RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
37220	**Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty**	High Volume Growth1	January 2019	SVS, ACS, SIR, ACR, ACC	February 2022

Background: In October 2018, 37225, 37227 and 37229 services were identified by the PE High Cost Supplies screen for services with non-facility Medicare utilization over 10,000, not reviewed in the last five years and include a supply item greater than $500. The RUC requests an action plan for the January 2019 on how to address these services. The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies.

76998	**Ultrasonic guidance, intraoperative**	CMS-Other - Utilization over 20,000 Part1	October 2019	STS, AATS, ACS, ASBrS, AUA, AVLS, SCAI, SIR, SVS	February 2022

Background: In October 2018, the Workgroup discussed future screens and recommends lowering the threshold and examining the list of CMS/Other source codes with Medicare utilization over 20,000. In October 2019, the RUC refers this issued to CPT Editorial Panel to more accurately differentiate physician work as multiple specialties currently use this code and to clarify correct coding.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
99415	**Prolonged clinical staff service (the service beyond the highest time in the range of total time of the service) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; first hour (list separately in addition to code for outpatient evaluation and management service)**	CMS Request - Final Rule for 2020	April 2021	AAHPM, AAP, CHEST, ACP, AGS, ANA, ASCO, ATS, SVS	February 2022

Background: In October 2020, the RUC recommends that CPT codes 99358 and 99459 be referred to the CPT Editorial Panel for February 2021, to be examined and surveyed along with the other E/M services for the CPT 2023 and the 2023 Medicare Physician Payment Schedule (February 2021, CPT Tab 11). At the April 2021 review, there was discussion at both the PE Subcommittee meeting and the RUC regarding discrepancies between the long descriptors for these codes and the introductory CPT language. The descriptors for 99415 and 99416 state “direct patient contact with physician supervision;” while the preparatory paragraph for these codes describes “face-to-face time.” Given these inconsistencies, there was confusion as to whether the two codes could be used for non-face-to-face (asynchronous) patient encounters. The CPT representative stated that the CPT Editorial Panel is working to reconcile the language. Regardless, the PE Subcommittee agreed that the practice expense inputs for CPT codes 99415 and 99416 were appropriate and that the recommended clinical staff times are correctly valued.

RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
99416	**Prolonged clinical staff service (the service beyond the highest time in the range of total time of the service) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; each additional 30 minutes (list separately in addition to code for prolonged service)**	CMS Request - Final Rule for 2020	April 2021	AAHPM, AAP, CHEST, ACP, AGS, ANA, ASCO, ATS, SVS	February 2022

Background: In October 2020, the RUC recommends that CPT codes 99358 and 99459 be referred to the CPT Editorial Panel for February 2021, to be examined and surveyed along with the other E/M services for the CPT 2023 and the 2023 Medicare Physician Payment Schedule (February 2021, CPT Tab 11). G0396	**Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes**	CMS-Other - Utilization over 30,000	January 2018	AAFP, ASA, ASAM	Time Uncertain

Background: In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. This list resulted in 34 services and the RAW requested action plans to be reviewed at the January 2018 meeting. In January 2018, the RUC recommended to maintain the physician work and refer to CPT to editorially remove "screening” from 99408 and 99409 to “assessment” to mirror G0396. At the February 2018 CPT meeting, the Panel postponed until time uncertain this request to revise codes 99408-99409 to identify assessment of alcohol and/or substance abuse. As a rationale for postponement, the Panel said that the service described in this application did not meet the General Criteria for Category I because the proposed service is not unique or well defined, and does not describe a service that is clearly identified and distinguished from existing services already described in CPT by other codes. The Panel’s additional rationale for postponement of this item was to allow the relevant specialty societies an opportunity to submit a new code change application to address the differences between assessment and screening services.

G6001	**Ultrasonic guidance for placement of radiation therapy fields**	CMS-Other - Utilization over 20,000 Part2	January 2021	AADA, ASTRO	February 2022

Background: The RUC identified G6001 via the CMS/Other Source Utilization over 20,000 screen. In January 2021, the RUC recommended to refer to CPT to develop new code(s) that reflect the different process of care between the two specialties (dermatology and radiation oncology).

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
63685	**Insertion or replacement of spinal neurostimulator pulse generator or receiver, direct or inductive coupling**	Site of Service Anomaly / CMS Fastest Growing/ High Volume Growth7	January 2021	Review action plan in 2 years after CPT article published. 6.05	AAPM, AANS/CNS, ASA, ISIS, NASS	

Background: Oct 2010 re-reviewed site of service issue. In October 2020, the RUC identified six codes with Medicare utilization of 10,000 or more that have increased by at least 100% from 2014 through 2019e. CPT codes 00918, 63685, 75561, 75572, 75574 and 93655. The Workgroup requested that the specialty societies submit an action plan for codes CPT codes 00918, 63685, 75561, 75572, 75574 and 93655 for January 2021. In January 2021, the RUC recommended to refer to CPT Assistant. A CPT Assistant article has already been submitted. The RUC will reeview after 2 years of data are available after article is published.

Detailed Description of Pre-Service Time Packages (Minutes)

		FACILITY				NON-FAC	
		1	2	3	4	5**	6
	Total Pre-Service Time	**20**	**25**	**51**	**63**	**8**	**23**
	CATEGORY SUBTOTALS						
A	Pre-Service Evaluation (IWPUT =0.0224)	13	18	33	40	7	17
B	Pre-Service Positioning (IWPUT = 0.0224)	1	1	3	3	0	1
C	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	6	15	20	1	5
	DETAILS						
A	History and Exam (Performance and review of appropriate Pre-Tests)	5	10	10	15	4	9
A	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2	2	4	1	1
A	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3	5	5	2	3
A	Communicate with other professionals	0	0	5	5	0	2
A	Check/set-up room, supplies and equipment	1	1	5	5	0	1
A	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1	5	5	0	1
A	Prepare/ review/ confirm procedure	1	1	1	1	0	0
B	Perform/ supervise patient positioning	1	1	3	3	0	1
C	Administer local/topical anesthesia	1	1	0	0	1	5
C	Observe (wait anesthesia care)	0	0	10	15	0	0
C	Dress and scrub for procedure	5	5	5	5	0	0

**If the procedure does not require local anesthesia, 1 minute should be removed from pre-service time

1 Straightforward Patient/Straightforward Procedure (No anesthesia care)
2 Difficult Patient/Straightforward Procedure (No anesthesia care)
3 Straightforward Patient/Difficult Procedure
4 Difficult Patient/Difficult Procedure
5 Procedure with minimal anesthesia care (If no anesthesia care deduct 1 minute)
6 Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect

Additional Positioning Times for Spinal Surgical Procedures

SS1	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
SS2	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
SS3	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
SS4	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
SS5	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

Additional Positioning Times for Spinal Injection Procedures

SI1	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
SI2	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
SI3	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
SI4	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

Additional Positioning Times for Urological Procedures

U1	Dorsal Lithotomy	5 Minutes

Notes:

- Roll-over cells for additional detail where available
- Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice

Detailed Description of Facility Based Post-Service Time Packages (Minutes)						
	7A Local Anesthesia/ Straightforward Procedure	**7B Local Anesthesia/ Complex Procedure**	**8A IV Sedation/ Straightforward Procedure**	**8B IV Sedation/ Complex Procedure**	**9A General Anesthesia or Complex Regional Block/ Straightforward Procedure**	**9B General Anesthesia or Complex Regional Block/Complex Procedure**
Total Post-Service Time	**18**	**21**	**25**	**28**	**30**	**33**
Details:						
Application of Dressing[1]	2	2	2	2	2	2
Transfer of supine patient off table	1	1	1	1	1	1
Operative Note	5	5	5	5	5	5
Monitor patient recovery/stabilization	1	1	5	5	10	10
Communication with patient and/or family	5	5	5	5	5	5
Written post-operative note	2	5	2	5	2	5
Post-Operative Orders and Order Entry	2	2	5	5	5	5

Advisors may request additional time for circumstances that require additional work beyond the type of work described

1 This represents a simple dressing

0071A	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 10 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation; first dose	Oct 2021	Pfizer Tris-Sucrose-Age5-11-SARS-CoV-2-IA	24	CPT 2021	January 2025		☐
0072A	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 10 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation; second dose	Oct 2021	Pfizer Tris-Sucrose-Age5-11-SARS-CoV-2-IA	24	CPT 2021	January 2025		☐
10011	Fine needle aspiration biopsy, including mr guidance; first lesion	Jan 2018	Fine Needle Aspiration	04	CPT 2019	January 2023		☐
10012	Fine needle aspiration biopsy, including mr guidance; each additional lesion (list separately in addition to code for primary procedure)	Jan 2018	Fine Needle Aspiration	04	CPT 2019	January 2023		☐
14302	Adjacent tissue transfer or rearrangement, any area; each additional 30.0 sq cm, or part thereof (list separately in addition to code for primary procedure)	Apr 2009	Adjacent Tissue Transfer	4	CPT 2010	October 2015	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	☑
15271	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
15272	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (list separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
15273	Application of skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
15274	Application of skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (list separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
15275	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
15276	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (list separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
15277	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
15278	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (list separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑

15769	Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)	Oct 2018	Tissue Grafting Procedures	04	CPT 2020	January 2024		☐
15771	Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50 cc or less injectate	Oct 2018	Tissue Grafting Procedures	04	CPT 2020	January 2024		☐
15772	Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50 cc injectate, or part thereof (list separately in addition to code for primary procedure)	Oct 2018	Tissue Grafting Procedures	04	CPT 2020	January 2024		☐
15773	Grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; 25 cc or less injectate	Oct 2018	Tissue Grafting Procedures	04	CPT 2020	January 2024		☐
15774	Grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; each additional 25 cc injectate, or part thereof (list separately in addition to code for primary procedure)	Oct 2018	Tissue Grafting Procedures	04	CPT 2020	January 2024		☐
15777	Implantation of biologic implant (eg, acellular dermal matrix) for soft tissue reinforcement (ie, breast, trunk) (list separately in addition to code for primary procedure)	Apr 2011	Chronic Wound Dermal Substitute	4	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
17106	Destruction of cutaneous vascular proliferative lesions (eg, laser technique); less than 10 sq cm	Oct 2008	Destruction of Skin Lesions	11	CPT 2009	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
17107	Destruction of cutaneous vascular proliferative lesions (eg, laser technique); 10.0 to 50.0 sq cm	Oct 2008	Destruction of Skin Lesions	11	CPT 2009	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
17108	Destruction of cutaneous vascular proliferative lesions (eg, laser technique); over 50.0 sq cm	Oct 2008	Destruction of Skin Lesions	11	CPT 2009	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
19105	Ablation, cryosurgical, of fibroadenoma, including ultrasound guidance, each fibroadenoma	Apr 2006	Fibroadenoma Cryoablation	11	CPT 2007	September 2011	Remove, code does not need to be re-evaluated	☑
19294	Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (iort) concurrent with partial mastectomy (list separately in addition to code for primary procedure)	Oct 2016	Intraoperative Radiation Therapy Applicator Procedures	07	CPT 2018	April 2022		☐
20560	Needle insertion(s) without injection(s); 1 or 2 muscle(s)	Jan 2019	Trigger Point Dry Needling	41	CPT 2020	January 2024		☐
20561	Needle insertion(s) without injection(s); 3 or more muscles	Jan 2019	Trigger Point Dry Needling	41	CPT 2020	January 2024		☐
20696	Application of multiplane (pins or wires in more than 1 plane), unilateral, external fixation with stereotactic computer-assisted adjustment (eg, spatial frame), including imaging; initial and subsequent alignment(s), assessment(s), and computation(s) of adjustment schedule(s)	Apr 2008	Computer Dependent External Fixation	6	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	☑
20697	Application of multiplane (pins or wires in more than 1 plane), unilateral, external fixation with stereotactic computer-assisted adjustment (eg, spatial frame), including imaging; exchange (ie, removal and replacement) of strut, each	Apr 2008	Computer Dependent External Fixation	6	CPT 2009	September 2012	Remove, code does not need to be re-evaluated	☑
20700	Manual preparation and insertion of drug-delivery device(s), deep (eg, subfascial) (list separately in addition to code for primary procedure)	Oct 2018	Drug Delivery Implant Procedures	05	CPT 2020	January 2024		☐
20701	Removal of drug-delivery device(s), deep (eg, subfascial) (list separately in addition to code for primary procedure)	Oct 2018	Drug Delivery Implant Procedures	05	CPT 2020	January 2024		☐

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
20702	Manual preparation and insertion of drug-delivery device(s), intramedullary (list separately in addition to code for primary procedure)	Oct 2018	Drug Delivery Implant Procedures	05	CPT 2020	January 2024		☐
20703	Removal of drug-delivery device(s), intramedullary (list separately in addition to code for primary procedure)	Oct 2018	Drug Delivery Implant Procedures	05	CPT 2020	January 2024		☐
20704	Manual preparation and insertion of drug-delivery device(s), intra-articular (list separately in addition to code for primary procedure)	Oct 2018	Drug Delivery Implant Procedures	05	CPT 2020	January 2024		☐
20705	Removal of drug-delivery device(s), intra-articular (list separately in addition to code for primary procedure)	Oct 2018	Drug Delivery Implant Procedures	05	CPT 2020	January 2024		☐
20983	Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; cryoablation	Apr 2014	Cryoablation Treatment of the Bone Tumors	04	CPT 2015	October 2018	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	☑
20985	Computer-assisted surgical navigational procedure for musculoskeletal procedures, image-less (list separately in addition to code for primary procedure)	Apr 2007	Computer Navigation	7	CPT 2008	September 2011	Resurvey for January 2012	☑
20986	Code Deleted CPT 2009	Apr 2007	Computer Navigation	7	CPT 2008	September 2011	Code Deleted CPT 2009	☑
20987	Code Deleted CPT 2009	Apr 2007	Computer Navigation	7	CPT 2008	September 2011	Code Deleted CPT 2009	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
21011	Excision, tumor, soft tissue of face or scalp, subcutaneous; less than 2 cm	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	October 2017	Review the data for the melanoma diagnoses within these services and the site of service in 2 years (October 2017). In October 2017, recommended to remove from the list, no demonstrated technology diffusion that impacts work or practice expense.	☑
21012	Excision, tumor, soft tissue of face or scalp, subcutaneous; 2 cm or greater	Feb 2009	Excision of Soft Tissue and Bone Tumors		CPT 2010	October 2017	Review the data for the melanoma diagnoses within these services and the site of service in 2 years (October 2017). In October 2017, recommended to remove from the list, no demonstrated technology diffusion that impacts work or practice expense.	☑

920XX		Apr 2021	Orthoptic Training	10	CPT 2023	January 2027		☐
92132	Scanning computerized ophthalmic diagnostic imaging, anterior segment, with interpretation and report, unilateral or bilateral	Apr 2010	Anterior Segment Imaging	22	CPT 2011	April 2015	Survey for October 2015. The RUC noted that it is the specialty societies decision whether 92133 and 92134 need to be surveyed with this service.	☑
92133	Scanning computerized ophthalmic diagnostic imaging, posterior segment, with interpretation and report, unilateral or bilateral; optic nerve	Apr 2010	Computerized Scanning Ophthalmology Diagnostic Imaging	23	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
92134	Scanning computerized ophthalmic diagnostic imaging, posterior segment, with interpretation and report, unilateral or bilateral; retina	Apr 2010	Computerized Scanning Ophthalmology Diagnostic Imaging	23	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
92145	Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report	Apr 2014	Corneal Hysteresis Determination	23	CPT 2015	October 2018	Survey for January 2019.	☑
92227	Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral	Oct 2019	Remote Retinal Imaging	09	CPT 2021	January 2025		☐
92228	Imaging of retina for detection or monitoring of disease; with remote physician or other qualified health care professional interpretation and report, unilateral or bilateral	Apr 2010	Diabetic Retinopathy Imaging	24	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
92228	Imaging of retina for detection or monitoring of disease; with remote physician or other qualified health care professional interpretation and report, unilateral or bilateral	Oct 2019	Remote Retinal Imaging	09	CPT 2021	January 2025		☐

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
92229	Imaging of retina for detection or monitoring of disease; point-of-care automated analysis and report, unilateral or bilateral	Oct 2019	Remote Retinal Imaging	09	CPT 2021	January 2025		☐
92284	Dark adaptation examination with interpretation and report	Apr 2021	Dark Adaption Eye Exam	20	CPT 2023	October 2023	The RUC will review the typical technology used to perform this service when it is next re-evaluated, acknowledging that the device included in proposed direct practice costs recently was very recently replaced with a newer technology.	☐
92517	Vestibular evoked myogenic potential (vemp) testing, with interpretation and report; cervical (cvemp)	Apr 2019	Vestibular Evoked Myogenic Potential (VEMP) Testing	07	CPT 2021	January 2025		☐
92518	Vestibular evoked myogenic potential (vemp) testing, with interpretation and report; ocular (ovemp)	Apr 2019	Vestibular Evoked Myogenic Potential (VEMP) Testing	07	CPT 2021	January 2025		☐
92519	Vestibular evoked myogenic potential (vemp) testing, with interpretation and report; cervical (cvemp) and ocular (ovemp)	Apr 2019	Vestibular Evoked Myogenic Potential (VEMP) Testing	07	CPT 2021	January 2025		☐
93050	Arterial pressure waveform analysis for assessment of central arterial pressures, includes obtaining waveform(s), digitization and application of nonlinear mathematical transformations to determine central arterial pressures and augmentation index, with interpretation and report, upper extremity artery, non-invasive	Apr 2015	Arterial Pressure Waveform Analysis	20	CPT 2016	April 2022	Review in 2 years (January 2022)	☐
93241	External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93242	External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; recording (includes connection and initial recording)	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93243	External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; scanning analysis with report	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93244	External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; review and interpretation	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93245	External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93246	External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; recording (includes connection and initial recording)	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93247	External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; scanning analysis with report	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93248	External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; review and interpretation	Jan 2020	External Extended ECG Monitoring	18	CPT 2021	January 2025		☐
93260	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; implantable subcutaneous lead defibrillator system	Apr 2014	Subcutaneous Implantable Defibrillator Procedures	09	CPT 2015	April 2022	In October 2018, RUC recommended to review again after 3 more years of data (2022).	☐

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93261	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable subcutaneous lead defibrillator system	Apr 2014	Subcutaneous Implantable Defibrillator Procedures	09	CPT 2015	April 2022	In October 2018, RUC recommended to review again after 3 more years of data (2022).	☐
93264	Remote monitoring of a wireless pulmonary artery pressure sensor for up to 30 days, including at least weekly downloads of pulmonary artery pressure recordings, interpretation(s), trend analysis, and report(s) by a physician or other qualified health care professional	Jan 2018	Pulmonary Wireless Pressure Sensor Services	08	CPT 2019	January 2023		☐
93279	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead pacemaker system or leadless pacemaker system in one cardiac chamber	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93280	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93281	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93282	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead transvenous implantable defibrillator system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93283	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93284	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93285	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; subcutaneous cardiac rhythm monitor system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93286	Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93287	Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93288	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93289	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93290	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; implantable cardiovascular physiologic monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93291	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; subcutaneous cardiac rhythm monitor system, including heart rhythm derived data analysis	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93292	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; wearable defibrillator system	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93293	Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93294	Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system, or leadless pacemaker system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93295	Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead implantable defibrillator system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93296	Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system, leadless pacemaker system, or implantable defibrillator system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93297	Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑

93298	Interrogation device evaluation(s), (remote) up to 30 days; subcutaneous cardiac rhythm monitor system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93299	Code Deleted CPT 2020	Apr 2008	Cardiac Device Monitoring	23	CPT 2009	September 2012	Ad Hoc Workgroup developed to determine how to address the work neutrality failure and estabhis guidelines for further RAW review of retrospective work neutralilty.	☑
93319	3d echocardiographic imaging and postprocessing during transesophageal echocardiography, or during transthoracic echocardiography for congenital cardiac anomalies, for the assessment of cardiac structure(s) (eg, cardiac chambers and valves, left atrial appendage, interatrial septum, interventricular septum) and function, when performed (list separately in addition to code for echocardiographic imaging)	Oct 2020	3D Imaging of Cardiac Structures	09	CPT 2022	January 2026		☐
93462	Left heart catheterization by transseptal puncture through intact septum or by transapical puncture (list separately in addition to code for primary procedure)	Apr 2010	Diagnostic Cardiac Catheterization	26	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
93463	Pharmacologic agent administration (eg, inhaled nitric oxide, intravenous infusion of nitroprusside, dobutamine, milrinone, or other agent) including assessing hemodynamic measurements before, during, after and repeat pharmacologic agent administration, when performed (list separately in addition to code for primary procedure)	Apr 2010	Diagnostic Cardiac Catheterization	26	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93464	Physiologic exercise study (eg, bicycle or arm ergometry) including assessing hemodynamic measurements before and after (list separately in addition to code for primary procedure)	Apr 2010	Diagnostic Cardiac Catheterization	26	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
93583	Percutaneous transcatheter septal reduction therapy (eg, alcohol septal ablation) including temporary pacemaker insertion when performed	Jan 2013	Percutaneous Alcohol Ablation of Septum	17	CPT 2014	October 2017	Remove from list, no demonstrated techology diffusion that impacts work or practice expense.	☑
93590	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve	Jan 2016	Closure of Paravalvular Leak	22	CPT 2017	October 2020	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
93591	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve	Jan 2016	Closure of Paravalvular Leak	22	CPT 2017	October 2020	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
93592	Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (list separately in addition to code for primary procedure)	Jan 2016	Closure of Paravalvular Leak	22	CPT 2017	October 2020	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
93593	Right heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone; normal native connections	Oct 2020	Cardiac Catheterization for Congenital Defects	10	CPT 2022	January 2026		☐
93594	Right heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone; abnormal native connections	Oct 2020	Cardiac Catheterization for Congenital Defects	10	CPT 2022	January 2026		☐

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
93595	Left heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone, normal or abnormal native connections	Oct 2020	Cardiac Catheterization for Congenital Defects	10	CPT 2022	January 2026		☐
93596	Right and left heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone(s); normal native connections	Oct 2020	Cardiac Catheterization for Congenital Defects	10	CPT 2022	January 2026		☐
93597	Right and left heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone(s); abnormal native connections	Oct 2020	Cardiac Catheterization for Congenital Defects	10	CPT 2022	January 2026		☐
93598	Cardiac output measurement(s), thermodilution or other indicator dilution method, performed during cardiac catheterization for the evaluation of congenital heart defects (list separately in addition to code for primary procedure)	Oct 2020	Cardiac Catheterization for Congenital Defects	10	CPT 2022	January 2026		☐
93644	Electrophysiologic evaluation of subcutaneous implantable defibrillator (includes defibrillation threshold evaluation, induction of arrhythmia, evaluation of sensing for arrhythmia termination, and programming or reprogramming of sensing or therapeutic parameters)	Apr 2014	Subcutaneous Implantable Defibrillator Procedures	09	CPT 2015	April 2022	In October 2018, RUC recommended to review again after 3 more years of data (2022).	☐
93982	Code Deleted	Apr 2007	Wireless Pressure Sensor Implantation	25	CPT 2008	September 2011	Remove, code does not need to be re-evaluated	☑
93XX0		Oct 2021	Pulmonary Angiography	08	CPT 2023	January 2027		☐
93XX1		Oct 2021	Pulmonary Angiography	08	CPT 2023	January 2027		☐
93XX2		Oct 2021	Pulmonary Angiography	08	CPT 2023	January 2027		☐

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2021

Endovascular Pulmonary Arterial Revascularization – Tab 4

In February 2021, the CPT Editorial Panel approved a new family of Category I CPT codes to describe percutaneous endovascular repair of pulmonary artery stenosis (PAS) by stent replacement, a developing approach that has improved outcomes for some patients, particularly small children. Since other peripheral vascular angioplasty and stenting interventions were formerly the only possible method of procedure for treating PAS, endovascular pulmonary repair is not uniquely delineated in CPT due to the large number of patients treated for other pathologies with any of the existing codes that are used to report this work. CPT codes 33900-33904 were surveyed together for the October 2021 RUC meeting.

Over the last 20 years, advancements in stent technology have provided physicians with the opportunity to perform endovascular repair of pulmonary artery stenosis by stent placement on a broader patient population, specifically now to small children. Stents are smaller and conducive to a wider range of medical procedures, and physicians are no longer limited to only using balloon angioplasty for treating PAS in children. Therefore, the specialty societies noted, and the RUC agreed, that for procedures involving pulmonary artery stenosis on pediatric patients, the application of endovascular repair using a stent was an obstacle and a technological impossibility until more recently.

33900 ***Percutaneous pulmonary artery revascularization by stent placement, initial; normal native connections, unilateral***
The RUC reviewed the survey results from 35 interventional and pediatric interventional cardiologists and recommends the survey median work RVU of 14.00 for CPT code 33900 which falls appropriately between the top two key reference services (KRS). The RUC recommends 50 minutes of pre-service evaluation, 6 minutes of per-service positioning, 15 minutes of pre-service scrub/dress/wait time, 90 minutes of intra-service time and 45 minutes of immediate post-service time. The specialties noted that the pre-service time for pediatric patients includes additional time to review imaging evaluations, careful positioning due to the potential for multiple access points of intervention, and comprehensive discussion with the patient's family about the procedure. Similarly, the post-service time includes additional time to explain the pathology of the child to the parent. In addition, the post-service period time typically includes time to diagram congenital heart defect(s) in the electronic health record (EHR) and complete data submission to the appropriate national registry, as available/appropriate.

To justify the value of 14.00, the RUC compared the surveyed code to key reference codes 92928 *Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch* (work RVU= 10.96, 76 minutes of intra-service time, and 135 minutes of total time) and 93580 *Percutaneous transcatheter closure of congenital interatrial communication (ie, Fontan fenestration, atrial septal defect) with implant* (work RVU= 17.97, 120 minutes of intra-service time and 210 minutes of total time) and determined that the surveyed code appropriately falls between these services based on the physician work and intensity required to perform these services and therefore maintains relativity. The RUC explained that CPT code 33900 is a unilateral procedure where the patient has normal native connections; the intensity required to perform this service is consistent with the supporting references codes and comparable to the median survey results.

For additional support, the RUC referenced the Multi-Specialty Points of Comparison (MPC) code 37244 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation* (work RVU= 13.75, 90 minutes of intra-service time and 166 minutes of total time) and CPT code 33340 *Percutaneous transcatheter closure of the left atrial appendage with endocardial implant, including fluoroscopy, transseptal puncture, catheter placement(s), left atrial angiography, left atrial appendage angiography, when performed, and radiological supervision and interpretation* (work RVU= 14.00, 90 minutes intra-service time, and 183 minutes of total time) and noted that the surveyed code exactly matches the intra-service time established for these two supplementary codes. The intensity to perform the service for the MPC, comparison code, and surveyed code appropriately align in terms of their work RVU, therefore maintaining relativity in the Medicare Physician Payment Schedule. **The RUC recommends a work RVU of 14.00 for CPT code 33900.**

33901 ***Percutaneous pulmonary artery revascularization by stent placement, initial; normal native connections, bilateral***
The RUC reviewed the survey results from 35 interventional and pediatric interventional cardiologists and recommends the survey median work RVU of 18.00 for CPT code 33901. The RUC recommends 50 minutes of pre-service evaluation, 6 minutes of per-service positioning, 15 minutes of pre-service scrub/dress/wait, 120 minutes of intra-service time and 45 minutes of immediate post-service time. The specialties noted that the pre-service time for pediatric patients includes additional time to review imaging evaluations, careful positioning due to the potential for multiple access points of intervention, and comprehensive discussion with the patient's family about the procedure. Similarly, the post-service time includes additional time to explain the pathology of the child to the parent. In addition, the post-service period time typically includes time to diagram congenital heart defect(s) in the EHR and complete data submission to the appropriate national registry, as available/appropriate. A primary distinction between 33901 and 33900 is the 30-minute increase in intra-service time, which is attributed to the procedure becoming more medically complex when advancing from unilateral to bilateral in nature.

To justify the value of 18.00, the RUC compared the surveyed code to key reference code CPT codes 93580 *Percutaneous transcatheter closure of congenital interatrial communication (ie, Fontan fenestration, atrial septal defect) with implant* (work RVU= 17.97, 120 minutes of intra-service time, and 210 minutes of total time) and determined that the surveyed code is appropriately supported by this reference service based on the similar physician work and time required to perform these services. Being that this a bilateral procedure for a patient with normal native connections, the 120-minute intra-service time allocation for 33901, along with the measured intensity required to perform this service, are consistent with the supporting reference codes and comparable to the median from the survey results.

For additional support, the RUC referenced CPT code 93591 *Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve* (work RVU = 17.97, 120 minutes intra-service time, and 208 minutes of total time). The RUC selected this reference code based on the similarities of physician work required to perform the service compared to the surveyed code. While the codes have identical intra-service time, the total time for the surveyed code is slightly higher, suggesting that they should be valued similarly, although the surveyed code should maintain a slightly higher work RVU. **The RUC recommends a work RVU of 18.00 for CPT code 33901.**

33902 ***Percutaneous pulmonary artery revascularization by stent placement, initial; abnormal connections, unilateral***
The RUC reviewed the survey results from 34 interventional and pediatric interventional cardiologists and recommends the survey median work RVU of 17.33 for CPT code 33902. The RUC recommends 50 minutes of pre-service evaluation, 6 minutes of per-service positioning, 15 minutes of pre-service scrub/dress/wait, 90 minutes of intra-service time and 48 minutes of immediate post-service time. The specialties noted that the pre-service time for pediatric patients includes additional time to review imaging evaluations, careful positioning due to the potential for multiple access points of intervention, and comprehensive discussion with the patient's family about the procedure. Similarly, the post-service time includes additional time to explain the pathology of the child to the parent. In addition, the post-service period time typically includes time to diagram congenital heart defect(s) in the EHR and complete data submission to the appropriate national registry, as available/appropriate.

To justify the value of 17.33, the RUC compared the surveyed code to CPT codes 93590 *Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve* (work RVU= 21.70, 135 minutes of intra-service time, and 223 minutes of total time) and 37231 *Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed* (work RVU= 14.75, 135 minutes of intra-service time, and 203 minutes of total time) and determined that the surveyed code appropriately falls between these services based on the physician work and time required to perform these services. The RUC discerned that 33900 and 33902 are both unilateral procedures and require 90 minutes of intra-service time; however, there is larger amount of physician work required due to increased intensity and greater medical complexity of these services when patients have abnormal connections versus normal native connections.

For additional support, the RUC also referenced CPT code 93580 *Percutaneous transcatheter closure of congenital interatrial communication (ie, Fontan fenestration, atrial septal defect) with implant* (work RVU= 17.97, 120 minutes intra-service time, and 210 minutes of total time) which has similar total time to the surveyed code but a lower intensity. The RUC recognizes similarities between these services, although the surveyed code still requires more physician work to perform the service as the RUC discerned above. Additionally, it was determined that the surveyed code was valued appropriately within the family to maintain relativity based on the description of work related to abnormal connections. **For this reason, the RUC recommends a work RVU of 17.33 for CPT code 33902.**

33903 ***Percutaneous pulmonary artery revascularization by stent placement, initial; abnormal connections, bilateral***
The RUC reviewed the survey results from 35 interventional and pediatric interventional cardiologists and recommends the survey median work RVU of 20.00 for CPT code 33903. The RUC recommends 50 minutes of pre-service evaluation, 6 minutes of per-service positioning, 15 minutes of pre-service scrub/dress/wait, 120 minutes of intra-service time and 50 minutes of immediate post-service time. The specialties noted that the pre-service time for pediatric patients includes additional time to review imaging evaluations, careful positioning due to the potential for multiple access points of intervention, and comprehensive discussion with the patient's family about the procedure. Similarly, the post-service time includes additional time to explain the pathology of the child to the parent. In addition, the post-service period time typically includes time to diagram congenital heart defect(s) in the EHR and complete data submission to the appropriate national registry, as available/appropriate. A primary distinction between 33903 and 33902 is the 30-minute increase in intra-service time, which is attributed to the procedure becoming more medically complex when advancing from unilateral to bilateral in nature.

To justify the value of 20.00, the RUC compared the surveyed code to top key reference code 93581 *Percutaneous transcatheter closure of a congenital ventricular septal defect with implant* (work RVU= 24.39, 180 minutes of intra-service time, and 270 minutes of total time) and noted

that the surveyed code requires less physician work and time to perform and is thus appropriately valued lower. The RUC also compared the surveyed code to the second top key reference code 92928 *Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch* (work RVU= 10.96, 76 minutes of intra-service time and 135 minutes of total time) and determined that the surveyed code appropriately falls between these services based on the physician work and time required to perform these services. Being that the surveyed code is a bilateral procedure for a patient with abnormal connections, there is increased intra-service, in addition to a greater intensity of physician work required. Therefore, the RUC determined that a higher work RVU would be appropriate relative to the other codes in this family. This valuation is consistent with the supporting key reference codes and comparable to the median from the survey results.

For additional support, the RUC referenced CPT code 33745 *Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, including all imaging guidance by the proceduralist, when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt* (work RVU= 20.00, 92 minutes intra-service time, and 207 minutes of total time). The RUC reviewed the differences in intra-service time and intensity of physician work and determined that the total time required to perform this service and the longer skin-to-skin time warrant a similar RVU. **Therefore, the RUC recommends a work RVU of 20.00 for CPT code 33903.**

33904 ***Percutaneous pulmonary artery revascularization by stent placement, each additional vessel or separate lesion, normal or abnormal connections (list separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 35 interventional and pediatric interventional cardiologists and recommends the survey median work RVU of 7.27 for CPT code 33904. The RUC recommends 45 minutes of intra-service for each additional stent. It is important to note that the work of this procedure is supplementary to the work related to the primary services from this code family and should be used for the additional work related to stent placement of each additional vessel or separate lesion (normal or abnormal) of percutaneous pulmonary artery revascularization.

To justify the value of 7.27, the RUC compared the surveyed code to CPT code 33746 *Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, including all imaging guidance by the proceduralist, when performed, left and right heart diagnostic cardiac catherization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); each additional intracardiac shunt location (List separately in addition to code for primary procedure)* (work RVU= 8.00 and 60 minutes of intra-service time/total time) and determined that the surveyed code appropriately relates to this service based on the intensity of physician work and intra-service time required to perform these services.

For additional support, the RUC referenced CPT code 93592 *Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)* (work RVU= 8.00 and 60 minutes of intra-service time). The RUC recognized similarities in the intensity of physician work for these services despite differences in intra-service time; ultimately, this comparison was determined to be in line with the survey results and supports the proposed work RVU. **The RUC recommends a work RVU of 7.27 for CPT code 33904.**

Practice Expense
No direct practice expense inputs are recommended for CPT codes 33900-33904 as they are facility-only services.

New Technology/New Service
The RUC recommends that CPT codes 33900-33904 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Cardiovascular System** **Heart and Pericardium** ***Endovascular Repair of Congenital Heart and Vascular Defects*** *Codes 33894, 33895, 33897 describe transcatheter interventions for revascularization or repair for coarctation of the aorta. Code 33897 describes dilation of the coarctation using balloon angioplasty without stent placement. Codes 33894, 33895 describe stent placement to treat the coarctation. The procedure described in 33894 involves stent placement across one or more major side branches of the aorta. For reporting purposes, the major side branches of the thoracic aorta are the brachiocephalic, carotid, and subclavian arteries, and the major side branches of the abdominal aorta are the celiac, superior mesenteric, inferior mesenteric, and renal arteries.* *Codes 33894, 33895, 33897 include all fluoroscopic guidance of the intervention, diagnostic congenital left heart catheterization, all catheter and wire introductions and manipulation, and angiography of the target lesion.* *Codes 33894, 33895 include stent introduction, manipulation, positioning, and deployment, temporary pacemaker insertion for rapid pacing (33210) to facilitate stent positioning when performed, as well as any additional stent delivery in tandem with the initial stent for extension purposes. Balloon angioplasty within the target treatment zone, either before or after stent deployment, is not separately reportable. For balloon angioplasty of an additional coarctation of the aorta in a segment separate from the treatment zone for the coarctation stent, use 33897.* *For balloon angioplasty of the aorta for lesions other than coarctation (eg, atherosclerosis) of the aorta in a segment separate from the coarctation treatment zone, use 37246.* *For additional diagnostic right heart catheterization in the same setting as 33894, 33895, see 93593, 93594.* *Other interventional procedures performed at the time of endovascular repair of coarctation of the aorta (33894, 33895) may be separately reported (eg, innominate, carotid, subclavian, visceral, iliac, or pulmonary artery balloon angioplasty or stenting, arterial or venous embolization), when performed before or after coarctation stent deployment.*				

33894 *Endovascular stent repair of coarctation of the ascending, transverse, or descending thoracic or abdominal aorta, involving stent placement; across major side branches*

33895 *not crossing major side branches*

(Do not report 33894, 33895 in conjunction with 33210, 34701, 34702, 34703, 34704, 34705, 34706, 36200, 75600, 75605, 75625, 93567, 93595, 93596, 93597)

(Do not report 33894, 33895 in conjunction with 37246, 37236, 33897 for balloon angioplasty of the aorta within the coarctation stent treatment zone)

(For additional atrial, ventricular, pulmonary, coronary or bypass graft angiography in the same setting, see 93563, 93564, 93565, 93566, 93568)

(For angiography of other vascular structures, use the appropriate code from the Radiology/Diagnostic Radiology section)

(For additional congenital right heart catheterization at same setting as 33894, 33895, see 93593, 93594)

33897 *Percutaneous transluminal angioplasty of native or recurrent coarctation of the aorta*

(Do not report 33897 in conjunction with 33210, 34701, 34702, 34703, 34704, 34705, 34706, 36200, 37236, 37246, 75600, 75605, 75625, 93567, 93595, 93596, 93597)

(Do not report 33897 in conjunction with 33894, 33895 for balloon angioplasty of the aorta within the coarctation stent treatment zone)

(For additional congenital right heart diagnostic catheterization performed in same setting as 33897, see 93593, 93594)

(For angioplasty and other transcatheter revascularization interventions of additional upper or lower extremity vessels in same setting, use the appropriate code from the Surgery/Cardiovascular System section)

Codes 33900, 33901, 33902, 33903, 33904 describe endovascular repair of pulmonary artery stenosis by stent placement. Codes 33900, 33901 describe stent placement within the pulmonary arteries via normal native connections, defined as superior vena cava/inferior vena cava to right atrium, then right ventricle, then pulmonary arteries. Codes 33902, 33903 describe stent placement within the pulmonary arteries, ductus arteriosus, or within a surgical shunt, via abnormal connections or through post-surgical shunts (eg, Blalock-Taussig shunt, Sano shunt, or post Glenn or Fontan procedures). Code 33904 is an add-on code that describes placement of stent(s) in additional vessels or lesions beyond the primary vessel or lesion treated whether access is via normal or abnormal connection.

Codes 33900, 33901, 33902, 33903, 33904 include vascular access and all catheter and guidewire manipulation, fluoroscopy to guide the intervention, any post diagnostic angiography for road mapping purposes, and post implant evaluation, stent positioning and balloon inflation for stent delivery, and radiologic supervision and interpretation of the intervention. Angiography at the same session, as part of a diagnostic cardiac catheterization, may be reported with the appropriate angiographic codes from the Radiology or Medicine/Cardiovascular/Cardiac Catheterization/Injection Procedures sections.

Diagnostic cardiac catheterization and diagnostic angiography codes (93451, 93452, 93453, 93454, 93455, 93456, 93457, 93458, 93459, 93460, 93461, 93563, 93566, 93567, 93568, *93593, 93594, 93596, 93597, 93598*) should **not** be used with 33900, 33901, 33902, 33903, 33904 to report:

1. Contrast injections, angiography, roadmapping, and/or fluoroscopic guidance for the TPVI,
2. Pulmonary conduit angiography for guidance of TPVI, or
3. Right heart catheterization for hemodynamic measurements before, during, and after TPVI for guidance of TPVI.

Diagnostic right and left heart catheterization codes (93451, 93452, 93453, 93456, 93457, 93458, 93459, 93460, 93461, *93593, 93594, 93595, 93596, 93597, 93598*), diagnostic coronary angiography codes (93454, 93455, 93456, 93457, 93458, 93459, 93460, 93461, 93563, 93564), and diagnostic angiography codes 93565, 93566, 93567, 93568 may be separately reported in conjunction with 33900, 33901, 33902, 33903, 33904, representing separate and distinct services from pulmonary artery revascularization, if:

1. No prior study is available and a full diagnostic study is performed, or
2. A prior study is available, but as documented in the medical record:
    a. There is inadequate visualization of the anatomy and/or pathology, or
    b. The patient's condition with respect to the clinical indication has changed since the prior study, or
    c. There is a clinical change during the procedure that requires new evaluation.

Do not report 33900, 33901, 33902, 33903, 33904, in conjunction with 76000, 93451, 93452, 93453, 93454, 93455, 93456, 93457, 93458, 93459, 93460, 93461, *93593, 93594, 93596, 93597, 93598*, 93563, 93564, 93565, 93566, 93567, 93568 for catheterization and angiography services intrinsic to the procedure.

Balloon angioplasty (92997, 92998) within the same target lesion as stent implant, either before or after stent deployment, is not separately reported.

For balloon angioplasty at the same session as 33900, 33901, 33902, 33903, 33904, but for a distinct lesion or in a different artery, see 92997, 92998.

~~For diagnostic congenital cardiac catheterization performed in conjunction with 33900, 33901, 33902, 33903, 33904, see *93593, 93594, 93595, 93596, 93597.*~~

To report percutaneous pulmonary artery revascularization by stent placement ~~(33900, 33901, 33902, 33903, 33904)~~ in conjunction with diagnostic congenital cardiac catheterization, see 33900, 33901, 33902, 33903, 33904 ~~*93593, 93594, 93595, 93596, 93597*~~.

For transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, see 33745, 33746.

CPT Descriptor: Percutaneous pulmonary artery revascularization by stent placement, initial; normal native connections, unilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 2-year-old female with prior surgical repair of tetralogy of fallot repair in infancy is suspected to have left pulmonary artery stenosis by echocardiography and physical exam. Congenital diagnostic cardiac catheterization demonstrates severe left pulmonary artery stenosis.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review of noninvasive work-up including echocardiogram, CXR, EKG, cardiac CT or MRI, or any other pertinent studies. Based on available information, determine all potential components required for the procedure plus contingencies and backups. Perform and document a complete and/or interval history and physical exam. Provide a description of the procedure and expected results to the parents of the patient, a description of potential risks, and obtain signature of informed consent for the procedure. Supervise the administration of anxiolysis, when necessary. Conduct final procedural coordination with technicians, nurses, and the anesthesiology team. Don surgical scrubs & lead. Position patient. Prep, scrub, drape and wait. Perform a "time-out."

Description of Intra-Service Work: The procedure is conducted under general anesthesia using fluoroscopic guidance throughout. Lidocaine is injected to the access sites as an adjunct to general anesthesia. Vascular access is obtained percutaneously, typically in a large vein. The site of venous access may vary due to patient anatomy and vascular access limitations. Arterial access is obtained for hemodynamics and pressure monitoring during intervention. Introducer sheaths are initially placed over a wire in the vein and artery to establish secure access. The wires and dilators are removed, and the sheaths flushed with heparinized saline. Intravenous heparin is administered to achieve therapeutic anticoagulation. The activated clotting time is monitored throughout the case, and additional heparin is administered, as needed.

Diagnostic cardiac catheterization (separately reportable, 93593-93597) (STAFF NOTE: CPT codes 93593-93597 were passed at the May 2020 CPT meeting) including hemodynamic and angiographic evaluation is initially performed and demonstrates an indication for further intervention. Measurement of the lesion as well as neighboring healthy vessel are made from the angiograms, which is used for selection of the appropriate balloon and stent sizes. The angiographic catheter is removed and an end-hole catheter with soft guidewire advanced into and beyond the stenotic pulmonary artery. The soft guidewire is replaced with a stiff interventional guidewire to secure a stable position in the distal branch to support the remainder of the intervention. The chosen stent is prepared, mounted and hand-crimped on the appropriate delivery balloon, which has been de-aired to ensure the lowest possible profile. The diagnostic introducer sheath in the vein is removed and exchanged for a larger and longer sheath to accommodate delivery of the balloon-mounted stent. The delivery sheath is advanced over the wire to the target location, just distal to the lesion in the pulmonary artery. The dilator is removed, and the sheath allowed to bleed back to ensure evacuation of any air, then flushed with heparinized saline. The balloon with mounted stent is loaded onto the wire and advanced through the long sheath to the tip of the sheath. The entire

system is adjusted to position the stent, still within the sheath, across the lesion. Once in the appropriate location, the sheath is carefully withdrawn partially. An angiogram is performed through the side port of the sheath to evaluate the position. Adjustments are made as needed, and angiography repeated until the position is appropriate. The sheath is then withdrawn further, fully exposing the delivery balloon. The balloon is inflated to deliver the stent within the pulmonary artery. The balloon is deflated and removed, maintaining wire position. A larger or higher-pressure balloon catheter may be used to post-dilate the stent to the desired diameter and is not additionally reportable. The balloon is exchanged for a diagnostic catheter to perform hemodynamic assessment of the result. Angiography is also performed to assess the positioning of the delivered stent and potential need for additional intervention. All catheters and sheaths are removed and manual compression or a vascular closure device is used to achieve hemostasis prior to transfer to the recovery area.

