RUC Referrals to CPT Editorial Panel - Outstanding Issues

22210	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; cervical	Screen CMS Request - Final Rule for 2025	RUC Meeting January 2025	Specialty Society: AANS, AAOS, CNS, NASS	CPT Meeting September 2025

Background: In the NPRM for 2025, CPT codes 22210, 22212, 22214 and 22216 were nominated as potentially misvalued services for the following reasons (1) incorrect global period; (2) incorrect inpatient days; (3) incorrect intra-service work description; (4) overvalued intra-service times; (5) changed surgical practice; and (6) incorrect use of posterior osteotomy codes. CMS notes that these services were last reviewed in 1995 and all but CPT code 22216 did not have a description of work or vignettes describing the typical patient. CMS also noted that there may be the need for potential bundling of these services, such as CPT code 22210 and 22600 Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment. The nominator suggested two options to address this concern: (1) developing add-on codes to differentiate between the number of vertebral segments involved in the osteotomy procedure and whether it occurs in the cervical, thoracic, or lumbar regions; and (2) removing the current posterior osteotomy codes and incorporating osteotomies into new deformity fusion codes, both with and without osteotomy. CMS is proposed to consider this code family as potentially misvalued. The RUC considered these services at the January 2025 RUC meeting. The specialty societies submitted a detailed letter on why they disagreed with issues identified by the nominator. The specialties indicated that there is no evidence that these services have an incorrect global period. They also noted that the nominator did not provide a comprehensive list of literature to support the claim that incorrect inpatient days are represented in these services, provided no evidence that the intra-service time is incorrect or that these services have changed in adults. The specialty societies did not conduct a survey of these codes and requested that the RUC refer this issue to the CPT Editorial Panel for revision. The specialties will consult with pediatric spine surgeons specializing in scoliosis surgery to submit a CPT Code Change Application (CCA). The RUC recommends that CPT codes 22210-22216 be referred to the September 2025 CPT Editorial Panel meeting for the CPT 2027 cycle.

22212	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; thoracic	Screen CMS Request - Final Rule for 2025	RUC Meeting January 2025	Specialty Society: AANS, AAOS, CNS, NASS	CPT Meeting September 2025

Background: In the NPRM for 2025, CPT codes 22210, 22212, 22214 and 22216 were nominated as potentially misvalued services for the following reasons (1) incorrect global period; (2) incorrect inpatient days; (3) incorrect intra-service work description; (4) overvalued intra-service times; (5) changed surgical practice; and (6) incorrect use of posterior osteotomy codes. CMS notes that these services were last reviewed in 1995 and all but CPT code 22216 did not have a description of work or vignettes describing the typical patient. CMS also noted that there may be the need for potential bundling of these services, such as CPT code 22210 and 22600 Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment. The nominator suggested two options to address this concern: (1) developing add-on codes to differentiate between the number of vertebral segments involved in the osteotomy procedure and whether it occurs in the cervical, thoracic, or lumbar regions; and (2) removing the current posterior osteotomy codes and incorporating osteotomies into new deformity fusion codes, both with and without osteotomy. CMS is proposed to consider this code family as potentially misvalued. The RUC considered these services at the January 2025 RUC meeting. The specialty societies submitted a detailed letter on why they disagreed with issues identified by the nominator. The specialties indicated that there is no evidence that these services have an incorrect global period. They also noted that the nominator did not provide a comprehensive list of literature to support the claim that incorrect inpatient days are represented in these services, provided no evidence that the intra-service time is incorrect or that these services have changed in adults. The specialty societies did not conduct a survey of these codes and requested that the RUC refer this issue to the CPT Editorial Panel for revision. The specialties will consult with pediatric spine surgeons specializing in scoliosis surgery to submit a CPT Code Change Application (CCA). The RUC recommends that CPT codes 22210-22216 be referred to the September 2025 CPT Editorial Panel meeting for the CPT 2027 cycle.

22216	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure)	Screen CMS Request - Final Rule for 2025	RUC Meeting January 2025	Specialty Society: AANS, AAOS, CNS, NASS	CPT Meeting September 2025

Background: In the NPRM for 2025, CPT codes 22210, 22212, 22214 and 22216 were nominated as potentially misvalued services for the following reasons (1) incorrect global period; (2) incorrect inpatient days; (3) incorrect intra-service work description; (4) overvalued intra-service times; (5) changed surgical practice; and (6) incorrect use of posterior osteotomy codes. The RUC recommends that CPT codes 22210-22216 be referred to the September 2025 CPT Editorial Panel meeting for the CPT 2027 cycle.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

36557	Insertion of tunneled centrally inserted central venous catheter, without subcutaneous port or pump; younger than 5 years of age	Screen Site of Service Anomaly - 2023	RUC Meeting January 2024	Specialty Society: ACR, ACS, APSA, OEIS, SIR, SVS	CPT Meeting September 2025

Background: In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 36558 via the site of service anomaly screen, for services with Medicare utilization over 10,000 in 2019-2021 that are typically performed in the inpatient hospital setting, yet only include a half discharge day management visit (99238). The RAW reviewed the action plan in September 2023, and agreed with the specialty societies that the entire family of services (36557-36566) be surveyed for the January 2024 RUC meeting. The specialty societies also requested changing the global period from a 010-day to a 000-day to account for variability in site of service based on the patient presentation and specialty performing the procedure. However, when the specialty societies were preparing to survey the services, they determined they could not proceed and instead requested to revise the codes through the CPT process prior to surveying. The specialty societies noted that the ages listed within some of the current code descriptors do not accurately reflect the variation of physician work (e.g., babies versus infants versus children versus adults). Additionally, some of the code descriptors are antiquated and include outdated practices and techniques technology that no longer exist or are incorrectly described, which may cause incorrect reporting. For example, patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. Finding an access location in a patient in which access issues have become harder, takes more time, includes more risk, and potentially requires additional interventions. The RUC recommends that CPT codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 be referred to the May 2024 CPT Editorial Panel meeting for revision. In September 2024 the applicants withdrew the CCA citing that the specialties that most frequently use these codes were not involved in development of the code structure. The applicants requested a workgroup to be formed to develop a unified code structure.

36558	Insertion of tunneled centrally inserted central venous catheter, without subcutaneous port or pump; age 5 years or older	Screen Site of Service Anomaly - 2023	RUC Meeting January 2024	Specialty Society: ACR, ACS, APSA, OEIS, SIR, SVS	CPT Meeting September 2025

Background: In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 36558 via the site of service anomaly screen, for services with Medicare utilization over 10,000 in 2019-2021 that are typically performed in the inpatient hospital setting, yet only include a half discharge day management visit (99238). 55705	Biopsy, prostate, any approach, nonimaging-guided	<u>Screen</u> Codes Reported Together 75% or More- Part5	<u>RUC Meeting</u> September 2024	<u>Specialty Society:</u> ACR, AUA, OEIS, SIR	<u>CPT Meeting</u> September 2025; February 2025 (Tab 16); May 2024 (Tab 15)

Background: In September 2024, the RUC recommended to refer this entire code family to the CPT Editorial Panel for restructuring in the CPT 2027 cycle. Specifically, to ensure that the long descriptor language and related guidelines appropriately describe the services and number of biopsies performed per service. Additionally, the language of "first targeted lesion" was not clear to RUC members and the survey respondents as indicated by the identical intra-service times for services were few biopsies were obtained and services were numerous biopsies were obtained. Another RUC member noted that the language "Biopsy" and "Biopsies" was confusing as well. Additionally, the add-on code was thought to present a potential issue for improper coding due to lack of clarity on the number of biopsies performed, per service. The societies informed the RUC that they have a Coding Change Application prepared for the February 2025 CPT Editorial Panel meeting for the CPT 2027 cycle. The specialties submitted a CCA for the Feb 2025 CPT meeting but it was withdrawn for restructuring. A new CCA is expected for September 2025.

55706	Biopsies, prostate, needle, transperineal, stereotactic template guided saturation sampling, including imaging guidance	<u>Screen</u> 010-Day Global Post-Operative Visits / Codes Reported Together 75% or More- Part5	<u>RUC Meeting</u> September 2024	<u>Specialty Society:</u> ACR, AUA, OEIS, SIR	<u>CPT Meeting</u> September 2025; February 2025 (Tab 16); May 2024 (Tab 15)

Additionally, the add-on code was thought to present a potential issue for improper coding due to lack of clarity on the number of biopsies performed, per service. The societies informed the RUC that they have a Coding Change Application prepared for the February 2025 CPT Editorial Panel meeting for the CPT 2027 cycle. The specialties submitted a CCA for the Feb 2025 CPT meeting but it was withdrawn for restructuring. A new CCA is expected for September 2025.

5XX09	<u>Screen</u> Codes Reported Together 75% or More- Part5	<u>RUC Meeting</u> September 2024	<u>Specialty Society:</u> ACR, AUA, OEIS, SIR	<u>CPT Meeting</u> September 2025; February 2025 (Tab 16); May 2024 (Tab 15)

Background: In September 2024, the RUC recommended to refer this entire code family to the CPT Editorial Panel for restructuring in the CPT 2027 cycle. Specifically, to ensure that the long descriptor language and related guidelines appropriately describe the services and number of biopsies performed per service. Additionally, the language of "first targeted lesion" was not clear to RUC members and the survey respondents as indicated by the identical intra-service times for services where few biopsies were obtained and services where numerous biopsies were obtained. Another RUC member noted that the language "Biopsy" and "Biopsies" was confusing as well. Additionally, the add-on code was thought to present a potential issue for improper coding due to lack of clarity on the number of biopsies performed, per service. The societies informed the RUC that they have a Coding Change Application prepared for the February 2025 CPT Editorial Panel meeting for the CPT 2027 cycle. The specialties submitted a CCA for the Feb 2025 CPT meeting but it was withdrawn for restructuring. A new CCA is expected for September 2025.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

70544	Magnetic resonance angiography, head; without contrast material(s)	<u>Screen</u> CMS High Expenditure Procedural Codes2 / Codes Reported Together 75% or More-Part5	<u>RUC Meeting</u> April 2024	<u>Specialty Society:</u> ACR, ASNR, SIR	<u>CPT Meeting</u> September 2025

Background: In April 2022, the Relativity Assessment Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of \$5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 70547 and 70544. In September 2022, the Workgroup recommended review in 2 years (2021-2022 data) after practice patterns in the inpatient and outpatient setting go back to how it was prior to the pandemic. (Note: 2019 reported together data was 66%). In April 2024, the RAW noted that the rate these services are reported together continues to increase (2020=77%, 2021=79% and 2022=81%). The specialty societies recommended, and the Workgroup agreed that 70547 and 70544 be referred to the CPT Editorial Panel (Feb 2025) to create a code bundling solution.

70547	Magnetic resonance angiography, neck; without contrast material(s)	<u>Screen</u> CMS High Expenditure Procedural Codes2 / Codes Reported Together 75% or More-Part5	<u>RUC Meeting</u> April 2024	<u>Specialty Society:</u> ACR, ASNR, SIR	<u>CPT Meeting</u> September 2025

90901	Biofeedback training by any modality	<u>Screen</u> High Volume Growth9	<u>RUC Meeting</u> April 2024	<u>Specialty Society:</u> ACOG, APTA, AUA	<u>CPT Meeting</u> September 2025; Sep 2024

Background: In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 90901 via the high volume growth screen with 2021 Medicare utilization of 10,000 or more than increased by at least 100% from 2016 through 2021. In September 2023, the Workgroup reviewed the action plan for CPT code 90901 and agreed with the specialty societies that 90901, along with the other services in this code family (90912 and 90913) be surveyed for the April 2024 RUC meeting. The specialty society also requested changing the global period from 010-day to a 000-day global period to account for variability in the site of service based on the patient presentation and specialty societies performing the procedure. However, when the specialty societies were preparing to survey the services, they determined they could not proceed and instead requested to revise the code family through the CPT process before surveying. The specialty societies noted that the current code descriptor for CPT code 90901 is not well understood based on their review of past RUC rationales for valuation, claims data, and the vignettes used for review in 1995 and 1996 by the RUC and HCPAC. In the 1995 RUC rationale, the vignette described 45–60-minute sessions (and brief 30-minute sessions) and included information about psychiatrists and psychologists, though it is unclear who was surveyed. However, the 1996 RUC rationale of the HCPAC review is based on a different vignette, considered a CMD five-year-review comment, and was surveyed by physical therapists, which led to a reduction of the work RVU from 0.89 to 0.41 based on comparison to a time-based therapy code, CPT code 97110. The specialty societies note that although 90901 is not time-based, the comparison for the current value was to a 15-minute time-based code despite the current intra-service time being 45 minutes. In their letter to request a referral to CPT for this code family, the specialty societies proposed revising the code descriptor for CPT code 90901 to be consistent with other physical therapy time-based and modality codes, as well as similar to other biofeedback training codes. Additionally, code descriptor clarification may resolve the continued confusion about the intent and correct coding for 90901. The RUC recommends that CPT codes 90901, 90902 and 90903 be referred to the September 2024 CPT Editorial Panel meeting for revision. In September 2024, the CPT Editorial Panel postponed this issue and indicated clarifications necessary for the submitters to address prior to the next submission.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

90912	Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry, when performed; initial 15 minutes of one-on-one physician or other qualified health care professional contact with the patient	Screen Negative IWPUT	RUC Meeting April 2024	Specialty Society: ACOG, APTA, AUA	CPT Meeting September 2025; Sep 2024; Feb 2019-EC

Background: In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 90901 via the high volume growth screen with 2021 Medicare utilization of 10,000 or more than increased by at least 100% from 2016 through 2021. Additionally, code descriptor clarification may resolve the continued confusion about the intent and correct coding for 90901. The RUC recommends that CPT codes 90901, 90902 and 90903 be referred to the September 2024 CPT Editorial Panel meeting for revision.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

92507	Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual	<u>Screen</u> CMS Request/Speech Language Pathology Request / High Volume Growth 3 / High Volume Growth10	<u>RUC Meeting</u> September 2024	<u>Specialty Society:</u> ASHA	<u>CPT Meeting</u> September 2025

Background: In April 2024, this service was identified via the high volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. The Workgroup requests that the specialty societies submit an action plan for codes for September 2024. In September 2024, the RUC recommended referral to CPT to reflect current practice patterns and modernize the descriptions of treatment services currently captured under CPT code 92507.

G0396	Alcohol and/or substance (other than tobacco) misuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes	<u>Screen</u> CMS-Other - Utilization over 30,000	<u>RUC Meeting</u> January 2018	<u>Specialty Society:</u> AAFP, ASA	<u>CPT Meeting</u> Time Uncertain

Background: In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. This list resulted in 34 services and the RAW requested action plans to be reviewed at the January 2018 meeting. In January 2018, the RUC recommended to maintain the physician work and refer to CPT to editorially remove "screening" from 99408 and 99409 to "assessment" to mirror G0396. At the February 2018 CPT meeting, the Panel postponed until time uncertain this request to revise codes 99408-99409 to identify assessment of alcohol and/or substance abuse. As a rationale for postponement, the Panel said that the service described in this application did not meet the General Criteria for Category I because the proposed service is not unique or well defined, and does not describe a service that is clearly identified and distinguished from existing services already described in CPT by other codes. The Panel's additional rationale for postponement of this item was to allow the relevant specialty societies an opportunity to submit a new code change application to address the differences between assessment and screening services.

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

60240 Thyroidectomy, total or complete

Screen:

CPT Referral to the RUC

RUC Meeting:

January 2025

RUC Rec:

Refer to CPT Assistant

Specialty Society:

AAO-HNS, ACS

CPT Asst Status:

August 2025

Background: At the October 2021, CPT Editorial Panel meeting, the CPT Executive Committee (EC) referrals were presented to the CPT Editorial Panel. The recommendations of the Executive Committee were accepted through a consent calendar, with the following single extraction: Tab I: Other Business - Issue 2: Tab 28 - Thyroidectomy 60260 Parenthetical Deletion. The Panel Chair provided an overview of the issue, which was derived from a previous CPT Assistant Editorial Board recommendation regarding proper coding for CPT code 60260. Specifically, the Editorial Board was seeking clarity on whether the code referred to removal of a lobe of the thyroid, or to removal of all remaining thyroid tissue. The AAO-HNS attempted to address this issue via a CCA (Tab 28) submitted for the October 2021 meeting. However, based on additional feedback from the ACS Advisors and Panel reviewers, it was withdrawn prior to the meeting. Given the withdraw, the EC, during their deliberations, discussed potential next steps. The Panel discussed precedent for sending something back to the RUC. The EC members noted that while this may be rare, it provided an opportunity for the RUC to potentially address an issue that goes beyond just code structure. Furthermore, having the issue tracked as part of a RUC screen/issue may ensure the issue gets addressed through additional mechanisms for tracking and feedback. The Panel approved the EC recommendation to refer this issue to the RUC to further consider whether CPT codes 60240 and 60260 represent a rank order anomaly. In July 2024, AMA RUC staff were asked the status of this issue and noted that they missed this referral. The Relativity Assessment Workgroup should discuss this issue at the September 2024 meeting to determine how to address it. The Workgroup reviewed this referral and recommends that the specialty societies submit an action plan for the January 2025 meeting for CPT codes 60240 and 60260 on how to address these services. In January 2025, the Workgroup discussed the possible work order anomaly with 60240 and 60260. The specialties explained that there is not a rank order anomaly between 60240 and 60260. The pre/intra/post service times are relatively the same, but the post-operative visits are quite different. CPT code 60260 requires post-operative hospital visits, whereas CPT 60240 does not, which is primary reason for the difference in work RVU. The post-operative hospital visits in CPT code 60260 (1-99231 and 1-99232) are necessary to monitor the patient's calcium levels every few hours. Patient's who have had a previous operation on the neck must be monitored to ensure that the parathyroid glands were not disrupted, in turn disrupting the patient's regulation of calcium levels. Therefore, the patient must stay in the hospital longer to ensure they are stable. The Workgroup agreed with the specialty societies that there is not a rank order anomaly between 60240 and 60260 and will notify the CPT Editorial Panel/CPT Assistant Board and agreed that this issue be referred to CPT Assistant to develop an article that revises the 2010 CPTA Q&A guidance and includes numerous clinical examples to support education about correct coding for thyroidectomy procedures.

Detailed Description of Pre-Service Time Packages (Minutes)

		FACILITY				NON-FAC	
		1	2	3	4	5**	6
	Total Pre-Service Time	20	25	51	63	8	23

CATEGORY SUBTOTALS

A	Pre-Service Evaluation (IWPUT =0.0224)	13	18	33	40	7	17
B	Pre-Service Positioning (IWPUT = 0.0224)	1	1	3	3	0	1
C	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	6	15	20	1	5

DETAILS

A	History and Exam (Performance and review of appropriate Pre-Tests)	5	10	10	15	4	9
A	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2	2	4	1	1
A	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3	5	5	2	3
A	Communicate with other professionals	0	0	5	5	0	2
A	Check/set-up room, supplies and equipment	1	1	5	5	0	1
A	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1	5	5	0	1
A	Prepare/ review/ confirm procedure	1	1	1	1	0	0
B	Perform/ supervise patient positioning	1	1	3	3	0	1
C	Administer local/topical anesthesia	1	1	0	0	1	5
C	Observe (wait anesthesia care)	0	0	10	15	0	0
C	Dress and scrub for procedure	5	5	5	5	0	0

**If the procedure does not require local anesthesia, 1 minute should be removed from pre-service time

- 1 Straightforward Patient/Straightforward Procedure (No anesthesia care)
- 2 Difficult Patient/Straightforward Procedure (No anesthesia care)
- 3 Straightforward Patient/Difficult Procedure
- 4 Difficult Patient/Difficult Procedure
- 5 Procedure with minimal anesthesia care (If no anesthesia care deduct 1 minute)
- 6 Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect

Additional Positioning Times for Spinal Surgical Procedures

SS1	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
SS2	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
SS3	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
SS4	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
SS5	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

Additional Positioning Times for Spinal Injection Procedures

SI1	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
SI2	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
SI3	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
SI4	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

Additional Positioning Times for Urological Procedures

U1	Dorsal Lithotomy	5 Minutes

Notes:

- Roll-over cells for additional detail where available
- Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice

Detailed Description of Facility Based Post-Service Time Packages (Minutes)						
	7A Local Anesthesia/ Straightforward Procedure	7B Local Anesthesia/ Complex Procedure	8A IV Sedation/ Straightforward Procedure	8B IV Sedation/ Complex Procedure	9A General Anesthesia or Complex Regional Block/ Straightforward Procedure	9B General Anesthesia or Complex Regional Block/Complex Procedure
Total Post-Service Time	18	21	25	28	30	33
Details:						
Application of Dressing ¹	2	2	2	2	2	2
Transfer of supine patient off table	1	1	1	1	1	1
Operative Note	5	5	5	5	5	5
Monitor patient recovery/stabilization	1	1	5	5	10	10
Communication with patient and/or family	5	5	5	5	5	5
Written post-operative note	2	5	2	5	2	5
Post-Operative Orders and Order Entry	2	2	5	5	5	5

Advisors may request additional time for circumstances that require additional work beyond the type of work described

¹ This represents a simple dressing

In April 2025, the RUC recommended to survey for September 2025. The patient population has changed on who is receiving these services and it is no longer the sickest, most complicated patients, but will be available to more candidates and these services may be used to treat aortic regurgitation. The Workgroup indicated if National Coverage Determinations (NCDs) for these services having a co-surgery designation, the specialties could submit a CCA if any code descriptor changes are necessary.	

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re- Review</i>	<i>RUC Rec</i>	<i>Complete</i>
33364	Transcatheter aortic valve replacement (tavr/tavi) with prosthetic valve; open iliac artery approach	Apr 2012	Transcatheter Aortic Valve Replacement	12	CPT 2013	September 2025	Surveyed again in April 2018 and the RUC indicated that CPT codes 33361, 33362, 33363, 33364, 33365 and 33366 will remain on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. In April 2024, the Workgroup indicated to Review an update from the specialty societies in 1 year (April 2025). The specialty societies indicated a couple changes: 1) The patient population has changed and is/will be performed on not just the sickest patients but will be available to more candidates and these services may be used to treat aortic regurgitation. 2) The services are changing and co-surgery may not necessarily be necessary in the future. The specialties may pursue a request for CMS to removal of the National Coverage Determination (NCD) regarding co-surgeons for these services. 3) Coding changes may be necessary to keep the highest performed	☐

67516	Suprachoroidal space injection of pharmacologic agent (separate procedure)	Jan 2023	Suprachoroidal Injection	10	CPT 2024	April 2028	There is currently only one FDA-approved medication for this procedure, triamcinolone acetonide, and it is approved for only one indication: macular edema associated with uveitis. The relevant HCPCS code is J-3299. Medicare claims volume for this indication is expected to be low. However, if other drugs for more common indications obtain FDA approval, claims volume may grow substantially. Thus, CPT code 6X000 will be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. The RUC recommended that if there are new drugs that have an associated J-code that these also be considered by the Relativity Assessment Workgroup as part of the New Technology screen.	☐

81252	Gjb2 (gap junction protein, beta 2, 26kda, connexin 26) (eg, nonsyndromic hearing loss) gene analysis; full gene sequence	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81253	Gjb2 (gap junction protein, beta 2, 26kda, connexin 26) (eg, nonsyndromic hearing loss) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81254	Gjb6 (gap junction protein, beta 6, 30kda, connexin 30) (eg, nonsyndromic hearing loss) gene analysis, common variants (eg, 309kb [del(gjb6-d13s1830)] and 232kb [del(gjb6-d13s1854)])	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81256	Hfe (hemochromatosis) (eg, hereditary hemochromatosis) gene analysis, common variants (eg, c282y, h63d)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81257	Hba1/hba2 (alpha globin 1 and alpha globin 2) (eg, alpha thalassemia, hb bart hydrops fetalis syndrome, hbh disease), gene analysis; common deletions or variant (eg, southeast asian, thai, filipino, mediterranean, alpha3.7, alpha4.2, alpha20.5, constant spring)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81261	Igh@ (immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, b-cell), gene rearrangement analysis to detect abnormal clonal population(s); amplified methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81262	Igh@ (immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, b-cell), gene rearrangement analysis to detect abnormal clonal population(s); direct probe methodology (eg, southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re- Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81263	Igh@ (immunoglobulin heavy chain locus) (eg, leukemia and lymphoma, b-cell), variable region somatic mutation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81264	Igk@ (immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, b-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81265	Comparative analysis using short tandem repeat (str) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81266	Comparative analysis using short tandem repeat (str) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygosity in multiple birth pregnancies) (list separately in addition to code for primary procedure)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81267	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; without cell selection	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81268	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; with cell selection (eg, cd3, cd33), each cell type	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re- Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81270	Jak2 (janus kinase 2) (eg, myeloproliferative disorder) gene analysis, p.val617phe (v617f) variant	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81275	Kras (kirsten rat sarcoma viral oncogene homolog) (eg, carcinoma) gene analysis; variants in exon 2 (eg, codons 12 and 13)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81291	Mthfr (5,10-methylenetetrahydrofolate reductase) (eg, hereditary hypercoagulability) gene analysis, common variants (eg, 677t, 1298c)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81292	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81293	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81294	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81295	Msh2 (mutl homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re- Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81296	Msh2 (mut homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81297	Msh2 (mut homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81298	Msh6 (mut homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81299	Msh6 (mut homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81300	Msh6 (mut homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81301	Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) of markers for mismatch repair deficiency (eg, bat25, bat26), includes comparison of neoplastic and normal tissue, if performed	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81302	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re- Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81303	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81304	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81315	Pml/raralpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; common breakpoints (eg, intron 3 and intron 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81316	Pml/raralpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; single breakpoint (eg, intron 3, intron 6 or exon 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81317	Pms2 (postmeiotic segregation increased 2 [s. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81318	Pms2 (postmeiotic segregation increased 2 [s. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓
81319	Pms2 (postmeiotic segregation increased 2 [s. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	✓

99091			Remote Monitoring (RPM)	20	CPT 2026	January 2028	Resurvey in January 2028. In January 2025, the RUC noted that the use of RPM services continue to fluctuate in terms of the specialties who report and the monitoring that occurs. All the codes in this family would be considered new technology. Since CPT has split out the services it is unclear which technologies are used for each code based on the specific durations. It is also unclear who is predominantly providing these services. The RPM family of services will be placed on the New Technology list and resurveyed and reviewed by the RUC at the January 2028 meeting to ensure correct valuation, patient population, and utilization assumptions. Additionally, the RUC flagged the RPM codes as do not use to validate physician work in the RUC database due to the low survey response. These services will be resurveyed for the January 2028 RUC meeting.	☐

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2025

Ablation Therapy – Bone Tumors– Tab 4

In February 2025, the CPT Editorial Panel approved a new Category I add-on code to describe and report cryoablation during an open surgical procedure where the bone is frozen after a tumor resection. The physician work involves applying liquid nitrogen into the bone defect to freeze it. Typically, this is utilized for large or complex tumors rather than percutaneous methods, where a device or a probe is put through the skin. The new add-on code was surveyed for the April 2025 RUC meeting.

Family of Services

Despite all three codes involving bone tumors, the specialty societies indicated that percutaneous approach CPT codes 20982 and 20983 are not part of the same code family as the new open approach add-on code 209XX. In preparation for the April 2025 RUC meeting, the specialty societies submitted a letter to the RUC that provides a detailed explanation about how these codes are dissimilar and a comprehensive rationale supporting their decision to survey only CPT code 209XX and not the other two existing codes. CPT codes 20982 and 20983 both describe stand-alone percutaneous procedures for radiofrequency ablation (20982) and cryoablation (20983), whereas 209XX describes an add-on open procedure performed after surgical curettage of the bone tumor. Thus, the two percutaneous procedures are not clinically similar to 209XX and do not require comparable physician work. Both percutaneous procedures are performed by a small number of physicians overall, and among the physicians who use these codes, the annual case volumes are relatively low. The specialty societies reiterated the substantial differences between the stand-alone percutaneous procedures and the new add-on open bone tumor ablation procedure. They also confirmed this would not create a rank order anomaly across these services. **The RUC agreed with the specialty societies that CPT codes 20982 and 20983 are not in the same code family and do not need to be resurveyed with CPT code 209XX for the April 2025 RUC meeting. The RUC submits no recommendation for CPT codes 20982 and 20983. The RUC notes that a small percentage (15%) of these services were reported incorrectly, rather than an unlisted code for the open approach. As such, a small budget neutrality adjustment is included in the RUC’s utilization assumptions.**

ZZZ Survey Template

The specialty societies submitted a second letter to the RUC, indicating their intention to make an interim recommendation for CPT code 209XX at the April 2025 RUC meeting until this code can be resurveyed for the September 2025 RUC meeting using a different survey instrument. In their rationale, the specialty societies explained that the standard ZZZ survey instrument used to survey CPT code 209XX did not provide survey respondents with the opportunity to accurately account for and estimate any potential pre-service and post-service time required to perform this service. In rare circumstances, specialty societies may provide justification and request that an amended ZZZ survey instrument with pre- and post-service time be used when surveying.

In their explanation, the specialty societies described that the pre-service work involved with CPT code 209XX includes further discussion with the patient, which includes describing the ablation therapy and outlining potential risks, particularly to the adjacent tissues and structures.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code S=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

Additional time is also needed to ensure the medical team is set up and fully prepared to perform this procedure, which is rarely done and requires using a variety of supplies for handling liquid nitrogen, including funnels, silicone sheets to place around soft tissues, and special types of protective goggles and gloves. The intra-service time involved with this service includes the placement of the protective silicone sheets, attaching a probe or thermocouple to monitor the temperature and the extent of freezing, carefully pouring the liquid nitrogen into the defect through a funnel, letting it sit and freeze the bone for 5-6 minutes, administering warm saline around the soft tissue as necessary to avoid freezing damage, and drying the bone to complete the freeze-thaw cycle. This cryoablation cycle is repeated three times.

Considering that the standard ZZZ survey instrument only has a single field to enter intra-service time, the specialty societies believe this may have confused survey respondents and led to a potential underestimation of the pre-service, post-service, and total time necessary to perform this procedure. Due to this potentially being a flawed survey, the specialty societies prepared an interim recommendation for CPT code 209XX using the current survey results. They intend on resurveying for the September 2025 RUC meeting using an amended ZZZ survey instrument with pre- and post-service time, which would provide survey respondents with the opportunity to report additional pre- and/or post-service time if applicable. **The RUC determined that the specialty societies may survey 209XX with the amended ZZZ survey template that specifically asks the respondent whether pre- and post-service time is associated with this add-on service for the September 2025 RUC meeting.**

209XX Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)

The RUC reviewed survey results from 37 orthopaedic surgeons who are self-designated as musculoskeletal oncologists and recommends an interim work RVU of 2.78, which is consistent with the survey 25th percentile work RVU and appropriately accounts for the physician work typically required to perform this service. The RUC recommends 25 minutes of intra-service and total time.

To support the recommended work RVU of 2.78, the RUC compared the surveyed code to the top key reference code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time, 32 minutes total time) and the second key reference code 61797 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure)* (work RVU = 3.48, 30 minutes intra-service and total time). The RUC recognizes that the two key reference services bracket the survey 25th percentile work RVU and estimated measured intensity. The surveyed code requires identical intra-service time compared to the top key reference code, but also has greater complexity and intensity to perform, thus supporting a higher work RVU. Survey respondents who selected the top key reference also agreed that the surveyed code is more intense/complex to perform. CPT code 209XX requires slightly less time and intensity compared to the second key reference code, further supporting the survey 25th percentile work RVU. **The RUC recommends an interim work RVU of 2.78 for CPT code 209XX and a resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

Practice Expense

The RUC recommends no direct practice expense inputs for CPT code 209XX as it is a facility-based add-on service.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

New Technology

CPT code 209XX will be placed on the New Technology/New Services list to be re-reviewed by the RUC in three years. The specialty societies expect this to be a low-volume service. Given that this procedure describes open cryosurgery and involves liquid nitrogen, the technology utilized, and the technique involved with these supplies are not widely practiced and are unfamiliar to most orthopaedic surgeons at this time.

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Subject: Tab 4 Ablation Therapy – Bone Tumors (Codes +209XX, 20982, 20983)

Dear Dr. Silva:

On behalf of the American College of Radiology, Society of Interventional Radiology, and the Outpatient Endovascular and Interventional Society, we write to explain why the new add-on CPT code 209XX (*Ablation therapy for reduction or eradication of bone tumors, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)*) is not in the same family as existing percutaneous bone tumor ablation procedures, 20982 (*Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency*) and 20983 (*Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; cryoablation*).

Background

CPT codes 20982 and 20983 were created in 2004 and 2015, respectively. In February 2025, the CPT Editorial Panel approved a new Category I CPT code, 209XX, for open bone tumor ablation as an add-on code to open surgical procedures, which is scheduled to be valued at the April 2025 RUC meeting.

Procedures are not clinically similar

Despite these three codes all involving bone tumors, they are not similar in the nature, time, or intensity of physician work. Percutaneous ablation procedures involve image-guided placement of linear, metallic ablation probes through the skin and soft tissues into and around target tumor(s), followed by energy-mediated tumor treatment with imaging monitoring, and they are standalone procedures. In contrast, 209XX's Description of Procedure from the Code Change Application (CCA) describes it as an **add-on open procedure** performed after surgical curettage of the bone tumor in which "liquid nitrogen is gently poured using a funnel into the defect..." This bears no resemblance to the work performed in codes 20982 or 20983.

Little to no overlap between performing specialties

New code 209XX is anticipated to be performed "significantly, if not exclusively" by orthopedic and hand surgeons.

In contrast, over 90% of the claims data from 20982 and 20983 arise outside those specialties, predominantly from diagnostic and interventional radiologists. According to the 209XX CCA, approximately 15% of open procedures are miscoded as percutaneous, so the true degree of specialty overlap is even smaller.

No change to the existing procedure or patient population

Documented in the 209XX CCA (excluding those procedures which are being miscoded), open bone tumor ablation procedures are currently being reported with unlisted CPT codes. As such, the addition of this new code will not be expected to change the type, length of time, and intensity of physician work, or the patient population of codes 20982 or 20983.

Logistical barriers

CPT codes 20982 and 20983 have low utilization and are performed by a small number of physicians. Based on the latest available claims data from 2023, only seven physicians billed 20982 more than 11 times and zero physicians billed 20983 more than 11 times. This makes the probability of a valid survey very low.

For these reasons, the undersigned societies have concluded that existing codes 20982 and 20983 are not in the same family as the new, add-on open surgical code 209XX and therefore we have not surveyed them for the April 2025 RUC Meeting.

We look forward to discussion with the RUC at the upcoming meeting.

RE: Tab 4, Ablation Therapy – Bone Tumors

Dear Dr. Silva,

The AAOS has provided the survey results from the current survey for 209XX and are recommending the 25th percentile work RVU and median intraservice time until we can resurvey code 209XX using a survey instrument that includes the ability to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

- **Rationale: Resurvey of 209XX**

The current standard ZZZ-global code survey defines the ZZZ global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time that is shown as "intra-service time" which can be confusing with respect to time estimation. The current 2025 survey resulted in an intraservice time of 25 minutes. However, preservice and postservice time that we believe is applicable to code 209XX was not collected.

Thank you for allowing us to provide this information. We will be available to respond to any RUC member questions.

Sincerely,
William Creevy, MD
RUC Advisor, American Academy of Orthopaedic Surgeons

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 209XX Tracking Number A3

Original Specialty Recommended RVU: **2.78**Global Period: ZZZ Current Work RVU: **N/A**Presented Recommended RVU: **2.78**RUC Recommended RVU: **2.78**

CPT Descriptor: Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female who has just undergone intralesional surgical treatment of a giant cell tumor of bone involving the distal femur also requires additional local adjuvant treatment of the resultant defect. [Note: This is an add-on service. Only consider the additional work related to the ablation therapy for eradication the bone tumor, including adjacent soft tissue when involved by tumor extension.]

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Discuss the purpose of ablation therapy after tumor excision with the patient and/or family, including a brief description of the technical aspects of the procedure. Outline the risks, including damage to adjacent tissues and structures. Review sequence and timing of the cryoablation with OR team. Confirm the availability and presence of the supplies and equipment needed to perform cryoablation, including liquid nitrogen, funnels, saline solution and warming device, silicone sheeting for soft tissue protection, and protective devices for the surgical team (eg, goggles and gloves).

Description of Intra-Service Work: Following resection/removal of the tumor (separately reported), the resulting defect is carefully inspected. The popliteal artery, tibial nerve, common peroneal nerve and the surrounding skin, muscles, and tendons are protected with silicone sheets. Thermocouples are placed around and within the lesion to monitor the temperature and the extent of freezing, ensuring proper treatment while safeguarding the surrounding healthy tissue. Liquid nitrogen is slowly poured into the defect through a funnel, with attention given to prevent spillage onto surrounding soft tissues and skin. Warm saline is applied to soft tissue areas to avoid freezing damage. After 5-6 minutes of freezing, the area is thoroughly irrigated with warm normal saline, and the bone is dried to complete the freeze-thaw cycle. This procedure (liquid nitrogen application, warm saline application to protect soft tissues, 5-6 minutes of freezing, warm normal saline irrigation, drying of bone) is repeated for a total of three freeze-thaw cycles of cryoablation.

Description of Post-Service Work: Document the cryoablation procedure in the medical record.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

New add-on code 209XX was created to report open cryosurgery for reduction or eradication of bone tumor, where liquid nitrogen is used directly on a bone tumor and local soft tissue after intralesional management of the tumor. This technique might be preferred over percutaneous cryoablation (20983, where a probe is inserted through the skin) for bone tumors in certain cases, particularly for large or complex tumors, because it allows for more precise and complete tumor destruction with better visualization and control of neurovascular and soft tissue structures.

The current standard ZZZ-global code survey defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-service time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice time of 25 minutes. However, preservice and postservice time as applicable was not collected. As we believe this resulted in a flawed survey, we have provided the

survey results from the current survey and are **recommending the 25th percentile work RVU and median intraservice time as interim until we can resurvey code 209XX** using a survey instrument that includes the ability for survey respondents to report additional pre- and/or post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 209XX in conjunction with 21601, 21602, 21603, 22100, 22101, 22102, 22110, 22112, 22114, 23140, 23145, 23146, 23150, 23155, 23156, 24110, 24115, 24116, 24120, 24125, 24126, 25120, 25125, 25126, 25130, 25135, 25136, 26200, 26205, 26210, 26215, 27065, 27066, 27067, 27355, 27356, 27357, 27635, 27637, 27638, 28100, 28102, 28103, 28104, 28106, 28107, 28108)

From: William Creevy, MD, RUC Advisor, American Academy of Orthopaedic Surgeons

Subject: Practice Expense, Tab 4, Ablation Therapy – Bone Tumors

Tab 4 CPT code 209XX is a facility-only add-on service that will have no related direct practice expense input. Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: High Volume Growth (20985)

April 2025

Computer-Assisted Surgical Navigation – Tab 05

In April 2024, the Relativity Assessment Workgroup identified CPT code 20985 as part of the high-volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2017 through 2022. Separately, codes 0054T *Computer-assisted musculoskeletal surgical navigational orthopedic procedure, with image-guidance based on fluoroscopic images (List separately in addition to code for primary procedure)* and 0055T *Computer-assisted musculoskeletal surgical navigational orthopedic procedure, with image-guidance based on CT/MRI images (List separately in addition to code for primary procedure)* had been identified on the high-volume CPT Category III screen and were referred for repeat evaluation in three years because the current literature was not sufficient for Category I code status. The specialty society noted that codes 20985, 0054T, and 0055T represented the same service if minor changes were made in the 20985 code descriptor. In September 2024, the Workgroup reviewed the action plan for 20985 and recommended that the RUC refer this code to the CPT Editorial Panel for revision. The RUC recommended that CPT code 20985 be referred to CPT for revision to modify the descriptor and address overlap with codes 0054T and 0055T. At the February 2025 CPT Editorial Panel meeting, CPT code 20985 was revised to remove “image-less” for reporting computer-assisted surgical navigational procedures for musculoskeletal procedures. The two existing Category III codes will be deleted for CPT 2027. CPT code 20985 and related family (eg, 20985 is reported with 27447 76% of the time) codes were identified for review at the April 2025 RUC meeting.

Family of Services

The specialty societies indicated that CPT codes 20985, 27130, 27446 and 27447 are not a family of services as 20985 is an add-on code that can be reported with hundreds of different musculoskeletal procedures. The RUC noted that 20985 is reported 76 percent of the time with 27447. However, as 27447 has much more volume than 20985, only 18 percent of the claims that have 27447 also include 20985. The other joint arthroplasty codes are also currently not typically reported with computer-assisted surgical navigation. AMA staff noted that CMS has an expectation that add-on codes are reviewed along with base codes, with which they are typically performed. At this meeting, CPT codes 27130 and 27447 have been separately identified in a Relativity Assessment Workgroup site of service anomaly screen for services that are typically outpatient, though still have inpatient visits. The specialty society indicated that they will be surveying these services for the September 2025 RUC meeting. Due to this separate identification, all four services will be reviewed at the same meeting. **The RUC recommends that 27130, 27446 and 27447 be reviewed at the September 2025 RUC meeting.**

ZZZ Survey Template

CPT code 20985 was surveyed for pre-and post-time in 2012 and include 10 minutes of pre-service time. CPT codes 20985 was surveyed this time with the standard ZZZ survey template, which specifies the ZZZ global period as a *code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre-and post-service time)* and only asks for the day of procedure intra-service time. In rare circumstances, specialties may provide justification and request that a ZZZ

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code S=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

survey with pre- and post-service time be conducted. The specialty societies are requesting to resurvey these services with the pre/post ZZZ survey template.

The specialties indicated that they believe the pre-service time that was captured in the 2012 valuation remains an integral part of this work for these services. The specialty noted that they are using computer navigation and the associated risk with the patient. The associated risk is related to the need to make additional small incisions for placement of reference pins into bone and associated risks of infection, fracture, and neurovascular injury. There is also additional pre-service time required to initiate and calibrate computer navigation equipment, as well as additional patient positioning time for the computer navigation to be used. **The RUC determined that the specialty societies may survey 20985 with the amended ZZZ survey template that specifically asks the respondent whether this is pre- and post-service time associated with these add-on services.**

20985 Computer-assisted surgical navigational procedure for musculoskeletal procedures (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 113 orthopaedic surgeons and recommends an interim work RVU of 2.50, maintaining the current value. As interim, the RUC recommends 0 minutes pre-service time and 25 minutes intra-service time, totaling 25 minutes. The specialty societies did not survey for pre-service time and have requested to resurvey with an amended survey instrument, specifically asking if separate pre-service time from the base code occurs for this service.

The RUC compared the surveyed code to the top key reference code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU= 2.50, intra-service 25 minutes and total time 32 minutes) and determined that with identical intra-service times, both services typically involve the same amount of physician work. Of the survey respondents who selected this key reference code, 79 percent indicated that the surveyed code is more intense than key reference code 20702.

For additional support the RUC referenced CPT code 33268 *Excision of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)* (work RVU= 2.50, 20 minutes intra-service and total time). **The RUC recommends an interim work RVU of 2.50 for CPT code 20985 and resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

Practice Expense

The RUC recommends no direct practice expense inputs for CPT code 20985 as it is a facility-based add-on service.

RE: Tab 5, Computer Assisted Surgical Navigation

Dear Dr. Silva,

The AAOS is requesting to maintain the current work RVU and times for code 20985, and to resurvey for the September 2025 RUC meeting with a ZZZ global survey tool that allows reporting of intraservice time and pre/postservice time if applicable, consistent with the definition of a ZZZ code. Below we provide a detailed rationale for this request. We also provide below a rationale as to why 20985 does not have any "family" codes.

- **Rationale: Resurvey of 20985**

In the 2007 survey and the 2011 survey of 20985, the standard ZZZ-global survey was used and correctly defined a ZZZ-global code as: *"Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)."* The survey included the ability for the survey respondent to indicate "pre-service time (if applicable); intra-service time (skin-to-skin); and immediate post-service time (if applicable)." For both prior surveys, the RUC agreed with the survey median pre-service time of 10 minutes because of the significant time and effort required to initiate and calibrate computer navigation equipment as well as additional patient positioning time for the computer navigation to be used. The RUC disagreed with additional post-service time as duplicate to the primary procedure even though documentation of all the imaging navigation would require additional time and not be related to the index procedure. This resulted in a RUC recommendation of 10 minutes of pre-service time and 20 minutes of intra-service (skin-to-skin) time that was accepted by CMS.

The current standard ZZZ-global code survey still defines the global as *"Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)."* However, even though the definition indicates there could be pre- and post-time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time that is shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice time of 25 minutes. However, preservice time was not collected for the additional preservice work prior to the skin-to-skin component of the index procedure.

We have provided the survey results from the current survey and are **recommending the current work RVU and times be maintained until we can resurvey code 20985** using a survey instrument that includes the ability to report additional pre- and post-service time, if

applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

- **Rationale: Code 20985 Does Not Have "Family" Codes**

The RUC LOI sent out to societies regarding code 20985 included 27130, 27446, and 27447 as "family" codes. These codes were not included in the code change application for revision of 20985 and deletion of 0054T and 0055T. These codes were not included in the code change application for establishing 20985, 0054T, or 0055T. We do not know who determined these codes to be family codes and we disagree that add-on code 20985 has family codes given the descriptor states "Computer-assisted surgical navigational procedure **for musculoskeletal procedures** (List separately in addition to code for primary procedure)." In fact, code 20985 can be reported with hundreds of musculoskeletal procedures, and as such, there are not specific family procedures identified.

