virus vaccine	XXX	0.17 (Value is linked to 90471)
G0009	Administration of pneumococcal vaccine	XXX	0.17 (Value is linked to 90471)
G0010	Administration of hepatitis b vaccine	XXX	0.17 (Value is linked to 90471)

RE: Tab 19: Immunization Administration (90460, 90461, 90471, 90472, 90473, 90474, G0008, G0009, G0010): G Code Recommendations

Dear Doctor Silva:

Thank you for the opportunity to survey and provide recommendations for Tab 19 Immunization Administration. The undersigned specialties provide this letter as informational background, an explanation of our decision not to survey certain codes, as well as our valuation recommendations for codes G0008 *(Administration of influenza virus vaccine)*, G0009 *(Administration of pneumococcal vaccine)*, and *G0010 (Administration of hepatitis b vaccine)*.

As you know, as of March 1, 2003, the Medicare Claims Processing Manual instructs carriers to reimburse HCPCS codes G0008, G0009, and G0010 at the same rate as CPT code 90471 *(Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); one vaccine (single or combination vaccine/toxoid)).*

The specific language from page 49 of the manual states:

> *"The HCPCS codes G0008 and G0009 for the administration of the vaccines are not paid on the MPFS. However, prior to March 1, 2003, they must be paid at the same rate as HCPCS code 90782, which is on the MPFS. The designated contractor must pay per the correct MPFS file for each calendar year based on the date of service of the claim. Beginning March 1, 2003, HCPCS codes G0008, G0009, and G0010 are to be reimbursed at the same rate as HCPCS code 90471."*

As a result of this explicit Medicare payment policy, the undersigned specialties do not believe it is necessary to survey or develop direct practice expense input recommendations for codes G0008, G0009, and G0010.

Our specialties support the current crosswalk between 90471 and these codes and believe that this crosswalk should be maintained. As such, following a robust survey response, our specialties are recommending a work RVU of 0.17 for CPT code 90471. ***Given existing Medicare payment policy, we encourage the RUC to also recommend to CMS a work RVU of 0.17 and identical direct practice expense inputs for codes G0008, G0009, and G0010.***

Thank you,

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	4%	0%	12%	56%	28%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	16%	32%	52%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	36%	60%
Physical effort required	8%	60%	32%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	20%	76%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	33%	38%	12%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	38%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	50%	42%
Physical effort required	13%	54%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	38%	54%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence

For code 90460, the specialties recommend the survey 25th percentile of 0.24 work RVUs, which is greater than the current value of 0.17. In support of consideration of this higher work RVU, the specialties offer the following compelling evidence arguments.

First, the specialties believe the current value was arrived at via flawed methodology. The pediatric Immunization Administration codes 90460 and 90461 were developed to promote physician counseling of hesitant parents and use of combination vaccines to address decline in national immunization rates and subsequently valued by the RUC in October 2009. However, in the 2011 MPFS, CMS did not accept the RUC recommendations for 90460 and 90461. Instead, CMS applied the same methodology used for the existing Immunization Administration codes (90471-90474) to establish the values for 90460 and 90461. CMS valued codes 90471 and 90473 (base) codes by hard-coding them to code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*) and then setting the RVUs for the add-on codes (90472 and 90474) at approximately half the value of the base codes. While CMS the values in and of themselves do not create flawed methodology, the process associated with valuing these codes is flawed for several reasons.

Unlike RUC crosswalking of codes to determine a one-time value, CMS hard-coded 90460 to 96372, meaning that when PE inputs for code 96372 were subsequently reduced by the RUC in January 2017, CMS automatically reduced the PE values for 90460 even though the same reductions in clinical staff time did not apply to 90460. These reductions threatened the US national vaccination program by reducing the value below the Medicaid minimum payment rate for immunization administration. The specialties then began working with CMS to identify an alternative crosswalk methodology to reflect the physician counseling work and practice expense inherent in the service.

In the 2021 MPFS proposed rule, CMS stated its belief that the hard-coding of 90460 to 96372 does not reflect the relative resource costs associated with these services (Source: CMS-1734-P (pages 266-270). Although CMS chose to maintain the hard-coding for 2021, it stated in the final rule that "*we would welcome the results of an updated formal review of these services as well as any additional information that may be helpful for improved valuation*" (Source: CMS 1734-F (page 157)). This statement and CMS's comments in the proposed rule indicate the current values are based on a flawed methodology.

In addition, the fact that both the RUC and CMS recently accepted the October 2009 RUC recommendations for code 90460 as the basis of a RUC crosswalk for all COVID Immunization Administration with physician counseling codes further supports that the hard coding of the Immunization Administration codes with counseling to 96372 was flawed and no longer an appropriate valuation.

As noted above, code 96372 was the same code used by CMS years earlier to value Immunization Administration code 90471. Both 96372 and 90471 describe the physician work of direct supervision whereas 90460 and 90461 describe a more intense type of physician work of patient counseling.

In addition to flawed methodology, there is a change in the patient population reflecting growing vaccine hesitancy. Although coverage levels for most childhood vaccines remain relatively high in the United States,[8,9] numerous studies have documented that vaccine-related confidence has been decreasing among US parents over the past several years (Source: https://www.tandfonline.com/doi/full/10.4161/hv.25085). In 2011, only one in five physicians reported that a significant percentage of parents asked to spread out vaccines in a typical month. By 2014, that had grown to 58% of respondents who reported frequent requests for alternative vaccination schedules (Source: https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7242184/). Because altered vaccine schedules are associated with reduced vaccine rates and increase in vaccine administration errors, physician counseling is required to confront requests for alternative scheduling.

Additional rationale to support recommended value

For code 90460, the specialties recommend the survey 25th percentile of 0.24 work RVUs and the survey median of 7 minutes intra-service time, which also serves as the total time. While the recommended RVW is higher than the current CMS hard-coded value of 0.17, the source code 96372 has only 3 minutes of intraservice time which supports that the RVW for 90460, with more than double the IST, should be higher than 0.17.

The recommended increase in work RVUs is also supported by increased intensity when providing this counseling service, because of the increase in number of vaccines recommended and the options presented and the details/footnotes on the

Advisory Committee on Immunization Practices' recommended schedule that must be considered with each vaccine component that is counseled in comparison to the last time this service was valued.

The recommended time and work are supported by the primary key reference service, 99406 (*Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes*), which has the same time and work RVUs as are recommended for code 90460. As with 90460, the bulk of the physician/QHP work for 99406 is counseling.

There are multiple other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
88311	Decalcification procedure	XXX	0.24	0	5	2	7
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	XXX	0.24	0	7	0	7
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX	0.24	0	7	0	7
77073	Bone length studies (orthoroentgenogram, scanogram	XXX	0.26	1	5	1	7
92202	Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral)	XXX	0.26	1	5	1	7
70260	Radiologic examination, skull; complete, minimum of 4 views	XXX	0.28	1	4	1	6

These examples illustrate that the recommended value and time for code 90460 are comparable to other services of other specialties in the resource-based relative value scale.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Code 90460 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	4%	9%	39%	30%	17%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	35%	48%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	22%	65%	13%

Physical effort required	17%	52%	30%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	30%	57%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	5%	18%	41%	36%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	32%	41%	27%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	23%	59%	18%
Physical effort required	32%	55%	14%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	36%	27%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence

For code 90461, the specialties recommend the survey 25th percentile of 0.18 work RVUs, which is greater than the current value of 0.15. In support of consideration of this higher work RVU, the specialties offer the following compelling evidence arguments.

First, the current values for the Immunization Administration codes are based on a CMS hard-coding to code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*) rather than using the RUC recommended value. Unlike code 90461, 96372 does not include patient counseling.

Code 96372 was reviewed by the RUC in January 2017. CMS subsequently accepted changes to the practice expense inputs that led to steadily decreasing practice expense RVUs for that code and, by extension, the Immunization Administration codes that were hard-coded to 96372.

In the 2021 MPFS proposed rule, CMS stated its belief that that this valuation methodology does not reflect the relative resource costs associated with these services (Source: CMS-1734-P (pages 266-270). Although CMS chose to maintain the hard-coding for 2021, it stated in the final rule that "*we would welcome the results of an updated formal review of these services as well as any additional information that may be helpful for improved valuation*" (Source: CMS 1734-F (page 157). This statement and CMS's comments in the proposed rule indicate the current values are based on a flawed methodology. Additional evidence of the methodological flaw in hard-coding 96372 to 90461 is found in the fact that it resulted in the assignment of direct practice expenses to 90461 despite the fact the code only describes the work of physician/QHP vaccine counseling.