Description of Post-Service Work: Following catheterization, an immediate post-procedure note is documented in the medical record. Once hemostasis of the catheterization vascular access sites has been ensured, the patient is transported to the appropriate recovery area and a verbal report given to the accepting team. Medication reconciliation is performed in the EMR and post procedure orders are placed for nursing care. A detailed report is documented which includes an anatomically correct diagram of the congenital heart defects, detailed description of the procedure performed, calculations and interpretation of all the hemodynamic data obtained, review and radiologic interpretation of the angiograms, a complete listing and discussion of the findings, and recommendations based on all of the findings. All necessary data is then also entered into the appropriate national registry, as available/appropriate. There is at least one physician bedside visit to assess the patient, including catheterization sites, discuss the findings with the patient and/or family, and review discharge and follow up instructions prior to discharge. For outpatients, stent implantation will typically require an overnight hospital stay and follow-up testing the next morning, which will be reviewed by the operator. For inpatients, communication/hand-off of the findings is made with the intensive care team, as may be appropriate.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	11%	89%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel approved a new family of five codes at the February Panel meeting describing physician services to describe pulmonary artery stenting after a long shift toward percutaneous endovascular approaches in some patients. While initially balloon angioplasty was the only possible treatment for pulmonary artery stenosis (PAS), particularly for small children, the use of endovascular stents has developed and improved outcomes versus angioplasty alone. Compared

to other peripheral vascular angioplasty and stenting interventions, the work performed in the pulmonary arteries poses greater complexity and risk not captured by other existing peripheral vascular CPT codes. Additionally, there is currently no way in CPT to track patients undergoing endovascular repair of PAS due to the large number of patients treated for other pathologies with any of the existing codes that are used to report this work.

CPT codes 33900-33904 are for endovascular repair of pulmonary artery stenosis by stent placement. Codes 33900 and 33901 are for stent placement within the pulmonary arteries via normal native connections, defined as venous access through normal right heart structures and chambers. Codes 33902 and 33903 are for stent placement within the pulmonary arteries, ductus arteriosus, or within a surgical shunt, via abnormal connections or through post-surgical shunts (eg, Blalock-Taussig shunt, Sano shunt, or post Glenn or Fontan procedures). Code 33904 is for each additional stent placed at any location via normal or abnormal connections. Due to the extreme variability of the underlying diagnosis associated with pulmonary artery stenosis, it is impossible to determine if a right heart only, left heart only, or combined right and left diagnostic study is needed. Therefore, congenital diagnostic cardiac catheterization is separately reportable with CPT codes 93593-93597.

Survey of the codes was deferred one meeting while some introductory coding language was revised by the Panel in consultation with the specialties. Specialty societies randomly surveyed interventional cardiologists and pediatric interventional cardiologists, as designated by membership rolls, on the newly created codes. The 000-global day survey was completed by physicians who have experience with the service.

As we move through this family of codes, there are three relationships in which we anticipate the RUC will be interested. The first is an increase in time and work as the codes move from unilateral to bilateral. That relationship exists and appears appropriate to the expert panel, with increased time and work for bilateral procedures. The second is an increase in work as the codes move from “normal native” connections to “abnormal” connections. That relationship also exists and appears appropriate to the expert panel. The final relationship that one might expect to see but does not exist is an increase in time as the codes move from “normal native” connections to “abnormal” connections. We can speak to this in greater detail during discussion of the abnormal codes at the meeting, but will explain here that while the times may be the same, the increased work can be attributed to increased intensity of these services in patients with abnormal connections: interpretations of any other angiographic studies are more difficult; operators are looking for additional lesions throughout the procedure, whereas in a healthy child with normal connections that complexity doesn’t exist; this essentially creates more complex MDM throughout procedure, as the operator is constantly thinking about what else could be wrong.

Finally, we note a logical progression in WPUT throughout the family as we progress from unilateral stenting in normal native connections to bilateral stenting in abnormal connections, from 0.068 to 0.076 to 0.083 and 0.083, respectively, that we suggest supports the time and RVU recommendations.

Preservice/Postservice

The societies have sought, and the RUC has approved additional time in similar circumstances at several recent meetings, with additional time most commonly added for review of records/imaging, extended discussions with family/parents, additional positioning, additional wound dressing, prolonged monitoring, and extensive documentation (eg. anatomically correct diagram with hemodynamic data embedded). Those elements apply with this family of codes, and we describe recommendations beyond traditional standards here.

Separately at this meeting, the societies submitted information requesting a degree of standardization for additional time in the preservice and postservice periods to reflect complicating factors physicians face when treating patients in need of complex congenital cardiac procedures. The Research Subcommittee opted not to pursue a standardized addition, but rather to consider requests for additional time for complex congenital cardiac procedures on an ad hoc basis when each code is presented. Insofar as surveys supported times beyond the standards in Preservice Package 4 and Postservice Package 9B, we have made recommendations for additional preservice and postservice time consistent with that submission.

For 33900 that results in a recommendation for 10 additional minutes of evaluation time—with 5 additional minutes for procedure preparation, 3 additional minutes for communication/consent with patient/family, and 2 additional minutes to prepare/gown/drape the patient. This produces a recommendation of 50 minutes preservice evaluation time rather than 40. Survey respondents indicated 62 minutes at the median.

> *“Prepare for Procedure (Check labs, plan, assess risks, review procedure)”:* Time to prepare for the procedure is considerable. The typical patient has extensive past cardiac history. It is vital to review their past cardiac

catheterization reports, angiographic imaging, any existing CT or cardiac MR, and prior surgical history. Previous percutaneous access issues must also be reviewed including from prior cardiac catheterization procedures or long standing CVL placement during ICU care.

"Communicate with patient and/or family (Discuss procedure/ obtain consent)": The time to discuss a patient's procedure with the parent of a child is greater than the typical discussions when an adult patient consents for themselves. This leads to considerably more time for explaining the procedure and consenting the family for the forthcoming procedure.

"Check/ prepare patient readiness (Gown, drape, prep, mark)": Whereas anxiolytic medications are quite often administered to alleviate patient anxiety in a typical pre-operative setting, this is not typical in cardiac patients due to concerns about hemodynamic instability. Therefore, parents are relied upon for significant patient coaching and may even accompany the child to the catheterization lab, where they spend 1-2 minutes comforting the child as the anesthesiologist administers inhalational sedation in a controlled setting.

We recommend 3 additional minutes for positioning, for a total 6 minutes. Survey respondents indicated 15 minutes at the median.

"Perform/ supervise patient positioning": Positioning of these patients is more time consuming. Positioning is complicated by the requirement for bi-plane fluoroscopic equipment. Given the extensive intra-procedure monitoring that is necessary, the myriad of EKG wires (2 sets), IV tubing, pH probe, etc. must be precisely positioned so as not to be in the way of either of the bi-plane imaging views. Patients are then positioned with both arms extended above the head and the legs pigeon toed and secured in this position for femoral access. It is also common to obtain access from both the groin and the neck during the same procedure, which means three points of access (bilateral femoral and right neck) must be prepped and draped in sterile fashion. Additional positioning occurs to move the arm(s) up when operators prefer arms down to obtain neck access. Arm positioning is particularly important for anticipated long procedures to avoid brachial plexus injury. All of this must be done while maintaining a sterile environment.

For postservice time, we recommend 12 additional minutes, consistent with the survey median time of 45 minutes. This would be comprised of 2 additional minutes for application of dressing, 3 additional minutes for monitoring/stabilization, 3 additional minutes communication with patient/family, and 4 additional minutes for the written post-op note.

"Application of dressing": As noted in the description of the post-service package breakdown, the existing times allow for a "simple dressing". Unlike adult catheterization patients, who typically have closure devices placed as part of the intra-procedure time, these devices are not typically used in children, and various dressings are applied instead. Pressure dressings are the most common, but other sites may require additional occlusive dressings (eg. Opsite, Tegaderm) prior to pressure dressing application or by themselves. Patients in the congenital cardiac surgical suite will have dressings applied to multiple sites, including mediastinal and pleural drains, as well as a sternal dressing, which often involves an open sternum.

"Monitor patient recovery/stabilization": Due to the labile hemodynamics most of these patients demonstrate, a prolonged period for monitoring is needed immediately upon completion of the case. This provides additional time for emerging from sedation/anesthesia to prevent dramatic swings in systemic and/or pulmonary vascular resistance.

"Communication with patient and/or family": As explained in the pre-service package for the same issue, communication of complex cardiac findings and interventions is more time consuming for the family of a child as compared to an adult patient with other pathologies. Additionally, the discussion typically extends into explanation of next steps, namely whether or not there is need for complex surgery or medical management.

"Written Post-operative Note": In addition to the traditional immediate post-operative note (a separate line item) a comprehensive post-operative report is documented for these patients. Unlike the typical post procedure report of other specialties for which the existing post procedure package includes 5 minutes, these reports incorporate multiple additional elements including:

a. A list of prior relevant cardiac surgical procedures and the indications for the current procedure;

b. A detailed operative procedure report including all catheter and wire manipulations necessary to catheterize particularly difficult vessels and/or chambers;
c. Summary discussion of the hemodynamic findings including calculations of cardiac index, systemic and pulmonary vascular resistance, and any intra-cardiac shunt fractions;
d. Safe hand-off/communication is made with the hospital rounding team for inpatients returning to their respective units;
e. A complete radiologic report describing all of the findings from the angiograms performed;
f. An anatomically accurate drawing of the cardiac defect(s) is performed, usually using existing software programs (a time-consuming effort that facilitates understanding for all providers); and
g. All data obtained must be duplicated and entered into a national registry, such as IMPACT

33900

Code 33900 is the first code in the family and describes the work of unilateral pulmonary artery stent placement in a heart with normal native connections. The key reference code is 92928 for percutaneous coronary stenting. It was selected by 34% of respondents. 67% of the respondents indicated that 33900 was of identical complexity, while the rest indicated it was more complex. The second reference code is 93580 for percutaneous transcatheter closure of a congenital interatrial communication. It was selected by 26% of respondents. 100% of the respondents indicated that 33900 was more intense/complex overall.

Recommendation

Therefore, for code 33900 the **societies recommend the survey median RVW of 14.00 with 71 minutes preservice time, 90 minutes intraservice time from the survey median, and 45 minutes postservice time**. This fits between the times and work RVUs of theintensity of the KRS, which survey respondents felt was similarly intense to 33900, and also compares well to MPC code 37244 for vascular embolization of a hemorrhage and code 33340 for percutaneous closure of the left atrial appendage, both in terms of time and work RVU, as shown in the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. NA

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatric Interventional Cardiology How often? Sometimes

Specialty Interventional Cardiology How often? Sometimes

Specialty Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. CCA estimate

Specialty Pediatric/Interventional Cardiology Frequency 600 Percentage 60.00 %

Specialty Cardiology Frequency 400 Percentage 40.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. It is possible that a very small percentage of patients may be beneficiaries

Specialty Pediatric/Interventional Cardiology Frequency 20 Percentage 50.00 %

Specialty Cardiology Frequency 20 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Percutaneous pulmonary artery revascularization by stent placement, initial; normal native connections, bilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 4-year-old male with history of extreme prematurity, chronic lung disease, and tracheostomy is found to have right ventricular hypertension by echocardiography, and bilateral pulmonary artery stenosis on mri. congenital diagnostic cardiac catheterization demonstrates severe bilateral pulmonary artery stenosis.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review of noninvasive work-up including echocardiogram, CXR, EKG, cardiac CT or MRI, or any other pertinent studies. Based on available information, determine all potential components required for the procedure plus contingencies and backups. Perform and document a complete and/or interval history and physical exam. Provide a description of the procedure and expected results to the parents of the patient, a description of potential risks, and obtain signature of informed consent for the procedure. Supervise the administration of anxiolysis, when necessary. Conduct final procedural coordination with technicians, nurses, and the anesthesiology team. Don surgical scrubs & lead. Position patient. Prep, scrub, drape and wait. Perform a “time-out.”

Description of Intra-Service Work: The procedure is conducted under general anesthesia using fluoroscopic guidance throughout. Lidocaine is injected to the access sites as an adjunct to general anesthesia. Vascular access is obtained percutaneously, typically in a large vein. The site of venous access may vary due to patient anatomy and any vascular access limitations. Arterial access is typically obtained for hemodynamics and pressure monitoring during intervention. Introducer sheaths are initially placed over a wire in the vein and artery to establish secure access. The wires and dilators are removed, and the sheaths flushed with heparinized saline. Intravenous heparin is administered to achieve therapeutic anticoagulation. The activated clotting time is monitored throughout the case, and additional heparin is administered, as needed.

Diagnostic cardiac catheterization (separately reportable, 93593-97) including hemodynamic and angiographic evaluation is initially performed and demonstrates an indication for further intervention. After identification of bilateral right and left main pulmonary artery stenosis, measurements of the lesions as well as neighboring healthy vessels are made from the angiograms, which are used for selection of the appropriate balloon and stent sizes. The angiographic catheter is removed and an end-hole catheter with soft guidewire advanced into and beyond the stenotic pulmonary artery and extended into the distal right lower lobe branch. The soft guidewire is replaced with a stiff interventional guidewire to secure a stable position in the distal branch to support the remainder of the intervention. The chosen stent is prepared, mounted and hand-crimped on the appropriate delivery balloon, which has been de-aired to ensure the lowest possible profile. The diagnostic introducer sheath in the vein is removed and exchanged for a larger and longer sheath to accommodate delivery of the balloon-mounted stent. The delivery sheath is advanced over the wire to the target location, just distal to the lesion in the right pulmonary artery. The dilator is removed, and the sheath allowed to bleed back to ensure evacuation of any air, then

flushed with heparinized saline. The balloon-mounted stent is loaded onto the wire and advanced through the long sheath to the tip of the sheath. The entire system is adjusted to position the stent, still within the sheath, across the lesion. Once in the appropriate location, the sheath is carefully withdrawn partially. An angiogram is performed through the side port of the sheath to evaluate the position. Adjustments are made, as needed and angiography repeated until the position is appropriate. The sheath is then withdrawn further, fully exposing the delivery balloon. The balloon is inflated to deliver the stent within the pulmonary artery. The balloon is deflated and removed, maintaining wire position. A larger or higher-pressure balloon catheter may be used to post-dilate the stent to the desired diameter and is not additionally reportable. The balloon is exchanged for a diagnostic catheter to perform hemodynamic assessment of the result. Angiography is also performed to assess the positioning of the delivered stent and potential need for additional intervention. The diagnostic catheter is then inserted and used to retrieve the stiff interventional wire and remove it from the body. The soft tipped guidewire is then re-inserted through the catheter and advanced into and beyond the stenotic left pulmonary artery and extended into the distal left lower lobe branch. Once again, the guidewire is removed and the stiff interventional wire re-inserted to secure left sided wire position for the subsequent intervention. The entire process described above for the right sided stent is now repeated to address the left pulmonary artery stenosis. Once the left sided lesion is successfully stented, a final main pulmonary artery angiogram is repeated to assess the final results of the bilateral stent implants.

All catheters and sheaths are removed and manual compression or a vascular closure device is used to achieve hemostasis prior to transfer to the recovery area.

Description of Post-Service Work: Following catheterization, an immediate post-procedure note is documented in the medical record. Once hemostasis of the catheterization vascular access sites has been ensured, the patient is transported to the appropriate recovery area and a verbal report given to the accepting team. Medication reconciliation is performed in the EMR and post procedure orders are placed for nursing care. A detailed report is documented which includes an anatomically correct diagram of the congenital heart defects, detailed description of the procedure performed, calculations and interpretation of all the hemodynamic data obtained, review and radiologic interpretation of the angiograms, a complete listing and discussion of the findings, and recommendations based on all of the findings. All necessary data is then also entered into the appropriate national registry, as available/appropriate. There is at least one physician bedside visit to assess the patient, including catheterization sites, discuss the findings with the patient and/or family, and review discharge and follow up instructions prior to discharge. For outpatients, stent implantation will typically require an overnight hospital stay and follow-up testing the next morning, which will be reviewed by the operator. For inpatients, communication/hand-off of the findings is made with the intensive care team, as may be appropriate.

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	38%	62%
Physical effort required	0%	38%	62%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	38%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel approved a new family of five codes at the February Panel meeting describing physician services to describe pulmonary artery stenting after a long shift toward percutaneous endovascular approaches in some patients. While initially balloon angioplasty was the only possible treatment for pulmonary artery stenosis (PAS), particularly for small children, the use of endovascular stents has developed and improved outcomes versus angioplasty alone. Compared

to other peripheral vascular angioplasty and stenting interventions, the work performed in the pulmonary arteries poses greater complexity and risk not captured by other existing peripheral vascular CPT codes. Additionally, there is currently no way in CPT to track patients undergoing endovascular repair of PAS due to the large number of patients treated for other pathologies with any of the existing codes that are used to report this work.

CPT codes 33900-33904 are for endovascular repair of pulmonary artery stenosis by stent placement. Codes 33900 and 33901 are for stent placement within the pulmonary arteries via normal native connections, defined as venous access through normal right heart structures and chambers. Codes 33902 and 33903 are for stent placement within the pulmonary arteries, ductus arteriosus, or within a surgical shunt, via abnormal connections or through post-surgical shunts (eg, Blalock-Taussig shunt, Sano shunt, or post Glenn or Fontan procedures). Code 33904 is for each additional stent placed at any location via normal or abnormal connections. Due to the extreme variability of the underlying diagnosis associated with pulmonary artery stenosis, it is impossible to determine if a right heart only, left heart only, or combined right and left diagnostic study is needed. Therefore, congenital diagnostic cardiac catheterization is separately reportable with CPT codes 93593-93597.

Survey of the codes was deferred one meeting while some introductory coding language was revised by the Panel in consultation with the specialties. Specialty societies randomly surveyed interventional cardiologists and pediatric interventional cardiologists, as designated by membership rolls, on the newly created codes. The 000-global day survey was completed by physicians who have experience with the service.

As we move through this family of codes, there are three relationships in which we anticipate the RUC will be interested. The first is an increase in time and work as the codes move from unilateral to bilateral. That relationship exists and appears appropriate to the expert panel, with increased time and work for bilateral procedures. The second is an increase in work as the codes move from “normal native” connections to “abnormal” connections. That relationship also exists and appears appropriate to the expert panel. The final relationship that one might expect to see but does not exist is an increase in time as the codes move from “normal native” connections to “abnormal” connections. We can speak to this in greater detail during discussion of the abnormal codes at the meeting, but will explain here that while the times may be the same, the increased work can be attributed to increased intensity of these services in patients with abnormal connections: interpretations of any other angiographic studies are more difficult; operators are looking for additional lesions throughout the procedure, whereas in a healthy child with normal connections that complexity doesn’t exist; this essentially creates more complex MDM throughout procedure, as the operator is constantly thinking about what else could be wrong.

Finally, we note a logical progression in WPUT throughout the family as we progress from unilateral stenting in normal native connections to bilateral stenting in abnormal connections, from 0.068 to 0.076 to 0.083 and 0.083, respectively, that we suggest supports the time and RVU recommendations.

Preservice/Postservice

The societies have sought, and the RUC has approved additional time in similar circumstances at several recent meetings, with additional time most commonly added for review of records/imaging, extended discussions with family/parents, additional positioning, additional wound dressing, prolonged monitoring, and extensive documentation (eg. anatomically correct diagram with hemodynamic data embedded). Those elements apply with this family of codes, and we describe recommendations beyond traditional standards here.

Separately at this meeting, the societies submitted information requesting a degree of standardization for additional time in the preservice and postservice periods to reflect complicating factors physicians face when treating patients in need of complex congenital cardiac procedures. The Research Subcommittee opted not to pursue a standardized addition, but rather to consider requests for additional time for complex congenital cardiac procedures on an ad hoc basis when each code is presented. Insofar as surveys supported times beyond the standards in Preservice Package 4 and Postservice Package 9B, we have made recommendations for additional preservice and postservice time consistent with that submission.

For 33901 that results in a recommendation for 10 additional minutes of evaluation time—with 5 additional minutes for prepare for the procedure, 3 additional minutes for communication/consent with patient/family, and 2 additional minutes to prepare/gown/drape the patient. This produces a recommendation of 50 minutes preservice evaluation time rather than 40. Survey respondents indicated 62 minutes at the median.

> *“Prepare for Procedure (Check labs, plan, assess risks, review procedure)”:* Time to prepare for the procedure is considerable. The typical patient has extensive past cardiac history. It is vital to review their past cardiac

catheterization reports, angiographic imaging, any existing CT or cardiac MR, and prior surgical history. Previous percutaneous access issues must also be reviewed including from prior cardiac catheterization procedures or long standing CVL placement during ICU care.

"Communicate with patient and/or family (Discuss procedure/ obtain consent)": The time to discuss a patient's procedure with the parent of a child is greater than the typical discussions when an adult patient consents for themselves. This leads to considerably more time for explaining the procedure and consenting the family for the forthcoming procedure.

"Check/ prepare patient readiness (Gown, drape, prep, mark)": Whereas anxiolytic medications are quite often administered to alleviate patient anxiety in a typical pre-operative setting, this is not typical in cardiac patients due to concerns about hemodynamic instability. Therefore, parents are relied upon for significant patient coaching and may even accompany the child to the catheterization lab, where they spend 1-2 minutes comforting the child as the anesthesiologist administers inhalational sedation in a controlled setting.

We recommend 3 additional minutes for positioning, for a total 6 minutes. Survey respondents indicated 15 minutes at the median.

"Perform/ supervise patient positioning": Positioning of these patients is more time consuming. Positioning is complicated by the requirement for bi-plane fluoroscopic equipment. Given the extensive intra-procedure monitoring that is necessary, the myriad of EKG wires (2 sets), IV tubing, pH probe, etc. must be precisely positioned so as not to be in the way of either of the bi-plane imaging views. Patients are then positioned with both arms extended above the head and the legs pigeon toed and secured in this position for femoral access. It is also common to obtain access from both the groin and the neck during the same procedure, which means three points of access (bilateral femoral and right neck) must be prepped and draped in sterile fashion. Additional positioning occurs to move the arm(s) up when operators prefer arms down to obtain neck access. Arm positioning is particularly important for anticipated long procedures to avoid brachial plexus injury. All of this must be done while maintaining a sterile environment.

For postservice time, we recommend 12 additional minutes, consistent with the survey median time of 45 minutes. This would be comprised of 2 additional minutes for application of dressing, 3 additional minutes for monitoring/stabilization, 3 additional minutes communication with patient/family, and 4 additional minutes for the written post-op note.

"Application of dressing": As noted in the description of the post-service package breakdown, the existing times allow for a "simple dressing". Unlike adult catheterization patients, who typically have closure devices placed as part of the intra-procedure time, these devices are not typically used in children, and various dressings are applied instead. Pressure dressings are the most common, but other sites may require additional occlusive dressings (eg. Opsite, Tegaderm) prior to pressure dressing application or by themselves. Patients in the congenital cardiac surgical suite will have dressings applied to multiple sites, including mediastinal and pleural drains, as well as a sternal dressing, which often involves an open sternum.

"Monitor patient recovery/stabilization": Due to the labile hemodynamics most of these patients demonstrate, a prolonged period for monitoring is needed immediately upon completion of the case. This provides additional time for emerging from sedation/anesthesia to prevent dramatic swings in systemic and/or pulmonary vascular resistance.

"Communication with patient and/or family": As explained in the pre-service package for the same issue, communication of complex cardiac findings and interventions is more time consuming for the family of a child as compared to an adult patient with other pathologies. Additionally, the discussion typically extends into explanation of next steps, namely whether or not there is need for complex surgery or medical management.

"Written Post-operative Note": In addition to the traditional immediate post-operative note (a separate line item) a comprehensive post-operative report is documented for these patients. Unlike the typical post procedure report of other specialties for which the existing post procedure package includes 5 minutes, these reports incorporate multiple additional elements including:

a. A list of prior relevant cardiac surgical procedures and the indications for the current procedure;

b. A detailed operative procedure report including all catheter and wire manipulations necessary to catheterize particularly difficult vessels and/or chambers;
c. Summary discussion of the hemodynamic findings including calculations of cardiac index, systemic and pulmonary vascular resistance, and any intra-cardiac shunt fractions;
d. Safe hand-off/communication is made with the hospital rounding team for inpatients returning to their respective units;
e. A complete radiologic report describing all of the findings from the angiograms performed;
f. An anatomically accurate drawing of the cardiac defect(s) is performed, usually using existing software programs (a time-consuming effort that facilitates understanding for all providers); and
g. All data obtained must be duplicated and entered into a national registry, such as IMPACT

33901

Code 33901 is the second code in the family and describes the work of bilateral pulmonary artery stent placement in a heart with normal native connections. The key reference code is 93580 for percutaneous transcatheter closure of a congenital interatrial communication. It was selected by 26% of respondents. 100% of the respondents indicated that 33901 is more intense/complex overall. The second reference code is 92928 for percutaneous coronary stenting. It was selected by 23% of respondents. 75% of these respondents indicated 33901 is more intense/complex overall.

Recommendation

Therefore, for code 33901 the **societies recommend the survey median RVW of 18.00 with 71 minutes preservice time, 120 minutes intraservice time from the survey median, and 45 minutes postservice time**. This aligns reasonably well with the intensity, time, and RVU of the KRS, which survey respondents felt was less intense than 33901. It also compares well to the intensity of MPC code 37244 for vascular embolization of a hemorrhage, and with the intensity, time, and RVU of code 93591 for percutaneous closure of aortic paravalvular leak, as shown in the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. NA

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatric Interventional Cardiology How often? Sometimes

Specialty Interventional Cardiology How often? Sometimes

Specialty Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate from CCA

Specialty Pediatric/Interventional Cardiology Frequency 300 Percentage 60.00 %

Specialty Cardiology Frequency 200 Percentage 40.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. It is possible that a very small percentage of patients may be beneficiaries

Specialty Pediatric/Interventional Cardiology Frequency 20 Percentage 50.00 %

Specialty Cardiology Frequency 20 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Percutaneous pulmonary artery revascularization by stent placement, initial; abnormal connections, unilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 3-month-old female with pulmonary atresia and intact ventricular septum who underwent surgical blalock-taussig-thomas (btt) shunt in the neonatal period presents with worsening systemic hypoperfusion, shock, and evidence of acute shunt stenosis. she is brought to the cardiac catheterization laboratory emergently for stenting of the btt shunt.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review of noninvasive work-up including echocardiogram, CXR, EKG, cardiac CT or MRI, or any other pertinent studies. Based on available information, determine all potential components required for the procedure plus contingencies and backups. Perform and document a complete and/or interval history and physical exam. Provide a description of the procedure and expected results to the parents of the patient, a description of potential risks, and obtain signature of informed consent for the procedure. Supervise the administration of anxiolysis, when necessary. Conduct final procedural coordination with technicians, nurses, and the anesthesiology team. Don surgical scrubs & lead. Position patient. Prep, scrub, drape and wait. Perform a “time-out.”

Description of Intra-Service Work: The procedure is conducted under general anesthesia using fluoroscopic guidance throughout. Lidocaine is injected to the access sites to help minimize hypotension caused by excessive general anesthetic. Vascular access is obtained percutaneously, typically in a large vein and an artery. The site of venous access is variable and depends on patient anatomy and any vascular access limitations. Arterial access is typically obtained in a femoral artery but may require carotid artery access. Introducer sheaths are initially placed over a wire in the vein and artery to establish secure access. The wires and dilators are removed, and the sheaths flushed with heparinized saline. Intravenous heparin is administered to achieve therapeutic anticoagulation. The activated clotting time is monitored throughout the case, and additional heparin is administered, as needed.

Diagnostic catheterization varies due to inconsistent venous or arterial access to the pulmonary arteries. Diagnostic cardiac catheterization (separately reportable, 93593-97) including hemodynamic and angiographic evaluation is initially performed and demonstrates an indication for further intervention. If the pulmonary arteries originate from the aorta, the diagnostic evaluation would include an aortogram to evaluate the shunt or ductal pathway to the pulmonary arteries for stenosis. Measurements of the lesion as well as neighboring healthy vessels are made from the angiograms, which are used for selection of the appropriate balloon and stent sizes. The angiographic catheter is removed and an end-hole catheter with soft guidewire advanced into and beyond the stenotic lesion. The soft guidewire is replaced with a stiff interventional guidewire to secure a stable position in the distal branch to support the remainder of the intervention. The chosen stent is prepared, mounted and hand-crimped on the appropriate delivery balloon, which has been de-aired to ensure the lowest possible profile. The diagnostic introducer sheath is removed and exchanged for a larger and longer sheath to accommodate

delivery of the balloon-mounted stent. The delivery sheath is advanced over the wire to the target location, just distal to the lesion. The dilator is removed, and the sheath allowed to bleed back to ensure evacuation of any air, then flushed with heparinized saline. The balloon with mounted stent is loaded onto the wire and advanced through the long sheath to the tip of the sheath. The entire system is adjusted to position the stent, still within the sheath, across the lesion. Once in the appropriate location, the sheath is carefully withdrawn partially. An angiogram is performed through the side port of the sheath to evaluate the position. Adjustments are made, as needed and angiography repeated until the position is appropriate. The sheath is then withdrawn further, fully exposing the delivery balloon. The balloon is inflated to deliver the stent within the target lesion. The balloon is deflated and removed, maintaining wire position. A larger or higher-pressure balloon catheter may be used to post-dilate the stent to the desired diameter and is not additionally reportable. The balloon is exchanged for a diagnostic catheter to perform hemodynamic assessment of the result. Angiography is also performed to assess the positioning of the delivered stent and potential need for additional intervention. All catheters and sheaths are removed and manual compression or a vascular closure device is used to achieve hemostasis prior to transfer to the recovery area.

Description of Post-Service Work: Following catheterization, an immediate post-procedure note is documented in the medical record. Once hemostasis of the catheterization vascular access sites has been ensured, the patient is transported to the appropriate recovery area and a verbal report given to the accepting team. Medication reconciliation is performed in the EMR and post procedure orders are placed for nursing care. A detailed report is documented which includes an anatomically correct diagram of the congenital heart defects, detailed description of the procedure performed, calculations and interpretation of all the hemodynamic data obtained, review and radiologic interpretation of the angiograms, a complete listing and discussion of the findings, and recommendations based on all of the findings. All necessary data is then also entered into the appropriate national registry, as available/appropriate. There is at least one physician bedside visit to assess the patient, including catheterization sites, discuss the findings with the patient and/or family, and review discharge and follow up instructions prior to discharge. For outpatients, stent implantation will typically require an overnight hospital stay and follow-up testing the next morning, which will be reviewed by the operator. For inpatients, communication/hand-off of the findings is made with the intensive care team, as may be appropriate.

Physical effort required	0%	33%	67%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	17%	83%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel approved a new family of five codes at the February Panel meeting describing physician services to describe pulmonary artery stenting after a long shift toward percutaneous endovascular approaches in some patients. While initially balloon angioplasty was the only possible treatment for pulmonary artery stenosis (PAS), particularly for small children, the use of endovascular stents has developed and improved outcomes versus angioplasty alone. Compared

to other peripheral vascular angioplasty and stenting interventions, the work performed in the pulmonary arteries poses greater complexity and risk not captured by other existing peripheral vascular CPT codes. Additionally, there is currently no way in CPT to track patients undergoing endovascular repair of PAS due to the large number of patients treated for other pathologies with any of the existing codes that are used to report this work.

CPT codes 33900-33904 are for endovascular repair of pulmonary artery stenosis by stent placement. Codes 33900 and 33901 are for stent placement within the pulmonary arteries via normal native connections, defined as venous access through normal right heart structures and chambers. Codes 33902 and 33903 are for stent placement within the pulmonary arteries, ductus arteriosus, or within a surgical shunt, via abnormal connections or through post-surgical shunts (eg, Blalock-Taussig shunt, Sano shunt, or post Glenn or Fontan procedures). Code 33904 is for each additional stent placed at any location via normal or abnormal connections. Due to the extreme variability of the underlying diagnosis associated with pulmonary artery stenosis, it is impossible to determine if a right heart only, left heart only, or combined right and left diagnostic study is needed. Therefore, congenital diagnostic cardiac catheterization is separately reportable with CPT codes 93592-93597.

Survey of the codes was deferred one meeting while some introductory coding language was revised by the Panel in consultation with the specialties. Specialty societies randomly surveyed interventional cardiologists and pediatric interventional cardiologists, as designated by membership rolls, on the newly created codes. The 000-global day survey was completed by physicians who have experience with the service.

As we move through this family of codes, there are three relationships in which we anticipate the RUC will be interested. The first is an increase in time and work as the codes move from unilateral to bilateral. That relationship exists and appears appropriate to the expert panel, with increased time and work for bilateral procedures. The second is an increase in work as the codes move from “normal native” connections to “abnormal” connections. That relationship also exists and appears appropriate to the expert panel. The final relationship that one might expect to see but does not exist is an increase in time as the codes move from “normal native” connections to “abnormal” connections. We can speak to this in greater detail during discussion of the abnormal codes at the meeting, but will explain here that while the times may be the same, the increased work can be attributed to increased intensity of these services in patients with abnormal connections: interpretations of any other angiographic studies are more difficult; operators are looking for additional lesions throughout the procedure, whereas in a healthy child with normal connections that complexity doesn’t exist; this essentially creates more complex MDM throughout procedure, as the operator is constantly thinking about what else could be wrong.

Finally, we note a logical progression in WPUT throughout the family as we progress from unilateral stenting in normal native connections to bilateral stenting in abnormal connections, from 0.068 to 0.076 to 0.083 and 0.083, respectively, that we suggest supports the time and RVU recommendations.

Preservice/Postservice

The societies have sought, and the RUC has approved additional time in similar circumstances at several recent meetings, with additional time most commonly added for review of records/imaging, extended discussions with family/parents, additional positioning, additional wound dressing, prolonged monitoring, and extensive documentation (eg. anatomically correct diagram with hemodynamic data embedded). Those elements apply with this family of codes, and we describe recommendations beyond traditional standards here.

Separately at this meeting, the societies submitted information requesting a degree of standardization for additional time in the preservice and postservice periods to reflect complicating factors physicians face when treating patients in need of complex congenital cardiac procedures. The Research Subcommittee opted not to pursue a standardized addition, but rather to consider requests for additional time for complex congenital cardiac procedures on an ad hoc basis when each code is presented. Insofar as surveys supported times beyond the standards in Preservice Package 4 and Postservice Package 9B, we have made recommendations for additional preservice and postservice time consistent with that submission.

For 33902 that results in a recommendation for 10 additional minutes of evaluation time—with 5 additional minutes for prepare for the procedure, 3 additional minutes for communication/consent with patient/family, and 2 additional minutes to prepare/gown/drape the patient. This produces a recommendation of 50 minutes preservice evaluation time rather than 40. Survey respondents indicated 62 minutes at the median.

> *“Prepare for Procedure (Check labs, plan, assess risks, review procedure)”:* Time to prepare for the procedure is considerable. The typical patient has extensive past cardiac history. It is vital to review their past cardiac

catheterization reports, angiographic imaging, any existing CT or cardiac MR, and prior surgical history. Previous percutaneous access issues must also be reviewed including from prior cardiac catheterization procedures or long standing CVL placement during ICU care.

"Communicate with patient and/or family (Discuss procedure/ obtain consent)": The time to discuss a patient's procedure with the parent of a child is greater than the typical discussions when an adult patient consents for themselves. This leads to considerably more time for explaining the procedure and consenting the family for the forthcoming procedure.

"Check/ prepare patient readiness (Gown, drape, prep, mark)": Whereas anxiolytic medications are quite often administered to alleviate patient anxiety in a typical pre-operative setting, this is not typical in cardiac patients due to concerns about hemodynamic instability. Therefore, parents are relied upon for significant patient coaching and may even accompany the child to the catheterization lab, where they spend 1-2 minutes comforting the child as the anesthesiologist administers inhalational sedation in a controlled setting.

We recommend 3 additional minutes for positioning, for a total 6 minutes. Survey respondents indicated 15 minutes at the median.

"Perform/ supervise patient positioning": Positioning of these patients is more time consuming. Positioning is complicated by the requirement for bi-plane fluoroscopic equipment. Given the extensive intra-procedure monitoring that is necessary, the myriad of EKG wires (2 sets), IV tubing, pH probe, etc. must be precisely positioned so as not to be in the way of either of the bi-plane imaging views. Patients are then positioned with both arms extended above the head and the legs pigeon toed and secured in this position for femoral access. It is also common to obtain access from both the groin and the neck during the same procedure, which means three points of access (bilateral femoral and right neck) must be prepped and draped in sterile fashion. Additional positioning occurs to move the arm(s) up when operators prefer arms down to obtain neck access. Arm positioning is particularly important for anticipated long procedures to avoid brachial plexus injury. All of this must be done while maintaining a sterile environment.

For postservice time, we recommend 15 additional minutes, consistent with the survey median time of 48 minutes. This would be comprised of 3 additional minutes for application of dressing, 4 additional minutes for monitoring/stabilization, 3 additional minutes communication with patient/family, and 5 additional minutes for the written post-op note.

"Application of dressing": As noted in the description of the post-service package breakdown, the existing times allow for a "simple dressing". Unlike adult catheterization patients, who typically have closure devices placed as part of the intra-procedure time, these devices are not typically used in children, and various dressings are applied instead. Pressure dressings are the most common, but other sites may require additional occlusive dressings (eg. Opsite, Tegaderm) prior to pressure dressing application or by themselves. Patients in the congenital cardiac surgical suite will have dressings applied to multiple sites, including mediastinal and pleural drains, as well as a sternal dressing, which often involves an open sternum.

"Monitor patient recovery/stabilization": Due to the labile hemodynamics most of these patients demonstrate, a prolonged period for monitoring is needed immediately upon completion of the case. This provides additional time for emerging from sedation/anesthesia to prevent dramatic swings in systemic and/or pulmonary vascular resistance.

"Communication with patient and/or family": As explained in the pre-service package for the same issue, communication of complex cardiac findings and interventions is more time consuming for the family of a child as compared to an adult patient with other pathologies. Additionally, the discussion typically extends into explanation of next steps, namely whether or not there is need for complex surgery or medical management.

"Written Post-operative Note": In addition to the traditional immediate post-operative note (a separate line item) a comprehensive post-operative report is documented for these patients. Unlike the typical post procedure report of other specialties for which the existing post procedure package includes 5 minutes, these reports incorporate multiple additional elements including:

a. A list of prior relevant cardiac surgical procedures and the indications for the current procedure;

b. A detailed operative procedure report including all catheter and wire manipulations necessary to catheterize particularly difficult vessels and/or chambers;
c. Summary discussion of the hemodynamic findings including calculations of cardiac index, systemic and pulmonary vascular resistance, and any intra-cardiac shunt fractions;
d. Safe hand-off/communication is made with the hospital rounding team for inpatients returning to their respective units;
e. A complete radiologic report describing all of the findings from the angiograms performed;
f. An anatomically accurate drawing of the cardiac defect(s) is performed, usually using existing software programs (a time-consuming effort that facilitates understanding for all providers); and
g. All data obtained must be duplicated and entered into a national registry, such as IMPACT

33902

Code 33902 is the third code in the family and describes the work of unilateral pulmonary artery stent placement in a heart with abnormal connections. The key reference code is 93590 for percutaneous transcatheter closure of paravalvular leak in the mitral valve. It was selected by 24% of respondents. 62% of the respondents indicated that 33902 is more intense/complex overall, with the remainder responding it is identical. The second reference code is 37231 for endovascular tibial/peroneal atherectomy. It was selected by 18% of respondents. 66% of these respondents felt 33902 to be more intense/complex.

Recommendation

Therefore, for code 33902 the **societies recommend the survey median RVW of 17.33 with 71 minutes preservice time, 90 minutes intraservice time from the survey median, and 48 minutes postservice time**. This aligns reasonably well with the intensity of the KRS, which survey respondents felt was less intense than 33902 but takes longer to perform. It also compares well to the intensity of MPC code 37244 for vascular embolization of a hemorrhage, with work in the congenital cardiac space being more intense for an identical 90-minutes of intraservice time. Additional 000 comparator 93580 is another code common in the congenital cardiac space that could be useful in valuing 33902. It has a longer intraservice time but similar total time, and was identified by respondents elsewhere in this survey to be less intense/complex than pulmonary artery stenting in normal native connections, suggesting it could also be useful here.

As we noted above and discussed with the prefacilitation committee, this recommendation reflects and increased intensity for a service provided in the same amount of time as 33900, the normal connections version of this service. The increased work can be attributed to increased intensity of these services in patients with abnormal connections: interpretations of any other angiographic studies are more difficult; operators are looking for additional lesions throughout the procedure, where in a healthy child with normal connections that complexity doesn't exist; this essentially creates more complex MDM throughout procedure, as the operator is constantly thinking about what else could be wrong. This difference is demonstrated in the increased in IWPUT from 0.129 to 0.165 and the increase in WPUT from 0.068 to 0.083.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. NA

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatric Interventional Cardiology How often? Sometimes

Specialty Interventional Cardiology How often? Sometimes

Specialty Pediatric Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. CCA estimate

Specialty Pediatric/Interventional Cardiology Frequency 600 Percentage 60.00 %

Specialty Cardiology Frequency 400 Percentage 40.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. It is possible that a very small percentage of patients may be beneficiaries

Specialty Pediatric/Interventional Cardiology Frequency 20 Percentage 50.00 %

Specialty Cardiology Frequency 20 Percentage 50.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Percutaneous pulmonary artery revascularization by stent placement, initial; abnormal connections, bilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 5-year-old male with hypoplastic left heart syndrome status post fontan operation is identified by physical exam and subsequent mri to have possible bilateral pulmonary artery stenoses. he is brought to the cardiac catheterization laboratory for further evaluation and possible bilateral stent implantation of the right and left main pulmonary arteries.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review of noninvasive work-up including echocardiogram, CXR, EKG, cardiac CT or MRI, or any other pertinent studies. Based on available information, determine all potential components required for the procedure plus contingencies and backups. Perform and document a complete and/or interval history and physical exam. Provide a description of the procedure and expected results to the parents of the patient, a description of potential risks, and obtain signature of informed consent for the procedure. Supervise the administration of anxiolysis, when necessary. Conduct final procedural coordination with technicians, nurses, and the anesthesiology team. Don surgical scrubs & lead. Position patient. Prep, scrub, drape and wait. Perform a “time-out.”

Description of Intra-Service Work: The procedure is conducted under general anesthesia using fluoroscopic guidance throughout. Lidocaine is injected to the access sites to help minimize hypotension caused by excessive general anesthetic. Vascular access is obtained percutaneously, typically in a large vein and an artery. The site of venous access is variable and depends on patient anatomy and any vascular access limitations. Arterial access is typically obtained in a femoral artery but may require carotid artery access. Introducer sheaths are initially placed over a wire in the vein and artery to establish secure access. The wires and dilators are removed, and the sheaths flushed with heparinized saline. Intravenous heparin is administered to achieve therapeutic anticoagulation. The activated clotting time is monitored throughout the case, and additional heparin is administered, as needed.

Diagnostic catheterization varies due to inconsistent venous or arterial access to the pulmonary arteries. Diagnostic cardiac catheterization (separately reportable, 93593-97) including hemodynamic and angiographic evaluation is initially performed and demonstrates an indication for further intervention. Measurements of the lesion as well as neighboring healthy vessels are made from the angiogram, which is used for selection of the appropriate balloon and stent sizes. The angiographic catheter is removed and an end-hole catheter with soft guidewire advanced into and beyond the stenotic left pulmonary artery lesion. The soft guidewire is replaced with a stiff interventional guidewire to secure a stable position in the distal branch to support the remainder of the intervention. The chosen stent is prepared, mounted and hand-crimped on the appropriate delivery balloon, which has been de-aired to ensure the lowest possible profile. The diagnostic introducer sheath is removed and exchanged for a larger and longer sheath to accommodate delivery of the balloon-mounted stent. The delivery sheath is advanced over the wire to the target location, just distal to the lesion. The dilator is removed, and the

sheath allowed to bleed back to ensure evacuation of any air, then flushed with heparinized saline. The balloon with mounted stent is loaded onto the wire and advanced through the long sheath to the tip of the sheath. The entire system is adjusted to position the stent, still within the sheath, across the lesion. Once in the appropriate location, the sheath is carefully withdrawn partially. An angiogram is performed through the side port of the sheath to evaluate the position. Adjustments are made as needed and angiography repeated until the position is appropriate. The sheath is then withdrawn further, fully exposing the delivery balloon. The balloon is inflated to deliver the stent within the target lesion. The balloon is deflated and removed, maintaining wire position. A larger or higher-pressure balloon catheter may be used to post-dilate the stent to the desired diameter and is not additionally reportable. The balloon is exchanged for a diagnostic catheter to perform hemodynamic assessment of the result. Angiography is also performed to assess the positioning of the delivered stent and potential need for additional intervention. The soft tipped guidewire is then re-inserted through the catheter and advanced into and beyond the stenotic right pulmonary artery and extended into the distal right lower lobe branch. Once again, the guidewire is removed and the stiff interventional wire re-inserted to secure right sided wire position for the subsequent intervention. The entire process described above for the left sided stent is now repeated to address the right pulmonary artery stenosis. Once the right sided lesion is successfully stented, a final main pulmonary artery angiogram is repeated to assess the final result of the bilateral stent implants.
All catheters and sheaths are removed and manual compression or a vascular closure device is used to achieve hemostasis prior to transfer to the recovery area.