In the AMA collaborative program EncoderPro, there is a Knowledge Base enhanced content entry that provides information about add-on codes that supports the fact that some add-on codes do not have specific primary (family) codes:

The *CPT® 2024 Code Set* includes 628 codes designated as 'add-on' codes. These codes represent additional or supplemental procedures associated with a primary procedure, eg, additional digit(s), lesion(s), vertebral segment(s). Within this group, there are **35 add-on codes** that do not include the specific parenthetical statement, "(Use ##### in conjunction with ...)", which lists the primary code(s) that the add-on code may be used in conjunction with on the same date of service. The list of 35 add-on codes without specific parenthetical instruction as to which specific primary code(s) it may be reported in conjunction with are listed in Table 1 below.

As these add-on codes can have a broader base of primary codes that they can be reported in conjunction with on the same date of service as the add-on code, the parenthetical statement, "(Use ##### in conjunction with ...)" has not been included. Instead, they often include a parenthetical statement that reflects the code's broader applicability "(List separately in addition to code for primary procedure)" or address the type(s) of procedure(s) the add-on code may be reported with. Code 33268 below is an example of this type of parenthetical instruction.

33268 Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)

(Use 33268 in conjunction with primary procedures performed via sternotomy or thoracotomy approach)

(Do not report 33268 in conjunction with 33254, 33255, 33256, 33257, 33258, 33259, 33265, 33266, 33420, 33422, 33425, 33426, 33427, 33430)

Lastly, some of these add-on codes also may include exclusionary “(Do not report …)” parentheticals as seen in the example above. While it does not directly address which specific codes it can be added to, it does provide specific instructions/directions on codes that should not be reported with the add-on code.

Table 1: [SELECTED] CPT Add-On Codes Without Specific Primary Code Reporting Instruction

2024 CPT® Add-On Code	Effective Date	2024 CPT Code Descriptor
Category III		
0054T	1/1/2009	Computer-assisted musculoskeletal surgical navigational orthopedic procedure, with image-guidance based on fluoroscopic images (List separately in addition to code for primary procedure)
0055T	1/1/2009	Computer-assisted musculoskeletal surgical navigational orthopedic procedure, with image-guidance based on CT/MRI
Surgery		
20985	1/1/2008	Computer-assisted surgical navigational procedure for musculoskeletal procedures, image-less (List separately in addition to code for primary procedure)

As indicated in this Knowledge Base information, code 20985 does not have specific primary codes and as such does not have any specific family codes. We therefore did not identify any code to be surveyed with code 20985. The service described by 20985 does not replace work in any possible index procedure, but instead enhances precision and safety by providing surgeons with real-time, 3D visualization of the skeletal anatomy and surgical instruments, improving the accuracy of procedure, and potentially reducing surgical complications

Thank you for allowing us to provide this information. We will be available to respond to any RUC member questions.

Sincerely,
William Creevy, MD
RUC Advisor, American Academy of Orthopaedic Surgeons

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 20985	Tracking Number B1	Original Specialty Recommended RVU: 2.50
		Presented Recommended RVU: 2.50
Global Period: ZZZ	Current Work RVU: 2.50	RUC Recommended RVU: 2.50

CPT Descriptor: Computer-assisted surgical navigational procedure for musculoskeletal procedures (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Computer-assisted surgical navigation is utilized when a 65-year-old female undergoes a unilateral total knee arthroplasty. [Note: This is an add-on service. Only consider the additional work related to the computer-assisted surgical navigation.]

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In the preoperative area, discussion with patient/family about the use of computer navigation as an adjunct to the arthroplasty procedure. This includes the rationale for use of the system, how it helps align the knee, and that it will increase surgical time. Describe additional small incisions that will be necessary for placement of reference pins into bone and associated risks of infection, fracture, and neurovascular injury. In the OR, confirm the computer system is operational and positioned correctly. Review preoperative plan and templating; update as needed.

Description of Intra-Service Work: Through separate incisions, predrill and place two reference pins in the femur and two in the tibia. Attach clamps to each pin to hold the tracking device. Secure navigation trackers to each pin. The trackers are activated and identified by the computer system. Registration is completed by moving the hip in a circular fashion to enable the computer software to identify the center of the femoral head. Following the standard surgical exposure, identify the bony landmarks of the femur and tibia individually by directed digitization using a pointing device with tracker components. Landmarks identified are typically the medial epicondyle, the lateral epicondyle, the distal femoral center, the axis of the femoral trochlear groove, the surfaces of the medial and lateral distal and posterior condyles, and the topography of the medial and lateral anterior distal femur. Register the tibia by digitizing the center of the tibial plateau, the anterior-posterior axis of the tibia, and the surfaces of the medial and lateral tibial condyles. Identify the ankle center by digitizing tips of the medial and lateral malleoli. After the anatomy has been registered, make an initial assessment of the range of motion (ROM). Measure the amount of angular deformity and degree of ligament imbalance to confirm optimal implant size and position with the bone cuts. The surgeon then proceeds with the standard steps of the procedure including attachment of sequential bone cutting guides; bone cuts with an oscillating saw; soft tissue releases; insertion of trial components; assessment of knee motion, ligament balance and joint stability; and insertion and fixation of the final components. During all of these steps, computer navigation is utilized to provide detailed feedback information which may be used to refine or adjust each step in the procedure. Once the permanent implants are fixed, final alignment, ligament stability and ROM are recorded and stored with the software system. At the conclusion of the surgical procedure, the trackers and pins are removed, and the wounds from the pins are closed.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In September 2024, the RAW identified 20985 via the high-volume growth screen and recommended resurvey. At the previous April 2024 RUC meeting, codes 0054T and 0055T had been identified on the high-volume CPT Category III screen and were referred for repeat evaluation in 3 years because current literature was not sufficient for Category 1 codes. With the RUC recommendation to resurvey 20985, the societies included codes 0054T and 0055T for survey, however these codes did not have vignettes. While considering vignettes for these codes, it became apparent that codes 20985, 0054T, and 0055T represented the same service if minor changes were made in the 20985 descriptor. Additionally, it was apparent that a high volume of reporting of 0054T and 0055T was likely reporting that should have been coded as 20985, if the wording for 20985 was clearer. A revised code descriptor for 20985 was approved by the CPT Panel to minimize miscoding and codes 0054T and 0055T will be deleted.

In the 2007 survey and the 2011 survey of 20985, the standard ZZZ-global survey was used and correctly defined a ZZZ-global code as: "Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre-

and post-service time)." The survey included the ability for the survey respondent to indicate "pre-service time (if applicable); intra-service time (skin-to-skin); and immediate post-service time (if applicable)." For both prior surveys, the RUC agreed with the survey median pre-service time of 10 minutes because of the significant time and effort required to initiate and calibrate computer navigation equipment as well as additional patient positioning time for the computer navigation to be used. The RUC disagreed with additional post-service time as duplicate to the primary procedure even though documentation of all the imaging navigation would require additional time and not be related to the index procedure. This resulted in a RUC recommendation of 10 minutes of pre-service time and 20 minutes of intra-service (skin-to-skin) time that was accepted by CMS.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time that is shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice time of 25 minutes. However, preservice time was not collected for the additional preservice work prior to the skin-to-skin component of the index procedure.

As we believe this resulted in a flawed survey, we have provided the survey results from the current survey and are **recommending the current work RVU and times be maintained as interim until we can resurvey code 20985** using a survey instrument that includes the ability for survey respondents to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 20985 may be reported for computer-assisted surgical navigation services performed in conjunction with any musculoskeletal procedure..

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 20985, 0054T, 0055T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

March 31, 2025

To: Scott Manaker, MD
Chair, AMA/RUC PE Subcommittee

From: William Creevy, MD, RUC Advisor, American Academy of Orthopaedic Surgeons

Subject: Practice Expense, Tab 5, Computer Assisted Surgical Navigation

Tab 5 CPT code 20985 is a facility-only add-on service that will have no related direct practice expense input. Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2025

Division of Median Arcuate Ligament – Tab 06

At the February 2025 CPT Editorial Panel meeting, two new codes were created to report open and laparoscopic median arcuate ligament syndrome (MALS) treatment, respectively. MALS or celiac artery compression syndrome is an uncommon vascular disorder caused by an extrinsic compression of the celiac artery from the median arcuate ligament, prominent fibrous bands, and ganglionic periaortic tissue. These infrequent but constant procedures have been performed for several decades and reported with unlisted codes. The two new codes were surveyed for the April 2025 RUC meeting.

39XX1 Division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed

The RUC reviewed the survey results from 36 surgeons and recommends a work RVU of 27.09 based on a direct crosswalk to CPT code 35601 *Bypass graft, with other than vein; common carotid-ipsilateral internal carotid* (work RVU = 27.09, 180 minutes intra-service, and 484 minutes total time), which maintains relativity within the family for this code. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes positioning time, 15 minutes scrub/dress/wait time, 160 minutes intra-service time, 30 minutes immediate post-service time, 2-99231, 1-99232, 1-99233, 1-99239, 1-99213, 1-99214, totaling 501 minutes. The 5-day hospital stay is necessary for the patient, who is typically in an anorexic state and extremely underweight, to be monitored for their ability to tolerate adequate oral intake of food to ensure safe discharge. The re-establishment of oral food intake is sufficiently complex where management of this problem typically extends into the office visits.

For this open procedure, the median arcuate ligament lies directly over the aorta, which significantly increases the complexity and intensity of dissecting the celiac axis. This procedure necessitates a large upper midline laparotomy with the use of mechanical retractors to access the upper posterior portion of the abdomen. Although injury to the aorta, phrenic vessels, or diaphragm is not common, the potential for such injury is possible. Preparation for emergency maneuvers and intraoperative attention to possible injury is constant, significantly increasing the intensity of the procedure. Compared to the laparoscopic procedure, 39XX2, CPT code 39XX1 requires more time during the post-operative period; therefore, is valued slightly higher.

To support the recommended work RVU, the RUC referenced codes 49187 *Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 5.1 to 10 cm* (work RVU = 28.65, 195 minutes intra-service, and 542 minutes total time) and 43281 *Laparoscopy, surgical, repair of paraesophageal hernia, includes fundoplasty, when performed; without implantation of mesh* (work RVU = 26.60, 180 minutes intra-service, and 424 minutes total time). The surveyed code work RVU and total time are appropriately bracketed by the key reference services supporting the relativity of the RUC recommended work RVU.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code +=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

For additional support, the RUC referenced code 35506 *Bypass graft, with vein; carotid-subclavian or subclavian-carotid* (work RVU = 25.33, 165 minutes intra-service, and 452 minutes total time) and MPC code 34705 *Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)* (work RVU = 29.58, 150 minutes intra-service, and 512 minutes total time). The surveyed code work RVU, intra-service time, and total time are appropriately bracketed by the reference codes supporting the relativity of the RUC recommended work RVU. **The RUC recommends a work RVU of 27.09 for CPT code 39XX1.**

39XX2 Laparoscopy, surgical, with division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed

The RUC reviewed the survey results from 37 surgeons and recommends a work RVU of 26.60 based on a direct crosswalk to CPT code 43281 *Laparoscopy, surgical, repair of paraesophageal hernia, includes fundoplasty, when performed; without implantation of mesh* (work RVU = 26.60, 180 minutes intra-service, 424 minutes total time), which maintains relativity within the family for this code. The RUC recommends 40 minutes of pre-service evaluation time, 15 minutes positioning time, 10 minutes scrub/dress/wait time, 180 minutes intra-service time, 30 minutes immediate post-service time, 1-99231, 1-99232, 1-99238, 1-99213, 1-99214, totaling 436 minutes. The additional pre-service positioning time is required to secure the patient to the table during manipulation to provide better exposure. The 3-day hospital stay is necessary for the patient, who is typically in an anorexic state and extremely underweight, to be monitored for their ability to tolerate adequate oral intake of food to ensure safe discharge. The reestablishment of oral food intake is so challenging that management of this problem extends into the office visits.

For this laparoscopic procedure, the median arcuate ligament lies directly over the aorta, which significantly increases the complexity and intensity of dissecting the celiac axis. This procedure uses similar types of mechanical retraction to elevate the liver, and delicate dissections around the three branches of the celiac trunk are performed. Although injury to the aorta, phrenic vessels, or diaphragm is not common, the potential for such injury is possible. Preparation for emergency maneuvers and intraoperative attention to possible injury is constant, significantly increasing the intensity of the procedure.

To support the recommended work RVU, the RUC referenced MPC codes 55866 *Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed* (work RVU = 22.46, 180 minutes intra-service, and 362 minutes total time) and 34705 *Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)* (work RVU = 29.58, 150 minutes intra-service, and 512 minutes total time). The surveyed code work RVU and total time are appropriately bracketed by the reference services supporting relativity of the RUC recommended work RVU. **The RUC recommends a work RVU of 26.60 for CPT code 39XX2.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 39XX1 Tracking Number C1

Original Specialty Recommended RVU: **29.06**Global Period: 090 Current Work RVU: **N/A**Presented Recommended RVU: **27.09**RUC Recommended RVU: **27.09**

CPT Descriptor: Division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 40-year-old female with median arcuate ligament syndrome (MALS) presents with a history of postprandial/epigastric pain, abdominal bruit, weight loss, diarrhea, and nausea for more than one year. She has radiographic evidence of celiac artery compression.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 92%

Description of Pre-Service Work: Results of preadmission testing (imaging, electrocardiogram and labs) are reviewed. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. Adequate preoperative fasting is confirmed to reduce the risk of postprandial symptoms during the perioperative period. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The length of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. The choice of analgesia, monitoring, and attention to hemodynamic changes and possible complications are extremely important to prevent any anesthetic complications and to be able to adapt to intraoperative physiological changes and the potential risk of vessel compromise/bleeding. Verify that all required instruments and supplies are available. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist with positioning of patient. Assist anesthesia team with initiation of anesthesia, to ensure surgical access to upper abdomen. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Under general anesthesia, a laparotomy incision is performed via an upper midline incision from the xiphoid to approximately 2 cm cephalad to the umbilicus. Grasp, elevate, and carefully incise the fascia and peritoneum to avoid injury to bowel. Sharply enter the peritoneal cavity under direct vision. Perform a visual and manual complete exploration of the abdominal cavity and its contents. When required, a gastric tube is placed and position confirmed.. The lesser sac and lesser omentum are identified and opened. Downward traction is then applied to the stomach. Identify and carefully dissect along the common hepatic artery and continue in the perivascular plane toward the confluence of the splenic and left gastric arteries to the main trunk of the celiac artery. After meticulously skeletonizing the branches of the celiac axis, the arcuate ligament and all of its fibers overlying the celiac axis are divided and resected. Care must be taken to ensure no inadvertent dissection/injury of the arteries of the celiac access, which could ultimately cause compromise to the liver and/or spleen. All surrounding ligamentous and ganglionic tissues are sharply dissected and removed down to the aorta. The celiac artery is circumferentially mobilized. Disruption of the ganglionic tissue is extended

along the initial 2 to 3 cm of the branches of the celiac trunk including the common hepatic, left gastric, and splenic arteries. Irrigate the abdominal cavity if necessary. Obtain hemostasis. Inspect the abdomen for injury. Make an instrument, needle, sponge, and laparotomy pad count. Return the abdominal organs to normal anatomical position. Drape the omentum over the abdominal contents. Carefully close the fascia and the wound in layers. When placed, the gastric tube is removed.

Description of Post-Service Work:

Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy as appropriate. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen. Monitor fluid and electrolyte status and renal function; monitor for problems, such as ileus or internal bleeding. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers and order as required. Assess pain scores and adequacy of analgesia. Write orders for laboratory tests and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Adjust parenteral controlled pain medication dosing appropriately. Write orders for labs, imaging, and medications. Write orders for advancing diet and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse with an emphasis on managing possible dysregulated eating, nausea, and/or constipation. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate (at a single visit or over multiple visits). Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, dysregulated eating, nausea, constipation) is performed and addressed. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. Activity limitations and wound care are reviewed with the patient and family. Ongoing side effects of the surgical procedure and the release of the ligament are managed including needs for additional postoperative analgesia. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Nutritional and electrolyte disturbances in patients with median arcuate ligament syndrome requires on-going management beyond routine postoperative surgical care. During the initial postoperative visit, patients are monitored for refeeding syndrome given their malnourished state. This requires consultation with another qualified health care professional, specifically dietitians, and the referring provider. Following these discussions, dietary instructions and need for nutritional supplements are discussed and planned. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The median arcuate ligament syndrome (MALS) or celiac artery compression syndrome is an uncommon vascular disorder caused by an extrinsic compression of the celiac artery from the median arcuate ligament, prominent fibrous bands, and ganglionic periaortic tissue. Clinical symptoms are postprandial abdominal pain, nausea, vomiting, unintentional weight loss, and sometimes, abdominal pain during body exercise caused by an intermittent visceral ischemia.

A survey request was sent to a random selection of members from the ACS, SVS, and SAGES. For both 39XX1 and 39XX2, almost all of the respondents that indicated they did not perform the procedure in the past 12 months performed the procedure in the past 5 years.

The **intensity/complexity statistics** for 39XX1 support the fact that this procedure is significantly more intense and complex than the key reference codes. The median arcuate ligament lies directly over the aorta. Although injury to the aorta, phrenic vessels, or diaphragm is not common, the potential for such injury is very possible. Preparation for emergency maneuvers to rescue this situation is mandatory, significantly increasing the intensity of the procedure. This is unanimously supported by the survey results for intensity/complexity including psychological stress.

Based on prefacilitation discussion, we recommend a work RVU of 27.09 for code 39XX1. This value has been crosswalked from code 35601, *Bypass graft, with other than vein; common carotid-ipsilateral internal carotid* [intraservice time = 180 minutes; total time = 484 minutes]. Although the intraservice time is slightly higher for 35601, the postservice work is greater for 39XX1. Total work is similar for both codes. This recommendation is less than the survey 25th percentile and reflects an intraoperative intensity that is consistent with similar services.

Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Standard package time of 40 minutes. The survey respondents indicated significantly more preservice evaluation time. This may be due to the additional preparation time for a possible emergent operation, including additional time to discuss such possibility with the anesthesiologist and the rest of the surgical team as MAL release is an uncommon procedure. Although the survey indicated significant additional time, we are recommending the standard package evaluation time of 40 minutes. The scrub, dress, wait time has been reduced to be consistent with the survey median time.

Positioning time: Standard package time of 3 minutes for supine positioning.

Scrub, dress, wait time: Subtract 5 minutes (total time = 15 minutes) to be consistent with survey median.

Immediate Post-time

Package 9b: Subtract 3 minutes (total time = 30 minutes) to be consistent with the survey median.

For **discharge day management**, code 99239 is recommended due to the extended time required for postoperative counseling. Patients undergoing open MAL procedures often need comprehensive guidance on managing dysregulated eating, nausea, and constipation—common complications that prolong recovery. This aligns with survey responses and reflects the complexity of care documented for such cases.

The **first postoperative visit (99214)** will require overall moderate medical decision making. Prior to surgery, these patients suffered from chronic abdominal pain for years and had undergone countless tests and procedures, many of which did not provide relief. They have tried multiple different medications to manage pain. They also typically have concurrent psychiatric diagnoses. Postoperatively, the problem addressed at the first postoperative visit will be moderate (one or more chronic illnesses with exacerbation, progression, or side effects of treatment); data reviewed and analyzed will be moderate (order/review labs to monitor for anemia, hydration, electrolytes); discussion of management with an external provider(s) (eg, psychiatrist, physical therapist, dietician); and the risk is moderate (prescription drug management; narcotic and nonnarcotic pain medication). The encounter will also include lengthy counseling regarding management of dysregulated eating, nausea, and constipation. More specifically, an interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, dysregulated eating, nausea, constipation) is performed and addressed. A PDMP check is performed, pain medications are reviewed and adjustments made including counseling on side

effects and tapering instructions. Activity limitations and wound care are reviewed with the patient and family. Ongoing side effects of the surgical procedure and the release of the ligament are managed including needs for additional postoperative analgesia. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Nutritional and electrolyte disturbances in patients with median arcuate ligament syndrome requires on-going management beyond routine postoperative surgical care. During the initial postoperative visit, patients are monitored for refeeding syndrome given their malnourished state. This requires consultation with another qualified health care professional, specifically dietitians, and the referring provider. Following these discussions, dietary instructions and need for nutritional supplements are discussed and planned. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 39599 Unlisted procedure, diaphragm (Medicare N=10); 49999 Unlisted procedure, abdomen, peritoneum and omentum (Medicare N=10)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Sometimes

Specialty vascular surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 350

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate

Specialty general surgery	Frequency 175	Percentage 50.00 %

Specialty vascular surgery	Frequency 175	Percentage 50.00 %

Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate

Specialty general surgery	Frequency 10	Percentage 50.00 %

Specialty vascular surgery	Frequency 10	Percentage 50.00 %

Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

CPT Descriptor: Laparoscopy, surgical, with division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 40-year-old female with median arcuate ligament syndrome (MALS) presents with a history of postprandial/epigastric pain, abdominal bruit, weight loss, diarrhea, and nausea for more than one year. She has radiographic evidence of celiac artery compression.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 3% , Overnight stay-less than 24 hours 22% , Overnight stay-more than 24 hours 76%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 94%

Description of Pre-Service Work: Results of preadmission testing are reviewed. Prior imaging is reviewed, including arterial visceral angiography, CT angiography, and duplex ultrasound. Appropriate selection, timing, and administration of DVT prophylaxis are ensured. Appropriate selection, timing, and administration of antibiotics are ensured. The need for beta-blockers is assessed, and they are ordered as required. The patient is reexamined to confirm that physical findings have not changed, the patient's medication regimen has remained the same, the patient has no new allergies, and the patient has not undergone any recent procedures. Adequate preoperative fasting is confirmed to reduce the risk of postprandial symptoms during the perioperative period. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the patient and family. Informed consent is reviewed and obtained from the patient, including witness confirmation. The length and type of anesthesia, including adjuncts to postoperative analgesia management, are reviewed with the anesthesiologist. The choice of anesthesia, analgesia, monitoring, and attention to hemodynamic changes and possible complications are extremely important to prevent any anesthetic complications and to be able to adapt to intraoperative physiological changes and the potential risk of vessel compromise/bleeding. Verify that all required instruments and supplies are available, including reusable and disposable laparoscopic equipment and emergency laparotomy equipment and supplies. Assistance is provided in transfer of the patient from gurney to operating table. Monitor/assist patient positioning, initially supine while upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are then padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents. There is also consideration of positioning the patient relative to laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. Assist anesthesia team with intubation. Preposition all laparoscopic equipment for appropriate height and location to prevent patient and surgeon injury. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: Under general anesthesia, obtain abdominal access and create a safe pneumoperitoneum with placement of a needle/trocar. Insert the camera and verify safe entry. Place additional ports as required high up in the abdomen to allow the best view of the celiac ganglion during dissection. Confirm that bowel and abdominal wall vessels

are not injured during trocar placement. A liver retractor is then placed to lift the left lobe of the liver. After placing all the ports, the patient is placed in a reverse Trendelenburg position with right or left tilt as required. The pars flaccida is divided followed by dissection of the bilateral crura. The common hepatic artery is identified along the superior edge of the pancreas. The artery is traced in a retrograde fashion toward the trifurcation of the celiac trunk. The celiac trunk is then exposed by dissection of the overlying adipose tissue. The trunk is followed retrograde toward the origin at the aorta and the compression generated by the median arcuate ligament. Additional dissection of the left gastric, common hepatic, and splenic arteries may be performed for better exposure. Compression obscures the origin of the celiac trunk as the vessel dives under the fibrous tissue. To provide better exposure, the abdominal aorta is exposed through disruption of the diaphragmatic fascia just caudad/posterior to the esophageal hiatus allowing separation of the right and left crural fibers. The aorta is traced downward until the fibrous tissue of the ligament becomes thicker and harder to divide. The fibers of the ligament are divided one by one from each direction, cephalad along the anterior aorta and caudad along the anterior edge of the celiac trunk. The process proceeds slowly avoiding injury to either the aorta or the delicate celiac artery until the ligament suddenly gives way releasing the underlying pulsatile structure. Dissection is continued until the splenic, common hepatic, and left gastric arteries are free of adipose tissue and celiac plexus fibers within 2 cm in either direction of the trifurcation of the celiac trunk. A complete camera survey of the abdomen and contents is performed to inspect for bleeding and visceral injury from retraction or thermal injury from capacitance coupling or damaged equipment. Irrigate as necessary. Remove ports and close fascial and skin incisions.

Description of Post-Service Work: Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy as appropriate. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen. Monitor fluid and electrolyte status and renal function; monitor for problems, such as ileus or internal bleeding. Examine patient, check wounds, and change dressings. Continue prophylaxis for DVT. Assess need for beta-blockers and order as required. Assess pain scores and adequacy of analgesia. Write orders for laboratory tests, films, and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Adjust parenteral controlled pain medication dosing appropriately. Write orders for labs, films, and medications. Write orders for advancing diet and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse, with an emphasis on managing possible dysregulated eating, nausea, and/or constipation. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wounds are evaluated. Sutures are removed when appropriate. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, dysregulated eating, nausea, constipation) is performed and addressed. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. Activity limitations and wound care are reviewed with the patient and family. Ongoing side effects of the surgical procedure and the release of the ligament are managed including needs for additional postoperative analgesia. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Nutritional and electrolyte disturbances in

patients with median arcuate ligament syndrome requires on-going management beyond routine postoperative surgical care. During the initial postoperative visit, patients are monitored for refeeding syndrome given their malnourished state. This requires consultation with another qualified health care professional, specifically dietitians, and the referring provider. Following these discussions, dietary instructions and need for nutritional supplements are discussed and planned. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The median arcuate ligament syndrome (MALS) or celiac artery compression syndrome is an uncommon vascular disorder caused by an extrinsic compression of the celiac artery from the median arcuate ligament, prominent fibrous bands, and ganglionic periaortic tissue. Clinical symptoms are postprandial abdominal pain, nausea, vomiting, unintentional weight loss, and sometimes, abdominal pain during body exercise caused by an intermittent visceral ischemia.

A survey request was sent to a random selection of members from the ACS, SVS, and SAGES. For both 39XX1 and 39XX2, almost all of the respondents that indicated they did not perform the procedure in the past 12 months performed the procedure in the past 5 years.

The intensity/complexity statistics for 39XX2 support the fact that this procedure is significantly more intense and complex than the key reference codes. The median arcuate ligament lies directly over the aorta. Although injury to the aorta, phrenic vessels, or diaphragm is not common, the potential for such injury is very possible. Preparation for emergency maneuvers to rescue this situation is mandatory, significantly increasing the intensity of the procedure. This is unanimously supported by the survey results for intensity/complexity including psychological stress.

Based on prefacilitation discussion, we recommend a work RVU of 26.60 for code 39XX2. This value as been crosswalked from code 43281, *Laparoscopy, surgical, repair of paraesophageal hernia, includes fundoplasty, when performed; without implantation of mesh* [intraservice time = 180 minutes; total time = 424 minutes]. Total work is similar for both codes. This recommendation is less than the survey 25th percentile and reflects an intraoperative intensity that is consistent with similar services.

Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Standard package time of 40 minutes. The survey respondents indicated significantly more preservice evaluation time. This may be due to the additional preparation time for a possible emergent operation, including additional time to discuss such possibility with the anesthesiologist and the rest of the surgical team as MAL release is an uncommon procedure. Although the survey indicated significant additional time, we are recommending the standard package evaluation time of 40 minutes. The scrub, dress, wait time has been reduced to be consistent with the survey median time.

Positioning time: Additional 12 minutes (total time = 15 minutes) The patient will initially be positioned supine and upper extremity intravenous and arterial access points are dressed, padded and secured. The arms are padded and tucked at the patient's sides. The patient must be secured to the table, including a soft chest and thigh strap, as it may be necessary to roll the table during the procedure to use gravity to assist with shifting the abdominal contents. There is also consideration of positioning the patient relative to: laparoscopy equipment, including lines and video equipment and anesthesia lines relative to the rest of the equipment. The survey median positioning time reflects the time for this procedure for these activities.

Scrub, dress, wait time: Subtract 10 minutes (total time = 10 minutes) to be consistent with survey median.

The **first postoperative visit (99214)** will require overall moderate medical decision making. Prior to surgery, these patients suffered from chronic abdominal pain for years and had undergone countless tests and procedures, many of which did not provide relief. They have tried multiple different medications to manage pain. They also typically have concurrent psychiatric diagnoses. Postoperatively, the problem addressed at the first postoperative visit will be moderate (one or more chronic illnesses with exacerbation, progression, or side effects of treatment); data reviewed and analyzed will be moderate (order/review labs to monitor for anemia, hydration, electrolytes); discussion of management with an external provider(s) (eg, psychiatrist, physical therapist, dietician); and the risk is moderate (prescription drug management; narcotic and nonnarcotic pain medication). The encounter will also include lengthy counseling regarding management of dysregulated eating, nausea, and constipation. More specifically, an interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wounds are evaluated. Sutures are removed when appropriate. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, dysregulated eating, nausea, constipation) is performed and addressed. A PDMP check is performed, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. Activity limitations and wound care are reviewed with the patient and family. Ongoing side effects of the surgical procedure and the release of the ligament are managed including needs for additional postoperative analgesia. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Nutritional and electrolyte disturbances in

patients with median arcuate ligament syndrome requires on-going management beyond routine postoperative surgical care. During the initial postoperative visit, patients are monitored for refeeding syndrome given their malnourished state. This requires consultation with another qualified health care professional, specifically dietitians, and the referring provider. Following these discussions, dietary instructions and need for nutritional supplements are discussed and planned. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 39599 Unlisted procedure, diaphragm (Medicare N=15); 49329 Unlisted laparoscopy procedure, abdomen, peritoneum and omentum (Medicare N=15)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Sometimes

Specialty vascular surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 500

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate

Specialty general surgery Frequency 250 Percentage 50.00 %

Specialty vascular surgery Frequency 250 Percentage 50.00 %

Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 30 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate

Specialty general surgery	Frequency 15	Percentage 50.00 %

Specialty vascular surgery	Frequency 15	Percentage 50.00 %

Specialty	Frequency 0	Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 35281

Jonathan Thompson, MD, FACS; Dmitry Nepomnayshy, MD, FACS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 04/2025

CPT Code	Long Descriptor	Global Period
39XX1	Division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed	090
39XX2	Laparoscopy, surgical, with division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed	090

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
39XX1	A 40-year-old female with median arcuate ligament syndrome (MALS) presents with a history of postprandial/epigastric pain, abdominal bruit, weight loss, diarrhea, and nausea for more than one year. She has radiographic evidence of celiac artery compression.
39XX2	A 40-year-old female with median arcuate ligament syndrome (MALS) presents with a history of postprandial/epigastric pain, abdominal bruit, weight loss, diarrhea, and nausea for more than one year. She has radiographic evidence of celiac artery compression.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The specialty societies from the surveying societies convened a consensus panel to develop the PE recommendations based on best practices and RUC guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

CPT Codes 49187 and 43281 were selected as the key reference codes for physician work estimation. They are also both facility-only services.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A – Codes 39XX1 and 39XX2 are new codes that do not have current practice expense inputs.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

FACILITY DIRECT PE INPUTS

CPT CODE(S): 39XX1, 39XX2

SPECIALTY SOCIETY(IES): ACS, SAGES, SVS

PRESENTER(S): Charles Mabry, MD, FACS; Matthew Sideman, MD, FACS;
Jonathan Thompson, MD, FACS; Dmitry Nepomnayshy, MD, FACS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of preservice imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including presurgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

c. Post-service period:

The clinical staff work includes the standard activities involved in office E/M visits including ensuring

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

The surveying specialty societies have included recommendations that include established PE supply packs (CMS defined) for each code:

- SA048 pack, minimum mutli-specialty visit
- SA052 pack, post-op incision care (staple)
- SA054 pack, post-op incision care (suture)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2025

Transoral Oropharyngeal Procedures – Tab 7

In February 2025, the CPT Editorial Panel approved two new Category I codes that describe transoral endoscopic surgery under magnification for the removal of tumors in the oropharynx, including robotic assistance (when performed). Transoral Robotic Surgery (TORS) is a new technique for transoral resection that has become the standard of care for this sort of physician work. After creating the two new Category I codes that described transoral resection of oropharyngeal tumors under magnification, CPT code 42808 was revised to clarify that it is done without magnification. CPT code 42808 was included in the family of procedures to be surveyed for the April 2025 RUC meeting.

42808 Excision or destruction of lesion of pharynx, without magnification, any method

The RUC reviewed survey results from 37 head and neck surgeons and recommends the current work RVU of 2.35, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 25 minutes pre-service evaluation time, 3 minutes pre-service positioning time, 10 minutes scrub/dress/wait time, 32 minutes intra-service time, 20 minutes immediate post-service time, 0.5-99238 discharge day visit, and 1-99212 office visit, which equals 125 minutes of total time.

The specialty society recommended pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9A General Anes or Complex Reg Blk/Srghtrforw Proc*. The specialty society modified the selected time packages to align with the pre-service and post-service time as indicated by the survey respondents. The RUC noted that 42808 is typically provided in the outpatient setting and agreed that one 99212 office visit and a half-day discharge visit is appropriate.

To support the recommended work RVU of 2.35, the RUC compared the surveyed code to the top key reference code 17272 *Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettement), scalp, neck, hands, feet, genitalia; lesion diameter 1.1 to 2.0 cm* (work RVU = 1.82, 22 minutes intra-service time, 52 minutes total time) and the second key reference code 12034 *Repair, intermediate, wounds of scalp, axillae, trunk and/or extremities (excluding hands and feet); 7.6 cm to 12.5 cm* (work RVU = 2.97, 45 minutes intra-service time, 85 minutes total time). The RUC recognizes that the top key reference service requires significantly less time than the surveyed code and appropriately has a lower work RVU. Moreover, the second key reference service has a greater work RVU because it requires more intra-service time, albeit less overall total time, and is more intense/complex for the physician to perform compared to the surveyed code.

For additional support, the RUC referenced MPC code 13121 *Repair, complex, scalp, arms, and/or legs; 2.6 cm to 7.5 cm* (work RVU = 4.00, 45 minutes intra-service time, 85 minutes total time). This MPC reference code requires more intra-service time and physician work at a greater intensity/complexity, thus it has a greater work RVU than the surveyed code. **The RUC recommends a work RVU of 2.35 for CPT code 42808.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

42XX1 Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg, microscope or telescope), includes robotic assistance, when performed, tongue base

The RUC reviewed survey results from 37 head and neck surgeons and recommends the survey median work RVU of 20.00, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 20 minutes pre-service positioning time, 15 minutes scrub/dress/wait time, 120 minutes intra-service time, 30 minutes immediate post-service time, 3-99232 hospital visits, 1-99239 discharge day visit, and 3-99213 office visits, which equals 469 minutes of total time.

The RUC agreed with survey respondents' inclusion of three hospital visits during the patient's multi-day hospital stay, a full discharge management visit, and three follow-up office visits to accurately account for the considerable post-operative work involved following this major surgical procedure. During the full discharge management visit, discussion of an aftercare treatment plan with the patient occurs, which includes coordinating tube feeding supplies for patients who need supplemental nutrition, home care instructions for management of the nasogastric (NG) tube and other daily living activities, as well as post-discharge follow-up professional services and testing as necessary. The first office visit involves removing the NG tube, coordinating post-operative radiation and medical oncology as indicated, and discussion of final pathology reports and post-operative adjuvant therapy needs, in addition to diet discussions with a nutritionist and standard post-operative monitoring and care coordination. The second and third office visits are necessary for ongoing monitoring of the adequacy of airway and swallowing due to radiation and chemotherapy, as well as routine surveillance for detection of tumor recurrence.

CPT code 42XX1 involves excision of tongue-based lesions. In their rationale, the specialty society discussed the history of this surgical procedure and noted that despite the use of a robot, the intensity/complexity of this service is greater under magnification than it was historically via traditional open surgery. When performed in an open fashion in the past, the lower jaw was cut with a saw, and the mandible was split; swinging open the mandible would allow for clearer access to tumors of the oropharynx. While this was very morbid for the patient, it was easier to perform from a technical perspective compared to the transoral robotic approach. The open approach allows for a wider field of work and view, as well as direct control of the vasculature. In the event there is bleeding, the field of view is wide enough to allow for easier visualization and control. In terms of tumor excision, the surgeon can have a wider field with which to work, thus making surgical movements easier due to the increased room. This also allows for tactile feedback when addressing the tumors.

CPT code 42XX1 is a more difficult procedure to perform compared to other existing open surgical pharyngectomy codes for a variety of reasons. The surgery is inverted for the physician, meaning the physician uses instruments posteriorly and inferiorly through the oral cavity to the base of the tongue, which can be challenging and disorienting. There are no anatomic landmarks throughout the tongue and no surgical planes. The physician must cut through the flesh until they reach the lingual airway and hypoglossal nerve, which is preserved. When making the inferior cut, the surgeon cuts through the vallecula, which is the top of the patient's airway. This is very intense/complex because if the surgeon performs too much manipulation here, it could lead to significant airway swelling. Additionally, when compared to the open procedure approach, there is no tactile feedback with this TORs procedure. The surgeon is completely reliant on robotic visualization, which is limited and typically has small amounts of blood obscuring the field. Notably, TORs reportedly have a 1.3% patient mortality 90 days post-surgery, which speaks to the overall intensity/complexity of this procedure.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

The specialty society selected pre-service time package *4-FAC Difficult Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Proc.* The specialty societies made modifications to the selected time packages to more accurately reflect pre-service and post-service time as indicated by the survey respondents. This includes 20 minutes of pre-service positioning time, which is 17 minutes above the selected pre-service time package but 5 minutes less than the survey median time. The specialty society indicated that the additional positioning time is justified because the procedure requires the use of mouth props and retractors to properly visualize the anatomy. Additional positioning time is needed to set up the robot used during this procedure. The RUC agreed with the changes to the time packages and that 3-99232 hospital visits, 1-99239 discharge day visit, and 3-99213 office visits were appropriate based on the presented rationale.

To support the recommended work RVU of 20.00, the RUC compared the surveyed code to the top key reference code 43332 *Repair, paraesophageal hiatal hernia (including fundoplication), via laparotomy, except neonatal; without implantation of mesh or other prosthesis* (work RVU = 19.62, 150 minutes intra-service time, 482 minutes total time) and second key reference code 15738 *Muscle, myocutaneous, or fasciocutaneous flap; lower extremity* (work RVU = 19.04, 150 minutes intra-service time, 516 minutes total time). The RUC recognizes that though the surveyed code has less intra-service and total time than both key reference services, survey respondents considered it significantly more intense/complex to perform. In their discussion, the RUC also compared the surveyed code to CPT codes 44125 *Enterectomy, resection of small intestine; with enterostomy* (work RVU = 20.03, 120 minutes intra-service time, 524 minutes total time) and 27415 *Osteochondral allograft, knee, open* (work RVU = 20.00, 120 minutes intra-service time, 424 minutes total time). Compared to CPT code 42XX1, both reference codes have nearly identical work RVUs, identical intra-service time, and support 42XX1 in terms of total time and relative intensity/complexity.

For additional support, the RUC also referenced MPC code 35301 *Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision* (work RVU = 21.16, 120 minutes intra-service time, 404 minutes total time), which involves identical intra-service time as CPT code 42XX1. This reference service requires less time than the surveyed code but requires a greater relative intensity to perform. The survey median work RVU for 42XX1 preserves relativity within the Medicare Fee Schedule. **The RUC recommends a work RVU of 20.00 for CPT code 42XX1.**

42XX2 Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg, microscope or telescope), includes robotic assistance, when performed; tongue base; lateral pharyngeal wall, including tonsil

The RUC reviewed survey results from 38 head and neck surgeons and recommends the survey median work RVU of 20.05, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 20 minutes pre-service positioning time, 15 minutes scrub/dress/wait time, 120 minutes intra-service time, 30 minutes immediate post-service time, 3-99232 hospital visits, 1-99239 discharge day visit, and 3-99213 office visits, which equals 469 minutes of total time.

The RUC agreed with survey respondents' inclusion of three hospital visits during the patient's multi-day hospital stay, a full discharge management visit, and three follow-up office visits to accurately account for the considerable post-operative work involved following this major surgical procedure. During the full discharge management visit, discussion of an aftercare treatment plan with the patient occurs, which includes coordinating tube feeding supplies for patients who need supplemental nutrition, home care instructions for management of the nasogastric (NG) tube and other daily living activities, as well as post-discharge follow-up professional services and testing as necessary. The first office visit

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

involves removing the NG tube, coordinating post-operative radiation and medical oncology as indicated, and discussion of final pathology reports and post-operative adjuvant therapy needs, in addition to diet discussions with a nutritionist and standard post-operative monitoring and care coordination. The second and third office visits are necessary for ongoing monitoring of the adequacy of airway and swallowing due to radiation and chemotherapy, as well as routine surveillance for detection of tumor recurrence.

CPT code 42XX2 involves the removal of lateral pharyngeal wall lesions, including the tonsil. In their rationale, the specialty society discussed the history of this surgical procedure and noted that despite the use of a robot, the intensity/complexity of this service is greater under magnification than it was historically via traditional open surgery. When performed in an open fashion in the past, the lower jaw was cut with a saw, and the mandible was split; swinging open the mandible would allow for access to tumors of the oropharynx. While this was very morbid for the patient, it was easier to perform from a technical perspective compared to the transoral robotic approach. The open approach allows for a wider field of work and view, as well as direct control of the vasculature. In the event there is bleeding, the field of view is wide enough to allow for easier visualization and control. In terms of tumor excision, the surgeon can have a wider field with which to work, thus making surgical movements easier due to the increased room to make them. This also allows for tactile feedback when addressing the tumors.

CPT code 42XX2 is a more difficult procedure to perform compared to other existing open surgical pharyngectomy codes for a variety of reasons. The surgery is inverted for the physician, meaning the physician uses instruments posteriorly and inferiorly through the oral cavity to the base of the tongue, which can be challenging and disorienting. There are no anatomic landmarks throughout the tongue and no surgical planes. The physician must cut through the flesh until they reach the lingual airway and hypoglossal nerve, which is preserved, but there are no specifically identifiable anatomic landmarks. When making the inferior cut, the surgeon cuts through the vallecula, which is the top of the patient's airway. This is very intense/complex because if the surgeon does too much work and manipulation here, it could lead to significant airway swelling. Additionally, when compared to the open procedure approach, there is no tactile feedback with this TORs procedure. The surgeon is completely reliant on robotic visualization, which is limited and typically has small amounts of blood obscuring the field. Notably, TORs reportedly have a 1.3% patient mortality 90 days post-surgery, which speaks to the overall intensity/complexity of this procedure.

Compared to CPT code 42XX1, CPT code 42XX2 is nearly identical in terms of the physician work involved with this service, aside from the fact that it involves removal of lateral pharyngeal wall lesions, including the tonsil, while 42XX1 specifically involves excision of tongue-based lesions. The recommended survey median work RVU for 42XX2 is 20.05 compared to 20.00 for 42XX1. The specialty society attributed this slight increase to the increased risk of bleeding with surgery involving the tonsil. As the surgeon approaches the lateral pharyngeal wall, there is a great risk of going too deep near the carotid artery. Being that this is a tumor resection and not a child's tonsillectomy, the surgeon must try to get clear margins. This distinction explains why survey respondents likely considered recommending a slightly greater work RVU for 42XX2 compared to 42XX1.

The specialty society selected pre-service time package *4-FAC Difficult Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Proc*. The specialty societies modified the selected time packages to more accurately reflect pre-service and post-service time, as indicated by the survey respondents. This includes 20 minutes of pre-service positioning time, which is 17 minutes above the selected pre-service time package but 5 minutes less than the survey median time. The specialty society indicated that the additional positioning

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

time is justified because the procedure requires the use of mouth props and retractors to properly visualize the anatomy. Additional positioning time is needed to set up the robot used during this procedure. The RUC agreed with the changes to the time packages and that 3-99232 hospital visits, 1-99239 discharge day visit, and 3-99213 office visits were appropriate based on the presented rationale.

To support the recommended work RVU of 20.05, the RUC compared the surveyed code to the top key reference code 15738 *Muscle, myocutaneous, or fasciocutaneous flap; lower extremity* (work RVU = 19.04, 150 minutes intra-service time, 516 minutes total time) and second key reference code 15733 *Muscle, myocutaneous, or fasciocutaneous flap; head and neck with named vascular pedicle (ie, buccinators, genioglossus, temporalis, masseter, sternocleidomastoid, levator scapulae)* (work RVU = 15.68, 120 minutes intra-service time, 305 minutes total time). The RUC recognizes that the top key reference service requires more intra-service time and total time than the surveyed code, but is much less intense/complex to perform, and thus it is appropriate that it has a lower work RVU. Compared to the second key reference service, the surveyed code requires identical intra-service time but significantly less total time overall, which justifies why 42XX2 has a greater work RVU.