In addition to flawed methodology, there is a change in the patient population reflecting growing vaccine hesitancy. Although coverage levels for most childhood vaccines remain relatively high in the United States,[8,9] numerous studies have documented that vaccine-related confidence has been decreasing among US parents over the past several years (Source: https://www.tandfonline.com/doi/full/10.4161/hv.25085). In 2011, only one in five physicians reported that a significant percentage of parents asked to spread out vaccines in a typical month. By 2014, that had grown to 58% of respondents who reported frequent requests for alternative vaccination schedules (Source: https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7242184/). Because altered vaccine schedules are associated with reduced vaccine rates and increase in vaccine administration errors, physician counseling is required to confront requests for alternative scheduling.

Additional rationale to support recommended value

For code 90461, the specialties recommend the survey 25th percentile of 0.18 work RVUs and the survey median of 5 minutes intra-service time, which also serves as the total time, because there is no pre- or post-service time associated with this code.

The recommended increase in work RVUs is supported by increased intensity when providing this counseling service, because of the increase in number of vaccines recommended and the options presented and the details/footnotes on the Advisory Committee on Immunization Practices' recommended schedule that must be considered with each vaccine component that is counseled in comparison to the last time this service was valued.

Other RUC-reviewed codes with a ZZZ global period and comparable time and work RVUs include:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
96375	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug	ZZZ	0.10	0	4	0	4
96366	Intravenous infusion, for therapy, prophylaxis,	ZZZ	0.18	0	5	0	5

	or diagnosis (specify substance or drug); each additional hour						
90461	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered	ZZZ	0.18	0	5	0	5
96370	Subcutaneous infusion for therapy or prophylaxis (specify substance or drug); each additional hour	ZZZ	0.18	0	5	0	5
96415	Chemotherapy administration, intravenous infusion technique; each additional hour	ZZZ	0.19	0	5	0	5

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☒ Other reason (please explain) The base code (90460) is typically reported in addition to an office vsit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time

4.	90460	XXX	0.24	0	7	0
5.	90461	ZZZ	0.18	0	5	0
6.	Total		1.72	5	32	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90461

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatric Medicine How often? Commonly

Specialty Family Medicine How often? Sometimes

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 79173313
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Pediatrics Frequency 54787933 Percentage 69.20 %

Specialty Nurse Practitioner Frequency 10925917 Percentage 13.79 %

Specialty Family Medicine Frequency 7046425 Percentage 8.90 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 58 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. (RUC database.)

Specialty Pediatrics Frequency 31 Percentage 53.44 %

Specialty Family Medicine Frequency 17 Percentage 29.31 %

Specialty Nurse Practitioner Frequency 6 Percentage 10.34 %

Do many physicians perform this service across the United States? Yes

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Additional rationale to support recommended value

The specialties recommend maintaining the current work RVUs of 0.17 for this service, which is less than the 25th percentile of our survey. We recommend the survey median of 4 minutes for intra-service and total time.

While the recommended intra-service time of 4 minutes is nominally less than the intra-service time currently shown for this code, it is greater than the 3 minutes of intra-service time for 96372, to which the value of 90471 is currently hard-coded. Despite that greater intra-service time, we are recommending maintaining the current value of 0.17, which is the same as 96372.

The recommended value is less than the 0.18 work RVUs assigned to key reference service 99211 (Level 1 established patient office visit), which has 5 minutes of intra-service time. It is also less than the 0.18 work RVUs assigned to code 90970 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older), which has only 3.2 minutes of intra-service and total time.

A comparison of the recommended value and time with the key reference services and other services follows:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
94781	Car seat/bed testing for airway integrity, for infants through 12 months of age, with continual clinical staff observation and continuous recording of pulse oximetry, heart rate and respiratory rate, with interpretation and report; each additional full 30 minutes	ZZZ	0.17	0	5	0	5
90471	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)	XXX	0.17	0	4	0	4
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	XXX	0.18	0	3.2	0	3.2
99211	Office or other outpatient visit for the evaluation and	XXX	0.18	0	5	2	7

	management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal.						
99188	Application of topical fluoride varnish by a physician or other qualified health care professional	XXX	0.20	2	5	2	9

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Code 90471 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time
3.	99213	XXX	1.30	5	20	5
4.	90471	XXX	0.17	0	4	0
5.	Total		1.47	5	24	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90471

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Commonly

Specialty Internal Medicine How often? Commonly

Specialty Nurse Practitioner How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 162160552
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Family Medcine Frequency 39832832 Percentage 24.56 %

Specialty Nurse Practitioner Frequency 35557273 Percentage 21.92 %

Specialty Pediatrics Frequency 21719251 Percentage 13.39 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 282,357 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database.

Specialty Family Medicine Frequency 99672 Percentage 35.29 %

Specialty Internal Medicine Frequency 73130 Percentage 25.89 %

Specialty Nurse Practitioner Frequency 47718 Percentage 16.89 %

Do many physicians perform this service across the United States? Yes

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	8%	10%	50%	28%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	60%	20%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	20%	70%	10%

Physical effort required	18%	60%	23%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	50%	35%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	65%	29%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	59%	12%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	12%	76%	12%
Physical effort required	24%	65%	12%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	24%	41%	35%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Additional rationale to support recommended value
The specialties recommend maintaining the current work RVUs of 0.15 for this service, which is also the 25th percentile of our survey. We recommend the survey median of 3 minutes for intra-service and total time.

While the recommended intra-service time of 3 minutes is nominally less than the intra-service time currently shown for this code, it is equal to the 3 minutes of intra-service time for 96372, to which 90472 is currently hard-coded. Despite that equal intra-service time, we are recommending maintaining the current value of 0.15, which is less than the value of 0.17 assigned to 96372.

A comparison of the recommended value and time with the key reference services and other services follows:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
96375	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug	ZZZ	0.10	0	4	0	4
73020	Radiologic examination, shoulder; 1 view	XXX	0.15	1	3	1	5
78730	Urinary bladder residual study	ZZZ	0.15	0	5	0	5
90472	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid)	ZZZ	0.15	0	3	0	3
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	XXX	0.18	0	3.2	0	3.2
96370	Subcutaneous infusion for therapy or prophylaxis (specify substance or drug); each additional hour	ZZZ	0.18	0	5	0	5
96411	Chemotherapy administration;	ZZZ	0.20	3	4	0	7

	intravenous, push technique, each additional substance/drug						

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) The base code (90471) is typically reported in addition to an office vsit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	3%	8%	50%	36%	3%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	58%	22%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	6%	61%	33%

Physical effort required	8%	61%	31%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	36%	61%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	25%	50%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	25%	70%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	20%	45%	35%
Physical effort required	45%	40%	15%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	5%	95%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Additional rationale to support recommended value

The specialties recommend maintaining the current work RVUs of 0.17 for this service, which is less than the 25th percentile of our survey. We recommend the survey median of 3 minutes for intra-service and total time.

While the recommended intra-service time of 3 minutes is nominally less than the intra-service time currently shown for this code, it is equal to the 3 minutes of intra-service time for 96372, to which the value of 90473 is currently hard-coded. Consistent with the equal intra-service time, we are recommending maintaining the current value of 0.17, which is equal to the value of 0.17 assigned to 96372.

The recommended value is less than the 0.18 work RVUs assigned to key reference service 99211 (Level 1 established patient office visit), which has 5 minutes of intra-service time. It is also less than the 0.18 work RVUs assigned to code 90970 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older), which has 3.2 minutes of intra-service and total time.

A comparison of the recommended value and time with the key reference services and other services follows:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
94781	Car seat/bed testing for airway integrity, for infants through 12 months of age, with continual clinical staff observation and continuous recording of pulse oximetry, heart rate and respiratory rate, with interpretation and report; each additional full 30 minutes	ZZZ	0.17	0	5	0	5
90473	Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid)	XXX	0.17	0	3	0	3
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	XXX	0.18	0	3.2	0	3.2
99211	Office or other outpatient visit for the evaluation and management of an established patient, that may not require the	XXX	0.18	0	5	2	7

	presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal.						
99188	Application of topical fluoride varnish by a physician or other qualified health care professional	XXX	0.20	2	5	2	9

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) We expect code 90473 would typically be reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time
3.	99213	XXX	1.30	5	20	5
4.	90473	XXX	0.17	0	3	0
5.	Total		1.47	5	23	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90473

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Rarely

Specialty Internal Medicine How often? Rarely

Specialty Nurse Practitioner How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 201822
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Pediatrics Frequency 139661 Percentage 69.20 %

Specialty Nurse Practitioner Frequency 27851 Percentage 13.79 %

Specialty Family Medicine Frequency 17962 Percentage 8.89 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization in the RUC database.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	3%	15%	55%	21%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	24%	61%	15%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	27%	67%	6%
Physical effort required	18%	64%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	52%	33%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	64%	21%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	57%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	43%	43%	14%
Physical effort required	43%	43%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	57%	21%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Additional rationale to support recommended value
The specialties recommend maintaining the current work RVUs of 0.15 for this service, which is also the 25th percentile of our survey. We recommend the survey median of 3 minutes for intra-service and total time.