Description of Post-Service Work: Following catheterization, an immediate post-procedure note is documented in the medical record. Once hemostasis of the catheterization vascular access sites has been ensured, the patient is transported to the appropriate recovery area and a verbal report given to the accepting team. Medication reconciliation is performed in the EMR and post procedure orders are placed for nursing care. A detailed report is documented which includes an anatomically correct diagram of the congenital heart defects, detailed description of the procedure performed, calculations and interpretation of all the hemodynamic data obtained, review and radiologic interpretation of the angiograms, a complete listing and discussion of the findings, and recommendations based on all of the findings. All necessary data is then also entered into the appropriate national registry, as available/appropriate. There is at least one physician bedside visit to assess the patient, including catheterization sites, discuss the findings with the patient and/or family, and review discharge and follow up instructions prior to discharge. For outpatients, stent implantation will typically require an overnight hospital stay and follow-up testing the next morning, which will be reviewed by the operator. For inpatients, communication/hand-off of the findings is made with the intensive care team, as may be appropriate.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel approved a new family of five codes at the February Panel meeting describing physician services to describe pulmonary artery stenting after a long shift toward percutaneous endovascular approaches in some patients. While initially balloon angioplasty was the only possible treatment for pulmonary artery stenosis (PAS), particularly for

small children, the use of endovascular stents has developed and improved outcomes versus angioplasty alone. Compared to other peripheral vascular angioplasty and stenting interventions, the work performed in the pulmonary arteries poses greater complexity and risk not captured by other existing peripheral vascular CPT codes. Additionally, there is currently no way in CPT to track patients undergoing endovascular repair of PAS due to the large number of patients treated for other pathologies with any of the existing codes that are used to report this work.

CPT codes 33900-33904 are for endovascular repair of pulmonary artery stenosis by stent placement. Codes 33900 and 33901 are for stent placement within the pulmonary arteries via normal native connections, defined as venous access through normal right heart structures and chambers. Codes 33902 and 33903 are for stent placement within the pulmonary arteries, ductus arteriosus, or within a surgical shunt, via abnormal connections or through post-surgical shunts (eg, Blalock-Taussig shunt, Sano shunt, or post Glenn or Fontan procedures). Code 33904 is for each additional stent placed at any location via normal or abnormal connections. Due to the extreme variability of the underlying diagnosis associated with pulmonary artery stenosis, it is impossible to determine if a right heart only, left heart only, or combined right and left diagnostic study is needed. Therefore, congenital diagnostic cardiac catheterization is separately reportable with CPT codes 93593-93597.

Survey of the codes was deferred one meeting while some introductory coding language was revised by the Panel in consultation with the specialties. Specialty societies randomly surveyed interventional cardiologists and pediatric interventional cardiologists, as designated by membership rolls, on the newly created codes. The 000-global day survey was completed by physicians who have experience with the service.

As we move through this family of codes, there are three relationships in which we anticipate the RUC will be interested. The first is an increase in time and work as the codes move from unilateral to bilateral. That relationship exists and appears appropriate to the expert panel, with increased time and work for bilateral procedures. The second is an increase in work as the codes move from “normal native” connections to “abnormal” connections. That relationship also exists and appears appropriate to the expert panel. The final relationship that one might expect to see but does not exist is an increase in time as the codes move from “normal native” connections to “abnormal” connections. We can speak to this in greater detail during discussion of the abnormal codes at the meeting, but will explain here that while the times may be the same, the increased work can be attributed to increased intensity of these services in patients with abnormal connections: interpretations of any other angiographic studies are more difficult; operators are looking for additional lesions throughout the procedure, where in a healthy child with normal connections that complexity doesn’t exist; this essentially creates more complex MDM throughout procedure, as the operator is constantly thinking about what else could be wrong.

Finally, we note a logical progression in WPUT throughout the family as we progress from unilateral stenting in normal native connections to bilateral stenting in abnormal connections, from 0.068 to 0.076 to 0.083 and 0.083, respectively, that we suggest supports the time and RVU recommendations.

Preservice/Postservice

The societies have sought, and the RUC has approved additional time in similar circumstances at several recent meetings, with additional time most commonly added for review of records/imaging, extended discussions with family/parents, additional positioning, additional wound dressing, prolonged monitoring, and extensive documentation (eg. anatomically correct diagram with hemodynamic data embedded). Those elements apply with this family of codes, and we describe recommendations beyond traditional standards here.

Separately at this meeting, the societies submitted information requesting a degree of standardization for additional time in the preservice and postservice periods to reflect complicating factors physicians face when treating patients in need of complex congenital cardiac procedures. The Research Subcommittee opted not to pursue a standardized addition, but rather to consider requests for additional time for complex congenital cardiac procedures on an ad hoc basis when each code is presented. Insofar as surveys supported times beyond the standards in Preservice Package 4 and Postservice Package 9B, we have made recommendations for additional preservice and postservice time consistent with that submission.

For 33903 that results in a recommendation for 10 additional minutes of evaluation time—with 5 additional minutes for prepare for the procedure, 3 additional minutes for communication/consent with patient/family, and 2 additional minutes to prepare/gown/drape the patient. This produces a recommendation of 50 minutes preservice evaluation time rather than 40. Survey respondents indicated 62 minutes at the median.

"Prepare for Procedure (Check labs, plan, assess risks, review procedure)": Time to prepare for the procedure is considerable. The typical patient has extensive past cardiac history. It is vital to review their past cardiac catheterization reports, angiographic imaging, any existing CT or cardiac MR, and prior surgical history. Previous percutaneous access issues must also be reviewed including from prior cardiac catheterization procedures or long standing CVL placement during ICU care.

"Communicate with patient and/or family (Discuss procedure/ obtain consent)": The time to discuss a patient's procedure with the parent of a child is greater than the typical discussions when an adult patient consents for themselves. This leads to considerably more time for explaining the procedure and consenting the family for the forthcoming procedure.

"Check/ prepare patient readiness (Gown, drape, prep, mark)": Whereas anxiolytic medications are quite often administered to alleviate patient anxiety in a typical pre-operative setting, this is not typical in cardiac patients due to concerns about hemodynamic instability. Therefore, parents are relied upon for significant patient coaching and may even accompany the child to the catheterization lab, where they spend 1-2 minutes comforting the child as the anesthesiologist administers inhalational sedation in a controlled setting.

We recommend 3 additional minutes for positioning, for a total 6 minutes. Survey respondents indicated 15 minutes at the median.

"Perform/ supervise patient positioning": Positioning of these patients is more time consuming. Positioning is complicated by the requirement for bi-plane fluoroscopic equipment. Given the extensive intra-procedure monitoring that is necessary, the myriad of EKG wires (2 sets), IV tubing, pH probe, etc. must be precisely positioned so as not to be in the way of either of the bi-plane imaging views. Patients are then positioned with both arms extended above the head and the legs pigeon toed and secured in this position for femoral access. It is also common to obtain access from both the groin and the neck during the same procedure, which means three points of access (bilateral femoral and right neck) must be prepped and draped in sterile fashion. Additional positioning occurs to move the arm(s) up when operators prefer arms down to obtain neck access. Arm positioning is particularly important for anticipated long procedures to avoid brachial plexus injury. All of this must be done while maintaining a sterile environment.

For postservice time, we recommend 17 additional minutes, consistent with the survey median time of 50 minutes. This would be comprised of 3 additional minutes for application of dressing, 5 additional minutes for monitoring/stabilization, 4 additional minutes communication with patient/family, and 5 additional minutes for the written post-op note.

"Application of dressing": As noted in the description of the post-service package breakdown, the existing times allow for a "simple dressing". Unlike adult catheterization patients, who typically have closure devices placed as part of the intra-procedure time, these devices are not typically used in children, and various dressings are applied instead. Pressure dressings are the most common, but other sites may require additional occlusive dressings (eg. Opsite, Tegaderm) prior to pressure dressing application or by themselves. Patients in the congenital cardiac surgical suite will have dressings applied to multiple sites, including mediastinal and pleural drains, as well as a sternal dressing, which often involves an open sternum.

"Monitor patient recovery/stabilization": Due to the labile hemodynamics most of these patients demonstrate, a prolonged period for monitoring is needed immediately upon completion of the case. This provides additional time for emerging from sedation/anesthesia to prevent dramatic swings in systemic and/or pulmonary vascular resistance.

"Communication with patient and/or family": As explained in the pre-service package for the same issue, communication of complex cardiac findings and interventions is more time consuming for the family of a child as compared to an adult patient with other pathologies. Additionally, the discussion typically extends into explanation of next steps, namely whether or not there is need for complex surgery or medical management.

"Written Post-operative Note": In addition to the traditional immediate post-operative note (a separate line item) a comprehensive post-operative report is documented for these patients. Unlike the typical post procedure report of other specialties for which the existing post procedure package includes 5 minutes, these reports incorporate multiple additional elements including:

a. A list of prior relevant cardiac surgical procedures and the indications for the current procedure;
b. A detailed operative procedure report including all catheter and wire manipulations necessary to catheterize particularly difficult vessels and/or chambers;
c. Summary discussion of the hemodynamic findings including calculations of cardiac index, systemic and pulmonary vascular resistance, and any intra-cardiac shunt fractions;
d. Safe hand-off/communication is made with the hospital rounding team for inpatients returning to their respective units;
e. A complete radiologic report describing all of the findings from the angiograms performed;
f. An anatomically accurate drawing of the cardiac defect(s) is performed, usually using existing software programs (a time-consuming effort that facilitates understanding for all providers); and
g. All data obtained must be duplicated and entered into a national registry, such as IMPACT

33903

Code 33903 is the fourth code in the family and describes the work of bilateral pulmonary artery stent placement in a heart with abnormal connections. The key reference code is 93581 for percutaneous transcatheter closure of a congenital ventricular septal defect. It was selected by 26% of respondents. 56% of the respondents indicated that 33903 is identical in overall intensity/complexity, with 33% indicating it is much more intense complex. The second reference code is 92928 for percutaneous coronary stenting. It was selected by 17% of respondents. 100% of these respondents felt 33903 to be more intense/complex.

Recommendation

Therefore, for code 33903 the **societies recommend the survey median RVW of 20.00 with 71 minutes preservice time, 120 minutes intraservice time from the survey median, and 50 minutes postservice time**. This fits between the times and work RVUs of the two KRSs, with an appropriately higher intensity. Additional comparator 33745 for transcatheter intracardiac shut creation through stent placement may be useful for comparison. This recently valued service is for another congenital/pediatric patient procedure. 33745 has the same work RVU, but a shorter time and appropriately higher intensity, as it is performed on patients with poor hemodynamics and who are poor surgical candidates.

As we noted above and discussed with the prefacilitation committee, this recommendation reflects and increased intensity for a service provided in the same amount of time as 33901, the normal connections version of this service. The increased work can be attributed to increased intensity of these services in patients with abnormal connections: interpretations of any other angiographic studies are more difficult; operators are looking for additional lesions throughout the procedure, where in a healthy child with normal connections that complexity doesn't exist; this essentially creates more complex MDM throughout procedure, as the operator is constantly thinking about what else could be wrong. This difference is demonstrated in the increased in IWPUT from 0.130 to 0.146 and the increase in WPUT from 0.076 to 0.083. It is also notable that the WPUT for this code is identical to the prior, which makes sense to the expert panel, and supports the recommendations.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. NA

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatric Interventional Cardiology How often? Sometimes

Specialty Interventional Cardiology How often? Sometimes

Specialty Pediatric Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate from CPT CCA.

Specialty Pediatric/Interventional Cardiology Frequency 300 Percentage 60.00 %

Specialty Cardiology Frequency 200 Percentage 40.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. It is possible that a very small percentage of patients may be beneficiaries

Specialty Pediatric/Interventional Cardiology Frequency 20 Percentage 50.00 %

Specialty Cardiology Frequency 20 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Global Period: ZZZ Current Work RVU: **NA** RUC Recommended RVU: **7.27**

CPT Descriptor: Percutaneous pulmonary artery revascularization by stent placement, each additional vessel or separate lesion, normal or abnormal connections (list separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During congenital cardiac catheterization for suspected pulmonary artery stenosis, a 4-year-old female who has just undergone bilateral stent implant via abnormal connections, requires additional stent implants for additional lesions not previously identified. she undergoes additional segmental pulmonary arterial stent implant in the right and left upper branches (note: this is an add-on code for the additional work related to stent placement of each additional vessel or separate lesion [normal or abnormal] of percutaneous pulmonary artery revascularization. the work related to the first percutaneous pulmonary artery revascularization by stent placement is reported separately as the primary procedure and not included in the work of this add-on code).

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The work for 33904 begins following completion of primary stent implantation in the left and/or right main pulmonary arteries. Hemodynamic and angiographic evaluation identifies multiple segmental branch pulmonary artery stenoses. After selective angiography (separately reported) is performed in the right lower lobe segmental branch, an end-hole catheter with soft guidewire is advanced into and beyond the stenotic right lower lobe lesion. The soft guidewire is replaced with a stiff interventional guidewire to secure a stable position in the distal branch to support the remainder of the intervention. The chosen stent is prepared, mounted and hand-crimped on the appropriate delivery balloon, which has been de-aired to ensure the lowest possible profile. The delivery sheath is advanced over the wire to the target location, just distal to the lesion. The dilator is removed, and the sheath allowed to bleed back to ensure evacuation of any air, then flushed with heparinized saline. The balloon with mounted stent is loaded onto the wire and advanced through the long sheath to the tip of the sheath. The entire system is adjusted to position the stent, still within the sheath, across the lesion. Once in the appropriate location, the sheath is carefully withdrawn partially. An angiogram is performed through the side port of the sheath to evaluate the position. Adjustments are made as needed and angiography repeated until the position is appropriate. The sheath is then withdrawn further, fully exposing the delivery balloon. The balloon is inflated to deliver the stent within the target lesion. The balloon is deflated and removed, maintaining wire position. A larger or higher-pressure balloon catheter may be used to post-dilate the stent to the desired diameter and is not additionally reportable. Hemodynamic and angiographic evaluation is repeated to assess the result. The entire process described above for the right lower lobe stent is now repeated in the right upper lobe, left lower lobe, and left upper lobe to address these additional bilateral segmental stenoses. All catheters and sheaths are removed and manual compression or a vascular closure device is used to achieve hemostasis prior to transfer to the recovery area.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	44%	34%	22%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	22%	78%
Physical effort required	0%	33%	67%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	56%	44%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	38%	37%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	63%	12%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	38%	37%
Physical effort required	29%	43%	28%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	50%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

33904

Code 33904 is the final code in the family and describes the work of placement of an additional stent in any of the previous four services. The key reference code is 37237 for transcatheter placement of each additional intravascular stent. It was selected by 26% of respondents. 56% of the respondents indicated that 33904 is more overall intensity/complexity, with the remaining 44% indicating it is identical intensity/complexity. The second reference code is 33746 for transcatheter intracardiac shunt creation through stent placement. It was selected by 23% of respondents. 38% of these respondents felt 33904 to be of identical intensity/complexity, with the balance roughly split on it being more or less intense/complex.

Recommendation

Therefore, for code 33904 the **societies recommend the survey median RVW of 7.27 with 45 minutes intraservice time from the survey median and 45 minutes total time**. This fits between the work RVUs of the two KRSs. Additional comparator 93592 for percutaneous transcatheter closure of an additional paravavular leak may be useful for comparison. This recently valued service is for another percutaneous cardiac procedure. Because both the MPC comparator 93592 and the second KRS 33746 have longer time and higher RVU, they support our recommended value as not being too high. Additionally, though the time for this service is the same as the first KRS (45 minutes), its higher intensity justifies our recommendation for a value higher than for 37237.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93799

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatric Interventional Cardiology How often? Sometimes

Specialty Interventional Cardiology How often? Sometimes

Specialty Pediatric Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate from CPT CCA.

Specialty Pediatric/Interventional Cardiology Frequency 600 Percentage 60.00 %

Specialty Cardiology Frequency 400 Percentage 40.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 40 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. It is possible that a very small percentage of patients may be beneficiaries

Specialty Pediatric/Interventional Cardiology Frequency 20 Percentage 50.00 %

Specialty Cardiology Frequency 20 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93530

Re: Tab 4 Endovascular Pulmonary Arterial Revascularization

Dear Dr. Manaker:

Tab 4 on the October 2021 RUC agenda addresses five new codes, which describe endovascular repair of pulmonary artery stenosis by stent placement. All five of these services will be provided exclusively in the facility setting with 000 or ZZZ global periods. As such, the Society for Cardiovascular Angiography and Interventions and the American College of Cardiology recommend no direct practice expense inputs for Tab 4.

Thank you for your consideration of this information as you prepare for the upcoming meeting. Please contact Debra Mariani at jvavricek@acc.org if you have any questions.

Sincerely,

Edward Toggart, MD

Chicago, IL 60611

Re: Tab 4 Endovascular Pulmonary Arterial Revascularization (Codes 33900-33904)

Dear Doctor Silva:

The American Academy of Pediatrics (AAP) would like to offer comments on codes 33900-33903 (*Percutaneous pulmonary artery revascularization by stent placement, initial*) and 33904 (*Percutaneous pulmonary artery revascularization by stent placement, each additional vessel or separate lesion*).

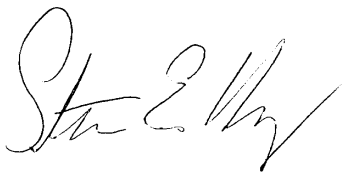
These procedures follow the model established by the new congenital cardiac catheterization codes, reflecting increased complexity as one moves from normal to abnormal native connections. These procedures represent advances in technology of stenting for pulmonary revascularization as opposed to balloon angioplasty.

Of the 363 who were surveyed, 45% were pediatric interventional cardiologists represented by the ACC, and we appreciate the ACC's inclusion of such a large number of pediatric cardiologists in its sample. Therefore, we believe that the survey results are representative from a pediatric perspective, especially with regard to the median values, which acknowledge pediatric cardiology complexity. Despite the fact that the sequence of procedures (33900 through 33904) address normal versus abnormal native connections as well as unilateral versus bilateral work, rank order median values were maintained as complexity increased.

The AAP is fully supportive of these recommendations.

Thank you for the opportunity to comment.

Sincerely,



Steven E. Krug, MD, FAAP
AAP RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth (76942)

October 2021

Somatic Nerve Injections – Tab 5

In October 2015, CPT code 76942 was identified under the high volume growth screen and the RUC noted to review the utilization in October 2017. In October 2017, this code appeared on an agenda tab, but it was not surveyed. Therefore, the RUC indicated that this service was not addressed via this flag because the Relativity Assessment Workgroup (RAW) thought it was going to be addressed from the RUC survey process. In January 2018, the RAW reviewed this issue and noted that this service was recently bundled in 2015 and the clinical staff time is not duplicative.

In May 2018, the CPT Editorial Panel approved the revision of descriptors and guidelines for codes 64400-64450 and deletion of three codes to clarify reporting (i.e., separate reporting of imaging guidance, number of units, change of CPT codes 64421 from a 000-day global to ZZZ). Codes 64400-64450 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately. The physician work for this family of services varies based on the anatomic location of each nerve, whether the service is typically performed in the facility setting, the typical approach used by the dominant specialty to access the nerve that performs each service and whether the service involves continuous infusion by catheter.

During the October 2018 RUC presentation of the Somatic Nerve Injection family of services, the specialty societies stated that codes 64415, 64416, 64417, 64446, 64447, and 64448 were reported with code 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* more than 50 percent of the time. The societies indicated they would submit a code change application to bundle 76942 into codes 64415, 64416, 64417, 64446, 64447, and 64448 for the CPT 2021 cycle. This overlap was accounted for in the RUC recommendations for these services. The RUC referred CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 to be bundled with ultrasound guidance, CPT code 76942, to the CPT Editorial Panel for CPT 2021. In September 2019, this issue was postponed until after the CPT Imaging Guidance Workgroup completed its work.

In May 2021, the CPT Editorial Panel approved the revision of ten codes to add "including imaging guidance, when performed" to the descriptors and to revise the introductory guidelines to report these services. CPT codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 are now bundled and the parenthetical appropriately notes "Do not report in conjunction with 76942, 77002, 77003."

Bundled Injection Codes
The RUC discussed the time and intensity for CPT codes 64415-64417 and 64445-64448 for the survey 25th percentile work RVU recommendations. The RUC noted decreases in the intra-service time for some of the codes and discussed that in general when surveying these codes with imaging now bundled, they would not expect the intra-service time to significantly increase because the imaging and injection

physician work are occurring simultaneously. Similarly, the RUC considered the increased intensity of the surveyed codes and noted it is appropriate because the surveyed codes describe the physician work of doing both the injection and imaging simultaneously, wherein the previous codes only described the physician work of doing the injection alone. In reviewing the intensity, the RUC concluded that it provided further support for the appropriateness of the recommendations at the 25th percentile.

During the discussion of the bundled injection codes, the RUC questioned if it would be typical that an anesthesia code would be reported on the same date by the same physician and the specialty clarified that it should not be typical.

64415 ***Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed***
The RUC reviewed the survey results from 86 anesthesiologists and interventional pain physicians and recommends the survey 25th percentile work RVU of 1.50 for CPT code 64415, noting that the brachial plexus injection requires more work than axillary, sciatic and femoral nerve injection without continuous infusion by catheter codes. The RUC recommends the following physician time components: 13 minutes pre-service evaluation, 1 minute pre-service positioning, 4 minutes pre-service scrub/dress/wait time, 10 minutes intra-service time, and 7 minutes immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than somatic nerve injection services that are typically performed in the non-facility setting.

To support a work value of 1.50, the RUC compared the surveyed code to the top key reference code 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)* (work RVU= 1.27, 15 minutes pre-service time, 10 minutes intra-service time and 10 minutes immediate post-service time) and noted that the codes have identical intra-service and total times, yet the reference code involves less intense physician work. Similarly, of the survey respondents that selected this key reference service, 65% indicated that the surveyed code was more intense and complex. Therefore, 64415 is appropriately valued higher than the top key reference code.

The RUC also compared 64415 to the second highest key reference code 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.80, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that the surveyed code has less intra-service time and less total time than the reference code and therefore is appropriately valued lower. The RUC further noted that the key reference services appropriately bracket the surveyed code. The RUC concluded that CPT code 64415 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.50 for CPT code 64415.**

64416 ***Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed***
The RUC reviewed the survey results from 79 anesthesiologists and interventional pain physicians and recommends the survey 25th percentile work RVU of 1.80 for CPT code 64416, noting that the brachial plexus injection requires more work than the axillary, sciatic and femoral nerve injection without continuous infusion by catheter codes and that the additional 5 minutes of intra-service time for the catheter placement is appropriate. The RUC recommends the following physician time components: 13 minutes pre-service evaluation, 1 minute pre-service positioning, 5 minutes pre-service scrub/dress/wait time, 15 minutes intra-service time, and 10 minutes immediate post-service time. This service is typically

performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than somatic nerve injection services that are typically performed in the non-facility setting.

To support a work value of 1.80, the RUC compared the surveyed code to the top key reference code 62325 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)* (work RVU= 2.20, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that the codes have identical intra-service times and similar total times, yet the surveyed code involves less intense physician work and is therefore appropriately valued lower than the top key reference code.

The RUC also noted the close comparison of 64416 to the second highest key reference code 62327 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.90, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time). The codes have identical intra-service times and similar total times, yet the surveyed code involves slightly less intense physician work and therefore is appropriately valued slightly lower than the reference code.

For additional support, the RUC noted that the multi-specialty points of comparison codes, MPC code 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 12 minutes pre-service time, 10 minutes intra-service time and 5 minutes immediate post-service time) and MPC code 64483 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level* (work RVU = 1.90, 24 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time), appropriately bracket the surveyed code. The RUC concluded that CPT code 64416 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.80 for CPT code 64416.**

64417 ***Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed***
The RUC reviewed the survey results from 79 anesthesiologists and interventional pain physicians and determined that the survey 25th percentile work RVU of 1.31 for CPT code 64417 appropriately accounts for the physician work involved in this service. The RUC recommends the following physician time components: 13 minutes pre-service evaluation, 1 minute pre-service positioning, 4 minutes pre-service scrub/dress/wait time, 10 minutes intra-service time, and 10 minutes immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than somatic nerve injection services that are typically performed in the non-facility setting.

To support a work value of 1.31, the RUC compared the surveyed code to the top key reference code 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)* (work RVU= 1.27, 15 minutes pre-service time, 10 minutes intra-service time and 10 minutes immediate post-service time) and noted the close comparison with identical intra-service times, similar total times and intensity, and comparable amount of physician work. The RUC also compared 64417 to the second highest key reference code 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid,*

other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT) (work RVU = 1.80, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that the surveyed code has less intra-service time and involves less intense physician work than the reference code and therefore is appropriately valued lower.

For additional support, the RUC noted that the multi-specialty points of comparison codes, MPC code 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 12 minutes pre-service time, 10 minutes intra-service time and 5 minutes immediate post-service time) and MPC code 64483 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level* (work RVU = 1.90, 24 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time), appropriately bracket the surveyed code. The RUC concluded that CPT code 64417 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.31 for CPT code 64417.**

64445 *Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed*
The RUC reviewed the survey results from 76 anesthesiologists and interventional pain physicians and determined that the survey 25th percentile work RVU of 1.39 for CPT code 64445 appropriately accounts for the physician work involved in this service. The RUC recommends the following physician time components: 7 minutes pre-service evaluation, 1 minute pre-service positioning, 1 minute pre-service scrub/dress/wait time, 10 minutes intra-service time, and 5 minutes immediate post-service time.

To support a work value of 1.39, the RUC compared the surveyed code to the top key reference code 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)* (work RVU= 1.27, 15 minutes pre-service time, 10 minutes intra-service time and 10 minutes immediate post-service time) and noted that the codes have identical intra-service times, yet the surveyed code involves more intense physician work focused on the sciatic nerve. Similarly, of the survey respondents that selected this key reference service, 96% indicated that the surveyed code was identical or more intense and complex relative to the key reference service. Therefore, 64445 is appropriately valued higher than the top key reference code.

The RUC also compared 64445 to the second highest key reference code 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.80, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that the surveyed code has less intra-service time and less total time than the reference code and therefore is appropriately valued lower. The RUC further noted that the key reference services appropriately bracket the surveyed code. The RUC concluded that CPT code 64445 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.39 for CPT code 64445.**

64446 ***Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed***
The RUC reviewed the survey results from 60 anesthesiologists and interventional pain physicians and recommends the survey 25th percentile work RVU of 1.75 for CPT code 64446, noting that the additional 5 minutes of intra-service time for the catheter placement is appropriate. The RUC recommends the following physician time components: 13 minutes pre-service evaluation, 1 minute pre-service positioning, 5 minutes pre-service scrub/dress/wait time, 15 minutes intra-service time, and 10 minutes immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than somatic nerve injection services that are typically performed in the non-facility setting.

To support a work value of 1.75, the RUC compared the surveyed code to both the top key reference code 62327 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.90, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and the second highest key reference code 62325 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)* (work RVU= 2.20, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that, in both cases, the codes have identical intra-service times, yet the surveyed code involves less intense physician work and therefore is appropriately valued lower than the reference codes.

For additional support, the RUC noted that the multi-specialty points of comparison codes, MPC code 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 12 minutes pre-service time, 10 minutes intra-service time and 5 minutes immediate post-service time) and MPC code 64483 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level* (work RVU = 1.90, 24 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time), appropriately bracket the surveyed code. The RUC concluded that CPT code 64446 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.75 for CPT code 64446.**

64447 ***Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed***
The RUC reviewed the survey results from 76 anesthesiologists and interventional pain physicians and determined that the survey 25th percentile work RVU of 1.34 for CPT code 64447 appropriately accounts for the physician work involved in this service. The RUC recommends the following physician time components: 12 minutes pre-service evaluation, 1 minute pre-service positioning, 3 minutes pre-service scrub/dress/wait time, 8 minutes intra-service time, and 5 minutes immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than somatic nerve injection services that are typically performed in the non-facility setting.

To support a work value of 1.34, the RUC compared the surveyed code to the top key reference code 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)* (work RVU= 1.27, 15

minutes pre-service time, 10 minutes intra-service time and 10 minutes immediate post-service time) and noted that the surveyed code has less intra-service time than the reference code and involves more intense physician work next to a major vessel and nerve as opposed to the abdominis plane. Therefore, 64447 is appropriately valued higher than the top reference code. Similarly, of the survey respondents that selected this top key reference service, 97% indicated that the surveyed code was identical or more intense and complex relative to the reference service.
The RUC also compared 64447 to the second highest key reference code 64493 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level* (work RVU = 1.52, 17 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that the surveyed code has less intra-service time and less total time than the reference code and therefore is appropriately valued lower. The RUC further noted that the key reference services appropriately bracket the surveyed code. The RUC concluded that CPT code 64447 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.34 for CPT code 64447.**

64448 ***Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed***
The RUC reviewed the survey results from 62 anesthesiologists and interventional pain physicians and recommends the survey 25th percentile work RVU of 1.68 for CPT code 64448, noting that the additional 7 minutes of intra-service time for the catheter placement is appropriate. The RUC recommends the following physician time components: 13 minutes pre-service evaluation, 1 minute pre-service positioning, 5 minutes pre-service scrub/dress/wait time, 15 minutes intra-service time, and 9 minutes immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than somatic nerve injection services that are typically performed in the non-facility setting.

To support a work value of 1.68, the RUC compared the surveyed code to both the top key reference code 62327 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.90, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and the second highest key reference code 62325 *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)* (work RVU= 2.20, 20 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time) and noted that, in both cases, the codes have identical intra-service times and similar total times, yet the surveyed code involves less intense physician work and therefore is appropriately valued lower than the reference codes.

For additional support, the RUC noted that the multi-specialty points of comparison codes, MPC code 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 12 minutes pre-service time, 10 minutes intra-service time and 5 minutes immediate post-service time) and MPC code 64483 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level* (work RVU = 1.90, 24 minutes pre-service time, 15 minutes intra-service time and 10 minutes immediate post-service time), appropriately bracket the surveyed code. The RUC concluded that CPT code 64448 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.68 for CPT code 64448.**

Imaging Codes
There are three codes which capture the imaging guidance component of the somatic nerve injection procedures that will no longer be reported separately with codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448, as their work is now bundled into each revised CPT code.

76942 ***Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation***
The RUC reviewed the survey results from 98 physicians and determined that maintaining the current work RVU of 0.67, which falls below the survey 25th percentile, appropriately accounts for the physician work involved in this service. The RUC recommends the following physician time components: 7 minutes pre-service evaluation time, 15 minutes intra-service time, and 5 minutes immediate post-service time as supported by the survey.

The RUC compared CPT code 76942 to the top key reference code 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56, 10 minutes intra-service time and 18 minutes total time) and noted that the surveyed code has 5 minutes more intra-service time and more total time than the top key reference code and therefore is appropriately valued higher. The reference service is a comparable ultrasound procedure based on the type of imaging performed and the interpretation of the images obtained. Comparatively, the surveyed code typically requires more pre-service time to review the pre-existing images for the needle target and more real-time imaging to guide the needle during the procedure. This contributes to the 5 additional intra-service minutes and overall greater total time for 76942, along with higher value relative to the top key reference service.

The RUC also compared 76942 to the second highest key reference code 38221 *Diagnostic bone marrow; biopsy(ies)* (work RVU = 1.28-, and 20-minutes intra-service time and 50 minutes total time) which is a biopsy procedure performed without imaging guidance and noted that the surveyed code is appropriately valued lower given it has less intra-service time, less total time and involves less intense physician work than the reference service.

For additional support, the RUC compared CPT code 76942 to MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report* (work RVU = 0.70, 2 minutes pre-service evaluation time, 15 minutes intra-service time and 3 minutes immediate post-service time) and noted that the codes have identical intra-service times yet the multi-specialty points of comparison code involves slightly more intense physician work than the surveyed code, justifying the recommendation. The RUC concluded that the value of CPT code 76942 should be maintained at 0.67 work RVUs, below the 25th percentile of the survey. **The RUC recommends a work RVU of 0.67 for CPT code 76942.**

77002 ***Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 91 physicians and determined that maintaining the current work RVU of 0.54 appropriately accounts for the physician work involved in this add-on service, which is supported by the survey 25th percentile work RVU. The RUC recommends the following physician time components: 2 minutes pre-service positioning time, 15 minutes intra-service time, and 0 minutes post-service time.

CPT codes 77002 and 77003 were once XXX global period codes, but CMS determined that the vignettes and parentheticals for these codes were consistent with that of add-on codes and requested that the societies survey them as ZZZ codes in October 2015. At that time, the existing times

for both 77002 and 77003 were 7 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service. At the October 2015 meeting, the RUC recommended reducing the pre-service time to 2 minutes instead of 7 minutes. The 2 minutes of pre-service time is based on the difference in pre-service positioning time between the epidural injection without imaging guidance (CPT code 62320) and with imaging guidance (CPT code 62321) codes. This is the reason why these add-on services include pre-service time.

The RUC compared CPT code 77002 to the top key reference code 77001 *Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)* (work RVU = 0.38, 2 minutes pre-service positioning time, 15 minutes intra-service time and 0 minutes immediate post-service time) and noted that the add-on codes have the exact same times, including 2 minutes for pre-service positioning, yet the surveyed code involves more intense physician work and therefore is appropriately valued higher than the reference code. CPT code 77002 pertains to fluoroscopic guidance for needle placement during a percutaneous procedure and typically may involve contrast injection or tissue sampling to aid in confirming the position. Comparatively, the reference service involves fluoroscopic guidance through an existing venous access.

The RUC also compared 77002 to the second highest key reference code 10008 *Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure)* (work RVU = 1.18, 20 minutes intra-service time) which is an ultrasound guidance code that typically involves tissue sampling, and noted that the surveyed code is appropriately valued lower given it has less intra-service time and involves less intense physician work than the reference service. The RUC concluded that the value of CPT code 77002 should be maintained at 0.54 work RVUs as supported by the survey. **The RUC recommends a work RVU of 0.54 for CPT code 77002.**

77003 ***Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 82 physicians and determined that maintaining the current work RVU of 0.60, which falls below the survey 25th percentile, appropriately accounts for the physician work involved in this add-on service. The RUC recommends the following physician time components: 2 minutes pre-service positioning time, 15 minutes intra-service time, and 0 minutes post-service time.

CPT codes 77002 and 77003 were once XXX global period codes, but CMS determined that the vignettes and parentheticals for these codes were consistent with that of add-on codes and requested that the societies survey them as ZZZ codes in October 2015. At that time, the existing times for both 77002 and 77003 were 7 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service. At the October 2015 meeting, the RUC recommended reducing the pre-service time to 2 minutes instead of 7 minutes. The 2 minutes of pre-service time is based on the difference in pre-service positioning time between the epidural injection without imaging guidance (CPT code 62320) and with imaging guidance (CPT code 62321) codes. This is the reason why these add-on services include pre-service time.

The RUC compared CPT code 77003 to the top key reference code 64484 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* (work RVU = 1.00, 10 minutes intra-service time) and noted that the surveyed code has more intra-service time but involves much less intense physician work and therefore is appropriately valued lower than the top key reference service which must target a smaller transforaminal approach compared

to the epidural or subarachnoid localization. The RUC also compared 77003 to the second highest key reference code 64491 *Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)* (work RVU = 1.16, 15 minutes intra-service time) and noted that the add-on codes have identical intra-service times, yet the surveyed code again involves less intense physician work and is appropriately valued lower than the reference service. The RUC concluded that the value of CPT code 77003 should be maintained at 0.60 work RVUs, below the 25th percentile of the survey. **The RUC recommends a work RVU of 0.60 for CPT code 77003.**

Affirmation of RUC Recommendations

The RUC reviewed the specialty societies' request to affirm the recent RUC valuations for the remaining codes in the Somatic Nerve Injections tab. Although these codes were identified with the other codes to be surveyed, the specialty societies elected not to survey because the codes were recently reviewed by the RUC and, unlike 64415-64417 and 64445-64448, there were no changes to their code descriptors. The RUC agreed to affirm the recommendations for the fourteen remaining codes. **The RUC recommends affirming the following recent RUC-recommended work RVUs:**

1.00 for CPT code 64400	**1.15 for CPT code 64430**
0.94 for CPT code 64405	**0.75 for CPT code 64435**
0.90 for CPT code 64408	**1.55 for CPT code 64449**
1.10 for CPT code 64418	**0.75 for CPT code 64450**
1.18 for CPT code 64420	**1.52 for CPT code 64451**
0.60 for CPT code 64421	**1.52 for CPT code 64454**
1.19 for CPT code 64425	**0.75 for CPT code 64455**

Practice Expense

Although not required due to the bundling of the codes, the specialty societies chose to address compelling evidence to support the direct practice expense recommendations. The Practice Expense (PE) Subcommittee discussed that these codes were previously reported without imaging and now include imaging, which constitutes the compelling evidence. It is the bundling of two codes into a single code. Further, the PE Subcommittee noted that the corresponding imaging code 76942 shows a net savings for each bundled code. The PE Subcommittee voted to approve compelling evidence for CPT codes 64415-64417 and 64445-64448. In addition, the PE Subcommittee verified the equipment minutes as submitted. The PE Subcommittee also voted to approve compelling evidence for CPT codes 76942, 77002 and 77003 to account for the updated calculation of equipment time for ED050 *Technologist PACS workstation* for CPT code 76942 and the addition of ED053 *Professional PACS workstation* for CPT codes 77002 and 77003. The previous omission of the Professional PACS workstation was in error. **The RUC recommends the direct practice expense inputs as submitted by the specialty society on all three PE spreadsheets.**

Potential Misreporting

For CPT codes 64445 and 64447, the RUC database indicates that family physicians are the dominant specialty in the non-facility setting, reporting at 36% and 57% respectively. The reporting of these services by family physicians was confusing since these are not procedures that would typically be provided by non-anesthesiologists. Upon further research, the specialties have determined that the family medicine non-facility reporting these services are likely a result of inappropriate reporting. The public 2019 Physician Supplier Procedure Summary (PSPS) file was

analyzed, and it was found that family medicine physicians in Fort Worth, Texas were responsible for 64% of all claims for CPT code 64445 and 89% of all claims for CPT code 64447. The large concentration of family medicine non-facility claims in one locality suggests potential misreporting. **The RUC suggests that CMS explore and address this misreporting.**

Work Neutrality
The RUC's recommendations for this CPT code set will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Category I **Surgery** **Nervous System** **Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System** **Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic** *For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681) (For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327) (64400-64455, 64461, 64462, 64463, 64479, 64480, 64483, 64484, 64490-64495 are unilateral procedures. For bilateral procedures, report 64400, 64405, 64408, 64415, 64416, 64417, 64418, 64420, 64425-64455, 64461, 64463, 64479, 64483, 64490, 64493 with modifier 50. Report add-on codes 64421, 64462, 64480, 64484, 64491, 64492, 64494, 64495 twice, when performed bilaterally. Do not report modifier 50 in conjunction with 64421, 64462, 64480, 64484, 64491, 64492, 64494, 64495)* **Somatic Nerves** *Codes 64400-64489 describe the introduction/injection of an anesthetic agent and/or steroid into the somatic nervous system for diagnostic or therapeutic purposes. For injection or destruction of genicular nerve branches, see 64454, 64624, respectively.* *Codes 64400-64450, 64454 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code.* Imaging guidance and localization may be reported separately for 64400- 64405, 64408, 64420, 64421, 64425, 64430, 64435, 64449, 64450. Imaging guidance and any injection of contrast are inclusive components of 64415, 64416, 64417, 64445, 64446, 64447, 64448, 64451 and 64454. *Codes 64455, 64479, 64480, 64483, 64484 are reported for single or multiple injections on the same site. For 64479, 64480, 64483, 64484, imaging guidance (fluoroscopy or CT) and any injection of contrast are inclusive components and are not reported separately. For 64455, imaging guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.*				

Codes 64461, 64462, 64463 describe injection of a paravertebral block (PVB). Codes 64486, 64487, 64488, 64489 describe injection of a transversus abdominis plane (TAP) block. Imaging guidance and any injection of contrast are inclusive components of 64461, 64462, 64463, 64486, 64487, 64488, 64489 and are not reported separately.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
(f)64400	M1	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)	000	1.00 (Affirmed October 2018 RUC Recommendation)
(64402 has been deleted. To report injection of anesthetic agent and/or steroid to the facial nerve, use 64999)				
(f) 64405	M2	greater occipital nerve	000	0.94 (Affirmed April 2017 RUC Recommendation)
(f) 64408	M3	vagus nerve	000	0.90 (Affirmed October 2018 RUC Recommendation)
(64410, 64413 have been deleted. To report injection of anesthetic agent and/or steroid to the phrenic nerve, cervical plexus, use 64999)				
▲64415	M4	brachial plexus, including imaging guidance, when performed (Do not report 64415 in conjunction with 76942, 77002, 77003)	000	1.50
▲64416	M5	brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed (Do not report 64416 in conjunction with 01966, 76942, 77002, 77003)	000	1.80
▲64417	M6	axillary nerve, including imaging guidance, when performed (Do not report 64417 in conjunction with 76942, 77002, 77003)	000	1.31

(f)64418	M7	suprascapular nerve	000	1.10 (Affirmed April 2016 RUC Recommendation)
(f)64420	M8	intercostal nerve, single level	000	1.18 (Affirmed October 2018 RUC Recommendation)
(f)✚64421	M9	intercostal nerve, each additional level (List separately in addition to code for primary procedure) (Use 64421 in conjunction with 64420)	ZZZ	0.60 (Affirmed October 2018 RUC Recommendation)
(f)64425	M10	ilioinguinal, iliohypogastric nerves	000	1.19 (Affirmed October 2018 RUC Recommendation)
(f)64430	M11	pudendal nerve	000	1.15 (Affirmed October 2018 RUC Recommendation)
(f)64435	M12	paracervical (uterine) nerve	000	0.75 (No Change) (Affirmed October 2018 RUC Recommendation)
▲64445	M13	sciatic nerve, including imaging guidance, when performed (Do not report 64445 in conjunction with 76942, 77002, 77003)	000	1.39
▲64446	M14	sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed (Do not report 64446 in conjunction with 01966, 76942, 77002, 77003)	000	1.75

▲64447	M15	femoral nerve, including imaging guidance, when performed (Do not report 64447 in conjunction with 01966, 76942, 77002, 77003)	000	1.34
▲64448	M16	femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed (Do not report 64448 in conjunction with 01996, 76942, 77002, 77003)	000	1.68
(f)64449	M17	lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement) (Do not report 64449 in conjunction with 01996)	000	1.55 (Affirmed October 2018 RUC Recommendation)
(f)64450	M18	other peripheral nerve or branch (For injection, anesthetic agent, nerves innervating the sacroiliac joint, use 64451)	000	0.75 (No Change) (Affirmed October 2018 RUC Recommendation)
(f)64451	M19	nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography) (Do not report 64451 in conjunction with 64493, 64494, 64495, 77002, 77003, 77012, 95873, 95874) (For injection, anesthetic agent, nerves innervating the sacroiliac joint, with ultrasound, use 76999) (For bilateral procedure, report 64451 with modifier 50)	000	1.52 (No Change) (Affirmed February 2019 RUC Recommendation)
(f)64454	M20	genicular nerve branches, including imaging guidance, when performed (Do not report 64454 in conjunction with 64624) (64454 requires injecting all of the following genicular nerve branches: superolateral, superomedial, and inferomedial. If all 3 of these genicular nerve branches are not injected, report 64454 with modifier 52)	000	1.52 (No Change) (Affirmed February 2019 RUC Recommendation)

(f)64455	M21	plantar common digital nerve(s) (eg, Morton's neuroma) (Do not report 64455 in conjunction with 64632) (Imaging guidance [fluoroscopy or CT] and any injection of contrast are inclusive components of 64479-64484. Imaging guidance and localization are required for the performance of 64479-64484)	000	0.75 (No Change) (Affirmed May 2017 RUC Recommendation)
(64470-64476 have been deleted. To report, see 64490- 64495)				
Radiology **Diagnostic Ultrasound** **Ultrasonic Guidance Procedures**				
(f)76942	M22	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation (Do not report 76942 in conjunction with 10004, 10005, 10006, 10021, 10030, 19083, 19285, 20604, 20606, 20611, 27096, 32408, 32554, 32555, 32556, 32557, 37760, 37761, 43232, 43237, 43242, 45341, 45342, 46948, 55874, 64415, 64416, 64417, 64445, 64446, 64447, 64448, 64479, 64480, 64483, 64484, 64490, 64491, 64493, 64494, 64495, 76975, 0213T, 0214T, 0215T, 0216T, 0217T, 0218T, 0232T, 0481T, 0582T)	XXX	0.67 (No Change)
Radiologic Guidance **Fluoroscopic Guidance**				
(f) +77002	M23	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure) (Use 77002 in conjunction with 10160, 20206, 20220, 20225, 20520, 20525, 20526, 20550, 20551, 20552, 20553, 20555, 20600, 20605, 20610, 20612, 20615, 21116, 21550, 23350, 24220, 25246, 27093, 27095, 27369, 27648, 32400, 32553, 36002, 38220, 38221, 38222, 38505, 38794, 41019, 42400, 42405, 47000, 47001, 48102, 49180, 49411, 50200, 50390, 51100, 51101, 51102, 55700, 55876, 60100, 62268, 62269, 64400, 64405, 64408, ~~64415, 64416, 64417,~~ 64418, 64420, 64421, 64425, 64430, 64435 ~~64445, 64446, 64447, 64448,~~ 64450, 64455, 64505, 64600, 64605)	ZZZ	0.54 (No Change)

330 N. Wabash Ave.
Chicago, IL 60611

RE: Request to Reaffirm Physician Work and Practice Expense (PE) Recommendations for Select Codes from Tab 5: Somatic Nerve Injection (October 2021 RUC Meeting)

Dear Dr. Silva:

Tab 5 at the October 2021 RUC meeting consists of codes describing somatic nerve injection services and related imaging services. The procedures in this family are performed by several different specialties. Seven of the codes in the tab were revised at the May 2021 CPT meeting where imaging was bundled and these codes have been surveyed for the October 2021 RUC meeting (64415-64417, 64445-64448). Imaging codes related to this family were also surveyed for this meeting (77002, 77003, 76942).