For additional support, the RUC referenced MPC 47605 *Cholecystectomy; with cholangiography* (work RVU = 18.48, 135 minutes intra-service time, 490 minutes total time). Due to the increased relative intensity/complexity of 42XX2, it is appropriate that it has a greater work RVU than CPT code 47605. The survey median for CPT code 42XX2 preserves relativity within the Medicare Fee Schedule. **The RUC recommends a work RVU of 20.05 for CPT code 42XX2.**

Practice Expense

The Practice Expense (PE) Subcommittee agreed there is compelling evidence to support an increase over the aggregate current cost for clinical staff time, supplies, and equipment. CPT code 42808 had previously never been reviewed by the RUC for work or practice expense. Changes in intra-service time, equipment formulas/standards, and post-operative monitoring time have increased the total time for CPT code 42808 when performed in the office, increasing the total time attributed to practice expense equipment inputs. **The PE Subcommittee approved compelling evidence based on flawed methodology.**

The PE Subcommittee reviewed the direct practice expense inputs and made several modifications. The Subcommittee considered CA022 *Monitor patient following procedure/service, multitasking 1:4* for CPT code 42808. The specialty society justified the 15 minutes of monitoring time as the surgeons are operating in the back of the airway, so there is potential for post-op swelling, requiring the patient to be monitored for an hour post-procedure in the non-facility. The specialty also confirmed that 15 minutes for CA026 *Clean surgical instrument package* is appropriate as it is the standard for cleaning instruments in the medium surgical instrument package. The PE Subcommittee removed the minutes from CA037 *Conduct patient communications* since two phone calls are typically provided with the 99212 post-operative visit. In addition, the equipment formula for EQ170 *light, fiberoptic headlight w-source* and EF008 *chair with headrest, exam, reclining* was revised to include the full amount of time for the procedure, including the post-operative office visit. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology

CPT codes 42XX1 and 42XX2 will be placed on the New Technology list to be reviewed by the RUC in three years. Given that these procedures describe a new technique of transoral en bloc resection of oropharyngeal tumors under magnification with the use of a robot, this is not yet widely practiced and relatively unfamiliar to many head and neck surgeons at this time.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Digestive System Tongue and Floor of Mouth Excision				
41120		Glossectomy; less than one-half tongue (For transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification, see 42XX1, 42XX2)		
41130		hemiglossectomy		
41135		partial, with unilateral radical neck dissection		
41140		complete or total, with or without tracheostomy, without radical neck dissection		
41145		complete or total, with or without tracheostomy, with unilateral radical neck dissection		
41150		composite procedure with resection floor of mouth and mandibular resection, without radical neck dissection		
41153		composite procedure with resection floor of mouth, with suprahyoid neck dissection		
41155		composite procedure with resection floor of mouth, mandibular resection, and radical neck dissection (Commando type) (For cryolysis therapy for reduction of adipocytes or lymphatic structures in the soft palate, base of tongue, and lingual tonsil, see XX97T, XX98T, XX99T)

Transoral Excision Under Magnification

Codes 42XX1, 42XX2 define en bloc resection of neoplasms performed transorally with the aid of magnification. These services should not be reported using combinations of open and transoral resection codes for tumors that may involve multiple sites. They may involve the use of a surgical robot. The use of surgical loupes alone does not constitute magnification for the purpose of these codes. Report only one code for each tumor based on its presumed origin or its main anatomic location of involvement. For those tumors that involve resection on both sides of the midline, bilateral reporting of these codes is not appropriate. For removal of tongue base tissue in search of an unknown primary head and neck tumor and/or for benign conditions such as obstructive sleep apnea, report with standard biopsy, tonsillectomy and/or lingual tonsillectomy codes (41105, 42800, 42820, 42821, 42825, 42826, 42870). Reconstruction of the resulting surgical defects from performance of the below procedures may be reported separately.

●42XX1	D2	Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg, microscope or telescope), includes robotic assistance, when performed; tongue base	090	20.00
●42XX2	D3	lateral pharyngeal wall, including tonsil (Do not report 42XX1, 42XX2 in conjunction with 41105, 41110, 41113, 41114, 42800, 42808, 42820, 42821, 42825, 42826, 42842, 42844, 42845, 42860, 42870, 42890, 42892, 42894)	090	20.05

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 42808	Tracking Number D1	Original Specialty Recommended RVU: 2.35
		Presented Recommended RVU: 2.35
Global Period: 010	Current Work RVU: 2.35	RUC Recommended RVU: 2.35

CPT Descriptor: Excision or destruction of lesion of pharynx, without magnification, any method

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: a 58-year-old male presents with dysphagia. on physical exam, he is noted to have a pharyngeal lesion. excision of the lesion without magnification is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 54% , In the ASC 35%, In the office 11%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 50% , Overnight stay-less than 24 hours 40% , Overnight stay-more than 24 hours 10%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 90%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review medical history, pathology and radiology reports, and preoperative imaging. Review results of preadmission testing (lab, EKG, chest x-ray, consultant notes and recommendations). Meet with patient and family to review planned procedure and post-operative management. Re-examine patient to ensure that physical findings have not changes and update H&P. Obtain informed consent. Review planned airway management and procedure with OR staff and anesthesiologist. Verify all required instruments and supplies are available. Change into scrub clothes. Monitor intubation by anesthesiology team. Assist with positioning with shoulder roll, arms padded and tucked at side, sequential compression devices, and lower/underbody warmer. Ensure eye protection with padded or rigid goggles. Untape endotracheal tube so it can be mobilized to view tumor. Place stitch in tongue to aid in mobilization of surrounding tissues. Insertion and placement of mouth prop for adequate exposure of the tumor and surrounding tissues. Placing mouth prop into suspension to maintain visualization. Re-secure the endotracheal tube by suturing it in place so it will not interfere with tumor visualization. Perform surgical time out with operating room team.

Description of Intra-Service Work: With the tumor in direct view, it is grasped with forceps to assess the extent of the tumor. The relationship to adjacent critical structures of the upper aerodigestive tract is also evaluated. The lesion is then either avulsed with forceps or ablated with any other method. The laser or electrosurgical handpiece is commonly used to remove or destroy the lesion, but cryotherapy and radiofrequency methods can be used as well. The lesion is sent for pathology and intra-operative frozen section evaluation if needed. Any areas of remaining tumor are treated until it has been completely removed or adequately reduced in size. The area is irrigated and hemostasis is ensured. The adjacent upper aerodigestive tract is evaluated for edema and trauma. The mouth prop is removed and the teeth, lips, and gums are checked for trauma. A small caliber feeding tube is inserted if needed. The suture holding the endotracheal tube is cut and the tube is re-secured with tape for transfer to the anesthesiologist.

Description of Post-Service Work: The endotracheal tube is removed with the operating surgeon present in case of airway compromise or bleeding. Monitor patient during reversal of anesthesia. Discuss post-operative care with anesthesia and nursing team. Ensure correct labeling of specimens with circulating nurse. Review post-operative care plan with Post-Anesthesia Care Unit. Write post-operative orders. Discuss surgery outcome and post-operative plans with family in waiting area. Write brief operative note. Dictate operative report and copy the referring physicians.

99231:

Review interval medical records generated since the last visit. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis and bleeding. Ensure adequate pain control. Carefully evaluate oral intake.

99238:

Review medical records and other available data. Obtain an interval history and perform a physical examination. Formulate and/or revise diagnosis and treatment plan(s), including making the decision for discharge. Review information regarding availability, safety, and adequacy of post-discharge support systems. Discuss aftercare treatment with patient, family, and/or caregivers and other health care professionals. Provide care coordination for transition that includes instructions to patient and/or family/caregivers for aftercare. Write orders for post-discharge follow-up professional services. Reconcile patient's medications with attention to pre-admission therapy, inpatient/observation therapy, and outpatient formulary. Write prescriptions as necessary. Complete discharge and aftercare forms. Inform referring physician of discharge plans. Complete medical record documentation.

99213:

Monitor progress of healing, PO intake, pain control. Refill pain prescriptions. Discuss final pathology reports and post-operative adjuvant therapy needs with patient. Monitor healing of pharynx. Monitor speech and swallowing functionality. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

During the May 2024 CPT meeting, the CPT executive committee stated that "CPT Assistant Editorial Board (EB) meeting the EB discussed Transoral Robotic Surgery (TORS) and whether existing open codes may be reported for endoscopic and robotic procedures. Codes noted in the discussion included [41130], [42892], [42842], [42890] and [42950]. Members discussed the distinction in work and practice expense between open versus endoscopic procedures. Currently, there are no endoscopic transoral codes. Therefore, the unlisted code, [42999], Unlisted procedure, pharynx, adenoids, or tonsils, should be reported."

The EC specifically asked, "Should the EC recommend that the CPT Editorial Panel accept this request for a CCA for the establishment of a new subsection of codes to report endoscopic transoral procedures (Surgery, Digestive System, Pharynx, Adenoids, and Tonsils)." The EC voted to refer this issue to the CPT Editorial Panel with a recommendation for approval.

In response to that vote, the Academy submitted a code change application for the February 2025 CPT meeting to establish new codes for transoral endoscopic surgery for removal of tumors in the oropharynx, pharynx, and tongue base which was accepted by the CPT Editorial Panel and is now being RUC surveyed.

Transoral en bloc removal of tumors has become the standard of care for removal of surgically amenable oropharyngeal tumors versus an open neck approach. In particular, the use of a robot, FDA approved for transoral removal of tumors in 2009, has allowed head and neck surgeons to perform these resections in less morbid fashion. As this was a new method to remove these tumors, they were reported with existing combined transoral and open codes, without magnification. To allow for accuracy in the work performed with these procedures, this CCA proposes new codes for the new technique of transoral en bloc resection of oropharyngeal tumors under magnification. Code 42808 was revised to clarify that it is done without magnification. Given that this code has never been RUC surveyed, it is being included in the family of new TORs codes for review during the April 2025 meeting.

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 1410 members from the AAO-HNS of those with sub-specialty designations of head and neck surgery.

Key Reference Codes

The first KRS selected was CPT 17272 Destruction, malignant lesion (eg, laser surgery, electrosurgery, cryosurgery, chemosurgery, surgical curettment), scalp, neck, hands, feet, genitalia; lesion diameter 1.1 to 2.0 cm valued at 1.82 RVUs with a pre time of 9 / intra time of 22 / post time of 5, totaling 52 minutes. 12 respondents selected this as their primary KRS.

The second KRS selected was CPT 12034 Repair, intermediate, wounds of scalp, axillae, trunk and/or extremities (excluding hands and feet); 7.6 cm to 12.5 cm valued at 2.97 RVUs with a pre time of 14 / intra time of 45 / post time of 10, totaling 85 minutes. 9 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU **2.35 and 32 minutes of intra service time**. Our expert panel felt maintenance of existing value, despite it being lower than our survey's 25th percentile, maintains relativity with other 010 otolaryngology codes within the fee schedule. Further, we did not feel there was compelling evidence beyond the code never having been RUC reviewed, to justify an increased work RVU, although we do believe the existing value is too low for the work and intensity of this procedure. This is clearly reflected in respondents answers on intensity and complexity as compared to our KRS'.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 25 minutes of evaluation time which less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 3 minutes of positioning time which is less than the survey median time, but consistent with the preservice package.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 38 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A General Anesthesia or Complex Regional Block/ Straightforward Procedure

Recommended time has been reduced to 20 minutes which is a decrease of 10 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 20 minutes, taking the lesser of surveyed time or the pre-service package time.***

Supporting Reference Codes for the Recommended Value

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 42808

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1551

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the Medicare volume as found in the RUC database.

Specialty Otolaryngology Frequency 1500 Percentage 96.71 %

Specialty Maxillofacial surgery Frequency 51 Percentage 3.28 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 517

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the current code volume as found in the RUC database.

Specialty Otolaryngology Frequency 500 Percentage 96.71 %

Specialty Maxillofacial surgery Frequency 17 Percentage 3.28 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 42808

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. n/a

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 42XX1	Tracking Number D2	Original Specialty Recommended RVU: 20.00
		Presented Recommended RVU: 20.00
Global Period: 090	Current Work RVU: N/A	RUC Recommended RVU: 20.00

CPT Descriptor: Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg with microscope or telescope), includes robotic assistance, when performed; tongue base

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with squamous cell carcinoma of the tongue base. Examination, diagnostic endoscopy, and imaging demonstrate that the tumor is resectable. The surgeon performs transoral en bloc resection of the tongue base tumor under magnification.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 5% , Overnight stay-more than 24 hours 95%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review medical history, pathology and radiology reports, and preoperative imaging. Review results of preadmission testing (lab, EKG, chest x-ray, consultant notes and recommendations). Meet with patient and family to review planned procedure and post-operative management. Re-examine patient to ensure that physical findings have not changed and update H&P. Obtain informed consent. Review planned airway management and procedure with OR staff and anesthesiologist. Verify all required instruments and supplies are available. Change into scrub clothes. Monitor intubation by anesthesiology team. Assist with positioning with shoulder roll, arms padded and tucked at side, sequential compression devices, and lower/underbody warmer. Ensure eye protection with padded or rigid goggles. Untape endotracheal tube so it can be mobilized to view tumor. Place stitch in tongue to aid in mobilization of surrounding tissues. Insertion and placement of mouth prop for adequate exposure of the tumor and surrounding tissues. Placing mouth prop into suspension to maintain visualization. Re-secure the endotracheal tube by suturing it in place so it will not interfere with tumor visualization or robotic arm movement. Make sure anesthesia monitoring equipment will not interfere with draping, and that draping will comply with universal precautions for body substance isolation. Maneuver robotic patient cart to operating room table and dock. Insert and calibrate three dimensional camera to robotic patient cart. Insert and ensure appropriate calibration of robotic surgical instrument arms. Place camera and robotic instrument arms into oral cavity with attention to avoid trauma to teeth, lips, or gums. Sit at surgeon console and adjust settings for optimal visualization, instrument maneuvering, and ergonomics. Perform surgical time out with operating room team.

Description of Intra-Service Work: With tumor in direct view, incision along the anterior tonsillar pillar and retromolar trigone. Incision is carried superiorly into the soft palate and inferiorly to the posterior floor of mouth. Dissection is deepened through the pharyngeal constrictors until the medial pterygoid muscle and parapharyngeal fat are visualized. The parapharyngeal fat and internal carotid artery are dissected away from the constrictor muscles. Superior dissection through the soft palate adjacent to the uvula is completed down through the posterior pharyngeal wall and the tumor is elevated off the prevertebral fascia. The glossopharyngeal nerve is visualized and preserved if oncologically feasible. The styloglossus muscle is identified and dissected towards the styloid process where it is transected. The stylopharyngeus is identified and away from the main external carotid artery so it can be divided. Branches from the external carotid artery are controlled with surgical clips or powered electrical instruments. An incision is made across the base of tongue towards behind the

circumvallate papilla to the midline. The transverse base of tongue incision is continued vertically to the vallecula while ensuring the epiglottis is preserved. Dissection through the superficial and deep muscles of the base of tongue is completed. Vascular control of the lingual artery is achieved with surgical clips or powered instruments. The remaining mucosal incisions are made along the posterior pharyngeal wall and the inferior base of tongue. For large tumors The entire specimen is taken to pathology and oriented with pathologist for frozen section review. Review frozen section results with the pathologist and confirm location of any close or positive margins. Resect further tissue as needed until the surgical margins are clear. Irrigate defect and ensure hemostasis. The robotic camera and instrument arms are retracted and removed from patients mouth and pharynx. The robotic cart is moved away from the operating room table. A small caliber nasogastric feeding tube is placed and secured. Mouth prop is removed and the teeth, lips, and gums are checked for trauma.

Description of Post-Service Work: The endotracheal tube is removed with the operating surgeon present in case of airway compromise or bleeding. Monitor patient during reversal of anesthesia. Discuss post-operative care with anesthesia and nursing team. Ensure correct labeling of specimens with circulating nurse. Review post-operative care plan with Post-Anesthesia Care Unit and/or ICU staff. Write post-operative orders. Discuss surgery outcome and post-operative plans with family in waiting area. Write brief operative note. Dictate operative report and copy the referring physicians. Check x-ray to confirm placement of nasogastric tube.

99232 Visit 1:

Review interval medical records generated since the admission. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Review inpatient admission orders, including arranging for necessary diagnostic testing, consultations, and therapeutic interventions. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Discuss case with speech and swallowing therapist. Discuss case with nutritionist to start tube feeds and advance as tolerated. Start oral liquid diet with NG tube supplementation.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis, bleeding, and oral intake. Ensure adequate pain control. Discuss results of the surgery and intraoperative pathology with the patient.

99232 Visit 2:

Review interval medical records generated since the last visit. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Review inpatient admission orders, including arranging for necessary diagnostic testing, consultations, and therapeutic interventions. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis, bleeding, and oral intake. Ensure adequate pain control. Monitor patient progress with speech and swallowing therapist. Review results and imaging of Modified Barium Swallow with speech and swallowing therapist.

99232 Visit 3:

Review interval medical records generated since the last visit. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical

history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Review inpatient admission orders, including arranging for necessary diagnostic testing, consultations, and therapeutic interventions. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis and bleeding. Ensure adequate pain control. Carefully evaluate oral intake to determine home tube feeding needs.

99239:

Review medical records and other available data. Obtain an interval history and perform a physical examination. Formulate and/or revise diagnosis and treatment plan(s), including making the decision for discharge. Review information regarding availability, safety, and adequacy of post-discharge support systems. Discuss aftercare treatment with patient and/or family/caregiver and other health care professionals. Write orders for post-discharge follow-up professional services and testing as necessary. Reconcile patient's medications with attention to pre-admission therapy, inpatient/observation therapy, and outpatient formulary. Inform referring physician of discharge plans.

Coordinate tube feeding supplies for patients who need supplemental nutrition in addition to PO intake. Write prescriptions and supplies needed for post-discharge. Home instructions such as activity, diet, management of NG tube, and bathing are discussed with the patient and family members. All appropriate medical records are completed, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

99213 Visit 1:

Monitor progress of healing, PO intake, pain control. Remove NG tube once patients are taking sufficient nutrition orally. Discuss diet with nutritionist and continue to monitor caloric intake and weight of patient. Refill pain prescriptions. Provide instructions on therapy to prevent trismus with commercial or homemade products. Arrange for post-operative radiation oncology and medical oncology as indicated. Discuss final pathology reports and post-operative adjuvant therapy needs with patient. Discuss case with radiation oncologist and medical oncologist as needed and prepare documents for transmission to that office. Discuss dental consultation for patient. Monitor healing of pharynx. Order and review post-discharge labs. Order and review post-discharge imaging. Review lab results and imaging with patient and family. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

99213 Visit 2:

Monitor progress of healing, PO intake, pain control. Discuss diet with nutritionist and continue to monitor caloric intake and weight of patient. Monitor healing of pharynx. Monitor effects of radiation and chemotherapy with emphasis on adequacy of airway and swallowing. Begin routine surveillance for recurrent tumor to detect tumor recurrence. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

99213 Visit 3:

Monitor progress of healing, PO intake, pain control. Discuss diet with nutritionist and continue to monitor caloric intake and weight of patient. Monitor healing of pharynx. Monitor effects of radiation and chemotherapy with emphasis on adequacy of airway and swallowing. Begin routine surveillance for recurrent tumor to detect tumor recurrence. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2025				
Presenter(s):	R. Peter Manes, MD and Brian Boyce, MD				
Specialty Society(ies):	AAO-HNS				
CPT Code:	42XX1				
Sample Size:	1410	Resp N:	37		
Description of Sample:	Random targeted sample of AAO-HNS members who subspecialize in head and neck surgery				
	Low	25th pctl	Median*	75th pctl	High
Service Performance Rate	1.00	4.00	10.00	15.00	40.00

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
43332	090	19.62	RUC Time

CPT Descriptor Repair, paraesophageal hiatal hernia (including fundoplication), via laparotomy, except neonatal; without implantation of mesh or other prosthesis

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
15738	090	19.04	RUC Time

CPT Descriptor Muscle, myocutaneous, or fasciocutaneous flap; lower extremity

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
27447	090	19.60	RUC Time	313,723

CPT Descriptor 1 Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
35301	090	21.16	RUC Time	22,058

CPT Descriptor 2 Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
47605	090	18.48	RUC Time

CPT Descriptor Cholecystectomy; with cholangiography

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 11 **% of respondents:** 29.7 %

Number of respondents who choose 2nd Key Reference Code: 7 % of respondents: 18.9 %

TIME ESTIMATES (Median)

	CPT Code: <u>42XX1</u>	Top Key Reference CPT Code: <u>43332</u>	2nd Key Reference CPT Code: <u>15738</u>

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

During the May 2024 CPT meeting, the CPT executive committee stated that "CPT Assistant Editorial Board (EB) meeting the EB discussed Transoral Robotic Surgery (TORS) and whether existing open codes may be reported for endoscopic and robotic procedures. Codes noted in the discussion included [41130], [42892], [42842], [42890] and [42950]. Members discussed the distinction in work and practice expense between open versus endoscopic procedures. Currently, there are no endoscopic transoral codes. Therefore, the unlisted code, [42999], Unlisted procedure, pharynx, adenoids, or tonsils, should be reported."

The EC specifically asked, "Should the EC recommend that the CPT Editorial Panel accept this request for a CCA for the establishment of a new subsection of codes to report endoscopic transoral procedures (Surgery, Digestive System, Pharynx, Adenoids, and Tonsils)." The EC voted to refer this issue to the CPT Editorial Panel with a recommendation for approval.

In response to that vote, the Academy submitted a code change application for the February 2025 CPT meeting to establish new codes for transoral endoscopic surgery for removal of tumors in the oropharynx, pharynx, and tongue base which was accepted by the CPT Editorial Panel and is now being RUC surveyed.

Transoral en bloc removal of tumors has become the standard of care for removal of surgically amenable oropharyngeal tumors versus an open neck approach. In particular, the use of a robot, FDA approved for transoral removal of tumors in 2009, has allowed head and neck surgeons to perform these resections in less morbid fashion. As this was a new method to remove these tumors, they were reported with existing combined transoral and open codes, without magnification. To allow for accuracy in the work performed with these procedures, this CCA proposes new codes for the new technique of transoral en bloc resection of oropharyngeal tumors under magnification. Code 42808 was revised to clarify that it is done without magnification. Given that this code has never been RUC surveyed, it is being included in the family of new TORs codes for review during the April 2025 meeting.

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 1410 members from the AAO-HNS of those with sub-specialty designations of head and neck surgery.

Key Reference Codes

The first KRS selected was CPT 43332 Repair, paraesophageal hiatal hernia (including fundoplication), via laparotomy, except neonatal; without implantation of mesh or other prosthesis valued at 19.62 RVUs with a pre time of 63 / intra time of 150 / post time of 30, with 4 hospital visits (1-99233, 2-99232, 1-99231), a full discharge management visit 99238, and two post operative office visits (2-99213), totaling 482 minutes. 11 respondents selected this as their primary KRS.

The second KRS selected was CPT 15738 Muscle, myocutaneous, or fasciocutaneous flap; lower extremity valued at 19.04 RVUs with a pre time of 70 / intra time of 150 / post time of 30, with 4 hospital visits (2-99232, 2-99231), a full discharge management visit 99238, and five post operative office visits (4-99213 and 1-99212), totaling 516 minutes. 7 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU **20.00 and 469 minutes of intra service time**. Our expert panel felt our survey's median maintains relativity with other 090 otolaryngology codes within the fee schedule, particularly considering respondent's feedback that this procedure is more intense and complex than either of the KRS'. This is a major surgical procedure where patients remain in the hospital for several days post operatively for monitoring.

Time package selection: We have selected pre-time package 4 and post-time package 9B due to this procedure currently being done predominantly in the hospital inpatient setting under general anesthesia.

Pre-time Package 4 Difficult Patient / Difficult Procedure

Evaluation Time – We are recommending 40 minutes of evaluation time which is the lesser of our survey time or the package.

Positioning Time – We are recommending 20 minutes of positioning time which is the less than our survey median time, but more than the package. We believe this additional positioning time is justified because the procedure requires the use of mouth props and retractors in order to properly visualize the anatomy. Additionally, you must set up the robot used for this procedure during the positioning time.

Scrub, Dress, Wait Time – We are recommending 15 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 75 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/Complex Procedure

Recommended time has been reduced to 30 minutes which is a decrease of 3 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 30 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-operative visits

Survey respondents accurately accounted for the considerable post-operative work that is involved following this major surgical procedure. Specifically, they reported that three hospital visits occur during the patient's multi-day hospital stay. This includes the activities described above in our description of work. While survey respondents indicated for the 42XX1 code that the hospital visits were a 99233 and 2 99232s, for the 42XX2 code they felt it they were all 99232 visits. Our expert panel felt that for consistency, it made sense to streamline both codes and include 3 99232 visits for both codes. Likewise, respondents indicated a full discharge management visits (99239) following this procedure and three office visits. For 42XX1, respondents indicated that all post op visits were 99213 visits, but for 42XX2 they indicated one 99214 and 2 99213 visits. Similarly, our expert panel felt that 3 99213 visits were appropriate and consistent for both codes following the procedure. ***This results in a total recommended post-operative visit time of 244 minutes.***

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Posit Time	Pre SDW	Intra Time	Immed Post Time	Post-op Visit Time	Total Time	IWPUT	Time Source	Most Recent RUC Review	2023 Medicare Utilization

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 42999

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 375

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that 60% of the existing unlisted code 42999's Medicare volume will be attributed to the new X1 code. That is 125 cases. We estimate that the national volume will be three times Medicare volume.

Specialty Otolaryngology Frequency 350 Percentage 93.33 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 125

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 60% of the current Medicare volume reflected in the RUC database for unlisted code 42999.

Specialty Otolaryngology Frequency 115 Percentage 92.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31365

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 42XX2 Tracking Number D3

Original Specialty Recommended RVU: **20.05**Global Period: 090 Current Work RVU: **N/A**Presented Recommended RVU: **20.05**RUC Recommended RVU: **20.05**

CPT Descriptor: Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg with microscope or telescope), includes robotic assistance, when performed; lateral pharyngeal wall, including tonsil

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: a 58-year-old male presents with squamous cell carcinoma of the left tonsil. examination, diagnostic endoscopy, and imaging reveal that the tumor is amenable to surgical resection. the surgeon performs transoral en bloc resection of the left tonsil with wide margins under magnification.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 11% , Overnight stay-more than 24 hours 89%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review medical history, pathology and radiology reports, and preoperative imaging. Review results of preadmission testing (lab, EKG, chest x-ray, consultant notes and recommendations). Meet with patient and family to review planned procedure and post-operative management. Re-examine patient to ensure that physical findings have not changes and update H&P. Obtain informed consent. Review planned airway management and procedure with OR staff and anesthesiologist. Verify all required instruments and supplies are available. Change into scrub clothes. Monitor intubation by anesthesiology team. Assist with positioning with shoulder roll, arms padded and tucked at side, sequential compression devices, and lower/underbody warmer. Ensure eye protection with padded or rigid goggles. Untape endotracheal tube so it can be mobilized to view tumor. Place stitch in tongue to aid in mobilization of surrounding tissues. Insertion and placement of mouth prop for adequate exposure of the tumor and surrounding tissues. Placing mouth prop into suspension to maintain visualization. Re-secure the endotracheal tube by suturing it in place so it will not interfere with tumor visualization or robotic arm movement. Make sure anesthesia monitoring equipment will not interfere with draping, and that draping will comply with universal precautions for body substance isolation. Maneuver robotic patient cart to operating room table and dock. Insert and calibrate three dimensional camera to robotic patient cart. Insert and ensure appropriate calibration of robotic surgical instrument arms. Place camera and robotic instrument arms into oral cavity with attention to avoid trauma to teeth, lips, or gums. Sit at surgeon console and adjust settings for optimal visualization, instrument maneuvering, and ergonomics. Perform surgical time out with operating room team.

Description of Intra-Service Work: With tumor in direct view, incision along the anterior tonsillar pillar and retromolar trigone. Incision is carried superiorly into the soft palate and inferiorly to the posterior floor of mouth. Dissection is deepened through the pharyngeal constrictors until the medial pterygoid muscle and parapharyngeal fat are visualized. The parapharyngeal fat and internal carotid artery are dissected away from the constrictor muscles. Superior dissection through the soft palate adjacent to the uvula is completed down through the posterior pharyngeal wall and the tumor is elevated off the prevertebral fascia. The glossopharyngeal nerve is visualized and preserved if oncologically feasible. The styloglossus muscle is identified and dissected towards the styloid process where it is transected. The stylopharyngeus is identified and away from the main external carotid artery so it can be divided. Branches from the external carotid artery are controlled with surgical clips or powered electrical instruments. An incision is made across the base of tongue towards behind the

circumvallate papilla to the midline. The transverse base of tongue incision is continued vertically to the vallecula while ensuring the epiglottis is preserved. Dissection through the superficial and deep muscles of the base of tongue is completed. Vascular control of the lingual artery is achieved with surgical clips or powered instruments. The remaining mucosal incisions are made along the posterior pharyngeal wall and the inferior base of tongue. For large tumors The entire specimen is taken to pathology and oriented with pathologist for frozen section review. Review frozen section results with the pathologist and confirm location of any close or positive margins. Resect further tissue as needed until the surgical margins are clear. Irrigate defect and ensure hemostasis. The robotic camera and instrument arms are retracted and removed from patients mouth and pharynx. The robotic cart is moved away from the operating room table. A small caliber nasogastric feeding tube is placed and secured. Mouth prop is removed and the teeth, lips, and gums are checked for trauma.

Description of Post-Service Work: The endotracheal tube is removed with the operating surgeon present in case of airway compromise or bleeding. Monitor patient during reversal of anesthesia. Discuss post-operative care with anesthesia and nursing team. Ensure correct labeling of specimens with circulating nurse. Review post-operative care plan with Post-Anesthesia Care Unit and/or ICU staff. Write post-operative orders. Discuss surgery outcome and post-operative plans with family in waiting area. Write brief operative note. Dictate operative report and copy the referring physicians. Check x-ray to confirm placement of nasogastric tube.

99232 Visit 1:

Review interval medical records generated since the admission. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Review inpatient admission orders, including arranging for necessary diagnostic testing, consultations, and therapeutic interventions. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Discuss case with speech and swallowing therapist. Discuss case with nutritionist to start tube feeds and advance as tolerated. Start oral liquid diet with NG tube supplementation.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis, bleeding, and oral intake. Ensure adequate pain control. Discuss results of the surgery and intraoperative pathology with the patient.

99232 Visit 2:

Review interval medical records generated since the last visit. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Review inpatient admission orders, including arranging for necessary diagnostic testing, consultations, and therapeutic interventions. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis, bleeding, and oral intake. Ensure adequate pain control. Monitor patient progress with speech and swallowing therapist. Review results and imaging of Modified Barium Swallow with speech and swallowing therapist.

99232 Visit 3:

Review interval medical records generated since the last visit. Coordinate with other members of the health care team regarding the observation/admission service. Visit patient location and confirm patient's identity. Review the medical

history with the patient as well as the prior clinical notes. Review vital signs obtained by clinical staff. Obtain a medically appropriate updated history of the events since last visit. Reconcile the patient's medications. Perform a medically appropriate examination. Synthesize all the information, including the relevant history and physical examination, to formulate a differential diagnosis and treatment plan. Discuss treatment plan with patient and/or family/caregiver. Provide patient education and respond to questions from the patient and/or family/caregiver. Review inpatient admission orders, including arranging for necessary diagnostic testing, consultations, and therapeutic interventions. Document the encounters throughout the calendar day in the medical record. Address interval data obtained and reported changes in condition. Communicate results and additional care plans to other health care professionals and to the patient and/or family/caregivers throughout the calendar day. Answer follow-up questions from patient and/or family/caregiver that may occur within the calendar day and respond to treatment failures.

Check post-operative laboratory values including hemoglobin and electrolytes. Adjust IV fluids and replete electrolytes as indicated. Monitor overall status of patient, including airway, ambulation, signs of atelectasis and bleeding. Ensure adequate pain control. Carefully evaluate oral intake to determine home tube feeding needs.

99239:

Review medical records and other available data. Obtain an interval history and perform a physical examination. Formulate and/or revise diagnosis and treatment plan(s), including making the decision for discharge. Review information regarding availability, safety, and adequacy of post-discharge support systems. Discuss aftercare treatment with patient and/or family/caregiver and other health care professionals. Write orders for post-discharge follow-up professional services and testing as necessary. Reconcile patient's medications with attention to pre-admission therapy, inpatient/observation therapy, and outpatient formulary. Inform referring physician of discharge plans.

Coordinate tube feeding supplies for patients who need supplemental nutrition in addition to PO intake. Write prescriptions and supplies needed for post-discharge. Home instructions such as activity, diet, management of NG tube, and bathing are discussed with the patient and family members. All appropriate medical records are completed, including day of discharge progress notes, discharge summary, discharge instructions, and insurance forms.

99213 Visit 1:

Monitor progress of healing, PO intake, pain control. Remove NG tube once patients are taking sufficient nutrition orally. Discuss diet with nutritionist and continue to monitor caloric intake and weight of patient. Refill pain prescriptions. Provide instructions on therapy to prevent trismus with commercial or homemade products. Arrange for post-operative radiation oncology and medical oncology as indicated. Discuss final pathology reports and post-operative adjuvant therapy needs with patient. Discuss case with radiation oncologist and medical oncologist as needed and prepare documents for transmission to that office. Discuss dental consultation for patient. Monitor healing of pharynx. Order and review post-discharge labs. Order and review post-discharge imaging. Review lab results and imaging with patient and family. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

99213 Visit 2:

Monitor progress of healing, PO intake, pain control. Discuss diet with nutritionist and continue to monitor caloric intake and weight of patient. Monitor healing of pharynx. Monitor effects of radiation and chemotherapy with emphasis on adequacy of airway and swallowing. Begin routine surveillance for recurrent tumor to detect tumor recurrence. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

99213 Visit 3:

Monitor progress of healing, PO intake, pain control. Discuss diet with nutritionist and continue to monitor caloric intake and weight of patient. Monitor healing of pharynx. Monitor effects of radiation and chemotherapy with emphasis on adequacy of airway and swallowing. Begin routine surveillance for recurrent tumor to detect tumor recurrence. Dictate/write progress notes for medical chart and ensure transmission to referring and consulting physicians.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

During the May 2024 CPT meeting, the CPT executive committee stated that "CPT Assistant Editorial Board (EB) meeting the EB discussed Transoral Robotic Surgery (TORS) and whether existing open codes may be reported for endoscopic and robotic procedures. Codes noted in the discussion included [41130], [42892], [42842], [42890] and [42950]. Members discussed the distinction in work and practice expense between open versus endoscopic procedures. Currently, there are no endoscopic transoral codes. Therefore, the unlisted code, [42999], Unlisted procedure, pharynx, adenoids, or tonsils, should be reported."

The EC specifically asked, "Should the EC recommend that the CPT Editorial Panel accept this request for a CCA for the establishment of a new subsection of codes to report endoscopic transoral procedures (Surgery, Digestive System, Pharynx, Adenoids, and Tonsils)." The EC voted to refer this issue to the CPT Editorial Panel with a recommendation for approval.

In response to that vote, the Academy submitted a code change application for the February 2025 CPT meeting to establish new codes for transoral endoscopic surgery for removal of tumors in the oropharynx, pharynx, and tongue base which was accepted by the CPT Editorial Panel and is now being RUC surveyed.

Transoral en bloc removal of tumors has become the standard of care for removal of surgically amenable oropharyngeal tumors versus an open neck approach. In particular, the use of a robot, FDA approved for transoral removal of tumors in 2009, has allowed head and neck surgeons to perform these resections in less morbid fashion. As this was a new method to remove these tumors, they were reported with existing combined transoral and open codes, without magnification. To allow for accuracy in the work performed with these procedures, this CCA proposes new codes for the new technique of transoral en bloc resection of oropharyngeal tumors under magnification. Code 42808 was revised to clarify that it is done without magnification. Given that this code has never been RUC surveyed, it is being included in the family of new TORs codes for review during the April 2025 meeting.

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 1410 members from the AAO-HNS of those with sub-specialty designations of head and neck surgery.

Key Reference Codes

The first KRS selected was CPT 15738 Muscle, myocutaneous, or fasciocutaneous flap; lower extremity valued at 19.04 RVUs with a pre time of 70 / intra time of 150 / post time of 30, with 4 hospital visits (2-99232, 2-99231), a full discharge management visit 99238, and five post operative office visits (4-99213 and 1-99212), totaling 516 minutes. 13 respondents selected this as their primary KRS.

The second KRS selected was CPT 15733 Muscle, myocutaneous, or fasciocutaneous flap; head and neck with named vascular pedicle (ie, buccinators, genioglossus, temporalis, masseter, sternocleidomastoid, levator scapulae) valued at 15.68 RVUs with a pre time of 58 / intra time of 120 / post time of 30, with a .5 discharge management visit 99238, and four post operative office visits (2-99213 and 2-99212), totaling 305 minutes. 7 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU **20.05 and 469 minutes of intra service time**. Our expert panel felt our survey's median maintains relativity with other 090 otolaryngology codes within the fee schedule, particularly considering respondent's feedback that this procedure is more intense and complex than either of the KRS'. This is a major surgical procedure where patients remain in the hospital for several days post operatively for monitoring.

Time package selection: We have selected pre-time package 4 and post-time package 9B due to this procedure currently being done predominantly in the hospital inpatient setting under general anesthesia.

Pre-time Package 4 Difficult Patient / Difficult Procedure

Evaluation Time – We are recommending 40 minutes of evaluation time which is the lesser of our survey time or the package.

Positioning Time – We are recommending 20 minutes of positioning time which is the less than our survey median time, but more than the package. We believe this additional positioning time is justified because the procedure requires the use of mouth props and retractors in order to properly visualize the anatomy. Additionally, you must set up the robot used for this procedure during the positioning time.

Scrub, Dress, Wait Time – We are recommending 15 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 75 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/Complex Procedure

Recommended time has been reduced to 30 minutes which is a decrease of 3 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 30 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-operative visits

Survey respondents accurately accounted for the considerable post-operative work that is involved following this major surgical procedure. Specifically, they reported that three hospital visits occur during the patient's multi-day hospital stay. This includes the activities described above in our description of work. While survey respondents indicated for the 42XX1 code that the hospital visits were a 99233 and 2 99232s, for the 42XX2 code they felt it they were all 99232 visits. Our expert panel felt that for consistency, it made sense to streamline both codes and include 3 99232 visits for both codes. Likewise, respondents indicated a full discharge management visits (99239) following this procedure and three office visits. For 42XX1, respondents indicated that all post op visits were 99213 visits, but for 42XX2 they indicated one 99214 and 2 99213 visits. Similarly, our expert panel felt that 3 99213 visits were appropriate and consistent for both codes following the procedure. ***This results in a total recommended post-operative visit time of 244 minutes.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 42999

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 249

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that 40% of Medicare volume for the unlisted code 42999 will be attributed to new code 42XX2. That represents 83 cases. We estimate the national volume will be three times Medicare volume, totaling 249.

Specialty Otolaryngology Frequency 230 Percentage 92.36 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 83 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 40% of the existing Medicare volume for 42899 which we believe will be captured by 42XX2

Specialty Otolaryngology Frequency 77 Percentage 92.77 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 31365

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 42808SPECIALTY SOCIETY(IES): AAO-HNSPRESENTER(S): R. Peter Manes, MD & Brian Boyce, MDAMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)Meeting Date: April 2025

CPT Code	Long Descriptor	Global Period
42808	Excision or destruction of lesion of pharynx, without magnification, any method	010

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
42808	A 58-year-old male presents with dysphagia. on physical exam, he is noted to have a pharyngeal lesion. excision of the lesion without magnification is performed.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Our expert panel was comprised of our RUC advisors and guest expert Dr. Boyce who specializes in head and neck surgery.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

We utilized 42808 as the comparator for 42808, as well as the two new codes that were created.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

No

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility*? What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Otolaryngology

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Evidence that there has been a change in equipment or practice expense cost.

NON-FACILITY DIRECT PE INPUTSCPT CODE(S): 42808SPECIALTY SOCIETY(IES): AAO-HNSPRESENTER(S): **R. Peter Manes, MD & Brian Boyce, MD****AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

This code has never been RUC reviewed and therefore, the practice expense inputs had never been reviewed either. Changes in intra service time and equipment formulas / standards have increased the total time for 42808 when performed in the office, increasing the total time attributed to practice expense equipment inputs.

See the *PE compelling evidence guidelines* under PE Reference Materials on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

42808 – 010 global

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

3 which is a reduction from the existing five minutes. Typically, vital signs would be taken by staff prior to this procedure. This procedure involves injection of local anesthesia with epinephrine, and knowledge and documentation of vital signs is important before the start of this procedure.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

CA001	Complete pre-service diagnostic and referral forms	
CA002	Coordinate pre-surgery services (including test results)	
CA004	Provide pre-service education/obtain consent	

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CA005	Complete pre-procedure phone calls and prescription	

b. Service period (includes pre, intra and post):

CA009	Greet patient, provide gowning, ensure appropriate medical records are available	
CA010	Obtain vital signs	
CA013	Prepare room, equipment and supplies	
CA016	Prepare, set-up and start IV, initial positioning and monitoring of patient	
CA017	Sedate/apply anesthesia	
CA018	Assist physician or other qualified healthcare professional---directly related to physician work time (100%)	
CA022	Monitor patient following procedure/service, multitasking 1:4	
CA024	Clean room/equipment by clinical staff	
CA026	Clean surgical instrument package	
CA027	Complete post-procedure diagnostic forms, lab and x-ray requisitions	
CA029	Check dressings, catheters, wounds	
CA035	Review home care instructions, coordinate visits/prescriptions	

c. Post-service period:

1	99212 27 minutes	

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

During the procedure, staff are actively assisting the physician. While the physician is performing the excision, the staff is passing instruments to the physician, cleaning instruments of bio-debris to ensure their optimal use, providing suction to evacuate any smoke from the use of electrocautery to allow for adequate visualization, and handling of specimens removed to place in fluid/containers for pathology evaluation.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

n/a

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

n/a

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

underpad 2ftx3ft (Chux)	item	1

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	SA048	pack	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

See above.

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

n/a

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

n/a

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
 - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - Does the computer include code specific software that is typically used to provide the service(s)?

n/a

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected "other formula" for any of the equipment, please explain here:

EQ234	suction and pressure cabinet, ENT (SMR)	
EQ170	light, fiberoptic headlight w-source	
EQ138	instrument pack, medium (\$1500 and up)	

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

EQ110	electrocautery-hyfreacator, up to 45 watts
EF015	mayo stand
EF008	chair with headrest, exam, reclining

All equipment utilized the default equipment formula except EQ138 which used the instrument pack formula.

PE-ONLY CODES ADDITIONAL INFORMATION

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

n/a

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Pre time – no change

Intra time –

Obtain vitals went from 5 minutes down to 3 minutes.

Service period increased one minute per the median of our survey, to 32 minutes.

We added 15 minutes for post procedure monitoring of a 1:4 ratio for an hour, per the PE standard.

This is needed because you are Operating in the back of the airway, so have potential for post op swelling that you want to make sure someone is monitoring the patient for an hour post-procedure. This concern doesn't go away when it's done in the office, so monitoring time is required for the procedure when done in the non-facility.

Time for cleaning the room was reduced down to the standard 3 minutes.

Cleaning scope time was removed as no scope is used for this procedure.

The PE subcommittee's standard 15 minutes for cleaning a medium instrument pack was added, the value of the instruments used is over \$1500, justifying the medium instrument pack.

2 minutes to complete post procedure diagnostic paperwork was added per PE standard,

2 minutes for reading xray, path, and lab reports was removed,

1 minute for checking dressing was added per PE standard,

Review home care instructions was reduced to 2 minutes per PE standards.

Post Time -

The post operative visit was maintained as a 99212.

Supplies –

We removed the sponge tipped applicator and added a tongue depressor for the post op visit.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)****Equipment –**

We removed the intra oral biopsy pack

Minutes for all equipment went down based on the default formula except the instrument pack which increased by one minute using the instrument pack standard formula.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Post Time -

The minutes in CA037 were removed as an office visit typically has 2 phone calls and there was no justification for a 3rd call.

Equipment

Default formula was switched to Office Visit for the light (EQ170) and the chair (EF008) in 42808.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

FACILITY DIRECT PE INPUTS**CPT CODE(S): 42808,****42XX1, 42XX2****SPECIALTY SOCIETY(IES): AAO-HNS****PRESENTER(S): R. Peter****Manes, MD & Brian Boyce, MD****AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)

CPT Code	Long Descriptor	Global Period
42808	Excision or destruction of lesion of pharynx, without magnification, any method	010
42XX1	Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg, microscope or telescope), includes robotic assistance, when performed; tongue base	090
42XX2	Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (eg, microscope or telescope), includes robotic assistance, when performed; lateral pharyngeal wall, including tonsil	090

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
42808	A 58-year-old male presents with dysphagia. on physical exam, he is noted to have a pharyngeal lesion. excision of the lesion without magnification is performed.
42XX1	A 62-year-old male presents with squamous cell carcinoma of the tongue base. examination, diagnostic endoscopy, and imaging demonstrate that the tumor is resectable. the surgeon performs transoral en bloc resection of the tongue base tumor under magnification.
42XX2	A 58-year-old male presents with squamous cell carcinoma of the left tonsil. examination, diagnostic endoscopy, and imaging reveal that the tumor is amenable to surgical resection. the surgeon performs transoral en bloc resection of the left tonsil with wide margins under magnification.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Our expert panel was comprised of our RUC advisors and guest expert Dr. Boyce who specializes in head and neck surgery.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

We utilized 42808 as the comparator for 42808, as well as the two new codes that were created.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

Manes, MD & Brian Boyce, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Staff time:

For 42808, we are only looking for an increase in the post operative office visits based on our survey median. Thus we are asking for an increase from a 99212 post op visit to a 99213 visit.

42808. Physician time for the post-operative visit has increased, as physicians are now dealing with more complex lesions. One of the common lesions addressed by this code are papillomas. This brings up discussions of HPV as well as vaccinations. The increased clinical work is reflected in our survey responses increasing the post-operative visit from a 99212 to a 99213, leading to our requested increase in staff time.

For X1 and X2, these are new codes for which we are only requesting facility PE inputs for the post operative office visits our survey respondents indicated. Upon review, our expert panel felt making the three post operative office visits that occur following these major procedures in the facility should be consistent and recommend 3 99213 visits for both X1 and X2.

Supplies:

For 42808, we are only requesting one change and that is to add a multispecialty visit pack in to support the 1 post operative office visit respondents indicated occurred.

For X1 and X2, we are requesting 3 multispecialty packs for the 3 office visits that occur postoperatively and 3 tongue depressors for each codes, as one of each is needed at all post op visits to evaluate healing.