While the recommended intra-service time of 3 minutes is nominally less than the intra-service time currently shown for this code, it is equal to the 3 minutes of intra-service time for 96372, to which 90474 is currently hard-coded. Despite that equal intra-service time, we are recommending maintaining the current value of 0.15, which is less than the value of 0.17 assigned to 96372.

A comparison of the recommended value and time with the key reference services and other services follows:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
96375	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); each additional sequential intravenous push of a new substance/drug	ZZZ	0.10	0	4	0	4
73020	Radiologic examination, shoulder; 1 view	XXX	0.15	1	3	1	5
78730	Urinary bladder residual study	ZZZ	0.15	0	5	0	5
90474	Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid)	ZZZ	0.15	0	3	0	3
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	XXX	0.18	0	3.2	0	3.2
96370	Subcutaneous infusion for therapy or prophylaxis (specify substance or drug); each	ZZZ	0.18	0	5	0	5

	additional hour						
96411	Chemotherapy administration; intravenous, push technique, each additional substance/drug	ZZZ	0.20	3	4	0	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) We expect the base code (90473) is typically reported in addition to an office vsit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time

Specialty Internal Medicine How often? Rarely

Specialty Nurse Practitioner How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 1003452
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Pediatrics Frequency 694389 Percentage 69.20 %

Specialty Nurse Practitioner	Frequency 138476	Percentage 13.79 %
Specialty Family Medicine	Frequency 89307	Percentage 8.89 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. (See attached spreadsheet; frequency and percentages are from the 2019 Medicare utilization in the RUC database.)

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency 0	Percentage	%

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
Immunizations/Vaccinations

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 90474

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 90460, 90461
SPECIALTY SOCIETY(IES): AAFP, ACOG, ACP, ANA, AAP
PRESENTER(S): Megan Adamson, MD; Jon Hathaway, MD; Tanvir Hussain, MD; Korinne Van Keuren, DNP; Elisabeth Volpert, DNP; Steven Krug, MD; Suzanne Berman, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX
90461	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
90460	Counseling is provided when a 15-year-old patient is administered the Human Papilloma virus (HPV) vaccine.
90461	Counseling is provided when a twelve-month-old patient is administered the measles, mumps, rubella (MMR) combination vaccine. (Note: This is an add-on code for the additional physician/other qualified health care professional work related to the administration of one additional vaccine or toxoid component. The physician or other qualified health care professional work related to the administration of the first vaccine or toxoid component is reported separately with code 90460.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   We convened a Practice Expense (PE) Expert Panel consisting of 15 individuals representing AAFP (RUC Advisor and Alternate RUC Advisor), ACOG (RUC Advisor), ANA (Alternate RUC/HCPAC Advisor and PE Subcommittee member), and AAP (RUC Advisor and members of the AAP Section on Administration & Practice Management and the AAP Pediatric Practice Management Alliance). After an initial virtual kick-off meeting, we surveyed Panel members on typical clinical activities, medical supplies, and medical equipment utilized in the service of immunization administration (IA). Survey results were compiled and shared via email, allowing Panel members to reach consensus on direct PE input recommendations for the IA codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   90460 and 90461 are existing codes; therefore, we are using their current direct PE inputs as their reference codes. However, we are also offering COVID IA code 0031A as a reference code. While

administration of the COVID-19 vaccine is unique, the fact that the RUC recently reviewed seven (7) new COVID IA codes imparts relevance on the inclusion of 0031A as a reference for the IA codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

Codes 90460 and 90461 are typically reported with an E/M service. Codes 90460 and 90461 are typically reported with the E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

90460: nonfacility Family Medicine (45.5%); for all sites Family Medicine (45.2%) 90461: nonfacility Pediatric Medicine (53.4%); for all sites Pediatric Medicine (53.4%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

We are recommending a net decrease of $0.76 for the Immunization Administration (IA) code family: Current inputs for family = $35.49 Recommended inputs for family = $34.73 Net decrease = $0.76 **Please note that this calculation includes the current projected inputs ($3.98) for code 90461 based upon the current CMS crosswalk for this code. Code 90461 should not have any direct PE inputs and, therefore, negligible PE RVUs (due entirely to indirect PE). This is due to the fact that 90461 represents the physician/QHP counseling (ie, work only) required for each additional component in a multicomponent vaccine.** **However, based on the fact that the IA family has been hard-coded since its inception, CMS has assigned it PE RVUs equivalent with 90472 (0.21). Therefore, we have replicated the current direct PE inputs for code 90472 for code 90461. [PLEASE SEE PINK COLUMN IN PE SPREADSHEET.]**

In light of the above, we are technically not required to offer PE compelling evidence arguments. However, we provide the following information in support of our direct PE input recommendations.

Flawed Methodology

Since the Immunization Administration (IA) codes' inception, the Centers for Medicare and Medicaid Services (CMS) has valued them by hard-coding them to 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular) (formerly code 90772 and then code 90782), rather than by utilizing RUC-recommendations to establish their values. CMS' decision to hard-code the base IA codes (90460, 90471, 90473) to 96372 and then value the add-on IA codes (90461, 90472, 90474) at approximately half of the base IA codes was flawed. This is illustrated by the fact 90461 is currently valued the same as 90472 and 90474, even though 90461 does contain any direct PE inputs. Code 90461 only reflects the physician/QHP work of vaccine counseling on each additional vaccine component.

Change in Clinical Staff Immunization Protocols

Immunization confirmation protocols have changed since the Immunization Administration codes were last valued due to the explosion in the number of new vaccines introduced since 2009. For example, there are 15 difference influenza vaccine presentations available today. This perhaps explains why 20% of all vaccine error reports have to do with influenza vaccine.

While electronic health records (EHRs) offer vaccine clinical decision support to predict (although not 100% accurately) the antigens required, they do not give decision support on the brand and presentation of a vaccine. Physicians/QHPs typically give orders for the antigen (eg, DTaP), but not the particular brand and presentation (eg, Daptacel, Infanrix, Kinrix, Pediarix, Pentacel, or Quadracel). Determining which of these vaccine products to use is a clinical staff decision, based on the patient's age and vaccination history.

This is further complicated by the fact that combination vaccines may only be used in some instances (eg, Kinrix (DTaP-IPV) can be given to patients who need both DTaP and IPV, but only if the patient is between ages 4-6, has had four prior doses of DTaP, and at least two prior doses of IPV). Additionally, some vaccines have different dosing requirements based on age (Hep A, Hep B, influenza), while others are the same regardless of patient age.

Finally, while the Advisory Committee on Immunization Practices (ACIP) recommends that a vaccine series be completed with the same brand whenever possible, in some cases it is acceptable to use the alternative brand in stock if the original brand is not known (DTaP), while, in other cases, using only the brand from the original dose is acceptable (MenB).

Change in ACIP Immunization Monitoring Time Recommendations (CA022)

The Advisory Committee on Immunization Practices (ACIP) recommends that "vaccine providers, particularly when vaccinating adolescents, should consider observing patients (with patients seated or lying down) for 15 minutes after vaccination to decrease the risk for injury should they faint" (please see https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/downloads/general-recs.pdf (page 71)). The ACIP recommendation has become more specific (in terms of time, description of patients who are at-risk for syncope, and position) since the IA codes were last valued.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

Use of Total Clinical Staff Time in Calculating Equipment Usage
In February 2008, the RUC established a precedent for the Immunization Administration codes in that it recommended the total vaccine clinical staff time as the time of refrigerator/freezer use, rather than just the intra-service clinical staff time used in CMS' PE methodology. Our use of total clinical staff time to establish equipment recommendations accounts for a portion of the increase in the aggregate cost of direct PE inputs for the Immunization Administration codes.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We allocated 0 minutes to obtain vital signs and, therefore, are requesting no CST.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

CA007: Confirming vaccine order/checking appropriateness for patient
CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

   b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable
CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine
CA021: Actual administration of vaccine; bandage application
CA022: Watching patient after vaccine is administered
CA024: Disposal of vaccine-specific medical waste
CA034: Charting administered immunizations in the patient chart and EMR; preparing patient record/immunization card

   c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
No, we are not recommending a PE supply pack.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
N/A

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

McKesson redacted invoice attached, includes estimate for refrigerator, vaccine medical grade, w-data logger sngl glass door ($7,674.43) (NEW, line 113)

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

10 years

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Formula: Default
Refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates (SD043)
Refrigerator, vaccine medical grade, w-data logger sngl glass door (NEW) ($7,674.43)

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

Please note that we are recommending zero direct PE inputs for code 90461. This is due to the fact that it represents the physician/QHP counseling (ie, work only) required for each additional component in a multicomponent vaccine.