As for the remaining codes in the tab, although these codes were identified with other codes to be surveyed, we elected not to survey because they have been recently reviewed by the RUC and unlike 64415-64417, 64445-64448; they did not have a change in their code descriptors. The below signed physician specialty societies request the RUC reaffirm their recommendations for these remaining codes.

Tab 5 Codes	
Surveyed for October 2021 RUC Meeting	• 64415-64417; 64445-64448* • 77002, 77003, 76942
Reaffirmation Requested	• 64400-64405, 64408 • 64418-64435 • 64449-64455

* Codes revised at May 2021 CPT meeting

Discussion on the reaffirmation of the wRVUs is below and PE recommendations on current PE forms have been submitted separately.

The societies would note that although all of these codes are under one tab, we do not believe these codes constitute a "family" in the traditional sense. For example, the services are provided by several different specialties. As such, rank order issues for these codes is not an issue. In addition, all these codes do not have imaging bundled into the code. Therefore rank order with the new codes (all with imaging bundled) is not an issue.

Recent History of Somatic Nerve Injection Code Family

These somatic nerve injection codes describes injection procedures using anesthetic agents or steroids. The procedures are performed by numerous different specialties, represented by the societies submitting this request to the RUC.

In May 2018, the CPT Editorial Panel reached out to the appropriate specialty societies requesting a code change application to provide further definition and descriptor transparency around the use of codes 64400-64455. The

updated language was approved at the May 2018 CPT Editorial Panel meeting and the majority of the codes were surveyed for the October 2018 RUC meeting. Exceptions to this include:

- Code 64405 was surveyed for the April 2017 RUC meeting and reaffirmed at the October 2018 RUC meeting.
- Code 64418 was surveyed for the April 2016 RUC meeting and reaffirmed at the October 2018 RUC meeting.
- CPT codes 64451 and 64454 were new codes established for the 2020 cycle and surveyed at the January 2019 RUC meeting.
- Code 64455 was surveyed for the April 2017 RUC meeting.

During the October 2018 RUC meeting, CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 were identified by the RUC to be reported with ultrasound imaging more than 50% of the time. The RUC referred these codes to CPT to be bundled with ultrasound guidance, CPT code 76942. The codes were revised at the May 2021 CPT meeting and surveyed for the October 2021 meeting.

A code-by code request with further details and identification of requesting societies follows.

64400

Requesting Societies*: ASA and AAN*

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64400	Oct. 2018	1.00	25th percentile of subset of respondents (AAN) and crosswalks	0.75

CPT code 64400 *(Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular))* was surveyed in October 2018 and the RUC recommended 1.00 wRVUs. Since the code was surveyed in 2018 and the new values were not established until 2020, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies recommend that the 2018 RUC recommended wRVU (1.00 wRVUs) and PE inputs for code 64400 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC wRVU recommendation, the societies believe the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

The societies note that the code was flagged by the in the RUC Database as a code not to be used to value physician work. This flag was added during the 2018 survey process as the Committee recommended a wRVU value that was based onsurvey data from a subset of survey respondents. The joint societies believe the 2018 recommended wRVU value continues to appropriately describe the physician work being performed by physicians.

64405

Requesting Societies*: AAN, AAPM, AAPM&R and ASA*

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64405	Oct. 2018	0.94	Reaffirmed	0.94
	April 2017		Survey 25th percentile	

CPT code 64405 *(Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve)* was surveyed in October 2016 and the RUC recommended 0.94 wRVUs. 64405 was reaffirmed in October 2018. Since the code was surveyed in 2017 and reaffirmed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies recommend that the 2018 RUC recommended wRVU (0.94 wRVUs) and PE inputs for code 64405 be reaffirmed at the October 2021 RUC meeting.

64408

Requesting Societies: AAO-HNS

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64408	Oct. 2018	0.90	25th percentile	0.75

CPT code 64408 *(Injection(s), anesthetic agent(s) and/or steroid; vagus nerve)* was surveyed in October 2018 and the RUC recommended 0.90 wRVUs. Since the code was surveyed in 2018 and the new values were not established until 2020, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The society recommends that the 2018 RUC recommended wRVU (0.90 wRVUs) and PE inputs for code 64408 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC recommendation, the society believes the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

64418

Requesting Societies*: ASA, AAPM and AAPM&R*

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64418	Oct. 2018	1.10	Reaffirmed	1.10
	April 2016		Crosswalks	

CPT code 64418 (*Injection(s), anesthetic agent(s) and/or steroid; suprascapular nervewas)* was surveyed in October 2016 and the RUC recommended 1.10 wRVUs. 64418 was reaffirmed in October 2018. Since the code was surveyed in 2016 and reaffirmed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies recommend that the 2018 RUC recommended wRVU (1.10 wRVUs) and PE inputs for code 64418 be reaffirmed at the October 2021 RUC meeting.

64420

Requesting Societies*: ASA, AAPM and AAPM&R*

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64420	Oct. 2018	1.18	Existing value with crosswalks	1.08

CPT code 64420 *(Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level)* was surveyed in October 2018 and was valued by the RUC at 1.18 wRVUs. Since the code was surveyed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2018 RUC recommended wRVU (1.18 wRVUs) and PE inputs for code 64420 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC recommendation, the societies believe the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

64421

Requesting Societies: ***ASA, AAPM and AAPM&R***

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64421	Oct. 2018	0.60	Crosswalk	0.50

CPT code 64421 *(Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, each additional level (List separately in addition to code for primary procedure))* was surveyed in October 2018 and the RUC recommended 0.60 wRVUs. Since the code was restricted to be an add-on code and was surveyed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2018 RUC recommended wRVU (0.60 wRVUs) and PE inputs for code 64421 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC recommendation, the societies believe the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

64425

Requesting Societies: ***ASA, AAPM and AAPM&R***

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64425	Oct. 2018	1.19	Survey 25th percentile	1.00

CPT code 64425 *(Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves)* was surveyed in October 2018 and the RUC recommended 1.19 wRVUs. Since the code was surveyed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2018 RUC recommended wRVU (1.19 wRVUs) and PE inputs for code 64425 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC recommendation, the societies believe the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

64430

Requesting Societies*: ACOG, ASA and AAPM*

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64430	Oct. 2018	1.15	Survey 25th percentile	1.00

CPT code 64430 *(Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve)* was surveyed in October 2018 and the RUC recommended 1.15 wRVUs. Since the code was surveyed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2018 RUC recommended wRVU (1.15 wRVUs) and PE inputs for code 64430 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC recommendation, the societies believe the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

64435

Requesting Societies: ***ACOG***

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64435	Oct. 2018	0.75	Survey 25th percentile	0.75

CPT code 64435 *(Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve)* was surveyed in October 2018 and the RUC recommended 0.75 wRVUs. Since the code was surveyed in 2018, the representing society does not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The society therefore recommends that the 2018 RUC recommended wRVU (0.75 wRVUs) and PE inputs for code 64435 be reaffirmed at the October 2021 RUC meeting.

64449

Requesting Societies*: ASA*

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64449	Oct. 2018	1.55	Crosswalk	1.27

CPT code 64449 (*Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement))* was surveyed in October 2018 and the RUC recommended 1.55 wRVUs. Since the code was surveyed in 2018, the representing society does not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The society therefore recommends that the 2018 RUC recommended wRVU (1.55 work RVU) and PE inputs for code 64449 be reaffirmed at the October 2021 RUC meeting.

Although CMS did not accept the RUC recommendation, the societies believe the most appropriate value to reaffirm is the RUC recommended value as it is based on known and appropriate valuation methods approved by the Committee.

64450

Requesting Societies: ASA, AAPM, AAN, and AAPM&R

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64450	Oct. 2018	0.75	Current value and crosswalks	0.75

CPT code 64450 (*Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch))* was surveyed in October 2018 and the RUC recommended 0.75 wRVUs. Since the code was surveyed in 2018, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2018 RUC recommended wRVU (0.75 wRVUs) and PE inputs for code 64450 be reaffirmed at the October 2021 RUC meeting.

64451

Requesting Societies: ASA, AAPM, AAPM&R, SIS, ASIPP and NANS

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64451	Jan. 2019	1.52	Survey 25th percentile	1.52

CPT code 64451 (*Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography))* was surveyed in January 2019 and the RUC recommended 1.52 wRVUs. Since the code was new to CPT 2020 and surveyed in 2019, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2019 RUC recommended wRVU (1.52 wRVUs) and PE inputs for code 64451 be reaffirmed at the October 2021 RUC meeting.

64454

***Requesting Societies*: ASA, AAPM, AAPM&R, ASIPP and SIS**

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64454	Jan. 2019	1.52	Survey 25th percentile	1.52

CPT code 64454 (*Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches, including imaging guidance, when performed*) was surveyed in January 2019 and the RUC recommended 1.52 wRVUs. Since the code was new to CPT 2020 and surveyed in 2019, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2019 RUC recommended wRVU (1.52 wRVUs) and PE inputs for code 64451 be reaffirmed at the October 2021 RUC meeting.

64455

Requesting Societies: APMA

Code	RUC Meeting	RUC wRVU Rec.	RUC Rationale	2021 wRVU
64455	April. 2017	0.75	Current value and crosswalks	0.75

CPT code 64455 (*Injection(s), anesthetic agent(s) and/or steroid; plantar common digital nerve(s) (eg, Morton's neuroma))* was surveyed in April 2017 and the RUC recommended 0.75 wRVUs. Since the code was surveyed in 2017, the representing societies do not believe enough time has lapsed for there to be sufficient utilization data to assess if resurvey is necessary.

The joint societies therefore recommend that the 2017 RUC recommended wRVU (0.75 wRVUs) and PE inputs for code 64455 be reaffirmed at the October 2021 RUC meeting.

Table 1. Summary of Reaffirmation Recommendations

Code	Descriptor	Societies' Recommended Reaffirmation Values (RUC Recommended Values)
64400	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)	1.00
64405	Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve	0.94
64408	Injection(s), anesthetic agent(s) and/or steroid; vagus nerve	0.90
64418	Injection(s), anesthetic agent(s) and/or steroid; suprascapular nerve	1.10
64420	Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level	1.18
64421	Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, each additional level (List separately in addition to code for primary procedure)	0.60
64425	Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves	1.19
64430	Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve	1.15
64435	Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve	0.75
64449	Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)	1.55
64450	Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch	0.75

Code	Descriptor	Societies' Recommended Reaffirmation Values (RUC Recommended Values)
64451	Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)	1.52
64454	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches, including imaging guidance, when performed	1.52
64455	Injection(s), anesthetic agent(s) and/or steroid; plantar common digital nerve(s) (eg, Morton's neuroma)	0.75

We look forward to presenting our recommendation for the Somatic Nerve Injection code set at the upcoming RUC meeting. If you have any questions, please contact ASA staff Sharon Merrick, s.merrick@asahq.org, ASA Consultant Sheila Madhani, smadhani@mcdermottplus.com, or AAPM&R staff Carolyn Winter-Rosenberg, cwinterrosenberg@aapmr.org.

Thank you for your consideration of this request.

Sincerely,

/s/

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64415 Tracking Number Original Specialty Recommended RVU: **1.50**
Presented Recommended RVU: **1.50**
Global Period: 000 Current Work RVU: **1.35** RUC Recommended RVU: **1.50**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old female will undergo surgery on her shoulder and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A brachial plexus block with ultrasound guidance is performed to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The anesthesiologist obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol. The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment. The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the brachial plexus are identified and with ultrasound imaging, the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the brachial plexus and correct position is confirmed. Under continuous ultrasound imaging, a local anesthetic solution with or without adjuvants is injected into the fascial compartment containing the brachial plexus using intermittent aspiration and injection. The needle is removed. After cleaning of site, and occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the brachial plexus nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64486	000	1.27	**RUC Time**

CPT Descriptor Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62323	000	1.80	**RUC Time**

CPT Descriptor Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
20611	000	1.10	**RUC Time**	1,069,935

CPT Descriptor 1 Arthrocentresis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64483	000	1.90	**RUC Time**	1,044,547

CPT Descriptor 2 Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level

Other Reference CPT Code	Global	Work RVU	Time Source
64488	000	1.60	**RUC Time**

CPT Descriptor Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 29 **% of respondents:** 33.7 **%**

Number of respondents who choose 2nd Key Reference Code: 25 **% of respondents:** 29.0 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	34%	48%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	52%	48%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	45%	55%
Physical effort required	7%	79%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	21%	76%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	12%	72%	12%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	62%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	60%	36%
Physical effort required	4%	67%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	60%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery BUT do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code

over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result, ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code#	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.

- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45 units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64415

64415 Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,393 members (4,093 ASA members and 300 ASIPP members). A total of 86 responses were received (85 ASA members and 1 ASIPP member). The median experience in the previous 12 months for all respondents was 48.

Recommendation – 64415

64415 – Recommendation Summary	
Work RVU	1.50 (survey 25th)
Physician Time	
Pre-Time	13/1/4
Intra-Time	10
Immediate Post Time	7
Total Time	35

Work RVU

The Survey median Work RVU was 1.80 and the survey 25th percentile was 1.50.

- We recommend the 25th percentile of 1.50.

This recommendation is less than current combined Work RVU of 64415 and 76942 which is 2.02 (1.35 + 0.67 = 2.02 Work RVUs).

Physician Time

Pre-Service Package: 1 (with 2 minute reduction for scrub/dress/wait)

Evaluation: 13 minutes

Positioning: 1

SDW: 4

Intra-Service Time: 10 minutes

Immediate Post Service: 7 minutes

Total Time: 35 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64415 intra-time did decrease by two minutes. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64415	
	Intra-service Time

Type of Physician Work	
Ultrasound Imaging	⟷
Injection	⟷

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone. In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	CPT	IWPUT	Work RVU	Total Time	Pre-Time Evaluation	Pre-Time Positioning	Pre-Time SDW	Intra	Post
Current	64415	0.065	1.35	40	13	1	4	12	10
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64415 + 76942	0.097	2.02	43	13	1	4	15	10
Recommendation	64415	0.100	1.50	35	13	1	4	10	7

*Combined intra time reflects efficiencies between CPT 64415 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64415 and 76942.

Key Reference Service (KRS) Code Comparison

The societies then compared the surveyed code to the top KRS codes and found that they provided further support that the recommendation was appropriate.

KRS1: The most typical KRS selected was CPT code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed*)) with 33.72% respondents selecting this code. Over 50% of the survey respondents that selected this KRS indicated that the surveyed code was more intense.

KRS2: The second most typical KRS selected was CPT code 62323 (*Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)*) with 29.0% of the respondents selecting this code. 88% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed	1.27	0.078	35	15	10	10
64415	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed**	**1.50**	**0.100**	**35**	**18**	**10**	**7**
62323	Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)	1.80	0.080	45	20	15	10

MPC Codes

Our recommended Work RVU of 1.50 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64415	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed**	**1.50**	**0.100**	**35**	**18**	**10**	**7**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Code Comparison

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
27096	Injection procedure for sacroiliac joint, anesthetic/steroid, with image guidance (fluoroscopy or CT) including arthrography when performed	1.48	0.0861	38	17	11	10
64415	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed**	**1.50**	**0.100**	**35**	**18**	**10**	**7**
64488	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)	1.60	0.0741	40	15	15	10

Summary

The societies recommend for code 64415 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed*) the following:

Work RVU: 1.50 (25th percentile)

Physician Time

- Pre-Time: 13/1/4 minutes
- Intra-Service Time: 10 minutes
- Post Time: 7 minutes
- Total Time: 35 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64415

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNAs How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 597450
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization.

Specialty Anesthesiology Frequency 523964 Percentage 87.70 %

Specialty CRNAs Frequency 60342 Percentage 10.09 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 199,150 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Anesthesiology Frequency 174655 Percentage 87.70 %

Specialty CRNAs Frequency 20114 Percentage 10.09 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64415

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64416 Tracking Number Original Specialty Recommended RVU: **1.80**
Presented Recommended RVU: **1.80**
Global Period: 000 Current Work RVU: **1.48** RUC Recommended RVU: **1.80**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 54-year-old female will undergo surgery on her shoulder and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A brachial plexus block with a catheter and a continuous infusion of local anesthetic with ultrasound guidance is performed to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The anesthesiologist obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol. The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment. The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the brachial plexus are identified and with ultrasound imaging, the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the brachial plexus and correct position is confirmed. Under continuous ultrasound imaging a local anesthetic or crystalloid solution is injected into the fascial compartment containing the brachial plexus using intermittent aspiration and injection. A catheter is advanced carefully under ultrasound guidance to lie next to the brachial plexus then the needle is removed. Local anesthetic is injected via the catheter. The catheter is secured and an occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the brachial plexus nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	64%	25%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	71%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	63%	37%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	53%	36%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	70%	15%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	59%	26%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	63%	33%
Physical effort required	0%	74%	26%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	67%	22%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery BUT do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code #	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.
- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45 units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64416

64416 Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,393 members (4,093 ASA members and 300 ASIPP members). A total of 79 responses were received (78 ASA members and 1 ASIPP member). The median experience in the previous 12 months for all respondents was 10.

Recommendation – 64416

64416 – Recommendation Summary	
Work RVU	1.80 (survey 25th)
Physician Time	
Pre-Time	13/1/5
Intra-Time	15
Immediate Post Time	10
Total Time	44

Work RVU

The Survey median Work RVU was 2.00 and the survey 25th percentile was 1.80.

- We recommend the 25th percentile of 1.80.

This recommendation is less than current combined Work RVU of 64416 and 76942 which is 2.15 (1.48 + 0.67 = 2.15 Work RVUs).

Physician Time

Pre-Service Package: 2 (1 minute deducted from scrub, dress and wait)

Evaluation: 13 minutes

Positioning: 1

SDW: 5

Intra-Service Time: 15 minutes

Immediate Post Service: 10 minutes

Total Time: 44 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64416 intra-time did decrease by five minutes. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64416	
	Intra-service Time
Type of Physician Work	
Ultrasound Imaging	Catheter Placement and Injection	

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone. In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	**CPT**	**IWPUT**	**Work RVU**	**Total Time**	**Pre-Time Evaluation**	**Pre-Time Positioning**	**Pre-Time SDW**	**Intra**	**Post**
Current	64416	0.045	1.48	49	13	1	5	20	10
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64416 + 76942	0.068	2.15	52	13	1	5	23	10
Recommendation	64416	0.081	1.80	44	13	1	5	15	10

*Combined intra time reflects efficiencies between CPT 64416 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64416 and 76942.

Key Reference Service (KRS) Code Comparison

The societies then compared the surveyed code to the top KRS codes and found that they provided further support that the recommendation was appropriate.

KRS1: The most typical KRS selected was CPT code 62325 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT*)) with 35.44% respondents selecting this code. 96% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

KRS2: The second most typical KRS selected was CPT code 62327 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)*) with 34.18% of the respondents selecting this code. 89% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

CPT	**DESCRIPTOR**	**RVW**	**IWPUT**	**TOTAL TIME**	**PRE**	**INTRA**	**POST**
64416	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.80**	**0.081**	**44**	**19**	**15**	**10**

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
62325	Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)	2.20	0.1066	45	20	15	10

MPC Codes

Our recommended Work RVU of 1.80 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64416	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.80**	**0.081**	**44**	**19**	**15**	**10**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Code Comparison

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64488	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)	1.60	0.0741	40	15	15	10
64416	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.80**	**0.081**	**44**	**19**	**15**	**10**
64479	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), cervical or thoracic, single level	2.29	0.1076	49	24	15	10

Summary

The societies recommend for code 64416 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed*) the following:

Work RVU: 1.80 (25th percentile)

Physician Time

- Pre-Time: 13/1/5 minutes
- Intra-Service Time: 15 minutes
- Post Time: 10 minutes
- Total Time: 44 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64416

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNAs How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 53736
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 48953 Percentage 91.09 %

Specialty CRNAs Frequency 3869 Percentage 7.20 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 17,912 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Anesthesiology Frequency 16318 Percentage 91.10 %

Specialty CRNAs Frequency 1290 Percentage 7.20 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64416

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64417 Tracking Number Original Specialty Recommended RVU: **1.31**
Presented Recommended RVU: **1.31**
Global Period: 000 Current Work RVU: **1.27** RUC Recommended RVU: **1.31**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male will undergo surgery on his arm and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. An axillary nerve block with ultrasound guidance is performed to relieve his pain and improve his function.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The anesthesiologist obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol.The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment. The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the axillary nerve are identified and with ultrasound imaging, the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the target nerve(s) and correct position is confirmed. A local anesthetic solution with or without adjuvants is injected around the target nerve using intermittent aspiration and injection. The needle is removed. After cleaning of site, and occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the axillary nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	48%	41%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	59%	41%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	62%	38%
Physical effort required	7%	79%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	41%	52%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	83%	6%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	53%	18%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	61%	28%
Physical effort required	6%	71%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	67%	11%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery AND do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code

over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code#	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.

- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45 units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64417

64417 Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,393 members (4,093 ASA members and 300 ASIPP members). A total of 79 responses were received (78 ASA members and 1 ASIPP member). The median experience in the previous 12 months for all respondents was 10.

Recommendation – 64417

64417 – Recommendation Summary	
Work RVU	1.31 (survey 25th)
Physician Time	
Pre-Time	13/1/4
Intra-Time	10
Immediate Post Time	10
Total Time	38

Work RVU

The Survey median Work RVU was 1.60 and the survey 25th percentile was 1.31.

- We recommend the 25th percentile of 1.31.

This recommendation is less than current combined Work RVU of 64417 and 76942 which is 1.94 (1.27 + 0.67 = 1.94 Work RVUs).
Physician Time

Pre-Service Package: 1 (1 minute deducted from scrub, dress and wait)

Evaluation: 13 minutes

Positioning: 1

SDW: 4

Intra-Service Time: 10 minutes

Immediate Post Service: 10 minutes

Total Time: 38 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64417 intra-time stayed the same. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64417	
	Intra-service Time

Type of Physician Work	
Ultrasound Imaging	⟷
Injection	⟷

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone.In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	CPT	IWPUT	Work RVU	Total Time	Pre-Time Evaluation	Pre-Time Positioning	Pre-Time SDW	Intra	Post
Current	64417	0.070	1.27	49	13	1	4	10	10
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64417 + 76942	0.105	1.94	41	13	1	4	13	10
Recommendation	64417	0.074	1.31	38	13	1	4	10	10

*Combined intra time reflects efficiencies between CPT 64417 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64417 and 76942.

Key Reference Service (KRS) Code Comparison

The societies then compared the surveyed code to the top KRS codes and found that they provided further support that the recommendation was appropriate.

KRS1: The most typical KRS selected was CPT code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed*)) with 36.71% respondents selecting this code. 96% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

KRS2: The second most typical KRS selected was CPT code 62323 (*Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)*) with 22.78% of the respondents selecting this code. 89% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed	1.27	0.078	35	15	10	10
64417	**Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed**	**1.31**	**0.074**	**38**	**18**	**10**	**10**
62323	Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)	1.80	0.080	45	20	15	10

MPC Codes

Our recommended Work RVU of 1.31 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64417	**Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed**	**1.31**	**0.074**	**38**	**18**	**10**	**10**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Code Comparison

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	1.27	0.0782	35	15	10	10
64417	**Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed**	**1.31**	**0.074**	**38**	**18**	**10**	**10**
10035	Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; first lesion	1.70	0.0733	45	20	15	10

Summary

The societies recommend for code 64417 (*Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed*) the following:

Work RVU: 1.31 (25th percentile)

Physician Time

- Pre-Time: 13/1/4 minutes
- Intra-Service Time: 10 minutes
- Post Time: 10 minutes
- Total Time: 38 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64417

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNAs How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 47295
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization.

Specialty Anesthesiology Frequency 35566 Percentage 75.20 %

Specialty CRNAs Frequency 7095 Percentage 15.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,765 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Anesthesiology Frequency 11855 Percentage 75.19 %

Specialty CRNAs Frequency 2365 Percentage 15.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64417

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64445 Tracking Number Original Specialty Recommended RVU: **1.39**
Presented Recommended RVU: **1.39**
Global Period: 000 Current Work RVU: **1.00** RUC Recommended RVU: **1.39**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 25-year-old female will undergo surgery for a right trimalleolar fracture open reduction and fixation and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A sciatic nerve block with ultrasound guidance is performed to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The anesthesiologist obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol. The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment. The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the sciatic nerve are identified and with ultrasound imaging, the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the sciatic nerve and correct position is confirmed. Under continuous ultrasound imaging, a local anesthetic solution with or without adjuvants is injected into the fascial compartment containing the sciatic nerve using intermittent aspiration and injection. The needle is removed. After cleaning of site, and occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the sciatic nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	53%	39%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	56%	37%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	56%	44%
Physical effort required	0%	81%	19%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	41%	52%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	69%	23%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	23%	62%	15%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	69%	31%
Physical effort required	8%	69%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	77%	15%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery AND do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code

over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result, ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code#	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.

- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45 units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64445

64445 Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,867 members (4,567 ASA members and 300 ASIPP members). A total of 76 responses were received (73 ASA members and 3 ASIPP member). The median experience in the previous 12 months for all respondents was 26.

Recommendation – 64445

64445 – Recommendation Summary	
Work RVU	1.39 (survey 25th)
Physician Time	
Pre-Time	7/1/1
Intra-Time	10
Immediate Post Time	5
Total Time	24

Work RVU

The Survey median Work RVU was 1.60 and the survey 25th percentile was 1.39.

- We recommend the 25th percentile of 1.39.

This recommendation is less than current combined Work RVU of 64445 and 76942 which is 1.67 (1.00 + 0.67 = 1.67 Work RVUs).

Physician Time

Pre-Service Package: 5

Evaluation: 7 minutes

Positioning: 1

SDW: 1

Intra-Service Time: 10 minutes

Immediate Post Service: 5 minutes

Total Time: 24 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64445 intra-time stayed the same. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64445	
	Intra-service Time

Type of Physician Work	
Ultrasound Imaging	⟷
Injection	⟷

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone. In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	CPT	IWPUT	Work RVU	Total Time	Pre-Time Evaluation	Pre-Time Positioning	Pre-Time SDW	Intra	Post
Current	64445	0.0701	1.00	24	7	1	1	10	5
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64445 + 76942	0.105	1.67	27	7	1	1	13	5
Recommendation	64445	0.109	1.39	24	7	1	1	10	5

*Combined intra time reflects efficiencies between CPT 64445 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64445 and 76942.

Key Reference Service (KRS) Code Comparison

The societies then compared the surveyed code to the top KRS codes and found that they provided further support that the recommendation was appropriate.

KRS1: The most typical KRS selected was CPT code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed*)) with 36.84% respondents selecting this code. 96% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

KRS2: The second most typical KRS selected was CPT code 62323 (*Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)*) with 17.11% of the respondents selecting this code. 92% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed	1.27	0.078	35	15	10	10
64445	**Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed**	**1.39**	**0.109**	**24**	**9**	**10**	**5**
62323	Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)	1.80	0.080	45	20	15	10

MPC Codes

Our recommended Work RVU of 1.39 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64445	**Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed**	**1.39**	**0.109**	**24**	**9**	**10**	**5**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Code Comparison

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	1.27	0.0782	35	15	10	10
64445	**Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed**	**1.39**	**0.109**	**24**	**9**	**10**	**5**
10035	Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; first lesion	1.70	0.0733	45	20	15	10

Summary

The societies recommend for code 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed)* the following:

Work RVU: 1.39 (25th percentile)

Physician Time

- Pre-Time: 7/1/1 minutes
- Intra-Service Time: 10 minutes
- Post Time: 5 minutes
- Total Time: 24 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64445

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Family Medicine How often? Rarely

Specialty Physical Medicine and Rehab How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 392157
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization.

Specialty Anesthesiology Frequency 145490 Percentage 37.09 %

Specialty Family Medicine Frequency 84314 Percentage 21.50 %

Specialty Physical Medicine & Rehab Frequency 26274 Percentage 6.69 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 130,719 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Anesthesiology Frequency 48497 Percentage 37.10 %

Specialty Family Medicine Frequency 28105 Percentage 21.50 %

Specialty Physical Medicine & Rehab Frequency 8758 Percentage 6.69 %

Do many physicians perform this service across the United States? Yes

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64445

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64446 Tracking Number Original Specialty Recommended RVU: **1.75**
Presented Recommended RVU: **1.75**
Global Period: 000 Current Work RVU: **1.36** RUC Recommended RVU: **1.75**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30-year-old male will undergo surgery for major reconstruction of his left foot and ankle and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A continuous sciatic nerve block with a catheter and a continuous infusion of local anesthetic with ultrasound guidance is performed to relieve his pain and improve his function.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The anesthesiologist obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol. The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment. The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the sciatic nerve are identified and with ultrasound imaging, the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the sciatic nerve and correct position is confirmed. Under continuous ultrasound imaging, a local anesthetic or crystalloid solution is injected into the fascial compartment containing the sciatic nerve using intermittent aspiration and injection. A catheter is advanced carefully under ultrasound guidance to lie next to the sciatic nerve then the needle is removed. Local anesthetic is injected via the catheter. The catheter is secured and an occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the sciatic nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	52%	28%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	54%	11%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	61%	29%
Physical effort required	4%	68%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	61%	18%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	82%	9%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	73%	18%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	64%	27%
Physical effort required	9%	64%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	45%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery AND do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code#	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.
- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45 units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64446

64446 Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,867 members (4,567 ASA members and 300 ASIPP members). A total of 60 responses were received (57 ASA members and 3 ASIPP member). The median experience in the previous 12 months for all respondents was 10.

Recommendation – 64446

64446 – Recommendation Summary	
Work RVU	1.75 (survey 25th)
Physician Time	
Pre-Time	13/1/5
Intra-Time	15
Immediate Post Time	10
Total Time	44

Work RVU

The Survey median Work RVU was 1.90 and the survey 25th percentile was 1.75.

- We recommend the 25th percentile of 1.75.

This recommendation is less than current combined Work RVU of 64446 and 76942 which is 2.03 (1.36 + 0.67 = 2.03 Work RVUs).

Physician Time

Pre-Service Package: 1 (1 minute from scrub, dress and wait)

Evaluation: 13 minutes

Positioning: 1

SDW: 5

Intra-Service Time: 15 minutes

Immediate Post Service: 10 minutes

Total Time: 44 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64446 intra-time stayed the same. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64446	
	Intra-service Time
Type of Physician Work	
Ultrasound Imaging	Catheter Placement and Injection	

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone. In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	**CPT**	**IWPUT**	**Work RVU**	**Total Time**	**Pre-Time Evaluation**	**Pre-Time Positioning**	**Pre-Time SDW**	**Intra**	**Post**
Current	64446	0.0581	1.36	40	13	1	5	15	6
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64446 + 76942	0.086	2.03	43	13	1	5	18	6
Recommendation	64446	0.078	1.75	44	13	1	5	15	10

*Combined intra time reflects efficiencies between CPT 64446 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64446 and 76942.

Key Reference Service (KRS) Code Comparison

The societies then compared the surveyed code to the top KRS codes and found that they provided further support that the recommendation was appropriate.

KRS1: The most typical KRS selected was CPT code 62327 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)*) with 48.33% of the respondents selecting this code. 83% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

KRS2: The most typical KRS selected was CPT code 62325 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT*)) with 18.33% respondents selecting this code. With 91% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

CPT	**DESCRIPTOR**	**RVW**	**IWPUT**	**TOTAL TIME**	**PRE**	**INTRA**	**POST**

MPC Codes

Our recommended Work RVU of 1.75 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64446	**Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.75**	**0.078**	**44**	**19**	**15**	**10**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Comparison Codes

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64488	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)	1.60	0.0741	40	15	15	10
64446	**Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.75**	**0.078**	**44**	**19**	**15**	**10**
64479	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), cervical or thoracic, single level	2.29	0.1076	49	24	15	10

Summary

The societies recommend for code 64446 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed)* the following:

Work RVU: 1.75 (25th percentile)

Physician Time

- Pre-Time: 13/1/5 minutes

- Intra-Service Time: 15 minutes
- Post Time: 10 minutes
- Total Time: 44 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64446

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNAs How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 17640
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization.

Specialty Anesthesiology Frequency 16194 Percentage 91.80 %

Specialty CRNAs Frequency 811 Percentage 4.59 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,880
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization data

Specialty Anesthesiology Frequency 5398 Percentage 91.80 %

Specialty CRNAs Frequency 270 Percentage 4.59 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64446

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64447 Tracking Number Original Specialty Recommended RVU: **1.34**
Presented Recommended RVU: **1.34**
Global Period: 000 Current Work RVU: **1.10** RUC Recommended RVU: **1.34**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30-year-old male will undergo surgery for a right anterior cruciate ligament repair and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A femoral nerve block with ultrasound guidance is performed to manage post-operative pain and improve his function.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol.The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment. The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the femoral nerve are identified and with ultrasound imaging,the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the femoral nerve and correct position is confirmed. Under continuous ultrasound imaging, a local anesthetic solution with or without adjuvants is injected into the fascial compartment containing the femoral nerve using intermittent aspiration and injection. The needle is removed. After cleaning of site, and occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the femoral nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	60%	34%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	61%	32%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	68%	32%
Physical effort required	3%	87%	10%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	48%	45%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	67%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	50%	42%	8%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	67%	25%
Physical effort required	17%	66%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	67%	8%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery AND do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code

over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code #	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.
- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45

units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64447

64447 Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,867 members (4,567 ASA members and 300 ASIPP members). A total of 76 responses were received (73 ASA members and 3 ASIPP member). The median experience in the previous 12 months for all respondents was 30.

Recommendation – 64447

64447 – Recommendation Summary	
Work RVU	1.34 (survey 25th)
Physician Time	
Pre-Time	12/1/3
Intra-Time	8
Immediate Post Time	5
Total Time	29

Work RVU

The Survey median Work RVU was 1.51 and the survey 25th percentile was 1.34.

- We recommend the 25th percentile of 1.34.

This recommendation is less than current combined Work RVU of 64447 and 76942 which is 1.77 (1.10 + 0.67 = 1.77) Work RVUs).

Physician Time

Pre-Service Package: 1 (1 minute deducted from evaluation, 3 minutes deducted from scrub, dress and wait)

Evaluation: 12 minutes

Positioning: 1

SDW: 3

Intra-Service Time: 8 minutes

Immediate Post Service: 5 minutes

Total Time: 29 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64447 intra-time increased by 2 minutes. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64447	
	Intra-service Time

Type of Physician Work	
Ultrasound Imaging	← →
Injection	← →

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone. In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	CPT	IWPUT	Work RVU	Total Time	Pre-Time Evaluation	Pre-Time Positioning	Pre-Time SDW	Intra	Post
Current	64447	0.112	1.10	27	12	1	3	6	5
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64447 + 76942	0.149	1.77	30	12	1	3	9	5
Recommendation	64447	0.114	1.34	29	12	1	3	8	5

*Combined intra time reflects efficiencies between CPT 64447 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64447 and 76942.

Key Reference Service (KRS) Code Comparison

The societies then compared the surveyed code to the top KRS codes and found that they provided further support that the recommendation was appropriate.

KRS1: The most typical KRS selected was CPT code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed*)) with 42.11% respondents selecting this code. 97% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

KRS2: The second most typical KRS selected was CPT code 64493 (*Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level*) with 15.79% of the respondents selecting this code. 92% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed	1.27	0.078	35	15	10	10
64447	**Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed**	**1.34**	**0.114**	**29**	**16**	**8**	**5**
64493	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level	1.52	0.0658	42	17	15	10

MPC Codes

Our recommended Work RVU of 1.34 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64447	**Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed**	**1.34**	**0.114**	**29**	**16**	**8**	**5**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Comparison Codes

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	1.27	0.0782	35	15	10	10
64447	**Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed**	**1.34**	**0.114**	**29**	**16**	**8**	**5**
10035	Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; first lesion	1.70	0.0733	45	20	15	10

Summary

The societies recommend for code 64447 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed)* the following:

Work RVU: 1.34 (25th percentile)

Physician Time

- Pre-Time: 12/1/3 minutes
- Intra-Service Time: 8 minutes
- Post Time: 5 minutes
- Total Time: 29 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64447

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64448 Tracking Number Original Specialty Recommended RVU: **1.68**
Presented Recommended RVU: **1.68**
Global Period: 000 Current Work RVU: **1.41** RUC Recommended RVU: **1.68**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male will undergo surgery for a right total knee replacement and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A continuous femoral nerve block with a catheter and a continuous infusion of local anesthetic with ultrasound guidance is performed to manage post-operative pain and improve his function.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The anesthesiologist obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The anesthesiologist communicates with surgeon to confirm that a block is indicated for postoperative pain management, confirms that the surgical consent is complete and the surgeon has seen the patient, and confirms that the surgical site is marked per institutional protocol. The anesthesiologist inspects and prepares the ultrasound equipment, including appropriate transducers, needle guides if applicable, and probe covers, as well as the proper settings for the ultrasound equipment.The anesthesiologist obtains informed consent. The site of the proposed procedure is marked. The patient is monitored in a procedure room or operating room. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the femoral nerve are identified and with ultrasound imaging, the nerve(s) are visualized, and the skin entry point is identified. A local anesthetic skin wheal is created. Under ultrasound guidance, a needle is advanced towards the femoral nerve and correct position is confirmed. Under continuous ultrasound imaging, a local anesthetic or crystalloid solution is injected into the fascial compartment containing the femoral nerve using intermittent aspiration and injection. A catheter is advanced carefully under ultrasound guidance to lie next to the femoral nerve then the needle is removed. Local anesthetic is injected via the catheter. The catheter is secured and an occlusive dressing is placed.

Description of Post-Service Work: Observe the patient for any signs or symptoms of local anesthetic systemic toxicity. After several minutes have passed, evaluate the initial effects of the femoral nerve block by physical examination to determine if the patient is developing appropriate weakness, numbness, and relief of pain in the expected nerve distribution. A procedure note is entered into the medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	52%	28%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	32%	54%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	53%	36%
Physical effort required	4%	71%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	57%	18%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	67%	22%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	78%	11%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	56%	33%
Physical effort required	11%	67%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	56%	22%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Last surveyed at the October 2018 RUC meeting, the current codes 64415, 64416, 64417, 64445, 64446, 64447 and 64448 describe only injection of an anesthetic agent in the area of the peripheral nerve and/or catheter placement for postoperative pain management after surgery AND do not include imaging guidance. The imaging guidance was reported using 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*). In October 2018 the RUC identified that over 50% of the time codes 64415-64417 and 64446-64448 were reported with ultrasound imaging code over 76942 The RUC referred these codes to the CPT Editorial Panel indicating they need to be bundled with imaging guidance. Although 644445 was not part of the original application, in reviewing billed together data as part of its work for submitting the CPT application, the American Society of Anesthesiologists (ASA) found that the 2021 RUC database indicated that 64445 is billed with code 76942 65.4% of the time. As a result ASA included 64445 in its CPT application submission.

Therefore, the surveyed codes are new codes that describe both work of the injection with or without a catheter placement AND imaging guidance.

When imaging is provided, ultrasound described by code 76942 is the dominant imaging modality for all of codes.

Code	Percent CPT Code Billed with 76942 (2019)
64415	86.8%
64416	88.1%
64417	78.5%
64445	68.8%
64446	83.3%
64447	87.3%
64448	87.0%

Source: 2021 RUC Database

At their May 2021 meeting, the CPT Editorial Panel approved new descriptors for codes 64415-54417 and 6445-64448 where managing was bundled. ASA and the American Society of Interventional Pain Physicians (ASIPP) surveyed these codes for the October 2021 RUC meeting.

Summary of Recommendations for Codes 64415-64417 and 64445-64448

Code #	Description	Oct 2018 RUC Recommended Work Value Injection Code Only	Current (CMS) Work RVU Injection Code Only	Current Work RVU Injection Combined with Imaging (76942)	October 2021 Recommendation of New Codes with Imaging bundled	October 2021 Recommendation Rationale
64415	Brachial Plexus Injection only	1.42	1.35	2.02	**1.50**	Survey 25th percentile
64416	Brachial Plexus Injection and Catheter	1.81	1.48	2.15	**1.80**	Survey 25th percentile
64417	Axillary Nerve Injection only	1.27	1.27	1.94	**1.31**	Survey 25th percentile
64445	Sciatic Nerve Injection only	1.18	1.00	1.67	**1.39**	Survey 25th percentile
64446	Sciatic Nerve Injection and Catheter	1.54	1.36	2.03	**1.75**	Survey 25th percentile
64447	Femoral Nerve Injection only	1.10	1.10	1.77	**1.34**	Survey 25th percentile
64448	Femoral Nerve Injection and Catheter	1.55	1.41	2.08	**1.68**	Survey 25th percentile

Recommended Values and Relativity within the Family

- Injection Only Codes. The current survey recommended wRVU (25th percentile of survey) is generally consistent with the 2018 RUC recommended wRVU demonstrating that the Brachial Plexus injection (64415) is more work and higher wRVU

than the other injection codes. In addition, the other three injection only codes (64417, 64445, 64447) have similar wRVUs in both the 2018 RUC recommended wRVU and the current survey recommended wRVU.

- Additional work for catheter placement. The current survey recommended wRVU and the 2018 RUC recommended wRVU maintain relativity with the injection only codes. The current survey recommended values show an incremental increase in wRVU of 0.30-0.36 units and the 2018 RUC recommended values had an incremental increase in wRVU of 0.31-0.45 units. Further, the additional time for the catheter placement is 5-7 min in the current survey is consistent with the 2018 RUC survey that had additional time for catheter placement of 5-8 min.

CODE 64448

64448 Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed

Survey Description

ASA and ASIPP conducted a random survey of 4,867 members (4,567 ASA members and 300 ASIPP members). A total of 62 responses were received (59 ASA members and 3 ASIPP member). The median experience in the previous 12 months for all respondents was 10.

Recommendation – 64448

64448 – Recommendation Summary	
Work RVU	1.68 (survey 25th)
Physician Time	
Pre-Time	13/1/5
Intra-Time	15
Immediate Post Time	9
Total Time	43

Work RVU

The Survey median Work RVU was 1.90 and the survey 25th percentile was 1.68.

- We recommend the 25th percentile of 1.68.

This recommendation is less than current combined Work RVU of 64448 and 76942 which is 2.08 (1.41 + 0.67 = 2.08) Work RVUs).

Physician Time

Pre-Service Package: 1 (1 minute deducted from scrub, dress and wait)

Evaluation: 13 minutes

Positioning: 1

SDW: 5

Intra-Service Time: 15 minutes

Immediate Post Service: 9 minutes

Total Time: 43 minutes

Framework for Considering Time and Intensity When Imaging Is Bundled

In selecting the 25th percentile, the societies considered how time and intensity should be considered. They noted that it was important to compare the recommendation to not just the current injection code alone but compare it to the combined injection and imaging code.

Time

The societies noted that for 64448 intra-time increased by 2 minutes. They discussed that in general when surveying this code with imaging now bundled they would not expect the intra-time to increase significantly because for the majority of the intra-time the imaging and the injection physician work is occurring simultaneously.