Equipment:

For 42808, we are requesting the default equipment formula be applied for the 1 post operative visit that takes place, resulting in 36 minutes for the exam chair and fiberoptic headlight to be added.

For X1 and X2, these same two equipment items are required for all 3 post operative visits, respectively.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, 42808 is 010 and X1 and X2 are 090 globals.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are mirroring the extensive use of clinical staff pre time standards for 42808, consistent with prior PE inputs for the code.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

Complete pre-service diagnostic and referral forms	
Coordinate pre-surgery services (including test results)	
Schedule space and equipment in facility	
Provide pre-service education/obtain consent	
Complete pre-procedure phone calls and prescription	

b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records are available	
Obtain vital signs	
Prepare room, equipment and supplies	
Prepare, set-up and start IV, initial positioning and monitoring of patient	
Sedate/apply anesthesia	
Intra-service (of service period)	
Assist physician or other qualified healthcare professional---directly related to physician work time (100%)	
Post-Service (of service period)	
Monitor patient following procedure/service, multitasking 1:4	
Clean room/equipment by clinical staff	
Clean surgical instrument package	
Complete post-procedure diagnostic forms, lab and x-ray requisitions	
Check dressings, catheters, wounds	
Review home care instructions, coordinate visits/prescriptions	

c. Post-service period:

Conduct patient communications
42808 - 1 99213 post visit
42XX1 - 3 99213 post op visits

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: High Volume Growth (95800)

April 2025

Unattended Sleep Testing – Tab 08

In April 2024, CPT code 95800 was identified via the high-volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. The Relativity Assessment Workgroup (RAW) requested that the specialty societies submit an action plan for codes for September 2024. In September 2024, the RUC recommended to refer the code family to CPT for revision. The specialty societies submitted a CPT code change application for the September 2024 CPT meeting to delete the current code family and replace it with a set of codes that more accurately reflect current medical practice and technologies. However, the tab was withdrawn at CPT due to coding structure issues identified by the Panel reviewers. At the February 2025 CPT Editorial Panel meeting, six codes were added to report unattended sleep study with set-up, data acquisition, and technical analysis, and with interpretation and report by a physician or other qualified health care professional. The three existing codes were deleted (95806, 95800, 95801). The new codes were surveyed for the April 2025 RUC meeting.

Compelling Evidence

The specialty societies presented compelling evidence to support a change in physician work due to changes in technique, knowledge, and technology. Deleted CPT codes 95800, 95801, and 95806 were originally established to report unattended sleep testing. However, these codes were originally established to test solely for obstructive sleep apnea and were specific to devices that captured the parameters included in the code descriptors. The new CPT codes 95X18, 95X19, 95X20, 95X21, 95X22, and 95X23 have been developed to capture new devices and new technologies that include varying numbers of leads, channels and parameter categories, and allow for different data capture. Further, the number of leads, channels and parameter categories changes the amount of time that technologists and physicians or QHPs spend. As with more channels and or parameters to review, additional time is required. **The RUC accepted compelling evidence based on a change in physician work due to changes in technique, knowledge, and technology.**

Code Family

CPT codes 95X18, 95X19, 95X20 may only be reported when the raw data is reviewed and includes the set-up, data acquisition, device-generated analysis, and technical analysis. Technical analysis refers to the review and scoring of the data produced by the unattended sleep testing device by a technologist or QHP. These codes represent the technical component of this code family and are practice expense only. Under the prior code structure (95806, 95800 and 95801), technical component only work would be reported by appending the -TC modifier to the former CPT codes.

CPT codes 95X21, 95X22, 95X23 may only be reported when the raw data is reviewed, and the interpretation is completed and documented by a physician or other QHP. Code selection is determined by counting the number of channels and the number of parameter categories reviewed by the physician or other QHP. These codes represent the professional component of this code family and encompass the physician work to provide the services. Under the prior code structure (95806, 95800 and 95801), professional component only work would be reported by appending the -26 modifier to the former CPT codes.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code S=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

Further, the low complexity codes are for devices with the minimal number of channels and parameters required to diagnose the presence of sleep disordered breathing. Moderate complexity codes cover devices that provide greater characterization of the disorders and information that influences treatment decisions. High complexity studies look for multiple disorders that home devices previously were incapable of rendering a diagnosis. For context, channel refers to a specific type of data collection pathway used to monitor and display physiological signals during sleep. Channels may include measurements of airflow, respiratory effort, blood oxygen levels, heart rate, heart rhythm, and brain activity, among others. A channel must capture data that provides physiologic information clinically relevant to the disorder(s) being evaluated and the data is viewed over the course of the study. Further, parameters are grouped into categories according to the disorders or physiologic processes they describe. For example, all obstructive respiratory parameters (eg, apnea-hypopnea index [AHI]) respiratory disturbance index [RDI], peripheral arterial tone apnea-hypopnea index [pAHI]) are grouped into a single category because they describe obstructive breathing events or patterns.

95X21 Unattended sleep study, interpretation and report by a physician or other qualified health care professional; low complexity of 3-4 channels that generate at least 3-5 parameter categories

The RUC reviewed the survey results from 93 physicians and recommends a work RVU of 0.83, which is lower than the survey 25th percentile work RVU of 0.90, based on a direct crosswalk to CPT code 72265 *Myelography, lumbosacral, radiological supervision and interpretation* (work RVU = 0.83, 15 minutes intra-service time, and 25 minutes total time). The RUC recommends 5 minutes of pre-service time, 15 minutes intra-service time, 6 minutes post-service time, and 26 minutes total time.

Within the family, this service is the lowest complexity study with at least 3-4 channels to review. These 3-4 channels are typically within several hours of data split into 30 second segments and include actigraphy, respiratory tracings, pulse oximetry, and EKG. Therefore, the physician is reviewing multiple points of data and analyzing at least 3-5 parameters that are generated from the data, such as apnea-hypopnea index, arousal index, and periodic limb movement index, while accounting for the clinical history and context.

To support the recommended work RVU, the RUC referenced MPC codes 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70, 11 minutes intra-service time, and 16 minutes total time) and 74246 *Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered* (work RVU = 0.90, 15 minutes intra-service time, and 22 minutes total time). When compared to the reference codes, the surveyed code is similar in intra-service time and has more total time, although it is less intense/complex to perform, supporting the recommended work RVU.

For additional support, the RUC referenced codes 93888 *Transcranial Doppler study of the intracranial arteries; limited study* (work RVU = 0.73, 15 minutes intra-service time, and 25 minutes total time) and 95983 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code S=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code F=Family Code E=Editorial D=Deleted

or other qualified health care professional (work RVU = 0.91, 15 minutes intra-service time, and 28 minutes total time). The surveyed code has identical intra-service time to the reference codes, and the work RVU and total time are appropriately bracketed, supporting the relativity of the recommended work RVU. **The RUC recommends a work RVU of 0.83 for CPT code 95X21.**

95X22 Unattended sleep study, interpretation and report by a physician or other qualified health care professional; moderate complexity of 5-10 channels that generate at least 6-8 parameter categories

The RUC reviewed the survey results from 66 physicians and recommends a work RVU of 1.08, which is lower than the survey 25th percentile work RVU of 1.30, based on a direct crosswalk to CPT code 95822 *Electroencephalogram (EEG); recording in coma or sleep only* (work RVU = 1.08, 18 minutes intra-service time, and 33 minutes total time). The RUC recommends 5 minutes of pre-service time, 18 minutes intra-service time, 8 minutes post-service time, and 31 minutes total time.

Within the family, this service is a moderately complex study with at least 5-10 channels to review. These 5-10 channels are typically within several hours of data split into 30 second segments and include multiple EEG tracings, EMG tracings, respiratory tracings, pulse oximetry, and EKG. Therefore, the physician is reviewing hundreds of points of data and analyzing at least 6-8 parameters that are generated from the data, such as, but not limited to, cardiac indices, apnea-hypopnea index, arousal index, and periodic limb movement index, while accounting for the clinical history and context.

To support the RUC recommended work RVU, the RUC referenced MPC codes 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time, and 26 minutes total time) and 99308 *Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30, 18 minutes intra-service time, and 27 minutes total time). The reference codes support the recommended work RVU, given the similar intra-service times and more total time required by the surveyed code.

For additional support, the RUC referenced codes 78266 *Gastric emptying imaging study (eg, solid, liquid, or both); with small bowel and colon transit, multiple days* (work RVU = 1.08, 20 minutes intra-service time, and 36 minutes total time) and 93975 *Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; complete study* (work RVU = 1.16, 20 minutes intra-service time, and 30 minutes total time). The reference codes support the recommended work RVU given the similar intra-service times and total times to the surveyed code. **The RUC recommends a work RVU of 1.08 for CPT code 95X22.**

95X23 Unattended sleep study, interpretation and report by a physician or other qualified health care professional; high complexity of 11 or more channels that generate at least 9 parameter categories

The RUC reviewed the survey results from 45 physicians and recommends a work RVU of 1.60, which is lower than the survey 25th percentile work RVU of 1.90, based on a direct crosswalk to MPC code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60, 25 minutes intra-service time, and 35

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code S=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~≈FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

minutes total time). The RUC recommends 9 minutes of pre-service time, 20 minutes intra-service time, 10 minutes post-service time, and 39 minutes total time.

Within the family, this service is the highest complexity study with at least 11 channels to review and interpret. These 11 channels are typically within 7 hours of sleep recorded data split into 30 second segments, and include multiple EEG tracings, EMG tracings, respiratory tracings, pulse oximetry, and EKG. Therefore, the physician is reviewing over 800 points of data and analyzing at least 9 parameters that are generated from the data, such as, but not limited to, cardiac indices, Obstructive Sleep Apnea (OSA) respiratory indices, apnea-hypopnea index, arousal index, and periodic limb movement index, while accounting for the clinical history and context. The patients that receive this service are typically more complex with several comorbidities that could be contributing to the final diagnoses, increasing the cognitive intensity of the data analysis.

To support the recommended work RVU, the RUC referenced MPC codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time, and 32 minutes total time) and 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional* (work RVU = 1.75, 20 minutes intra-service time, and 40 minutes total time). The surveyed code has similar intra-service time and total time, although it is slightly less intense/complex to perform and is therefore appropriately valued lower.

For additional support, the RUC referenced code 95813 *Electroencephalogram (EEG) extended monitoring; 61-119 minutes* (work RVU = 1.63, 25 minutes intra-service time, and 35 minutes total time) and MPC code 99221 *Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.* (work RVU = 1.63, 40 minutes intra-service time, and 40 minutes total time). The surveyed code is supported by the reference codes similar total times and bracketed by the intensity/complexity of the relative services supporting a similar recommended work RVU. **The RUC recommends a work RVU of 1.60 for CPT code 95X23.**

Practice Expense

The Practice Expense (PE) Subcommittee considered and approved compelling evidence based on a change in equipment or practice expense cost and evidence that technology has changed clinical staff time. The new codes were created to capture new devices and new technologies that include varying numbers of leads, channels and parameter categories, and allow for different data capture. This changes the amount of time that technologists spend preparing equipment and educating the patient. As with more channels and/or parameters to review, additional time is required for technical analysis by the clinical staff for some of the new codes. In addition, the PE Subcommittee acknowledged that these services are now used for more than diagnosing obstructive sleep apnea and agreed that there is compelling evidence based on a change in patient population. Accordingly, several changes to the PE equipment and supply inputs are recommended to support the services used to diagnose multiple sleep disorders. **The PE Subcommittee approved compelling evidence based on a change in equipment or practice expense cost and a change in technology impacting clinical staff time, as well as a change in patient population.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

! = New code s = Revised code : = Add-on code H = Modifier 51 exempt * = Telemedicine X = Audio-only ~ = FDA approval pending # = Resequenced code f = Family Code e = Editorial D = Deleted

The PE Subcommittee reviewed the direct practice expense inputs for the code family, specifically the three technical component PE-only codes 95X18, 95X19, and 95X20, and made minor modifications. The PE Subcommittee discussed clinical activity CA042 *Perform procedure/service in post-service period---NOT directly related to physician work time* and the specialties provided a breakdown for each of the three codes to describe the first pass (qc review), second pass, technical analysis summary, and cleaning of equipment and wires and repackaging for next use. The Subcommittee also ensured there was no overlap between CA042 and CA024 *Clean room/equipment by clinical staff*.

The PE Subcommittee recommends one new supply item, *Nox AI Sensor Kit Adult*, for CPT code 95X20. For the equipment inputs, the specialty societies selected only one device for each code. Recognizing that there are 20+ devices available, choosing one was not a majority “typical,” rather a “plurality”. Each device has its own and very different inputs; some have kits that include items such as tape, others do not have the tape. It is the same concept for batteries, where some are rechargeable, and others are not. The devices below are the basis for the inputs:

- The *Apnea Link Air* device for the low complexity code, 95X18.
- The *Apnea Trak Legacy* device for the moderate complexity code, 95X19.
- The *Nox AIs System with SpO2* for the high complexity code, 95X20.

As noted above, each new recommended equipment item correlates with a specific code and the number of channels derived from the equipment, informing the parameter categories. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee.**

G-Codes

The RUC requests that CMS delete G0398-G0400 for CPT 2027 as they are duplicative with the new CPT codes 95X18, 95X19, 95X20, 95X21, 95X22, and 95X23.

New Technology/New Services

CPT codes 95X18, 95X19, 95X20, 95X21, 95X22, and 95X23 will be placed on the New Technology/New Services list and will be re-reviewed by the RUC in three years.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine Neurology and Neuromuscular Procedures Sleep Medicine Testing Sleep medicine services include procedures that evaluate adult and pediatric patients for a variety of sleep disorders. Sleep medicine testing services are diagnostic <u>and therapeutic</u> procedures using in-laboratory and portable technology to assess physiologic data and <u>response to</u> therapy.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

l=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

Unattended sleep study services (95X18, 95X19, 95X20, 95X21, 95X22, 95X23) are used to report set-up, data acquisition, and technical analysis alone or with the addition of an interpretation and report by a physician or other qualified health care professional (QHP). Report modifier 52 with 95X18, 95X19, 95X21, 95X22 for less than four hours of recording. Report modifier 52 with 95X20, 95X23 for less than six hours of recording. Technical analysis requires review of the raw data from the device with scoring of events as clinically indicated. Interpretation requires review of the raw data and correction of the scoring, if indicated. Attended sleep study services (95807, 95808, 95810, 95811) include set-up, data acquisition and technical analysis, and an interpretation with report by a physician or other QHP. Report modifier 52 if less than six hours of recording for 95807, 95808, 95810, 95811; if less than seven hours of recording for 95782, 95783, or if less than four nap opportunities are recorded for 95805.

Code selection for unattended sleep study services is determined by the number of channels used and the type of physiologic parameters measured. The addition of extra channels or parameters that do not provide additional, clinically relevant information may not justify the use of a higher complexity code. Complexity is determined by the clinical relevance of the information derived from the channels and parameters.

The number of channels and the quantity and complexity of the parameter categories determines the amount of physician work and, thus, the appropriate unattended sleep study code (95X18, 95X19, 95X20, 95X21, 95X22, 95X23). Codes 95X18, 95X19, 95X20 include the set-up, data acquisition, device-generated analysis, and technical analysis must be performed. Technical analysis refers to the review and scoring of the data produced by the unattended sleep testing device by a technologist or QHP. Codes 95X21, 95X22, 95X23 may only be reported when the raw data is reviewed, and the interpretation is completed and documented by a physician or other QHP. Code selection is determined by counting the number of channels and the number of parameter categories reviewed by the physician or other QHP. The code is determined by the lowest number of the two groups (channel and parameter categories) (see Table 1).

All sleep services (95800-95811) include recording, interpretation, and report. (Report with modifier 52 if less than 6 hours of recording for 95800, 95801 and 95806, 95807, 95810, 95811; if less than 7 hours of recording for 95782, 95783, or if less than four nap opportunities are recorded for 95805).

Definitions

For purposes of...

Actigraphy: the use...

Attended: a technologist...

Channel: in the context of sleep studies, a channel refers to a specific type of data collection pathway used to monitor and display physiological signals during sleep. Channels may include measurements of airflow, respiratory effort, blood oxygen levels, heart rate, heart rhythm, and brain activity, among others. A channel must capture data that provides physiologic information clinically relevant to the disorder(s) being evaluated and the data is viewed over the course of the study. For examples of channels, see Table 2.

Derived measures of heart rhythm: Heart rhythms extrapolated from alternate signals to electrocardiogram (ECG).

Direct measures of heart rhythm: Heart rhythms determined using ECG channels.

Direct measures of sleep: sleep stages determined using electroencephalogram (EEG), electrooculogram (EOG), and electromyogram (EMG) channels.

Derived measures of sleep: sleep stages extrapolated from alternate signals to EEG, EOG, and EMG.

Electrooculogram (EOG): a...

Interpretation: a physician or other QHP reviews the recorded channels epoch-by-epoch and reviews and assesses study adequacy including recording time, technical quality, and signal quality. They also modify the sleep record scoring, when necessary, and determine the type, pattern, severity, and features of respiratory events and movement disorders and assess the sleep pattern. The QHP also correlates findings with the patient's clinical history, comparing to previous sleep studies, and reviews patient's post-study feedback. The QHP considers all elements in medical decision making and all of this information is included in the sleep study interpretation.

Maintenance of wakefulness...

Multiple sleep latency...

Parameter categories: parameters are grouped into categories according to the disorders or physiologic processes they describe. For example, all obstructive respiratory parameters (eg, apnea-hypopnea index [AHI], respiratory disturbance index [RDI], peripheral arterial tone apnea-hypopnea index [pAHI]) are grouped into a single category because they describe obstructive breathing events or patterns. For a listing of the Parameter Categories, see Table 3.

Peripheral arterial tonometry...

Physiological measurements of...

Polysomnography: a sleep...

Positive airway pressure...

...

Sleep testing (or sleep study): the continuous, simultaneous monitoring of physiological parameters during sleep (eg, polysomnography, unattended sleep test, EEG).

Technical analysis: refers to the review, quality assessment, and scoring of the data that is produced by the sleep testing device by a technologist or QHP.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95X21	Tracking Number E4	Original Specialty Recommended RVU: 0.85
		Presented Recommended RVU: 0.83
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: 0.83

CPT Descriptor: Unattended sleep study, interpretation and report by a physician or other qualified health care professional; low complexity of 3-4 channels that generate at least 3-5 parameter categories

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old male with morbid obesity and snoring reports excessive daytime sleepiness. An unattended sleep study is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Evaluates the clinical scenario which includes reviewing the health records, referring QHP documentation, past medical history, medications, and previous sleep testing. Review the sleep study order to ensure that the appropriate test is performed, contacts the ordering provider when necessary.

Description of Intra-Service Work:

Reviews all technologist notes regarding set-up and processing of the unattended sleep study. Opens the sleep recording and reviews the recording. Reviews recorded channels and assesses study adequacy, including recording time, technical quality, and signal quality. Modifies the sleep record scoring when necessary. Correlates findings with patient's clinical history and comparison to previous sleep studies (if applicable).

Reviews patient's post-study feedback. Completes interpretation of data and creates a formal interpretative report.

Description of Post-Service Work: Enters the formal interpretive report into the patient's health record. Communicates test results to the referring QHP.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2024 RAW meeting, CPT 95800 code was identified with Medicare utilization of 10,000 or more, that have increased by at least 100% from 2017 through 2022.

The joint societies representing the American Academy of Neurology, (AAN), American Academy of Sleep Medicine (AASM), the American College of CHEST Physicians (CHEST) and the American Thoracic Society (ATS), herein referred to as the (joint AAN,AASM, CHEST, ATS) had been working through the AMA CPT process, first submitting an application in June 2024 for the September CPT meeting, with a follow up submission for the February 2025 CPT panel meeting. At the September 2024 RAW meeting, the committee agreed with the referral to CPT for this family.

As a result of the February 2025 AMA CPT meeting, the CPT panel approved the addition of six codes to report unattended sleep study with set-up, data acquisition, and technical analysis; unattended sleep study with interpretation and report by a physician or other qualified health care professional; and additional introductory guidelines. Deletion of three existing sleep study codes, specifically the 95800 CPT code an outcome of the RAW High Volume Growth screen. Additionally, the joint *AAN*, *AASM*, *CHEST*, *ATS* medical specialties agree and would support CMS deleting the redundant HCPCS Level II codes G0398, G0399 and G0400.

Since the establishment of the unattended sleep test code family in 2011, several new technologies have been developed and are now FDA approved for diagnostic testing for sleep disorders. The current code family (95800, 95801, and 95806) only includes devices that are used to diagnose obstructive sleep apnea. However, unattended sleep studies may be used to diagnose several sleep disorders. The current code family also does not accurately capture all existing sleep testing technologies that are being used outside of the sleep center to diagnose sleep disorders. Newer sleep testing devices have varying levels of complexity and now measure sleep parameters using both direct and derived measures of sleep.

The proposed revised code descriptors for unattended sleep studies are categorized by the complexity of the monitoring and analysis involved. These range from basic respiratory analysis for sleep-disordered breathing using less than 5 channels, to comprehensive monitoring, which includes 11 or more channels and generates more than a dozen physiologic parameters. The codes are designed to capture various diagnostic needs, from diagnosing sleep apnea to detailed sleep pattern and respiratory analysis for managing conditions like insomnia, identifying obstructive vs. central sleep apnea, and evaluating sleep-related movement disorders and parasomnias. Each code specifies the number of channels used and physiologic parameters generated, indicating the breadth of data collected during the test and increasing qualified health professional (QHP) work.

Specifically, the low complexity codes are for devices with the minimal number of channels and parameters required to diagnose the presence of sleep disordered breathing. Moderate complexity codes cover devices that provide greater characterization of the disorders and information that influences treatment decisions. High complexity studies look for multiple disorders that home devices previously were incapable of diagnosing and provide equivalent data to in laboratory polysomnography. At the request of the AMA CPT panel, the codes were split into two sets of services, 95X18, 95X19 and 95X20 for the set up, data acquisition and technical analysis by the clinical staff, and 95X21, 95X22 and 95X23 for the interpretation and report by the physician or QHP. One of the primary goals of this code set revision is to create a framework that supports reporting across multiple devices.

Method and Data

The joint *AAN*, *AASM*, *CHEST*, *ATS* conducted a random survey using the AMA Qualtrics survey tool. The group met over email and several conference calls to review the data and develop the below consensus recommendations.

Compelling Evidence:

We believe the following PE and Work compelling arguments have been met and the current PE inputs and work are not sufficient as evidenced by the changes in the CPT codes and descriptions. These services are now used for more than diagnosing obstructive sleep apnea as discussed in the background. Literature was provided with the AMA CPT code change application and is part of the RUC materials.

- Evidence that there has been a change in equipment or practice expense cost
- Evidence that technology has changed clinical staff time
- Evidence that there have been changes in physician work due to technique, knowledge/technology and physician time.

Codes 95800, 95801, and 95806 were originally established to report unattended sleep testing. However, these codes were originally established to test solely for obstructive sleep apnea and were specific to devices that captured the parameters included in the code descriptors. The new CPT codes 95X18, 95X19, 95X20, 95X21, 95X22 and 95X23 have been developed to capture new devices and new technologies that include vary numbers of leads, channels and parameter categories, and allow for different data capture. The

number of leads, channels and parameter categories changes the amount of time that technologists and physicians or QHPs spend. As with more channels and or parameters to review, additional time is required.

95X21 *Unattended sleep study, interpretation and report by a physician or other qualified health care professional; low complexity of 3-4 channels that generate at least 3-5 parameter categories*

A joint AAN, AASM, CHEST, ATS RVS panel (expert panel) reviewed and discussed the survey results. Ninety six percent of the survey respondents stated that the vignette was typical. The expert panel noted the volume of 93 survey responses for this code surpassing the required 50 necessary for a valid survey. The survey performance rate median of 100 studies per year among the 93 respondents is a reasonable rate. We are therefore confident that those completing the survey for this code did have experience performing the service.

Time Discussion

The expert panel reviewed the survey physician median times of 5 minutes pre-service, 15 minutes intra time and 6 minutes post-service. The expert panel also reviewed the billed together files in the RUC database and found that this service is not typically billed with an E/M or other services. Therefore, we did not believe it necessary for any time or work adjustments. We compared the current total time in the RUC database of 95800 and 95801, 31 minutes, compared to the survey total time of 26 minutes. The panel reviewed other similar services, and they recommend accepting the median survey times 5 pre-service time, 15 minutes intra time and 6 minutes post time. As this code is closest to the prior CPT codes 95800 and 95801, we did note that this service in the code family are common and that these services may take slightly less time to perform than the prior CPT codes as providers are more familiar and the technology has improved. The expert panel did believe that the survey times was lower than their experience, however for this code they were inclined to accept the survey results.

RVW Discussion

The expert panel reviewed the RVWs for the survey results of 95X21 additionally comparing to the 2 Key reference codes selected and reviewing the rank order in general. The expert panel discussed compelling evidence arguments to support the survey median or the 25th percentile results and dismissed the option for recommending the median, or the 25th percentile as they did not believe the times supported. They observed that the 25th percentile of 0.90 was closer to the current value 0.85 and that using a combination of the some comparator codes and the 25th percentile supports maintaining the current RVW. We believe these procedures have not fundamentally changed over the years. The expert panel did struggle with a reduction of 5 minutes to the total time and after much discussion, decided that they reduction was in the margin of error and in combination with reviewing some comparator codes, time and RVWs are recommending maintaining the current RVW of 0.85.

The two key reference services for 95X21 were 94621 (11 responses) and 95819 (14 responses). Additionally, we compared 95X21 to a MPC codes CPT 74246 and CPT 95819 all detailed in the table below. The expert panel would agree that 95X21 is ranked appropriately for the current value and supported by the 25th percentile of the survey.

Below is a table of other codes supportive to our recommendation:

CPT-global	Description Short	RVW	Pre	Intra	Post	Total	MPC	RUC review date

99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	0.70	2	11	3	16	yes	April 2019
75984 XXX	Change of percutaneous tube or drainage catheter with contrast monitoring (eg, genitourinary system, abscess), radiological supervision and interpretation	0.83	5	15	5	25	No	2019-04
93281 XXX	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system	0.85	7	15	10	32	No	2016-10
95X21 XXX SVY REC	Unattd Sleep, Interpret/report, low comp, 3-4 channels, 3-5 parameters	0.83	5	15	6	26		
72265 X-walk	Myelography, lumbosacral, radiological supervision and interpretation	0.83	5	15	5	25		Apr14
78227 XXX	Hepatobiliary system imaging, including gallbladder when present; with pharmacologic intervention, including quantitative measurement(s) when performed	0.90	6	15	5	26	No	2011-02
74246 XXX	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered	0.90	4	15	3	22	Yes	2019-01
95819	Key Ref 2 Electroencephalogram (EEG); including recording awake and asleep	1.08	5	15	6	26	Yes	Oct12

In summary, we recommend a crosswalk to CPT 72265 RVW of 0.83 for 95X21 with a pre-service time 5 minutes' intra-service time 15 minutes and post-service time 6 minutes, total time 26 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95800

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Sometimes

Specialty Sleep Medicine How often? Sometimes

Specialty Neurology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 360000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare data times 3

Specialty IDTF Frequency 146520 Percentage 40.70 %

Specialty Pulmonary Frequency 77040 Percentage 21.40 %

Specialty Sleep Medicine Frequency 39960 Percentage 11.10 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

121,746 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare claims from ruc data base

Specialty IDTF Frequency 84759 Percentage 69.61 %

Specialty Pulmonary Frequency 24657 Percentage 20.25 %

Specialty Sleep Medicine Frequency 9246 Percentage 7.59 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95800

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95X22	Tracking Number E5	Original Specialty Recommended RVU: 1.20
		Presented Recommended RVU: 1.08
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: 1.08

CPT Descriptor: Unattended sleep study, interpretation and report by a physician or other qualified health care professional; moderate complexity of 5-10 channels that generate at least 6-8 parameter categories

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old male with obesity and hypertension who reports non-refreshing sleep has an unattended sleep study to evaluate the presence, severity, and positional nature of obstructive sleep apnea, central sleep apnea, Cheyne Stokes respiration, actual sleep time, and degree of associated oxyhemoglobin desaturation.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Evaluates the clinical scenario which includes reviewing the health records, referring QHP documentation, past medical history, medications, and previous sleep testing. Review the sleep study order to ensure that the appropriate test is performed, contacts the ordering provider when necessary.

Description of Intra-Service Work:

Reviews all technologist notes regarding set-up and processing of the unattended sleep study. Opens the sleep recording and reviews the recording. Reviews recorded channels and assesses study adequacy, including recording time, technical quality, and signal quality. Modifies the sleep record scoring when necessary. Determine type, pattern, severity and features of respiratory events, assess sleep pattern, and assess positioning. Correlates findings with patient's clinical history and comparison to previous sleep studies (if applicable).

Reviews patient's post-study feedback. Completes interpretation of data and creates a formal interpretative report.

Description of Post-Service Work: Enters the formal interpretive report into the patient's health record. Communicates test results to the referring QHP.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2024 RAW meeting, CPT 95800 code was identified with Medicare utilization of 10,000 or more, that have increased by at least 100% from 2017 through 2022.

The joint societies representing the American Academy of Neurology, (AAN), American Academy of Sleep Medicine (AASM), the American College of CHEST Physicians (CHEST) and the American Thoracic Society (ATS), herein referred to as the (joint AAN,AASM, CHEST, ATS) had been working through the AMA CPT process, first submitting an application in June 2024 for the September CPT meeting, with a follow up submission for the February 2025 CPT panel meeting. At the September 2024 RAW meeting, the committee agreed with the referral to CPT for this family.

As a result of the February 2025 AMA CPT meeting, the CPT panel approved the addition of six codes to report unattended sleep study with set-up, data acquisition, and technical analysis; unattended sleep study with interpretation and report by a physician or other qualified health care professional; and additional introductory guidelines. Deletion of three existing sleep study codes, specifically the 95800 CPT code an outcome of the RAW High Volume Growth screen. Additionally, the joint *AAN*, *AASM*, *CHEST*, *ATS* medical specialties agree and would support CMS deleting the redundant HCPCS Level II codes G0398, G0399 and G0400.

Since the establishment of the unattended sleep test code family in 2011, several new technologies have been developed and are now FDA approved for diagnostic testing for sleep disorders. The current code family (95800, 95801, and 95806) only includes devices that are used to diagnose obstructive sleep apnea. However, unattended sleep studies may be used to diagnose several sleep disorders. The current code family also does not accurately capture all existing sleep testing technologies that are being used outside of the sleep center to diagnose sleep disorders. Newer sleep testing devices have varying levels of complexity and now measure sleep parameters using both direct and derived measures of sleep.

The proposed revised code descriptors for unattended sleep studies are categorized by the complexity of the monitoring and analysis involved. These range from basic respiratory analysis for sleep-disordered breathing using less than 5 channels, to comprehensive monitoring, which includes 11 or more channels and generates more than a dozen physiologic parameters. The codes are designed to capture various diagnostic needs, from diagnosing sleep apnea to detailed sleep pattern and respiratory analysis for managing conditions like insomnia, identifying obstructive vs. central sleep apnea, and evaluating sleep-related movement disorders and parasomnias. Each code specifies the number of channels used and physiologic parameters generated, indicating the breadth of data collected during the test and increasing qualified health professional (QHP) work.

Specifically, the low complexity codes are for devices with the minimal number of channels and parameters required to diagnose the presence of sleep disordered breathing. Moderate complexity codes cover devices that provide greater characterization of the disorders and information that influences treatment decisions. High complexity studies look for multiple disorders that home devices previously were incapable of diagnosing and provide equivalent data to in laboratory polysomnography. At the request of the AMA CPT panel, the codes were split into two sets of services, 95X18, 95X19 and 95X20 for the set up, data acquisition and technical analysis by the clinical staff, and 95X21, 95X22 and 95X23 for the interpretation and report by the physician or QHP. One of the primary goals of this code set revision is to create a framework that supports reporting across multiple devices.

Method and Data

The joint *AAN*, *AASM*, *CHEST*, *ATS* conducted a random survey using the AMA Qualtrics survey tool. The group met over email and several conference calls to review the data and develop the below consensus recommendations.

Compelling Evidence:

We believe the following PE and Work compelling arguments have been met and the current PE inputs and work are not sufficient as evidenced by the changes in the CPT codes and descriptions. These services are now used for more than diagnosing obstructive sleep apnea as discussed in the background. Literature was provided with the AMA CPT code change application and is part of the RUC materials.

- Evidence that there has been a change in equipment or practice expense cost
- Evidence that technology has changed clinical staff time
- Evidence that there have been changes in physician work due to technique, knowledge/technology and physician time.

Codes 95800, 95801, and 95806 were originally established to report unattended sleep testing. However, these codes were originally established to test solely for obstructive sleep apnea and were specific to devices that captured the parameters included in the code descriptors. The new CPT codes 95X18, 95X19, 95X20, 95X21, 95X22 and 95X23 have been developed to capture new devices and new technologies that include vary numbers of leads, channels and parameter categories, and allow for different data capture. The

number of leads, channels and parameter categories changes the amount of time that technologists and physicians or QHPs spend. As with more channels and or parameters to review, additional time is required.

95X22 *Unattended sleep study, interpretation and report by a physician or other qualified health care professional; moderate complexity of 5-10 channels that generate at least 6-8 parameter categories*

A joint AAN, AASM, CHEST, ATS RVS panel (expert panel) reviewed and discussed the survey results. Eighty six percent of the survey respondents stated that the vignette was typical. The expert panel noted the volume of 66 survey responses for this code surpassing the required necessary for a valid survey. The survey performance rate median of 18 studies per year among the 86 respondents is a reasonable rate. We are therefore confident that those completing the survey for this code did have experience performing the service.

Time Discussion

The expert panel reviewed the survey physician median times of 5 minutes pre-service, 18 minutes intra time and 8 minutes post-service. The expert panel also reviewed the billed together files in the RUC database and found that this service is not typically billed with an E/M or other services. Therefore, we did not believe it necessary for any time or work adjustments. We compared the current total time in the RUC database of 95806, 31 minutes, compared to the survey total time of 31 minutes. The panel reviewed other similar services, and they recommend accepting the median survey times 5 pre-service time, 18 minutes intra time and 8 minutes post time. As this code is closest to the prior CPT codes 95806, but not exact and likely more work based on the number of channels and parameters required to review, the expert panel believed the time estimates by the survey takers was lower than their experience. We did note that this service in the code family are not quite as common as the prior code discussed and is the beginning of the different technology and work of these services. The expert panel did believe that the survey times was lower than their experience, however we are required to accept our survey median times if there is no other published data that we can point too.

RVW Discussion

The expert panel reviewed the RVWs for the survey results of 95X22 additionally comparing to the 2 Key reference codes selected and reviewing the rank order in general. The expert panel discussed arguments to support the survey median or the 25th percentile results and dismissed the option for recommending the median, or the 25th percentile as they did not believe the times supported. They observed that the 25th percentile of 1.30 was too high and that using a combination of the some comparator codes and a x-walk code would be required for this service recommendation. We believe these procedures **have** fundamentally changed over the years. The expert panel did comment that the total time did come in the same, 31 minutes, as the less than perfect comparator code. The expert panel had anticipated this new code would yield higher times than the survey results.

The two key reference services for 95X22 were 99214 (12 responses) and 94621 (11 responses). Additionally, we compared 95X22 to a MPC codes CPT 95819 and CPT 99308 all detailed in the table below. The expert panel would agree that 95X22 is ranked appropriately with a x-walk to code **95822** and relative to the IWPUT for 95X21.

Below is a table of other codes supportive to our recommendation:

CPT-global	Description Short	RVW	Pre	Intra	Post	Total	MPC	RUC review date
99212	Office or other outpatient visit for the evaluation and management	0.70	2	11	3	16	yes	April 2019

	of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.							
95822	Electroencephalogram (EEG); recording in coma or sleep only	1.08	5	18	10	33	No	2012-10
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	5	15	6	26	Yes	Oct12
95X22 XXX SVY REC	Unattd Sleep, Interpret/report, Mod comp, 5-10 channels, 6-8 parameters	1.08	5	18	8	31		
95822 x-walk	Electroencephalogram (EEG); recording in coma or sleep only	1.08	5	18	10	33		Oct12
93284	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system	1.25	9	18	10	37	No	2016-10
99308	Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	5	18	4	27	yes	2021-04
74170	Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections	1.40	5	18	5	28	yes	Apr12

In summary, we recommend a RVW of 1.08 x-walked to CPT 95822 for 95X22 with a pre-service time 5 minutes' intra-service time 18 minutes and post-service time 8 minutes, total time 31 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95806

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Sometimes

Specialty Sleep Medicine How often? Sometimes

Specialty Neurology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 81000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare data times 3

Specialty Pulmonary	Frequency 38300	Percentage 47.28 %
Specialty Sleep Medicine	Frequency 13280	Percentage 16.39 %
Specialty Neurology	Frequency 9800	Percentage 12.09 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 27,396 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare claims from ruc data base

Specialty Pulmonary	Frequency 12657	Percentage 46.20 %
Specialty Sleep Medicine	Frequency 3342	Percentage 12.19 %
Specialty Neurology	Frequency 3534	Percentage 12.89 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95806

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95X23	Tracking Number E6	Original Specialty Recommended RVU: 1.75
		Presented Recommended RVU: 1.60
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: 1.60

CPT Descriptor: Unattended sleep study, interpretation and report by a physician or other qualified health care professional; high complexity of 11 or more channels that generate at least 9 parameter categories

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with Parkinson's disease and heart disease reports snoring, gasping, excessive movement during sleep, wakefulness during the sleep period, and daytime sleepiness. His bed partner reports repetitive leg jerks throughout the night. An unattended sleep study is ordered to evaluate the patient's symptoms, measure actual sleep time, evaluate for the presence, severity, and positional nature of obstructive sleep apnea and central sleep apnea, assess sleep quality, muscle tone, and heart rate variability, and assess for sleep fragmentation disorders such as periodic limb movements of sleep.

Percentage of Survey Respondents who found Vignette to be Typical: 66%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Evaluates the clinical scenario which includes reviewing the health records, referring QHP documentation, past medical history, medications, and previous sleep testing. Review the sleep study order to ensure that the appropriate test is performed, contacts the ordering provider when necessary.

Description of Intra-Service Work:

Reviews all technologist notes regarding set-up and processing of the unattended sleep study. Opens the sleep recording and reviews the recording. Reviews recorded channels and assesses study adequacy, including recording time, technical quality, and signal quality. Modifies the sleep record scoring when necessary. Analyzes sleep stages based on direct measures of sleep including EEG, EMG, and EOG. Determines if there are respiratory events (obstructive and central), movement events, arrhythmias, and EEG abnormalities. Correlates findings with patient's clinical history and comparison to previous sleep studies (if applicable).

Reviews patient's post-study feedback. Completes interpretation of data and creates a formal interpretative report.

Description of Post-Service Work: Enters the formal interpretive report into the patient's health record. Communicates test results to the referring QHP.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2024 RAW meeting, CPT 95800 code was identified with Medicare utilization of 10,000 or more, that have increased by at least 100% from 2017 through 2022.

The joint societies representing the American Academy of Neurology, (AAN), American Academy of Sleep Medicine (AASM), the American College of CHEST Physicians (CHEST) and the American Thoracic Society (ATS), herein referred to as the (joint AAN, AASM, CHEST, ATS) had been working through the AMA CPT process, first submitting an application in June 2024 for the September CPT meeting, with a follow up submission for the February 2025 CPT panel meeting. At the September 2024 RAW meeting, the committee agreed with the referral to CPT for this family.

As a result of the February 2025 AMA CPT meeting, the CPT panel approved the addition of six codes to report unattended sleep study with set-up, data acquisition, and technical analysis; unattended sleep study with interpretation and report by a physician or other qualified health care professional; and additional introductory guidelines. Deletion of three existing sleep study codes, specifically the 95800 CPT code an outcome of the RAW High Volume Growth screen. Additionally, the joint AAN, AASM, CHEST, ATS medical specialties agree and would support CMS deleting the redundant HCPCS Level II codes G0398, G0399 and G0400.

Since the establishment of the unattended sleep test code family in 2011, several new technologies have been developed and are now FDA approved for diagnostic testing for sleep disorders. The current code family (95800, 95801, and 95806) only includes devices that are used to diagnose obstructive sleep apnea. However, unattended sleep studies may be used to diagnose several sleep disorders. The current code family also does not accurately capture all existing sleep testing technologies that are being used outside of the sleep center to diagnose sleep disorders. Newer sleep testing devices have varying levels of complexity and now measure sleep parameters using both direct and derived measures of sleep.

The proposed revised code descriptors for unattended sleep studies are categorized by the complexity of the monitoring and analysis involved. These range from basic respiratory analysis for sleep-disordered breathing using less than 5 channels, to comprehensive monitoring, which includes 11 or more channels and generates more than a dozen physiologic parameters. The codes are designed to capture various diagnostic needs, from diagnosing sleep apnea to detailed sleep pattern and respiratory analysis for managing conditions like insomnia, identifying obstructive vs. central sleep apnea, and evaluating sleep-related movement disorders and parasomnias. Each code specifies the number of channels used and physiologic parameters generated, indicating the breadth of data collected during the test and increasing qualified health professional (QHP) work.

Specifically, the low complexity codes are for devices with the minimal number of channels and parameters required to diagnose the presence of sleep disordered breathing. Moderate complexity codes cover devices that provide greater characterization of the disorders and information that influences treatment decisions. High complexity studies look for multiple disorders that home devices previously were incapable of diagnosing and provide equivalent data to in laboratory polysomnography. At the request of the AMA CPT panel, the codes were split into two sets of services, 95X18, 95X19 and 95X20 for the set up, data acquisition and technical analysis by the clinical staff, and 95X21, 95X22 and 95X23 for the interpretation and report by the physician or QHP. One of the primary goals of this code set revision is to create a framework that supports reporting across multiple devices.

Method and Data

The joint AAN, AASM, CHEST, ATS conducted a random survey using the AMA Qualtrics survey tool. The group met over email and several conference calls to review the data and develop the below consensus recommendations.

Compelling Evidence:

We believe the following PE and Work compelling arguments have been met and the current PE inputs and work are not sufficient as evidenced by the changes in the CPT codes and descriptions. These services are now used for more than diagnosing obstructive sleep apnea as discussed in the background. Literature was provided with the AMA CPT code change application and is part of the RUC materials.

- Evidence that there has been a change in equipment or practice expense cost
- Evidence that technology has changed clinical staff time
- Evidence that there have been changes in physician work due to technique, knowledge/technology and physician time.

Codes 95800, 95801, and 95806 were originally established to report unattended sleep testing. However, these codes were originally established to test solely for obstructive sleep apnea and were specific to devices that captured the parameters included in the code descriptors. The new CPT codes 95X18, 95X19, 95X20, 95X21, 95X22 and 95X23 have been developed to capture new devices and new technologies that include vary numbers of leads, channels and parameter categories, and allow for different data capture. The number of leads, channels and parameter categories changes the amount of time that technologists and physicians or QHPs spend. As with more channels and or parameters to review, additional time is required.

95X23 *Unattended sleep study, interpretation and report by a physician or other qualified health care professional; high complexity of 11 or more channels that generate at least 9 parameter categories.*

A joint AAN, AASM, CHEST, ATS RVS panel (expert panel) reviewed and discussed the survey results. Sixty-seven percent of the survey respondents stated that the vignette was typical. The expert panel noted the volume of 45 survey responses for this code surpassing the required necessary for a valid survey. The survey performance rate median of 20 studies per year among the 45 respondents is a reasonable rate. We are therefore confident that those completing the survey for this code did have experience performing the service.

Time Discussion

The expert panel reviewed the survey physician median times of 9 minutes pre-service, 20 minutes intra time and 10 minutes post-service. The panel reviewed other similar services, and they recommend accepting the median survey times 9 pre-service time, 20 minutes intra time and 10 minutes post time. We did note that this service in the code family are not quite as common as the prior codes discussed and is the most different technology and work of these services. Our experts would compare this service as an outpatient version of the CPT code 95810 *Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist*. The expert panel did believe that the survey times was lower than their experience, however we are required to accept our survey median times if there is no other published data that we can point too.

RVW Discussion

The expert panel reviewed the RVWs for the survey results of 95X23 additionally comparing to the 2 Key reference codes selected and reviewing the rank order and IWP/UTs. The expert panel discussed arguments to support the survey median or the 25th percentile results and dismissed the option for recommending the median, or the 25th percentile as they did not believe the times supported. They observed that the 25th percentile of 1.90 was too high and that using a combination of the some comparator codes and a x-walk code would be required for this service recommendation. We believe these procedures **have** fundamentally changed over the years. The expert panel had anticipated this new code would yield higher times than the survey results.

The two key reference services for 95X23 were 99204 (15 responses) and 99214 (10 responses). Additionally, we compared 95X23 to a MPC codes CPT 99203 and CPT 99214 all detailed in the table below.