Please note under Medical Equipment:
Line 111 (ED043): While its description begins with "refrigerator, vaccine," it is the **temperature monitor with alarm** for the vaccine medical grade refrigerator (NEW, line 113). **We do not have two vaccine refrigerators included as part of our recommended medical equipment.**

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 90471, 90472
SPECIALTY SOCIETY(IES): AAFP, ACOG, ACP, ANA, AAP
PRESENTER(S): Megan Adamson, MD; Jon Hathaway, MD; Tanvir Hussain, MD; Korinne Van Keuren, DNP; Elisabeth Volpert, DNP; Steven Krug, MD; Suzanne Berman, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
90471	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)	XXX
90472	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
90471	A patient seeks immunization against seasonal influenza. The patient is offered and accepts an intramuscular injection of seasonal influenza vaccine.
90472	After a patient receives an intramuscular vaccine (reported separately), she receives an additional intramuscular vaccine. (Note: This is an add-on code for the additional physician or other qualified health care professional work related to the administration of one additional vaccine (single or combination vaccine/toxoid). The physician or other qualified health care professional work for the administration of the first vaccine (single or combination vaccine/toxoid) is reported separately with code 90471.)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   We convened a Practice Expense (PE) Expert Panel consisting of 15 individuals representing AAFP (RUC Advisor and Alternate RUC Advisor), ACOG (RUC Advisor), ANA (Alternate RUC/HCPAC Advisor and PE Subcommittee member), and AAP (RUC Advisor and members of the AAP Section on Administration & Practice Management and the AAP Pediatric Practice Management Alliance). After an initial virtual kick-off meeting, we surveyed Panel members on typical clinical activities, medical supplies, and medical equipment utilized in the service of immunization administration (IA). Survey results were compiled and shared via email, allowing Panel members to reach consensus on direct PE input recommendations for the IA codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   90471 and 90472 are existing codes; therefore, we are using their current direct PE inputs as their reference codes. However, we are also offering COVID IA code 0031A as a reference code. While administration of the COVID-19 vaccine is unique, the fact that the RUC recently reviewed seven (7) new COVID IA codes imparts relevance on the inclusion of 0031A as a reference for the IA codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

NOTE: Please see attached document "90471-4 Current Direct PE Inputs" for information on how the current direct PE inputs for codes 90471 and 90472 were established.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Codes 90471 and 90472 are typically reported with an E/M service. Codes 90471 and 90472 are typically reported with the E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   90471: nonfacility Family Medicine (35.3%); for all sites Family Medicine (35.3%)
   90472: nonfacility Family Medicine (41.8%); for all sites Family Medicine (41.8%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   We are recommending a net decrease of $0.76 for the Immunization Administration (IA) code family:
   Current inputs for family = $35.49
   Recommended inputs for family = $34.73
   Net decrease = $0.76

   Please note that this calculation includes the current projected inputs ($3.98) for code 90461 based upon the current CMS crosswalk for this code. Code 90461 should not have any direct PE inputs and, therefore, negligible PE RVUs (due entirely to indirect PE). This is due to the fact that 90461 represents the physician/QHP counseling (ie, work only) required for each additional component in a multicomponent vaccine.

   However, based on the fact that the IA family has been hard-coded since its inception, CMS has assigned it PE RVUs equivalent with 90472 (0.21). Therefore, we have replicated the current direct PE inputs for code 90472 for code 90461. [PLEASE SEE PINK COLUMN IN PE SPREADSHEET.]

In light of the above, we are technically not required to offer PE compelling evidence arguments. However, we provide the following information in support of our direct PE input recommendations.

Flawed Methodology

Since the Immunization Administration (IA) codes' inception, the Centers for Medicare and Medicaid Services (CMS) has valued them by hard-coding them to 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular) (formerly code 90772 and then code 90782), rather than by utilizing RUC-recommendations to establish their values. CMS' decision to hard-code the base IA codes (90460, 90471, 90473) to 96372 and then value the add-on IA codes (90461, 90472, 90474) at approximately half of the base IA codes was flawed. This is illustrated by the fact 90461 is currently valued the same as 90472 and 90474, even though 90461 does contain any direct PE inputs. Code 90461 only reflects the physician/QHP work of vaccine counseling on each additional vaccine component.

Change in Clinical Staff Immunization Protocols

Immunization confirmation protocols have changed since the Immunization Administration codes were last valued due to the explosion in the number of new vaccines introduced since 2009. For example, there are 15 difference influenza vaccine presentations available today. This perhaps explains why 20% of all vaccine error reports have to do with influenza vaccine.

While electronic health records (EHRs) offer vaccine clinical decision support to predict (although not 100% accurately) the antigens required, they do not give decision support on the brand and presentation of a vaccine. Physicians/QHPs typically give orders for the antigen (eg, DTaP), but not the particular brand and presentation (eg, Daptacel, Infanrix, Kinrix, Pediarix, Pentacel, or Quadracel). Determining which of these vaccine products to use is a clinical staff decision, based on the patient's age and vaccination history.

This is further complicated by the fact that combination vaccines may only be used in some instances (eg, Kinrix (DTaP-IPV) can be given to patients who need both DTaP and IPV, but only if the patient is between ages 4-6, has had four prior doses of DTaP, and at least two prior doses of IPV). Additionally, some vaccines have different dosing requirements based on age (Hep A, Hep B, influenza), while others are the same regardless of patient age.

Finally, while the Advisory Committee on Immunization Practices (ACIP) recommends that a vaccine series be completed with the same brand whenever possible, in some cases it is acceptable to use the alternative brand in stock if the original brand is not known (DTaP), while, in other cases, using only the brand from the original dose is acceptable (MenB).

Change in ACIP Immunization Monitoring Time Recommendations (CA022)

The Advisory Committee on Immunization Practices (ACIP) recommends that "vaccine providers, particularly when vaccinating adolescents, should consider observing patients (with patients seated or lying down) for 15 minutes after vaccination to decrease the risk for injury should they faint" (please see https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/downloads/general-recs.pdf (page 71)). The ACIP recommendation has become more specific (in terms of time, description of patients who are at-risk for syncope, and position) since the IA codes were last valued.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

Use of Total Clinical Staff Time in Calculating Equipment Usage
In February 2008, the RUC established a precedent for the Immunization Administration codes in that it recommended the total vaccine clinical staff time as the time of refrigerator/freezer use, rather than just the intra-service clinical staff time used in CMS' PE methodology. Our use of total clinical staff time to establish equipment recommendations accounts for a portion of the increase in the aggregate cost of direct PE inputs for the Immunization Administration codes.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We allocated 0 minutes to obtain vital signs and, therefore, are requesting no CST.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

CA007: Confirming vaccine order/checking appropriateness for patient
CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

   b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable
CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine
CA021: Actual administration of vaccine; bandage application
CA022: Watching patient after vaccine is administered
CA024: Disposal of vaccine-specific medical waste
CA034: Charting administered immunizations in the patient chart and EMR; preparing patient record/immunization card

   c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
No, we are not recommending a PE supply pack.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
N/A

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

McKesson redacted invoice attached, includes estimate for refrigerator, vaccine medical grade, w-data logger sngl glass door ($7,674.43) (NEW, line 113)

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):
    10 years

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

    N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:
    Formula: Default
    Refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates (SD043)
    Refrigerator, vaccine medical grade, w-data logger sngl glass door (NEW) ($7,674.43)

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:
    Please note under Medical Equipment:
    Line 111 (ED043): While its description begins with "refrigerator, vaccine," it is the **temperature monitor with alarm** for the vaccine medical grade refrigerator (NEW, line 113). **We do not have two vaccine refrigerators included as part of our recommended medical equipment.**

   Codes 90473 and 90474 are typically reported with an E/M service. Codes 90473 and 90474 are typically reported with the E/M service in the nonfacility.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   90473: nonfacility General Practice (33.3%); for all sites General Practice (33.3%)
   90474: nonfacility Family Medicine (100%); for all sites Family Medicine (100%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   We are recommending a net decrease of $0.76 for the Immunization Administration (IA) code family:
   Current inputs for family = $35.49
   Recommended inputs for family = $34.73
   Net decrease = $0.76

   Please note that this calculation includes the current projected inputs ($3.98) for code 90461 based upon the current CMS crosswalk for this code. Code 90461 should not have any direct PE inputs and, therefore, negligible PE RVUs (due entirely to indirect PE). This is due to the fact that 90461 represents the physician/QHP counseling (ie, work only) required for each additional component in a multicomponent vaccine.