Breakdown of Physician Work for Code 64448	
	Intra-service Time
Type of Physician Work	
Ultrasound Imaging	Catheter Placement and Injection	

Intensity

Similar to thinking about time, the societies considered that intensity of the new surveyed code should be compared to the intensity of the combined injection and imaging codes which appropriately have higher intensities. The higher intensities are appropriate because the new code describes the physician work of doing both the injection and imaging simultaneously where in the older code only describes the physician work of doing only the injection alone. In reviewing the intensities, the societies concluded that they provided further support of the appropriateness of the recommendation of the 25th percentile.

Source	CPT	IWPUT	Work RVU	Total Time	Pre-Time Evaluation	Pre-Time Positioning	Pre-Time SDW	Intra	Post
Current	64448	0.071	1.41	38	13	1	5	13	6
Current	76942	0.027	0.67	27	7	0	0	15	5
Current – Combined*	64448 + 76942	0.099	2.08	41	13	1	5	16	6
Recommendation	64448	0.075	1.68	43	13	1	5	15	9

*Combined intra time reflects efficiencies between CPT 64448 and imaging (76942), leading to only a 3 minute increase in total time when combined. Combined RVW is the sum of the RVW for 64448 and 76942.

Key Reference Service (KRS) Code Comparison

KRS1: The most typical KRS selected was CPT code 62327 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)*) with 46.77% of the respondents selecting this code. 83% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

KRS2: The most typical KRS selected was CPT code 62325 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT*)) with 14.52% respondents selecting this code. With 89% of the survey respondents that selected this KRS indicated that the surveyed code was identical or more intense.

	solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)						

MPC Codes

Our recommended Work RVU of 1.68 is well bracketed by MPC codes with the similar intra-service time and similar total times and clinically similar and with similar intensities. The two MPC codes are code 20611 with a Work RVU of 1.10 and code 64483 with a Work RVU of 1.90.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	0.0791	27	12	10	5
64448	**Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.68**	**0.075**	**43**	**19**	**15**	**9**
64483	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, single level	1.90	0.0816	49	24	15	10

Other Comparison Codes

Societies also reviewed how the recommendation fit in with other codes with similar intra-service time, similar total time, clinically similar and with similar intensities and concluded that this provided further evidence of the appropriateness of the recommendation.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	1.27	0.0782	35	15	10	10
64448	**Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed**	**1.68**	**0.075**	**43**	**19**	**15**	**9**
10035	Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; first lesion	1.70	0.0733	45	20	15	10

Summary

The societies recommend for code 64448 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement) including imaging guidance, when performed)* the following:

Work RVU: 1.68 (25th percentile)

Physician Time

- Pre-Time: 13/1/5 minutes
- Intra-Service Time: 15 minutes
- Post Time: 9 minutes
- Total Time: 43 minutes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64448

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNAs How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 120564
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization.

Specialty Anesthesiology Frequency 107061 Percentage 88.80 %

SUMMARY OF RECOMMENDATION

CPT Code:76942 Tracking Number M22 Original Specialty Recommended RVU: **0.67**
Presented Recommended RVU: **0.67**
Global Period: XXX Current Work RVU: **0.67** RUC Recommended RVU: **0.67**

CPT Descriptor: Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Ultrasonic guidance is utilized for needle placement during a separately reported underlying procedure (eg, biopsy, aspiration, injection).

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging examinations. Confirm appropriateness of imaging guidance and determine appropriate protocol and approach. Discuss with the patient (and family or proxy) the risks and benefits relative to other potential imaging modalities. Discuss the equipment being used and potential for prolonged immobility and repositioning to ensure optimal imaging for guidance and interpretation. Provide instructions for the diagnostic medical sonographer in the ultrasound equipment required, including appropriate transducers, needle guides, and probe covers, as well as the proper settings for the ultrasound equipment. Confirm patient positioning and imaging setup, ensuring the entire area necessary can be imaged and that equipment and patient can be repositioned as needed during sterile procedure (i.e., the field must be clear of impediments to approach and repositioning as needed). The physician dresses in sterile attire.

Description of Intra-Service Work: Supervise and interpret initial sonography of area to be imaged to select appropriate planes of view. Obtain and interpret preliminary images acquired to assess appropriate approach to the target(s), evaluate for unexpected findings, interval changes in target lesion(s), and adjust patient positioning or protocol as needed. Mark skin entry site and prepare in sterile fashion with sterile drape and ultrasound probe cover. Perform intermittent or continuous ultrasound guidance to direct needle to target(s) and reposition, as necessary. Confirm satisfactory needle placement in the target(s). Obtain and interpret post-procedural ultrasound to evaluate for complications. Interpret all images resulting from the study including dedicated review of the target(s) as well as all visualized viscera, vasculature, and soft tissues. Assess for complications or other unexpected findings. Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: The physician reviews, proofreads, and submits the final report describing the ultrasound guidance procedure, including the final position of the needle/catheter and any procedure-related complications, for the patient's medical record. Communicate the results of the procedure to the referring physician and patient when appropriate.

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	17%	56%	22%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	33%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	11%	83%

Physical effort required	6%	33%	61%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	11%	83%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	18%	53%	29%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	24%	65%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	12%	88%
Physical effort required	12%	53%	35%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	12%	82%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Somatic Nerve Injection code family was identified on the October 2021 RUC New and Revised LOI due to the bundling of seven codes (CPT codes 64415, 64416, 64417, 64445, 64446, 64447, 64448) with imaging

guidance. There are three codes which capture the imaging guidance component of the somatic nerve injection procedures.

The imaging guidance codes are comprised of the following:

- **CPT code 76942**: *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*
- **CPT code 77002**: *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)*
- **CPT code 77003**: *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)*

The American College of Radiology (ACR), American Academy of Physical Medicine and Rehabilitation (AAPM&R), Spine Intervention Society (SIS), and Society of Interventional Radiology (SIR) agreed to survey CPT code 76942 for the October 2021 RUC meeting.

Survey Process
The ACR surveyed a total of 500 members (a random sample of 250 members and a separate random sample of 250 members who perform radiography, ultrasound, and interventional radiology procedures). The AAPM&R surveyed a random sample of 400 individuals, the SIS surveyed a random sample of 250 individuals, and the SIR surveyed a random sample of 200 individuals from their respective memberships.

Work RVU and Time Recommendations
The expert panel recommends maintaining the current value at 0.67 work RVU, which is below the survey 25th percentile, and current times of 7 minutes pre-service, 15 minutes intra-service and 5 minutes post-service which match the median survey times.

Key Reference Services
The societies propose the existing wRVU at 0.67 for the surveyed code, which is bracketed by the most commonly chosen key references services, CPT codes 76536 *(Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation)* and 38221 *(Diagnostic bone marrow; biopsy(ies)).* The most commonly chosen key reference code, 76536, is a comparable ultrasound procedure based on the type of imaging performed and the interpretation of the images obtained. Comparatively, the surveyed code typically requires more pre-service time to review the pre-existing images for the needle target and more real-time imaging to guide the needle during the procedure. This contributes to the 5 additional intra-service minutes and overall longer total time, which corresponds to the greater total time for the surveyed code and higher wRVU relative to KRS code 76536. The second most commonly chosen key reference code, 38221, is a biopsy procedure performed without imaging guidance, which has 5 additional minutes of intra-service time and 23 additional minutes of total time, supporting the higher wRVU. The majority of survey respondents rated the surveyed code as “somewhat more” or “much more” intense than each KRS and these responses are well aligned with the survey 25th percentile wRVU of 0.80. However, the specialties are requesting to maintain the current 0.67 wRVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76536	Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation	0.56	4	10	4	18	0.038	0.031
76942	**Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation**	**0.67**	**7**	**15**	**5**	**27**	**0.027**	**0.025**
38221	Diagnostic bone marrow; biopsy(ies)	1.28	15	20	15	50	0.030	0.026

MPC Codes

The surveyed code is bracketed by MPC codes 76519 *(Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation)* and 95251 *(Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report).* MPC code 76519 is an ophthalmic ultrasound code which has 5 minutes less intra-service and total time, with a proportionally lower wRVU and nearly identical IWPUT compared to the proposed value of the surveyed code. MPC code 95251 is an interpretation and reporting of data from a diagnostic test which has identical intra-service time and a slightly higher wRVU. MPC code 76857 *(Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles))* is a radiology ultrasound code which has less intra-service time than the surveyed code and a comparably lower wRVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76857	Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)	0.50	5	7	5	17	0.039	0.029
76519	Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation	0.54	2	10	10	22	0.027	0.025
76942	**Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation**	**0.67**	**7**	**15**	**5**	**27**	**0.027**	**0.025**
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	2	15	3	20	0.039	0.035

Summary

In summary, our expert panel recommends maintaining the current value at 0.67 work RVU and current times of 7 minutes pre-service, 15 minutes intra-service and 5 minutes post-service. The recommended value compares favorably with the key reference services and MPC codes, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty Physical Medicine and Rehabilitation How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 3534798
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service described by CPT code 76942 is estimated to be provided 3,534,798 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 109121 Percentage 3.08 %

Specialty Interventional Radiology Frequency 28380 Percentage 0.80 %

Specialty Physical Medicine and Rehabilitation Frequency 58291 Percentage 1.64 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,178,266 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 76942 is estimated to be provided 1,178,266 times in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 36374 Percentage 3.08 %

Specialty Interventional Radiology Frequency 9460 Percentage 0.80 %

Specialty Physical Medicine and Rehabilitation Frequency 19430 Percentage 1.64 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:77002 Tracking Number M23 Original Specialty Recommended RVU: **0.54**
Presented Recommended RVU:
Global Period: ZZZ Current Work RVU: **0.54** RUC Recommended RVU: **0.54**

CPT Descriptor: Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with hip pain and suspected joint effusion is referred for joint aspiration. Fluoroscopic guidance is used to advance a needle into the joint space, and the joint fluid is aspirated (needle aspiration is reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the patient's history and prior imaging studies to become familiar with the patient's anatomy and plan an appropriate trajectory for the needle placement (including access site, pertinent landmarks, and variant anatomy). Physician obtains informed consent from patient or patient’s proxy. The physician dresses in radiation attire and ensures others in the room have radiation attire. The physician instructs the radiologic technologists on the imaging equipment required, including the proper settings and radiation dose controls for the imaging equipment. The patient is placed on a fluoroscopy table and positioned appropriately, depending on the type of procedure to be performed.

Description of Intra-Service Work: Preliminary fluoroscopy, including angulation of the beam source to image receptor plane, is performed in order to identify the appropriate level and approach for the initial needle placement. The skin entry site is prepped and marked, and sterile drapes are applied. Local anesthetic may be applied. During needle placement, intermittent fluoroscopy and angulation of the x-ray source and receptor are used to confirm the correct approach and the need for needle repositioning or realignment. When the needle position appears correct, radiographic contrast may be injected to confirm the proper position or tissue samples may be acquired and reviewed. If the position is not correct, additional fluoroscopy is used to guide repositioning until the proper position is achieved. Interpret images, as appropriate. Dictate report for medical record. The physician reviews, proofreads, and submits a report that describes the guidance procedure, including the final position of the needle/catheter, for the patient's medical record. Patient dose report will be retained in imaging center records and may be discussed with patient or designated caretaker at patient’s or caretaker’s request. The physician communicates the results of the procedure to the referring physician when appropriate.

Description of Post-Service Work:

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
77001	ZZZ	0.38	**RUC Time**

CPT Descriptor Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
10008	ZZZ	1.18	**RUC Time**

CPT Descriptor Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93923	XXX	0.45	**RUC Time**	440,595

CPT Descriptor 1 Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization

74220	XXX	0.60	**RUC Time**	196,573

CPT Descriptor 2 Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study

Other Reference CPT Code	Global	Work RVU	Time Source
95251	XXX	0.70	**RUC Time**

CPT Descriptor Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 22 **% of respondents:** 24.1 **%**

Number of respondents who choose 2nd Key Reference Code: 15 **% of respondents:** 16.4 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	9%	59%	18%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	68%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	64%	32%
Physical effort required	5%	64%	32%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	64%	23%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	7%	7%	60%	20%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	53%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	60%	20%
Physical effort required	7%	73%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	47%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
The Somatic Nerve Injection code family was identified on the October 2021 RUC New and Revised LOI due to the bundling of seven codes (CPT codes 64415, 64416, 64417, 64445, 64446, 64447, 64448) with imaging guidance. There are three codes which capture the imaging guidance component of the somatic nerve injection procedures.

The imaging guidance codes include the following:

- **CPT code 76942**: *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*
- **CPT code 77002**: *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)*
- **CPT code 77003**: *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)*

The American College of Radiology (ACR), American Academy of Physical Medicine and Rehabilitation (AAPM&R), American Academy of Pain Medicine (AAPM), American Society of Anesthesiologists (ASA), Spine Intervention Society (SIS), and Society of Interventional Radiology (SIR) agreed to survey CPT code 77002 for the October 2021 RUC meeting.

Survey Process
The ACR surveyed a total of 500 members (a random sample of 250 members and a separate random sample of 250 members who perform radiography, fluoroscopy, musculoskeletal, neuro imaging, neurointerventional, and interventional radiology procedures). The AAPM&R surveyed a random sample of 400 individuals, the AAPM surveyed a random sample of 500 individuals, the ASA surveyed a random sample of 496 individuals, the SIS surveyed a random sample of 250 individuals, and the SIR surveyed a random sample of 200 individuals from their respective memberships.

History of 77002 and 77003: Pre-Service Time
CPT codes 77002 and 77003 were once XXX codes, but CMS felt that the vignettes and parentheticals for the codes were consistent with that of add-on codes and requested that the societies survey them as ZZZ codes in October 2015.

In October 2015, the existing times for both 77002 and 77003 were 7 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service, so the societies recommended the current times for all 3 codes, including CPT code 77001, at the October 2015 RUC meeting. The RUC recommended reducing the pre-service time to 2 minutes instead of 7 minutes. The 2 minutes of pre-service time is based on the difference in pre-service positioning time between the epidural injection without imaging guidance (CPT code 62320) and with imaging guidance (CPT code 62321) codes. This is the primary reason that the societies were allotted pre-service time for these add-on codes.

Work RVU and Time Recommendations
The expert panel recommends maintaining the current value at 0.54 work RVU and current times of 2 minutes pre-service and 15 minutes intra-service.

Reference Service List

During the survey process of the fluoroscopic guidance codes (CPT codes 77002 and 77003), a multi-specialty Qualtrics survey was launched mistakenly using a draft version of the RSL instead of the final version.. Of the six specialties surveying this code 4 societies used an old version of the RSL and 2 societies used the final version of the RSL. All involved societies communicated this issue to AMA staff, specifically to Mike Morrow who is aware of the situation. The main differences between the two RSL are: a) the old RSL includes CPT codes 64421, 75565, and 76937 which the final RSL does not include and b) the final RSL includes CPT codes 76983 and 78835 which the old RSL does not include.

Based on the helpful input from Mike Morrow, the societies believe that this issue does not significantly impact the survey data and thus, the survey data is valid and can be used for our recommendations to the RUC for the following reasons: a) the top two KRS codes chosen by the surveyees were in both the old version and the final version of the RSL b) Two of the codes that were only in the old RSL version were not selected by the surveyees at all (CPT codes 75565 and 76937) and the other code (CPT 64421) was selected by only 5 surveyees. We do not believe this impacted the final KRS selections.

To note, CPT code 64421 is currently being reviewed by the RUC for this meeting as this code is included in this tab for the Somatic Nerve Injection code family. Therefore, CPT code 64421 would be invalid to use on this RSL.

Key Reference Services

The most commonly chosen key reference service was CPT code 77001 *(Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure))*, selected by 24% of respondents, and has identical pre-service, intra-service, and total time compared to surveyed code 77002. The majority of survey respondents (59%) felt that KRS code 77001 had identical overall intensity and complexity compared to the surveyed code. CPT code 77002 pertains to fluoroscopic guidance of a needle during a percutaneous procedure and typically may involve contrast injection or tissue sampling to aid in confirming the position. Comparatively, CPT code 77001 involves fluoroscopic guidance through an existing venous access.

The second most commonly chosen key reference service was CPT code 10008 *(Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure))*, an ultrasound guidance code that typically involves tissue sampling. This KRS code was selected by 16% of respondents and has 20 minutes of total time and a proportionally higher wRVU. The majority of the survey respondents (60%) indicated that KRS code 10008 had an identical overall intensity and complexity compared to the surveyed code.

A third key reference code was also chosen, CPT code 64484, *(Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure))*, as 16% of the survey respondents selected this code. Similar to CPT code 77002, CPT code 64484 is a fluoroscopic guidance add-on code for an additional injection performed after the base procedure, with a significantly higher IWPUT due to the intensity of positioning a needle in the spinal nerve foramen. This provides an appropriate comparison to the surveyed code, as 77002 involves a more typical needle placement within a large joint.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT

77001	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)	0.38	2	15		17	0.022	0.022
77002	**Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)**	**0.54**	**2**	**15**		**17**	**0.033**	**0.032**
64484	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)	1.00		10		10	0.100	0.100
10008	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure)	1.18		20		20	0.059	0.059

MPC Codes

Prior to 2015, the surveyed code was an XXX code and there are limited ZZZ codes on the MPC list for comparison purposes. The surveyed code is closely bracketed by two radiology XXX codes, MPC codes 93923 *(Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more, or single level study with provocative functional maneuvers)* and 74220 *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study).* MPC code 93923 has 5 minutes less intra-service time and 1 minute less total time, with a proportionally lower wRVU and nearly identical IWPUT, compared to the surveyed code.

MPC code 74220 is a radiology procedure with 5 minutes less intra-service time and greater wRVU and IWPUT compared to the surveyed code. MPC code 74220 typically involves much more repositioning of the patient during real-time examination and concurrent examination of anatomic structures following contrast administration while in comparison, the surveyed code is a focused on a single area of anatomy.

Lastly, the surveyed code is compared to MPC code 95251, which has identical intra-service time and slightly more total time, resulting in a similar IWPUT and proportionally greater wRVU compared to the surveyed code.

CPT Code	Descriptor	Work RVU	Global Period	Pre	Intra	Post	Total Time	IWPUT	WPUT
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more, or single level study with provocative functional maneuvers	0.45	XXX	3	10	3	16	0.032	0.028
77002	**Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)**	**0.54**	**ZZZ**	**2**	**15**		**17**	**0.033**	**0.032**
74220	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	0.60	XXX	3	10	3	16	0.047	0.038
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	XXX	2	15	3	20	0.040	0.035

Summary

In summary, our expert panel recommends maintaining the current value at 0.54 work RVU and survey median times of 2 minutes pre-service positioning and 15 minutes intra-service. The recommended value compares favorably with the key reference services and MPC codes, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77002

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Anesthesiology How often? Commonly

Specialty Pain Medicine How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1,048,554
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service described by CPT code 77002 is estimated to be provided 1,048,554 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 241239 Percentage 23.00 %

Specialty Anesthesiology Frequency 83742 Percentage 7.98 %

Specialty Pain Medicine Frequency 108250 Percentage 10.32 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 349,518 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 77002 is estimated to be provided 349,518 times in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 80413 Percentage 23.00 %

Specialty Anesthesiology Frequency 27914 Percentage 7.98 %

Specialty Pain Medicine Frequency 36083 Percentage 10.32 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77002

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Fluoroscopic guidance is used for needle placement during a separately reported underlying procedure involving the spine (eg, biopsy, aspiration, injection).

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the patient's history and prior imaging studies to become familiar with the patient's spine anatomy (e.g., numbering of levels, anatomic variants, prior surgery, pathology). Physician obtains informed consent from patient or patient’s proxy. The physician dresses in radiation attire and ensures others in the room have radiation attire. The physician instructs the radiologic technologists in the imaging equipment required, including the proper settings and radiation dose controls for the imaging equipment. The patient is placed on a fluoroscopy table in the prone, decubitus, or prone oblique position, depending on the type of injection to be performed.

Description of Intra-Service Work: Preliminary fluoroscopy is performed, including angulation of the beam source to image receptor plane to identify the appropriate level and approach for initial needle placement. The skin entry site is prepped and marked, and sterile drapes are applied. Local anesthetic may be applied. During needle/catheter placement, intermittent fluoroscopy and angulation of the x-ray source and receptor are used to confirm the correct approach and need for needle repositioning or realignment. When the needle position appears correct, radiographic contrast is injected to confirm proper position. If the position is not correct, additional fluoroscopy during repositioning is provided until proper position is achieved. If a catheter is to be placed, additional fluoroscopic guidance is provided during and after catheter positioning to confirm proper positioning and perform additional contrast injections, as necessary. Interpret images, as appropriate. Dictate report for medical record. The physician reviews, proofreads, and submits a report that describes the guidance procedure, including the final position of the needle/catheter, for the patient's medical record. Patient dose report will be retained in imaging center records and may be discussed with patient or designated caretaker at patient’s or caretaker’s request. The physician communicates the results of the procedure to the referring physician when appropriate.

Description of Post-Service Work:

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	83%	13%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	67%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	77%	17%
Physical effort required	0%	87%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	70%	20%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	5%	9%	55%	23%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	64%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	77%	9%
Physical effort required	5%	77%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	55%	41%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
The Somatic Nerve Injection code family was identified on the October 2021 RUC New and Revised LOI due to the bundling of seven codes (CPT codes 64415, 64416, 64417, 64445, 64446, 64447, 64448) with imaging guidance. There are three codes which capture the imaging guidance component of the somatic nerve injection procedures.

The imaging guidance codes include the following:

- **CPT code 76942**: *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation*
- **CPT code 77002**: *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)*
- **CPT code 77003**: *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)*

The American College of Radiology (ACR), American Academy of Pain Medicine (AAPM), American Society of Anesthesiologists (ASA), Spine Intervention Society (SIS), and Society of Interventional Radiology (SIR) agreed to survey CPT code 77003 for the October 2021 RUC meeting.

Survey Process
The ACR surveyed a total of 500 members (a random sample of 250 members and a separate random sample of 250 members who perform radiography, fluoroscopy, musculoskeletal, neuro imaging, neurointerventional, and interventional radiology procedures). The AAPM surveyed a random sample of 500 individuals, the ASA surveyed a random sample of 496 individuals, the SIS surveyed a random sample of 250 individuals, and the SIR surveyed a random sample of 200 individuals from their respective memberships.

History of 77002 and 77003: Pre-Service Time
CPT codes 77002 and 77003 were once XXX codes, but CMS felt that the vignettes and parentheticals for the codes were consistent with that of add-on codes and requested that the societies survey them as ZZZ codes in October 2015.

In October 2015, the existing times for both 77002 and 77003 were 7 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service in 2015, so the societies recommended the current times for all 3 codes, including CPT code 77001, at the October 2015 meeting. The RUC recommended reducing the pre-service time to 2 minutes instead of 7 minutes. The 2 minutes of pre-service time is based on the difference in pre-service positioning time between the epidural injection without imaging guidance (CPT code 62320) and with imaging guidance (CPT code 62321) codes. This is the primary reason that the societies were allotted pre-service time for these add-on codes.

Work RVU and Time Recommendations
The expert panel recommends maintaining the current value at 0.60 work RVU and current times of 2 minutes pre-service and 15 minutes intra-service.

Reference Service List
During the survey process of the fluoroscopic guidance codes (CPT codes 77002 and 77003), a multi-specialty Qualtrics survey was launched mistakenly using a draft version of the RSL instead of the final version. Of the five specialties surveying this code, 4 societies used an old version of the RSL and 2 societies used the final version of the RSL. All involved societies communicated this issue to AMA staff, specifically to Mike Morrow who is aware of the situation. The main differences between the two RSL are: a) the old RSL includes CPT codes 64421, 75565, and 76937 which the final RSL does not include and b) the final RSL includes CPT codes 76983 and 78835 which the old RSL does not include.

Based on the helpful input from Mike Morrow, the societies believe that this issue does not significantly impact the survey data and thus, the survey data is valid and can be used for the following reasons: a) the top two KRS codes chosen by the surveyees were in both the old version and the final version of the RSL b) Two of the codes that were only in the old version were not selected by the surveyees at all (CPT codes 75565 and 76937) and the other code (CPT 64421) was selected by only 3 surveyees. We do not believe this impacted the final KRS selections.

To note, CPT code 64421 is currently being reviewed by the RUC for this meeting as this code is included in this tab for the Somatic Nerve Injection code family. Therefore, CPT code 64421 would be invalid to use on this RSL.

Key Reference Services

The most commonly chosen key reference service code, 64484 *(Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure))* has 5 minutes less intra-service time and a higher IWPUT compared to the surveyed code, 77003. KRS code 64484 was chosen by 37% of survey respondents, with 83% of this subset indicating that the KRS code had identical overall intensity and complexity compared to the surveyed code.

The second most commonly chosen key reference code was CPT code 64491 *(Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure))*, which has identical intra-service time and a higher IWPUT compared to the surveyed code. KRS code 64491 was chosen by 27% of respondents, with 55% of this subset indicating that the code had identical overall intensity and complexity compared to the survey code.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
77003	**Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)**	**0.60**	**2**	**15**		**17**	**0.037**	**0.035**
64484	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)	1.00		10		10	0.100	0.100
64491	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)	1.16		15		15	0.077	0.077

MPC Codes

Prior to 2015, CPT code 77003 was an XXX code and there are limited ZZZ codes on the MPC list for comparison purposes. In comparison to MPC code 74220 *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study))*, the

CPT code 77003 has an identical wRVU, and 1 minute more of total time. The lower IWPUT of the surveyed code is proportional due to the differences intra-service time between the two codes.

Additionally, the surveyed code also compares well to MPC code 95251 *(Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report))*, which has an identical intra-service time and slightly more total time, resulting in a similar IWPUT and proportionally greater wRVU, compared to 77003.

Lastly, the surveyed code compares favorably to MPC code 99407 *(Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes))*, which has identical intra-service time and 2 minutes less of total time, compared to the surveyed code, resulting in a similar IWPUT and proportionally lower wRVU.

CPT Code	Descriptor	Work RVU	Global Period	Pre	Intra	Post	Total Time	IWPUT	WPUT
99407	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	0.50	XXX		15		15	0.033	
77003	**Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)**	**0.60**	**ZZZ**	**2**	**15**		**17**	**0.037**	**0.035**
74220	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	0.60	XXX	3	10	3	16	0.047	
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	XXX	2	15	3	20	0.040	

Summary

In summary, our expert panel recommends maintaining the current value at 0.60 work RVU and survey median times of 2 minutes pre-service positioning and 15 minutes intra-service. The recommended value compares favorably with the key reference services and MPC codes, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77003

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty Anesthesiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 22,020
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service described by CPT code 77003 is estimated to be provided 22,020 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 15006 Percentage 68.14 %

Specialty Interventional Radiology Frequency 1699 Percentage 7.71 %

Specialty Anesthesiology Frequency 940 Percentage 4.26 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,340
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 77003 is estimated to be provided 7,340 times in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 5002 Percentage 68.14 %

Specialty Interventional Radiology Frequency 566 Percentage 7.71 %

Specialty Anesthesiology Frequency 313 Percentage 4.26 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77003

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SPECIALTY SOCIETY(IES): ASA, ASIPP
PRESENTER(S): Richard Rosenquist, MD; Gordon Morewood, MD; Michael Lubrano, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: October 2021

CPT Code	Long Descriptor	Global Period
64415	Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed	000
64417	Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed	000
64445	Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed	000
64447	Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64415	A 66-year-old female will undergo surgery on her shoulder and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A brachial plexus block with ultrasound guidance is performed to relieve her pain and improve her function.
64417	A 68-year-old male will undergo surgery on his arm and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. An axillary nerve block with ultrasound guidance is performed to relieve his pain and improve his function.
64445	A 25-year-old female will undergo surgery for a right trimalleolar fracture open reduction and fixation and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A sciatic nerve block with ultrasound guidance is performed to relieve her pain and improve her function.
64447	A 30-year-old male will undergo surgery for a right anterior cruciate ligament repair and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A femoral nerve block with ultrasound guidance is performed to manage post-operative pain and improve his function.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened an expert panel of advisors from the presenting specialties via telephone to discuss recommendations for practice expense for codes 64415, 64417, 64445, and 64447. The panel reviewed existing inputs for these codes and considered any necessary modifications.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The expert panel used the existing inputs for codes 64415, 64417, 64445, 64447 and 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device*), as reference for the new recommendations.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

3. Is this code(s) typically reported with an E/M service?

No

4. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment, and supplies, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

For codes 64415, 64417, 64445, 64447 the clinical staff coordinates pre-surgery services (including test results; schedules space and equipment in facility and completes pre-procedure phone calls and prescriptions.

   b. Service period (includes pre, intra and post):

N/A

   c. Post-service period:

N/A

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

No

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

16. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition to those revisions, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 64415, 64417, 64445, 64447

SPECIALTY SOCIETY(IES): ASA, ASIPP

PRESENTER(S): Richard Rosenquist, MD; Gordon Morewood, MD; Michael Lubrano, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: October 2021

CPT Code	Long Descriptor	Global Period
64415	Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed	000
64417	Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed	000
64445	Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed	000
64447	Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed	000

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
64415	A 66-year-old female will undergo surgery on her shoulder and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A brachial plexus block with ultrasound guidance is performed to relieve her pain and improve her function.
64417	A 68-year-old male will undergo surgery on his arm and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. An axillary nerve block with ultrasound guidance is performed to relieve his pain and improve his function.
64445	A 25-year-old female will undergo surgery for a right trimalleolar fracture open reduction and fixation and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A sciatic nerve block with ultrasound guidance is performed to relieve her pain and improve her function.
64447	A 30-year-old male will undergo surgery for a right anterior cruciate ligament repair and the surgeon consults the anesthesiologist for opioid sparing postoperative pain management. A femoral nerve block with ultrasound guidance is performed to manage post-operative pain and improve his function.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened an expert panel of advisors from the presenting specialties via telephone to discuss recommendations for practice expense for codes 64415, 64417, 64445, and 64447. The panel reviewed existing inputs for these codes and considered any necessary modifications.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

NONFACILITY DIRECT PE INPUTS
CPT CODE(S): 64415, 64417, 64445, 64447
SPECIALTY SOCIETY(IES): ASA, ASIPP
PRESENTER(S): Richard Rosenquist, MD; Gordon Morewood, MD; Michael Lubrano, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The expert panel used the existing inputs for codes 64415, 64417, 64445, 64447 and 76942 (*Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device*), as reference for the new recommendations.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   No

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

Code	NF Dominant Provider	% Dominant Provider in NF	All Sites
64415	Neurology	36.5%	Anesthesiology is 87.7%
64417	Neurology	46.1%	Anesthesiology is 75.2%
64445	Family Medicine	36%	Anesthesiology is 37.1%
64447	Family Medicine	57%	Anesthesiology is 75.9%

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment, and supplies, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

For codes 64415, 64417, 64445 and 64447 we are requesting 5 minutes. Typically the following vitals are taken: Heart rate , blood pressure , pulse ox, temp and EKG baseline or rhythm strip

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period: 64415, 64417, 64445 and 64447

During the pre-service period the clinical staff completes pre-procedure phone calls and prescriptions and confirms availability of prior imaging studies.

    b. Service period (includes pre, intra and post):

Pre Time During the pre-time service period the clinical staff greets patient, provides gowning and ensures appropriate medical records are available; obtains vital signs; provides education/obtains consent; prepares room, equipment and supplies; and prepares room setup, initial positioning and monitors patient (standard times are requested) Intra Time Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure. (100% of physician time) Post Time During the post-time the clinical staff monitors the patient, cleans the room, checks dressings, QCs images in PACs, reviews examination with physician, scans exam documents into PACs, and reviews home care instructions and coordinates any prescriptions (standard times are requested)

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The clinical staff time is 100% linked to the physician work time for the injection and imaging guided portion of the procedure.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? **Yes** or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    SA041 – pack, basic injection
    SA048 – minimum multi-specialty visit

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, basic injection	**SA041**	**pack**		**11.365**
applicator, sponge-tipped		item	3	
bandage, strip 0.75in x 3in		item	1	
cap, surgical		item	1	

drape, sterile barrier 16in x 29in		item	1	
drape, sterile, for Mayo stand		item	1	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	2	
gown, staff, impervious		item	1	
gown, surgical, sterile		item	1	
lidocaine 1%-2% inj (Xylocaine)		ml	5	
mask, surgical		item	1	
needle, 18-27g		item	2	
povidone soln (Betadine)		ml	10	
syringe 3ml		item	1	
underpad 2ftx3ft (Chux)		item	1	

DESCRIPTION	**Code**	**Unit**	**Item Qty**	**Unit price**
pack, minimum multi-specialty visit	**SA048**	**pack**		**4.0507**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

- EQ184 – (nerve stimulator (eg, for nerve block)

- 64445 only
- Formula: Default

- EQ011 – (ECG, 3-channel (with SpO2, NIBP, temp, resp))
  - Formula: Other (During the procedure and during monitoring time)
- EQ250 – (ultrasound unit, portable)
  - Formula: Default
- ED050 - Technologist PACS workstation
  - Formula: PAC
- EF023 – Table, exam
  - Formula: Default
- EF015 – Mayo stand
  - Formula: Default

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64400	A patient with a normal neurologic examination reports of headaches that include pain in one or more branches of the trigeminal nerve (ophthalmic, maxillary, or mandibular). An injection of local anesthetic with or without steroid is performed for nerve blockade.
64405	A patient with frequent headaches and a normal neurological examination has tenderness over the left occipital notch, where palpation triggers pain. For both diagnostic and therapeutic purposes, an injection of local anesthetic and anti-inflammatory is recommended.
64408	A 55-year-old female presents with a neurogenic cough. Injection of an anesthetic agent to the vagus nerve is performed.
64420	A 48-year-old female has a two-year history of rib pain that is interfering with her ability to complete ADLs. She has had poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of intercostal nerve block is scheduled to relieve her pain and improve her function.
64425	A 48-year-old male has a three-year history of pain in his groin following an open inguinal hernia repair that is interfering with his ability to complete ADLs. He has had poor control of his pain despite multiple medication trials and PT. Due to persistent, debilitating pain, a trial of ilioinguinal or iliohypograstric nerve block is scheduled to relieve pain and improve function.
64430	A 48-year-old female has a two-year history of pudendal neuralgia that is interfering with her ability to complete ADLs. She has poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of pudendal nerve block is scheduled to relieve her pain and improve her function.

FACILITY DIRECT PE INPUTS **CPT CODE(S): 64400, 64405, 64408, 64420, 64425, 64430, 64435, 64449, 64450, 64451, 64454, ___**
SPECIALTY SOCIETY(IES):__AAN, AAPM, AAPM&R, APMA, ASA, NANS, SIS_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

64435	A 34-year-old female with an intrauterine device (IUD) presented for IUD removal. The IUD string was not identified on examination, and initial probing of the cervical canal was not tolerated by the patient. Cervical dilation under cervical anesthesia is required for retrieval.
64449	A 62-year-old female undergoes a left total knee replacement (code 27447) under general anesthesia. The surgeon requests a block with a continuous infusion to manage postoperative pain and facilitate rehabilitation. In order to provide postoperative pain control and increased mobility in her knee, a continuous lumbar plexus block is performed.
64450	A 52-year-old female complains of chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and a steroid.
64451	A 68-year-old male has a five-year history of persistent right sacroiliac pain that is interfering with his ability to complete ADLs. He has had poor control of his pain despite multiple medication trials and PT. Due to his persistent, debilitating pain, a trial of diagnostic nerve blocks to the sacroiliac joint is scheduled to relieve his pain and improve his function.
64454	A 72-year-old female has a five-year history of persistent right knee pain that is interfering with her ability to complete ADLs. She has had poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of genicular nerve blocks is schedule to relieve her pain and improve her function.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Our expert panel consisted of advisors from specialties presenting this tab. The specialty societies reviewed current PE inputs for the codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):
   Existing codes were used as reference codes.

3. Is this code(s) typically reported with an E/M service?
   Codes 64435 and 64455 are reported with an E/M service more than 50% of the time.

4. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment, and supplies, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:
   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and

has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Codes 64400, 64408, 64420, 64425, 64430, 64435, 64449, 64450, 64451 and 64454 have pre-service time in the facility setting. In the facility, this includes coordinating pre-surgery services as well as scheduling space and necessary equipment. Additionally, during this time, staff explains where to come for the appointment, checks medications, runs through list of medical conditions, makes sure the patient is off anti-coagulation drugs, confirms if patient uses BP medications, walks the patient through the procedure, confirms whether a driver is available for a ride home and answers patient questions. For several codes, there is also time required to confirm availability of prior images or studies.

   b. Service period (includes pre, intra and post):

   c. Post-service period:

Codes 64400, 64408, 64420, 64425, 64430, 64435, 64449, 64450, and 64454 have post service time in the facility setting. This includes three minutes time for conducting patient communications following the service.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: October 2021

CPT Code	Long Descriptor	Global Period
64400	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular	000
64405	Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve	000
64408	Injection(s), anesthetic agent(s) and/or steroid; vagus nerve	000
64418	Injection(s), anesthetic agent(s) and/or steroid; suprascapular nerve	000
64420	Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level	000
64421	Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, each additional level (List separately in addition to code for primary procedures)	ZZZ
64425	Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves	000
64430	Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve	
64435	Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve	000
64450	Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch	000
64451	Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)	000
64454	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches, including imaging guidance, when performed	000
64455	Injection(s), anesthetic agent(s) and/or steroid; plantar common digital nerve(s) (eg, Morton's neuroma)	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64400	A patient with a normal neurologic examination reports of headaches that include pain in one or more branches of the trigeminal nerve (ophthalmic, maxillary, or mandibular). An injection of local anesthetic with or without steroid is performed for nerve blockade.
64405	A patient with frequent headaches and a normal neurological examination has tenderness over the left occipital notch, where palpation triggers pain. For both diagnostic and therapeutic purposes, an injection of local anesthetic and anti-inflammatory is recommended.
64408	A 55-year-old female presents with a neurogenic cough. Injection of an anesthetic agent to the vagus nerve is performed.
64418	A 52-year-old woman with a frozen shoulder is unable to tolerate physical therapy due to pain. She is referred for a suprascapular nerve block to provide pain relief so that she can undergo physical therapy.
64420	A 48-year-old female has a two-year history of rib pain that is interfering with her ability to complete ADLs. She has had poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of intercostal nerve block is scheduled to relieve her pain and improve her function.
64421	A 48-year-old female has a two-year history of rib pain that is interfering with her ability to complete ADLs. She has had poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of intercostal nerve blocks involving multiple intercostal spaces is scheduled to relieve her pain and improve her function.

NONFACILITY DIRECT PE INPUTS **CPT CODE(S):_64400, 64405, 64408, 64418, 64420, 64421, 64425, 64430, 64435, 64450, 64451, 64454, 64455_____**
SPECIALTY SOCIETY(IES):_ AAN, AAPM, AAPM&R, APMA, ASA, NANS, SIS _____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

64425	A 48-year-old male has a three-year history of pain in his groin following an open inguinal hernia repair that is interfering with his ability to complete ADLs. He has had poor control of his pain despite multiple medication trials and PT. Due to persistent, debilitating pain, a trial of ilioinguinal or iliohypograstric nerve block is scheduled to relieve pain and improve function.
64430	A 48-year-old female has a two-year history of pudendal neuralgia that is interfering with her ability to complete ADLs. She has poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of pudendal nerve block is scheduled to relieve her pain and improve her function.
64435	A 34-year-old female with an intrauterine device (IUD) presented for IUD removal. The IUD string was not identified on examination, and initial probing of the cervical canal was not tolerated by the patient. Cervical dilation under cervical anesthesia is required for retrieval.
64450	A 52-year-old female complains of chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and a steroid.
64451	A 68-year-old male has a five-year history of persistent right sacroiliac pain that is interfering with his ability to complete ADLs. He has had poor control of his pain despite multiple medication trials and PT. Due to his persistent, debilitating pain, a trial of diagnostic nerve blocks to the sacroiliac joint is scheduled to relieve his pain and improve his function.
64454	A 72-year-old female has a five-year history of persistent right knee pain that is interfering with her ability to complete ADLs. She has had poor control of her pain despite multiple medication trials and PT. Due to her persistent, debilitating pain, a trial of genicular nerve blocks is schedule to relieve her pain and improve her function.
64455	A 46-year-old female presents with a painful neuroma in the third intermetatarsal space of her right foot. The decision is made to proceed with a therapeutic intermetatarsal neuroma injection.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our expert panel consisted of advisors from specialties presenting this tab. The specialty societies reviewed current PE inputs for the codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   Existing codes were used as reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   Codes 64435 and 64455 are reported with an E/M service more than 50% of the time.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different than for the global?
(Please see the *Billed Together* tab in the RUC Database)

Non-Facility Dominant Specialties

64400	Neurology (51.9%), Nurse Practitioner (10%), Physicians Assistant (8.1%)
64405	Neurology (45.6%), Pain Management (10.1%), Physical Medicine & Rehabilitation (8.1%)
64408	Otolaryngology (94.4%)
64418	Anesthesiology (19.6%), Pain Management (17.4%), Physical Medicine & Rehabilitation (15.6%)
64420	Physical Medicine & Rehabilitation (22.2%), Pain Management (15.6%), Anesthesiology (14.6%)
64421	Pain Management (22.1%), Interventional Pain Management (19.6%), Anesthesiology (16.3%), Physical Medicine & Rehabilitation (16.3%)
64425	Physical Medicine & Rehabilitation (26.2%), Anesthesiology (14.9%), Pain Management (13.8%)
64430	Obstetcis/Gynecology (37%), Urology (13.2%), Anesthesiology (10.8%)
64435	Obstetrics/Gynecology (77.3%), Anesthesiology (13.6%)
64449	Neurology (29.6%), Interventional Pain Management (24.4%), Family Medicine (18.9%)
64450	Podiatry (17.8%), Family Medicine (16.9%), Nurse Practitioner (14.2%)
64451	No data
64454	No data
64455	Podiatry (93.9%)

Global Dominant Specialties

64400	Neurology (43.4%), Nurse Practitioner (11.8%), Anesthesiology (9.2%)
64405	Neurology (40.4%), Pain Management (11.5%), Anesthesiology (11.4%)
64408	Otolaryngology (94.8%)
64418	Anesthesiology (23.4%), Pain Management (17.9%), Physical Medicine & Rehabilitation (14.4%)
64420	Anesthesiology (43.1%), Pain Management (12.3%), Physical Medicine & Rehabilitation (12.2%)
64421	Anesthesiology (31.6%), Pain Management (20.6%), Interventional Pain Management (18.4%)
64425	Anesthesiology (32.6%), Physical Medicine & Rehabilitation (16.1%), Pain Management (14%)
64430	Obstetrics/Gynecology (24.8%), Anesthesiology (18.5%), Pain Management (13.9%)
64435	Obstetrics/Gynecology (60.5%), Anesthesiology (26.3%)
64449	Anesthesiology (81.9%),
64450	Anesthesiology (31.7%), Podiatry (10.6%), Pain Management (10.5%)
64451	No data

64454	No data
64455	Podiatry (93.3%)

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment, and supplies, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre-service time is recommended for five codes as noted below in 10.a.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Codes in this family primarily include 5 minutes for obtaining vital signs with the exception of code 64408 which has an input of 3 (note this code has a different dominant specialty than all other codes in this tab).

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Codes 64400, 64420, 64425, 64451, 64454 have pre service time allocated in the non-facility setting. During this time, staff explains where to come for the appointment, checks medications, runs through list of medical conditions, makes sure the patient is off anti-coagulation drugs, confirms if patient uses BP medications, walks the patient through the procedure, confirms whether a driver is

available for a ride home and answers patient questions. For codes 64451 and 64454,, there is also time required to confirm availability of prior images or studies.

b. Service period (includes pre, intra and post):

Codes include time for pre-service of the service period including greeting the patient, providing gowning, ensuring medical records are available, obtaining vital signs, providing education, preparing the room, confirming the order, and set up of the patient. Additionally, time is allotted for assisting the physician with the procedure both for the RN/LPN/MTA and for the radiologic technician for codes 64451 and 64454. Monitoring and cleaning time is also include in post service of the service period.

c. Post-service period:

Most codes in this tab include 3 minutes post-service time for communicating with the patient following the procedure.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes – recommending SA041 and SA048 for various codes as listed below in question 19.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

SA041 Pack, basic injection – unit price 4.0507 (codes 64400, 64420, 64425, 64450)

Description	Unit	Item Quantity
paper, exam table	foot	7
gloves, non-sterile	pair	2
gown, patient	item	1
pillow case	item	1
cover, thermometer probe	item	1

SA048 Pack, minimum multi-specialty visit – unit price 11.365 (codes 64400, 64408, 64420, 64425, 64430, 64435, 64450)

Description	Unit	Item Quantity
applicator, sponge-tipped	item	3
bandage, strip 0.75in x 3in	item	1
cap, surgical	item	1
drape, sterile barrier 16in x 29in	item	1
drape, sterile, for Mayo stand	item	1
gauze, sterile 4in x 4in	item	2
gloves, sterile	pair	2
gown, staff, impervious	item	1
gown, surgical, sterile	item	1
lidocaine 1%-2% inj (Xylocaine)	ml	5
mask, surgical	item	1
needle, 18-27g	item	2
povidone soln (Betadine)	ml	10
syringe 3ml	item	1
underpad 2ftx3ft (Chux)	item	1

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF023	Table, exam	Default
EF015	Mayo stand	Default
EQ011	ECG, 3-channel (with SP02, NIBP, temp, resp)	Other Formula – this technology is used in several of the codes both during the procedure and during monitoring time.
EF008	Chair with headrest, exam, reclining	Default
EQ168	Light, exam	Default
EF031	Table, power	Default
EL018	Room, mobile c-ARM	Default
ED050	Technologist PACS workstation	PACS
EF027	Table, equipment, mobile	PACS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

25. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 77002, 77003**

SPECIALTY SOCIETY(IES): ACR, SIR, SIS, AAPM, AAPM&R, ASA

PRESENTER(S): Lauren Golding, MD; Andy Moriarity, MD; Richard Rosenquist, MD; Neal Cohen, MD; Gordon Morewood, MD; Gregory Polston, MD; Wesley Ibazebo, MD; David Reece, DO; Carlo Milani, MD; Curtis Anderson, MD; Minhaj Khaja, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: October 2021

CPT Code	Long Descriptor	Global Period
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)	ZZZ
77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
77002	A 65-year-old male with hip pain and suspected joint effusion is referred for joint aspiration. Fluoroscopic guidance is used to advance a needle into the joint space, and the joint fluid is aspirated (needle aspiration is reported separately).
77003	Fluoroscopic guidance is used for needle placement during a separately reported underlying procedure involving the spine (eg, biopsy, aspiration, injection).