Below is a table of other codes supportive to our recommendation:

CPT-global	Description Short	RVW	Pre	Intra	Post	Total	MPC	RUC review date
74170	Computed tomography, abdomen; without contrast	1.40	5	18	5	28	yes	Apr12

	material, followed by contrast material(s) and further sections							
95813	Electroencephalogram (EEG) extended monitoring; 61-119 minutes	1.63	5	25	5	30		2016-01
99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	1.63		40		40	yes	2022-01
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.60	5	25	5	35	yes	April 2019
95X23 XXX SVY REC	Unattd Sleep, Interpret/report, High comp, 11+ channels, 9+ parameters	1.60	9	20	10	39		
99203 x-walk	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.60	5	25	5	35	yes	April 2019
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.92	7	30	10	47	yes	April 2019
95810 comp	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.5	15	36.5	15	66.5	yes	Apr10

In summary, we recommend a x-walk to 99203 with a RVW of 1.60 for 95X23 with a pre-service time 9 minutes' intra-service time 20 minutes and post-service time 10 minutes, total time 39 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0398

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Sometimes

Specialty Sleep Medicine How often? Sometimes

Specialty Neurology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 68608

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare data times 3

Specialty Pulmonary	Frequency 31285	Percentage 45.59 %
Specialty Sleep Medicine	Frequency 14174	Percentage 20.65 %
Specialty Internal Medicine	Frequency 7266	Percentage 10.59 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 22,869 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare claims from ruc data base

Specialty Pulmonary	Frequency 9147	Percentage 39.99 %
Specialty Sleep Medicine	Frequency 2973	Percentage 13.00 %
Specialty Internal Medicine	Frequency 2286	Percentage 9.99 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95806

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
95X18	A 45-year-old male with morbid obesity and snoring reports excessive daytime sleepiness. An unattended sleep study is ordered to assess for sleep apnea.
95X19	A 55-year-old male with obesity and hypertension reports non-refreshing sleep. An unattended sleep study is ordered to evaluate the presence, severity, and positional nature of obstructive sleep apnea, central sleep apnea, Cheyne Stokes respiration, actual sleep time, and degree of associated oxyhemoglobin desaturation.
95X20	A 65-year-old male with Parkinson's disease and heart disease reports snoring, gasping, excessive movement during sleep, wakefulness during the sleep period, and daytime sleepiness. His bed partner reports repetitive leg jerks throughout the night. An unattended sleep study is ordered to evaluate the patient's symptoms, measure actual sleep time, evaluate for the presence, severity, and positional nature of obstructive sleep apnea and central sleep apnea, assess sleep quality, muscle tone, and heart rate variability, and assess for sleep fragmentation disorders such as periodic limb movements of sleep.
95X21	A 45-year-old male with morbid obesity and snoring reports excessive daytime sleepiness. An unattended sleep study is ordered.
95X22	A 55-year-old male with obesity and hypertension who reports non-refreshing sleep has an unattended sleep study to evaluate the presence, severity, and positional nature of obstructive sleep apnea, central sleep apnea, Cheyne Stokes respiration, actual sleep time, and degree of associated oxyhemoglobin desaturation.
95X23	A 65-year-old male with Parkinson's disease and heart disease reports snoring, gasping, excessive movement during sleep, wakefulness during the sleep period, and daytime sleepiness. His bed partner reports repetitive leg jerks throughout the night. An unattended sleep study is ordered to evaluate the patient's symptoms, measure actual sleep time, evaluate for the presence, severity, and positional nature of obstructive sleep apnea and central sleep apnea, assess sleep quality, muscle tone, and heart rate variability, and assess for sleep fragmentation disorders such as periodic limb movements of sleep.

NON-FACILITY DIRECT PE INPUTS

CPT

CODE(S):95X18,95819,95X20

SPECIALTY SOCIETY(IES):_AAN, AASM, ATS, CHEST

PRESENTER(S):Amy Ahasic,

MD (CHEST), Omar Hussain, MD (ATS), Marianna V. Spanaki, MD, PhD (AAN), Jeremy Weingarten, MD, MBA, MS (AASM)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

RUC advisors from all the participating specialty societies acted as an expert panel and met several times, by conference call, to arrive at the recommendations for direct practice expense inputs. The Advisor group consists of neurologists, sleep medicine physicians, pulmonologists, and critical care medicine physicians.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

We used the original unattended sleep testing codes (95800, 95801, and 95806) as well as the attended polysomnography code (95810) and corresponding CMS values, for comparison with the new codes.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

No

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility*? What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Pulmonary disease is the dominant specialty for codes 95801, 95806, and 95810. The dominant specialty for 95800 is listed as Independent Diagnostic Testing Facility with Pulmonary disease as the next largest specialty.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

We believe the following PE compelling arguments have been met and the current PE inputs are not sufficient as evidenced by the changes in the CPT codes and descriptions. Literature was provided with the code change application and is part of the RUC materials.

Evidence that there has been a change in equipment or practice expense cost

NON-FACILITY DIRECT PE INPUTS**CPT****CODE(S):95X18,95819,95X20****SPECIALTY SOCIETY(IES):_AAN, AASM, ATS, CHEST****PRESENTER(S):Amy Ahasic,****MD (CHEST), Omar Hussain, MD (ATS), Marianna V. Spanaki, MD, PhD (AAN), Jeremy Weingarten, MD, MBA, MS (AASM)****AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Evidence that technology has changed clinical staff time

Codes 95800, 95801, and 95806 were originally established to report unattended sleep testing. However, these codes were originally established to test solely for obstructive sleep apnea and were specific to devices that captured the parameters included in the code descriptors. The new CPT codes 95X18-95X23 have been developed to capture new devices and new technologies that include varying numbers of leads, channels and parameter categories, and allow for different data capture. The number of leads, channels and parameter categories changes the amount of time that technologists spend on preparing equipment and educating the patient. As with more channels and or parameters to review, additional time is required for technical analysis by the clinical staff for some of the new codes. Several of the PE equipment and supply inputs for the deleted codes are no longer appropriate or sufficient and are recommended for changes to support the services used to diagnose multiple sleep disorders.

See the *PE compelling evidence guidelines* under PE Reference Materials on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

NON-FACILITY DIRECT PE INPUTS**CPT****CODE(S):95X18,95819,95X20****SPECIALTY SOCIETY(IES):_AAN, AASM, ATS, CHEST****PRESENTER(S):Amy Ahasic,****MD (CHEST), Omar Hussain, MD (ATS), Marianna V. Spanaki, MD, PhD (AAN), Jeremy Weingarten, MD, MBA, MS (AASM)****AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

The front office staff will prepare consent forms, equipment responsibility forms, and the pre-study intake questionnaire and post-study feedback questionnaire, for the patient. Clinical staff will also call the patient to confirm the appointment and provide directions, including parking information. Preparatory information will also be shared including recommended attire that is most appropriate for the sleep study, and staff will also respond to patient questions. Staff will explain what will take place during their appointment, as the patient will pick up the equipment and review all procedures related to equipment set up. Lastly, they will explain to the patient that during the visit the system will be customized and the patient will be asked to perform the set up and explain how they will start the system, to demonstrate understanding.

b. Service period (includes pre, intra and post):

Pre-service Line 32:

Clinical staff will greet the patient, escort them to the exam room and ask the patient to complete the pre-study intake questionnaire. The clinical staff will explain the consent and equipment responsibility forms and present them for signature.

Intra-service Lines 37, 48:

The tech will then obtain the equipment, including all attachments, and ensure that it has been properly cleaned before attaching and testing the equipment and entering appropriate time parameters for the test. The patient will be educated on the device and each attachment and how to properly connect and apply each piece, while the tech simultaneously customizes the fit of each piece. All patient questions will be answered as the patient attaches the device and attachments independently and any additional instruction will be provided.

Post-service Line 58:

Once the dry run is complete, the room where the patient and clinical staff were reviewing and testing the equipment is cleaned as and the patient takes the equipment home for the procedure.

c. Post-service period:

Line 87: The patient returns the sleep testing device, the device information is verified and it is inspected for damage. The tech uploads the sleep study data and the post-study questionnaire. The tech downloads, reviews and edits the recording, marks artifacts, scores sleep stages and performs an evaluation of physiological changes. The tech generates a preliminary technical analysis and adds it to the patient medical record. Any disposable items are discarded and reusable equipment is thoroughly sanitized and repackaged. [See bottom for a Detail breakdown of CA042 line 87].

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Line 48: Perform procedure/service---NOT directly related to physician work time

- Position patient properly typically in a sitting upright or standing position
- Show the device and provide education regarding the purpose of the different components.

NON-FACILITY DIRECT PE INPUTS**CPT****CODE(S):95X18,95819,95X20****SPECIALTY SOCIETY(IES):_AAN, AASM, ATS, CHEST****PRESENTER(S):Amy Ahasic,****MD (CHEST), Omar Hussain, MD (ATS), Marianna V. Spanaki, MD, PhD (AAN), Jeremy Weingarten, MD, MBA, MS (AASM)****AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Inspect the patient for optimal location of device and components, which finger to place the oxygen saturation probe.
- Alcohol pads are used to clean the finger and other areas on the face and body in which adhesives may be applied to secure the equipment.
- Apply the device to the patient and customize fit. This includes fitting the nasal cannula in combination with the thermistor in the proper location and tighten to prevent loosening, taping the cords to the face or cords to the wrist for peripheral arterial tone device, demonstrating the attachment of patient body position and snore sensors, demonstrating the attachment of oxygen saturation probe with adhesive.
 - May also require instruction on proper application of 2 respiratory effort belts. This involves estimating proper size belts required, then fitting the patient with the belts and adjusting the belt tightness to customize the fit for the patient and ensuring that the belts are in the correct order and at the proper location.
- The device(s) is/are then removed and the patient is asked to demonstrate the proper self-application of the device. Corrections or additional instructions are a typical part of this process.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We identified a device Nox A1s with several disposable items that are supplied in kits/ package.

CODE(S):95X18,95819,95X20

SPECIALTY SOCIETY(IES):_AAN, AASM, ATS, CHEST

PRESENTER(S):Amy Ahasic,

MD (CHEST), Omar Hussain, MD (ATS), Marianna V. Spanaki, MD, PhD (AAN), Jeremy Weingarten, MD, MBA, MS (AASM)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Since we are required to select only ONE device for each of the three/six codes, we used our experts to identify the more commonly used devices for each of the codes. There are 20+ devices available, choosing one is not a majority “typical” rather a “plurality”.

Each device has its own and very different inputs; some have kits that include items such as tape, others do not have the tape, same concept for batteries where some are rechargeable, and others are not. The devices below are the basis for the inputs:

The Apnea Link Air device for the low complexity code, 95X18. An invoice is provided.

The Apnea Trak Legacy device for the moderate complexity code, 95X19. An invoice is provided.

The Nox A1s System for the high complexity code, 95X20. An invoice is provided.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life of the Apnea Link Air is 5 years.

The useful life of the Apnea Trak Legacy is 5 years.

The useful life of the Nox A1s System is 5 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?

a. If yes, please explain how the computer is used for this service(s).

b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?

c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

EQ336	Oximetry and Airflow Device
NEW	Apnea Link Air
NEW	Apnea Trak Legacy
NEW	Nox A1s System with SpO2, US

New equipment was identified to represent what is typical for the revised codes, based on the number of channels and parameter categories.

We chose “other” formula for equipment as the patient arrives typically later in the day e.g. 4 PM for appointment to perform as test run with the equipment. The patient then takes the equipment home and returns it in the morning typically 9 AM. Therefore, we are simply using the 16-hour period that currently exists in the RUC database and is generally consistent with clinical practice.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

From Budget Neutrality Utilization for Medicare		
	Medicare	Medicare *3
95X18	73,374	220,122
95X19	132,470	397,410
95X20	4,091	12,273
95X21	159,300	477,900
95X22	154,108	462,324
95X23	5,591	16,773

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

The societies recommend the crosswalks below, as they are predominantly provided in the non-facility setting and have a similar specialty mix to existing CPT codes 95805 and 95810.			
Code	Crosswalk	Descriptor	PLI RVU
95X18	95805	Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness	0.17
95X19	95805	Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness	0.17
95X20	95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	0.24
95X21	95800	Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (eg, by airflow or peripheral arterial tone), and sleep time	0.05
95X22	95806	Sleep study, unattended, simultaneous recording of, heart rate, oxygen saturation, respiratory airflow, and respiratory effort (eg, thoracoabdominal movement)	0.05
95X23	G0398	Home sleep study test (hst) with type ii portable monitor, unattended; minimum of 7 channels: eeg, eog, emg, ecg/heart rate, airflow, respiratory effort and oxygen saturation	0.00

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Line 48: CA021 Best practice and in society guidelines require patients to come into the office to pick up the kit (personally) and get a demo, as the demo significantly decreases failure rates. Each device has more equipment; therefore, it takes more time for each code to demonstrate by the clinical staff and have the patient self-apply during the test run. While we are aware of some devices being mailed, we do not believe this is best practice, nor is it the most common method.

Line 87: CA042 This includes the equipment download, sanitize and repackaging (10-15 min) as well as the technical score and review with notes. Automation has not simplified technical scoring and review at present.

Detail breakdown line 87			
	95X18	95X19	95X20
Download with first pass qc review (qc is primary component of time)	17	20	30
Second pass review	9	12	18
Technical analysis summary	4	6	8
Cleaning all equip and wires and repackaging for next use.	10	12	14
Total	40	50	70

Paper is for the detailed step by step procedure instructions to put the device on and any other instructions specific for that site such as phone numbers to call if there are technical questions.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
****Screen: Codes Reported Together 75% or More****

April 2025

Autonomic Function Testing – Tab 09

In October 2019, the Relativity Assessment Workgroup (RAW) identified CPT code 95923 via the high-volume growth screen, with Medicare utilization of 10,000 or more, which increased by at least 100% from 2013 through 2018. In January 2020, the RAW reviewed the action plan submitted by the specialty societies and the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. The RAW would review the specialty mix again in three years of those reporting the services (Sept 2023). In September 2023, the specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarification on terminology used in the code descriptor language of the code set, and clinical examples for each code. The article intended to reduce miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties is typical. The RAW examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article, but to due to the COVID-19 pandemic. The RAW noted that these services are typically reported with one another and the code family should be referred to the CPT Editorial Panel to be restructured. In April 2024, the RAW identified code pair 95921/95923 as performed by the same physician on the same date of service 75% of the time or more based on 2022 Medicare Utilization data. The RAW requested action plans for September 2024. In September 2024, the RUC recommended referral to CPT. The specialty societies noted that they submitted a CPT code change application (CCA) for the September 2024 CPT meeting with revisions to the current autonomic function testing code set and the creation of a new Category I code to more accurately reflect current clinical practice and technologies. However, this issue was withdrawn from CPT based on feedback from specialty society comments and CPT Panel reviewers. The specialty societies revised the CCA to address concerns with reported together utilization for the February 2025 CPT meeting. As a result, the CPT Editorial Panel created six new codes to report autonomic function testing with the use of a tilt table, sudomotor tests, and combined procedures to address the RUC referral. Further, the Panel revised four existing codes to include interpretation and report and clarification on tilt table use. The code family was surveyed for the April 2025 RUC meeting.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection, the tests are essentially in three categories: parasympathetic, sympathetic, and sudomotor. The tests can be performed independently or as a full battery as reflected in the CPT code language.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

CPT Code	Parasympathetic (cardiovagal function) including 2 or more of the following: -HR response to deep breathing w/ recorded R-R interval -Valsalva ratio -30:15 ratio	Sympathetic vasomotor function including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and passive tilt <i>(includes tilt table in code)</i>	Sudomotor: QSART or silastic sweat imprint	Sudomotor: thermo-regulatory sweat test	Sudomotor: sympathetic skin response (SSR) potential	*With Tilt Table add-on code (+95XX4)
95921	X					*
95922		X				
95923			X			
95XX5				X		
95XX6					X	
95924	X	X				
95XX7	X		X			*
95XX8		X	X			
95XX9	X	X	X			

- CPT code 95921 describes testing that evaluates parasympathetic function. A tilt table may be used but is not required and 95XX4 may be reported in addition to this code when a tilt table is used.
- CPT code 95922 describes testing that evaluates sympathetic function. This code does require performance of passive head-up tilt, which must be performed using a tilt table, which is included as indicated in the code descriptor.
 - CPT code 95924 is reported when both the parasympathetic and sympathetic functions, as described in 95921 and 95922 are tested together, and this also requires the use of a tilt table, which is included as indicated in the code descriptor.

The testing of sudomotor function is reported as follows:

- CPT code 95923 describes sudomotor testing that evaluates sweat gland function and should be reported when using the quantitative sudomotor axon reflex test (QSART) or the silastic sweat imprint.
- CPT code 95XX5 describes sudomotor testing, using the thermal regulatory sweat test or TST by recording sweat production and distribution during controlled heating of the entire body.
- CPT code 95XX6 describes evaluation of the sympathetic skin response (SSR) by recording surface electrical responses.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

- CPT codes 95XX7, 95XX8 and 95XX9 represent various combinations of tests:
 - CPT code 95XX7 is reported when both the parasympathetic function testing and QSART are performed, a tilt table may be used, but is not required, and add-on code 95XX4 may be reported in addition when a tilt table is used.
 - CPT code 95XX8 is reported when both the sympathetic function tests and QSART are performed and require the use of a tilt table, as indicated in the code descriptor.
 - CPT code 95XX9 is reported when parasympathetic, sympathetic, and QSART testing are performed. CPT code 95XX9 also requires the use of a tilt table as indicated in the code descriptor.

The autonomic function testing codes require interpretation and report by a physician or other qualified health care provider (QHP) and should not be used for tests that include algorithmically aided diagnostic support tools. The CPT Editorial Panel added this language to eliminate potential misuse when the appropriate physician work is not performed and eliminate the potential for reporting with automated devices.

Compelling Evidence

The specialty societies presented compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically that there has been a change in physician work due to changes in technique and knowledge/technology to perform these services. For Valsalva responses as part of sympathetic testing, additional quantitative analyses are now typical. In addition to the “classic” elements included at the time of the last survey; additional analyses including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now typical. These have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. This change is reflected in the updated description of physician work, which now details visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. For codes where interpretation is required for a combination of multiple test procedures (e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, sympathetic and parasympathetic testing the integration of multiple modality data is required. These newly implemented analyses add complexity and intensity to the physician work.

In the past 10 years, there has been enhanced knowledge in epidemiology, etiology, pathophysiology, genetics, diagnostic criteria, differential diagnoses, and management of discrete autonomic disorders that in the past were grouped together as “dysautonomia”. The specialty societies indicated that enhanced knowledge in a disease or group of diseases results in proper and targeted utilization of relevant diagnostic procedures and further adds to the complexity of physician work.

In addition to this change in physician work, utilization is expected to significantly decrease for at least a portion of the existing code set and shifts in dominant specialties, particularly for existing code 95923, which previously encompassed multiple, technically differing procedures. These procedures are now described under individual codes (95923, 95XX5 and 95XX6); it is expected that these coding changes will reduce any existing misuse of the codes, as well as result in a shift in use toward the dominant specialty, neurology. **The RUC agreed that there is compelling evidence that there has been a change in physician work due to changes in technique and knowledge/technology to perform these services.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

95921 Testing of autonomic nervous system function, with interpretation and report; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio

The RUC reviewed the survey results from 54 neurologists and internal medicine physicians and determined the survey 25th percentile work RVU of 0.90, which is also the current value, appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 15 minutes intra-service and 5 minutes post-service time, totaling 25 minutes. The RUC reduced the post-service time from 10 to 5 minutes. The RUC noted that this service is typically reported with an office Evaluation and Management (E/M) service and ensured there is no duplication in pre- or post-service work. The 5 minutes of pre-service time account for evaluating the patient characteristics relative to the data to be collected, the appropriateness of the test for the patient and whether the patient is prepared for it in a way that will result in valid data. The post-service time of 5 minutes accounts for the physician and interpretation of the raw data that they visualized and marked during performing the test, which is performed for separate indications clinically and diagnostically than the E/M.

CPT code 95921 describes testing which evaluates parasympathetic (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used, but it is not required for testing parasympathetic function. CPT code 95XX4 may be reported in addition to 95921 when a tilt table is used to perform the tests.

The RUC compared the surveyed code to the top key reference code 95907 *Nerve conduction studies; 1-2 studies* (work RVU = 1.00, 15 minutes intra-service time and 35 minutes total time) and determined that the surveyed code requires less pre- and post-service time and slightly less physician work, thus is appropriately valued lower. The survey respondents that selected this key reference indicated that the surveyed code is identical or somewhat more intense than key reference code 95907. The RUC compared the surveyed code to the second top key reference service 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30, 20 minutes intra-service and 30 minutes total time) and determined that the surveyed code requires slightly less physician work and intra-service time to perform, thus is appropriately valued lower.

For additional support the RUC referenced MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time and 26 minutes total time), which clinically is a similar testing code. CPT code 93015 is less intense and complex compared to the surveyed code, with five minutes more intra-service time, which is less intense during the service period. The RUC also compared the surveyed code to MPC code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time), which is slightly more intense and complex than the surveyed code. Both MPC codes bracket the surveyed code and are comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 0.90 appropriately places CPT code 95921 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.90 for CPT code 95921.**

95XX4 Testing of autonomic nervous system function, with interpretation and report; use of tilt table (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 34 neurologists and determined a work RVU of 0.35 appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes of intra-service and total time. The RUC agreed with the specialty societies and recommends a direct crosswalk to the top key reference service, CPT code 95885 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)* (work RVU = 0.35, 15 minutes intra-service and total time). These services both require the same amount of physician time and work to perform.

CPT code 95XX4 may be reported in addition to 95921 and 95XX7 when a tilt table is used to perform these tests. Mental effort and clinical judgment are required for the physician to deem that the typical use of 95921 and 95XX7 without a tilt table is not sufficient to make a diagnosis. Then the physician must confer and make sure that the tilt table is necessary as part of the physician work, and then also interpret the results with the tilt table, which is more data in addition to that was also already gathered in the base codes.

The RUC compared the surveyed code to the top key reference service 95886 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)* (work RVU = 0.86, 30 minutes intra-service and total time) and determined that the surveyed code requires less physician work and time to perform, thus is appropriately valued lower.

For additional support the RUC referenced MPC codes 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)* (work RVU = 0.19, 5 minutes intra-service time and 6 minutes total time). The surveyed code requires more physician work and time than 96367, thus is appropriately valued higher. The RUC also compared the surveyed code to MPC code 77002 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* (work RVU = 0.54, 15 minutes intra-service time and 17 minutes total time), which requires more work and intensity to perform than the surveyed code. Both MPC codes bracket the surveyed code and are comparable for physician work and time. The RUC determined a work RVU of 0.35 appropriately places CPT code 95XX4 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.35 for CPT code 95XX4.**

95922 Testing of autonomic nervous system function, with interpretation and report; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt (ie, tilt table)

The RUC reviewed the survey results from 46 neurologists and internal medicine physicians and determined that the current work RVU of 0.96, which is below the survey 25th percentile work RVU of 1.02, appropriately accounts for the work required to perform this service. The RUC recommends 6 minutes pre-service time, 20 minutes intra-service and 10 minutes post-service time, totaling 36 minutes. The RUC noted that this

service is typically reported with an office Evaluation and Management (E/M) service and ensured there is no duplication in pre- or post-service work. For code 95922, there are multiple additional sources of data and types of analyses performed that make the assembly of the report more complex and more detailed and extensive.

CPT code 95922 describes testing that evaluates sympathetic effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat blood pressure and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, and the performance of passive head-up tilt, which must be performed using a tilt table.

The RUC compared the surveyed code to the top key reference service 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30, 20 minutes intra-service and 30 minutes total time) and determined that the surveyed code requires the same intra-service time but less intense and requires slightly less physician work, thus is appropriately valued lower. The RUC compared the surveyed code to the second top key reference code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time), and determined that the surveyed code requires slightly more time to perform but requires nearly the same overall intensity and complexity to perform as code 95819, with 67 percent of survey respondents who chose this as a key reference service indicating as such. Thus, the surveyed code is valued similarly relative to code 95819.

For additional support the RUC referenced MPC code 95971 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional* (work RVU = 0.78, 20 minutes intra-service time and 33 minutes total time). The surveyed code requires more physician work and is more intense and complex to perform, thus valued higher than code 95971. The RUC determined that the current work RVU of 0.96 appropriately places CPT code 95922 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.96 for CPT code 95922.**

95923 *Testing of autonomic nervous system function, with interpretation and report; sudomotor, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint*

The RUC reviewed the survey results from 52 neurologists and internal medicine physicians and determined the current work RVU of 0.90, which is below the survey 25th percentile work RVU of 1.00, appropriately accounts for the work required to perform this service. The RUC recommends 8 minutes pre-service time, 15 minutes intra-service and 9 minutes post-service time, totaling 32 minutes. The RUC noted that this service is typically reported with an office Evaluation and Management (E/M) service and ensured there is no duplication in pre- or post-service work.

CPT code 95923 describes testing that evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (QSART) or the silastic sweat imprint test. Previously, QSART, thermoregulatory sweat test (TST) and sympathetic skin response (SSR) testing were all reported with CPT code 95923. The revised coding structure established a unique CPT code for each test. At the time the code was last reviewed, QSART was the most typical test to evaluate sudomotor function and the code was valued based on the work associated with the QSART.

The RUC compared the surveyed code to the top key reference code 95907 *Nerve conduction studies; 1-2 studies* (work RVU = 1.00, 15 minutes intra-service time and 35 minutes total time) and determined these services require the same intra-service time, with the surveyed code requiring slightly less total time to perform, thus are valued slightly lower. The RUC compared the surveyed code to the second top key reference service 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54, 29 minutes intra-service and 49 minutes total time) and determined that the surveyed code requires less physician work and time to perform, thus is appropriately valued lower.

For additional support, the RUC referenced MPC codes 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70, 11 minutes intra-service time and 16 minutes total time). The surveyed code requires more physician work and time to perform compared to 99212, thus is valued higher. The RUC determined that the current work RVU of 0.90 appropriately places CPT code 95923 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.90 for CPT code 95923.**

95XX5 Testing of autonomic nervous system function, with interpretation and report; sudomotor, thermoregulatory sweat test

The RUC reviewed the survey results from 31 neurologists and determined that the survey 25th percentile work RVU of 1.00 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes pre-service time, 20 minutes intra-service and 10 minutes post-service time, totaling 40 minutes. CPT code 95XX5 is the most difficult to perform out of the sudomotor tests, therefore, 5 minutes more of intra-service time compared to CPT code 95923 is appropriate. The QSART test (95923) focuses on peripheral nerves, whereas in this case, 95XX5 focuses on central nervous system sweat control, and requires additional data analysis and considerations in terms of the physician's clinical review.

CPT code 95XX5 describes testing that evaluates sudomotor function using the thermoregulatory sweat test (TST) by recording sweat production and distribution during controlled heating of the whole body. Previously all sudomotor testing including quantitative sudomotor axon reflex test (QSART), thermoregulatory sweat test (TST), and sympathetic skin response (SSR) testing were all reported with CPT code 95923. At the time the code was last reviewed, QSART was the most typical test to evaluate sudomotor function and the code was valued based on the work associated with the QSART. The revised coding structure established a unique CPT code for each test.

The RUC questioned whether 95XX5 will typically be reported with any other codes in this family. The specialty societies indicated that 95XX5 is only available at very few institutions across the country and is such a tiny fraction, probably less than 1%, of the sudomotor tests that are performed. Therefore, it will be rare that 95XX5 will be reported with other codes in this family.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

The RUC compared the surveyed code to the top key reference code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time), and determined that the surveyed code requires more time to perform but requires nearly identical overall intensity and complexity to perform as code 95819, with 60 percent of survey respondents who chose this as a key reference service indicating as such. Thus, the surveyed code and 95819 are valued similarly. The RUC compared the surveyed code to the second top key reference service 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30, 20 minutes intra-service and 30 minutes total time) and determined that the surveyed code requires the same intra-service time but less intense and requires slightly less physician work, thus is appropriately valued lower.

For additional support the RUC referenced MPC codes 95971 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional* (work RVU = 0.78, 20 minutes intra-service time and 33 minutes total time). The surveyed code requires more physician work and is more intense and complex to perform, thus valued higher than code 95971. The RUC also compared the surveyed code to MPC code 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional* (work RVU = 1.75, 20 minutes intra-service time and 40 minutes total time), which requires more work and intensity to perform than the surveyed code. Both MPC codes bracket the surveyed code and are comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 1.00 appropriately places CPT code 95XX5 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 1.00 for CPT code 95XX5.**

95XX6 Testing of autonomic nervous system function, with interpretation and report; sudomotor, assessing the sympathetic skin response (SSR) potential

The RUC reviewed the survey results from 35 neurologists and determined the survey 25th percentile work RVU of 0.50 appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes pre-service time, 10 minutes intra-service and 5 minutes post-service time, totaling 20 minutes. The specialty societies noted that this service is not expected to typically be reported with an office Evaluation and Management (E/M) service because it is performed separately in the electromyography (EMG) lab.

CPT code 95XX6 describes testing that evaluates the sympathetic skin response (SSR) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested. Previously all sudomotor testing including quantitative sudomotor axon reflex test (QSART), thermoregulatory sweat test (TST), and SSR testing were all reported with CPT code 95923. At the time the code was last reviewed, QSART was the most typical test to evaluate sudomotor function and the code was valued based on the work associated with the QSART. The revised coding structure established a unique CPT code for each test.

The RUC compared the surveyed code to the top key reference code 95907 *Nerve conduction studies; 1-2 studies* (work RVU = 1.00, 15 minutes intra-service time and 35 minutes total time) and determined that the surveyed code requires significantly less physician time and work, thus is valued have that of 95907. The RUC compared the surveyed code to the second top key reference service 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.39, 8 minutes intra-service and 15 minutes total time) and determined that the surveyed code requires slightly more physician time and work, thus is appropriately valued higher.

For additional support, the RUC referenced MPC code 76830 *Ultrasound, transvaginal* (work RVU = 0.69, 10 minutes intra-service time and 23 minutes total time). The surveyed code requires slightly less physician work and time to perform compared to 76830, thus is valued lower. The RUC determined that the survey 25th percentile work RVU of 0.50 appropriately places CPT code 95XX6 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.50 for CPT code 95XX6.**

95924 Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt (ie, tilt table)

The RUC reviewed the survey results from 50 neurologists and internal medicine physicians and determined the survey 25th percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes pre-service time, 25 minutes intra-service and 12 minutes post-service time, totaling 47 minutes. The RUC noted that this service is typically reported with an office Evaluation and Management (E/M) service and ensured there is no duplication in pre- or post-service work.

CPT code 95924 is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in CPT codes 95921 and 95922 are tested together with the use of a tilt table.

The intensity for CPT code 95924 is now much higher than 95921 and 95922. The specialty societies indicated, and the RUC agreed that this is appropriate because there is the added complexity as outlined in 95922 from current and the interpretation of both the sympathetic and parasympathetic systems data and then the integration of that into one cohesive interpretation.

The RUC compared the surveyed code to the top key reference code 95717 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without videos* (work RVU = 2.00, 28 minutes intra-service time and 46 minutes total time) and determined that these services require almost identical time, however the surveyed code is slightly less intense and complex to perform, thus valued lower.

The RUC compared the surveyed code to the second top key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.92, 30 minutes intra-service and 47 minutes total time) and determined that the surveyed code requires and determined that these services require almost identical total time, however the surveyed code is slightly less intense and complex to perform.

For additional support, the RUC referenced MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time and 26 minutes total time). CPT code 93015 is less intense and complex compared to the surveyed code and requires less physician work and time to perform. The RUC also compared the surveyed code to MPC code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54, 29 minutes intra-service time and 49 minutes total time), which is slightly more intense and complex, and requires more physician work and time than the surveyed code. Both MPC codes bracket the surveyed code and are comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 1.50 appropriately places CPT code 95924 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 1.50 for CPT code 95924.**

95XX7 Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint

CPT code 95XX7 describes testing when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

The RUC reviewed the survey results from 34 neurologists and determined a work RVU of 1.20 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes pre-service time, 20 minutes intra-service and 10 minutes post-service time, totaling 40 minutes. The specialty societies indicated, and the RUC agreed that the survey 25th percentile work RVU of 1.02 would create a rank order anomaly as it would result in a lower intensity than 95923, when the QSART test is performed alone. The RUC recommends a direct crosswalk to CPT code 76988 *Intraoperative epicardial cardiac ultrasound (ie, echocardiography) for congenital heart disease, diagnostic; placement, manipulation of transducer, and image acquisition only* (work RVU = 1.20, 20 minutes intra-service time and 35 minutes total time).

The RUC compared the surveyed code to the top key reference service 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54, 29 minutes intra-service and 49 minutes total time) and determined that the surveyed code requires less physician work and time to perform, thus is appropriately valued lower. The RUC compared the surveyed code to the second top key reference code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time), and determined that the surveyed code requires more time, thus is appropriately valued higher.

For additional support the RUC referenced MPC code 95971 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional* (work RVU = 0.78, 20 minutes intra-service time and 33 minutes total time). The surveyed code requires more physician work and is more intense and complex to perform, thus valued higher than code 95971. The RUC also referenced CPT code 95868 *Needle electromyography; cranial nerve supplied muscles, bilateral* (work RVU = 1.18, 20 minutes intra-service time

and 40 minutes total time), which requires the same physician time and nearly identical work to perform. The RUC determined that the work RVU of 1.20 appropriately places CPT code 95XX7 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 1.20 for CPT code 95XX7.**

95XX8 Testing of autonomic nervous system function, with interpretation and report; combined sympathetic adrenergic with at least 5 minutes of passive tilt (ie, tilt table) and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint

The RUC reviewed the survey results from 32 neurologists and determined the survey median work RVU of 1.75 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes pre-service time, 30 minutes intra-service and 10 minutes post-service time, totaling 50 minutes. The specialty societies noted, and the RUC agreed, that the 25th percentile work RVU of 1.50 would create a rank order anomaly as it would result in a lower intensity than 95923 when the QSART test is performed alone. These combined tests are more complex, due to the interpreting physician needing to integrate more data points into a cohesive interpretation.

CPT code 95XX8 describes when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. CPT code 95XX8 requires the use of a tilt table.

The RUC compared the surveyed code to the top key reference code 95717 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without videos* (work RVU = 2.00, 28 minutes intra-service time and 46 minutes total time) and determined the surveyed service requires more time but is slightly less intense and complex to perform. The RUC compared the surveyed code to the second top key reference service 95813 *Electroencephalogram (EEG) extended monitoring; 61-119 minutes* (work RVU = 1.63, 25 minutes intra-service and 35 minutes total time) and determined that the surveyed code requires more physician time and work to perform, thus appropriately valued higher.

For additional support, the RUC referenced MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.92, 30 minutes intra-service time and 47 minutes total time), which is slightly more intense and complex, and requires more physician work and time than the surveyed code. The RUC determined that the survey median work RVU of 1.75 appropriately places CPT code 95XX8 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 1.75 for CPT code 95XX8.**

95XX9 Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic, sympathetic adrenergic function with at least 5 minutes of passive tilt (ie, tilt table), and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint

The RUC reviewed the survey results from 35 neurologists and determined the survey 25th percentile work RVU of 1.91 appropriately accounts for the work required to perform this service. The RUC recommends 10 minutes pre-service time, 30 minutes intra-service and 12 minutes post-service time, totaling 52 minutes.

CPT code 95XX9 describes when both the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. CPT code 95XX9 requires the use of a tilt table. CPT code 95XX9 is reported when all three major tests are performed together, therefore it is the most complex and time intensive of the family.

The RUC compared the surveyed code to the top key reference service 99239 *Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter* (work RVU = 2.15, 45 minutes intra-service and 64 minutes total time) and determined that the surveyed code requires less physician time and work, thus appropriately valued lower. The RUC compared the surveyed code to the second top key reference code 95717 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without videos* (work RVU = 2.00, 28 minutes intra-service time and 46 minutes total time) and determined the surveyed service requires slightly more time, but is slightly less intense and complex to perform, thus appropriately valued lower.

For additional support, the RUC referenced MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.92, 30 minutes intra-service time and 47 minutes total time), which requires similar physician work and time to perform. The RUC determined that the survey 25th percentile work RVU of 1.91 appropriately places CPT code 95XX9 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 1.91 for CPT code 95XX9.**

RUC Referral to CPT

The RUC expressed concern about the possible reporting of some of these services together, thus resulting in duplication of work. **Upon the conclusion of the RUC meeting, the specialty societies submitted a letter to the CPT Editorial Panel requesting to add CPT code 95XX5 to the parenthetical instructions for codes 95921, 95922, 95923, 95XX6, 95924, 95XX7, 95XX8, 95XX9:**

(Do not report 95921 in conjunction with 95922, 95923, 95XX5, 95XX6, 95924, 95XX7, 95XX8, 95XX9)
(Do not report 95922 in conjunction with 95921, 95923, 95XX5, 95XX6, 95924, 95XX7, 95XX8, 95XX9)
(Do not report 95923 in conjunction with 95921, 95922, 95XX5, 95XX6, 95924, 95XX7, 95XX8, 95XX9)
(Do not report 95924 in conjunction with 95921, 95922, 95923, 95XX5, 95XX6, 95XX7, 95XX8, 95XX9)
(Do not report 95XX6 in conjunction with 95921, 95922, 95923, 95XX5, 95924, 95XX7, 95XX8, 95XX9)
(Do not report 95XX7 in conjunction with 95921, 95922, 95923, 95XX5, 95XX6, 95924, 95XX8, 95XX9)
(Do not report 95XX8 in conjunction with 95921, 95922, 95923, 95XX5, 95XX6, 95924, 95XX7, 95XX9)
(Do not report 95XX9 in conjunction with 95921, 95922, 95923, 95XX5, 95XX6, 95924, 95XX7, 95XX8)

Practice Expense

The Practice Expense (PE) Subcommittee considered and approved compelling evidence based on a change in specialty, as the dominant provider for the six new codes is expected to be Neurology, and there is a change in the way the procedures are performed using additional and updated supplies. The following supplies were added: 4 SC052 *syringe 1 ml*, 1 SC029 *needle, 18-27g* and 1 SB022 *gloves, non-sterile*, for the testing codes 95923, 95XX7, 95XX8 and 95XX9, which employ SH002 *acetylcholine*. Invoices were submitted for three new supplies: *Filtered Mouthpiece*, *Gel Trode 2x2 Return Electrode* and *Meridian Electrode w/Expanding Foam*. The specialty societies explained the four codes that include QSART testing (95923, 95XX7, 95XX8 and 95XX9) require the use of SG055 *gauze, sterile 4in x 4in* to ensure the recording site is fully dry per protocol, rather than air-drying, while the gauze was removed from those codes which do not require patting dry the recording site (95921, 95922, 95XX6, 95924). Clarification was also provided on the tilt table and that it is only indicated in the services in which it is utilized (codes 95922, 95924, 95XX4, 95XX8 and 95XX9). Lastly, the PE Subcommittee ensured that the clinical activities were not duplicative of Evaluation and Management (E/M) services and justified the use of CA005 *Complete pre-procedure phone calls and prescription* for all the XXX codes in the family. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Reported with E/M

The RUC noted that the 2023 Medicare data showed that the existing codes 95921, 95922, 95923 and 95924 were typically reported with an E/M 51%-53% of the time. The specialty societies noted that a large part of the reason for this code family restructuring was because there was most likely still inappropriate reporting of these services by the wrong specialty and without the use of a tilt table. The RUC noted that it is possible that those inappropriately reporting these services were also the same individuals reporting with an E/M office visit on the same day. These services are expected to be primarily reported by neurology and not with an E/M on the same day. The RUC confirmed that it will analyze these services to ensure that the new coding structure is being reported as predicted when it reviews all CPT 2027 codes utilization data when available.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine Neurology and Neuromuscular Procedures Autonomic Function Tests The purpose of autonomic nervous system function testing is to determine ~~the presence of normal versus abnormal function~~ <u>autonomic dysfunction</u> , <u>define the site of autonomic dysfunction</u> , and <u>assess response to treatment</u> ~~the various autonomic subsystems that may be disordered~~ . <u>The autonomic nervous system is traditionally categorized into the parasympathetic, sympathetic, and enteric (gastrointestinal) systems. Parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (sudomotor) control are assessed by the testing methods described in this section. Tables 1-3 list the various testing modalities used in autonomic nervous system testing. Autonomic disorders lead to abnormalities in both blood pressure regulation on Valsalva maneuver (excessive early phase II, blunted or absent late phase</u>				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code f=Family Code e=Editorial D=Deleted

II, delayed recovery phase and/or absent phase IV) and tilt table responses (eg, abnormal heart rate and/or blood pressure in the form of excessive postural tachycardia, neurogenic and non-neurogenic orthostatic hypotension).

Code 95921 describes testing which evaluates parasympathetic (cardiovagal) function. Code 95921 should be reported only when electrocardiographic monitoring of heart rate derived from the time elapsing between two consecutive R waves in the electrocardiogram, or the R-R interval, is displayed on a monitor and stored for subsequent analysis of waveforms. Testing is typically performed in the supine prone position. A tilt table may be used, but is not required ~~equipment~~ for testing of ~~the~~ parasympathetic function. At least two of the following components need to be included in testing:

1. Heart rate response to deep breathing derived from a visual quantitative analysis of recordings with subject breathing at a rate of 5-6 breaths per minute, allowing five seconds for inspiration and five seconds for expiration. The heart rate increases during inspiration and decreases during expiration. An E (expiratory) to I (inspiratory) ratio or index can be calculated as the sum of the longest R-R intervals during six consecutive respirations divided by the sum of the six shortest R-R intervals. Alternatively, it may be calculated as the average of the six ratios of the longest R-R intervals and shortest R-R interval within each of the six respirations. Autonomic disorders reduce the amount of heart rate variation during this maneuver.
2. Heart rate variation during the Valsalva maneuver: the Valsalva ratio is determined by dividing the maximum heart rate by the lowest heart rate during Valsalva testing. The initial heart rate responses to sustained oral pressure (blowing into a tube with an open glottis) consist of tachycardia followed by a bradycardia at 15-45 seconds after the Valsalva pressure has been released. A minimum of two Valsalva maneuvers are to be performed. The initial cardioacceleration is an exercise reflex while the subsequent tachycardia and bradycardia are baroreflex-mediated. Autonomic disorders reduce the difference between the maximum and minimum heart rate achieved during the test in an age-dependent manner.
3. A 30:15 ratio (R-R interval at beat 30 after standing)/(R-R interval at beat 15 after standing) used as is also an index of parasympathetic cardiovascular (cardiovagal) function in response to standing. Autonomic disorders reduce the difference between the maximum and minimum heart rate achieved during the test.

Code 95XX4 may be reported in addition to 95921, 95XX7 when a tilt table is used to perform either of these tests.

Code 95922 describes testing which evaluates sympathetic effects on heart rate and blood pressure control. Code 95922 should be reported only when all of the following components are included in testing:

1. *Continuous recording of beat-to-beat BP and heart rate. The heart rate needs to be derived from an electrocardiogram (ECG) unit such that an accurate quantitative graphical measurement of the R-R interval is obtained.*
2. *A period of supine rest of at least 20 minutes prior to testing.*
3. *The performance and recording of beat-to-beat blood pressure and heart rate during a minimum of two (2) Valsalva maneuvers.*
4. *The performance of passive head-up tilt with continuous recording of beat-to-beat blood pressure and heart rate for a minimum of five minutes, followed by passive tilt-back to the supine position. This must be performed using a tilt table.*

Code 95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (QSART), or silastic sweat imprint test.

Code 95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (TST). The test is performed by recording sweat production and its distribution during controlled heating of the whole body. An indicator powder is used to generate a color change allowing visualization and analysis of sweat production across the body surface.

Code 95XX6 describes testing which evaluates the sympathetic skin response. The test is performed by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested. The presence of the response and its amplitude are the parameters that are assessed.

Code 95924 should be reported only when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

Codes 95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing. Codes 95XX8, 95XX9 require the use of a tilt table.

Codes 95921, 95922, 95923, 95XX4, 95XX5, 95924, 95XX6, 95XX7, 95XX8, 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools.

When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

▲95921	F1	Testing of autonomic nervous system function, <u>with interpretation and report</u> ; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio <u>(Do not report 95921 in conjunction with 95922, 95923, 95924, 95XX6, 95XX7, 95XX8, 95XX9)</u>	XXX	0.90 (No Change) (2025 Work RVU = 0.90)

April 12, 2025

Ezequiel Silva, III, MD
Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva,

We write on behalf of the American Academy of Family Physicians (AAFP) to offer our comments on the recommendations included in Tab 9 (Autonomic Function Testing) of the April 2025 RUC agenda. The AAFP is interested in this tab, because family physicians report anywhere from 7.6% to 12.6% of the non-facility Medicare claims for the current autonomic function testing codes (95921-95924). These comments reflect our review of the recommendations submitted by the specialties involved in presenting Tab 9.

Upon review, we find the recommended work relative value units for each code in the family to be supported by comparison to their respective key reference services and by comparison to other RUC-reviewed codes with the same global period, same intra-service time, and proximal total time. Compelling evidence to consider an increase in value, where relevant, is addressed in the Additional Rationale section of the work summary of recommendation (SOR) forms. We note the RUC database indicates that the current codes were last reviewed in 2012. We believe it is reasonable to conclude that there has been a change in knowledge that has changed work in the intervening 13 years. We encourage the RUC to accept that compelling evidence has been met.

In our review, we generally found the recommended practice expense inputs to be reasonable, given the new and revised code descriptors. In many cases, they reflect decreases in practice expense relative to current inputs.

The one exception was code 95923, where direct practice expense input costs are recommended to increase by approximately \$60 compared to current inputs. This is almost entirely due to changes in the medical supplies. The specialties appropriately address compelling evidence to consider this increase in response to Question 5 in the practice expense SOR form.

We had some minor questions about miscellaneous recommended practice expense inputs for some of the codes. We are confident reviewers on the Practice Expense Subcommittee will identify and ask those questions and that the specialties will provide satisfactory answers.

Thank you for the opportunity to review and comment on the recommendations in Tab 9.