   However, based on the fact that the IA family has been hard-coded since its inception, CMS has assigned it PE RVUs equivalent with 90472 (0.21). Therefore, we have replicated the current direct PE inputs for code 90472 for code 90461. [PLEASE SEE PINK COLUMN IN PE SPREADSHEET.]

In light of the above, we are technically not required to offer PE compelling evidence arguments. However, we provide the following information in support of our direct PE input recommendations.

Flawed Methodology

Since the Immunization Administration (IA) codes' inception, the Centers for Medicare and Medicaid Services (CMS) has valued them by hard-coding them to 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular) (formerly code 90772 and then code 90782), rather than by utilizing RUC-recommendations to establish their values. CMS' decision to hard-code the base IA codes (90460, 90471, 90473) to 96372 and then value the add-on IA codes (90461, 90472, 90474) at approximately half of the base IA codes was flawed. This is illustrated by the fact 90461 is currently valued the same as 90472 and 90474, even though 90461 does contain any direct PE inputs. Code 90461 only reflects the physician/QHP work of vaccine counseling on each additional vaccine component.

Change in Clinical Staff Immunization Protocols

Immunization confirmation protocols have changed since the Immunization Administration codes were last valued due to the explosion in the number of new vaccines introduced since 2009. For example, there are 15 difference influenza vaccine presentations available today. This perhaps explains why 20% of all vaccine error reports have to do with influenza vaccine.

While electronic health records (EHRs) offer vaccine clinical decision support to predict (although not 100% accurately) the antigens required, they do not give decision support on the brand and presentation of a vaccine. Physicians/QHPs typically give orders for the antigen (eg, DTaP), but not the particular brand and presentation (eg, Daptacel, Infanrix, Kinrix, Pediarix, Pentacel, or Quadracel). Determining which of these vaccine products to use is a clinical staff decision, based on the patient's age and vaccination history.

This is further complicated by the fact that combination vaccines may only be used in some instances (eg, Kinrix (DTaP-IPV) can be given to patients who need both DTaP and IPV, but only if the patient is between ages 4-6, has had four prior doses of DTaP, and at least two prior doses of IPV). Additionally, some vaccines have different dosing requirements based on age (Hep A, Hep B, influenza), while others are the same regardless of patient age.

Finally, while the Advisory Committee on Immunization Practices (ACIP) recommends that a vaccine series be completed with the same brand whenever possible, in some cases it is acceptable to use the alternative brand in stock if the original brand is not known (DTaP), while, in other cases, using only the brand from the original dose is acceptable (MenB).

Change in ACIP Immunization Monitoring Time Recommendations (CA022)

The Advisory Committee on Immunization Practices (ACIP) recommends that "vaccine providers, particularly when vaccinating adolescents, should consider observing patients (with patients seated or lying down) for 15 minutes after vaccination to decrease the risk for injury should they faint" (please see https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/downloads/general-recs.pdf (page 71)). The ACIP recommendation has become more specific (in terms of time, description of patients who are at-risk for syncope, and position) since the IA codes were last valued.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

Use of Total Clinical Staff Time in Calculating Equipment Usage
In February 2008, the RUC established a precedent for the Immunization Administration codes in that it recommended the total vaccine clinical staff time as the time of refrigerator/freezer use, rather than just the intra-service clinical staff time used in CMS' PE methodology. Our use of total clinical staff time to establish equipment recommendations accounts for a portion of the increase in the aggregate cost of direct PE inputs for the Immunization Administration codes.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

   c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, and administers the vaccine. The patient is then monitored for potential anaphylaxis response to the vaccine.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
No, we are not recommending a PE supply pack.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
N/A

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

McKesson redacted invoice attached, includes estimate for refrigerator, vaccine medical grade, w-data logger sngl glass door ($7,674.43) (NEW, line 113)

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):
    10 years

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

    N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:
    Formula: Default
    Refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates (SD043)
    Refrigerator, vaccine medical grade, w-data logger sngl glass door (NEW) ($7,674.43)

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:
    Please note under Medical Equipment:
    Line 111 (ED043): While its description begins with "refrigerator, vaccine," it is the **temperature monitor with alarm** for the vaccine medical grade refrigerator (NEW, line 113). **We do not have two vaccine refrigerators included as part of our recommended medical equipment.**

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:
    N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SoR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

****February 2008 RUC recommended, and CMS accepted, use of total vaccine clinical staff time as the time of refrigerator/freezer use, rather than just the intra-service clinical staff time as typically used in CMS' PE methodology.**

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Harvard Valued – Utilization over 30,000*

April 2021

Dark Adaption Eye Exam – Tab 20

In July 2020, the Relativity Assessment Workgroup identified one CPT code 92284 *Dark adaptation examination with interpretation and report* with 2019e Medicare utilization over 30,000. The Workgroup requested that the specialty societies submit an action plan addressing CPT code 92284 for January 2021. In January 2021, the RUC agreed with the specialty society that this service be surveyed for the April 2021 RUC meeting. The RUC noted that the family of services should be identified on the level of interest (LOI). The specialty societies indicated that there are no additional codes in this family. CPT 92284 is in a section of CPT labeled "Other Specialized Services" which contains several unrelated services performed using different techniques with different and unrelated physician work.

92284 ***Dark adaptation examination with interpretation and report***
The RUC reviewed the survey results from 45 ophthalmologists, retina specialists and optometrists for CPT code 92284 and determined that a direct work RVU crosswalk to CPT code 76514 *Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)* (work RVU = 0.14, 5 minutes of total time) appropriately accounts for the work required to perform this service. The RUC recommends 1 minute of pre-service time, 3 minutes of intra-service time, 1 minute of immediate post-service time, totaling 5 minutes for CPT code 92284. The specialty societies agreed that the recommended physician work and total time is more representative of the physician or other qualified healthcare professional (QHP) work associated with this procedure than the survey 25th percentile work RVU value of 0.45. The specialty society also noted that the recommended reduction in total time (from the current 36 minutes of total time) is due in part to the fact that CPT code 92284 is typically performed on the same date of an office or eye visit service.

The RUC discussed that CPT code 92284 is a diagnostic service but noted the manufacturer of the device used to perform this service markets the new model of this device to be used for both screening and diagnosis. The specialty societies confirmed that the work associated with CPT code 92284 is diagnostic in nature and that CPT code 92284 was not intended to be utilized for screening services. The specialty societies explained that intra-service work associated with CPT code 92284 involves physician or QHP interpretation and analysis of a machine generated data display to make a differential diagnosis. **The RUC recommends that CPT code 92284 be referred to CPT to editorially revise and include the word "diagnostic' in the code descriptor**.

The RUC compared CPT code 92284 to MPC code 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU = 0.17, 6 minutes of total time) and discussed the similarity in the type of work with respect to interpretation and reporting while also noting the more complex nature of ECG interpretation which justifies a slightly higher work RVU value and 1 minute of additional total time. The RUC noted that both services would appropriately have an identical work per unit time of 0.028. The RUC also compared CPT code 92284 to CPT code 93000 *Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report* (work RVU = 0.17, 6 minutes of total time). **The RUC recommends a work RVU of 0.14 for CPT code 92284.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality
The RUC's recommendation for this CPT code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

New Technology
This service will be placed on the New Technology list and be re-reviewed by the RUC to ensure correct valuation and utilization assumptions. The RUC will review the typical technology used to perform this service when it is next re-evaluated, acknowledging that the device included in proposed direct practice costs recently was very recently replaced with a newer technology.

Practice Expense
The Practice Expense Subcommittee approved the direct practice expense inputs as recommended by the specialty societies without modification and noted that the recommended reduction in practice expense inputs represents a greater than 50 percent decrease in direct practice expense costs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

RUC Referral to CPT
The RUC recommends CPT code 92284 be referred to CPT to editorially revise and include the word "diagnostic' in the code descriptor. "<u>Diagnostic</u> dark adaptation examination with interpretation and report."

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
92284	Dark adaptation examination with interpretation and report	XXX	0.14

SUMMARY OF RECOMMENDATION

CPT Code:92284 Tracking Number Original Specialty Recommended RVU: **0.24**
Presented Recommended RVU: **0.17**
Global Period: XXX Current Work RVU: **0.24** RUC Recommended RVU: **0.14**

CPT Descriptor: Dark adaptation examination with interpretation and report

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female with poor night vision has no identifiable cause on examination. Dark adaptation testing is performed to assess retinal function.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Explain the indications, risks, benefits, and nature of the dark adaptation test to the patient and/or family. Determine the appropriate testing strategy and place an order in the electronic health record.

Description of Intra-Service Work: Review the test results for each eye to determine reliability and interocular consistency. Interpret results, correlating the dark adaptation plot with age-adjusted norms, physical findings, and prior test results. Prepare a report and enter it into the medical record.

Description of Post-Service Work: Sign the report. Enter the findings in the electronic health record and send a letter to the referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	45%	32%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	27%	32%	41%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	50%	32%

Physical effort required	18%	68%	14%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	55%	27%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	25%	25%	50%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	38%	25%	38%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	13%	38%	50%
Physical effort required	13%	50%	38%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	75%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92284, *Dark adaptation examination with interpretation and report* is an XXX-global code that was identified as Harvard-valued with utilization over 30,000. The test is performed on patients with visual loss, typically poor night vision, and no identifiable cause on physical examination. Newer test protocols and machines have been introduced since the test

was first valued, and the patient population has expanded to include those with macular degeneration, resulting in increasing claims volume. The test has moved from being largely a research tool in academic medical centers to widespread clinical use.

Although CPT 92284 is in a section of CPT labeled "Other Specialized Services," it is not part of a family with any of the other 8 codes in that section (CPT 92265, 92270, 92273, 92274, 92283, 92285, 92286, and 92287). "Other Specialized Services" is a category for a diverse array of ophthalmic tests that do not fit elsewhere in CPT. They range from tests that measure muscle and retinal electrical responses, to subjective tests of color vision, and to imaging of different parts of the eye using different imaging techniques for management of different diseases by different subspecialists.

For CPT 92284, a dark adaptation test protocol is selected by the physician or other qualified health professional which is tailored to the patient's symptoms and findings. The new equipment used to administer the test is typically a desktop model that was introduced a few years ago. An even newer head-worn model offering greater convenience has recently been introduced. Marketing for this new model highlights a screening protocol that is not typical and that reports a single number indicating whether the test is normal or abnormal. For the diagnostic test in patients with nyctalopia or complaints of poor night vision, which is typical, a dark adaptation plot of sensitivity vs. time for each eye is interpreted by correlating to age-adjusted norms, physical findings, comorbidities known to affect night vision (e.g., vitamin deficiencies, cataracts, presence of treatments such as panretinal photocoagulation), and, if available, prior test results. Findings are entered into the medical record and a report is generated.

It remains to be determined whether the newest equipment and the shorter testing protocol are clinically useful or achieve sufficient market penetration to become typical. The technology remains in a state of flux. For that reason, this procedure should be placed on the New Technology list.

The procedure is typically performed on the same day as an office visit.

A survey was sent to a random selection of American Academy of Ophthalmology (AAO), American Optometric Association (AOA), and American Society of Retinal Specialists (ASRS) members. There were 45 responses. The vignette was considered typical by 80% of respondents. The median WRVU was 0.50, and the 25th percentile was 0.45. The current value of the code is 0.24 WRVU. The survey median IST was 15 minutes, pre-service evaluation time was 5 minutes, and immediate post-service time was 10 minutes. The current (Harvard) IST and total time are 36 minutes.

The top key reference service, chosen by 49% of respondents, was CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a WRVU of 0.50, an IST of 10 minutes, and a total time of 13 minutes. The second reference service, chosen by 18% of respondents, was CPT 92134, *Scanning computerized ophthalmic diagnostic imaging, posterior segment, with interpretation and report, unilateral or bilateral; retina* (RUC 2015), with a WRVU of 0.45, an IST of 10 minutes, and total time of 11 minutes. A plurality or majority of the respondents ranked the surveyed code identical to the top key reference service on overall intensity and complexity and each of the submeasures. Half of the respondents ranked the surveyed code higher than the second reference service on the overall intensity and complexity measure and on the technical skill submeasure. The ranking of the remaining submeasures was distributed evenly.

The expert panel, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median intraservice time of 15 minutes is significantly shorter than the current IST, but longer than expected for interpretation of test results. This IST would correlate to the physician participating in the administration of the test in addition to interpreting the results.

The panel therefore analyzed the survey data by specialty to determine if there was a specialty-specific difference. The panel noted that 64% of respondents were MDs, while 80% of claims are from ODs. The median performance rate was low (2), with a significant number of respondents who reported a zero-performance rate (21/45, 47%). We therefore also analyzed the data by performers vs. non-performers. The subgroup data are listed in separate rows of the revised Summary Spreadsheet. There were no remarkable differences in IST or WRVU estimates between the overall result and any of the subgroups.

The panel's expectation that a technician would administer the test appeared inconsistent with the survey data, which suggested that the provider administered the test. We therefore queried the 45 respondents, asking them to answer the following question: "When performing the test, who typically (over 50% of the time) acquires the data? You or a technician/staff member?" We received 29 responses, with 23 (79%) stating that a technician or staff member acquires the data and 6 (21%) stating that the provider acquires the data. We also analyzed these responses by provider type and performers vs. non-performers.

Data Acquisition	All (n=29)	MD (n=16)	OD (n=13)	Performers (n=18)	Non Performers (n=11)
Tech/Staff	23	15	8	13	10
Provider	6	1	5	5	1

In all groups, staff acquisition of data was typical. Based on this response, the panel rejected the survey IST and chose an IST consistent with the amount of time required for the provider to analyze the validity of the test by evaluating fixation losses and then interpret the plots of retinal sensitivity over time for the two eyes: 4 minutes.

Because the procedure is typically performed on the same day as an office visit, we reduced the pre-time from the survey value of 5 minutes to 1 minute. This time is required to explain the test to the patient and enter an order into the EHR. The testing device is not integrated with the EHR. We reduced the survey post-time from 10 minutes to 1 minute, which is necessary to sign the report, enter the results into the EHR, and send a letter to the referring physician. The total time for the procedure is 6 minutes, with a 4-minute IST.

The survey 25th percentile work value estimate of 0.45 is greater than the code's current value. Although there have been technological advances in the instrumentation used to perform the test and the patient population has expanded to include patients with macular degeneration, we were unable to find compelling evidence that this increased the physician work of the procedure. The physician work remains unchanged for the typical case with the legacy machine currently in use in the typical practice.

After discussion following pre-facilitation, we further considered the impact of the introduction of the newest instrument, which generates an automated report. It can be used to screen patients without nyctalopia or macular degeneration as well as performing diagnostic testing with a plot of sensitivity over time. We chose to value the code for patients with an existing diagnosis as a test in which a physician interprets a machine-generated data display and prepares a report as the typical service in 2021.

A similar procedure in which a physician interprets a machine-generated report is MPC code 93010, *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (RUC 2019). This code has a work value of 0.17 RVU, a 3-minute IST (1 minute shorter than our recommendation), and 6 minutes of total time (identical to our recommendation). We chose this code as a crosswalk and **therefore recommend a work value for CPT 92284 of 0.17 WRVU.**

This value is also supported by CPT 93000, Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report (RUC 2019), with 0.17 WRVU and pre/intra/post times of 2/3/1, and a total time of 6 minutes.

This is as accurate a representation of the physician work as it currently stands as we can recommend with the data we have in light of the evolving nature of the technology. Because of that evolving technology, we recommend that this code be placed on the New Technology list for review in 3 years.

We recommend a work value for CPT 92284 of 0.17 WRVU with times of 1/4/1, a total time of 6 minutes, and a crosswalk to CPT 93010.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Typically reported with an office visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global Period	Work RVU	Pre	Intra	Post	% Billed Together
4.	92250	XXX	0.40	1	10	1	34.8%
5.	92014	XXX	1.42	5	24	8	30.1%
6.	92134	XXX	0.45	1	10		26.7%
7.	92083	XXX	0.50	3	10		24.7%
8.	99213	XXX	1.30	5	20	5	13.6%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92284

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 100000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate.

Specialty Ophthalmology Frequency 20000 Percentage 20.00 %

Specialty Optometry Frequency 80000 Percentage 80.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 55,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on recent annual growth in RUC DB claims.