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology, Society of Interventional Radiology, Spine Intervention Society, American Academy of Pain Medicine, American Academy of Physical Medicine & Rehabilitation, and American Society of Anesthesiologists convened a panel that included a number of experts familiar with this service to evaluate the direct practice expense inputs for two fluoroscopic guidance codes related to needle placement and localization of needle or catheter tip.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   For our reference codes, the societies are providing the current inputs for CPT codes 77002 and 77003.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

77002
CPT code 77002 is typically reported with an E/M service at 15.2%.
CPT code 77002 is typically reported with an E/M service in the non-facility at 20.9%.

77003
CPT code 77003 is typically reported with an E/M service at 2.2%.
CPT code 77003 is typically reported with an E/M service in the non-facility at 14.5%.

4. What specialty is the dominant provider in the nonfacility?
What percent of the time does the dominant provider provide the service(s) in the nonfacility?
Is the dominant provider in the nonfacility different than for the global?
(Please see the *Billed Together* tab in the RUC Database)

77002
According to the RUC database in the non-facility (Global & 26), Physical Medicine and Rehabilitation is the dominant specialty at 16%. Diagnostic Radiology is the dominant specialty for the global (all sites) at 23%.

77003
According to the RUC database in the non-facility (Global & 26), Diagnostic Radiology is the dominant specialty at 26.3%. Diagnostic Radiology is also the dominant specialty for the global (all sites) at 68.2%.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment, and supplies, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

The specialties believe that the existing PE clinical staff and supply inputs for CPT codes 77002 and 77003 are appropriate and remain accurate. The increase over the aggregate current cost is due to the addition of the Professional PACS workstation (ED053). We believe the omission of the Professional PACS workstation from previous review was an oversight, and we have included the appropriate minutes in the PE spreadsheet.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are recommending to maintain 2 minutes for *Review patient clinical extant information and questionnaire* (CA007) for both 77002 and 77003 when the RUC standard is 1 minute. Two minutes is required for discussing radiation safety, risk of pregnancy and contrast allergy/renal insufficiency prior to any fluoroscopic guided procedure.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

77002 & 77003 The clinical staff will ensure that copies of imaging and imaging reports are available for physician review prior to the procedure. In addition, the staff will discuss possibility of patient being pregnant with the patient and offer POC pregnancy test, if necessary. In addition, any prior contrast allergic reactions will be discussed with patient.

    b. Service period (includes pre, intra and post):

77002 & 77003 The clinical staff will ensure that all equipment is available for procedure and will position table and equipment appropriately for procedure. Subsequently, the patient will be brought to the room and positioned appropriately on the table. IV will be started as needed. During the procedure, the radiologic technologist will assist in the imaging portion of the procedure. After completion of the procedure the staff will clean the table and imaging equipment and ensure transfer of images to PACS as well as transfer of any requisition or other paperwork into PACS. Clinical staff will confirm the adequacy of images and data with the physician.

    c. Post-service period:

N/A.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

77002 & 77003
The clinical staff time is 100% linked to the physician work time for the imaging guided portion of the procedure. The staff member is operating imaging equipment, storing images, and acting as a non-sterile circulating staff member in the room.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):
N/A.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
N/A.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:
N/A.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
N/A.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A.

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

- **Technologist PACS workstation (ED050)** = PACS formula
- **Professional PACS workstation (ED053) =** Sum of half of physician pre-time and full physician intra-service time
- **Room, radiographic-fluoroscopic (EL014)** = Highly technical formula

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A.

ADDITIONAL INFORMATION

25. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 76942**
SPECIALTY SOCIETY(IES): ACR, SIR, SIS, AAPM&R
PRESENTER(S): Lauren Golding, MD; Andy Moriarity, MD; David Reece, DO; Carlo Milani, MD; Wesley Ibazebo, MD; Curtis Anderson, MD; Minhaj Khaja, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: October 2021

CPT Code	Long Descriptor	Global Period
76942	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
76942	Ultrasonic guidance is utilized for needle placement during a separately reported underlying procedure (eg, biopsy, aspiration, injection).

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology, Society of Interventional Radiology, Spine Intervention Society, and American Academy of Physical Medicine & Rehabilitation convened a panel that included a number of experts familiar with this service to evaluate the direct practice expense inputs for ultrasonic guidance for needle placement.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   For our reference code, the societies are providing the current inputs for CPT code 76942.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   CPT code 76942 is typically reported with an E/M service at 17.3%.
   CPT code 76942 is typically reported with an E/M service in the non-facility at 45.5%.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

   According to the RUC database in the non-facility (Global & 26), Urology is the dominant specialty at 12.6%. Anesthesiology is the dominant specialty for the global (all sites) at 44.4%.

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment, and supplies, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The specialties believe that the existing PE clinical staff, supply, and equipment inputs for CPT code 76942 are appropriate and remain accurate. The proposed increase over the aggregate current cost is simply due to the updated calculation of equipment time for the Technologist PACS workstation (ED050). In October 2017, CMS previously assigned 15 minutes for the Technologist PACS workstation for CPT code 76942. However, the societies have updated these minutes based on the PACS formula, thus resulting in 27 minutes for ED050, which the societies believe to be appropriate.

CLINICAL STAFF ACTIVITIES

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

The clinical staff will ensure that copies of imaging and imaging reports are available for physician review prior to the procedure.

    b. Service period (includes pre, intra and post):

The clinical staff will ensure that all equipment is available for procedure and will position table and equipment appropriately for procedure. Subsequently, the patient will be brought to the room and positioned appropriately on the table. IV will be started as needed. During the procedure, the clinical staff will assist in the imaging portion of the procedure by adjusting ultrasound imaging parameters under physician direction. After completion of the procedure, the staff will clean the table and imaging equipment, and ensure transfer of images to PACS as well as transfer of any requisition or other paperwork into PACS. Clinical staff will confirm the adequacy of images and data with the physician.

    c. Post-service period:

N/A.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly*

related to physician work time or *Perform procedure/service---NOT directly related to physician work time:*

During the intra-service period, the clinical staff assists the physician in the procedure as a circulator, adjusts and operates the ultrasound equipment, monitors and tends to the patient and works with any additional scrubbed in staff (depending on the base procedure) in hand off of biopsy samples or other non-sterile aspects of the procedure.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/A.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A.

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A.

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

- **Technologist PACS workstation (ED050)** = PACS formula
- **Professional PACS workstation (ED053)** = Sum of half of pre-service physician time and full intra-service physician time
- **Ultrasound unit, portable (EQ250)** = Highly technical formula

September 9, 2021

Ezequiel Silva III, MD
Chair, RVS Update Committee (RUC)
American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, Illinois 60611

Dear Chairperson Ezequiel Silva,

CPT® codes 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve*) and 64447 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve*) have been surveyed by the American Society of Anesthesiologists (ASA) and the American Society of Interventional Pain Physicians (ASIPP) for the October 2021 RUC meeting. They are part of Tab 5.

The RUC database indicates that, in the non-facility setting family physicians are the dominant specialty, reporting at 36 percent and 57 percent respectively. As a result, RUC staff directed the American Academy of Family Physicians (AAFP) to review the practice expense (PE) recommendations prepared by ASA and ASIPP prior to their submission.

The specialties were confused by the apparent reporting of these services by family physicians since these are not procedures that would typically be provided by non-anesthesiologists. Upon further research, the specialties have determined that the family medicine non-facility billings are likely a result of inappropriate reporting.

The specialties analyzed the public 2019 Physician Supplier Procedure Summary (PSPS) file and found that Fort Worth Texas is responsible for 64% of all family medicine claims for CPT 64445, and 89% of all family medicine claims for 64447. The large concentration of family medicine non-facility claims in one locality area suggests these family medicine claims are likely inappropriately reported.

Based on these findings, the societies believe there is no need for the AAFP to review the PE recommendations. As such the PE recommendations were not reviewed by the AAFP.

Sincerely,

Megan Adamson, MD,
AAFP RUC Advisor

Richard Rosenquist, MD
ASA RUC Advisor

Michael Lubrano, MD
ASIPP RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS 000-Day Global Typically Reported with an E/M

April 2017

Injection – Digital Nerves

In the Final Rule for 2017, CMS finalized the list of 000-day global services reported with an Evaluation and Management (E/M) service 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000. CPT code 64455 was identified on this list.

64455 ***Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)***
The RUC reviewed the survey results from 205 orthopaedic surgeons, foot and ankle surgeons and podiatrists and determined that the current value of 0.75, which was also the survey 25th percentile and median, appropriately accounts for the work required to perform this service. The specialty societies recommended pre-time package 6, but reduced the package evaluation time from 17 minutes to 5 minutes to account for overlap in time with an E/M reported on the same day. The RUC carefully examined potential overlap with E/M services included in CPT code 64455 and recommends 5 minutes evaluation time, 1 minute positioning time, 5 minutes scrub/dress/wait time, 5 minutes of intra-service time and 5 minutes of post-service time. The five minutes of evaluation time includes time to obtain consent after discussion of possible complications and preparing for the procedure which includes confirming availability of necessary supplies and instruments and preparation of syringes; one with local anesthetic and one with mixed anesthetic and steroid. The one minute for positioning includes both positioning the patient for the injection and confirming the injection site. The five minutes for scrub/dress/wait time accounts for prepping the injection site, injecting the local anesthetic and waiting for anesthetic effect.

The RUC compared CPT code 64455 to the top two key reference services 64450 *Injection, anesthetic agent; other peripheral nerve or branch* (work RVU = 0.75) and 20550 *Injection(s); single tendon sheath, or ligament, aponeurosis (eg, plantar "fascia")* (work RVU = 0.75) and agreed that all three injections would require the same physician work and time justifying maintaining the current value. For additional support the RUC referenced MPC codes 67820 *Correction of trichiasis; epilation, by forceps only* (work RVU = 0.71) and 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84). **The RUC recommends a work RVU of 0.75 for CPT code 64455.**

In addition, the RUC observed that there are inconsistencies in the Medicare Claims Processing Manual (Manual) related to reporting an E/M service on the same day as a minor procedure. While acknowledging the CMS staff citation from the manual, Chapter 12, Section 40.1, paragraph B, regarding reporting an E/M visit with a 000-day global code and the expectation that all of the focused evaluation work is included in the global period, the presenters noted that in two other sections of the same Manual chapter, the guidance provided is different. Specifically, Section 40.1

paragraph C and Section 40.2 paragraph A (#8) of the Manual confirm that it is permissible to report an E/M code on the same day as a minor surgical procedure when a significant, separately identifiable service is also performed. It is appropriate to append modifier 25 to the E/M code in instances where a significant, separately identifiable evaluation and management service is performed by same physician on the day of a procedure. The RUC also noted this Section of the Manual corresponds to CPT Modifier 25 instructions which state: "It may be necessary to indicate that on the day a procedure or service identified by a CPT code was performed, the patient's condition required a significant, separately identifiable E/M service above and beyond the other service provided or beyond the usual preoperative and postoperative care associated with the procedure that was performed. A significant, separately identifiable E/M service is defined or substantiated by documentation that satisfies the relevant criteria for the respective E/M service to be reported."

Practice Expense

The Practice Expense Subcommittee reduced the time to *Prepare room, equipment and supplies* (CA013) from 3 minutes to the standard of 2 minutes. The PE Subcommittee discussed the potential for overlap with the evaluation and management service with the time for preparing the room, supplies and equipment. It was determined that this time addresses the preparation of the supplies related directly to the injection itself including logging injectables (eg, name, lot, expiration date) into the medical record and does not overlap with preparing the room for an E/M visit. CMS staff questioned whether the patients present with pain only and tried to discern any overlap with E/M. The specialties explained that it is typical to first examine the patient to determine where the pain is coming from and to determine if an injection or another procedure is medically necessary. Often times, the initial treatment is conservative medical management. In addition, the PE Subcommittee discussed the potential for overlap with E/M with the time for clean room/equipment. It was determined that the cleaning time for this code addresses the cleaning of supplies related directly to the injection itself, including sharps disposal and logging injectables back into storage, and was appropriate. Additionally the RUC removed the *exam light* (EQ168) as it would not typically be used for this service and would not be in a standard room used for evaluation and management. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
64455	Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)	000	0.75 (No Change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64455 Tracking Number n/a Original Specialty Recommended RVU: **0.75**
Presented Recommended RVU: **0.75**
Global Period: 000 Current Work RVU: **0.75** RUC Recommended RVU: **0.75**

CPT Descriptor: Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 46-year-old female presents with a painful neuroma in the third intermetatarsal space of her right foot. The decision is made to proceed with a therapeutic intermetatarsal neuroma injection.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure is explained to the patient and family, possible complications are discussed, and consent is obtained. Availability of necessary supplies and instruments is verified. Gloves are donned. Syringes are prepared, one with local anesthetic and one with mixed anesthetic and steroid. The patient and extremity are positioned and the injection site is confirmed. The injection site is prepped and local anesthetic is infiltrated.

Description of Intra-Service Work: Palpate the intermetatarsal space and identify the point of maximal tenderness. Utilize a dorsal approach and insert the needle top to bottom without penetrating the plantar skin. Deposit a portion of the injectable solution. Redirect the needle distally and medially without exiting the dorsal site and deposit a portion of the injectable solution. Again redirect the needle distally and laterally without exiting the dorsal site and deposit the final portion of the injectable solution.

Description of Post-Service Work: Cleanse the injection area and apply a bandage. Monitor the patient for any potential complications from the injection. Instruct patient and/or caregiver on appropriate activities and home care, including bathing restrictions. Advise the patient regarding signs related to increased pain at the injection site, which may occur within 24 to 48 hours, and the appropriate treatment if pain occurs. Document the procedure in the patient's medical record and send a copy to the primary care physician and insurance.

The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	7%	72%	21%
Urgency of medical decision making	3%	90%	7%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	7%	66%	27%
Physical effort required	3%	85%	12%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	5%	71%	24%
Outcome depends on the skill and judgment of physician	2%	69%	29%
Estimated risk of malpractice suit with poor outcome	6%	73%	21%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	0%	65%	35%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	4%	65%	31%
Urgency of medical decision making	4%	88%	8%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	69%	27%
Physical effort required	4%	92%	4%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	12%	42%	46%
Outcome depends on the skill and judgment of physician	4%	54%	42%
Estimated risk of malpractice suit with poor outcome	0%	81%	19%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In the Final Rule for 2017, CMS finalized the list of 000-day global services reported with an E/M service 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000. Code 64455 was identified on this list.

Survey Sample and Process

The survey request was sent to a random selection from the membership database for all participating societies. The American Academy of Orthopaedic Surgeons (AAOS), American Podiatric Medical Association (APMA), and American Orthopaedic Foot and Ankle Society (AOFAS) conducted a standard RUC survey and received 205 responses.

Pre-time Package 6

We recommend pre-time package 6, but have reduced the package evaluation time from 17 minutes to 5 minutes to account for overlap in time with an E/M service that is reported more than 50% of time. The recommended total pre-time of 11 minutes is consistent with the pre-time for key reference codes 64450 and 20550.

Key Reference Codes

The value for 64455 ranks appropriately relative to the key reference services. All three codes represent the same physician work.

MPC Comparison

MPC	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST
67820	Correction of trichiasis; epilation, by forceps only	**0.71**	0.100	**15**	8	**5**	2
64455	Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)	**0.75**	0.093	**21**	11	**5**	5
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	**0.84**	0.059	**22**	7	**10***	5

*When 12001 was reviewed in 2010, the intra-time included inject local anesthetic and wait for affect, which should have been included in the pre-time category.

*Current recommendation for April 2017. See Tab 10.

Recommendation - 64455

We recommend maintaining the work RVU of 0.75 for 64455. This value is also the survey median and 25th percentile. The work to perform this procedure has not changed since this code was last reviewed (2008) and the survey data support this. This value maintains the RUC, specialty, and CMS accepted intensity/complexity rank order and relativity for code 64455 with many other injection codes and procedures requiring 5 minutes of intra-service time. This survey provides supporting evidence for the accuracy of the current relative work value for 64455.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Code 64455 may be reported with an E/M service with modifier 25 appended. Per CMS Medicare Claims Processing Manual (Chapter 12): Modifier 25 is used to report a significant, separately identifiable evaluation and management service by same physician on the day of a procedure. The physician may need to indicate that on the day a procedure or service that is identified with a CPT code was performed, the patient's condition required a significant, separately identifiable evaluation and management service above and beyond the usual preoperative and postoperative care associated with the procedure or service that was performed. This circumstance may be reported by adding the modifier "-25" to the appropriate level of evaluation and management service.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code

in your scenario. An office visit E/M code (99201-99205, 99211-99215) with modifer 25 appended may be reported when appropriate.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64455

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopaedic surgery How often? Commonly

Specialty Podiatry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency is not avaialable

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
65,979 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.
Please explain the rationale for this estimate. RUC database

Specialty podiatry Frequency 61250 Percentage 92.83 %

Specialty orthopaedic surgery Frequency 2400 Percentage 3.63 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64455

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)

Global Period 000 Meeting Date: April 2017

*****N/A – no Facility Direct PE Inputs recommended*****

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

4. Please provide rationale for the minutes you are recommending for clinical activities that do not have PE Subcommittee standards:

5. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Spreadsheet Update Workgroup and listed in tab 2, please explain the difference here:

7. Please describe in detail the clinical activities of your staff below:

Pre-Service Period Clinical Activities:

Service Period Clinical Activities:

Pre-Service (of Service Period):

Intra-Service (of Service Period):

Post-Service (of Service Period):

Post-Service Period Clinical Activities:

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

REVISED 4-26-17

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)

Global Period 000 Meeting Date: April 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
The society Advisors reviewed the current PE details and the PE details for the recently reviewed code 20550 to develop a recommendation for code 64455.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
The current code and Key Ref code 20550 were used as references.

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
N/A

4. Please provide rationale for the minutes you are recommending for clinical activities that do not have PE Subcommittee standards:

CA011 (provide education/obtain consent): Clinical staff will answer patient questions about the procedure and confirm that consent has been obtained and documented. This is consistent with the time approved by the PE Subcommittee and CMS for code 20550.

CA023 (monitor patient following procedure): Clinical staff will monitor the patient after the injection for any reaction to the medication or to having the injection.

5. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

SJ053 (swab-pad, alcohol): Item added - One pad to wipe the rubber septum of the anesthetic and one to wipe the rubber septum of the steroid. CDC guidelines for injectable medication preparation indicates that sterile technique includes disinfecting the rubber septum of a vial with alcohol prior to piercing it. Once an alcohol pad has been opened, handled, and used to clean contaminants from a vial septum, the pad is considered contaminated after used and is to be discarded.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Spreadsheet Update Workgroup and listed in tab 2, please explain the difference here: N/A

7. Please describe in detail the clinical activities of your staff below:

Pre-Service Period Clinical Activities: N/A

Service Period Clinical Activities:

Pre-Service (of Service Period): Clinical staff will provide pre-service education to reinforce the physician's description of the procedure. Consent for the procedure is confirmed and documented. The supplies necessary for the injections are collected so that the physician can prepare the syringes. This includes documenting the drug, lot number, and expiration of the injectants.

Intra-Service (of Service Period): Clinical staff will assist the physician during the injection for 100% of the physician's intra-service time. The injection will performed in a sterile fashion. The staff is available to hand the physician supplies as needed in a sterile fashion. This has not changed since the previous review in 2008. The clinical staff time was approved by the PE Subcommittee as 100% of assist physician time in 2008. AMA staff research indicates that there was an error in the final PE spreadsheet in 2008 submitted by the societies, where 3 minutes was indicated instead of 5 minutes.

Post-Service (of Service Period): The clinical staff will monitor the patient for post-injection reaction, check the injection site and review the physician's instructions with the patient about home care. Once the patient leaves the office, the procedure room is cleaned, including disposing of all supplies related to the injection and returning the injectants to secure storage.

Post-Service Period Clinical Activities: N/A

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
Clinical staff assists the physician with maintaining patient positioning during the injection, hands supplies and syringes to the physician to maintain sterility, and is available to assist the physician as necessary.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. N/A

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: N/A

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. N/A

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: N/A

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: N/A

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here: N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2018

Somatic Nerve Injection

In May 2018 the CPT Editorial Panel approved the revision of descriptors and guidelines for codes 64400- 64450 and deletion of 3 codes to clarify reporting (ie, separate reporting of imaging guidance, number of units, change of CPT codes 64421 from a 0-day global to ZZZ). Codes 64400-64450 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately. The physician work for this family of services varies based on the anatomic location of each nerve, whether the services is typically performed in the facility setting, the typical approach used by the dominant specialty to access the nerve that performs each service and whether the service involves continuous infusion by catheter.

64400 ***Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)***
The RUC reviewed the survey results from 56 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 6 minutes of intra-service time and 5 minutes of immediate post-service time. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison. The IWPUT for the current times is similar to scrub/dress/wait IWPUT, which strongly implies the current times are highly inflated relative to the current work RVU and not valid for comparison to the new times.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.14. To find an appropriate work RVU, the RUC reviewed the survey 25th percentile for only the neurologist survey respondents of 1.00, noting that neurology is the top performing specialty yet there were fewer survey responses from neurology than from anesthesiology. Neurology is 47 percent of the 2017 Medicare claims whereas anesthesiology is only 10 percent of the claims, the RUC noted that it would be appropriate to value the service at the Neurology 25th percentile of 1.00. To justify a work RVU of 1.00, the RUC compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that the reference code more intra-service time and involves slightly more physician work. The RUC also compared the survey code to MPC code 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* **(**work RVU = 1.00, intra-service time of 7 minutes, total time of 17 minutes) and noted that although the survey code has 1 minute less of intra-service time, it has 3 more minutes of total time and both services involve a similar amount of physician work. **The RUC recommends a work RVU of 1.00 for CPT code 64400.**

64408 ***Injection(s), anesthetic agent(s) and/or steroid; vagus nerve***
The RUC reviewed the survey results from 37 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 3 minutes of pre-service positioning, 5 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 0.90. To justify a work RVU of 0.90, the RUC compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that both services have identical intra-service times and involve a similar amount of physician work, and therefore should be valued similarly. The RUC also compared the survey code to MPC code 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* **(**work RVU = 1.00, intra-service time of 7 minutes, total time of 17 minutes) and noted that the survey code involves 2 minutes less of intra-service time and it would be appropriate to value the survey code somewhat less as it involves somewhat less overall work. **The RUC recommends a work RVU of 0.90 for CPT code 64408.**

64415 ***Injection(s), anesthetic agent(s) and/or steroid; brachial plexus***
The RUC reviewed the survey results from 57 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 12 minutes of intra-service time and 10 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.42. To justify a work RVU of 1.42, the RUC compared the survey code to CPT code 64612 *Chemodenervation of muscle(s); muscle(s) innervated by facial nerve, unilateral (eg, for blepharospasm, hemifacial spasm)* (work RVU = 1.41, intra-service time of 10 minutes) and noted that the survey code involves slightly more intra-service time and slightly less total time and both services include a similar amount of physician work. The RUC also compared the survey code to CPT code 30903 *Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method* (work RVU = 1.54, intra-service time of 15 minutes, total time of 39 minutes) and noted that the survey code involves less intra-service time and valuing the survey code at 1.42 would maintain appropriate relativity with the reference code. **The RUC recommends a work RVU of 1.42 for CPT code 64415.**

64416 ***Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 42 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 20 minutes of intra-service time and 10 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.81 To justify a work RVU of 1.81, the RUC compared the survey

code to CPT code 32554 *Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance* (work RVU = 1.82, intra-service time of 20 minutes) and noted that both services involve identical intra-service time and have typically require a similar amount of physician work. **The RUC recommends a work RVU of 1.81 for CPT code 64416.**

64417 ***Injection(s), anesthetic agent(s) and/or steroid; axillary nerve***
The RUC reviewed the survey results from 45 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 10 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.27. To justify a work RVU of 1.27, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both services involve identical intra-service time and total time and a similar amount of physician work. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and involve a similar amount of physician work. The RUC noted that 64417 has appropriate relativity with the rest of the family. For example, 64415 and 64417 involve a similar work intensity and therefore the RUC recommendations for both services have similar IWPUTs. **The RUC recommends a work RVU of 1.27 for CPT code 64417.**

64420 ***Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level***
The RUC reviewed the survey results from 60 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting. The RUC noted that the current times for this service are from the Harvard study more than 20 years ago; in 1994, the RVU for this service was lowered substantially but the intra-service time was not changed to reflect the decrease. Therefore, a reduction in time would not necessarily imply a reduction in work value as the previous times used a flawed methodology.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.24. The RUC also reviewed the current value for this service of 1.18 and noted that would continue to be the appropriate value for this service. To verify a value of 1.18, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both codes involve identical intra-service time, whereas the reference code involves somewhat more total time and that the survey code should be valued somewhat lower. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for*

fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and involve a similar amount of physician work. The RUC noted that 64417 has appropriate relativity with the rest of the family. For example, 64420 and 64417 involve a similar work intensity and therefore the RUC recommendations for both services have similar IWPUTs. **The RUC recommends a work RVU of 1.18 for CPT code 64420.**

64421 ***Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, each additional level (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 60 physicians and agreed on the following physician time components: 10 minutes of intra-service time. The RUC noted that the coding structure for 64421 changed when the code was revised by CPT; 64421 switched from a 000-day global code that code only be reported a single time to an add-on code for 64420. Furthermore, the current physician times for 64421 are over 25 years old and from the Harvard study.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.00. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 77063 *Screening digital breast tomosynthesis, bilateral (List separately in addition to code for primary procedure)* (work RVU = 0.60, intra-service time of 8 minutes) and noted that although the survey code involves somewhat more intra-service time, both services require a very similar amount of physician work. Therefore, the RUC recommends a direct work RVU crosswalk from 77063 to 64421. **The RUC recommends a work RVU of 0.60 for CPT code 64421.**

64425 ***Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves***
The RUC reviewed the survey results from 54 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 11 minutes of intra-service time and 5 minutes of immediate post-service time. The RUC noted that the current times for this service are over 25 years old from the Harvard study and not valid for comparison.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.19. To justify a work RVU of 1.19, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both services involve identical intra-service time and whereas the reference code involves somewhat more total time and it would be appropriate to value the survey code somewhat lower than the reference code at a value of 1.19. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have similar intra-service times and the survey code should be valued slightly less than the reference code to maintain appropriate relativity. **The RUC recommends a work RVU of 1.19 for CPT code 64425.**

64430 ***Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve***
The RUC reviewed the survey results from 67 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 5 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 10 minutes of immediate post-service time. The specialty noted and the RUC agreed that this service requires more post-time than CPT code 64425 as the pudendal nerve is deeper. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting. The post-service time is longer for 64430 compared to 64435 because the approach involves going much deeper and the physician typically stays longer as the patient tends to have pelvic muscle weakness. Unlike for 64435, for 64430, the patient is then re-examined digitally to confirm pelvic stability and pelvic floor tonicity during the post-service period. The patient is then evaluated for safety in ambulation.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 1.15. To justify a work RVU of 1.15, the RUC compared the survey code to CPT code 49082 *Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance* (work RVU = 1.24, intra-service time of 10 minutes) and noted that both services involve identical intra-service time and whereas the reference code involves somewhat more total time and it would be appropriate to value the survey code somewhat lower than the reference code at a value of 1.15. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and the survey code should be valued slightly less than the reference code to maintain appropriate relativity. **The RUC recommends a work RVU of 1.15 for CPT code 64430.**

64435 ***Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve***
The RUC reviewed the survey results from 42 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 3 minutes of pre-service positioning, 5 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents appropriately valued the physician work involved in performing this service at the 25th percentile work RVU of 0.75. To justify a work RVU of 0.75, the RUC compared the survey code to top key reference code 20551 *Injection(s); single tendon origin/insertion* (work RVU = 0.75, intra-service time of 5, total time of 20 minutes) and noted that both services involve identical intra-service time and total time and the same amount of physician work. The RUC also compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that although both services have identical intra-service time, the reference code involves more total time, justifying a somewhat lower valuation for the survey code. **The RUC recommends a work RVU of 0.75 for CPT code 64435.**

64445 ***Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve***
The RUC reviewed the survey results from 68 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minutes of pre-service positioning, 1 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.30. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 67810 *Incisional biopsy of eyelid skin including lid margin* (work RVU = 1.18, intra-service time of 13 minutes, total time of 27 minutes and noted that although the survey code involves somewhat less intra-service time, it involves somewhat more total time and a very similar amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 67810 to CPT code 64445. The RUC also compared the code to CPT code 32562 *Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day* (work RVU = 1.24, intra-service time of 10) and noted that both services have identical intra-service times and whereas the survey code involves slightly more overall physician work. **The RUC recommends a work RVU of 1.18 for CPT code 64445.**

64446 ***Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 48 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 15 minutes of intra-service time and 6 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.80. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 30903 *Control nasal hemorrhage, anterior, complex (extensive cautery and/or packing) any method* (work RVU = 1.54, intra-service time of 15 minutes, total time of 39 minutes) and noted that both services have identical intra-service time and total time and involve an identical amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 30903 to CPT code 64446. **The RUC recommends a work RVU of 1.54 for CPT code 64446.**

64447 ***Injection(s), anesthetic agent(s) and/or steroid; femoral nerve***
The RUC reviewed the survey results from 62 physicians and agreed on the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 3 minutes of pre-service scrub/dress/wait, 6 minutes of intra-service time and 5 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.29. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* (work RVU = 1.10, intra-service time of 7 minutes, total time of 21 minutes) and noted that although the survey code involves slightly less intra-service time, it requires more total time and a very similar amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 31231 to CPT code 64447. **The RUC recommends a work RVU of 1.10 for CPT code 64447.**

64448 ***Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 51 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 13 minutes of intra-service time and 6 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.78. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 62322 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance* (work RVU = 1.55, intra-service time of 11 minutes, total time of 39 minutes) and noted that the survey code involves somewhat more intra-service time whereas both services only differ on total time by 1 minute and require a very similar total amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 62322 to CPT code 64448. The RUC also compared the survey code to MPC code 57452 *Colposcopy of the cervix including upper/adjacent vagina;* (work RVU = 1.50, intra-service time of 15 minutes, total time of 40 minutes) and noted that both services involve similar intra-service time and total time and should be valued similarly. **The RUC recommends a work RVU of 1.55 for CPT code 64448.**

64449 ***Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)***
The RUC reviewed the survey results from 36 physicians and agreed on the following physician time components: 13 minutes of pre-service evaluation, 1 minutes of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 14 minutes of intra-service time and 5 minutes of immediate post-service time. This service is typically performed in the facility setting and requires more pre-service evaluation and scrub/dress/wait time than services in this family that are typically performed in the non-facility setting.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.80. To find an appropriate work RVU crosswalk, the RUC compared the survey code to CPT code 62322 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance* (work RVU = 1.55, intra-service time of 11 minutes, total time of 39 minutes) and noted that the survey code involves somewhat more intra-service time whereas both services only differ on total time by 1 minute and require a very similar total amount of physician work. The RUC recommends a direct work RVU crosswalk from CPT code 62322 to CPT code 64449. The RUC also compared the survey code to MPC code 57452 *Colposcopy of the cervix including upper/adjacent vagina;* (work RVU = 1.50, intra-service time of 15 minutes, total time of 40 minutes) and noted that both services involve similar intra-service time and total time and should be valued similarly. The RUC noted that survey codes 64448 and 64449 have identical total times, only one minute difference in intra-service time and involve the same amount of physician work. **The RUC recommends a work RVU of 1.55 for CPT code 64449.**

64450 ***Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch***
The RUC reviewed the survey results from 88 physicians and agreed on the following physician time components: 7 minutes of pre-service evaluation, 1 minute of pre-service positioning, 1 minute of pre-service scrub/dress/wait, 5 minutes of intra-service time and 5 minutes of immediate post-service time.

The RUC reviewed the survey respondents' estimated physician work values and agreed that the respondents somewhat overvalued the work involved in performing this service, with a 25th percentile work RVU of 1.00. The RUC also reviewed the current value for this service of 0.75 and noted that would continue to be the appropriate value for this service. To justify a work RVU of 0.75, the RUC compared the survey code to CPT code 20551 *Injection(s); single tendon origin/insertion* (work RVU = 0.75, intra-service time of 5, total time of 20 minutes) and noted that both services involve identical intra-service time and very similar total time and the same amount of physician work. The RUC also compared the survey code to CPT code 31575 *Laryngoscopy, flexible; diagnostic* (work RVU = 0.94, intra-service time of 5 minutes) and noted that although both services have identical intra-service time, the reference code involves more total time and somewhat more intensity, justifying a somewhat lower valuation for the survey code. **The RUC recommends a work RVU of 0.75 for CPT code 64450.**

RUC Referral to CPT
During the October 2018 RUC presentation for this family of services, the specialty societies stated that codes 64415, 64416, 64417, 64446, 66447, and 64448 were reported with code 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* more than 50 percent of the time. Specifically, 76 percent with 64415, 85 percent with 64416, 68 percent with 64417, 77 percent with 64446, 77 percent with 66447, and 79 percent with 64448. The societies indicated they would submit a code change application to bundle 76942 into codes 64415, 64416, 64417, 64446, 64447, and 64448 for the 2021 cycle. This overlap was accounted for in the above RUC recommendations for these services. **The RUC refers CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 to be bundled with ultrasound guidance, CPT code 76942 to the CPT Editorial Panel for CPT 2021.**

Practice Expense
The RUC reviewed and approved the direct practice expense inputs as approved by the Practice Expense Subcommittee, with the only revision to account for the reduction in procedure time for codes 64400 and 64450.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Affirmation of RUC Recommendations
The RUC affirmed the recent RUC recommendations for CPT codes 64405 (work RVU= 0.94, pre-evaluation time of 5 minutes, pre-positioning time of 1 minute, intra-service time of 5 minutes and post-service time of 5 minutes) and 64418 (work RVU= 1.10, pre-evaluation time of 6

minutes, pre-positioning time of 3 minutes, pre-scrub/dress/wait time of 3 minutes, intra-service time of 10 minutes, post-service time of 10 minutes). The relativity within the family remains correct.

Do Not Use to Validate for Physician Work
The RUC agreed that CPT codes 64400 and 64418 should be labeled in the RUC database with a flag that it should not be used to validate physician work.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Nervous System **Extracranial Nerves, Peripheral Nerves, and Autonomic Nervous System** **Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic** *(For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681)* *(For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327)* *(*64400-64455, 64461, 64462, 64463, 64479, 64480, 64483, 64484~~7~~*,* 64490-64495 are unilateral procedures. For bilateral procedures, use modifier 50) **Somatic Nerves** Codes 64400-64489 describe the introduction/injection of an anesthetic agent and/or steroid into the somatic nervous system for diagnostic or therapeutic purposes. For injection or destruction of genicular nerve branches, see 644X0, 644X1. Codes 64400-64450, 644X0 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code. Image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.				

Image guidance (ultrasound, fluoroscopy, CT) and any injection of contrast are inclusive components of 644X0.

Codes 64455, 64479, 64480, 64483, 64484 are reported for ~~a~~ single or multiple injections at the same site. For 64479, 64480, 64483, 64484, image guidance (fluoroscopy or CT) and any injection of contrast are inclusive components and are not reported separately. For 64455, image guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.

Codes 64461, 64462, 64463 describe injection of a paravertebral block (PVB). Codes 64486, 64487, 64488, 64489 describe injection of a transversus abdominis plane (TAP) block. Image guidance and any injection of contrast are inclusive components of 64461, 64462, 64463 and 64486, 64487, 64488, 64489 and are not reported separately.

▲64400	H1	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each ~~any division or~~ branch (ie, ophthalmic, maxillary, mandibular)	000	1.00

Chicago, IL 60611

Re: Somatic Nerve Procedures

Dear Dr. Smith:

At its recent May 2018 meeting, the CPT Editorial panel approved new guidelines for the Somatic Nerve code family as well as minor edits to the code language for 64400-64450. Included within the code family are two codes that were recently reviewed by the RUC:

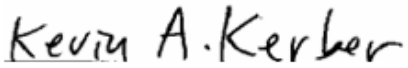
- 64405 Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve – RUC reviewed April 2017, values will go into effect January 2019.
- 64418 Injection(s), anesthetic agent(s) and or steroid; suprascapular nerve – RUC reviewed April 2016.

While these codes underwent minor editorial changes, there has been no change in the physician work for these two codes since they were last surveyed. We do not believe a re-survey of these codes is necessary. The joint societies therefore recommend that the current RUC values and inputs for codes 64405 (0.94 work RVU) and 64418 (1.10 work RVU) be re-affirmed at the October 2018 RUC meeting.

We look forward to presenting our recommendations for the Somatic Nerve code family at the upcoming RUC meeting. Please contact AAPM&R staff Carolyn Winter-Rosenberg at (847) 737-6024 or via email at cwinterrosenberg@aapmr.org if you have any questions.

Thank you for your consideration of this request.

Sincerely,



Kevin A. Kerber, MD

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64400 Tracking Number Original Specialty Recommended RVU: **1.14**
Presented Recommended RVU: **1.10**
Global Period: 000 Current Work RVU: **1.11** RUC Recommended RVU: **1.00**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with a normal neurologic exam reports headaches that include pain in one or more branches of the trigeminal nerve (ophthalmic, maxillary, or mandibular). An injection of local anesthetic with or without a steroid is performed for nerve blockade.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed procedure is marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The provider prepares the skin with an antiseptic solution, applies sterile drapes and then performs the universal protocol (“time out”) with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the procedure area are identified. A local anesthetic wheal is created and placed at the site of the injection. The provider penetrates the skin with the needle and injects the contents of the syringe along the course of the supraorbital nerve near the medial border of the eyebrow around the supraorbital notch. The needle is removed and the site is observed for bleeding and then covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and evidence of a successful block. A procedure note is dictated/written and medical record entries are made.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	64%	36%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	18%	82%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	9%	91%
Physical effort required	0%	70%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	36%	45%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	0%	50%	38%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	38%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	25%	75%
Physical effort required	0%	57%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	13%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64400 (*Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular*) is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use

of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64400, is currently a Harvard-valued code that has not been previously surveyed. It is a 0-day global code. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA) and the American Academy of Neurology (AAN).

October 2018 RUC Meeting Recommendation Rationale

A total of 56 responses were received from a random sample of 7,147 clinicians (0.7 percent response rate). ASA and AAN convened an Expert Panel to review the survey data. ***The societies are recommending 1.10 wRVUs and time of pre (7/1/1), intra (15 min) and post (10 min)***. This results in an IWPUT of 0.046.

Vignette

The typical patient for code 64400 presents with a normal neurologic exam but reports headaches that include pain in one or more branches of the trigeminal nerve (ophthalmic, maxillary, or mandibular). An injection of local anesthetic with or without a steroid is performed for nerve blockade. 95% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64400 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.14	1.50	2.20
Pre		18/5/5	
Intra	5	15	20
Post		10	

After review of the reviewer comments of the societies original recommended wRVU of 1.14 and time inputs, the Expert Panel agreed to recommend the following revised work RVU and time recommendation:

- wRVU
  - 1.10 wRVUs; this value is less than the 25th percentile
- Time
  - Pre-time: Non-facility pre-service package #5 with an additional minute for positioning (7/1/1)
  - Intra-time: 15 minutes (survey median)
  - Post-time 10 minutes (survey median)

Crosswalk

The Expert Panel agreed to recommend as a value: 1.10 wRVU. The Expert Panel is basing its recommendation on a crosswalk to code **56605** (*Biopsy of vulva or perineum (separate procedure); 1 lesion*); with wRVU 1.10, with times 10/15/10 with resultant IWPUT 0.0435.

The Expert Panel also noted that the recommended value aligned with other reference code **12002** (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm*)); with wRVU 1.14, with times 7/15/5 with resultant IWPUT 0.0590.

Current Value

- The current value of code 64400 is 1.11 wRVU
- The recommended wRVU of 1.10 is virtually and effectively identical

Comparison to Other Codes

The Expert Panel compared the recommendation for 64400 to other codes and identified other 0-day global codes with similar intra-time. These comparisons indicated the code was well aligned with other codes of similar time and value.

CPT Code	Long Desc	Global	Work RVU	Intra Time	IWPUT	2017 Utilization

CPT Code	Long Desc	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
46614	Anoscopy; with control of bleeding (eg, injection, bipolar cautery, unipolar cautery, laser, heater probe, stapler, plasma coagulator)	000	1.00	15	0.0338	887
11042	Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less	000	1.01	15	0.0369	1,816,207
45335	Sigmoidoscopy, flexible; with directed submucosal injection(s), any substance	000	1.04	15	0.0263	3,140
50431	Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access	000	1.10	15	0.0193	9,546
56605	Biopsy of vulva or perineum (separate procedure); 1 lesion	000	1.10	15	0.0435	30,749
64400	**Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)**	**0**	**1.10**	**15**	**0.046**	**33,977**
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	000	1.14	15	0.059	146,808
45331	Sigmoidoscopy, flexible; with biopsy, single or multiple	000	1.14	15	0.0345	36,331
36584	Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access	000	1.2	15	0.04	5,630
44385	Endoscopic evaluation of small intestinal pouch (eg, Kock pouch, ileal reservoir [S or J]); diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	1.2	15	0.037	1,359
57100	Biopsy of vaginal mucosa; simple (separate procedure)	000	1.2	15	0.0427	5,797
57500	Biopsy of cervix, single or multiple, or local excision of lesion, with or without fulguration (separate procedure)	000	1.2	15	0.06	7,650
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	000	1.22	15	0.0644	50,886
40490	Biopsy of lip	000	1.22	15	0.0577	34,141

In summary, for CPT code 64400 (*Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular*) ***ASA and AAN recommend 1.10 wRVUs and 9/15/10 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64400

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Anesthesiology How often? Commonly

Specialty Nurse Practitioners How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 101931
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Neurology Frequency 47541 Percentage 46.64 %

Specialty Anesthesiology Frequency 9928 Percentage 9.73 %

Specialty Nurse Practitioners Frequency 6891 Percentage 6.76 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 33,977 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization data

Specialty Neurology Frequency 15847 Percentage 46.64 %

Specialty Anesthesiology Frequency 3309 Percentage 9.73 %

Specialty Nurse Practitioners Frequency 2297 Percentage 6.76 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:64408 Tracking Number

Original Specialty Recommended RVU: **0.94**
Presented Recommended RVU: **0.90**
RUC Recommended RVU: **0.90**

Global Period: 000 Current Work RVU: **1.41**

CPT Descriptor: Injection, anesthetic agent; vagus nerve

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female presents with a neurogenic cough. Injection of an anesthetic agent to the vagus nerve is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review history and physical findings, including prior tests. Discuss procedure with patient, and obtain informed consent. Ensure that necessary equipment is available and set up. After confirming correct injectant, remove disposable top from vial and clean medication top; then draw injectant. After patient is again examined and appropriate central and lateral neck landmarks are palpated, perform a time out; position patient in a partially recumbent position with head turned and neck extended; and place a shoulder roll if needed. Prep the neck using alcohol swabs.

Description of Intra-Service Work: Palpate the lateral neck landmarks. Guide spinal needle into paralaryngeal area. After aspiration for blood and air is performed to insure extraluminal and extravascular position, deliver the injectant solution. Remove injection needle then apply pressure to the injection site if needed to stop bleeding. Inspect the neck for signs of hematoma or other complications.