Sincerely,

/s/

Brad Fox, MD
AAFP RUC Advisor

/s/

Timothy Switaj, MD

95921	Testing of autonomic nervous system function, with interpretation and report; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio					
+95XX4	; use of tilt table (List separately in addition to code for primary procedure)					
95922	; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt (ie, tilt table)					
95923	; sudomotor, quantitative sudomotor axon reflex test (QSART), or silastic sweat imprint					
95XX5	; sudomotor, thermoregulatory sweat test					
95XX6	; sudomotor, assessing the sympathetic skin response (SSR) potential					
95924	; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt (ie, tilt table)					
95XX7	; combined parasympathetic and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint					
95XX8	; combined sympathetic adrenergic with at least 5 minutes of passive tilt (ie, tilt table) and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint					
95XX9	; combined parasympathetic, sympathetic adrenergic function with at least 5 minutes of passive tilt (ie, tilt table), and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint					

CONFIDENTIAL – FOR AMA RUC SURVEY – DO NOT DISTRIBUTE – MARCH 2025

This coding table visually represents the different modalities used in autonomic function testing and their corresponding CPT codes, whether performed alone or in combination. Use this table as a reference to understand the revised code structure when completing the survey.

*95XX4 is an add on code reported in conjunction with 95921 or 95XX7 when a tilt table is used to perform the service

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95921	Tracking Number F1	Original Specialty Recommended RVU: 0.90
		Presented Recommended RVU: 0.90
Global Period: XXX	Current Work RVU: 0.90	RUC Recommended RVU: 0.90

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with poorly controlled diabetes, significant orthostatic hypotension, and heat intolerance which is interfering with his ability to walk and complete activities of daily living. Testing of the autonomic nervous system is performed to evaluate for possible primary autonomic disorder.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test, as well as personally evaluate the patient during testing maneuvers and/or confirm the technologist's impression as needed. Visualize ECG monitoring of the heart rate, which is derived from the R-R interval displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of R-R interval for normal morphology, reproducibility between trials, artifacts, medication effects, and/or pacemaker-induced abnormalities, and document any abnormalities of HR response to testing maneuvers (e.g., deep breathing, Valsalva and 30:15 ratio measures). Interpret cardiovagal testing data, localize findings, and make a clinical correlation of the results based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now

performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate. a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **54 responses** and **87% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses.

Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile value at 0.90 work RVU which is the current work RVU and survey median times of 5 minutes pre-service, 15 minutes intra-service and 10 minutes post-service for a total time of 30 minutes.

Key Reference Services

Our recommended work RVU of 0.90 compares favorably to the most commonly chosen key reference service, CPT code 95907 (*Nerve conduction studies; 1-2 studies*) which has an identical intra service time of 15 as the survey median intra service time of 15.

CPT code 95907 has 10 minutes pre-service compared to the surveyed code of 5 minutes pre-services which appropriately reflects the slightly increased complexity of 95921. Similarly, 80% of respondents reported that the surveyed code was identical or somewhat more intense overall than key reference code 95907. A decrease in pre-service time from the current time of 8 minutes to 5 minutes reflects increased efficiency and slight increase in IWP/UT.

The second key reference service code, CPT code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* supports the recommendation as well and is also an MPC code. While total service times of 99213 (30 minutes) are the same as those recommended for the surveyed code, the recommended 0.90 work RVU for the surveyed code is appropriately lower than that of key reference code 99213 at 1.30 work RVU and has an appropriately lower IWP/UT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/UT	WPUT
95921	Testing of autonomic nervous system function, with interpretation and report; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio	0.90	5	15	10	30	0.038	0.030
95907	Nerve conduction studies; 1-2 studies	1.00	10	15	10	35	0.037	0.029
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	5	20	5	30	0.054	0.043

MPC Codes

Our recommendation for surveyed code 95921 compares favorably to the MPC codes depicted in the table below. This includes CPT code 93015 (*Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report*), which is a clinically similar testing code. 93015 has an appropriately lower IWP/UT compared to the surveyed code as the cardiovascular testing code has 5 minutes greater intra-service time which is less intense during the service period.

MPC code 95819 *Electroencephalogram (EEG); including recording awake and asleep* has an identical intra service time at 15 minutes compared to the surveyed code but less total time at 26 minutes. This results in an appropriately lower IWP/UT for 95921 as compared to this MPC code.

In summary, our expert panel recommends the survey 25th percentile value at **0.90 work RVU** and a survey median time of **5 /15 /10 for a total time of 30**. The recommended value compares favorably with the key reference services, 95907 and 99213, and maintains relativity within the RBRVS.

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.

☒ Other reason (please explain) 95921 is currently reported together with 95923 at 86.7%. The CPT Editorial Panel finalized a revised code set at the February 2025 meeting which includes parentheticals limiting the reporting of the codes together.

95921 is currently reported together with an E/M at 52.1%. We anticipate this will remain stable.

Code	'23 Utilization	Global	wRVU	Pre	Intra	Post	Reported with	% Reported together
95921	60,466	XXX	0.90	8	15	10	95923	86.7%
							Office E/M	52.1%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95921

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 179688

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by three.

Specialty Internal Medicine Frequency 41329 Percentage 23.00 %

Specialty Neurology Frequency 25157 Percentage 14.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 60,466 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. his number is the 2023 Medicare Utilizaiton from the RUC database.

Specialty Internal Medicine Frequency 13908 Percentage 23.00 %

Specialty Neurology Frequency 8465 Percentage 14.00 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; use of tilt table (List separately in addition to code for primary procedure). (Use 95XX4 in conjunction with 95921, 95XX7, when a tilt table is used to perform these services)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male is undergoing testing of the autonomic nervous system. Tilt table testing is performed to enhance results of Valsalva testing. [Note: This is an add-on service. Only consider the additional work related to the use of the tilt table.]

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Supervise use of tilt table with passive tilt which enhances the results of the Valsalva component of cardiovagal function. Personally evaluate the patient during head-up tilt maneuvers and/or confirm the technologist's impression as needed. Evaluate HR and/or beat-to-beat BP for Valsalva responses both with and without tilt. Review results for normal morphology, reproducibility between trials, artifacts, medication effects and/or physiologic variants, and document any abnormalities of HR and/or BP response to testing maneuvers (e.g., a series of Valsalva's with and without head-up tilt).

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical

examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing

parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when both the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **34 responses** and **76% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel utilized a crosswalk to develop the recommendation of 0.35 work RVU and the survey median time of 15 minutes intra-service.

Key Reference Services

The expert panel reviewed the survey data and assert that the survey 25th time creates an inappropriately high IWP/UT for the add on survey code 95XX4. The recommended work RVU of 0.35 is based on the most commonly chosen key reference service, CPT code 95885 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)* which has a work RVU of 0.35 and intra service time of 15 minutes, which is identical to survey median intra service time. 95885 is also an MPC code. The majority of survey respondents rated survey code 95XX4 as identical in intensity/complexity to the KRS 95885, which further support the crosswalk recommended RVU.

The second key reference service code selected by respondents is 95886 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)*. The greater intra service time (30 min) and greater RVU (0.86) of survey code 95886 as compared that of survey code 95XX6 (15 minutes survey intra service time and recommended wRVU of 0.35) results in a similar IWP/UT and further support the recommendations.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/UT	WPUT
95XX4	Testing of autonomic nervous system function use of tilt table (List separately in addition to code for primary procedure)	0.35		15		15	0.023	0.023
95885	Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)	0.23		15		15	0.023	0.023
95886	Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)	0.86		30		30	0.029	0.029

MPC Codes

Our recommendation for surveyed code 95XX4 compares favorably to the MPC codes depicted in the table below. This includes CPT code 96367 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)*. The shorter intra service time of 5 minutes of the MPC code and corresponding greater IWP/UT, support the recommendation when comparing the longer intra service time of 15 for survey code 95XX4 and lower IWP/UT.

MPC code 77002 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* compares favorably to the survey code 95XX4 as the work RVU recommendation of 0.35 results in an appropriately lower IWP/UT when compared to the wRVU of MPC code 77002 at 0.54 when considering identical intra-service time of 15 minutes.

CPT Code	Descriptor	Work RVU	Pre (Posit)	Intra	Post	Total Time	IWPUT	WPUT
96367	Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); additional sequential infusion of a new drug/substance, up to 1 hour (List separately in addition to code for primary procedure)	0.19	1	5		6	0.034	0.032
95XX4	Testing of autonomic nervous system function use of tilt table (List separately in addition to code for primary procedure)	0.35		15		15	0.023	0.023
77002	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)	0.54	2	15		1	0.033	0.032

Summary

In summary, our expert panel recommends a **0.35 work RVU** derived from crosswalk code 95885 and a survey median intra service time of **15 minutes** for a total of 15 minutes. The recommended value compares favorably with the key reference services and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 95XX4 is a new add on code and will be reported with either base code 95921 or 95XX7 as specified in the CPT introductory language.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95921

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9069

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by 3.

Specialty Neurology Frequency 1724 Percentage 19.00 %

Specialty Internal Medicine Frequency 1633 Percentage 18.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,023

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies used 5% of CPT code 95921 from the 2023 Medicare utilization from the RUC database to estimate the new utilization for 95XX4.

Specialty Neurology Frequency 575 Percentage 19.02 %

Specialty Internal Medicine Frequency 545 Percentage 18.02 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95924

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95922 Tracking Number F3

Original Specialty Recommended RVU: **1.02**Global Period: XXX Current Work RVU: **0.96**Presented Recommended RVU: **0.96**RUC Recommended RVU: **0.96**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt (ie, tilt table). (Do not report 95922 in conjunction with 95921, 95923, 95924, 95XX6, 95XX7, 95XX8, 95XX9)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with parkinsonism, significant orthostatic hypotension, and heat intolerance. Autonomic testing with head up tilt is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test, as well as personally evaluate the patient during testing maneuvers and/or confirm the technologist's impression as needed. Visualize ECG monitoring of the heart rate, and continuous beat-to-beat recording of blood pressure, which is displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of beat-to-beat blood pressure for normal morphology, reproducibility between trials, artifacts, medication effects and/or physiologic variants, and document any abnormalities of BP response to testing maneuvers (e.g., a series of Valsalva's with and without head-up tilt). Evaluate HR & BP during the tilt component. Interpret vasomotor adrenergic data, localize findings, and make a clinical correlation of the findings based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to

clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate. a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **46 responses** and **83% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses.

Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends maintaining the current value of 0.96, which is below the survey 25th percentile value, and survey median times of 6 minutes pre-service, 20 minutes intra-service and 10 minutes post-service for a total of 36 minutes. A decrease in pre-service time from the current time of 10 minutes to 6 minutes reflects increased efficiency and a slight increase in IWPUT.

Key Reference Services

The recommendations for 95922 are supported by the relationship to the most chosen key reference service, CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded*) which has an identical intra service time of 20 as the survey median intra service time of 20. The work RVU recommendation of 0.96 results in an appropriate IWPUT when compared to the work RVU of KRS code at 1.30 when considering total time.

The second key reference service code, CPT code 99819 *Electroencephalogram (EEG); including recording awake and asleep* supports the recommendation as well and is also an MPC code. Survey code 95922 has a greater intra service and total time than 95819 which results in an appropriately lower IWPUT for 95922 as compared to this MPC code with the specialty recommended work RVU of 0.96

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95922	Testing of autonomic nervous system function, with interpretation and report; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt (ie, tilt table)	0.96	6	20	10	36	0.030	0.027
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	5	15	6	26	0.056	0.042
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	5	20	5	30	0.056	0.043

MPC Codes

Our recommendation for surveyed code 95922 compares favorably to the MPC codes depicted in the table below. This includes CPT code 95971 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional*. The work RVU recommendation of 0.96 results in an appropriate IWPUT when compared to the work RVU of MPC code 95971 at 0.78 when considering identical intra-service time of 20 minutes and near identical total times of 35 and 33.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95971	Electronic analysis of implanted neurostimulator pulse	0.78	8	20	5	33	0.024	0.024

	generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional							
95922	Testing of autonomic nervous system function, with interpretation and report; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt (ie, tilt table)	0.96	6	20	10	36	0.030	0.027
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	5	15	6	26	0.056	0.042

Summary

In summary, our expert panel recommends maintaining the current value of **0.96 work RVU** and a survey median time of **6 /20 /10 for a total time of 36**. The recommended value compares favorably with the key reference service, 95819 and 99213, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95922 is currently reported together with 95923 at 87.8%. The CPT Editorial Panel finalized a revised code set at the February 2025 meeting which includes parentheses limiting the reporting of the codes together.
95922 is currently reported together with an E/M at 51.4%. We anticipate this will remain stable.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Code	'23 Utilization	Global	wRVU	Pre	Intra	Post	Reported with	% Reported together
95922	2,524	XXX	0.96	10	20	10	95923	87.8%
							Office E/M	51.4%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95922

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 7572

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by 3.

Specialty Neurology Frequency 1022 Percentage 13.49 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,524

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This number is the 2023 Medicare Utilization from the RUC database.

Specialty Neurology Frequency 340 Percentage 13.47 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95922

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95923 Tracking Number F4

Original Specialty Recommended RVU: **1.00**Global Period: XXX Current Work RVU: **0.90**Presented Recommended RVU: **0.90**RUC Recommended RVU: **0.90**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; sudomotor, quantitative sudomotor axon reflex test (QSART), or silastic sweat imprint. (Do not report 95923 in conjunction with 95921, 95922, 95924, 95XX6, 95XX7, 95XX8, 95XX9)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female who has diabetes presents with numbness and burning of the feet. Standard laboratory tests, examination and nerve conduction studies are nondiagnostic. Testing of sudomotor function is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the quantitative sudomotor axon reflex test (QSART) which stimulates peripheral sympathetic nerve fibers to the sweat glands at standard sites on the limbs by the iontophoresis of acetylcholine to the skin. Supervise patient preparation and performance of the test. Personally evaluate the patient during testing and/or confirm the technologist's impression as needed. Visualize evoked sweat output, which is displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of sweat output for normal latency and volumes, artifacts, and/or medication effects, and document any abnormalities. Interpret sudomotor data, localize findings, and make a clinical correlation of the findings based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023. The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The

Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **52 responses** and **90% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends maintaining the current value of 0.90, which is below the survey 25th percentile value, and survey median times of 8 minutes pre-service, 15 minutes intra-service and 9 minutes post-service for a total of 32 minutes.

Key Reference Services

The recommendations for 95923 are supported by the relationship to the most chosen key reference service, CPT code 95907 *Nerve conduction studies; 1-2 studies* which has an identical intra service time of 15 as the survey median intra service time of 15. The IWPOT supports the current work RVU recommendation of 0.90 when compared to the similar work RVU of KRS code at 1.00. 75% of survey respondents rated 95923 as

identical or somewhat more intense which further supports the recommendation and is reflected in the IWP/PUT relationship

The second key reference service code, CPT code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* supports the recommendation as well and is also an MPC code. Survey code 95923 has a lower intra service (15) and total (32) time than 95861 at 29 and 49 respectively, and a proportionally lower work RVU which results in an appropriately similar IWP/PUT for 95923 as compared to this MPC code.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/PUT	WPUT
95923	Testing of autonomic nervous system function, with interpretation and report; sudomotor, quantitative sudomotor axon reflex test (QSART), or silastic sweat imprint	0.90	8	15	9	32	0.035	0.028
95907	Nerve conduction studies; 1-2 studies	1.00	10	15	10	35	0.037	0.029
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	10	29	10	49	0.038	0.031

MPC Codes

The recommendations for surveyed code 95923 are supported by the incremental increase of work RVU and times, and the appropriate decrease in IWP/PUT as you compare MPC codes 99212 to 95923 and 95861 as depicted below:

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/PUT	WPUT
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	0.70	2	11	3	16	0.053	0.044
95923	Testing of autonomic nervous system function, with interpretation and report; sudomotor, quantitative sudomotor axon reflex test (QSART), or silastic sweat imprint	0.90	8	15	9	32	0.035	0.028
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	10	29	10	49	0.038	0.031

Summary

In summary, our expert panel recommends maintaining the current value at **0.90 work RVU** and a survey median time of **8 / 15 / 9 for a total time of 32**. The recommended value compares favorably with the key reference services and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95923 is currently reported together with 95921 at 52.4%. The CPT Editorial Panel finalized a revised code set at the February 2025 meeting which includes parentheses limiting the reporting of the codes together.
- 95923 is currently reported together with an E/M at 53%. We anticipate this will remain stable.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Code	'23 Utilization	Global	wRVU	Pre	Intra	Post	Reported with	% Reported together
95923	100,495	XXX	0.90	5	15	10	95921	52.4%
							Office E/M	53%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95923

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 30150

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology Frequency 24120 Percentage 80.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,050 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate 10% of the 2023 Medicare utilization from the RUC database of 95923 will continue to be reported as 95923.

Specialty Neurology	Frequency 8040	Percentage 80.00 %

Specialty	Frequency 0	Percentage 0.00 %

Presented Recommended RVU: **1.00**RUC Recommended RVU: **1.00**

CPT Descriptor: Testing of the autonomic nervous system function, with interpretation and report; sudomotor, thermoregulatory sweat test

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with parkinsonism and heat intolerance. Testing of sudomotor function using the thermoregulatory sweat test is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test. For the thermoregulatory sweat test, the patient is placed in a closed infrared heat-controlled room or booth, skin is dusted with an indicator powder that changes color when the patient sweats. The patient is gradually warmed to target core temperature and distribution of sweat output and areas of anhidrosis over the entire body are assessed. Evaluate the patient during testing and/or confirm the technologist's impression as needed. Visualize evoked sweat output, which is displayed on a monitor and stored for analysis and review. Communicate any technical issues, and any required modification to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of sweat output, distribution, and/or medication effects, and document any abnormalities. Interpret sudomotor data, localize findings, and make a clinical correlation of the findings based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to

clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **31 responses** and **84% of respondents** found the vignette to be typical. 95XX5 is a new CPT code to report the thermoregulatory sweat test (TST) and was previously reported as one of the components of CPT code 95923.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile value at 1.00 work RVU and survey median times of 10 minutes pre-service, 20 minutes intra-service and 10 minutes post-service for a total time of 40 minutes.

Key Reference Services

Our recommended work RVU of 1.00 is supported by the key reference service, CPT code 95819 (Electroencephalogram (EEG); including recording awake and asleep) which has times of 5/15/6/26 as compared to survey code 95XX5 which has median survey times of 10/20/10/40. The recommended 25th percentile wRVU at 1.00 reflects an appropriate IWPUT compared to the KRS given the shorter times and relatively similar RVUs

The second key reference service code, CPT code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* supports the recommendation as well and is also an MPC code. While the intra service time of 99213 (20 minutes) is the same as the recommended median survey time for the surveyed code, the recommended 1.00 work RVU for the surveyed code is appropriately lower than that of the 2nd KRS 99213 at 1.30 work RVU and has an appropriately lower IWPUT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95XX5	Testing of autonomic nervous system function, with interpretation and report; sudomotor, thermoregulatory sweat test	1.00	10	20	10	40	0.028	0.025
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	5	15	6	26	0.056	0.042
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	5	20	5	30	0.054	0.043

MPC Codes

Our recommendation for surveyed code 95XX5 compares favorably to the MPC codes depicted in the table below. This includes CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*) Survey code 95XX5 has a greater intra service (20) and total (40) time than 99212 at 11 intra and 16 total minutes which results in an appropriate IWPUT for 95XX5 as compared to this MPC code.

The recommended 25th RVU is further supported by MPC code 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional*. While the intra service time of 93351 (20 minutes) is the same as the recommended median survey time for the surveyed code, the recommended 1.00 work RVU for the surveyed code is appropriately lower than that of the MPC code 93351 at 1.75 work RVU and has an appropriately lower IWP/PUT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/PUT	WPUT
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	0.70	2	11	3	16	0.053	0.044
95XX5	Testing of autonomic nervous system function, with interpretation and report; sudomotor, thermoregulatory sweat test	1.00	10	20	10	40	0.028	0.025
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional	1.75	10	20	10	40	0.065	0.044

Summary

In summary, our expert panel recommends the survey 25th percentile value at **1.00 work RVU** and a survey median time of **10 /20 /10 for a total time of 40**. The recommended value

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95XX5 is a new code

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95923

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15075

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology Frequency 12060 Percentage 80.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,025

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate 5% of the 2023 Medicare utilization from the RUC database of 95923 will be reported as 95XX5.

Specialty Neurology Frequency 4020 Percentage 80.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

SUMMARY OF RECOMMENDATION**

CPT Code: 95XX6 Tracking Number F6

Original Specialty Recommended RVU: **0.50**

Global Period: XXX Current Work RVU:

Presented Recommended RVU: **0.50**RUC Recommended RVU: **0.50**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; sudomotor, assessing the sympathetic skin response (SSR) potential. (Do not report 95XX6 in conjunction with 95921, 95922, 95923, 95924, 95XX7, 95XX8, 95XX9)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female diabetic presents with numbness and burning of the feet which is interfering with her ability to function normally. Standard laboratory tests, examination and nerve conduction studies are nondiagnostic. Neither quantitative sudomotor axon reflex test (QSART) nor thermoregulatory testing equipment is not available. Sympathetic skin responses (SSR) are performed.

Percentage of Survey Respondents who found Vignette to be Typical: 74%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results

Description of Intra-Service Work: Supervise patient preparation and performance of sympathetic skin potential recordings which are evoked over the palmar and plantar surfaces by standard nerve conduction study electrodes. Evaluate the patient during testing and confirm the technologist's impression as needed. Visualize evoked sweat response, which is displayed on a monitor and stored for analysis and review. Communicate any technical issues, and any required modification to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of sweat response and/or medication effects, and document any abnormalities. Interpret sudomotor data and make a clinical correlation of the findings based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

- The risk of significant complications, morbidity and/or mortality - Outcome depends on the skill and judgment of physician - Estimated risk of malpractice suit with poor outcome	63%	25%	12%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be

contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **35 responses** and **74% of respondents** found the vignette to be typical. 95XX6 is a new CPT code to report testing sympathetic skin response (SSR) and was previously reported as one of the components of CPT code 95923.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile value at 0.50 work RVU and survey median times of 5 minutes pre-service, 10 minutes intra-service and 5 minutes post-service for a total time of 20 minutes.

Key Reference Services

Our recommended work RVU of 0.50 is supported by the key reference service, CPT code 95707 *Nerve conduction studies; 1-2 studies* which has an RVU of 1.00 and 5 minutes more of intra service time than the surveyed code resulting in an appropriately lower IWPUP for 95XX6.

The second key reference service code, 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* has clinically similar work and is an MPC code. 93224 supports the recommended 25th percentile given the near identical IWPUP resulting from the lower times and lower RVU of the MPC code in relation to survey code 95XX6.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUP	WPUT
92334	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional	0.39	2	8	5	15	0.029	0.026
95XX6	Testing of autonomic nervous system function, with interpretation and report; sudomotor, assessing the sympathetic skin response (SSR) potential	0.50	5	10	5	20	0.028	0.025
95907	Nerve conduction studies; 1-2 studies	1.00	10	15	10	35	0.037	0.029

MPC Codes

Our recommended work RVU of 0.50 compares favorably to MPC, CPT code 95224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* as outlined above.

The recommended 25th RVU is further supported by MPC code 76830 *Ultrasound, transvaginal*. While the intra service time of 76830 10 minutes is the same as the recommended median survey time for the surveyed code, the recommended 0.50 work RVU for the surveyed code is appropriately lower than that of the MPC code 93351 at 0.69 work RVU and has an appropriately lower IWPUP.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUP	WPUT
92334	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional	0.39	2	8	5	15	0.029	0.026
95XX6	Testing of autonomic nervous system function, with interpretation and report; sudomotor, assessing the sympathetic skin response (SSR) potential	0.50	5	10	5	20	0.028	0.025
76830	Ultrasound, transvaginal	0.69	5	10	8	23	0.040	0.30

Summary

In summary, our expert panel recommends the survey 25th percentile value at **0.50 work RVU** and a survey median time of **5 /10 /5 for a total time of 20**. The recommended value compares favorably with the key reference services and MPC codes and maintains relativity within the RBRVS and the surveyed code family.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95XX6 is a new code

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95923

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 75372

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology Frequency 60298 Percentage 80.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,124 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Please explain the rationale for this estimate. The societies estimate 25% of the 2023 Medicare utilization from the RUC database of 95923 will be reported as 95XX6.

Specialty Neurology	Frequency 20100	Percentage 80.00 %

Specialty	Frequency	Percentage	%

Specialty	Frequency	Percentage	%

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95870

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95924 Tracking Number F7

Original Specialty Recommended RVU: **1.50**Global Period: XXX Current Work RVU: **1.73**Presented Recommended RVU: **1.50**RUC Recommended RVU: **1.50**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt (ie, tilt table). (Do not report 95924 in conjunction with 95921, or 95922, 95923, 95XX6, 95XX7, 95XX8, 95XX9)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female presents with activity intolerance and repeated, unexplained episodes of fainting and orthostatic hypotension. Testing of the autonomic nervous system, for both parasympathetic (cardiovagal) function and sympathetic (vasomotor adrenergic) function using at least a 5-minute tilt with a passive tilt table, is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test, as well as personally evaluate the patient during testing maneuvers and/or confirm the technologist's impression as needed. Visualize ECG monitoring of the heart rate, and continuous beat-to-beat recording of blood pressure, which is displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of beat-to-beat blood pressure for normal morphology, reproducibility between trials, artifacts, medication effects and/or physiologic variants, and document any abnormalities of BP response to testing maneuvers (e.g., a series of Valsalva's with and without head-up tilt). Review results of R-R interval for normal morphology, reproducibility between trials, artifacts, medication effects, and/or pacemaker-induced abnormalities, and document any abnormalities of HR response to testing maneuvers (e.g., deep breathing, Valsalva and 30:15 ratio measures). Evaluate HR & BP during the tilt component. Interpret combined [cardiovagal and vasomotor adrenergic] data, integrate results of combined tests for enhanced localization of findings, and make a clinical correlation of the findings based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to

clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate. a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **50 responses** and **98% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile value at 1.50 work RVU which is the current work RVU and survey median times of 10 minutes pre-service, 25 minutes intra-service and 10 minutes post-service for a total time of 45 minutes.

Key Reference Services

The most common chosen reference code 95717 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without videos* supports the recommended survey 25th percentile RVU of 1.50. The recommendation results in an appropriate IWP/PUT when considering the near identical intra service times and lower RVU of survey code 95924.

The second key reference service code, CPT code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* supports the recommendation as well and is also an MPC code. While total service time of 99214 (47 minutes) is nearly identical to that recommended for the surveyed code (45 minutes), the recommended 1.50 work RVU for the surveyed code is appropriately lower than that of key reference code 99214 at 1.92 work RVU and has an appropriately lower IWP/PUT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/PUT	WPUT
95924	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt (ie, tilt table)	1.50	10	25	10	45	0.033	0.042
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.92	7	30	10	47	0.051	0.041
95717	Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without video	2.00	8	28	10	46	0.057	0.043

MPC Codes

Our recommendation for surveyed code 95924 compares favorably to the MPC codes depicted in the table below. This includes 93015 *(Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report)*, which is a clinically similar testing code. 93015 has an appropriately lower IWP/PUT compared to the surveyed code as the cardiovascular testing code has 5 minutes greater intra-service time which is less intense during the service period.

The recommended 25th RVU is further supported by MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* While the intra (30) and total times (47) of 99214 are very similar to the recommended median survey intra time (25) and total time (45) of the surveyed code, the recommended 1.50 work RVU for the surveyed is appropriately lower than that of the MPC code at 1.92 work RVU and has an appropriately lower IWP/PUT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/PUT	WPUT
93015	Electroencephalogram (EEG); including recording awake and asleep	0.75	2	20	4	26	0.031	0.029
95924	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt (ie, tilt table)	1.50	10	25	10	45	0.039	0.042
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.92	7	30	10	47	0.051	0.041

Summary

In summary, our expert panel recommends the survey 25th percentile value at **1.50 work RVU** and a survey median time of **10 /25 /10 for a total time of 45**. The recommended value compares favorably with the key reference services and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95924 is currently reported together with 95923 at 79.8%. The CPT Editorial Panel finalized a revised code set at the February 2025 meeting which includes parentheses limiting the reporting of the codes together.
95924 is currently reported together with an E/M at 53.1%. We anticipate this will remain stable.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Code	'23 Utilization	Global	wRVU	Pre	Intra	Post	Reported with	% Reported together
95924	21,874	XXX	1.73	15	30	15	95923	79.8%
							Office E/M	53.1%

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95924

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 19686

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology Frequency 3741 Percentage 19.00 %

Specialty Internal Medicine Frequency 3544 Percentage 18.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,562

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate 30% of the 2023 Medicare utilization from the RUC database of 95924 will continue to be reported as 95924.

Specialty Neurology Frequency 1247 Percentage 19.00 %

Specialty Internal Medicine Frequency 1182 Percentage 18.01 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

RUC Recommended RVU: **1.20**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint. (Do not report 95XX7 in conjunction with 95921, 95922, 95923, 95924, 95XX6, 95XX8, 95XX9)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with poorly controlled diabetes, significant orthostatic hypotension, and heat intolerance which is interfering with his ability to walk and complete activities of daily living. Testing of the autonomic nervous system, including cardiovagal, adrenergic, and sudomotor function is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test, as well as personally evaluate the patient during testing maneuvers and/or confirm the technologist's impression as needed. Visualize ECG monitoring of the heart rate-based R-R interval, which is displayed on a monitor and stored for analysis and review. Visualize evoked sweat output, which is displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of R-R interval for normal morphology, reproducibility between trials, artifacts, medication effects, and/or pacemaker-induced abnormalities, and document any abnormalities of HR response to testing maneuvers (e.g., deep breathing, Valsalva and 30:15 ratio measures). Review results of sweat output for normal latency and volumes, artifacts, and/or medication effects, and document any abnormalities. Interpret combined [cardiovagal and sudomotor] data, integrate results of combined tests for enhanced localization of findings, and make a clinical correlation of the findings results based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be

contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **34 responses** and **85% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends a value at 1.20 work RVU which is based on a crosswalk to CPT code 76988, and survey median times of 10 minutes pre-service, 20 minutes intra-service and 10 minutes post-service for a total time of 40 minutes.

Key Reference Services

Our recommended work RVU of 1.20 is supported by the most commonly chosen key reference service, CPT code 95861 (*Needle electromyography; 2 extremities with or without related paraspinal areas*). CPT code 95861 has 29 minutes of intra-service time compared to the median survey time of 20 minutes for 95XX7. The recommended crosswalk value of 1.20, is supported by the identical IWPUT when compared to that of the KRS. The expert panel elected for a crosswalk recommendation as the panel asserts neither the 25th percentile nor the median RVU appropriately captures the work intensity or complexity.

The second key reference service code, 95819 *Electroencephalogram (EEG); including recording awake and asleep* supports the recommendation as well and is also an MPC code. The greater intra service time (20 min) and greater recommended RVU (1.20) of survey code 95XX7 as compared that of MPC code 95819, (15 minutes intra service time and wRVU of 1.08) result in an appropriately lower IWPUT as well.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95XX7	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	1.20	10	20	10	40	0.038	0.030
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	5	15	6	26	0.056	0.042
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	10	29	10	49	0.038	0.031

MPC Codes

Our recommendation for surveyed code 95XX7 compares favorably to the MPC codes depicted in the table below. This includes CPT code 95971 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional*. The work RVU recommendation of 1.20 results in an appropriate IWPUT when compared to the wRVU of MPC code 95971 at 0.78 when considering identical intra-service time of 20 minutes.

MPC code 92604 *Diagnostic analysis of cochlear implant, age 7 years or older; subsequent reprogramming* also supports the recommendation as survey code 95XX7 given the similar RVU and proportionally greater IWPUT for 95XX7 when compared to this MPC code.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95971	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse	0.78	8	20	5	33	0.024	0.024

	generator/transmitter programming by physician or other qualified health care professional							
95XX7	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	1.20	10	20	10	40	0.038	0.030
92604	Diagnostic analysis of cochlear implant, age 7 years or older; subsequent reprogramming	1.25	5	50	10	65	0.018	0.019

Summary

In summary, our expert panel recommends a crosswalk value at **1.20 work RVU** and a survey median time of **10 /20 /10 for a total time of 40**. The recommended value compares favorably with the key reference services and maintains relativity within the RBRVS

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95XX7 is a new code

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95921

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9045

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology	Frequency 7236	Percentage 80.00 %

Specialty	Frequency	Percentage %

Specialty	Frequency	Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,015

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate 3% of the 2023 Medicare utilization from the RUC database of 95923 will be reported as 95XX7.

Specialty Neurology	Frequency 2412	Percentage 80.00 %

Specialty	Frequency	Percentage %

Specialty	Frequency	Percentage %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95816

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 95XX8 Tracking Number F9

Original Specialty Recommended RVU: **1.50**Presented Recommended RVU: **1.75**

Global Period: XXX Current Work RVU:

RUC Recommended RVU: **1.75**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; combined sympathetic adrenergic with at least 5 minutes of passive tilt (ie, tilt table) and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint. (Do not report 95XX8 in conjunction with 95921, 95922, 95923, 95924, 95XX6, 95XX7, 95XX9)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female presents with repeated, unexplained episodes of fainting and heat intolerance. Testing of the autonomic nervous system, for sympathetic sudomotor and adrenergic (vasomotor) function using at least a 5-minute tilt with a passive tilt table, is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test, as well as personally evaluate the patient during testing maneuvers and/or confirm the technologist's impression as needed. Visualize ECG monitoring of the heart rate-based R-R interval, which is displayed on a monitor and stored for analysis and review. Visualize evoked sweat output, which is displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of beat-to-beat blood pressure for normal morphology, reproducibility between trials, artifacts, medication effects and/or physiologic variants, and document any abnormalities of BP response to testing maneuvers (e.g., a series of Valsalva's with and without head-up tilt). Evaluate HR & BP during the tilt component. Review results of sweat output for normal latency and volumes, artifacts, and/or medication effects, and document any abnormalities. Interpret combined [vasomotor adrenergic and sudomotor] data, integrate results of combined tests for enhanced localization of findings, and make a clinical correlation of the findings results based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical

examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate. a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing

parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **32 responses** and **90% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses. Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends the survey median value at 1.75 work RVU which is the current work RVU and survey median times of 10 minutes pre-service, 30 minutes intra-service and 14 minutes post-service for a total time of 54 minutes.

Key Reference Services

The recommended median work RVU is supported similarly by both the first and second most frequently chosen reference service codes which are both clinically similar work to survey code 95XX8:

95717 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without video*

95813 *Electroencephalogram (EEG), Electroencephalogram (EEG) extended monitoring; 61-119 minutes* The recommended work RVU of 1.75 is relatively appropriate in terms of clinical work and intensity when compared to the two reference codes. The majority of survey respondents reported the overall intensity and complexity of the survey code to be greater than that of the reference codes. The median RVU brings the survey codes into more appropriate proximity of the reference code RVUs.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95813	Electroencephalogram (EEG), Electroencephalogram (EEG) extended monitoring; 61-119 minutes	1.63	5	25	5	35	0.056	0.047
95XX8	Testing of autonomic nervous system function, with interpretation and report; combined sympathetic adrenergic with at least 5 minutes of passive tilt (ie, tilt table) and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	1.75	10	30	14	54	0.040	0.032
95717	Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without video	2.00	8	28	10	46	0.057	0.043

MPC Codes

Our recommendation for surveyed code 95XX8 compares favorably to the MPC codes depicted in the table below. This includes 92604 *Diagnostic analysis of cochlear implant, age 7 years or older; subsequent reprogramming*. Survey code 95XX8 has a lower intra service (25) and total (45) time than 92604 at 50 and 65 respectively, and a proportionally higher work RVU which results in an appropriate IWPUT for 95XX8 when compared to this MPC code.

The recommended 25th RVU is further supported by MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded*. While intra service time of 99214 is identical to the survey median time, the recommended 1.75 work RVU for the surveyed code is appropriately lower than that of key reference code 99213 at 1.92 work RVU and has an appropriately lower IWPUT

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
92604	Diagnostic analysis of cochlear implant, age 7 years or older; subsequent reprogramming	1.25	5	50	10	65	0.018	0.019
95XX8	Testing of autonomic nervous	1.75	10	25	10	45	0.040	0.032

	system function, with interpretation and report; combined sympathetic adrenergic with at least 5 minutes of passive tilt (ie, tilt table) and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint							
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.92	7	30	10	47	0.051	0.041

Summary

In summary, our expert panel recommends the survey median value at **1.75 work RVU** and a survey median time of **10 /30 /14 for a total time of 54**. The recommended value compares favorably with the key reference services and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95XX8 is a new code

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95923

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology

How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9045

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology	Frequency 7236	Percentage 80.00 %

Specialty	Frequency 0	Percentage 0.00 %

Specialty	Frequency 0	Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,015

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate 3% of the 2023 Medicare utilization from the RUC database of 95923 will be reported as 95XX8.

Specialty Neurology	Frequency 2412	Percentage 80.00 %

Specialty	Frequency 0	Percentage 0.00 %

Specialty	Frequency	Percentage	%

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95816

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 95XX9 Tracking Number F10

Original Specialty Recommended RVU: **1.91**

Global Period: XXX Current Work RVU:

Presented Recommended RVU: **1.91**RUC Recommended RVU: **1.91**

CPT Descriptor: Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic, sympathetic adrenergic function with at least 5 minutes of passive tilt (ie, tilt table), and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint. (Do not report 95XX9 in conjunction with 95921, 95922, 95923, 95924, 95XX6, 95XX7, 95XX8)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female presents with activity intolerance, repeated, unexplained episodes of fainting and heat intolerance. Testing of the autonomic nervous system, for sudomotor, parasympathetic (cardiovagal), and sympathetic (vasomotor adrenergic) function using at least a 5-minute tilt with a passive tilt table, is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral information including medications and past medical history/comorbidities, which might impact test results.

Description of Intra-Service Work: Supervise patient preparation and performance of the test, as well as personally evaluate the patient during testing maneuvers and/or confirm the technologist's impression as needed. Visualize ECG monitoring of the heart rate, and continuous beat-to-beat recording of blood pressure, which displayed on a monitor and stored for analysis and review. Communicate any electrode or recording issues, and any required modification to recording to the technologist when necessary. Review patient-reported symptoms, clinical notes, referral documents, and patient history. Review results of beat-to-beat blood pressure for normal morphology, reproducibility between trials, artifacts, medication effects and/or physiologic variants, and document any abnormalities of BP response to testing maneuvers (e.g., a series of Valsalva's with and without head-up tilt). Review results of R-R interval for normal morphology, reproducibility between trials, artifacts, medication effects, and/or pacemaker-induced abnormalities, and document any abnormalities of HR response to testing maneuvers (e.g., deep breathing, Valsalva and 30:15 ratio measures). Evaluate HR & BP during the tilt component. Review results of sweat output for normal latency and volumes, artifacts, and/or medication effects, and document any abnormalities. Interpret combined [sudomotor, cardiovagal and vasomotor adrenergic] data, integrate results of combined tests for enhanced localization of findings, and make a clinical correlation of the findings results based on patient's history. Discuss and explain findings with the patient as needed. Document a report and interpretation for the patient's chart.

Description of Post-Service Work: Review and sign final report. Send a copy of the report to the referring physician and/or primary care provider and provide a verbal report of critical results directly to referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2019, the Relativity Assessment Workgroup identified 95921 as a code with Medicare utilization over 10,000 that was performed by one specialty and is now performed by a different specialty, which the RUC referred to CPT Assistant and an article was published in 2020. In January 2020, the RUC recommended referring codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services and the Workgroup review the specialty mix again in 3 years of those reporting the services (Sept 2023). The Workgroup requested an action plan for Autonomic Function Testing for September 2023.

The specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be

contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported together and the code family should be referred to CPT to be restructured.

In February 2025, the CPT Editorial Panel approved 4 revised codes and 6 new codes to report autonomic function testing as outlined below. A coding table is provided to illustrate the appropriate code to report based on the systems tested (see appendix A). Codes 95921 – 95XX9 require interpretation and report by a physician or other qualified health care professional and should not be used for tests that include algorithmically aided diagnostic support tools. When autonomic function testing is performed without a separate interpretation and report by a physician or other qualified health care professional, use 95999.

Autonomic function tests assess parasympathetic and sympathetic functions of heart rate, blood pressure and sympathetic sweat gland (or sudomotor) control. For purposes of code selection one can think of the tests in three categories: parasympathetic, sympathetic and sudomotor. The tests can be performed independently or as a full battery of tests, which is reflected in the code language.

Code **95921** describes testing which evaluates **parasympathetic** (cardiovagal) function and includes electrocardiographic monitoring of heart rate derived from the variability in the time elapsing between two consecutive R waves in the electrocardiogram. A tilt table may be used but is not required for testing parasympathetic function. Code **95XX4** may be reported in addition to 95921 when a tilt table is used to perform the tests.

Code **95922** describes testing which evaluates **sympathetic** effects on heart rate and blood pressure control. Code 95922 requires continuous recording of beat-to-beat BP and heart rate, a period of supine rest of at least 20 minutes prior to testing, a minimum of two (2) Valsalva maneuvers, the performance of passive head-up tilt which must be performed using a tilt table.

Code **95924** is reported when both the parasympathetic (cardiovagal) function and the sympathetic adrenergic function as described in 95921, 95922 are tested together with the use of a tilt table.

The testing of **sudomotor** function is reported as follows:

95923 describes testing which evaluates sweat gland (sudomotor) function. Code 95923 should be reported only when performing quantitative evaluation of sweat gland function using the quantitative sudomotor axon reflex test (**QSART**), or silastic sweat imprint test.

95XX5 describes testing which evaluates sudomotor function using the thermoregulatory sweat test (**TST**) by recording sweat production and distribution during controlled heating of the whole body.

95XX6 describes testing which evaluates the sympathetic skin response (**SSR**) by recording surface electrical responses from the palmar or plantar surfaces after electrical stimulation of a nerve trunk of the limb being tested.

*QSART, TST and SSR testing were all previously reported with CPT code 95923. The revised coding structure established a unique CPT code for each test.

95XX7, 95XX8, 95XX9 represent various combinations of parasympathetic (cardiovagal), sympathetic, and sudomotor testing as described below:

95XX7 is reported when both the parasympathetic (cardiovagal) function and sweat gland function (sudomotor) QSART evaluation are performed. A tilt table may be used but is not required for testing parasympathetic function. Code 95XX4 may be reported in addition to 95XX7 when a tilt table is used to perform the tests.

95XX8 is reported when both the sympathetic function and sweat gland (sudomotor) function evaluation QSART are performed. 95XX8 requires the use of tilt table.

95XX9 is reported when the parasympathetic (cardiovagal) function, sympathetic function and sweat gland (sudomotor) function QSART are performed. 95XX9 requires the use of tilt table

Survey Process

The American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), and American College of Physicians (ACP) convened an expert panel familiar with these services to provide value and time recommendations for the April 2024 RUC meeting.

The AAN surveyed a sample of current US members from the Autonomic Nervous System section. The AANEM surveyed current US neurologist members. The ACP surveyed a random sample of ACP members plus a Research Subcommittee-approved targeted survey sample of ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners — by Provider and Service data set. The survey was also distributed to practicing US physician members of the American Autonomic Society which was approved by Research Subcommittee. The survey had **35 responses** and **94% of respondents** found the vignette to be typical.

Compelling Evidence

We believe that there is compelling evidence to consider an increase in the value for CPT code family 95921-95XX9, specifically **changes in physician work due to technique and knowledge/technology**. For codes that include vasomotor testing and assessment of Valsalva responses, additional quantitative analyses are now typical, in addition to the semi-quantitative/qualitative analyses of Valsalva response, that were typical at the time of the last survey. The typical work now requires visualization of physiological data (including determination of wave form morphology, sources of artifact, and quantitative analysis) and correlation of available clinical data with test results. These newly implemented analyses add complexity and intensity in the physician work. In addition, for codes where interpretation is required for a combination of multiple test procedures [e.g., 95XX7, 95XX8, 95XX9, which includes combinations of sudomotor, cardiovagal and vasomotor adrenergic testing] the integration of multiple modality data is required, which increases physician work.

The specialties have provided literature to support this argument. "Normative Data on Phases of the Valsalva Maneuver" from Denq et al 1998 represents the standard analyses which were required at the time of the last survey and "Non-invasive measurement of baroreflex during Valsalva maneuver: Evaluation of alpha and beta-adrenergic components" from Palamarchuk et al 2016 represents the standard analyses required currently. Since 2012, the time these codes were last reviewed, additional quantitative analyses have been integrated into practice, which have increased the cognitive complexity, time, and effort required to interpret Valsalva testing. In addition to the "classic" elements outlined by Denq et al, which include phase I, II (early and late), III and IV, the metrics described by Palamarchuk et al, including pressure time recovery (PRT), sympathetic index (SI), and baroreflex sensitivity (BRS) are now also required. These metrics were validated since the time of the last survey and are now typically used in the analysis and interpretation of Valsalva responses.

Beyond just 95922, when vasomotor testing is used in combination with the other autonomic testing procedures [as applies to 95924, 95XX8, 95XX9], these new metrics also come into play in the 'integrative' interpretation, by adding complexity to interpretation and analysis for the combined codes.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile value at 1.91 work RVU which is the current work RVU and survey median times of 10 minutes pre-service, 30 minutes intra-service and 12 minutes post-service for a total time of 52 minutes.

Key Reference Services

Our recommended work RVU of 1.91 compares favorably to the most commonly chosen key reference service, CPT code 99239 *Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter* which is also an MPC code. The recommended 25th wRVU is supported by the greater IWPUR of the survey code 95XX9, resulting from less interservice time compared to that of the KRS code. Additionally, 62% of respondents ranked 95XX9 as somewhat or much more intense than 99239 which further supports our recommendation.