Specialty Ophthalmology Frequency 11000 Percentage 20.00 %

Specialty Optometry Frequency 44000 Percentage 80.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 92284

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT, Work Per Unit Time and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

ISSUE:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
92284	Dark adaptation examination with interpretation and report	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92284	A 55 year old female with poor night vision has no identifiable cause on examination. Dark adaptation is performed to assess retinal function.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other healthcare providers who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The healthcare providers on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The current code was used as a reference.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Yes.
   Yes.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Optometry (80%)
   Non-facility Performance (100%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A

   b. Service period (includes pre, intra and post):

Standard times were used with care to eliminate duplication given the same day office visit. Granular detail is provided below. Standard input times used for pre, intra, and post activities. **Pre:** (Standard Inputs) Line CA011 – The technician provides education and obtains consent for the procedure. Line CA013 – The technician prepares the room, equipment, and supplies. Line CA016 – The patient is positioned, occlude is patched over the fellow eye. **Intra:** Line CA021 – The time listed includes time to occlude the non-tested eye, place trial lenses in front of the eye being tested as well as run the actual test on the dark adaptation device. The same procedure is repeated for the fellow eye. The technician is in the room the whole time providing real time coaching/feedback as the test is performed. **Post:** (Standard Inputs) Line CA024 – The technician will clean the room and pack up the equipment utilized. Line CA031 – The technician will review with the healthcare provider the patient's performance on the activities, before the provider comes up with a finalize plan.

   c. Post-service period:

N/A

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

During the intra-service period the technician will start by placing a series of trial lenses over the tested eye to account for their optimal prescription. This can often include multiple lenses with trial

and error to determine the optimal lenses. Next the patient's head is placed into the tabletop device and the test is run. During the test the technician remains in the room with the patient 100% of the time and provides real time feedback/coaching as the test is performed.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
    N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
    N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    No.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
    Supplies:
    Line SG043 Dressing, eye pad – Added - used to cover the fellow eye during testing
    Line SJ053 Swab-pad, alcohol – Was omitted in error, but is utilized to sterilize equipment prior to patient use.

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
    Invoices will be provided for new supplies with standard/default formulas.

Dark Adaptometer – device used to bleach and subsequently test the ability of the patient to dark adapt.

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

5 years

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Default formulas were used for all equipment, as there is no highly technical equipment.

EQ029 – Humphrey field analyzer – Removed – no longer used.
EL006 – lane, screening (oph) – Removed from Initial Recommendation – this test is now typically performed in a screening lane, trial lenses are included in this lane which are necessary for performing this test.
EQ165 – lens set, trial – Added - utilized to place appropriate prescription before testing is performed.
EF030 – table, motorized – Added - utilized to raise/lower the dark adaptometer device

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

The updates reflect the change to a different dark adaptometer which is now more typical. The current form of the device that is typical is the tabletop version (AdaptDx). We anticipate this to remain the typical version for this test for the next several years despite a newer version that became available in 2020 but at a significantly higher cost.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org

immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

April 24, 2021

Zach Hochstetler
Director, CPT Editorial Panel
American Medical Association
AMA Plaza
330 N. Wabash Ave, Suite 39300
Chicago, IL 60611-5885

Dear Mr. Hochstetler,

As a result of the April 2021 RUC meeting, it is now necessary to revise the descriptor for CPT 92284. The discussion at the RUC concluded to have a CPT editorial revision that specifies 92284 as a diagnostic code. As a result, the American Academy of Ophthalmology, the American Society of Retina Specialists, and the American Optometric Association propose the following editorial revision:

▲ 92284 Diagnostic dark adaptation examination with interpretation and report

If there are additional questions or comments regarding this revision, please contact Kayla L. Amodeo, AAO Director of Health Policy, via email at kamodeo@aao.org.

Sincerely,

Michael X. Repka, MD, MBA
AAO Medical Director for Government Affairs

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CPT Assistant Analysis

April 2021

Anterior Segment Imaging – Tab 21

In 2011, CPT code 92286 was originally identified via the *Harvard Valued – Medicare Utilization over 30,000* screen and code 92287 was added as part of the family for review. The American Academy of Ophthalmology (AAO) indicated that apart from utilizing an image, codes 92286 and 92287 have completely different clinical indications and conditions. CPT code 92286 is used primarily to follow patients with corneal endothelial dystrophy for progression of their disease, pre-cataract surgery to assess the need for possible corneal transplant at the same time and for follow-up care of post corneal transplant patients. The specialty societies believed that coding education and publication of a CPT Assistant article may help clarify the difference between codes 92287 and 92235. The RUC recommended that the specialty society develop a CPT Assistant article to clarify the difference between CPT codes 92287 and 92235.

In October 2018, the Relativity Assessment Workgroup reviewed a list of RUC referrals for CPT Assistant articles from 2013-2016. The Workgroup requested action plans for January 2019. In January 2019, the RUC recommended to review this service in two years to determine if the article and CPT changes were effective. In December 2020, the specialty societies noted that the CPT Assistant article addressed concerns with the appropriate reporting of macular degeneration. Medicare claims data for 2018 indicated that there is no confusion between 92287, 92286 or 92132. The diagnoses associated with claims for CPT 92287 do not include the glaucoma, cornea, or lens diagnoses which would be associated with CPT 92286 or 92132. However, the specialty societies noted that this service is Harvard valued and would benefit to be surveyed to include a vignette, description of work, updated physician time and valuation. A Workgroup member also commented that 92287 is frequently reported with fluorescein angiography of retina (92235). The RUC recommended that CPT code 92287 be surveyed for the April 2021 RUC meeting. The specialty societies indicated that despite its appearance as a "child" code of 92286, these are two wholly unrelated services in terms of instrumentation, diagnoses, and physician work.

92287 ***Anterior segment imaging with interpretation and report; with fluorescein angiography***
The RUC reviewed the survey results from 30 ophthalmologists and retina specialists for CPT code 92287 and determined that a direct work RVU crosswalk to MPC code 92250 *Fundus photography with interpretation and report* (work RVU = 0.40, 10 minutes of intra-service and 12 minutes total time) appropriately accounts for the work required to perform this service. The RUC recommends 1 minute of pre-service time, 10 minutes of intra-service time, and 1 minute of immediate post-service time. The RUC noted that 92287 is performed with an office or eye visit 95 percent of the time. The RUC ensured that its work and time recommendations represent work that is distinct and separate from the same-day office or eye visit services.

The RUC noted that both CPT code 92287 and CPT code 92250 are performed on both eyes and that the 1 minute of pre-service time is associated with entry of patient data into the electronic health record. The RUC also noted that the recommendation to decrease the valuation of 92287 reflects the marginal decrease in time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 92287 to CPT code 92201 *Ophthalmoscopy, extended; with retinal drawing and scleral depression of peripheral retinal disease (eg, for retinal tear, retinal detachment, retinal tumor) with interpretation and report, unilateral or bilateral* (work RVU = 0.40, 10 minutes of intra-service and 12 minutes of total time) determined that both services require nearly identical physician work, time and intensity, which supports the RUC recommended work RVU valuation of 92287. The RUC also compared CPT code 92287 to MPC code 92082 *Visual field examination, unilateral or bilateral, with interpretation and report; intermediate examination (eg, at least 2 isopters on Goldmann perimeter, or semiquantitative, automated suprathreshold screening program, Humphrey suprathreshold automatic diagnostic test, Octopus program 33)* (work RVU = 0.40, 8 minutes of intra-service and 11 minutes of total time). The RUC concluded that CPT code 92287 should be valued based on a direct work RVU crosswalk to MPC code 92250. **The RUC recommends a work RVU of 0.40 for CPT code 92287**.

Work Neutrality
The RUC's recommendation for this CPT code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Practice Expense
The Practice Expense (PE) Subcommittee approved the direct practice expense inputs as recommended by the specialty societies without modification. The RUC discussed whether a butterfly needle (SC030) and Bandaid (SG021) are included in this procedure even though this is often performed with retinal fluorescein angiography. The specialty societies clarified that it is typical to remove the butterfly needle and bandage the arm after the initial push rather than attempting to reuse the needle. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
92287	Anterior segment imaging with interpretation and report; with fluorescein angiography	XXX	0.40

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:92287 Tracking Number Original Specialty Recommended RVU: **0.40**
Presented Recommended RVU: **0.40**
Global Period: XXX Current Work RVU: **0.81** RUC Recommended RVU: **0.40**

CPT Descriptor: Anterior segment imaging with interpretation and report; with fluorescein angiography

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old diabetic male has possible iris neovascularization. Fluorescein angiography is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Explain the indications, risks, and benefits of iris angiography to the patient and/or family. Enter order into the electronic health record.

Description of Intra-Service Work: The quality of the study is evaluated. The fluorescein angiogram images from both eyes are compared and interpreted. Findings are compared with previous studies and other diagnostic modalities and a diagnosis is determined. The results are reviewed and discussed with the patient. Representative images are selected for archiving for future comparison. A report is prepared and dictated for entry into the medical record. The referring physician is informed of the results.

Description of Post-Service Work: The report is signed. Findings are included in a letter that accompanies the report and is sent to the referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	56%	28%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	39%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	61%	33%
Physical effort required	0%	89%	11%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	61%	39%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	100%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	80%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	100%	0%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	80%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92287, *Anterior segment imaging with interpretation and report; with fluorescein angiography,* is a Harvard-valued code in a section of CPT labeled "Other Specialized Services" containing a number of unrelated diagnostic testing services. It was originally, and incorrectly, identified as in a family with CPT 92286, *Anterior segment imaging with interpretation and report; with specular microscopy and endothelial cell analysis,* because of its location in CPT following the listing for

CPT 92286. This child code shared only the CPT hierarchy of location of the imaging and not the same technology or set of indications or use.

CPT 92287 is performed for evaluation of patients for iris neovascularization (rubeosis iridis) due to diabetes, retinal vascular occlusion, or ocular ischemic syndrome. It involves intravenous injection of fluorescein dye and imaging of the iris and is typically performed by a retina or ocular oncology subspecialist. In contrast, CPT 92286 is performed for determination of corneal endothelial cell density in patients with corneal endothelial dystrophy, corneal edema, or cataract to assess endothelial function prior to surgery. It involves a photograph of the cornea with no use of dye and is typically performed by a cornea subspecialist. The procedures themselves, the data and images generated, the interpretation processes, the diagnoses for which they are performed, the subspecialists that typically perform them, and the physician work are all unrelated.

Similarly, CPT 92287 is not in a family with any of the other ophthalmic angiography services (CPT 92230, 92235, 92240, 92242) listed under the "Ophthalmoscopy" heading in CPT. It is segregated under the "Other Specialized Services" heading because it images the iris for diagnosis of iris neovascularization, while the others image the retina for diagnosis and management of a variety of unrelated retinal diseases. Thus many of the differences which distinguish CPT 92287 from 92286 also apply to CPT 92230-92242: the data, images, interpretation processes, and diagnoses are all unrelated.

CPT 92287 is now being reviewed as a Harvard-valued code with modestly increasing claims volume (from 4,117 in 2016 to 7,182 in 2019). The procedure is typically performed on the same day as an office visit. Fluorescein angiography of the retina (CPT 92235) and fundus photography (CPT 92250) are also typically performed on the same day because the most common use of CPT 92287 is in the setting of diabetic eye disease which affects both posterior and anterior segments of the eye.

A survey was sent to a random selection of American Academy of Ophthalmology (AAO) and American Society of Retinal Specialists (ASRS) members. There were 30 responses. The vignette was considered typical by 93% of respondents. The median WRVU was 0.75, and the 25th percentile was 0.70. The current value of the code is 0.81 WRVU. The survey median IST was 10 minutes, pre-service evaluation time was 6 minutes, and immediate post-service time was 10 minutes. The current (Harvard) IST and total time are 23 minutes.

The top key reference service, chosen by 60% of respondents, was CPT 92235, *Fluorescein angiography (includes multiframe imaging) with interpretation and report, unilateral or bilateral* (RUC 2016), with 0.75 WRVU, an IST of 15 minutes, and a total time of 17 minutes. The second reference service, chosen by 17% of respondents, was CPT 92240, *Indocyanine-green angiography (includes multiframe imaging) with interpretation and report, unilateral or bilateral* (RUC 2016), with a WRVU of 0.80, an IST of 20 minutes, and total time of 22 minutes. Most respondents ranked the surveyed code identical to both reference services on overall intensity and complexity and each of the submeasures.

The expert panel, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median intraservice time of 10 minutes was accepted as appropriate for the number of images and amount of data to analyze and interpret. Because the procedure is typically performed on the same day as an office visit, we reduced the pre-time from the survey value of 6 minutes to 1 minutes. We reduced the survey post-time from 10 minutes to 1 minutes. The total time for the procedure is 12 minutes, with a 10-minute IST.

The survey 25th percentile work value estimate of 0.70 appeared high in comparison to the key reference services which have similar work values and lower ISTs given the identical intensity and complexity rankings. **We recommend instead a work value of 0.40 WRVU** with a crosswalk to MPC code 92250, *Fundus photography with interpretation and report* (RUC 2016). The crosswalk code has 0.40 WRVU, an identical IST of 10 minutes, and an identical total time of 12 minutes. Although equal to the survey low estimate, this is an accurate representation of the physician work associated with CPT 92287. While IWPUTs are often unreliable for short services, the IWPUT at this value (0.036) is similar to that of both reference services which were ranked identical on the intensity/complexity measures.

The recommended value is also supported by CPT 92201, *Ophthalmoscopy, extended; with retinal drawing and scleral depression of peripheral retinal disease (eg, for retinal tear, retinal detachment, retinal tumor) with interpretation and report, unilateral or bilateral* (RUC 2018), with 0.40 WRU and an identical IST (10 minutes) and total time (12 minutes).

Based on a crosswalk to MPC code 92250, we recommend a work value for CPT 92287 of 0.40 RVU with times of 1/10/1 and a total time of 12 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Typically performed with an office visit and retinal imaging.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global Period	Work RVU	Pre	Intra	Post	% Billed Together
4.	92235	XXX	0.75	1	15	1	86.7%
5.	92250	XXX	0.40	1	10	1	67.8%
6.	92014	XXX	1.42	5	24	8	55.4%
7.	92226	XXX	0.81		23		43.3%
8.	92134	XXX	0.45	1	10		32.8%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92287

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2021

CPT Code	Long Descriptor	Global Period
92287	Anterior segment imaging with interpretation and report; with fluorescein angiography	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92287	A 67 year old diabetic male has possible iris neovascularization. Fluorescein angiography is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other healthcare providers who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The healthcare providers on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The current code was used as a reference.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Yes.
   Yes.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   Ophthalmology (100%)
   Non-facility Performance (100%)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A

   b. Service period (includes pre, intra and post):

Standard times were used with care to eliminate duplication given the same day office visit. Granular detail is provided below. Standard input times used for pre, intra, and post activities. Su **Pre:** (Standard Inputs) Line CA011 (Line 37)– The technician provides education and obtains consent for the procedure. The input has been changed from RN to CRA (lowering cost) to reflect how the test is typically performed. Line CA013 – The CRA prepares the room, equipment, and supplies. Line CA016 – The CRA cleans the arm and connects a butterfly needle for IV push of the fluorescein dye. **Intra:** Line CA021 – The CRA injects the dye and begins taking pictures. Several pictures are taken of each eye at early and late phases which conveys different information about the iris vasculature. **Post:** (Standard Inputs) Line CA024 – The CRA will clean the room and pack up the equipment utilized. Line CA031 – The CRA will review with the healthcare provider the patient's performance on the activities, before the provider comes up with a finalize plan.

   c. Post-service period:

N/A

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

The CRA will inject the fluorescein dye into the patients vein. The patient will then undergo a series of photos taken at different time intervals for each eye. A number of early and late photos are taken to visualize the iris vasculature. Throughout the test the CRA will reassess and reposition the patient as needed to obtain adequate photos.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
    N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
    N/A

17. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    No.

18. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

Supplies:
Line SA050 pack, ophthalmology - *Removed*
Line SJ043 povidone swabsticks (3 pack) - *Removed*
Line SG021 Bandages – Maintained as before – cover wound post procedure
Line SC029 needles 18-27G - *Removed*
Line SC057 syringe 5-6ml - Maintained as before – load the fluorescein dye
Line SC030 butterfly needle - Maintained as before – inject the fluorescein dye
Line SH033 fluorescein inj - Maintained as before – actual dye utilized
Line SK058 paper photo - *Removed*
Line SK030 film - *Removed*
Line SC018 IV infusion set - *Removed*

Line SB023 gloves, nonsterile – *Added* – this is added as the ophthalmology pack which had gloves was removed
Line SG008 applicator, cotton-tipped – *Added* – this is added as the ophthalmology pack which had cotton tip applicator was removed. Used to hold eyelids open while taking photos.
Line SJ041 Betadine – *Added* – this replaces the povidone swabsticks which are no longer used as typical.

19. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

20. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

N/A

21. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Default formulas were used for all equipment, as there is no highly technical equipment.

EL005 – lane, exam – Removed – no longer used.
EQ168 – light, exam – Added – more typical of what is used in the room photos are taken
EF030 – motorized table – Maintained – used to adjust patient height/position
EQ029 – Humphrey field analyzer – Removed – no longer used.
EF027 – table, instrument – Added – typical of the room now used, required for equipment placement
ED003 – camera – Maintained – utilized for photo acquisition.

23. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

A butterfly needle and Band-Aid are included in this procedure despite the fact that this is often performed with retinal fluorescein angiography. This is because it is typical to remove the butterfly needle and bandage the arm after the initial push, rather than attempting to reuse the needle which would likely blow the vein during the 15-20 minutes of movement while taking the photo as well as the movement to a separate camera. We accordingly have no input for an IV, tape, tegaderm, or heparin flush, etc that would be required to keep the butterfly needle patent for the 20-30 minutes of the first angiographic procedure when done on the same day as another procedure. Thus we believe there are no duplicative supplies.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.