Description of Post-Service Work: Apply bandage. Return patient to sitting position. Observe the patient post-procedure for, any hemodynamic changes, new, unexpected neurologic deficits, vascular injury, or airway compromise. The physician communicates observation instructions with the nursing staff, patient, family, and other professionals (including written and telephone reports and orders). Document the procedure in the medical record, providing a detailed description of the placement of the injection and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the neurovascular status of neck, reexamine the patient to confirm successful injection and adequate response. If the patient is stable, discharge her or him home after meeting all appropriate discharge criteria. Prior to discharge, remind the patient and family of signs and symptoms of potential complications, provide contact information to be used if such signs or symptoms develop, and discuss and arrange appropriate follow up.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	14%	57%	29%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	99%
Physical effort required	0%	71%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	43%	57%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	40%	40%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Why is this code being reviewed?

A code change proposal was brought before the CPT Editorial Panel in May 2018 requesting modifications to the Somantic Nerve Injection family of codes. This included 64408. The entire family was then referred for survey at the September 2018 RUC meeting. No other specialties indicated an interest in this code, and Otolaryngology as the dominant user of the service elected to survey it. No changes were made at CPT to this CPT code.

Description of Random Survey Sample

Our physician work RVU recommendation was derived by conducting a targeted random survey of AAO-HNS members with a designation of laryngology in our database. The standard 000 global survey instrument was utilized. Surveys were sent to 568 Otolaryngologists. We received 37 responses.

Physician Time

Pre-Time

Regarding physician time, we recommend using pre-service package 5 Procedure with minimal anesthesia care which includes 7 minutes of evaluation, 0 minutes of positioning, and 1 minutes of scrub, dress, and wait time. Our expert panel felt this package was most appropriate given that this procedure does not utilize local anesthesia.

Evaluation time: Our experts felt that the 21 minutes of evaluation time provided by respondents was excessive given the short overall time for the procedure, therefore, we reduced this down to the package's recommended 7 minutes of evaluation time.

Positioning time: Regarding time for positioning, our expert panel reviewed the 0 minutes of time assigned by package 5 and felt this was insufficient for this particular procedure. Time must be taken to position the patient, using the headrest in order to ensure a successful injection. This includes time to palpate and figure out the trajectory of the injection site. We believe the three minutes assigned for this work by survey respondents is appropriate and are requesting 3 minutes for positioning.

Scrub, Dress, and Wait time: Last, we recommend the package time of 1 minute for scrub, dress, and wait.

Total Pre-Time: These modifications result in an overall pre-service time recommendation of 7/3/1, totaling 11 minutes for 64408.

Intra Time

Our expert panel agreed with our surveyees regarding the time for intra service work and are recommending the survey median time of 5 minutes for intra service work.

Immediate Post Time

Likewise, our experts felt that the survey's post time was an accurate reflection of the post time required for this procedure and are recommending the median post time of 6 minutes.

Physician Work

We are recommending our survey's 25th percentile of .90 for the physician work RVU. We believe the above recommendation is supported by the key reference codes, as well as crosswalk codes 64405 Injection, anesthetic agent; greater occipital nerve and 31575 Laryngoscopy, flexible; diagnostic. As the Panel is aware, 64405 is a part of this family of codes and serves as a strong comparator in work and time for 64408, we are asking that that value be reaffirmed at this meeting. In addition, 31575 is a service which has just been reviewed by the RUC and CMS and is provided by otolaryngology as the dominate specialty. We feel between these two codes survey respondents have a very clear understanding of these services and they serve as strong crosswalks for 64408. Survey respondents indicated this procedure was similar, and in many cases more, intense and complex that the selected KRS codes. We are also providing the following reference tables which include recently reviewed services which support our requested values for physician time and work for CPT 64408.

The table below compares the survey code to other RUC reviewed codes of similar time and work, providing further support that the recommended value for 64408 is appropriate.

CPT Code	Long Desc	Work RVU	Eval	Posit	SDW	Intra Time	Post Time	Total Time	RUC Review	IWPUT	MPC	2017 Utilization
20552	Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)	0.66	5	1	5	5	5	21	2016-01	0.0746	Yes	371780

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 88 times in 2017 per the Medicare database.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 264
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2017 Medicare volume multipled by three in order to account for the national volume that may occur.

SUMMARY OF RECOMMENDATION

CPT Code:64415 Tracking Number Original Specialty Recommended RVU: **1.42**
Presented Recommended RVU: **1.42**
Global Period: 000 Current Work RVU: **1.48** RUC Recommended RVU: **1.42**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year old female has a 1-year history of tumor that is infiltrating her arm causing significant pain and interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitatingn pain, a brachial plexus block is scheduled to relieve her pain nand improve her functionn.

Percentage of Survey Respondents who found Vignette to be Typical: 44%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed procedure is marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared.
The provider prepares the skin with an antiseptic solution, applies sterile drapes and then performs the universal protocol ("time out") with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the brachial plexus are identified. A local anesthetic skin wheal is created and placed at the site of injection. A needle is advanced towards the brachial plexus and correct position is confirmed. A local anesthetic and steroid is infiltrated into the fascial plane containing the brachial plexus using intermittent aspiration and injection. The needle is removed, and the site is observed for bleeding and then covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and evidence of a successful block. A procedure note is dictated/written and medical record entries are made.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	16%	58%	25%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	50%	25%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	62%	31%
Physical effort required	8%	69%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	62%	31%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	36%	55%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	73%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	27%	64%
Physical effort required	0%	73%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	45%	55%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64415 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single)* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64415 is a 0-day global. It was previously surveyed by the RUC in 2009. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 57 responses were received from a random sample of 3,891 clinicians (1.4 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending 1.42 wRVUs (survey 25th) and time of pre (13/1/5), intra (12 min) and post (10 min)***. This results in an IWPUT of 0.070.

Vignette

The typical patient for code 64415 presents with persistent, debilitating pain interfering with the ability to complete daily activities. A brachial plexus block is performed to relieve her pain and improve her function.

The specialty did note that only 44% of the survey respondents found the vignette to be typical. The Expert Panel concluded that this was because while the vignette was for a female patient with pain in her arm, the code can be used for treatment for when the pain is throughout the brachial plexus which is a set of nerves that goes from the spinal cord in the neck down throughout the arm. The top diagnosis code reported in the 2018v2 RUC database is G89, Pain, not elsewhere classified. Survey respondents also indicated that the code is used for pre-operative pain as well as post-operative pain management for various types of orthopedic surgeries. Based on these factors the low typical vignette rate seemed reasonable.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64415 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.42	1.70	2.0
Pre		20/4/4	
Intra	8	12	15
Post		10	

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 1.42 wRVUs (25th percentile)
- Time
  - Pre-time: Facility pre-service package #1 -adjusted (13/1/5)
  - Intra-time: 12 minutes (survey median)
  - Post-time 10 minutes (survey median)

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that recommended wRVU value and times appropriately reflected how the service is currently performed and it aligns well within and outside of the code family.

In drafting their recommendations, the Expert Panel considered a number of factors.

Current Value

- The Expert Panel agreed that the 25th percentile of 1.42 was appropriate. It is slightly less than the current value of 1.48. The Expert Panel noted that this recommendation slightly raised the IWPUT to 0.070 from the current IWPUT of 0.0601. This was likely due to a slight decrease in the intra-service time (from 15 minutes to 12

minutes) but that this decrease of 3 minutes was accounted for in the decrease in the recommended wRVU from the current value.

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code, 62323 (*Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT*)) which was surveyed in 2015, has a wRVU of 1.80, IWPUT of .0800 and intra time of 15 minutes. The reference code includes catheter placement, infusion and image guidance. Since none of these services are included in the surveyed code (64415), the Expert Panel agreed that the higher wRVU and IWPUT for the reference code was appropriate.

Other Code with Same wRVU Value and Similar Time

- The Panel identified one RUC-surveyed 0-day global code with wRVU of 1.42 and similar time. The Expert Panel noted the slightly higher IWPUT of 64415 compared to 43200, they believed this appropriately reflected the difference of intensity and complexity between the two procedures. The Expert Panel believed code 43200 aligned well with the surveyed code and that it supported the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
43200	Esophagoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	1.42	15	0.0506	6,488
64415	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single**	**000**	**1.42**	**15**	**0.0700**	**175,767**

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	N block inj intercost sng, addl level	0.60
64435	N block inj paracervical	0.75
64450	N block other peripheral	0.84
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	N block inj ilio-ing/hypogi	1.19
64420	N block inj intercost sng	1.24
64417	N block inj axillary	1.27
64447	N block inj fem single	1.40
64415	**N block inj brachial plexus**	**1.42**
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80
64449	N block inj lumbar plexus	1.80

Code#	Description	Proposed wRVU
64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other 0-day, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
67515	Injection of medication or other substance into Tenon's capsule	000	1.40	5	0.2083	26,441
43453	Dilation of esophagus, over guide wire	000	1.41	20	0.0326	1,861
43200	Esophagoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	1.42	15	0.0516	6,488
64415	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single**	**000**	**1.42**	**15**	**0.070**	**175,767**
12004	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm	000	1.44	17	0.0697	22,716
65430	Scraping of cornea, diagnostic, for smear and/or culture	000	1.47	10	0.1067	4,674
51703	Insertion of temporary indwelling bladder catheter; complicated (eg, altered anatomy, fractured catheter/balloon)	000	1.47	15	0.0580	57,100
27096	Injection procedure for sacroiliac joint, anesthetic/steroid, with image guidance (fluoroscopy or CT) including arthrography when performed	000	1.48	11	0.0861	470,242
64487	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by continuous infusion(s) (includes imaging guidance, when performed)	000	1.48	15	0.0661	314
15271	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area	000	1.50	15	0.0609	103,189
46612	Anoscopy; with removal of multiple tumors, polyps, or other lesions by hot biopsy forceps, bipolar cautery or snare technique	000	1.50	16	0.0492	66

In summary, for CPT code CPT Code 64415 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single)* ***ASA recommends 1.42 wRVUs and 19/12/10 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.

☒ Multiple codes are used to maintain consistency with similar codes.
☒ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 76942-26 (Global: XXX; wRVUs: 0.67; Time: 7/15/5)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64415

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty Interventional Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 527301
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 460650 Percentage 87.35 %

Specialty CRNA Frequency 50937 Percentage 9.65 %

Specialty Interventional Pain Management Frequency 4060 Percentage 0.76 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 175,767 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization data

Specialty Anesthesiology Frequency 153550 Percentage 87.35 %

Specialty CRNA Frequency 16979 Percentage 9.65 %

Specialty Interventional Pain Management Frequency 1353 Percentage 0.76 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64415

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64416 Tracking Number Original Specialty Recommended RVU: **1.81**
Presented Recommended RVU: **1.81**
Global Period: 000 Current Work RVU: **1.81** RUC Recommended RVU: **1.81**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 54-year-old female has a 6-month history of tumor that is infiltrating her arm, causing constant trials and she has been unable to tolerate physical therapy or perform normal activities of daily living with her arm. Due to her persistent, debilitating pain, a brachial plexus block with a catheter and a continuous infusion of local anesthetic is scheduled to relieve her pain and allow her to participate in physical therapy to improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 55%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed procedure is marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The provider prepares the skin with an antiseptic solution, applies sterile drapes and then performs the universal protocol ("time out") with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks bordering the brachial plexus are identified and placed at the site of injection. A local anesthetic skin wheal is created. A needle is advanced towards the brachial plexus and correct position is confirmed. A catheter is advanced to lie next to the brachial plexus and subsequently, a local anesthetic and steroid is infiltrated into the fascial plane containing the brachial plexus using intermittent aspiration and injection. The needle is removed, and the site is observed for bleeding and then covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and evidence of a successful block. A procedure note is dictated/written and medical record entries are made.

Key CPT Code	Global	Work RVU	Time Source
62325	000	2.20	**RUC Time**

CPT Descriptor Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62323	000	1.80	**RUC Time**

CPT Descriptor Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64644	000	1.82	**RUC Time**	31,712

CPT Descriptor 1 Chemodenervation of one extremity; 5 or more muscles

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64483	000	1.90	**RUC Time**	1,043,217

CPT Descriptor 2 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level

Other Reference CPT Code	Global	Work RVU	Time Source
62324	000	1.89	**RUC Time**

CPT Descriptor Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; without imaging guidance

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 26 **% of respondents:** 61.9 **%**

Number of respondents who choose 2nd Key Reference Code: 9 **% of respondents:** 21.4 **%**

TIME ESTIMATES (Median)

	CPT Code: 64416	Top Key Reference CPT Code: 62325	2nd Key Reference CPT Code: 62323
Median Pre-Service Time	19.00	20.00	20.00
Median Intra-Service Time	20.00	15.00	15.00

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	4%	12%	36%	36%	12%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	36%	28%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	12%	44%	44%

Physical effort required	12%	60%	28%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	42%	42%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	44%	56%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	44%	33%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	67%	33%
Physical effort required	0%	78%	22%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	33%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64416 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement))* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency

around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64416 is a 0-day global. It was previously surveyed by the RUC in 2008. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 42 responses were received from a random sample of 3,891 clinicians (1.0 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending 1.81 wRVUs (survey 25th) and time of pre (19/1/5), intra (20 min) and post (15 min)***. This results in an IWPUT of 0.049.

Vignette

The vignette in the survey described a typical patient for code 64416 as someone with persistent, debilitating pain interfering with the ability to complete daily activities. A brachial plexus block with continuous infusion of an anesthetic is performed to relieve her pain and improve her function.

The specialty did note that only 55% of the survey respondents found the vignette to be typical. The Expert Panel concluded that this was because while the vignette was for a female patient with pain in her arm, the code can be used for treatment for when the pain is throughout the brachial plexus which is a set of nerves that goes from the spinal cord in the neck down throughout the arm. The top diagnosis code reported in the 2018v2 RUC database is G89, Pain, not elsewhere classified. Survey respondents also indicated that the code is used for pre-operative pain as well as post-operative pain management for various types of orthopedic surgeries. Based on these factors the low typical vignette rate seemed reasonable.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64416 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.81	2.10	2.20
Pre		23/5/5	
Intra	15	20	24
Post		15	

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 1.81 wRVUs (25th percentile)
- Time
  - Pre-time: Facility pre-service package #2 -adjusted (19/1/5)
  - Intra-time: 20 minutes (survey median)
  - Post-time 15 minutes (survey median)

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that recommended wRVU value and times appropriately reflected how the service is currently performed and it aligns well within and outside of the code family.

In drafting their recommendations, the Expert Panel considered a number of factors.

Current Value

- The Expert Panel agreed that the 25th percentile of 1.81, which is also the current value of the code was appropriate. The Expert Panel also noted that the intra time of 20 minutes was the same for both the current

survey as well as the previous survey conducted in 2008. This provides further evidence of the appropriateness of the recommendation.

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code, 62325 (*Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)*) which has a wRVU of 2.20, IWPUT of 0.1066 and intra time of 15 minutes. The reference code includes catheter placement, infusion and image guidance. While code 64416 includes catheter placement and infusion it does not include image guidance. Additionally, code 62325 is reported for more complex neuraxial nerve blocks while 64416 is used for peripheral nerve blocks. The Expert Panel agreed that the higher wRVU and IWPUT for the reference code was appropriate.

Other Code with Same wRVU Value and Similar Time

- The Panel identified a recently RUC-surveyed (2017) 0-day global code with wRVU of 1.81 and similar time. The Expert Panel noted the similar IWPUTs of the two codes, they believe this appropriately reflected the similar intensity and complexity between the two procedures. The Expert Panel believed code 36514 (which is included on the MPC list) aligns well with the surveyed code and that it supports the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
36514	Therapeutic apheresis; for plasma pheresis	000	1.81	20	0.0412	28,945
64416	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement**	**000**	**1.81**	**20**	**0.049**	**20,870**

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	N block inj intercost sng, addl level	0.60
64435	N block inj paracervical	0.75
64450	N block other peripheral	0.84
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	N block inj ilio-ing/hypogi	1.19
64420	N block inj intercost sng	1.24
64417	N block inj axillary	1.27
64447	N block inj fem single	1.40
64415	N block inj brachial plexus	1.42
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80
64449	N block inj lumbar plexus	1.80

64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other 0-day, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
62326	Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance	000	1.78	15	0.0816	7,763
62320	Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, cervical or thoracic; without imaging guidance	000	1.80	15	0.0830	10,537
62323	Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)	000	1.80	15	0.0800	738,694
64489	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by continuous infusions (includes imaging guidance, when performed)	000	1.80	20	0.0656	1,443
64646	Chemodenervation of trunk muscle(s); 1-5 muscle(s)	000	1.80	20	0.0676	7,062
64416	**Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement**	**000**	**1.81**	**20**	**0.049**	**20,870**
64490	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level	000	1.82	15	0.0858	247,465
32554	Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance	000	1.82	20	0.0543	16,651
62324	Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; without imaging guidance	000	1.89	15	0.0890	25,856
54150	Circumcision, using clamp or other device with regional dorsal penile or ring block	000	1.90	15	0.0866	246

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
62327	Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)	000	1.90	15	0.0866	2,316
64483	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level	000	1.90	15	0.0816	1,043,217
64463	Paravertebral block (PVB) (paraspinous block), thoracic; continuous infusion by catheter (includes imaging guidance, when performed)	000	1.90	20	0.0605	1,066
36555	Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age	000	1.93	15	0.0842	38
62321	Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)	000	1.95	15	0.0900	215,908

In summary, for CPT code CPT Code 64416 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement)* ***ASA recommends 1.81 wRVUs and 25/20/15 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☒ Multiple codes are used to maintain consistency with similar codes.
   - ☒ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 76942-26 (Global: XXX; wRVUs: 0.67; Time: 7/15/5)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64416

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 62610
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 57733 Percentage 92.21 %

Specialty CRNA Frequency 4189 Percentage 6.69 %

Specialty Pain Management Frequency 351 Percentage 0.56 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20,870 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization data

Specialty Anesthesiology Frequency 19244 Percentage 92.20 %

Specialty CRNA Frequency 1396 Percentage 6.68 %

Specialty Pain Management Frequency 117 Percentage 0.56 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:64417 Tracking Number Original Specialty Recommended RVU: **1.27**
Presented Recommended RVU: **1.27**
Global Period: 000 Current Work RVU: **1.44** RUC Recommended RVU: **1.27**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; axillary nerve

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male has a 3-year history of a painful mass in his deltoid that is interfering with his ability to complete activities of daily living. He has had poor control of his pain despite multiple medication trials and physical therapy. Due to his persistent, debilitating pain, an axillary nerve block is scheduled to relieve his pain and improve his function.

Percentage of Survey Respondents who found Vignette to be Typical: 53%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed procedure is marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified and placed at the site of the injection. A local anesthetic skin wheal is created. A needle is advanced towards the axillary nerve and correct position is confirmed. A local anesthetic and steroid is infiltrated around the nerve using intermittent aspiration and injection. The needle is removed, and the site is observed for bleeding and then covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and evidence of a successful block. A procedure note is dictated/written and medical record entries are made.

CPT Descriptor Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36620	000	1.00	**RUC Time**	577,293

CPT Descriptor 1 Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36556	000	1.75	**RUC Time**	450,710

CPT Descriptor 2 Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older

Other Reference CPT Code	Global	Work RVU	Time Source
62322	000	1.55	**RUC Time**

CPT Descriptor Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 15 **% of respondents:** 33.3 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 17.7 **%**

TIME ESTIMATES (Median)

	CPT Code: 64417	Top Key Reference CPT Code: 64486	2nd Key Reference CPT Code: **62323**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	7%	53%	33%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	64%	36%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	13%	47%	40%
Physical effort required	13%	80%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	53%	40%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	13%	75%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	38%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	38%	50%
Physical effort required	13%	50%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	50%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64417 (*Injection(s), anesthetic agent(s) and/or steroid; axillary nerve)* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64417 is a 0-day global. It is currently a Harvard-valued code that has not been previously surveyed and was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 45 responses were received from a random sample of 3,891 clinicians (1.1 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending 1.27 wRVUs (survey 25th) and time of pre (13/1/5), intra (10 min) and post (10 min)***. This results in an IWPUT of 0.069.

Vignette

The vignette in the survey described a typical patient for code 64417 as someone with a painful mass in his deltoid that is interfering with his ability to complete activities of daily living. He has had poor control of his pain despite multiple medication trials and physical therapy. Due to his persistent, debilitating pain, an axillary nerve block is scheduled to relieve his pain and improve his function. The specialty did note that only 53% of the survey respondents found the vignette to be typical. Survey respondents indicated that the code is also used for pre-operative pain as well as post-operative pain management for various types of orthopedic surgeries. Based on these factors the low typical vignette rate seemed reasonable.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64417 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.27	1.50	2.00
Pre		21/4/4	
Intra	5	10	18
Post		10	

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 1.27 wRVUs (25th percentile)
- Time
  - Pre-time: Facility pre-service package #1 -adjusted (13/1/5)
  - Intra-time: 10 minutes (survey median)
  - Post-time 10 minutes (survey median)

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that recommended wRVU value and times appropriately reflect how the service is currently performed and it aligns well within and outside of the code family.

In drafting their recommendations, the Expert Panel considered a number of factors.

Current Value

- The Expert Panel agreed that the 25th percentile of 1.27 which is less than the current wRVU of 1.44 is appropriate. The Expert Panel noted that this recommendation did increase the IWPUT to 0.069 from the current IWPUT of 0.0451. This was largely due to a decrease in the intra-service time (from 19 minutes to 10 minutes). This decrease in intra-time is accounted for in the recommended wRVU decrease from the current value. Since the code was previously Harvard-valued, they felt the surveyed time more appropriately reflects current practice and the resulting IWPUT was appropriate. This position is consistent with the RUC comments on the CY 2019 NPRM for code 95970 where they state that Harvard time "holds zero validity for comparison."

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code, 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed*)) which was recently surveyed (2014), has a wRVU of 1.27, IWPUT of 0.0781and intra-time of 10 minutes. The Expert Panel noted that the codes had the same intra time but the reference code had a slightly higher IWPUT. The reference code includes catheter placement, infusion and image guidance. They concluded it was appropriate for the two codes to be valued the same, at 1.27 wRVUs.

Other Code with Same wRVU Value and Similar Time

- The Panel identified three RUC-surveyed 0-day global codes with wRVU of 1.27 and similar time. The Expert Panel noted the similar IWPUTs of the two codes, they believed this appropriately reflected the similar intensity and complexity between the two procedures.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
58301	Removal of intrauterine device (IUD)	000	1.27	15	0.0473	1,496
64417	**Injection(s), anesthetic agent(s) and/or steroid; axillary nerve**	**000**	**1.27**	**10**	**0.0690**	**13,923**
64486*	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	000	1.27	10	0.0781	7,349
67505	Retrobulbar injection; alcohol	000	1.27	10	0.0781	181

* 64486 is also the top reference code

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	N block inj intercost sng, addl level	0.60
64435	N block inj paracervical	0.75
64450	N block other peripheral	0.84
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	N block inj ilio-ing/hypogi	1.19
64420	N block inj intercost sng	1.24
64417	**N block inj axillary**	**1.27**
64447	N block inj fem single	1.40
64415	N block inj brachial plexus	1.42
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80

64449	N block inj lumbar plexus	1.80
64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other 0-day, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	000	1.22	15	0.0644	50,886
40490	Biopsy of lip	000	1.22	15	0.0577	34,141
32562	Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day	000	1.24	10	0.0654	1,532
49082	Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance	000	1.24	10	0.0654	12,016
64417	**Injection(s), anesthetic agent(s) and/or steroid; axillary nerve**	**000**	**1.27**	**10**	**0.0690**	**13,923**
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	000	1.27	10	0.0781	7,349
67505	Retrobulbar injection; alcohol	000	1.27	10	0.0781	181
58301	Removal of intrauterine device (IUD)	000	1.27	15	0.0473	1,496
43450	Dilation of esophagus, by unguided sound or bougie, single or multiple passes	000	1.28	15	0.0363	72,504
46610	Anoscopy; with removal of single tumor, polyp, or other lesion by hot biopsy forceps or bipolar cautery	000	1.28	15	0.0378	166

In summary, for CPT code CPT Code 64417 (Injection(s), anesthetic agent(s) and/or steroid; axillary nerve) ***ASA recommends 1.27 wRVUs and 19/10/10 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
☒ Multiple codes are used to maintain consistency with similar codes.
☒ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 76942-26 (Global: XXX; wRVUs: 0.67; Time: 7/15/5)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64417

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty Neurology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 41769
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 33035 Percentage 79.08 %

Specialty CRNA Frequency 5309 Percentage 12.71 %

Specialty Neurology Frequency 1846 Percentage 4.41 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 13,923 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization data

Specialty Anesthesiology Frequency 11012 Percentage 79.09 %

Specialty CRNA Frequency 1770 Percentage 12.71 %

Specialty Neurology Frequency 615 Percentage 4.41 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

CPT Descriptor: Injection(s), anesthetic agent(s), and/or steroid; intercostal nerve, single level

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old female has a 2-year history of rib pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of intercostal nerve block is scheduled to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed procedure is marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The provider cleans the skin with an antiseptic solution, applies a sterile drape, and then performs the universal protocol ("time out") with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified and placed at the site of the injection. A local anesthetic skin wheal is created. A needle is advanced at an angle of approximately 20° cephalad to the skin until the rib is contacted. With the same angle of insertion, the needle is walked off the inferior border of the rib and advanced 3 mm to place the tip in the space containing the neurovascular bundle between the internal and innermost intercostal muscles. After negative aspiration, a local anesthetic is injected. The needle is removed, and the site is observed for bleeding and covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and evidence of a successful block. A procedure note is dictated/written and medical record entries are made.

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	4%	52%	35%	9%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	61%	30%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	13%	52%	35%
Physical effort required	4%	78%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	35%	52%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	15%	23%	46%	15%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	46%	46%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	23%	69%
Physical effort required	8%	46%	46%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	15%	77%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64420 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level)* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64420 is currently a Harvard-valued code that has not been previously surveyed. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM) and the American Academy of Physical Medicine & Rehabilitation (AAPM&R).

October 2018 RUC Meeting Recommendation Rationale

A total of 60 responses were received from a random sample of 2,452 clinicians (2.4 percent response rate). ASA, AAPM and AAPM&R convened an Expert Panel to review the survey data. ***The societies are recommending maintaining the current value of 1.18 wRVUs and time of pre (13/1/5), intra (10 min) and post (10 min)***. This results in an IWPUT of 0.060.

Vignette

The vignette described a typical patient for code 64420 as a 48-year-old female with a 2-year history of rib pain that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of intercostal nerve block is scheduled to relieve her pain and improve her function. 97% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64420 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.24	1.50	1.86
Pre		25/5/5	
Intra	8	10	15
Post		10	

After review of the reviewer comments of the societies original recommended wRVU of 1.24 and time inputs, the Expert Panel agreed to recommend the following revised work RVU and time recommendation:

- wRVU
  - 1.18 wRVU (recommending maintaining the current value)
- Time
  - Pre-time: Facility pre-service package #1 -adjusted (13/1/5)
  - Intra-time: 10 minutes (survey median)
  - Post-time 10 minutes (survey median)

Crosswalk

Our recommended work RVU is supported by a crosswalk to code **67810** (*Incisional biopsy of eyelid skin including lid margin*); [wRVU=1.18; time=11/13/3; IWPUT=0.0688; RUC 2011].

The Expert Panel also concluded that recommended wRVU value and align well within and outside of the code family.

Current Value

- The current value of code 64420 is 1.18 wRVU
- The recommended wRVU of 1.18, which is less than the survey 25th percentile of 1.24, maintains this value

Comparison to Other Codes

- The Expert Panel compared the recommendation for 64420 to other codes and identified other 0-day global codes with similar intra-time. These comparisons indicated the code was aligned with other codes of similar time and value.

CPT Code	Long Desc	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	000	1.14	15	0.059	146,808
45331	Sigmoidoscopy, flexible; with biopsy, single or multiple	000	1.14	15	0.0345	36,331
64420	**Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level**	**000**	**1.18**	**10**	**0.060**	**3,762**
67810	Incisional biopsy of eyelid skin including lid margin	000	1.18	13	0.0688	30,330
46606	Anoscopy; with biopsy, single or multiple	000	1.2	11	0.0443	2,185
36584	Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access	000	1.2	15	0.04	5,630
44385	Endoscopic evaluation of small intestinal pouch (eg, Kock pouch, ileal reservoir [S or J]); diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	1.2	15	0.037	1,359
57100	Biopsy of vaginal mucosa; simple (separate procedure)	000	1.2	15	0.0427	5,797
57500	Biopsy of cervix, single or multiple, or local excision of lesion, with or without fulguration (separate procedure)	000	1.2	15	0.06	7,650
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	000	1.22	15	0.0644	50,886
40490	Biopsy of lip	000	1.22	15	0.0577	34,141
32562	Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day	000	1.24	10	0.0654	1,532
49082	Abdominal paracentesis (diagnostic or therapeutic); without imaging guidance	000	1.24	10	0.0654	12,016

In summary, for CPT Code 64420 (Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level***) ASA, AAPM, and AAPM&R recommend 1.18 wRVUs and 19/10/10 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64420

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Interventional Pain Management How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 11286
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 4518 Percentage 40.03 %

Specialty Interventional Pain Management Frequency 1290 Percentage 11.43 %

Specialty Pain Management Frequency 1260 Percentage 11.16 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,762
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 1506 Percentage 40.03 %

Specialty Interventional Pain Management Frequency 430 Percentage 11.43 %

Specialty Pain Management Frequency 420 Percentage 11.16 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64420

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

SUMMARY OF RECOMMENDATION

CPT Code:64421 Tracking Number Original Specialty Recommended RVU: **0.60**
Presented Recommended RVU: **0.60**
Global Period: ZZZ Current Work RVU: **1.68** RUC Recommended RVU: **0.60**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, multiple, regional block, each additional level (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old female has a 3-year history of persistent rib pain following a fall that resulted in multiple rib fractures. The pain is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of intercostal nerve blocks involving multiple intercostal spaces is scheduled to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: After the initial intercostal nerve block, additonal intercostal nerve blocks are performed at other levels. After cleaning the skin with an antiseptic solution, 1-2 mL of dilute local anesthetic is infiltrated subcutaneously at the planned injection site at the inferior border of the rib. A needle is advanced at an angle of approximately 20° cephalad to the skin till the rib is contacted.With the same angle of insertion, the needle is walked off the inferior border of the rib and advanced 3 mm to place the tip in the space containing the neurovascular bundle between the internal and innermost intercostal muscles. After negative aspiration, local anesthetic is deposited at each of the sites. The needle is removed, and the sites are covered with a sterile occlusive dressing.

Description of Post-Service Work: N/A

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	46%	46%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code +64421 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, multiple, regional block, each additional level (List separately in addition to code for primary procedure*) is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide

further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code +64421is currently a Harvard-valued code 0-day global code. The new code has been changed to an add-on code reported with base code 64420. A ZZZ global period has been assigned to the new code. Code +64421 was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM) and the American Academy of Physical Medicine & Rehabilitation (AAPM&R).

October 2018 RUC Meeting Recommendation Rationale

A total of 60 responses were received from a random sample of 2,452 clinicians (2.4 percent response rate). ASA, AAPM and AAPM&R convened an Expert Panel to review the survey data. ***The societies are recommending 0.60 wRVUs and 10 minutes of intra-time.*** This results in an IWPUT of 0.060.

Vignette

The typical patient presents with persistent, debilitating pain, and receives a trial of intercostal nerve blocks involving multiple intercostal spaces. 97% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

+64421 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.00	1.24	1.50
Intra	8	10	15

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 0.60 wRVUs which is based on a crosswalk
- Time
  - 10 minutes intra time

The Panel noted that the survey intra-time for +64421 was the same as the surveyed intra-time for 64420. Similar intra-service time for the codes was appropriate since they both described a single injection of an intercostal nerve.

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

In drafting their recommendations, the Expert Panel considered a number of factors.

Crosswalk

- The Expert Panel selected the code 77063 (Screening digital breast tomosynthesis, bilateral (List separately in addition to code for primary procedure)) as the crosswalk. The ZZZ code has a wRVU of 0.60 wRVUs and intra-time of 8 minutes. It was reviewed by the RUC in 2014. The Expert Panel agreed that +64421 aligned well both for wRVW value and intensity/complexity factors.

Relationship to Base Code

- The Expert Panel tested the appropriateness of the recommended wRVU of 0.60 by backing out the pre and post time from the recommended wRVU for the base code of 64420. This resulted in a wRVU value of 0.67. While this value was a little higher than the recommended value, the Expert Panel found this to be additional evidence of the appropriateness of the recommended wRVU.
  - 1.24 – [(13x.0224) + (1x.0224) + (5x.0081) + (10x.0224)] = 0.67

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code, +64462 *(Paravertebral block (PVB) (paraspinous block), thoracic; second and any additional injection site(s) (includes imaging guidance, when performed) (List separately in addition to code for primary procedure)*) which has a wRVU of 1.10, IWPUT of 0.0733 and intra time of 15 minutes. The Expert Panel noted that the reference code carries more intra time so the higher value was for the reference code was appropriate.

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	**N block inj intercost sng, addl level**	**0.60**
64435	N block inj paracervical	0.75
64450	N block other peripheral	0.84
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	N block inj ilio-ing/hypogi	1.19
64420	N block inj intercost sng	1.24
64417	N block inj axillary	1.27
64447	N block inj fem single	1.40
64415	N block inj brachial plexus	1.42
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80
64449	N block inj lumbar plexus	1.80
64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other ZZZ, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
+77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)	ZZZ	0.54	15	0.0330	481,426
+96571	Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); each additional 15 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and	ZZZ	0.55	15	0.0367	3

	gastrointestinal tract)					
+64421	**Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, multiple, regional block, each additional level (List separately in addition to code for primary procedure)**	**ZZZ**	**0.60**	**10**	**0.060**	**17,692**
+77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)	ZZZ	0.60	15	0.0370	68,387
+77063*	Screening digital breast tomosynthesis, bilateral (List separately in addition to code for primary procedure)	ZZZ	0.60	8	0.0750	2,777,164
+78020	Thyroid carcinoma metastases uptake (List separately in addition to code for primary procedure)	ZZZ	0.60	20	0.0300	1,056
+95887	Needle electromyography, non-extremity (cranial nerve supplied or axial) muscle(s) done with nerve conduction, amplitude and latency/velocity study (List separately in addition to code for primary procedure)	ZZZ	0.71	20	0.0355	14,162

* Also, selected as the crosswalk

In summary, for CPT Code +64421 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, multiple, regional block, each additional level (List separately in addition to code for primary procedure*) ***ASA, AAPM, and AAPM&R recommend 0.60 wRVUs and 0/10/0 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 64420, Injection(s), anesthetic agent(s), and/or steriod; intercostal nerve, single level; 0-day global; 1.24 wRVU; time=19/10/10 (recommended at Oct 2018 RUC meeting)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64421

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Interventional Pain Management How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 53076
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Mediccare utilization

Specialty Anesthesiology Frequency 16799 Percentage 31.65 %

Specialty Interventional Pain Management Frequency 10483 Percentage 19.75 %

Specialty Pain Management Frequency 9787 Percentage 18.43 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 17,692 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilizationn

Specialty Anesthesiology Frequency 5600 Percentage 31.65 %

Specialty Interventional Pain Management Frequency 3494 Percentage 19.74 %

Specialty Pain Management Frequency 3262 Percentage 18.43 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64425 Tracking Number Original Specialty Recommended RVU: **1.19**
Presented Recommended RVU: **1.19**
Global Period: 000 Current Work RVU: **1.75** RUC Recommended RVU: **1.19**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old male has a 3-year history of pain in his groin following an open inguinal hernia repair that is interfering with his ability to complete activities of daily living. He has had poor control of his pain despite multiple medication trials and physical therapy. Due to persistent, debilitating pain, a trial of ilioinguinal /iliohypogastric nerve block is scheduled to relieve pain and improve function.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed procedure is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The skin is cleansed with an antiseptic solution, sterile drapes are applied and then the provider performs the universal protocol ("time out") with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are idnetified. The anterior superior iliac spine is palpated and the target insertion site is marked 2 cm medial and 2 cm inferior to the anterior superior iliac spine. A local anesthetic skin wheal is created and then a needle is advanced through the external oblique muscle. A loss of resistance is appreciated as the needle passes through the muscle to lie between it and the internal oblique. After the initial loss of resistance, the needle is advanced again until a loss of resistance is encountered as the needle passes through the internal oblique muscle and is in the plane between the internal oblique and the transversus abdominus muscle. Following negative aspiration, a local anesthetic and steroid is injected. The needle is removed, and the site is observed for bleeding and covered with a sterile occlusive dressing.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	84%	12%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	80%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	64%	28%
Physical effort required	4%	84%	12%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	92%	8%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	38%	25%	25%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	63%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	38%	38%	25%
Physical effort required	13%	75%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	63%	13%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64425 (*Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves)* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64425 is currently a Harvard-valued code that has not been previously surveyed. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA), the American Academy of Pain Medicine (AAPM) and the American Academy of Physical Medicine & Rehabilitation (AAPM&R).

October 2018 RUC Meeting Recommendation Rationale

A total of 54 responses were received from a random sample of 2,452 clinicians (2.2 percent response rate). ASA, AAPM and AAPM&R convened an Expert Panel to review the survey data. ***The societies are recommending 1.19 wRVUs (survey 25th) and time of pre (7/0/1), intra (11 min) and post (10 min)***. This results in an IWPUT of 0.073.

Vignette

The typical patient was describes as experiencing persistent, debilitating pain, a trial of ilioinguinal /iliohypogastric nerve block is scheduled to relieve pain and improve function. 94% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64425 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.19	1.30	1.59
Pre		24/5/5/	
Intra	10	11	15
Post		10	

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 1.19 wRVU (25th percentile)
- Time
  - Pre-time: Non-facility pre-service package #5 -adjusted (7/0/1)
  - Intra-time: 11 minutes (survey median)
  - Post-time 10 minutes (survey median)

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that recommended wRVU value and times appropriately reflect how the service is currently performed and it aligns well within and outside of the code family.

In drafting their recommendations, the Expert Panel considered a number of factors.

Current Value

- The Expert Panel agreed that the 25th percentile of 1.19 wRVUs which is less than the current wRVU of 1.75 is appropriate. The Expert Panel noted that this recommendation decreased the IWPUT to 0.073 from the current IWPUT of 0.0928. Since the code was previously Harvard-valued, they felt the surveyed time more appropriately reflects current practice and the recommended wRVU and resulting IWPUT was appropriate. This position is consistent with the RUC comments on the CY 2019 NPRM for code 95970 where they state that Harvard time "holds zero validity for comparison."

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code, 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed*)) which was surveyed in 2014, has a wRVU of 1.27,

IWPUT of 0.0781 and intra time of 10 minutes. The Expert Panel noted that the codes had the same intra time and a slightly higher IWPUT. They concluded the reference code supported the recommendation of 1.19 wRVUs for code 64425.

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	N block inj intercost sng, addl level	0.60
64435	N block inj paracervical	0.75
64450	N block other peripheral	0.84
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	**N block inj ilio-ing/hypogi**	**1.19**
64420	N block inj intercost sng	1.24
64417	N block inj axillary	1.27
64447	N block inj fem single	1.40
64415	N block inj brachial plexus	1.42
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80
64449	N block inj lumbar plexus	1.80
64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other 0-day global codes, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
45305	Proctosigmoidoscopy, rigid; with biopsy, single or multiple	000	1.15	10	0.0549	668
44382	Ileoscopy, through stoma; with biopsy, single or multiple	000	1.17	20	0.0262	1,520
67810	Incisional biopsy of eyelid skin including lid margin	000	1.18	13	0.0688	30,330
64425	**Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves)**	**000**	**1.19**	**11**	**0.073**	**7,404**
46606	Anoscopy; with biopsy, single or multiple	000	1.20	11	0.0443	2,185
36584	Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access	000	1.20	15	0.0400	5,630

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
44385	Endoscopic evaluation of small intestinal pouch (eg, Kock pouch, ileal reservoir [S or J]); diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	1.20	15	0.0370	1,359
57100	Biopsy of vaginal mucosa; simple (separate procedure)	000	1.20	15	0.0427	5,797
57500	Biopsy of cervix, single or multiple, or local excision of lesion, with or without fulguration (separate procedure)	000	1.20	15	0.0600	7,650

In summary, for CPT Code 64425 (*Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves)* ***ASA, AAPM, and AAPM&R recommend 1.19 wRVUs and 8/11/10 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64425

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty Pain Management How often? Commonly

Specialty Interventional Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 22212
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilizationn

Specialty Anesthesiology Frequency 7923 Percentage 35.66 %

Specialty Pain Management Frequency 2728 Percentage 12.28 %

Specialty Interventional Pain Management Frequency 2619 Percentage 11.79 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,404
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 2641 Percentage 35.66 %

Specialty Pain Management Frequency 909 Percentage 12.27 %

Specialty Interventional Pain Management Frequency 873 Percentage 11.79 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

SUMMARY OF RECOMMENDATION

CPT Code:64430 Tracking Number H11 Original Specialty Recommended RVU: **1.15**
Presented Recommended RVU: **1.15**
Global Period: 000 Current Work RVU: **1.46** RUC Recommended RVU: **1.15**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old female has a 2-year history of pudendal neuralgia that is interfering with her ability to complete activities of daily living. She has had poor control of her pain despite multiple medication trials and physical therapy. Due to her persistent, debilitating pain, a trial of pudendal nerve block is scheduled to relieve her pain and improve her function.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure is thoroughly explained to the patient ensuring the patient's understanding of the procedure and expected outcomes. The risks, benefits, and potential complications of the procedure are discussed. Informed consent is obtained and the appropriate instruments and materials are prepared. The patient changes into a gown and has a pelvic drape. The patient is placed in the dorsal lithotomy position and appropriate pelvic draping is completed.

Description of Intra-Service Work: A time out is performed. A bimanual examination is performed for determination of internal pelvic anatomy. Concentrated digital evaluation of the levator muscles, pelvic ligaments and the ischial spines is performed. The provider proceeds with povidone cleansing of the entire vaginal canal and cervix. The speculum is removed. A 10cc control syringe is filled with local anesthetic with or without epinephrine. A spinal needle is attached to the 10cc syringe. Sterile gloves are donned and the provider again palpates the ischial spine and sacrospinous ligament. Introduction of the needle guide / trumpet is performed aligning with the providers digital palpation of the injection site. The spinal needle is directed into the needle guide and an initial injection of the anesthetic is performed of the vaginal tissue. The needle is advanced through the vaginal epithelium to the sacrospinous ligament. Aspiration is performed to ensure no vascular perforation has occurred and further injection is performed. The needle is advanced again slightly monitoring for loss of resistance, signifying complete penetration of the sacrospinous ligament and entrance into the region of pudendal nerve. Aspiration is again performed to ensure no perforation of the major pelvic vessels. The anesthetic is injected slowly to monitor adverse effects of possible intravascular injection. The trumpet and needle are removed. A speculum is placed and hemostasis is confirmed at the injection site. The operator may choose to use more than 10cc of anesthetic and therefore the syringe may require refilling and repeat injection or a second syringe may be used. If bleeding is encountered, a large procto-swab is held in place to exert pressure on any bleeding sites. Proctoswabs are utilized for cleaning the posterior fourchette of any blood or extruded anesthetic.

Description of Post-Service Work: After the procedure is complete, the provider will evaluate the effects of the anesthetic on the nerve distribution. The provider monitors the patient for possible systemic reactions related to intravascular injection. Write post-procedure orders for care and pain medication. Create procedure note.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	33%	67%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	67%	22%
Physical effort required	11%	44%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	56%	33%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	12%	38%	12%	38%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	38%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	25%	63%
Physical effort required	0%	38%	63%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	38%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64430 is part of the larger Somatic Nerve Injection family, which represents revisions of descriptors and guidelines for codes 64400- 64450 and deletion of 3 codes to clarify reporting (ie, separate reporting of imaging guidance, number of units, change of CPT codes 64421 from a 0-day global to ZZZ).

Time

Pre-time package 1:Straightforward Patient/Straightforward Procedure (No anesthesia care). Added five minutes for the Dorsal Lithotomy position (then reduced by one minute due to survey data). Reduced SDW one minute due to survey data.

Post-time package 7a: 7A Local Anesthesia/ Straightforward Procedure. Reduced time by eight minutes due to survey data.

Other Reference Code
We included 64483 as another reference code on the SOR. The survey respondents chose this code eight times, the same number of respondents that chose CPT Code 62323.

Billed Together
CPT Code 64430 is not typically billed with another service, nor is it typically billed with an E/M (23%).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64430

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty obstetrics/gynecology How often? Commonly

Specialty anesthesiology How often? Commonly

Specialty pain management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,388
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database indicates 3,388 Medicare claims in 2017.