The recommended median 25th work RVU is supported by the 2nd most frequently chosen reference service codes 95717 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without video* which has clinically similar work to 95XX9. 95717 has a near identical intra service time of 28 minutes as the survey median intra service time of 30. The work RVU recommendation of 1.91 results in an appropriately higher IWPUR when compared to the work RVU of code 95717 at 2.00 when considering intra service time.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUR	WPUR
95XX9	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic, sympathetic adrenergic function with at least 5 minutes of passive tilt (ie, tilt table), and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	1.91	10	30	12	52	0.047	0.037
99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter	2.15		45	19	64	0.038	0.034
95717	Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without video	2.00	8	28	10	46	0.057	0.043

MPC Codes

Our recommendation for surveyed code 95XX9 compares favorably to the MPC codes depicted in the table below. This includes 95819 *Electroencephalogram (EEG); including recording awake and asleep* which is a clinically similar testing code. Survey code 95XX9 has a greater intra service (30) and total (52) time than 95819 at 15 intra and 26 total minutes which results in an appropriate IWPUR for 95XX9 as compared to this MPC code, when considering the recommended 25th percentile RVU

The recommended 25th RVU is further supported by MPC code 99239 *Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter* as outlined above as the 2nd most common chosen reference code and respondents' intensity ratings compared to survey code 95XX9.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUR	WPUR
95819	Electroencephalogram (EEG);	1.08	5	15	6	26	0.056	0.042

	including recording awake and asleep							
95XX9	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic, sympathetic adrenergic function with at least 5 minutes of passive tilt (ie, tilt table), and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	1.91	10	30	12	52	0.047	0.037
99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter	2.15		45	19	64	0.038	0.034

Summary

In summary, our expert panel recommends the survey 25th percentile value at **1.91 work RVU** and a survey median time of **10 /30 /12 for a total time of 52**. The recommended value compares favorably with the key reference services and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 95XX9 is a new code

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95924 and 95923

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 166530

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimate Medicare patient utilization (seen below) multiplied by three.

Specialty Neurology Frequency 99918 Percentage 60.00 %

Specialty Internal Medicine Frequency 16653 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 55,510 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate 70% of the 2023 Medicare utilization from the RUC database of 95924, and 40% of the 2023 Medicare utilization of 95923 will be reported as 95XX9.

Specialty Neurology Frequency 33306 Percentage 60.00 %

Specialty Internal Medicine Frequency 5551 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

Other tests

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95924

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO;
Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2025
Revised 4-23-2025

CPT Code	Long Descriptor	Global Period
95921	Testing of autonomic nervous system function, with interpretation and report; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio	XXX
95XX4	Testing of autonomic nervous system function, with interpretation and report; use of tilt table (List separately in addition to code for primary procedure)	ZZZ
95922	Testing of autonomic nervous system function, with interpretation and report; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and R-R interval changes during Valsalva maneuver and at least 5 minutes of passive tilt (ie, tilt table)	XXX
95923	Testing of autonomic nervous system function, with interpretation and report; sudomotor, quantitative sudomotor axon reflex test (QSART), or silastic sweat imprint	XXX
95XX5	Testing of autonomic nervous system function, with interpretation and report; sudomotor, thermoregulatory sweat test	XXX
95XX6	Testing of autonomic nervous system function, with interpretation and report; sudomotor, assessing the sympathetic skin response (SSR) potential	XXX
95924	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt (ie, tilt table)	XXX
95XX7	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	XXX
95XX8	Testing of autonomic nervous system function, with interpretation and report; combined sympathetic adrenergic with at least 5 minutes of passive tilt (ie, tilt table) and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	XXX
95XX9	Testing of autonomic nervous system function, with interpretation and report; combined parasympathetic, sympathetic adrenergic function with at least 5 minutes of passive tilt (ie, tilt table), and sudomotor testing, quantitative sudomotor axon reflex test (QSART) or silastic sweat imprint	XXX

CPT Code	Vignette
95921	A 65-year-old male with poorly controlled diabetes, significant orthostatic hypotension, and heat intolerance which is interfering with his ability to walk and complete activities of daily living. Testing of the autonomic nervous system is performed to evaluate for possible primary autonomic disorder.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO; Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

95XX4	A 65-year-old male is undergoing testing of the autonomic nervous system. Tilt table testing is performed to enhance results of Valsalva testing. [Note: This is an add-on service. Only consider the additional work related to the use of the tilt table.]
95922	A 65-year-old male presents with parkinsonism, significant orthostatic hypotension, and heat intolerance. Autonomic testing with head up tilt is performed.
95923	A 45-year-old female who has diabetes presents with numbness and burning of the feet. Standard laboratory tests, examination and nerve conduction studies are nondiagnostic. Testing of sudomotor function is performed.
95XX5	A 65-year-old male presents with parkinsonism and heat intolerance. Testing of sudomotor function using the thermoregulatory sweat test is performed.
95XX6	A 45-year-old female diabetic presents with numbness and burning of the feet which is interfering with her ability to function normally. Standard laboratory tests, examination and nerve conduction studies are nondiagnostic. Neither quantitative sudomotor axon reflex test (QSART) nor thermoregulatory testing equipment is not available. Sympathetic skin responses (SSR) are performed.
95924	A 45-year-old female presents with activity intolerance and repeated, unexplained episodes of fainting and orthostatic hypotension. Testing of the autonomic nervous system, for both parasympathetic (cardiovagal) function and sympathetic (vasomotor adrenergic) function using at least a 5-minute tilt with a passive tilt table, is performed.
95XX7	A 65-year-old male presents with poorly controlled diabetes, significant orthostatic hypotension, and heat intolerance which is interfering with his ability to walk and complete activities of daily living. Testing of the autonomic nervous system, including cardiovagal and sudomotor function is performed.
95XX8	A 45-year-old female presents with repeated, unexplained episodes of fainting and heat intolerance. Testing of the autonomic nervous system, for sympathetic sudomotor and adrenergic (vasomotor) function using at least a 5-minute tilt with a passive tilt table, is performed.
95XX9	A 45-year-old female presents with activity intolerance, repeated, unexplained episodes of fainting and heat intolerance. Testing of the autonomic nervous system, for sudomotor, parasympathetic (cardiovagal), and sympathetic (vasomotor adrenergic) function using at least a 5-minute tilt with a passive tilt table, is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American Academy of Neurology, American Association of Neuromuscular and Electrodiagnostic Medicine, and the American College of Physicians convened a panel that included experts familiar with these services to evaluate the direct practice expense inputs for autonomic function testing.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO; Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The societies are providing the current code as the reference code for 95921, 95922, 95923 and 95924.

95XX4: The societies are providing current code 95922 PE inputs on the PE spreadsheet as new code 95XX4 is an add on code for use of a tilt table, and has similar equipment inputs to 95222. Societies are also providing 95885 as a reference code taken from the ZZZ Reference Service List.

95XX5 and 95XX6: The societies are providing current code 95923 PE inputs on the PE spreadsheet as the new codes were previously reported as 95923. Societies are also providing 93224 as a reference code. 93224 is taken from the Reference Service List and has similar clinical staff inputs.

95XX7, 95XX8, 95XX9: The societies are providing current code 95921- 95923 PE inputs on the PE spreadsheet as the new codes were previously reported as 95921, 95922 and 95923. Societies are also providing 93224 as a reference code. 93224 is taken from the Reference Service List and has similar clinical staff inputs.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

95921 is typically reported with an E/M service at 52.1%.

95921 is typically reported with an E/M service in the non-facility at 52.4%.

95XX4 is an add on code that will be reported in conjunction with primary procedure code 95921 or 95XX7, both of which we anticipate will typically be reported with an E/M service. When code 95XX4 is reported with an E/M code, it will typically be in the non-facility.

95922 is typically reported with an E/M service at 51.4%.

95922 is typically reported with an E/M service in the non-facility at 50%.

95923 is typically reported with an E/M service at 53%.

95923 is typically reported with an E/M service in the non-facility at 53.7%.

95924 is typically reported with an E/M service at 53.1%.

95924 is typically reported with an E/M service in the non-facility at 57.1%.

95XX5, 95XX6, 95XX7, 95XX8, 95XX9 are new codes which we anticipate will typically be reported with an E/M service. When reported with an E/M code, it will typically be in the non-facility.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO;
Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. What specialty is the dominant provider *in the non-facility*? What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

According to the RUC database in the non-facility (Global & 26) the dominant provider of: 95921 is Internal medicine at 22.9%. The dominant provider is the same for the global. 95922 is Independent diagnostic testing facility at 35.1%. The dominant provider is the same for the global. 95923 is Internal medicine at 20.4%. The dominant provider is the same for the global. 95924 is Internal medicine at 19.7%. The dominant provider for the global is Neurology.

The expert panel believes that the dominant provider of 95XX4, 95XX5, 95XX6, 95XX7, 95XX8, 95XX9 will be Neurology.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The societies are citing a change in equipment or practice expense cost as compelling evidence for the increase in aggregate cost for specifically the supply costs as detailed below:

SD099, mouthpiece respiratory is an outdated supply that is no longer used during the Valsalva test. SD099 price \$0.24 per item

Post Covid-19 pandemic, the current standards require a hepa-filtered single use mouthpiece.

The updated supply used for Valsalva testing is provided below with a paid invoice attached and is used in codes 95921, 95922, 95924, 95XX7, 95XX8, 95XX9

- Filtered Mouthpiece (Price \$86.00 for 50 items = \$1.72 per item)

NEW	Filtered Mouthpiece (NEW)	1.72	item

SA014 kit, electrode, iontophoresis is an outdated supply that is no longer used for QSART testing. SA014 price \$3.93 per kit

kit, electrode, iontophoresis	SA014		kit
<i>drug delivery electrode (1.5-2.0 cc)</i>		12	item
<i>return electrode</i>		1	item
<i>alcohol prep</i>		1	item
<i>silver chloride disk</i>		1	item

The current supplies used for QSART testing are provided below with paid invoice attached and are used in codes 95923, 95XX7, 95XX8, 95XX9.

- Gel Trode 2x2 Return Electrode (Price \$99.00 for 20 items = \$4.95 per item)

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO; Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- Meridian Electrode w/Expanding Foam (Price \$265.00 for 20 items = \$13.25 per item)

See the *PE compelling evidence guidelines* under PE Reference Materials on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

No time is currently allocated to CA010 - obtain vital signs for 95921-95XX9.

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

Complete pre-procedure phone calls and prescription (CA005) - Patient phone call with instructions for testing visit: guidance on food, caffeine and alcohol intake, smoking cessation, avoid any constrictive/compression clothing, review of medication list and counsel on which should be withheld prior to testing, plan for driving as test may causes dizziness or fainting. Perform medical screening for pacemakers or anything that may contraindicate test. **2 minutes**

- b. Service period (includes pre, intra and post):

Pre-service Clinical Labor Activities (for all XXX codes)

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO; Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- Prepare room, equipment and supplies (CA013) - Set up and calibrate equipment to adjust for patient, including entry of clinical information into testing software. Mix acetylcholine – (only for codes 95923, 95XX7, 95XX8, 95XX9). - **2 minutes**

Service period Clinical Labor Activities

- Perform procedure/service---NOT directly related to physician work time (CA021)

Post-service period Clinical Labor Activities (for all XXX codes)

- Monitor patient following procedure (CA023) Remove arm and finger cuff and any additional monitoring equipment. If patient needs additional recuperation time (due to dizziness or lightheadedness) monitor vital signs before assisting the patient with ambulating from the testing room. **2 minutes**
- Clean room/equipment (CA024) **3 minutes**

c. Post-service period:

No clinical staff activities currently allocated to the post-service period

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

95921: 35 minutes

- Apply EKG stickers and chest bellows to measure chest expansion and relaxation. Apply finger blood pressure cuff, and attach brachial blood pressure cuff, wait ~3 minutes for machine to calibrate and take brachial blood pressure. Enter baseline information into test software and start recording for at least 1 minute prior to test. **10 minutes**
- Begin heart rate response to deep breathing (HRBD) test which consists of multiple cycles of inhalation and exhalation totaling 80-seconds followed by 2-minute rest period. The test is repeated a minimum of two times. The technologist instructs the patient in baseline breathing and coaches the patient through deep breathing maneuvers, giving feedback on the number of seconds left in each test period. The technologist notes patient symptoms or any other complications as well as patient effort during testing. Record for at least one minute after the last maneuver. Ensure data was properly captured in testing software before concluding test. **10 minutes**
- Begin Valsalva test with patient in the supine position. Instruct the patient to blow into a mouthpiece for 15 seconds maintaining a target expiratory pressure, followed by a 3-minute rest period. The test is repeated until adequate test result is obtained, typically 3-4 trials. The technologist ensures the patient understands and complies with test specific instructions and assesses the patient for any reactions during testing, and notes symptoms felt during exercise, including blood pressure response to the Valsalva maneuver. Record

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO; Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

EKG for at least one minute after the last maneuver. Obtain resting blood pressure reading. Ensure data was properly captured in testing software before concluding test. **15 minutes**

95XX4 (20 minutes)

- Perform Valsalva with passive tilt (tilt table): **20 minutes**
 - Assist patient onto tilt table into supine position. Review series of symptoms on a 0-10 scale to determine baseline (lightheadedness, dizziness, headache, nausea, or other self-reported symptoms at the time.)
 - Apply straps and ensure patient is secure on tilt table, recalibrate equipment settings if necessary. Adjust table to 70% tilt. Begin Valsalva test by instructing the patient to blow into a mouthpiece for 15 seconds, followed by a 3-minute rest period. Repeat the test until adequate result is obtained, typically 3-4 trials. Ensure the patient understands and complies with test instructions, assess blood pressure response to the Valsalva maneuver and monitor patient reported symptoms. Observe the patient for any adverse effects.
 - Ensure continuous blood pressure monitoring on finger cuff and adjust as necessary to record and calibrate properly. Beat-to-beat recording of the blood pressure and heart rate is being recorded concurrently via the finger cuff as well as an EKG, and a measurement of chest expansion and relaxation.
 - Return table and patient to supine position and record for an additional 3 minutes where the technologist obtains a final brachial blood pressure, heart rate, and review of symptoms. Remove straps, unhook equipment and ensure data was properly captured in testing software.

95922: 30 minutes

- Apply EKG stickers and chest bellows to measure chest expansion and relaxation. Apply finger blood pressure cuff, and attach brachial blood pressure cuff, wait ~3 minutes for machine to calibrate and take brachial blood pressure. Enter baseline information into test software and start recording for at least 1 minute prior to test. **10 minutes**
- Perform Valsalva with passive tilt (tilt table): **20 minutes**
 - Assist patient onto tilt table into supine position. Review series of symptoms on a 0-10 scale to determine baseline (lightheadedness, dizziness, headache, nausea, or other self-reported symptoms at the time.)
 - Apply straps and ensure patient is secure on tilt table, recalibrate equipment settings if necessary. Adjust table to 70% tilt. Begin Valsalva test by instructing the patient to blow into a mouthpiece for 15 seconds, followed by a 3-minute rest period. Repeat the test until adequate result is obtained, typically 3-4 trials. Ensure the patient understands and complies with test instructions, assess blood pressure response to the Valsalva maneuver and monitor patient reported symptoms. Observe the patient for any adverse effects.
 - Ensure continuous blood pressure monitoring on finger cuff and adjust as necessary to record and calibrate properly. Beat-to-beat recording of the blood pressure and heart rate is being recorded concurrently via the finger cuff as well as an EKG, and a measurement of chest expansion and relaxation.
 - Return table and patient to supine position and record for an additional 3 minutes where the technologist obtains a final brachial blood pressure, heart rate, and review

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

of symptoms. Remove straps, unhook equipment and ensure data was properly captured in testing software.

95923: 31 minutes

Perform Quantitative Sudomotor Axon Reflex Test (QSART)

- Prep skin at each recording site (4 total- forearm, knee, ankle, foot): sandpaper first to rough the skin, site is then wiped with acetone to remove any oils or creams, followed with an alcohol wipe, then wiped with water, and patted dry with gauze to ensure recording site is fully dry per protocol and ensure integrity of recording. **2 minutes**
- Prepare and apply stimulating/recording capsules, which are later filled with mixture of acetylcholine and water, on skin at recording site using a silicone strap. Apply a gel-trode pad near each site, attach leads to gel-trode and connect to Iontophor machine. **8 minutes**
- Start Iontophor machine on and ensure all channels are recording. Attach 4 syringes with acetylcholine mixture to stimulating/recording capsules, and push liquid through capsule so it is in contact with patient's skin. Open recording software and run baseline for 2 minutes to verify there are no leaks in the capsules, the baseline recording is stable and to check impedences that may impact signal. **6 minutes**
- Mark the start of test in recording and turn on iontophoresis for 5 minutes to elicit the sweat response. During stimulation, review latency and volume throughout. Once stimulation is complete, place another marker in recording to indicate the end of the stimulus, and continue to monitor the nerves for 5 minutes of additional recording. Ensure data was properly captured in testing software. **15 minutes**

95XX5: 35 minutes

Perform thermoregulatory sweat test (TST)

- Apply powder to the patient's entire body and place a thermal probe on the skin and in the patient's mouth. Assist patient into the exam room with a heat box and assist into supine position on exam table. Observe throughout the testing for increased body temperature and sweat production. Monitor probes used to control the heat lamps in the box. Observe patient for signs of distress.
- Remove patient from heat box at a rate slow enough to ensure the body has time to adjust to temperature changes. Take photos and perform computer scan to map the areas of increased sweat production. Patient's weight is recorded. Brush loose powder off patient and provide shower instructions to ensure the powder is washed off safely.

95XX6: 10 minutes

Perform Sympathetic Skin Response (SSR) Test

- Take initial blood pressure with brachial cuff. Apply finger blood pressure cuff, wait 1 minute to ensure correctly placed to read HR. Enter baseline information into test software and start recording. **2 minutes**
- Prep skin at each recording site (on hand and foot), with an alcohol wipe and assess skin temperature of recording site. **2 minutes**

CPT CODE(S): 95921

SPECIALTY SOCIETIES: AAN, AANEM, ACP

PRESENTER(S): Marianna Spanaki MD, PhD; Meghan Ward, MD, FAAN; Melissa Cortez, DO; Kevin Fitzpatrick, MD; Charles Hamori, MD, FACP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- Apply electrodes to skin and connect recording equipment. The nerve is stimulated electrically to generate electrical potential changes in the skin. If patient is unable to tolerate stimulus, instruct patient to perform deep gasp (which will also trigger response). Monitor response for 1 minute and review amplitude. Repeat test 3-4 times. **6 minutes**

95924: 55 minutes

- Apply EKG stickers and chest bellows to measure chest expansion and relaxation. Apply finger blood pressure cuff, and attach brachial blood pressure cuff, wait ~3 minutes for machine to calibrate and take brachial blood pressure. Enter baseline information into test software and start recording for at least 1 minute prior to test. **10 minutes**
- Begin heart rate response to deep breathing (HRBD) test which consists of multiple cycles of inhalation and exhalation totaling 80-seconds followed by 2-minute rest period. The test is repeated a minimum of two times. The technologist instructs the patient in baseline breathing and coaches the patient through deep breathing maneuvers, giving feedback on the number of seconds left in each test period. The technologist notes patient symptoms or any other complications as well as patient effort during testing. Record for at least one minute after the last maneuver. Ensure data was properly captured in testing software before concluding test. **10 minutes**
- Perform Valsalva without tilt:
 - Begin Valsalva test with patient in the supine position. Instruct the patient to blow into a mouthpiece for 15 seconds maintaining a target expiratory pressure, followed by a 3-minute rest period. The test is repeated until adequate test result is obtained, typically 3-4 trials. The technologist ensures the patient understands and complies with test specific instructions and assesses the patient for any reactions during testing, and notes symptoms felt during exercise, including blood pressure response to the Valsalva maneuver. Record EKG for at least one minute after the last maneuver. Obtain resting blood pressure reading. Ensure data was properly captured in testing software before concluding test. **15 minutes**
- Perform Valsalva with passive tilt (tilt table) **20 minutes**
 - Assist patient onto tilt table into supine position. Review series of symptoms on a 0-10 scale to determine baseline (lightheadedness, dizziness, headache, nausea, or other self-reported symptoms at the time.) Perform 1 series of Valsalva without passive tilt activated.
 - Apply straps and ensure patient is secure on tilt table, recalibrate equipment settings if necessary. Adjust table to 70% tilt. Begin Valsalva test by instructing the patient to blow into a mouthpiece for 15 seconds, followed by a 3-minute rest period. Repeat the test until adequate result is obtained, typically 3-4 times. Ensure the patient understands and complies with test instructions, assess blood pressure response to the Valsalva maneuver and monitor patient reported symptoms. Observe the patient for any adverse effects.
 - Ensure continuous blood pressure monitoring on finger cuff and adjust as necessary to record and calibrate properly. Beat-to-beat recording of the blood pressure and heart rate is being recorded concurrently via the finger cuff as well as an EKG, and a measurement of chest expansion and relaxation.

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Background: For 2014, the PE Inputs of 95923 were reviewed as part of a CMS OPPS/ASC cap proposal. Although the CMS OPPS/ASC cap proposal was not implemented in the final rule for 2014, the RUC forwarded PE recommendations to CMS to illustrate that the RUC's review of practice expense is based on clinical necessity of the associated costs and payment should not be arbitrarily limited based on separate payment systems. 95923 was reviewed independent of the rest of the code family and the specialty societies' 2025 recommendations are in line with typical current practice and the rest of the code family.

The clinical staff activities for the intra-service period (of the service period) of 95923 are currently allocated to CA018 Assist physician—directly related to physician work time (100%) which the

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

societies believe was done incorrectly as part of the CMS OPPS/ASC cap review in 2014. CAO21 more accurately reflects the activities of the clinical staff and aligns with the rest of the code family.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

The specialty made the following modifications following the PE Subcommittee meeting:

PE SOR:

- o Added language to question 11 (indicated in red text) to clarify what the gauze pads are used for in all of the codes that include QSART testing (95923, 95XX7, 95XX8, 95XX9)

PE Spreadsheet: (all revisions noted in red text on spreadsheet)

- o Removed SG055 gauze, sterile 4in x 4in (row 104) from the codes which do not require wiping recording site with gauze (95921, 95922, 95XX6, 95924)

- o Added SB022, gloves, non-sterile (row 124) 1 pair to each code that includes acetylcholine: (95923, 95XX7, 95XX8, 95XX9)

- o Added SC029, needle 18-27 g (row 125) 1 item each to each code that include acetylcholine: 95923, 95XX7, 95XX8, 95XX9 (only 1 is needed, vs 4 that was suggested as this is a non-sterile process and the needle is only used for transferring acetylcholine from the mixing container into each syringe – a new sterile needle is not required for each)

- o Added SC052, syringe 1ml (row 126) 4 items to each code that includes acetylcholine: 95923, 95XX7, 95XX8, 95XX9

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2025

Laser Treatment for Psoriasis – Tab 10

In October 2015, CPT codes 96920, 96921 and 96922 were identified via the high-volume growth screen with Medicare utilization of 10,000 or more that increased by at least 100% from 2008 through 2013. At that time, the RUC recommended that the specialty societies develop a CPT Assistant article to ensure the codes were being used correctly, which was published in September 2016. This was the third article created for this code set, with articles also published in June 2012 and May 2013.

In January 2022, the Relativity Assessment Workgroup (RAW) reviewed these services again, noting that their utilization continued to steadily increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that they believed the growth is appropriate due to changes in treatment and medication for psoriasis. However, due to the continued growth, the RAW recommended, and the RUC agreed, that CPT codes 96920, 96921 and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting.

In April 2022, CPT codes 96920-96922 were referred to the CPT Editorial Panel for editorial review. Since the CPT descriptor was established in 2002, psoriasis was the only approved indication and use for this treatment modality. The specialty societies stated the indications had expanded beyond those noted in the code descriptors to include laser treatment for other inflammatory skin disorders. At the September 2022 CPT meeting, the tab was withdrawn when it was determined that the specialties' proposed changes were beyond editorial. This issue was deferred to the February 2023 CPT meeting and subsequently withdrawn as it was determined that existing literature was insufficient and did not support expanded indications at that time.

The presenters described the recent history of this code set and its route back to the RUC. This issue was surveyed for the April 2023 RUC meeting, without any revisions to the code descriptors, since the available 2021 Medicare data indicated that the typical patient was being treated for psoriasis (96920, psoriasis = 79.3%). At the April 2023 meeting, the RUC voted to recommend an editorial change to CPT to add “(ie, excimer)” after “Laser treatment” for clarity in codes 96920-96922. The codes were also flagged as “Do Not Use to Validate for Physician Work” as the times were not representative. At the May 2023 CPT Editorial Panel meeting, the CPT Executive Committee voted to editorially revise the code family parent code 96920 to align with the intended use of these services exclusively for psoriasis using an “Excimer” laser. These editorial revisions for the CPT 2024 code set did not involve a change in physician work. However, despite a CPT Assistant article, concern resulted from the addition of the term “excimer” to the descriptor for those using other types of appropriate ultraviolet lasers. Subsequently, at the February 2025 CPT Editorial Panel meeting, the codes were further revised to remove “Excimer” from the code descriptor and specify the wavelengths for other lasers that treat psoriasis that are not excimer lasers.

In preparation for the April 2025 RUC meeting, the specialty society submitted a letter to the RUC that detailed the revisions to the code family (removing “excimer” and specifying a wavelength range for treatment “308-312 nanometers”) and stated that the specialty considers these updates

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

! = New code s = Revised code : = Add-on code H = Modifier 51 exempt * = Telemedicine X = Audio-only ~ = FDA approval pending # = Resequenced code f = Family Code e = Editorial D = Deleted

editorial in nature. The typical patient, typical laser equipment, typical treatment procedure, and its associated work are unchanged. The specialty explained that an excimer laser delivers UV light energy within the range specified by the revised code descriptors and, while it is not the only laser that may be used in the phototherapy treatment of psoriasis, it is still the typical device. The excimer laser is the dominant laser with about 85% share of the ultraviolet lasers currently in use.

The specialty society also acknowledged that the code family will return to the CPT Editorial Panel in May 2025 with a new code change application (CCA) proposing to expand the laser codes beyond the treatment of psoriasis to include other inflammatory skin disorders. If approved by the CPT Editorial Panel, a RUC survey will be required to evaluate physician work and practice expense for any expanded indications. For these reasons, the specialty society requested that the RUC affirm the current values and CMS inputs for CPT codes 96920-96922.

Upon consideration at the April 2025 RUC meeting, the RUC concurred that the code descriptor changes since the laser codes were last reviewed in 2023 are editorial in nature. Furthermore, a new CCA is being considered by the CPT Editorial Panel with expanded indications that will require a RUC survey. In addition, it was noted that the codes are included in the “Do not use to validate physician work” screen that will also require resurvey for the September 2025 RUC meeting.

The RUC agreed with the specialty society’s request to affirm the current CMS values for CPT codes 96920, 96921 and 96922. **The RUC concurs that the current CMS values be maintained and therefore recommends a work RVU of 0.83 for CPT code 96920, 0.90 for CPT code 96921, and 1.15 for CPT code 96922.**

Practice Expense

The specialty society requested that the Practice Expense (PE) Subcommittee affirm the current CMS inputs for CPT codes 96920, 96921 and 96922 as the code descriptor revisions do not change the current work or PE inputs. The American Academy of Dermatology Association confirmed that the excimer laser remains the typical equipment used for the code family. It was acknowledged that CMS did not accept the change in business model for excimer lasers to a per-use rental (subscription model), as recommended at the April 2023 RUC meeting, since the equipment item EQ161 *laser, excimer* is available for purchase and already accounted for under its equipment methodology. The PE Subcommittee agreed to maintain the direct practice inputs without modification. **The RUC recommends the current CMS direct practice expense inputs be maintained as affirmed by the Practice Expense Subcommittee.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine Special Dermatological Procedures				
▲96920	G1	~~Excimer Laser treatment, 308-312 nanometer wavelengths, for psoriasis; total area less than 250 sq cm~~	000	0.83 (No Change) (2025 Work RVU = 0.83)
▲96921	G2	250 sq cm to 500 sq cm	000	0.90 (No Change) (2025 Work RVU = 0.90)
▲96922	G3	over 500 sq cm (For laser destruction of premalignant lesions, see 17000-17004) (For laser destruction of cutaneous vascular proliferative lesions, see 17106-17108) (For laser destruction of benign lesions, see 17110-17111) (For laser destruction of malignant lesions, see 17260-17286)	000	1.15 (No Change) (2025 Work RVU = 1.15)

RE: Tab 10 – Laser Treatment for Psoriasis AADA Recommendations

Dear Dr. Silva,

In February 2025, the CPT Editorial Panel approved minor revisions to the descriptors for CPT codes 96920, 96921, and 96922, which describe laser treatment for psoriasis. These revisions removed “excimer” and specified a wavelength range for treatment (308-312 nanometers).

The American Academy of Dermatology Association (AADA) considers these updates editorial in nature, as confirmed by AMA CPT staff. The procedure itself remains unchanged, and the revised descriptors continue to accurately reflect the typical physician work and practice expense (PE) inputs for these services. We recommend that the RUC reaffirm the current values and CMS inputs for CPT codes 96920, 96921, and 96922.

Background

These laser codes were most recently reviewed by the RUC in April 2023. At that time, the AADA received approval to conduct a targeted survey using vendor-supplied lists as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment. AADA reached out to the only two manufacturers, Strata (XTRAC) and LASEROPTEK Americas (PALLAS). The XTRAC laser is an excimer laser that delivers a focused, high-intensity ultraviolet B (UVB) laser beam at 308nm. The PALLAS laser is a non-excimer solid-state UVB laser operating at 311nm.

Strata held the majority of the market, providing 225 names, while LASEROPTEK Americas provided 25 names—all were surveyed. At the April 2023 RUC meeting, AADA recommended, and the RUC approved, physician work and PE inputs based on the typical device, the excimer laser.

After the tab passed, the RUC voted to recommend an editorial change to CPT to add a parenthetical, “(i.e., excimer)” to the code descriptors, indicating that the recommendation was made for clarity.

In May 2023, the CPT Executive Committee recommended broader editorial revisions to the code descriptors for 96920-96922, adding the term “excimer,” not as a parenthetical, and removing both the term “inflammatory skin disease” and the parenthetical around the term “psoriasis.” At the time, the AADA submitted a letter to the CPT Executive Committee disagreeing with the changes as they were brought forward. The CPT Editorial Panel ultimately approved these changes as a technical correction for the CPT 2024 code set.

Despite publication of a *CPT Assistant* article, the aforementioned changes to the code descriptor, particularly the inclusion of the term “excimer”, created confusion. As a result, the AADA was advised by the AMA CPT leadership team to submit an editorial code change application (CCA) for the February 2025 CPT Panel meeting requesting removal of the term “excimer” from the code descriptors. AMA CPT staff indicated that:

“Since there are only two players in this space and the device costs are equivalent, removing the term ‘Excimer’ should clear up the confusion. We could then work to handle the CPT Assistant Q&A to clarify that the laser can be generated by either pulsed gas or crystal. It’s unlikely that any new RUC work would need to be done since the typical patient would remain the same.”

In February 2025, the CPT Editorial Panel approved the following changes the descriptors for CPT codes 96920, 96921, and 96922, effective for CPT 2027:

- ▲ 96920 ~~Excimer~~ Laser treatment, 308-312 nanometer wavelengths, for psoriasis; total area less than 250 sq cm
- ▲ 96921 250 sq cm to 500 sq cm
- ▲ 96922 over 500 sq cm

Recommendations Rationale

The AADA maintains that the February 2025 revisions to the CPT descriptors for the laser treatment of psoriasis codes are editorial and do not change the current values, physician work, or PE associated with CPT codes 96920, 96921, and 96922. The excimer UV laser—used to value these codes in April 2023—remains the typical device for these services. Excimer lasers deliver UV light energy within the range specified by the revised code descriptor and, while it is not the only laser that may be used in the phototherapy treatment of psoriasis, it is still the typical device.

Although “excimer” is not a trade name, the term refers to a specific type of laser technology. CPT codes are typically crafted to be product-agnostic and not device-specific; therefore, the February 2025 CPT

changes, specifically the removal of “excimer,” appear to be consistent with AMA CPT’s conventions for code descriptor language.

The AADA acknowledges that CMS did not accept the RUC-recommended work relative values for CPT codes 96920, 96921, and 96922. Further, while the RUC recommended that the typical business model for excimer lasers is a per-use rental (subscription model), CMS stated that a rental, subscription, or per-use fee for equipment that is still available for purchase and already accounted for under its equipment methodology is not appropriate, particularly given its impact on direct PE costs for these CPT codes.¹ Indeed, CMS has historically considered rental and licensing fees as indirect PE under its methodology.

That said, CMS did recognize the excimer laser as the typical device and, while the agency did not accept the subscription model, CMS did indicate that the “excimer laser is appropriately and adequately accounted for in the equipment formula, which accounts for years of useful life, utilization rate, purchase price, interest rate, maintenance, and minutes per year of use”.¹

The AADA believes that resurveying these codes now would be premature. Since the April 2023 RUC review, there have been no changes in the physician work or technology that would warrant a rereview by the RUC at this time.

Additionally, there are new efforts to broaden the scope of these codes beyond their current indications. An industry-led CCA was submitted for the May 2025 CPT Editorial Panel Meeting, proposing to expand these codes beyond psoriasis to include additional inflammatory skin conditions, such as vitiligo, atopic dermatitis, and alopecia areata. If these changes are approved by CPT, a RUC resurvey would be required to evaluate physician work and PE for any expanded indications.

The AADA maintains that the February 2025 revisions to the code descriptors for 96920, 96921, and 96922 are editorial and do not change the current physician work or PE inputs. Further, given the industry-led CCA under review for the May 2025 CPT Editorial Panel Meeting, the AADA believes a resurvey is premature.

For the reasons stated, the AADA respectfully requests the RUC reaffirm the current values and CMS inputs for CPT codes 96920, 96921, and 96922.

Sincerely,

Howard Rogers, MD, PhD
AADA RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
****High Volume Growth****

April 2023

Laser Treatment-Skin – Tab 08

In October 2015, CPT codes 96920, 96921 and 96922 were identified via the high-volume growth screen with Medicare utilization of 10,000 or more that increased by at least 100% from 2008 through 2013. At that time, the RUC recommended that the specialty societies develop a CPT Assistant article to ensure the codes were being used correctly which was published in September 2016. This was the third article created for this code set, with articles also published in June 2012 and May 2013.

In January 2022, the Relativity Assessment Workgroup reviewed these services again noting that their utilization continues to steadily increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that they believed the growth is appropriate due to changes in treatment and medication for psoriasis. However, due to the continued growth, the Workgroup recommended, and the RUC agreed, that CPT codes 96920, 96921 and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting.

In April 2022, the specialty societies indicated, and the RUC agreed, that CPT codes 96920-96922 be referred to the CPT Editorial Panel for editorial review at the September 2022 CPT meeting. Since the CPT descriptor was established in 2002, psoriasis is the only approved indication and use for this treatment modality. Although, the specialty societies have noted that the indications have expanded beyond what is currently noted in the code descriptors to include laser treatment for other inflammatory skin disorders such as vitiligo, atopic dermatitis, alopecia areata, etc. This issue was deferred to the February 2023 CPT meeting to complete the full CCA and submit literature supporting excimer laser treatment for other inflammatory skin disorders as the changes were deemed more than editorial given that expanded indications would change the physician work. This issue was subsequently withdrawn from the February 2023 CPT Editorial Panel meeting agenda as it was determined that existing literature was insufficient and did not support expanded indications at this time. Thus, this issue was surveyed for the April 2023 RUC meeting, without any revisions to code descriptors, since the available 2021 Medicare data indicates that the typical patient is being treated for psoriasis (96920, psoriasis = 79.3%).

The RUC expressed concern with the survey that the times have decreased and there was not a proportionate decrease in work. However, there have been multiple reviews of this code set, and the valuation of the codes is currently based on the original valuation over two decades ago in 2002, where the time was *lower* than what is in the database now. Subsequent review in 2012 adopted new survey times while maintaining the work value from 2002 for CPT codes 96920 and 96922. For both the parent code 96920 and the code 96922 with the largest treatment area, the total RVUs have not changed since first implemented more than 20 years ago. *Thus, the current value is based on a lower time than the time in the database currently* (please see the table below).

	2002 Intra Time	2002 Total Time	2002 RUC Rec.	2002 CMS RVU	2012 Intra Time	2012 Total Time	2012 RUC Rec.	2012 CMS RVU	Current Intra Time	Current Total Time	Current CMS RVU
96920	17	27	1.15	1.15	23	37	1.15	1.15	23	35	1.15
96921	20	30	1.17	1.17	30	42	1.30	1.30	30	42	1.30
96922	30	40	2.10	2.10	45	57	2.10	2.10	45	57	2.10

96920 Excimer laser treatment for psoriasis; total area less than 250 sq cm

The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and concurred that the survey respondents overvalued the service. The RUC determined that changes in intra-service and total time for the procedure warranted a direct work RVU crosswalk to CPT code 20606 *Arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.00, 10 minutes intra-service time, and 27 minutes total time) which falls below the survey 25th percentile and has identical intra-service time that appropriately accounts for the physician work involved in this service. The RUC noted that code 20606, when compared to fifteen recently RUC-reviewed 000-day global codes with the same intra-service time and similar total time, the crosswalk value of 1.00 falls in the middle of the range in terms of work RVUs. The RUC recommends 10 minutes of pre-service time, 10 minutes of intra-service time, 3 minutes of post-service time, and 23 minutes total time as supported by the survey.

To justify the crosswalk value, the RUC compared the surveyed code to MPC codes 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07, 12 minutes intra-service time, and 24 minutes total time) and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10, 10 minutes intra-service time, and 24 minutes total time) and noted that both comparator codes involve similar intra-service time and slightly more physician work.

For additional support, the RUC compared the surveyed code to MPC codes 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84, 10 minutes intra-service time, and 22 minutes total time) and 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 10 minutes intra-service time, and 27 minutes total time) and noted that the multi-specialty points of comparison values have the same intra-service time and appropriately bracket the recommendation. The RUC concluded that CPT code 96920 should be valued based on a direct work RVU crosswalk to CPT code 20606 which falls below the 25th percentile as supported by the survey. **The RUC recommends a work RVU of 1.00 for CPT code 96920.**

96921 Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm

The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and concurred that the survey respondents overvalued the service. The RUC determined that changes in intra-service and total time for the procedure warranted a direct work RVU crosswalk to CPT code 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07, 12 minutes intra-service time and 24 minutes total time) which falls below the survey 25th percentile and has identical intra-service time that appropriately accounts for the physician work involved in this service. The RUC noted that, crosswalk code 12011,

when compared to four recently RUC-reviewed 000-day global codes with the same intra-service time and similar total time, the crosswalk value of 1.07 falls in the middle of the range in terms of work RVUs. The recommendation also provides for a stepwise progression of the procedure based on the size of the wound or lesion. The RUC recommends 10 minutes of pre-service time, 12 minutes of intra-service time, 3 minutes of post-service time, and a total time of 25 minutes as supported by the survey.

To justify the crosswalk value, the RUC compared the surveyed code to MPC codes 11980 *Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)* (work RVU = 1.10, 12 minutes intra-service time and 27 minutes total time) and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10, 10 minutes intra-service time and 24 minutes total time) and noted that both MPC codes involve similar intra-service time and slightly more physician work.

For additional support, the RUC compared the surveyed code to MPC codes 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.00, 7 minutes intra-service time and 17 minutes total time) and 12002 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm* (work RVU = 1.14, 15 minutes intra-service time and 27 minutes total time) and noted that the multi-specialty points of comparison values appropriately bracket the recommendation. The RUC concluded that CPT code 96921 should be valued based on a direct work RVU crosswalk to CPT code 12011 which falls below the 25th percentile as supported by the survey. **The RUC recommends a work RVU of 1.07 for CPT code 96921.**

96922 Excimer laser treatment for psoriasis; over 500 sq cm

The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and determined that the survey 25th percentile work RVU of 1.32 appropriately accounts for the physician work involved in this service. The RUC agreed that the current value would be inappropriate given the decrease in survey time. However, the work associated with this service has not changed since it was last surveyed. The RUC recommends 10 minutes of pre-service time, 18 minutes of intra-service time, 3 minutes of post-service time, and 31 minutes total time as supported by the survey. It was noted that much of the resetting and re-prepping is intra-service time as indicated in the description of the work. Typically, seven sites are treated, requiring repeated prep, and draping after the procedure is underway.

To justify a work RVU of 1.32, the RUC compared CPT code 96922 to the top key reference service code 12007 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); over 30.0 cm* (work RVU = 2.90, 35 minutes intra-service time and 54 minutes total time) and noted that the intra-service time is nearly twice that of the surveyed code and intensity is more justifying a higher value. The RUC also compared CPT code 96922 to MPC code 12004 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm* (work RVU = 1.44, 17 minutes intra-service time and 29 minutes total time) and noted that the surveyed code involves similar intra-service time and slightly less physician work. For additional support, the RUC compared CPT code 96922 to MPC code 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22, 15 minutes intra-service time and 27 minutes total time) and noted that the surveyed code has more intra-service and total time and is therefore valued higher than the comparator code. The RUC concluded that CPT code

96922 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation also provides a stepwise progression of the procedure based on the size of the wound or lesion. **The RUC recommends a work RVU of 1.32 for CPT code 96922.**

Practice Expense

The Practice Expense (PE) Subcommittee discussed the compelling evidence argument that there has been a notable change in the dominant practice model (eg, pay-per-use subscription-based model) since the code set was last surveyed in 2012 and, in addition, that the patient population has changed. The Subcommittee accepted compelling evidence based on “Evidence that there has been a change in equipment or practice expense cost.”

Based on acceptance of compelling evidence, the PE Subcommittee carefully considered the direct practice expense inputs including three new supply inputs for *laser, excimer, pay per use* based on size of treatment area. This piece of equipment is typically used via a subscription or a rental model. The dermatologist does not own the laser, rather the laser is placed in the dermatologist's office, and the practice buys a series of treatments. These treatments are purchased in packs of 10 and are based upon the size of the area being treated which corresponds to the three supply codes. A fourth new supply input was included for *Mupirocin 2% Topical Ointment 22 grams*. Following the laser treatment, the physician applies mupirocin to areas of blistering, erosion, and/or impending skin breakdown. The Subcommittee modified this item to reflect a per gram basis.

The PE Subcommittee made several modifications to the spreadsheet including revisions to the clinical staff minutes for CA011 *Provide education/obtain consent*, CA014 *Confirm order, protocol exam* and CA035 *Review home care instructions, coordinate visits/prescriptions*. Also, an additional pair of SB023 *gloves, non-sterile, nitrile* was added to CPT code 96922 which is typical for the larger area. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RUC Database Flag

The RUC recommends a flag for CPT codes 96920, 96921 and 96922 as “Do Not Use to Validate for Physician Work” since the times are not representative.

CPT Referral

At the April 2023 meeting, the RUC voted to recommend an editorial change to CPT to add “(ie, excimer)” after “Laser treatment” for clarity in code 96920. The CPT Executive Committee voted to further editorially revise code 96920 to align with the intended use of these services exclusively for psoriasis. These editorial revisions are for the CPT 2024 code set. The changes are editorial and do not involve a change in work.

Work Neutrality

The RUC’s recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
96920	~~Excimer laser treatment for inflammatory skin disease (psoriasis);~~ total area less than 250 sq cm	000	1.00
96921	250 sq cm to 500 sq cm	000	1.07
96922	over 500 sq cm (For laser destruction of premalignant lesions, see 17000-17004) (For laser destruction of cutaneous vascular proliferative lesions, see 17106-17108) (For laser destruction of benign lesions, see 17110-17111) (For laser destruction of malignant lesions, see 17260-17286)	000	1.32

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 96920	Tracking Number	Original Specialty Recommended RVU: 1.07
		Presented Recommended RVU: 1.00
Global Period: 000	Current Work RVU: 1.15	RUC Recommended RVU: 1.00

CPT Descriptor: Excimer laser treatment for psoriasis; total area less than 250 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has still less than 250 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further (unwanted UV exposure) and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023				
Presenter(s):	Alice Gottlieb, MD, FAAD, Alexandra Flamm, MD, FAAD, Howard Rogers, MD, FAAD, Alina Bridges, MD, FAAD				
Specialty Society(ies):	American Academy of Dermatology Association (AADA)				
CPT Code:	96920				
Sample Size:	250	Resp N:	41		
Description of Sample:	The AADA used a targeted vendor survey approach, which was approved by the Research Subcommittee. We inquired and received vendor lists from the 2 manufacturers of the excimer laser. A total of 250 surveys went out to all names provided - 225 from one manufacturer and 25 from the other.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In 2008, CPT codes 96920, 98921, and 96922, excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, Unlisted special dermatological service or procedure, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022))), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation

The expert panel reviewed the survey data. We acknowledge the decrease in intraservice time from the survey. However, our expert panel, which includes psoriasis experts who have frequently performed this procedure for many years, felt that the time and work associated with this code has not changed since it was last surveyed. Additionally, the survey

respondents clearly indicated relative stability in the work from current values for this code. That being said, it was felt that both the current values and the 25th percentile would be inappropriate given the decrease in survey time.

Therefore, the expert panel recommends a crosswalk from CPT code 20606, which has a wRVU of 1.00. This is under the 25th percentile survey value of 1.11 and the current wRVU of 1.15.

CPT code 20606 describes arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting. This code has the exact same intraservice time as our median data at 10 minutes and a similar total time at 27 minutes. This code was last valued in 2014 by the RUC based on survey data and is also a 0 day global.

It was felt that this crosswalk would maintain relativity well when compared to other codes with similar times. On a RUC database review of 0 day global codes valued since 2010 with the same intraservice time and similar total times (between 22 and 24 minutes), the proposed value of 1.00 would fall within range of the resulting RVWs values, and would not be the most highly valued code within this grouping.

Key Reference Service

The most chosen reference codes by survey participants are common dermatologic procedures.

- **96574** Debridement of premalignant hyperkeratotic lesion(s) (ie, targeted curettage, abrasion) followed with photodynamic therapy by external application of light to destroy premalignant lesions of the skin and adjacent mucosa with application and illumination /activation of photosensitizing drug(s) provided by a physician or other qualified healthcare professional, per day
- **12005** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 12.6 cm to 20.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 17% and 12% respectively, and therefore the society was not confident these were representative for comparison.

MPC Codes

Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96920*	Excimer laser treatment for psoriasis; total area less than 250 sq cm	1.15	35	7	23	5
96920**	Excimer laser treatment for psoriasis; total area less than 250 sq cm	1.00	23	10	10	3
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	0.84	22	7	10	5
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	27	12	10	5

*Current

**Recommendation

Summary

In summary, our expert panel recommends using the survey median intraservice work of 10 minutes, and crosswalking the wRVU values from CPT code 20606, as the surveyed wRVU for 96920 was similar at the 25th percentile (1.11) and higher at the median (1.45) to current values, but the times indicated were less.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96920

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 176000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 176000 Percentage 0.76 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 88,673 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This rationale is based on the 2021 Medicare utilization rates for the year 2021.

Specialty Dermatology Frequency 88673 Percentage 76.50 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Skin

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96920

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

		Presented Recommended RVU: 1.07
Global Period: 000	Current Work RVU: 1.30	RUC Recommended RVU: 1.07

CPT Descriptor: Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has between 250 sq cm and 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further (unwanted UV exposure) and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In 2008, CPT codes 96920, 98921, and 96922, Excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC

meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, Unlisted special dermatological service or procedure, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation

The expert panel reviewed the survey data. It was felt that both the current values and the 25th percentile would be inappropriate given the decrease in survey time. However, our expert panel, which included work experts who frequently perform this procedure, felt that the work associated with this code has not changed it was last surveyed. It was also noted that the request for survey arose from a utilization screen as opposed to other mechanisms. Additionally, the survey respondents indicated relative stability in the RVUs, as per the survey data.

Therefore, the expert panel recommends a crosswalk from CPT code 12011, which has a wRVU of 1.07. This is under the 25th percentile survey value of 1.25 and the current wRVU of 1.30.

CPT code 12011 describes a simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less. 12011 has the same intraservice time, at 12 minutes, a similar total time, at 24 minutes, to the surveyed time for 96921. This code was last valued in April 2010 by the RUC based on survey data. This code is additionally an MPC code.

It was felt that this crosswalk would maintain relativity well when compared to other codes with similar times. On a RUC database review of 0-day global codes valued since 2010 with the same intraservice time and similar total times (between 23 and 27 minutes), the proposed value of 1.07 would fall within range of the resulting RVW's values, and would not be the most highly valued code within this grouping.

Key Reference Service

The most chosen reference codes by survey participants are common dermatologic procedures.

- **12006** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 20.1cm to 30.0cm
- **11308** Shaving of epidermal or dermal lesion, single lesion, scalp, neck, hands, feet, genitalia; lesion diameter over 2.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 14% and 12% respectively, and therefore the society was not confident these were representative for comparison.

MPC Codes

Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96921*	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	1.30	42	7	30	5
96921**	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	1.07	25	10	12	3
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	1.00	17	7	7	3
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	24	12	7	5
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	1.14	27	7	15	5

*Current

**Recommendations

Summary

In summary, our expert panel recommends using the survey median intraservice work of 12 minutes, and crosswalking the wRVU values from CPT code 12011, as the surveyed wRVU for 96921 was similar at the 25th percentile (1.25) and higher at the median (1.57) to current values, but the times indicated were less.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96921

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50,848

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 50848 Percentage 78.30 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,424 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2021 Medicare utilization rate.

Specialty Dermatology Frequency 25424 Percentage 78.30 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Skin

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96921

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

SUMMARY OF RECOMMENDATION**

CPT Code: 96922	Tracking Number	Original Specialty Recommended RVU: 1.57
		Presented Recommended RVU: 1.32
Global Period: 000	Current Work RVU: 2.10	RUC Recommended RVU: 1.32

CPT Descriptor: Excimer laser treatment for psoriasis; over 500 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has more than 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further unwanted UV exposure and potential redness after treatment.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In 2008, CPT codes 96920, 98921, and 96922, excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC

meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, *Unlisted special dermatological service or procedure*, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022))), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation

The expert panel reviewed the survey data. It was felt that the current value would be inappropriate given the decrease in survey time. Our expert panel, which included work experts who frequently perform this procedure, felt that the work associated with this code has not changed it was last surveyed. It was also noted that the request for survey arose from a utilization screen as opposed to other mechanisms. However, in contrast to the other codes in this family, the RVW data for 96922 decreased similarly to the time.

Therefore, the expert panel recommends the 25th percentile, with a wRVU of 1.32. This would represent a decrease from current value of 2.10.

Key Reference Service

The most chosen reference codes by survey participants are common dermatologic procedures.

- **12007** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); over 30.0 cm
- **12018** Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; over 30.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 17.5% and 17.5% respectively, and therefore society was not confident these were representative for comparison.

MPC Codes

Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96922*	Excimer laser treatment for psoriasis; over 500 sq cm	2.10	57	7	45	5
96922**	Excimer laser treatment for psoriasis; over 500 sq cm	1.32	31	10	18	3
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	1.22	27	7	15	5
12004	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm	1.44	29	7	17	5

*Current

**Recommendation

Summary

In summary, our expert panel recommends using the survey median intraservice work of 18 minutes, and recommending the 25th percentile of wRVU data at 1.37, which would align with the noted decreases in time within the survey data and still maintain relativity within the code family.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96922

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 28048

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 28048 Percentage 82 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 14,024 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This rationale is based on the 2021 Medicare utilization rates for the year 2021

Specialty Dermatology Frequency 14024 Percentage 82.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
NA

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96922

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

ISSUE: Laser Therapy Codes 96920-96922
TAB: 8

[illegible][illegible][illegible]

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: April 2023

CPT Code	Long Descriptor	Global Period
96920	Excimer laser treatment for psoriasis; total area less than 250 sq cm	000
96921	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	000
96922	Excimer laser treatment for psoriasis; over 500 sq cm	000

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
96920	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has still less than 250 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.
96921	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has between 250 sq cm and 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.
96922	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has more than 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Subject Matter Experts who perform this procedure as routine reviewed current PE inputs and modified them to reflect current practice.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

N/A

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

Is this code(s) typically reported with the E/M service in the nonfacility?

This code is not typically reported with an E/M service in any setting.

See the *Billed Together* tab in the RUC Database.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Dermatology dominates the reporting in all settings with 76.7% of all billing for this service in the non-facility setting and 76.5% in all sites.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The society is requesting an increase in practice expense. Since surveying the code last in 2012, the business model for the excimer laser has changed. The primary company for the excimer laser, STRATA, which controls the majority of the market of the lasers in the United States, has provided evidence that the purchase model is no longer dominant. They have presented an attestation stating that the majority of their business model is through the partnership program (eg, subscription-based model) that is a pay-per-use. The current equipment cost represents outdated data and a flawed methodology.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are recommending an addition of 2 mins for positioning given the need for multiple repositionings to access areas to be treated that need to have EMLA applied before the procedure begins.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Previously 5 minutes, maintain current.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

Room preparation is completed including turning on the FDA approved excimer laser (308 nm) as it takes time to warm up. The patient is greeted by clinical staff, brought to treatment room and provided with a gown. Clinical staff ensures appropriate medical records are available. The clinical staff obtains vital signs including temperature, respiratory rate, BP and pulse. Clinical staff reviews the treatment procedure with the patient, obtains patient consent and confirms the order. Once the patient is gowned, photos are obtained of the treatment areas. EMLA cream is applied to pre-determined areas prone to pain or burning. The patient is positioned by the clinical staff to allow for ease of initial treatment.

b. Service period (includes pre, intra and post):

The clinical staff is present with the physician and actively assists the physician throughout the procedure. The clinical staff ensures the patient is wearing the required UV goggles throughout the treatment. The physician and clinical staff also wear UV goggles. Face shields are worn by physician and clinical staff to prevent any splashing due to mineral oil or other ointments. Clinical staff assists the physician with patient re-positioning the patient throughout the entire treatment, holding any body parts to ease access (including holding skin folds back), shifting or replacing and taping the fenestrated

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

drapes, as well as applying necessary topical agents throughout the procedure. Clinical staff applies ice packs to previously treated areas where there is discomfort. During the procedure the clinical staff and physician will change gloves as needed due to the use of mineral oil and other ointments.

c. Post-service period:

The clinical staff provides disposable towels for the patient to clean off excess mineral oil and ointments. The patient is monitored by clinical staff in the room and the treated areas are checked for any redness, burns or other reactions. Clinical staff applies mupirocin 2% topical ointment and sunscreen to areas as directed by the physician. Instructions are given to the patient regarding home care, including any special attention a treated area may need. The clinical staff clean the treatment room and carefully clean the laser. The clinical staff will remind the patient when to return for the next treatment and answer any questions the patient presents.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time*:

Assist physician as noted above in 10b

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

On line 129, 130, and 131, we added the laser, excimer, pay per use based on size of treatment area. This piece of equipment is typically used via a subscription or a rental model. The dermatologist does not own the laser, rather the laser is placed in the dermatologist's office, and the practice buys a series

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

of treatments. These treatments are purchased generally in packs of 10 and are based upon the size of the area being treated which corresponds to the 3 codes. We have included a paid invoice as well as a usage agreement from the manufacturer.

On line 132 we added Mupirocin 2% Topical Ointment 22 grams. Following the laser treatment, the physician applies mupirocin to areas of blistering, erosion, and/or impending skin breakdown. An invoice is attached.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

Yes -SA048

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	SA048	pack		5.02
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
 - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected "other formula" for any of the equipment, please explain here:

CMS Code	Useful Life	Price	Utilization Rate	Min/Year	Cost/Year
EQ168 light, exam	10	1232.887	0.5	150000	0.003271745
EF031 table, power	10	5906.76	0.5	150000	0.015674926
ED005 camera, digital system, 12 megapixel (medical grade)	5	5607.182	0.5	150000	0.022216755

The EQ168 light is used during pre-, intra and post-service time and thus tied to the entire clinical staff time (line 10). The light allows the clinical staff and physician to easily identify the plaques as well as take well-lit photos. The light is also used during the procedure to illuminate the treatment areas to allow the physician to achieve optimal results and minimize potential risks that may occur. During post-service the light is on to allow the physician and clinical staff to identify any areas of concern and allow for ease to apply any ointments.

The EF031 table, power is used for the entirety of the procedure and tied to the entire clinical staff time (line 10).

The ED005 camera is used to capture images of the patient's lesions in pre-service time as part of the initial 2 minutes for set-up of the procedure (CA016). The photos are used by the physician to track the course of treatment and clearance of lesions over time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: High Volume Growth

April 2025

Stereotactic Computer-Assisted Volumetric Navigational Procedures – Tab 11

In April 2024, CPT code 61783 was identified by the Relativity Assessment Workgroup (RAW) via the high-volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. In January 2025, the RAW reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010, and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for April 2025.

In October 2008, CPT code 61795 *Stereotactic computer-assisted volumetric (navigational) procedure, intracranial, extracranial, or spinal* (2008 work RVU = 4.03) was identified for potential misvaluation through the CMS Fastest Growing Screen. The RUC and the specialty societies determined that the work and technology related to intracranial, extracranial and spinal procedures may be different. Thus, the specialty societies submitted a code change application to the CPT Editorial Panel. At the October 2009 CPT Editorial Panel meeting, CPT code 61795 was deleted, and three new codes (61781, 61782 and 61783) were created to separately report cranial intradural, cranial extradural and spinal stereotactic computer-assisted volumetric procedures respectively. CPT codes 61781, 61782 and 61783 were reviewed at the February 2010 RUC meeting for publication in CPT 2011. CPT codes 61781 and 61783 were valued the same at 3.75 work RVUs and 61782 was valued at 3.18 work RVUs.

Based on 2023 Medicare utilization, CPT code 61781 is performed by neurosurgery (97%), CPT code 61783 is performed by neurosurgery (67%) and orthopaedic surgery (32%) and 61782 is performed by otolaryngology (98%). No specialty society interest was submitted to survey code 61781, and there is no recommendation. Otolaryngology surveyed code 61782 and neurosurgery, orthopaedic surgery and spine surgery surveyed code 61783.

Family of Services

The specialty societies indicated that CPT codes 61781, 61782 and 61783 are not a family of services as they are reported with distinctly different procedures and should not have been placed for convenience together in the Nervous System/ Skull, Meninges, and Brain/Stereotaxis subsection of CPT. The specialty societies believe that it was not correct to maintain all three codes together in the Nervous System section as established. Specifically, there is a Spine and Spinal Column/Stereotaxis subsection under the Nervous System subsection where code 61783 could have been located, or it could also have been placed in the Musculoskeletal System/Spine subsection. The specialty societies also question whether 61782 is correctly placed in the Nervous System section instead of in the Musculoskeletal System/Head subsection, closer to the procedures that 61782 is typically reported.

The RUC noted that these three services were valued together initially and the valuation for codes 61781 and 61783 is the same and is based on the same methodology. The RUC is concerned that a possible rank order anomaly may occur if valued separately. **The RUC disagrees with the specialty societies and recommends that 61781 be surveyed with 61782 and 61783 for September 2025.**

ZZZ Survey Template

CPT codes 61781, 61782 and 61783 were all surveyed for pre- and post-service time in 2010, and each included 15 minutes of pre-service time. CPT codes 61782 and 61783 were surveyed this time with the standard ZZZ survey template, which specifies the ZZZ global period as a *code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre-and post-service time)* and only asks for the day of procedure intra-service time. In rare circumstances, specialties may provide justification and request that a ZZZ survey with pre- and post-service time be conducted. The specialty societies are requesting to resurvey these services with the pre/post ZZZ survey template.

The specialties indicated that they believe the pre-service time that was captured in the 2010 valuation remains an integral part of this work for these services. Pre-service time is essential and inseparable from these services. For CPT code 61782, this work includes critical, physician-performed tasks directly related to the implementation and use of stereotactic computer navigation. These include an in-depth discussion with the patient about the rationale for the navigation system, its role in enhancing surgical precision, and its implications for surgical complexity and duration. This is particularly relevant in cases involving altered anatomy or proximity to critical structures. In addition, the surgeon must initiate, configure, and verify the navigation system, including hardware setup, image review in multiple planes, software validation, and procedural planning based on the individual patient's anatomy and pathology. These are non-delegable, case-specific activities that are essential to the safe and effective use of this advanced technology and therefore justify discrete pre-service time beyond what is included in the base code.

For 61783, this work includes critical, physician-only tasks that cannot be delegated, such as consulting with the patient about the placement of an additional tracker for spinal navigation, segmenting spinal levels, planning pedicle trajectories, and positioning the navigation system, all of which are fundamental to the success of the procedure and must be completed before sterile draping.

The RUC determined that the specialty societies may survey 61781, 61782 and 61783 with the amended ZZZ survey template that specifically asks the respondent whether pre- and post-service time is associated with these add-on services.

61781 Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)

No specialty society interest was submitted to survey code 61781, and there is no recommendation. **No RUC recommendation is submitted for CPT code 61781. The RUC recommends 61781 be surveyed with 61782 and 61783 for September 2025.**

61782 Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 141 otolaryngologists and determined that the survey 25th percentile work RVU of 2.50 appropriately accounts for the work required to perform this service based on the current survey. The RUC recommends interim times of 0 minutes pre-service time and 20 minutes intra-service time, totaling 20 minutes. The specialty societies did not survey for pre-service time and have requested to resurvey with an amended survey instrument, specifically asking if separate pre-service time from the base code occurs for this service. The RUC recommends an interim work RVU of 2.50 and resurvey for September 2025.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code S=Revised code :=Add-on code H=Modifier 51 exempt * =Telemedicine X=Audio-only ~ =FDA approval pending # =Resequenced code f =Family Code e =Editorial D =Deleted

The RUC compared the surveyed code to the top key reference code 19294 *Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure)* (work RVU = 3.00, 40 minutes intra-service time and total time) and determined the surveyed code requires much less physician work and time and thus is appropriately valued lower. The RUC noted that if the surveyed code had pre-time, code 19294 is a comparable service.

For additional support, the RUC referenced code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time and 32 minutes total time), which requires more time, but the surveyed code is somewhat more intense and complex to perform. **The RUC recommends an interim work RVU of 2.50 for CPT code 61782 and resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

61783 Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 146 neurosurgeons, orthopaedic surgeons and spine surgeons, and determined the survey 25th percentile work RVU of 3.50 and 30 minutes of intra-service and total time are appropriate based on the current survey. The specialty societies requested to resurvey CPT code 61783, using the specific ZZZ survey template with pre/post-service time.

The RUC compared the surveyed code to the second top key reference service 61797 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure)* (work RVU = 3.48, 30 minutes intra-service and total time) and determined that these services both require the same physician work and time, thus are valued similarly.

For additional support the RUC referenced code 67335 *Placement of adjustable suture(s) during strabismus surgery, including postoperative adjustment(s) of suture(s) (List separately in addition to code for specific strabismus surgery)* (work RVU = 3.23, 30 minutes intra-service time and total time), which requires similar physician work and time. **The RUC recommends an interim value of 3.50 for CPT code 61783 and resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for CPT code 61782 and made a single modification. Invoices were submitted for three new supplies: *single use instrumentation wire, patient tracker* and *adhesive pad*. The Subcommittee amended the patient tracker inputs to correct the price of the new supply item since it is available in a 5-pack, and the adhesive in a 10-pack, but only one of each is used. The specialty societies also recommended four new equipment items: *navigation system, pointer shell universal mounts, medical cart without monitor* and *registration pointer*. The RUC noted the equipment *service contract standard* was not included because maintenance such as a service contract is already included in the calculation of the cost per minute. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RE: Tab 11, Stereotactic Computer-Assisted Volumetric Navigational Procedures

Dear Dr. Silva,

The AANS, CNS, NASS, AAOS, and ISASS are requesting to maintain the current work RVU and times for code 61783, and to resurvey for the September 2025 RUC meeting with a ZZZ global survey tool that allows reporting of intraservice time and pre/postservice time if applicable, consistent with the definition of a ZZZ code. Below we provide a detailed rationale for this request.

We also provide below a rationale as to why codes 61781, 61782, and 61783 are not family codes and further why there are not any family codes related to code 61783.

- **Rationale for Resurvey of 61783**

The standard ZZZ-global survey was used in 2009 to survey code 61783. The 2009 survey tool correctly defined a ZZZ-global code as: *"Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)."* The survey included the ability for the survey respondent to indicate "preservice time (if applicable); intra-service time (skin-to-skin); and immediate post-service time (if applicable)." The 2009 survey of 61783 resulted in a median survey preservice time of 30 minutes. The specialty expert panel indicated the survey respondents overestimated the preservice time, however, the expert panel provided a rationale that there is (conservatively) an additional 15 minutes of preservice work as described in the SOR.

The RUC agreed with an additional 15 minutes of preservice work separate from the work that occurs during the skin-to-skin portion of the index procedure.

The current standard ZZZ-global code survey still defines the global as *"Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)."* However, even though the definition indicates there could be pre- and post-service time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice (skin-to-skin) time of 30 minutes which is consistent with the intraservice time from the prior survey. However, preservice time was not

collected for the significant additional preservice work prior to the skin-to-skin component of the index procedure.

We have provided the survey results from the current survey and are **recommending the current work RVU and times be maintained until we can resurvey code 61783** using a survey instrument that includes the ability to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

In addition, below we provide a rationale for surveying only 61783 and why codes 61781, 61782, and 61783 are not "family" codes.

- **Rationale: Codes 61781, 61782, and 61783 are Not Family Codes**

Background - CPT Coding Changes (1990 and 2000)

Code 61795 was established for CPT 1990. At this time, the Harvard study was coming to a close and CMS needed to predict the time and value for the new code for the 1992 PFS. The code was not reviewed. For CPT 2000, the code was revised to add "extracranial, or spinal" to the code descriptor. The rationale for the change indicated that *add-on code 61795 was revised to update current terminology associated with stereotactic computer assisted volumetric (navigational) technology. Anatomic references were added to clarify the use of this code in addition to other intracranial, extracranial or spinal stereotactic procedures to reflect current clinical practice. Code 61795 describes computer assisted planning for stereotactic surgery. This planning includes determination of the coordinates for the target, measurement of the AC-PC line, and angle calculation. Using a computer, various trajectories are determined to assist the physician in choosing the specific trajectory and calculating the entry point through the skull.*

The revision for CPT 2000 was determined editorial and a RUC survey was not conducted. The value and time for code 61795 remained as predicted values by CMS to gap fill the fee schedule. In addition the code remained in the "Skull, Meninges, and Brain" subsection under the "Nervous System" section of CPT.

+▲61795 Stereotactic computer assisted volumetric (navigational) procedure, intracranial, extracranial, or spinal (List separately in addition to code for primary procedure)

Short Descriptor: Brain surgery using computer

Background - CPT Coding Changes (2010)

In the CY 2009 NPRM, CMS provided a list of the 114 fastest growing procedures. Code 61795 was identified on this list. The action plan provided by the AANS, CNS, NASS, and AAOHNS indicated that code 61795 growth was driven by an increase in sinus surgery utilization that involved stereotactic computer assisted navigation. The RUC determined that 61795 should be surveyed since it had never been surveyed by the RUC (or Harvard). During the effort to develop a single typical patient vignette for survey, the specialties decided instead to delete 61795 and establish separate codes to report stereotactic computer-assisted (navigational) services for cranial intradural, cranial extradural, and spinal procedures.

At the October 2009 CPT meeting, AANS and CNS submitted a code change application to establish an add-on code for cranial procedures and AAOHNS submitted a code change application to establish an add-on code for extracranial procedures:

- +●61XXX Stereotactic computer assisted (navigational) procedure; cranial (List separately in addition to code for primary procedure)
- +●6179X1 Stereotactic computer-assisted volumetric (navigational) procedure, extracranial (List separately in addition to code for primary procedure)

Research indicates that a conference call was conducted after submission of the applications because both applications were subsequently revised and resubmitted. The AANS and CNS revised application added a code for spinal procedures and the AAOHNS revised application included a note about the conference call and placement of codes in CPT:

- +●61XXX Stereotactic computer assisted (navigational) procedure; cranial (List separately in addition to code for primary procedure)
- +●61XX1 spinal
- +●6179X1 Stereotactic computer-assisted volumetric (navigational) procedure, extracranial (List separately in addition to code for primary procedure)

Note: the conference call participants felt the new code (6179X1) would best be kept located close to the code it was replacing rather than moving it to the Head section.

The CPT Panel further modified the codes prior to release of the Panel Action memo:

The Panel accepted with modification of this request to delete stereotactic radiosurgery 61795 and established three separate codes to distinguish the various anatomic regions. The Panel further modified the proposal to include 1) the word “intradural” in 6179X1; 2) the word “extradural” in 6179X2; and 3) an exclusionary parenthetical note following 6179X1 to indicate that it should not be reported in conjunction with 61270-61791, 61796-61799, 61863-61868, 62201, 77371-77373, 77432; 4) an instructional note following 6179X2 to indicate that 6179X1 and 6179X2 cannot be reported by the same provider during the same surgical session; and 5) an

instructional note following 6179X3 to preclude reporting 6179X3 in addition to 63620, 63621. A cross-reference was added directing users to report 6179X1, 6179X2, 6179X3 for deleted code 61795. Finally, the Panel requested the specialties to submit revised vignettes.

Stereotactic Radiosurgery (Cranial)

- +61795 Stereotactic computer assisted volumetric (navigational) procedure, intracranial, extracranial, or spinal (List separately in addition to code for primary procedure)
(61795 has been deleted. To report, see 6179X1, 6179X2, 6179X3)

We believe that it was not correct to maintain all three codes together in the Nervous System section as established. Specifically, there is a Spine and Spinal Column / Stereotaxis subsection under the Nervous System subsection where code 61783 could have been located, or it could also have been placed in the Musculoskeletal System / Spine subsection.. We also question whether 61782 is correctly placed in the Nervous System section instead of in the Musculoskeletal System / Head subsection, closer to the procedures that 61782 is typically reported with.

The above information supports the fact that codes 61781, 61782, and 61783 are not a "family" as they are reported with distinctly different procedures, by distinctly different physicians, and should not have been placed for convenience together in the Nervous System/ Skull, Meninges, and Brain/ Stereotaxis subsection of CPT. This issue needs to be addressed with a code change application to move the code(s) to appropriate locations in CPT. Moving the codes is ancillary and editorial and should not impact the original or current intent of the services, not should it impact the survey of 61783.

- **Rationale: Code 61783 Does Not Have Index "Family" Codes**

The RUC LOI sent out to societies regarding code 61783 indicated:

- In April 2024, CPT code 61783 was identified via the high volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. **In January 2025, the Workgroup reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010 and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for April 2025.**

- The specialty society should indicate which codes are family codes. Per Medicare Claims Data, the codes commonly reported with add-on code 61783 are: 22614, 22842, 22853, 22612 and 22633.

The first bulleted text accurately reflects the RAW report text that was voted on and approved by the RUC. Regarding this first issue, codes 61781 and 61782 were added to the LOI as family codes instead of allowing the societies to determine what codes were family codes. When societies submitting their LOI indicating a survey of only 61783, information was provided that 61781 and 61782 were family codes and needed to also be surveyed. Code 61781 was not surveyed and the rationale is provided above as to why 61781 is not a family code. Separately, and independently, AAOHNS agreed to survey 61782 even though it is not a family code to 61783, possibly to be able to provide non-facility practice expense recommendations since a significant percentage of claims are now reported in the office setting. Independent of the reason to survey 61782, we still contend it is not a family code with 61783.

The second bulleted text in the LOI did not appear in the RAW report and was not reviewed and voted on by the RUC. This second bullet introduces additional possible "family" codes as some codes that are commonly reported with code 61783 in the Medicare 5% file. There are over 100 global codes that code 61783 may be reported with and an additional group of ZZZ add-on codes that also may be reported with 61783 and an index procedure. Commonly reported in the Medicare-aged population does not equate to a "family" code.

In the AMA collaborative program EncoderPro, there is a Knowledge Base enhanced content entry that provides information about add-on codes that supports the fact that some add-on codes do not have specific primary codes:

The *CPT® 2024 Code Set* includes 628 codes designated as ‘add-on’ codes. These codes represent additional or supplemental procedures associated with a primary procedure, eg, additional digit(s), lesion(s), vertebral segment(s). Within this group, there are **35 add-on codes** that do not include the specific parenthetical statement, “(Use ##### in conjunction with ...)”, which lists the primary code(s) that the add-on code may be used in conjunction with on the same date of service. The list of 35 add-on codes without specific parenthetical instruction as to which specific primary code(s) it may be reported in conjunction with are listed in Table 1 below.

As these add-on codes can have a broader base of primary codes that they can be reported in conjunction with on the same date of service as the add-on code, the parenthetical statement, “(Use ##### in conjunction with ...)” has not been included. Instead, they often include a parenthetical statement that reflects the code’s broader applicability “(List separately in addition to code for primary procedure)” or address the type(s) of procedure(s) the add-on code may be reported with. Code 33268 below is an example of this type of parenthetical instruction.

33268 Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)

(Use 33268 in conjunction with primary procedures performed via sternotomy or thoracotomy approach)

(Do not report 33268 in conjunction with 33254, 33255, 33256, 33257, 33258, 33259, 33265, 33266, 33420, 33422, 33425, 33426, 33427, 33430)

Lastly, some of these add-on codes also may include exclusionary “(Do not report ...)” parentheticals as seen in the example above. While it does not directly address which specific codes it can be added to, it does provide specific instructions/directions on codes that should not be reported with the add-on code.

Table 1: [SELECTED] CPT Add-On Codes Without Specific Primary Code Reporting Instruction

2024 CPT® Add-On Code	Effective Date	2024 CPT Code Descriptor
Surgery		
+61781	1/1/2011	Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)
+61782	1/1/2011	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)
+61783	1/1/2011	Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)

As indicated in this Knowledge Base information, code 61783 does not have specific primary codes and as such does not have any specific family codes. We therefore did not select any code to be surveyed with code 61783. The service described by 61783 does not replace work in any possible index procedure, but instead enhances precision and safety by providing surgeons with real-time, 3D visualization of the spine and surgical instruments, improving the accuracy of procedure, and potentially reducing surgical complications

Thank you for allowing us to provide this information. We will be available to respond to any RUC member questions.

Sincerely,

RUC Advisors for:

American Association of Neurological Surgeons (AANS)
Congress of Neurological Surgeons (CNS)
North American Spine Society (NASS)
American Academy of Orthopaedic Surgeons (AAOS)
International Society for the Advancement of Spine Surgery (ISASS)

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 61782	Tracking Number	Original Specialty Recommended RVU: 2.50
		Presented Recommended RVU: 2.50
Global Period: ZZZ	Current Work RVU: 3.18	RUC Recommended RVU: 2.50

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 51-year-old male presents with nasal polyposis and chronic sinusitis which has failed medical management. A sinus CT shows significant disease involving multiple sinuses with distortion of normal anatomic landmarks. Endoscopic sinus surgery is planned with computer-assisted image guided navigation.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to the standard preoperative discussion with the patient about the surgical procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to endoscopic sinus surgery. This involves explaining the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, and that the surgery may be somewhat longer and more complicated. The system is typically reserved for difficult cases in patients with extensive disease in close proximity to the skull base, orbit, or neurovascular structures, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes. Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure. The computer navigation unit is booted up and the surgeon activates the navigation software, loading and verifying patient information and confirming image quality. Program options are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the pathology in relationship to surrounding anatomy, formulating plans for both the approach to and resection of the disease process. Once the patient is positioned on the operating table, the computer navigational unit is moved into place to ensure proper alignment of the camera and intra-operative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor.

Description of Intra-Service Work: After induction of anesthesia, the head frame or other hardware is affixed to the patient's head, taking care to precisely position the apparatus. Surface tracings of the head and facial regions are performed to register and calibrate the device. Verification of navigational accuracy is ascertained by correlating specific surface anatomic sites to the computer-generated images. Verification is repeated, after the nose has been topically decongested, by correlating intranasal anatomic sites visualized endoscopically. Throughout the procedure, the operative field is visualized endoscopically, with frequent confirmation of position and relationship to surrounding vital structures provided by placing a tracking device within the operative field, correlating the endoscopic view with the position indicated by the images on the computer monitor. Based on this information, intra-operative decisions are made to appropriately modify the approach and resection to help ensure a safe and effective surgical procedure.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: In April 2024, CPT code 61783 was identified via the Relativity Assessment Workgroup's high volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. In January 2025, the Workgroup reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010 and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for April 2025. As the dominant provider of one of the codes in this family, 61782, the Academy is surveying this code for the April RUC meeting.

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 4197 members from the AAO-HNS of those with sub-specialty designations of general otolaryngology and rhinology.

Key Reference Codes

The first KRS selected was CPT 19294 Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure) valued at 3.00 RVUs with an intra time of 40. 17 respondents selected this as their primary KRS.

The second KRS selected was CPT 15777 Implantation of biologic implant (eg, acellular dermal matrix) for soft tissue reinforcement (ie, breast, trunk) (List separately in addition to code for primary procedure) valued at 3.65 RVUs with a pre time of 5 / intra time of 45, totaling 50 minutes. 16 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU **2.50** and **20 minutes of intra service time**. Our expert panel felt this value which was our survey's 25th percentile, maintains relativity related to other ZZZ otolaryngology codes within the fee schedule.

Pre Service Time: During the 2010 RUC review, the RUC approved pre time for this code, despite it being an add-on service. The RUC justified this, as it is typical for many neurosurgical procedures to have pre-service time due to the high intensity and complexity of the procedure. In addition to the standard preoperative discussion with the patient about the surgical procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to endoscopic sinus surgery. This involves explaining the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, and that the surgery may be somewhat longer and more complicated. The system is typically reserved for difficult cases in patients with extensive disease in close proximity to the skull base, orbit, or neurovascular structures, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes. Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure. The computer navigation unit is booted up and the surgeon activates the navigation software, loading and verifying patient information and confirming image quality. Program options are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the pathology in relationship to surrounding anatomy, formulating plans for both the approach to and resection of the disease process. Once the patient is positioned on the operating table, the computer navigational unit is moved into place to ensure proper alignment of the camera and intra-operative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor. Because a customized survey instrument was not used for this survey to inquire about pretime, we are not recommending pre time for this code during the April 2025 review.

Post Service Time: We are not requesting any post time for this code, as it is an add-on service.

Total Time: Based on the above recommendations, we are requesting a total time of 35 minutes for code 61782.

REQUEST FOR AN INTERIM VALUE AND TO RESURVEY FOR SEPTEMBER 2025: We understand from prefacilitation that any add on code with pre or post time should utilize a customized add on code survey instrument which was not used for this survey. This code has historically had 15 minutes of pre time that we believe is essential to the service, and is carefully described in our description of work above. Therefore, we request the opportunity to resurvey this code for the September 2025 RUC meeting. In the interim, we are requesting the times and work RVU outlined above and are adding a crosswalk to support this recommendation of *20702 Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* which was surveyed in 2018 and has an identical work RVU of 2.50 and pre time of 5 minutes, intra time of 25 minutes, and post time of 2 minutes, totaling 32 minutes. It also has a similar IWPUT of 0.094.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

- ☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This add on code may typically be reported with any combination of the following procedure codes: 31253, 31276, 31290, 31291, 31292, 31293, 31294.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61782

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 57000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is approximately three times the 2023 Medicare volume from the RUC database.

Specialty Otolaryngology Frequency 55500 Percentage 97.36 %

Specialty Neurosurgery Frequency 1500 Percentage 2.63 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 19,013 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2023 RUC database utilization for the Medicare population

Specialty Otolaryngology Frequency 18500 Percentage 97.30 %

Specialty Neurosurgery Frequency 500 Percentage 2.62 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 61782

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 61783	Tracking Number	Original Specialty Recommended RVU: 3.75
		Presented Recommended RVU: 3.75
Global Period: ZZZ	Current Work RVU: 3.75	RUC Recommended RVU: 3.50

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Computer-assisted surgical navigation is utilized when a 57-year-old male undergoes operative stabilization of the C1-C2 segment for rupture of the transverse atlantal ligament. [Note: This is an add-on service. Only consider the additional work related to the computer-assisted surgical navigation.]

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to the standard discussion with the patient about the planned spinal procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to spinal surgery. This involves explaining the rationale for the use of the system, how it helps to confirm surgical position and avoid damage to surrounding vital structures, how it helps visualize instrument and implant position and that the surgery may be somewhat longer and more complicated. The explanation describes the placement of optical or electromagnetic tracking devices on the spine and key instruments and the identification of reference points. Prior to the surgical procedure and positioning, the computer navigation unit is brought into the room and following booting up of the computer, the surgeon activates the navigation software and enters patient specific information such as identifiers, surgeon, site and side of surgery. Radiographic images that will be used for the navigation are either newly obtained or loaded from preexisting studies into the navigation computer. Setup options for the program are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the surgical anatomy/pathology in relationship to surrounding anatomy. The final operative plan for the approach to and resection (if needed) of the disease process is completed. Once the patient has been positioned on the operating table, the navigation unit is moved into place so the intra-operative trackers will be in the field of view of the cameras and the surgeon will be able to see the computer monitor screen.

Description of Intra-Service Work: Once the spine has been exposed (reported separately), the required navigation trackers are secured to the spine and to key instruments. The trackers may be passive devices with reflective balls whose position is determined by infrared light signals sent from the camera system which senses their position. They may also be active devices that emit infrared light or electromagnetic signals that are sensed by a detection system. These trackers are then registered with the stereotactic computer navigation system and specific bony landmarks are identified individually by directed digitization with a pointer device that also has tracker components on it. Multiple reference points are identified and generally include one or more spinous processes, facet joints, and transverse processes. After the anatomy has been registered, an assessment of the accuracy is confirmed with the pointing device. The position and angular alignment are checked at several sites. Changes to the trackers and reference points are made until accuracy within 1-2 millimeters is confirmed. The navigation system is used to identify the starting points for drill holes and the appropriate sagittal and coronal alignment. Drill bit orientation and depth of penetration is checked frequently as the drill is carefully and slowly

advanced. Changes in alignment are made as necessary. Repeat navigation images are then obtained as the hole is tapped and again as the final screw or implant is inserted to ensure correct positioning. This entire sequence is then repeated for each screw or implant placed. At the conclusion of the surgical procedure, the trackers are removed.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Rationale to Maintain Work RVU and Time for Code 61783 as Interim and to Resurvey

The standard ZZZ-global survey was used in 2009 to survey code 61783. The 2009 survey tool correctly defined a ZZZ-global code as: "Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)." The survey included the ability for the survey respondent to indicate "preservice time (if applicable); intra-service time (skin-to-skin); and immediate post-service time (if applicable)." The 2009 survey of 61783 resulted in a median survey preservice time of 30 minutes. The specialty expert panel indicated the survey respondents overestimated the preservice time, however, the expert panel provided a rationale that there is (conservatively) an additional 15 minutes of preservice work as described in the description of work section of the SOR.

The RUC agreed with an additional 15 minutes of preservice work separate from the work that occurs during the skin-to-skin portion of the index procedure.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-service time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice time of 30 minutes which is consistent with the intraservice time from the prior survey. However, preservice time was not collected for the significant additional preservice work prior to the skin-to-skin component of the index procedure.

We have provided the survey results from the current survey and are **recommending the current work RVU and times be maintained until we can resurvey code 61783** using a survey instrument that includes the ability to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61783

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
 29,281 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.
 Please explain the rationale for this estimate. 2023 information from the RUC database

Specialty Neurosurgery	Frequency 20000	Percentage 68.30 %
Specialty Orthopaedic surgery	Frequency 9281	Percentage 31.69 %
Specialty	Frequency	Percentage %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 61783

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)****Meeting Date:** APRIL 2025

CPT Code	Long Descriptor	Global Period
61782	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
61782	A 51-year-old male presents with nasal polyposis and chronic sinusitis which has failed medical management. A sinus CT shows significant disease involving multiple sinuses with distortion of normal anatomic landmarks. Endoscopic sinus surgery is planned with computer-assisted image guided navigation.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Our expert panel was comprised of our RUC Advisors and other rhinology experts who have intimate knowledge of this procedure.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

31267 – this is the code reported the most frequently with 61782

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

No

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility*? What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Otolaryngology is the dominant specialty in both sites of service.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The site of service for this code has changed since it's initial valuation in 2010 and it is not performed regularly in the non-facility setting, therefore, we are requesting the creation of non-facility PE inputs to be added to the fee schedule.

See the *PE compelling evidence guidelines* under PE Reference Materials on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

This is an add on (ZZZ) code, so there is no pre or post staff time.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

This is an add on code, so there is no pre or post staff time.

- b. Service period (includes pre, intra and post):

The nurse is assisting the physician during the entirety of this procedure. Typically, this entails removing the image guidance mount from instruments and placing it on other instruments. During this procedure, multiple different instruments are used for image guidance, and when in use, each instrument must have a mount that connects to a wire that then connects to the system.

- c. Post-service period:

This is an add on code, so there is no pre or post staff time.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Typically, this entails removing the image guidance mount from instruments and placing it on other instruments. During this procedure, multiple different instruments are used for image guidance, and when in use, each instrument must have a mount that connects to a wire that then connects to the system.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

The reusable items that integrate with the navigation system (lines 105-108) required for this procedure are not included in the existing CMS PE input lists for supplies or equipment, so we are providing invoices and proposing to add three new supply items.

Adhesive pads - Adheres to the patient and the patient tracker, allowing patient tracker to stick on the patient.

Patient tracker utilized as the registration point for the patient. Attaches to the adhesive pad which then adheres to the patient.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Single Use Instrumentation Wires - attaches to the mount, which attaches to instruments that are used to identify anatomic landmarks

18. Are you recommending a PE supply pack for this recommendation? Yes or No.

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	SA043	pack	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

The image guidance system and parts (rows 116-120) are required for this procedure are not included in the existing CMS PE input lists for supplies or equipment, so we are providing invoices and proposing to add them.

The navigation system is the computerized terminal that provides the image guidance. The mounts attach to instruments such as suction, curettes and pointers. The wire attaches to the mount, which then connects to the image guidance system. This then allows the mounted instrument to be used in the nose and show exactly where the instrument is on imaging. The medical cart without monitor is where the image guidance system sits.

Registration pointer - Pointer utilized to register the CT scan to the patient's surface anatomy.

Pointer Shell Universal Mounts 1 and 2 - attach to instruments that are then used to identify anatomic landmarks. Typically utilize two per procedure.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typically 7 years for the image guidance system.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The mounts have a useful life of about 1 year.
 The registration pointer useful lifespan is 5 years.
 The Medical Cart without Monitor useful life is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
 - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

Navigation system	
Pointer Shell Universal Mounts 1 and 2	
Registration pointer	
Medical Cart without Monitor	

We used the default formula for all of these items.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
 (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)****ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)**

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Adding non-facility PE inputs for a ZZZ add on code. This includes the addition of the intra service staff time to support the physician during the procedure, the supplies needed for the image guidance, and the equipment needed for the image guidance which have the default formula applied to them.

Additionally, during the PE presentation at the April RUC meeting, there was discussion regarding whether it was typical for the adhesives for the patient tracker to be included with the tracker cost, or a separately invoiced item. Upon further review, the AAO-HNS expert panel determined that the submitted invoices are correct and do represent the most typically used equipment/system. In a nutshell, the presenter was confused. When one of the reviewers mentioned TruD as the system, the presenter did not recognize that TruD is the name of the system. He was thinking of the name of the company that is typically used, hence his confusion. The invoices submitted do represent the most commonly used equipment/system.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

March 30, 2025

To: Scott Manaker, MD
Chair, AMA/RUC PE Subcommittee

From the RUC Advisors for:

American Association of Neurological Surgeons (AANS)
Congress of Neurological Surgeons (CNS)
North American Spine Society (NASS)
American Academy of Orthopaedic Surgeons (AAOS)
International Society for the Advancement of Spine Surgery (ISASS)

Subject: CPT Code 61783

CPT code 61783 is a facility-only add-on code and will have no related direct practice expense input.

Thank you for your consideration of this information.

Subject: High-Cost Disposable Supplies

Dear Ms. Baldwin,

On behalf of the Current Procedural Terminology (CPT) Editorial Panel and the American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC), we urge the Centers for Medicare & Medicaid Services (CMS) to address the escalating issue of high-cost disposable supplies within the Medicare physician payment system.

For two decades, **the RUC has strongly recommended that CMS separately identify and pay for high-cost disposable supplies (i.e., priced more than \$500) using appropriate Healthcare Common Procedure Coding System (HCPCS) supply codes.** CMS has been reluctant to implement this recommendation. In the most recent Final Rule (CMS-1807-F), CMS stated that it is “aware of the issues with the current practice expense (PE) methodology caused by very expensive supply and equipment items, and this is a subject that we may consider for future rulemaking alongside other updates to the PE methodology.”

The CY 2025 Medicare Physician Payment Schedule includes 85 medical supply items currently embedded in codes with a purchase price of more than \$500. These high-cost medical supplies represent \$1.32 billion dollars in direct costs for the 2025 Medicare Physician Payment Schedule and 19 percent of all direct practice expense medical supply costs in the non-facility setting. We contend that the outsized impact that high-cost disposable supplies have within the current practice expense relative value unit (PE RVU) methodology must be addressed immediately as the influx of new technology and high-cost supplies continues. **This has become a pressing issue for physician practices and a potential impediment to our patients who could benefit from access to these new technologies.** For example, there are 12 CPT codes where the total non-facility payment does not cover the purchase price of the high-cost supply input. There are another eight codes where the PE payment alone does not cover the high-cost supply. We are extremely concerned about the increasing impact on Medicare beneficiaries including impeding access to new technology and innovative care if payment does not cover invoice cost. *Please see the attached analysis of high-cost supplies over \$500.*

The payment accuracy concerns not only involve a concern that practices be compensated fully for the cost of the supply. In other instances, the supply item may be inaccurately priced as CMS does not update these prices frequently. Additionally, the current PE methodology not only accounts for a large amount of direct practice expense for high-cost supplies but also allocates an anomalously large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. This methodology derives code-level indirect practice expense in part from code-level direct practice expense inputs, including high-cost disposable supplies. **When CPT codes include a high-cost disposable supply, a larger portion of indirect practice expense is allocated to the subset of practices performing the service, which is subsidized by the broader specialty and all other physician and qualified healthcare professionals.**

Importantly, as required by law, it is CMS' responsibility to ensure the accurate pricing of the high-cost supply items. Accurate pricing of the 85 high-cost supplies is critical and should be based on a transparent process, where items are annually reviewed and updated. Under the current payment methodology, these supplies are priced at one point in time and then bundled within the overall physician payment for this service, without further review. High-cost disposable medical supplies that reflect new technology may experience pricing changes within the first six months to one year after a wider release into the market. **We strongly recommend and encourage CMS to review and re-price medical supplies, priced above \$500, on an annual basis.**

Moreover, CMS has excluded cast and splint supplies from the practice expense database for the CPT codes for fracture management and cast/strapping application procedures since 2000. These supplies can be separately billed using HCPCS codes Q4001 through Q4051. Efficiencies could potentially be realized if the high-cost supplies were pulled out of the physician payment schedule and pricing was negotiated.

We appreciate your attention to resolving the high-cost disposable supply issue and ensuring payment and pricing accuracy in the Medicare physician payment system. If you have any questions regarding this letter, please contact Sherry Smith at Sherry.Smith@ama-assn.org.

Sincerely,

Christopher L. Jagmin, MD
Chair, CPT Editorial Panel