Specialty obstetrics/gynecology Frequency 949 Percentage 28.01 %

Specialty anesthesiology Frequency 712 Percentage 21.01 %

Specialty pain management Frequency 407 Percentage 12.01 %

Do many physicians perform this service across the United States? Yes

---

Presented Recommended RVU: **0.75**
Global Period: 000 Current Work RVU: **1.45** RUC Recommended RVU: **0.75**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 34-year-old female with an IUD presented for removal. The IUD string was not identified on exam and initial probing of the cervical canal was not tolerated by the patient. Cervical dilation under cervical anesthesia is required for retrieval.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure is thoroughly explained to the patient ensuring the patient's understanding of the need for the procedure. The risks, benefits, and potential complications of the procedure are discussed. Informed consent is obtained and the appropriate instruments and materials are prepared. The patient is placed in the dorsal lithotomy position and appropriate draping is completed.

Description of Intra-Service Work: The provider places a speculum into the vagina. The speculum is positioned so that the cervix is centered in the operative field. The cervix and lateral vagina are cleaned with an appropriate solution. A 10cc syringe is filled with local anesthetic with or without epinephrine. The provider places a single tooth tenaculum at the 12 o'clock position of the cervix to stabilize the organ. A spinal needle is attached to the 10cc syringe. Initial aspirations and then injections of the anesthetic are placed into the cervix at the 3 and 9 o'clock position or the 2, 4, 8, and 10 o'clock positions. The anesthetic is injected slowly to ascertain infiltration of the stroma of the cervix. Hemostasis is confirmed at each injection site after injection. After the procedure, often bleeding is encountered from the injection site causing the need to hold pressure with pronto-swabs until stable. Once the procedure is complete, the operator will wait for complete anesthetic effect.

Description of Post-Service Work: After the procedure is complete, the provider will evaluate the effects of the anesthetic on the nerve distribution to observe possible untoward effects. The provider monitors the patient for possible systemic reactions related to intravascular injection and possible hematoma development in the retroperitoneal space. Write post-procedure orders for care and pain medication. Create procedure note.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	50%	42%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	25%	67%
Physical effort required	8%	42%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	42%	42%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	45%	45%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	45%	36%	18%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	18%	73%
Physical effort required	9%	73%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	45%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64435 is part of the larger Somatic Nerve Injection family, which represents revisions of descriptors and guidelines for codes 64400- 64450 and deletion of 3 codes to clarify reporting (ie, separate reporting of imaging guidance, number of units, change of CPT codes 64421 from a 0-day global to ZZZ).

Time

CPT Code 64435 is typically peformed in the non facility setting, with minimal anesthesia care. As such, we selected pre time package 5 and removed 1 minute for no anesthesia care. Three minutes were added to positioning to account for the dorsal lithotomy positioning (survey data was 3 minutes).

Billed Together
CPT Code 64435 is not typically billed with another service, nor is it typically billed with an E/M (0%).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64435

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty obstetrics/gynecology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national number is not known

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 78 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database (2017 utilization)

Specialty obstetrics/gynecology Frequency 36 Percentage 46.15 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:64445 Tracking Number Original Specialty Recommended RVU: **1.47**
Presented Recommended RVU: **1.30**
Global Period: 000 Current Work RVU: **1.48** RUC Recommended RVU: **1.30**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, single

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 25-year-old female has just undergone a right trimalleolar fracture open reduction and fixation, and the surgeon consults the anesthesiologist for pain management in the recovery room. The planned technique is a sciatic nerve block, to which the patient consents.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed injection is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The skin is cleansed with an antiseptic solution and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created and placed at injection site.The skin at the proposed entry site is anesthetized with a small amount of local anesthetic via a small-gauge needle. An insulated stimulating needle is inserted through the skin in the gluteal region. A nerve stimulator is turned on and the patient is monitored for reports of paresthesia or appropriate muscle twitches in the leg in response to nerve stimulation. The current on the nerve stimulator is reduced to confirm proximity of the needle to the sciatic nerve and to reposition if necessary to maintain a muscle twitch in the appropriate distribution with a low current. Once correct needle position is obtained, the needle is aspirated to confirm the absence of blood. Following negative aspiration, administer a small test dose of local anesthetic, monitor the patient's VS, and question the patient about symptoms of intravascular local anesthetic injection. If there are no signs or symptoms of intravascular injection, inject local anesthetic in incremental doses with frequent aspiration to avoid intra-vascular injection. After completion of the injection, remove the needle. Observe the patient for any signs or symptoms of local anesthetic toxicity. After several minutes have passed, evaluate the initial effects of the sciatic nerve block by physical examination to determine if the patient is developing weakness, numbness, and relief of pain in the expected nerve distribution.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	6%	6%	61%	22%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	26%	42%	32%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	39%	45%
Physical effort required	17%	44%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	56%	34%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	20%	50%	30%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	40%	30%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	50%	40%
Physical effort required	10%	60%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	30%	50%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, single)* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64445 was previously surveyed by the RUC in 2009. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA) and the American Academy of Physical Medicine & Rehabilitation (AAPM&R).

October 2018 RUC Meeting Recommendation Rationale

A total of 68 responses were received from a random sample of 6,346 clinicians (1.0 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending a value of 1.30 wRVUs (25th percentile) and time of pre (7/1/1), intra (10 min) and post (6 min)***. This results in an IWPUT of 0.098.

Vignette

The typical patient has just undergone a right trimalleolar fracture open reduction and fixation, and the surgeon consults the anesthesiologist for pain management in the recovery room. 85% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64445 Highlights from Survey Data			
	25th Percentile	Median	75th Percentile
Work	1.30	1.51	1.83
Pre		15/3.5/4	
Intra	6	10	13.25
Post		6	

After review of the reviewer comments of the societies original recommended wRVU of 1.47 and time inputs, the Expert Panel agreed to recommend the following revised work RVU and time recommendations as interim and to resurvey for the January 2019 RUC meeting:

- wRVU
  - 1.30 wRVU based on survey 25th percentile
- Time
  - Pre-time: Non-facility pre-service package #5 (7/1/1); 1 minute added for positioning
  - Intra-time: 10 minutes (survey median)
  - Post-time 6 minutes (survey median)

Survey 25th Percentile

The specialties societies' recommendation of 1.30 is based on the survey's 25th percentile.

In summary, for CPT code CPT Code 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, single*) ***ASA and AAPM&R recommend 1.30 wRVUs and 7/10/6 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. An intravenous infusion is initiated and supplemental oxygen is provided. The site of the proposed injection is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with a antiseptic solution and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created at the planned needle insertion site. A Touhy needle is advanced toward the sciatic nerve. A nerve stimulator is attached to the needle and the needle is advanced until it is close to the nerve. A brisk motor response in the ankle, foot or toes is noted with less than 0.4 mA stimulation. A catheter is then advanced through the Tuohy needle until it is 3 – 10 cm beyond its tip. The electrical connection is then transferred to the catheter and nerve stimulation is again evaluated to confirm that the catheter is lying next to the nerve. The Tuohy needle is removed, the catheter secured in place and 15-20 ml of a local anesthetic is injected through the catheter. Block of the sciatic nerve is then assessed over the next 15-30 minutes and an infusion of a dilute local anesthetic is started. Subcutaneous tunneling, affixation, and dressing of the catheter must be done carefully as this area is prone to bacterial contamination both during and after the procedure.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62325	000	2.20	**RUC Time**

CPT Descriptor Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62323	000	1.80	**RUC Time**

CPT Descriptor Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64644	000	1.82	**RUC Time**	31,712

CPT Descriptor 1 Chemodenervation of one extremity; 5 or more muscles

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64483	000	1.90	**RUC Time**	1,043,217

CPT Descriptor 2 njection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level

Other Reference CPT Code	Global	Work RVU	Time Source
62324	000	1.89	**RUC Time**

CPT Descriptor Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; without imaging guidance

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 26 **% of respondents:** 54.1 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 16.6 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	12%	28%	60%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	44%	36%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	12%	32%	56%

Physical effort required	0%	46%	54%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	16%	48%	36%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	13%	88%	0%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	75%	13%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	25%	63%	13%
Physical effort required	0%	88%	13%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	88%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64446 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement))* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these

codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64446 was previously surveyed by the RUC in 2008. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 48 responses were received from a random sample of 3,894 clinicians (1.2 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending an interim value of 1.70 wRVUs and time of pre (13/1/5), intra (15 min) and post (6 min)***. This results in an IWPUT of 0.081.

The reviewers indicated that the code was surveyed more than 75% with imaging and recommended that the code should be sent back to CPT, imaging should be bundled and the code should be re-surveyed. The specialty agrees with this recommendation and is why they are recommending an interim value for this code. The interim recommended value is less than the survey 25th percentile.

Vignette

The typical patient is described as receiving a sciatic nerve block for post-operative pain control. 92% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64446 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.80	2.19	2.33
Pre		15/4/5	
Intra	10	15	19
Post		6	

After review of the reviewer comments, ASA is reducing its original recommendation of 1.80 wRVUs to:

- wRVU
  - 1.70 wRVUs
- Time
- Pre-time: Facility pre-service package #1 -adjusted (13/1/5)
- Intra-time: 15 minutes (survey median)
- Post-time 6 minutes (survey median)

Crosswalk

The interim recommended value is based on a crosswalk. Reviewers note that the intra-service time had decreased by 5 minutes from the previous RUC survey. The Expert Panel considered these comments and selected code **10035** (*Placement of soft tissue localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including image guidance, first lesion*) which has a wRVU of 1.70, time of 20/15/10, IWPUT of 0.0733 and 2015 RUC survey.

The Expert Panel noted that it provided a reasonable increment from 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, single*) to account for the "continuous infusion by catheter."

The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Other Comparison Codes

The Expert Panel also considered other 0-day RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned with these codes

CPT Code	Long Desc	Global	Work RVU	Intra Time	IWPUT	2017 Utilization

53855	Insertion of a temporary prostatic urethral stent, including urethral measurement	000	1.64	15	0.0839	1,385
36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older	000	1.7	15	0.0757	148,430
43201	Esophagoscopy, flexible, transoral; with directed submucosal injection(s), any substance	000	1.72	15	0.0716	240
43202	Esophagoscopy, flexible, transoral; with biopsy, single or multiple	000	1.72	15	0.0716	2,369
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	000	1.75	15	0.0841	450,710
57410	Pelvic examination under anesthesia (other than local)	000	1.75	15	0.0345	2,420

In summary, for CPT code CPT Code 64446 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement))* ***ASA recommends 1.70 wRVUs and 19/15/6 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☒ Multiple codes are used to maintain consistency with similar codes.
   - ☒ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 76942-26 (Global: XXX; wRVUs: 0.67; Time: 7/15/5)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64446

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 17631
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 16238 Percentage 92.09 %

Specialty CRNA Frequency 829 Percentage 4.70 %

Specialty Pain Management Frequency 291 Percentage 1.65 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,877
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilizationn

Specialty Anesthesiology Frequency 5413 Percentage 92.10 %

Specialty CRNA Frequency 276 Percentage 4.69 %

Specialty Pain Management Frequency 97 Percentage 1.65 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64446

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64447 Tracking Number Original Specialty Recommended RVU: **1.40**
Presented Recommended RVU: **1.29**
Global Period: 000 Current Work RVU: **1.50** RUC Recommended RVU: **1.10**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, single

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 30-year-old male undergoes a right anterior cruciate ligament repair under general anesthesia. In order to provide postoperative pain control and increase mobility in his knee, a femoral nerve block is performed. This "block" will allow earlier discharge from the recovery room, decreased postoperative pain, and earlier ambulation.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The proposed site of the nerve block is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The skin is cleansed with an antiseptic solution and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created and placed at injection site. The skin at the proposed entry site is anesthetized with a small amount of local anesthetic via a small-gauge needle. An insulated stimulating needle is advanced through the skin in the groin. The nerve stimulator is turned on and the paitent is monitored for reports of paresthesia or appropriate muscle twitches in the quadriceps in response to nerve stimulation. The current on the nerve stimulator is reduced to confirm proximity of the needle to the femoral nerve and the needle is repositioned if necessary to maintain a muscle twitch in the appropriate distribution with a low current. Once correct needle position is obtained, aspirate the needle to confirm the absence of blood. Following negative aspiration, administer a small test-dose of local anesthetic, monitor the patient's VS, and question the patient about symptoms of intravascular local anesthetic injection. If there are no signs or symptoms of intravascular injection, inject local anesthetic in incremental doses with frequent aspiration to avoid intravascular injection. After completion of the injection, remove the needle. Observe the patient for any signs or symptoms of local anesthetic toxicity. After several minutes have passed, evaluate the initial effects of the femoral nerve block by physical examination to determine if the patient is developing weakness, numbness, and relief of pain in the expected nerve distribution.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64486	000	1.27	**RUC Time**

CPT Descriptor Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62323	000	1.80	**RUC Time**

CPT Descriptor Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
23350	000	1.00	**RUC Time**	37,824

CPT Descriptor 1 Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64483	000	1.90	**RUC Time**	1,043,217

CPT Descriptor 2 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level

Other Reference CPT Code	Global	Work RVU	Time Source
62324	000	1.89	**RUC Time**

CPT Descriptor Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; without imaging guidance

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 27 **% of respondents:** 43.5 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 12.9 **%**

TIME ESTIMATES (Median)

	CPT Code: 64447	Top Key Reference CPT Code: 64486	2nd Key Reference CPT Code: 62323

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	12%	58%	27%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	46%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	19%	50%	31%
Physical effort required	12%	69%	19%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	50%	43%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	63%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	75%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	63%	38%
Physical effort required	25%	63%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	88%	13%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64447 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, single)* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64447 was previously surveyed by the RUC in 2009. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 62 responses were received from a random sample of 3,894 clinicians (1.5 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending an interim value of 1.29 wRVUs (survey 25th) and time of pre (13/1/5), intra (6 min) and post (5 min)***. This results in an IWPUT of 0.137.

The reviewers indicated that the code was surveyed more than 75% with imaging and recommended that the code should be sent back to CPT, imaging should be bundled and the code should be re-surveyed. The specialty agrees with this recommendation and is why they are recommending an interim value for this code. The interim recommended value is less than the survey 25th percentile.

Vignette

The typical patient receives a femoral nerve block for postoperative pain control and to increase mobility in their knee. This "block" will allow earlier discharge from the recovery room, decreased postoperative pain, and earlier ambulation. 95% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64447 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.29	1.51	1.80
Pre		12/3/3	
Intra	5	6	10
Post		5	

After review of the reviewer comments, ASA is reducing its original recommendation of 1.50 wRVUs to:

- wRVU
  - 1.29 wRVU based on survey 25th percentile
- Time
  - Pre-time: Facility pre-service package #1 - adjusted (13/1/5)
  - Intra-time: 6 minutes (survey median)
  - Post-time 5 minutes (survey median)

Survey 25th Percentile

The interim recommendation of 1.29 is based on the survey 25th percentile.

Comparison Codes

The Expert Panel also identified two codes as reasonable comparisons. The Expert Panel agreed with the survey respondents that the surveyed code is more intense and complex than these comparison codes. Therefor the recommendation for a slightly higher value for the surveyed code in comparison to the reference codes seemed appropriate.

Code #	Descriptor	2018 wRVU	2018 IWPUT	Intra Time (min)	2017 Utilization
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes	1.27	0.0781	10	7,349

	imaging guidance, when performed)				
67505	Retrobulbar injection; alcohol	1.27	0.0781	10	181

In summary, for CPT code CPT Code 64447 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, single)* ***ASA recommends an interim value of 1.29 wRVUs and 19/6/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☒ Multiple codes are used to maintain consistency with similar codes.
   ☒ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 76942-26 (Global: XXX; wRVUs: 0.67; Time: 7/15/5)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64447

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty Internal Medicine How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 676098
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilizationn

Specialty Anesthesiology Frequency 523232 Percentage 77.38 %

Specialty CRNA Frequency 56522 Percentage 8.36 %

Specialty Internal Medicine Frequency 54967 Percentage 8.13 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 225,366 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilizationn

Specialty Anesthesiology Frequency 174411 Percentage 77.39 %

Specialty CRNA Frequency 18841 Percentage 8.36 %

Specialty Internal Medicine Frequency 18322 Percentage 8.12 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64447

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64448 Tracking Number

Original Specialty Recommended RVU: **1.78**
Presented Recommended RVU: **1.60**
RUC Recommended RVU: **1.55**

Global Period: 000 Current Work RVU: **1.63**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter replacement)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male undergoes a right total knee replacement (CPT code 27447) under general anesthesia. The surgeon requests a block with continuous infusion to manage postoperative pain and facilitate rehabilitation. In order to provide postoperative pain control and increased mobility in his knee, a continuous femoral nerve block is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. An intravenous infusion is initiated and supplemental oxygen is provided. The site of the proposed injection is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injection is prepared. The skin is cleansed with an antiseptic solution and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created. An insulated Touhy needle is inserted through the skin and advanced towards the femoral nerve. Proper location of the needle is confirmed with the use of a nerve stimulator. A catheter is then advanced through the needle to lie next to the femoral nerve. Next, a local anesthetic is injected through the catheter with frequent aspiration and monitoring of the ECG and pulse oximeter to avoid the possibility of intravascular injection. The catheter is then secured in place and a sterile dressing is applied. Then a dilute local anesthetic infusion is initiated. Subcutaneous tunneling, affixation, and dressing of the catheter must be done carefully as this area is prone to bacterial contamination, both during and after the procedure.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	64%	9%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64448 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter replacement))* is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around

the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64448 was previously surveyed by the RUC in 2008. It was surveyed for the October 2018 RUC meeting by the American Society for Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 51 responses were received from a random sample of 3,894 clinicians (1.3 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending an interim value of 1.60 wRVUs and time of pre (13/1/5), intra (13 min) and post (6 min)***. This results in an IWPUT of 0.086.

The reviewers indicated that the code was surveyed more than 75% with imaging and recommended that the code should be sent back to CPT, imaging should be bundled and the code should be re-surveyed. The specialty agrees with this recommendation and is why they are recommending an interim value for this code. The interim recommended value is less than the survey 25th percentile and the current value of 1.63 wRVUs.

Vignette

The typical patient femoral nerve block to manage postoperative pain and facilitate rehabilitation after a total knee replacement. 88% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64448 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.78	2.00	2.20
Pre		14/4/5	
Intra	8	13	16
Post		6	

- **After review of the reviewer comments, ASA is reducing its original recommendation of 1.78 wRVUs to:**
- wRVU
  - 1.60 wRVU; this recommendation is less than the survey 25th percentile of 1.78 wRVUs and just slightly less than the current value of 1.63 wRVUs
- Time
  - Pre-time: Facility pre-service package #1 - adjusted (13/1/5)
  - Intra-time: 13 minutes (survey median)
  - Post-time 6 minutes (survey median)

Crosswalk

The interim recommended value is based on a crosswalk. Reviewers note that the intra-service time had decreased by 2 minutes from the previous RUC survey. The Expert Panel considered these comments and selected code **64488** (*Transversus abdominis plane (TAP) (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance when performed*) which has a wRVU of 1.60, time of 20/15/10, IWPUT of 0.0733 and 2015 RUC survey.

The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

In summary, for CPT code CPT Code 64448 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter replacement))* ***ASA recommends 1.60 wRVUs and 19/13/6 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☒ Multiple codes are used to maintain consistency with similar codes.
   - ☒ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 76942-26 (Global: XXX; wRVUs: 0.67; Time: 7/15/5)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64448

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Commonly

Specialty CRNA How often? Commonly

Specialty Pain Management How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 128265
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology Frequency 114566 Percentage 89.31 %

Specialty CRNA Frequency 12172 Percentage 9.48 %

Specialty Pain Management Frequency 834 Percentage 0.65 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 42,755 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology Frequency 38189 Percentage 89.32 %

Specialty CRNA Frequency 4057 Percentage 9.48 %

Specialty Pain management Frequency 278 Percentage 0.65 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64449 Tracking Number Original Specialty Recommended RVU: **1.80**
Presented Recommended RVU: **1.70**
Global Period: 000 Current Work RVU: **1.81** RUC Recommended RVU: **1.55**

CPT Descriptor: injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old female undergoes a left total knee replacement (CPT code 27447) under general anesthesia. The surgeon requests a block with a continuous infusion to manage post-operative pain and facilitate rehabilitation. In order to provide post-operative pain control and increased mobility in her knee, a continuous lumbar plexus block is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 61%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. An intravenous infusion is initiated and supplemental oxygen is provided. The site of the proposed injection is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The low back is prepped with a topical antiseptic and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created and placed at injection site. After infiltrating the skin and deeper tissues with local anesthetic using a small gauge needle, a Touhy needle designed to allow the introduction of a catheter is connected to a peripheral nerve stimulator and advanced to obtain stimulation of the lumbar plexus. At this point careful aspiration for blood and CSF is performed. A test dose of local anesthetic is administered to rule out IV or intrathecal injection. Between 15 and 30 ml of dilute local anesthetic is slowly injected through the needle, followed by insertion of an infusion catheter through the needle (about 5 cm past the tip of the needle). The patient is observed for signs of undesired epidural spread and associated hemodynamic changes, and for analgesia of the left leg and hip. The catheter is checked for intravascular and intrathecal placement and secured in place. Once correct function of the catheter is confirmed, a continuous infusion of a dilute local anesthetic is started.

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	29%	41%	24%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	41%	47%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	6%	29%	65%

Physical effort required	0%	47%	53%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	29%	53%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	75%	13%	13%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	43%	57%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	43%	57%
Physical effort required	0%	71%	2900%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	57%	43%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64449 (*Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)*) is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency

around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64449 was previously surveyed by the RUC in 2008. It was surveyed for the October 2018 RUC meeting by the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 36 responses were received from a random sample of 3,894 clinicians (0.90 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending a value of 1.70 wRVUs and time of pre (13/1/5), intra (14 min) and post (5 min)***. This results in an IWPUT of 0.088.

Vignette

The typical patient received a lumbar plexus block after knee surgery for post-operative pain management and to facilitate rehabilitation. 61% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64449 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.80	2.20	2.41
Pre		15/5/5	
Intra	8	14	20
Post		5	

After review of the reviewer comments, ASA is reducing its original recommendation of 1.80 wRVUs to:

- wRVU
  - 1.70 wRVU; this is less than the survey 25h percentile of 1.80 wRVUs and less than the current value of 1.81 wRVUs
- Time
  - Pre-time: Facility pre-service package #1 - adjusted (13/1/5)
  - Intra-time: 14 minutes (survey median)
  - Post-time 5 minutes (survey median)

Currently code 64446 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement)* and code 64449 have the same value. This recommendation maintains the same value for both codes. Both codes also had similar survey times, providing evidence of the appropriateness of maintaining that relationship.

Crosswalk

The interim recommended value is based on a crosswalk. The Expert Panel selected code **10035** (*Placement of soft tissue localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including image guidance, first lesion*) which has a wRVU of 1.70, time of 20/15/10, IWPUT of 0.0733 and 2015 RUC survey.

The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Other Comparison Codes

The Expert Panel also considered other 0-day RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned with these codes.

CPT Code	Long Desc	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
53855	Insertion of a temporary prostatic urethral stent, including urethral measurement	000	1.64	15	0.0839	1,385

36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older	000	1.7	15	0.0757	148,430
43201	Esophagoscopy, flexible, transoral; with directed submucosal injection(s), any substance	000	1.72	15	0.0716	240
43202	Esophagoscopy, flexible, transoral; with biopsy, single or multiple	000	1.72	15	0.0716	2,369
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	000	1.75	15	0.0841	450,710
57410	Pelvic examination under anesthesia (other than local)	000	1.75	15	0.0345	2,420

In summary, for CPT code CPT Code 64449 (*Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)*) ***ASA recommends 1.70 wRVUs and 19/14/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64449

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 52-year-old female complains of chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and a steroid.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The clinician obtains and reviews the medical record and any pertinent imaging studies, laboratory studies and medical information. The site of the proposed injection is identified and marked. The patient is moved to the procedure room. The clinician gowns, gloves and prepares supplies. The injectate is prepared. The skin is cleansed with an antiseptic solution and sterile drapes are applied. A universal protocol ("time out") is performed with the care team.

Description of Intra-Service Work: The appropriate skin and bony landmarks are identified. A local anesthetic skin wheal is created and placed at injection site. Palpate the posterior tibial artery. Direct the needle slightly posterior and inferior to the posterior tibial artery. Prior to injecting, aspirate the needle to ensure that vascular structures are not injected. Redirect the needle proximally and distally and repeat aspiration and injection. The needle is removed, and the site is observed for bleeding and covered with a sterile occlusive dressing. .

Description of Post-Service Work: The patient is observed for bleeding or any adverse effects and for evidence of successful block. A procedure note is dictated/written and medical record entries are made.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64486	000	1.27	**RUC Time**

CPT Descriptor Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64493	000	1.52	**RUC Time**

CPT Descriptor Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
20553	000	0.75	**RUC Time**	346,970

CPT Descriptor 1 Injection(s); single or multiple trigger point(s), 3 or more muscles

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
23350	000	1.00	**RUC Time**	37,824

CPT Descriptor 2 Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography

Other Reference CPT Code	Global	Work RVU	Time Source
20526	000	0.94	**RUC Time**

CPT Descriptor Injection, therapeutic (eg, local anesthetic, corticosteroid), carpal tunnel

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 20 **% of respondents:** 22.7 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 20.4 **%**

TIME ESTIMATES (Median)

	CPT Code: 64450	Top Key Reference CPT Code: 64486	2nd Key Reference CPT Code: 64493
Median Pre-Service Time	9.00	15.00	17.00
Median Intra-Service Time	5.00	10.00	15.00

Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	63%	32%	5%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	60%	30%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	5%	80%	15%
Physical effort required	0%	85%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	65%	25%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	56%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	72%	11%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	61%	28%
Physical effort required	6%	59%	35%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	83%	11%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Code 64450 (*Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch*) is part of Tab 9 which includes changes and revisions to the Somatic Nerve Injection family (codes 64400- 64450). CPT staff, at the request of the Editorial Board of the *CPT Assistant*, reached out to several specialties to request a code change application to provide further definition and descriptor transparency around the use of these codes. The new code family was approved at the May 2018 CPT Editorial Panel meeting and surveyed for the October 2018 RUC meeting.

Code 64450 was previously surveyed by the RUC in 2011. It was surveyed for the October 2018 RUC meeting by the American Academy of Neurology (AAN), the American Academy of Pain Medicine (AAPM), the American Academy of Physical Medicine & Rehabilitation (AAPM&R) and the American Society of Anesthesiologists (ASA).

October 2018 RUC Meeting Recommendation Rationale

A total of 88 responses were received from a random sample of 3,256 clinicians (2.7 percent response rate). ASA convened an Expert Panel to review the survey data. ***The society is recommending 0.84 wRVUs and time of pre (7/0/1), intra (10 min) and post (5 min)***. This results in an IWPUT of 0.056.

Vignette

The vignette describes a typical patient experiencing a chronic burning pain and a tingling sensation in the plantar aspect of her right foot. Clinical examination is consistent with tarsal tunnel syndrome. The decision is made to perform a therapeutic injection about the posterior tibial nerve utilizing local anesthetic and a steroid.

78% of the survey respondents found the vignette to be typical.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

64450 Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.00	1.34	1.80
Pre		21/5/5	
Intra	5	10	15
Post		5	

The survey 25th percentile is higher than the current value of 0.75 wRVUs. The Expert Panel considered recommending the 25th percentile which they felt to be approximating a reasonable value for the service. They also noted that the intra-time doubled from 5 minutes to 10 minutes since the last survey. The Expert Panel concluded that this increase in intra-time supported a higher wRVU.

After a robust discussion the Expert Panel agreed to recommend:

- wRVU
  - 0.84 work RVUs based on a crosswalk to code 12001
- Time
  - Pre-time: Non-facility pre-service package #5 (7/0/1)
  - Intra-time: 10 minutes (survey median)
  - Post-time 5 minutes (survey median)

The Expert Panel discussed how in general the treatment for pain conditions has become more complex as the opioid crisis has escalated, and treatment and coverage for other non-pharmacologic and non-interventional strategies has been limited. With worsening pain, this impacts mobility, and in general has led to a more sedentary population with increase in co-morbidities of diabetes, hypertension and obesity. These findings, particularly the increase in BMI, have led to increases in the technical skill and judgment necessary to perform the procedure as well as the associated psychological stress to reduce risk of complications, such as pneumothorax or intravascular complication.

The Expert Panel concluded that these values and times appropriately reflected how the service is currently performed. In drafting their recommendations, the Expert Panel considered a number of factors.

Crosswalk

- The Expert Panel selected a value that was less than the survey 25th percentile of 1.00 wRVUs; crosswalking the recommendation of 0.84 wRVUs to code 12001 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less*). This 0-day global code was reviewed by the RUC in 2010 and also has 10 minutes intra-service. It has an IWPUT of 0.0585. The Expert Panel believes that this is an appropriate crosswalk not only because it matches intra-service time but also because of similarity in complexity and intensity. The Expert Panel does believe that the surveyed code 64450 is a somewhat more intense/complex than 12001.

Reference Code

- The Expert Panel also concluded that the recommendation aligned well with the top reference code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)*) which has a wRVU of 1.27, IWPUT of 0.0781 and intra time of 10 minutes. The Expert Panel noted that the codes had the same intra time and the reference code had a slightly higher IWPUT. The recommended value represents an appropriate rank order and alignment.

Other Codes in the Somatic Nerve Injection Family

- The Expert Panel also concluded the recommendation maintained rank order in the Somatic Nerve Injection family.

Code#	Description	Proposed wRVU
+64421	N block inj intercost sng, addl level	0.60
64435	N block inj paracervical	0.75
64450	**N block other peripheral**	**0.84**
64405	N block inj occipital	0.94
64408	N block inj vagus	0.94
64418	N block inj suprascapular	1.10
64400	N block inj trigeminal	1.14
64430	N block inj pudendal	1.15
64425	N block inj ilio-ing/hypogi	1.19
64420	N block inj intercost sng	1.24
64417	N block inj axillary	1.27
64447	N block inj fem single	1.40
64415	N block inj brachial plexus	1.42
64445	N block inj sciatic sng	1.47
64448	N block inj fem cont inf	1.78
64446	N blk inj sciatic cont inf	1.80
64449	N block inj lumbar plexus	1.80
64416	N block cont infuse b plex	1.81

Rank Order

- The Expert Panel also considered other 0-day, RUC reviewed codes outside of the Somatic Nerve Injection family with similar intra-time and concluded that the recommendation aligned well with these codes and provided further evidence of the appropriateness of the recommendation.

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
20553	Injection(s); single or multiple trigger point(s), 3 or more muscles	000	0.75	10	0.0441	346,970
20610	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); without ultrasound guidance	000	0.79	5	0.1006	681,9323
11901	Injection, intralesional;	000	0.80	13	0.046	69,094

CPT Code	Long Descriptor	Global	Work RVU	Intra Time	IWPUT	2017 Utilization
	more than 7 lesions					
11100	Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion	000	0.81	12	0.0488	3,646,411
69100	Biopsy external ear	000	0.81	12	0.0451	155,215
69220	Debridement, mastoidectomy cavity, simple (eg, routine cleaning)	000	0.83	10	0.0651	52,818
64450	**Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch**	**000**	**0.84**	**10**	**0.056**	**413,282**
65222	Removal of foreign body, external eye; corneal, with slit lamp	000	0.84	7	0.0944	27,017
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	000	0.84	10	0.0585	189,564
45330	Sigmoidoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	000	0.84	10	0.0217	54,322
11950	Subcutaneous injection of filling material (eg, collagen); 1 cc or less	000	0.84	15	0.0261	7
51720	Bladder instillation of anticarcinogenic agent (including retention time)	000	0.87	5	0.1199	192,279
20604	Arthrocentesis, aspiration and/or injection, small joint or bursa (eg, fingers, toes); with ultrasound guidance, with permanent recording and reporting	000	0.89	10	0.0581	40,141
57160	Fitting and insertion of pessary or other intravaginal support device	000	0.89	15	0.0268	90,878

In summary, for CPT code CPT Code 64450 (*Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch*) ***the societies recommend 0.84 wRVUs and 8/10/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Existing code 64450

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology	How often? Commonly
Specialty Nurse Practitioners	How often? Commonly
Specialty Pain Management	How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 945589
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on relative volume of Medicare utilization

Specialty Anesthesiology	Frequency 248974	Percentage 26.33 %
Specialty Nurse Practitioners	Frequency 122927	Percentage 13.00 %
Specialty Pain Management	Frequency 115646	Percentage 12.23 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 378,236 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2017 Medicare utilization

Specialty Anesthesiology	Frequency 99589	Percentage 26.32 %
Specialty Nurse Practitioners	Frequency 49171	Percentage 13.00 %

Specialty Pain Management Frequency 46258 Percentage 12.22 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64450

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

CPT Code:___64400_____
Specialty Society_____AAN, ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64400 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 32% of the time.

4. What specialty is the dominant provider in the nonfacility? *Neurology – 59%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *67%*
   Is the dominant provider in the nonfacility different then for the global? *No.*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are

not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code). *5 minutes*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

    N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    N/A

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Table, exam - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here: *Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).*

18. Please include an explanation of each line item:

Code	Supply	64400
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SC028	needle, 18-26g 1.5-3.5in, spinal	For performing the procedure
SH021	bupivacaine 0.25% inj (Marcaine)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

CPT Code:___64415_____
Specialty Society_____ASA_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, single

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64415 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 1% of the time.

4. What specialty is the dominant provider in the nonfacility? *Neurology – 34%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *This service is provided in the non-facility setting 2% of the time.*
   Is the dominant provider in the nonfacility different then for the global? *Yes. For the global, the dominant specialty is Anesthesiology (87%)*
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *5 minutes*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Table, exam – default
    Nerve stimulator (eg, for nerve block) – default
    ECG, 3-channel (with SpO2, NIBP, temp, respt) – default
    Mayo stand - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here:
Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).

18. Please include an explanation of each line item:

Code	Supply	64415
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH047	lidocaine 1%-2% inj (Xylocaine)	For performing the procedure
SH022	bupivacaine 0.5% inj (Marcaine)	For performing the procedure
SC038	needle, epidural (RK)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SD269	Grounding pad	For performing the procedure
SB019	drape-towel, sterile 18in x 26in	For sterile prep
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection(s), anesthetic agent(s) and/or steroid; axillary nerve

Global Period:__0___ Meeting Date: __October 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   An Expert Panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations. The Expert Panel was composed of clinicians from across the US practicing in small and large private practices and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64417 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   No it is billed with an E/M office visit 2% of the time.

4. What specialty is the dominant provider in the nonfacility? *Neurology – 48%*
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? *This service is provided in the non-facility setting less than 10% of the time.*

   Is the dominant provider in the nonfacility different then for the global? *For the global, the dominant specialty is Anesthesiology (79%)*

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are

not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

   Is the dominant provider in the nonfacility different then for the global? *For the global, the dominant specialty is Anesthesiology (37%)*

   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

   We are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies. Based on our Expert Panel review we identified a number of direct PE inputs (largely supplies) that are typically used when providing this service in the non-facility environment that are not currently included. We have confirmed that the added PE clinical labor tasks, supplies, and equipment are not included in the current inputs or packages and that there is no duplication.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code) *5 minutes*
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here: *We recommend 5 minutes for obtaining vital signs. The following vital signs are collected: heart rate, blood pressure, body mass index, temperature, and oxidation level.*

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. *N/A*

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    Table, exam – default
    Nerve stimulator (eg, for nerve block) – default
    ECG, 3-channel (with SpO2, NIBP, temp, respt) – default
    Mayo stand - default

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

17. If there is any other item on your spreadsheet that needs further explanation please include here:
Consent is obtained in the pre-service period of the service period on the day of the procedure (CA011), in addition to being obtained in the pre-service period (CA004).

18. Please include an explanation of each line item:

Code	Supply	64445
SA041	pack, basic injection	For performing the procedure
SA048	pack, minimum multi-specialty visit	For day of procedure
SK075	skin marking pen, sterile (Skin Skribe)	For performing the procedure
SH023	chlorhexidine 0.12% (Peridex)	For sterile prep
SH022	bupivacaine 0.5% inj (Marcaine)	For performing the procedure
SC053	syringe 20ml	For performing the procedure
SA088	tray, surgical skin prep, sterile	For sterile prep
SD050	electrode needle, injectable (Myoject)	For performing the procedure
SJ081	swab, patient prep, 1.5 ml (chloraprep)	For sterile prep

You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   Using the current direct PE inputs of code 64421 as the reference code

3. Is this code(s) typically billed with an E/M service?

   No.

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: *N/A*

5. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: *N/A*

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: *N/A*

7. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: *N/A*

8. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. *N/A*

9. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

10. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: *N/A*

11. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: *N/A*

12. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: *N/A*

13. If there is any other item on your spreadsheet that needs further explanation please include here: *N/A*

14. Please include an explanation of each line item: *N/A*

CPT Code:___64408_____
Specialty Society_____AAOHNS_____

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

Global Period:__000___ Meeting Date: ___September 2018_____

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialties formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisors and multiple clinical experts who practice in the areas of oral and maxillofacial surgery and general otolaryngologists. The expert panel members also practice in settings that vary by size, geography, and represent both private and academic settings.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   We utilized the existing PE inputs as a reference for CPT Code 64408.

3. Is this code(s) typically billed with an E/M service? **No**
   Is this code(s) typically billed with the E/M service in the nonfacility? **No**
   (Please see provided data in PE Subcommittee folder)

4. What specialty is the dominant provider in the nonfacility? **Otolaryngology**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? **91%**
   Is the dominant provider in the nonfacility different then for the global? **No**
   (Please see provided data in PE Subcommittee folder)

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

Pre time: we are requesting five minutes in the non-facility to schedule space for the procedure. This is a necessary activity for staff to complete in order to ensure a time block in the facility to conduct the procedure.

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.

Pre time – see rationale above

Intra time – time requested is below existing

Post time – time requested is the same as existing

Supplies – we have removed the injection pack as it included materials not needed for the procedure. We replaced this with the individual items we do need such as the blunt tip needle to draw up the local anesthetic, an alcohol pad to clean the injection site, one spinal needle to inject, gauze to hold pressure after the injection, a Band-Aid for the injection site.

Equipment – is reduced from existing inputs

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   Staff must take the following vitals: Heart rate, blood pressure and pulse oximetry

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Staff are present during the entire procedure, handing the physician the syringe, handing gauze and holding pressure to control bleeding and prevent a hematoma and passing the dressing supply.

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

    Existing PE was all lumped into the assist during procedure line item. We have divided out clinical staff activities for the necessary activities and assigned the standard time for those activities per the PE guidelines. The intra time for this procedure is only 5 minutes, so the prior 28 minutes for intra assisting was clearly not accounting for only directly assisting during the procedure.

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    The only equipment recommended is the exam chair EF008. The formula chosen is the "default" PE formula, as it is not highly technical equipment.

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

17. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

18. Please include an explanation of each line item:

Line 33 – greet patient, gown them and ensure any records needed are available.
Line 34 – obtain 3 vitals: Heart rate, blood pressure and pulse oximetry
Line 35 – provide education and consent to patient prior to procedure.
Line 37 – prepare the room for the patient's arrival and set up materials needed for procedure.
Line 49 – the staff are assisting directly during the entire 5 minute procedure handing the physician the syringe, handing gauze and holding pressure to control bleeding and prevent a hematoma and passing the dressing supply.
Line 60 – patients are monitored for 30 minutes after the procedure, so the standard time of 15 minutes per hour was reduced to accurately reflect 30 minutes of monitoring (7.5 rounded up).
Line 63 – staff clean the room and chair after the procedure.
Line 67 – check dressings, wounds – ensure there is no hematoma after procedure
Line 73 – review home care instructions – review potential signs to look for and what the patient will experience the days following procedure. Also when to remove bandaid and when they can shower, etc.
Line 84 – conducting phone calls a day or two after procedure to make sure the patient is doing well and no complications have arisen.
Line 103 – multi-specialty pack – used for prepping the room during procedure, gowning, and maintaining a safe environment (gloves).
Line 104 – spinal needle – used to inject the vagus nerve
Line 105 – needle, blunt tip – used to draw up the bupivacaine
Line 106 – syringe – used to draw up the bupivacaine
Line 107 – bupivacaine – local anesthetic to numb around the vagus nerve
Line 108 – alcohol swab – used to clean the injection site before and after the procedure.
Line 109 – Bandaid – used to cover the injection site after the procedure.
Line 110 – gauze non-sterile – used to apply pressure after the injection is complete.
Line 119 – exam chair – required for the procedure as the patient sits in it during the injection and the headrest is used for positioning the neck.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

Global Period: 000 **REVISED** **Meeting Date:** October 2018

CPT Long Descriptor(s):

64430 *Injection, anesthetic agent; pudendal nerve*

64435 *Injection, anesthetic agent; paracervical (uterine) nerve*

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACOG, ASA and AAPM convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these injection procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   CPT Codes 64430 and 64435 are existing CPT codes. As such, we included the current direct practice expense inputs on the PE spreadsheet.

3. **Is this code(s) typically billed with an E/M service?**
   Is this code(s) typically billed with the E/M service in the nonfacility?
   (Please see provided data in PE Subcommittee folder)

   These services are not typically reported with E/M:
   64430 – 23%
   64435 – 0%

   These services are not typically reported with E/M in the nonfacility:
   64430 – 43%
   64435 – 0%

4. **What specialty is the dominant provider in the nonfacility?**
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different then for the global?
   (Please see provided data in PE Subcommittee folder)

   OB/GYN is the dominant provider in the nonfacility:
   64430 – 28%
   64435 – 46%

OB/GYN is also the dominant provider for the globals in the nonfacility:
64430 – 39%
64435 – 67%

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   N/A

6. **If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), you must provide compelling evidence. Please explain if the increase can be entirely accounted for because of an increase in physician time.**

   N/A

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

8. **How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? (please use this time rather than 5 minutes in your reference code)**
   The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   Prior to CMS increasing the vital signs to 5 minutes there were 3 minutes for obtain vital signs. We are recommending 5 minutes for obtain vital signs, based on the vital signs standards (4-6). The vital signs for these procedures include: height, weight, blood pressure and heart rate.

9. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

   Nurse supplies physician with needed supplies and instruments. Assists with fluid management. Chaperone.
   Note: Patient is in dorsal lithotomy position throughout the procedure.

10. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

    N/A

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

N/A

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

We are recommending a new supply item, "Paracerv/Pudendal Block Tray, Sterile (Medline Item #BXT4540AH)" which is specifically designed for vaginal injection procedures. The needle guide is utilized to safely locate insertion of the needle for anesthetic delivery. It appears the existing CMS inputs do not describe this safety guide technology.

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

N/A

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EF023 table, exam – Default
EQ168 light, exam – Default
EF027 table, instrument, mobile - Default
**Note: Because we are using the default equipment formula, CA022 time is not included in the equipment formulas. However, the patient does recover in the room, so that time is not being captured.*

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

The patient recovers for approximately 15 minutes after the procedure, with the nurse coming to check in on the patient. We are requesting 3 minutes for post procedure monitoring (instead of 3.75 minutes). **See note in #15.*

Post procedure phone call is to check on the effects of the medication, muscle weakness, etc.

17. If there is any other item on your spreadsheet that needs further explanation please include here:

N/A

18. Please include an explanation of each line item:

SA048	pack, minimum multi-specialty visit	Patient gown, exam table paper, pillow case
SA051	pack, pelvic exam	SJ032 lubricating jelly SK052 pad, mini SD118 specula, vaginal SJ052 swab, procto
SB006	drape, non-sterile, sheet 40in x 60in	Patient drape
SH021	bupivacaine 0.25% inj (Marcaine)	Anesthetic injected
SJ052	Swab, procto	Hemostasis and fluid management (2 additional from the SA051)
SJ043	Povidone swabsticks	Sterilization of the operative site
NEW	Paracerv/Pudendal Block Tray, Sterile	Kit includes: 20g 6" needle w/ 1/4" spacer, 10cc control syringe, 22g 1 1/2" needle, needle guide, gauze sponge and underpad

CPT Code: 64430 (ACOG, ASA and AAPM)
64435 (ACOG)

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

Global Period: 000 **Meeting Date:** October 2018

CPT Long Descriptor(s):

64430 *Injection, anesthetic agent; pudendal nerve*

64435 *Injection, anesthetic agent; paracervical (uterine) nerve*

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   ACOG, ASA and AAPM convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for these injection procedures.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   CPT Codes 64430 and 64435 are existing CPT codes. As such, we included the current direct practice expense inputs on the PE spreadsheet.

3. **Is this code(s) typically billed with an E/M service?**

   These services are not typically reported with E/M:
   64430 – 23%
   64435 – 0%

4. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   We are recommending 8 minutes of pre service time for these 000 day services.
   - CA001 Complete pre-service diagnostic and referral forms – 3 min
     Anesthesia requires CBC, pregnancy test
   - CA004 Provide pre-service education/obtain consent – 5 min
     Consent is completed in the office and sent to the hospital

5. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   N/A

6. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

   N/A

7. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

   N/A

8. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

   N/A

9. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

   N/A

10. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

    N/A

11. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

    N/A

12. **If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:**

    N/A

13. If there is any other item on your spreadsheet that needs further explanation please include here:
