   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55845

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty UROLOGY How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 750 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 299
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology	Frequency 450	Percentage 100.00 %	
Specialty	Frequency	Percentage	%
Specialty	Frequency 0	Percentage	%

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 55845

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55866 Tracking Number H8 Original Specialty Recommended RVU: **27.00**
Presented Recommended RVU: **22.46**
Global Period: 090 Current Work RVU: **22.46** RUC Recommended RVU: **22.46**

CPT Descriptor: Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed; (Do not report 55866 in conjunction with 38571 if performed at the same session) (For open procedure, use see 55840, 55842, 55845) (For laparoscopy, surgical prostatectomy, simple subtotal, use 55867)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old male with a prostate-specific antigen (PSA) level of 3.5 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 7 in both lobes. He is counseled on the risks and benefits of surgery versus radiation and has chosen robotic-assisted laparoscopic radical prostatectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 98% , In the ASC 1%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 4% , Overnight stay-less than 24 hours 63% , Overnight stay-more than 24 hours 32%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 91%

Description of Pre-Service Work: On the day before the surgery, review patient's medical record, preoperative lab results, transrectal ultrasound images, and pathology reports. Write preoperative orders and send electronically to the hospital. Dictate a preoperative H&P. On the day of surgey, review the surgical procedure and postoperative recovery in and out of the hospital with the patient and/or family. Answer questions from the patient and/or family and obtain informed consent. Discuss the expected duration of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) with the anesthesiologist. Verify the availability of all necessary instruments. Review the position of the robotic arms, surgical console pedals, and hand controls and adjust as necessary. General anesthesia is induced. Prepare and drape the abdomen, genitalia, and perineum in standard fashion. The patient is placed in dorsal lithotomy position. Pad patient's wrists, elbows, shoulders, and legs and place and test sequential compression devices. Place both legs in stirrups, which are adjusted to assure proper positioning, and tuck both arms under sheets. Then place the patient in the maximal Trendelenburg position and pad all pressure points and adjust as needed. Once patient's position is satisfactory, level the table. The surgeon scrubs and gowns.

Description of Intra-Service Work: Place a urinary catheter into the bladder and inflate the balloon. Make a suprapubic incision and introduce a needle. Confirm an intraperitoneal position and create a pneumoperitoneum. Place a midline trocar and insert a zero-degree lens camera. Inspect the abdomen and pelvis for visceral injury or abnormal anatomy. Make four additional incisions after appropriate measurements and place four additional trocars under direct vision. Adjust the table to place the patient in a steep Trendelenburg position and advance the robot. Dock the four robotic arms individually and check pressure points. Make appropriate adjustments to the robotic arms at the surgical console. Next, introduce the laparoscope and dissect the seminal vesicles and vas deferens. Incise the peritoneum at the reflection point of the anterior rectum and the posterior bladder. Identify the vas deferens on each side and then divide. Carefully dissect the seminal vesicles using the harmonic scalpel to divide all bleeding vessels until the structures are completely freed. Dissect the space just posterior to the seminal vesicles to open Denonvilliers' fascia to reveal a prerectal fat plane. Turn attention to complete mobilization of the opening of the peritoneum and mobilization of the bladder. Divide the median umbilical ligaments and urachus close to the umbilicus. Use careful blunt dissection to reflect the bladder away from the abdominal wall and expose

the endopelvic fascia. Clear away the fat overlying the endopelvic fascia and incise the endopelvic fascia bilaterally to free the prostate away from the lateral pelvic side wall. Circumscribe, cauterize, and divide the superficial dorsal vein complex and identify and dissect the apex of the prostate. Ligate the deep dorsal vein complex with sutures or divide with an endoscopic stapling device. Identify the bladder neck-prostate junction using a variety of maneuvers and then separate the bladder from the prostate on both sides. Identify the bladder neck and open. Bring the catheter through the bladder neck and hold anteriorly, exposing the posterior bladder neck, which is then divided. Carefully separate the remainder of the prostate off of the bladder posteriorly and open the tissue overlying the seminal vesicles. Withdraw these structures into the area of dissection and use as traction. Isolate, cauterize, or clip the lateral vascular pedicles to the base of the prostate and bladder and then divide. Identify both neurovascular bundles and meticulously and carefully dissect them off of the prostate surface from the base to the apex of the gland. Divide the dorsal vein complex using sharp dissection around the apex of the prostate. Rock the prostate back and forth and continue dissection along the lateral pedicle plane to define the apex of the prostate posteriorly. Identify the urethra and use sharp dissection to divide the anterior and posterior urethra and the rectourethralis muscle. Unfasten the final attachments and put the specimen into the endosac and place out of the surgical field. Decrease the pneumoperitoneum and inspect the entire surgical field for evidence of bleeding. Once hemostasis is obtained, reconstruct the bladder neck with multiple interrupted sutures and perform the vesicourethral anastomosis using interrupted sutures. Pass a catheter into the bladder and test the anastomosis by placing 200 ml of saline into the bladder to distend it. Place a drain through one of the abdominal side ports. Inspect all four trocar sites and all surgical sites at 5 mm Hg pressure before the trocars are removed under direct vision. Extract the specimen by enlarging the midline incision and transferring the endosac bag to this area, where it is removed. Close the rectus fascia using suture, inject local anesthetic in all five of the trocar incisions, and close the trocar incisions with interrupted 2-0 nylon sutures. Place sterile dressings over each incision and secure the catheter to the patient's thigh with a catheter strap.

Description of Post-Service Work: Apply dressings. Transfer the patient from the operating table to the postoperative stretcher. Accompany patient to the recovery area and transfer to the recovery area bed. Write postoperative orders and review recovery area care and medications with recovery staff. Discuss results of the procedure, expected outcome, and planned postoperative care in and out of the hospital with patient's family. After patient is awake, discuss the outcome of the surgery with the patient. Notify the referring physician of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). Dictate a detailed operative report for the patient's medical record. After discharge from recovery, examine the patient and check the wound and patient's progress. Review hospital notes (ie, nursing, pharmacy, dietary, discharge planner). Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write a progress note for patient's medical record. During the patient's stay in the hospital, examine the patient and check laboratory results and vital signs. Check urine output and output from the drain and remove the drain if appropriate. Check wounds and dressings and discuss patient's progress with the patient and/or family. Review patient's hospital medical records. Discuss postoperative care of the wound at home. Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write progress notes for the patient's medical record. On day of discharge, examine the patient. Check the wounds and patient's progress. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the wound with patient and/or family. Dictate a detailed hospital discharge summary.

During the initial post-operative office visit, examine the patient. Check vital signs and inspect all surgical incisions. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Review in detail the final pathology report, implications, follow-up plan, and the possible need for additional prostate cancer therapy. Review usage of pain medications, including discontinuance of narcotic analgesic medications and focusing discussion on utilization of non-narcotic analgesic medications as additional options for any persistent discomfort. Discuss expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises. Discuss penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, and write prescriptions for chosen medications, inclusive of phosphodiesterase 5 (PDE5) inhibitors. Answer questions from the patient and/or family. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

At the second post-operative office visit, review bladder control and continence. Review bladder control exercises and additional therapies, inclusive of writing a referral for pelvic floor physical therapy. Review erectile function and determine if additional alterations should be made to the previously prescribed therapies; consider changing PDE5 inhibitor prescription medication and/or dosage. Discuss utility of obtaining PSA blood tests in monitoring the prostate cancer disease state, inclusive of writing a referral for a PSA blood test be obtained just prior to the next scheduled visit. Schedule

the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

Physical effort required	0%	58%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	26%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
55866 was recommended for survey as part of the family of prostatectomy codes. Survey of this family of codes was required due to 55866 (laparoscopic radical prostatectomy) and 35871 (pelvic lymph node dissection) being billed together greater than 75% of the time.

Prostate cancer at the time of intervention has undergone a migration towards a more aggressive, advanced disease-state. This is multi-factorial, inclusive of decreased PSA-screening and higher utilization of active surveillance for low-risk disease (i.e., Gleason 3+3=6 prostate cancer). National treatment guidelines no longer support radical prostatectomy or radiation therapy for patients with low-risk prostate cancer as first line therapy due to multiple studies demonstrating the safety of active surveillance protocols. The urologic community has accepted this change in treatment algorithm as demonstrated by a 2023 article in JAMA demonstrating an increase in active surveillance utilization from 26.5% in 2014 to

59.6% in 2021 (Cooperberg, et al). While urologists are appropriately moving away from surgical intervention for low-risk disease, in parallel, the decrease in PSA-screening has also yielded more patients presenting for prostatectomy with advanced disease states. Data published in 2019 and 2020 found a decline in the incidence of localized prostate cancer and an increase in the incidence of de novo metastatic disease (Butler, et al and Sheng, et al). In 2021, a study examined 528 patients who underwent radical prostatectomy for prostate cancer, noting a significant decrease in the proportion of low-risk disease and a trend toward a higher proportion of intermediate-risk disease (Hoeh, et al). Another 2021 study looked at 447 patients undergoing radical prostatectomy, finding a shift in these patients from years prior, inclusive of unfavorable disease characteristics such as higher PSA and tumor grade at the time of surgical intervention (Garg, et al). Similarly, a 2021 JAMA article examined 5700 radical prostatectomy patients treated at the VA from 2000 to 2017, demonstrating that the proportion of low-risk tumors decreased by 44%, while intermediate risk tumors increased by 29%, and high-risk tumors increased by 15% (Vaculik, et al). Surgery for intermediate and high-risk prostate cancer is significantly more intense and technically challenging secondary to the increased tumor burden, with goals of obtaining negative margins, while also maintaining potency and continence. Given this migration towards an increased-risk, aggressive prostate cancer disease state, the population undergoing prostatectomy has changed, meeting the threshold for compelling evidence.

PMID: 34081138; PMCID: PMC8176332.

Recommendation:

We recommend maintaining the current RVW of 22.46 We had a strong survey with 72 respondents. Median survey experience was 10, with a maximum procedure number of 200. The most common KRS selected was 58548. 43% of survey respondents selecting this KRS felt 55866 was much more intense and complex than the KRS.

Utilization of 55866 was stable between 2017 and 2022, with between 17,000 to 19,000 claims per year. It is likely that utilization of this code will decrease significantly as bundled codes including lymph node dissection are being created.

The survey demonstrates increasing complexity of work as the intraservice time has increased compared to the prior survey of 55866. Maintaining the current value is supported by clinical peer reviewed evidence and survey results.

Median intraservice time from the survey was 200 minutes. We are recommending a total time of 406 minutes with an increase in twenty minutes in immediate post-service time for same day evaluation and management services. We are also recommending a half day discharge day 99238 per RUC standards. The 90 day global period includes two level four office visits. A RUC database search of RUC reviewed 090 day global codes since 2014 reveals 4 codes with an intraservice time

between 190 and 210 minutes. The RVW range for these codes is 22.00-41.50. 55866 would fit well within the fee schedule at the current value of 22.46.

Pre-time package 3 and Post-time package 9B are selected with time adjustments based on survey results and RUC standards.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) This code was reported with 38571 more than 75%. However, this will no longer be the case as two new codes have been created that describe the work of 38571 and 55866.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
3.

CPT Descriptor: Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed; with lymph node biopsy(ies) (limited pelvic lymphadenectomy)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with a prostate specific antigen (PSA) level of 5.5 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 3+4=7 in both lobes. He is counseled on the risks and benefits of treatment options and has chosen robotic-assisted laparoscopic radical prostatectomy with lymph node sampling.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 98% , In the ASC 1%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 3% , Overnight stay-less than 24 hours 56% , Overnight stay-more than 24 hours 41%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 91%

Description of Pre-Service Work: On the day before the surgery, review patient's medical record, preoperative lab results, transrectal ultrasound images, and pathology reports. Write preoperative orders and send electronically to the hospital. Dictate a preoperative H&P. On the day of surgery, review the surgical procedure and postoperative recovery in and out of the hospital with the patient and/or family. Answer questions from the patient and/or family and obtain informed consent. Discuss the expected duration of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) with the anesthesiologist. Verify the availability of all necessary instruments. Review the position of the robotic arms, surgical console pedals, and hand controls and adjust as necessary. General anesthesia is induced. Prepare and drape the abdomen, genitalia, and perineum in standard fashion. The patient is placed in dorsal lithotomy position. Pad patient's wrists, elbows, shoulders, and legs and place and test sequential compression devices. Place both legs in stirrups, which are adjusted to assure proper positioning, and tuck both arms under sheets. Then place the patient in the maximal Trendelenburg position and pad all pressure points and adjust as needed. Once patient's position is satisfactory, level the table. The surgeon scrubs and gowns.

Description of Intra-Service Work: Place a urinary catheter into the bladder and inflate the balloon. Make a suprapubic incision and introduce a needle. Confirm an intraperitoneal position and create a pneumoperitoneum. Place a midline trocar and insert a zero-degree lens camera. Inspect the abdomen and pelvis for visceral injury or abnormal anatomy. Make four additional incisions after appropriate measurements and place four additional trocars under direct vision. Adjust the table to place the patient in a steep Trendelenburg position and advance the robot. Dock the four robotic arms individually and check pressure points. Make appropriate adjustments to the robotic arms at the surgical console. Next, introduce the laparoscope and dissect the seminal vesicles and vas deferens. Incise the peritoneum at the reflection point of the anterior rectum and the posterior bladder. Identify the vas deferens on each side and then divide. Carefully dissect the seminal vesicles using the harmonic scalpel to divide all bleeding vessels until the structures are completely freed. Dissect the space just posterior to the seminal vesicles to open Denonvilliers' fascia to reveal a prerectal fat plane. Turn attention to complete mobilization of the opening of the peritoneum and mobilization of the bladder. Divide the median umbilical ligaments and urachus close to the umbilicus. Use careful blunt dissection to reflect the bladder away from the abdominal wall and expose the endopelvic fascia. Clear away the fat overlying the endopelvic fascia and incise the endopelvic fascia bilaterally to free

the prostate away from the lateral pelvic side wall. Circumscribe, cauterize, and divide the superficial dorsal vein complex and identify and dissect the apex of the prostate. Ligate the deep dorsal vein complex with sutures or divide with an endoscopic stapling device. Identify the bladder neck-prostate junction using a variety of maneuvers and then separate the bladder from the prostate on both sides. Identify the bladder neck and open. Bring the catheter through the bladder neck and hold anteriorly, exposing the posterior bladder neck, which is then divided. Carefully separate the remainder of the prostate off of the bladder posteriorly and open the tissue overlying the seminal vesicles. Withdraw these structures into the area of dissection and use as traction. Isolate, cauterize, or clip the lateral vascular pedicles to the base of the prostate and bladder and then divide. Identify both neurovascular bundles and meticulously and carefully dissect them off of the prostate surface from the base to the apex of the gland. Divide the dorsal vein complex using sharp dissection around the apex of the prostate. Rock the prostate back and forth and continue dissection along the lateral pedicle plane to define the apex of the prostate posteriorly. Identify the urethra and use sharp dissection to divide the anterior and posterior urethra and the rectourethralis muscle. Unfasten the final attachments and put the specimen into the endosac and place out of the surgical field.

Then turn attention to the pelvic lymph node dissection. Divide the fibrofatty tissue surrounding the iliac vein anteriorly from the bifurcaton to the node of Cloquet residing near the inguineal canal. Separate the tissue between the iliac artery and vein exposing the iliac artery along its medial and anterior surfaces. Dissect the nodal packet to the obturator nerve. Divide the distal edge of the nodal packet. Rotate the packet superiorly and then divide at the bifurcation of the iliac artery. Clips are used to control the lymphatic channels. The lymph nodes are extracted through one of the trocar port sites and sent for pathologic analysis. This limited pelvic node dissection is completed bilaterally.

Decrease the pneumoperitoneum and inspect the entire surgical field for evidence of bleeding. Once hemostasis is obtained, reconstruct the bladder neck with multiple interrupted sutures and perform the vesicourethral anastomosis using interrupted sutures. Pass a catheter into the bladder and test the anastomosis by placing 200 ml of saline into the bladder to distend it. Place a drain through one of the abdominal side ports. Inspect all four trocar sites and all surgical sites at 5 mm Hg pressure before the trocars are removed under direct vision. Extract the specimen by enlarging the midline incision and transferring the endosac bag to this area, where it is removed. Close the rectus fascia using suture, inject local anesthetic in all five of the trocar incisions, and close the trocar incisions with interrupted 2-0 nylon sutures. Place sterile dressings over each incision and secure the catheter to the patient's thigh with a catheter strap.

Description of Post-Service Work: Apply dressings. Transfer the patient from the operating table to the postoperative stretcher. Accompany patient to the recovery area and transfer to the recovery area bed. Write postoperative orders and review recovery area care and medications with recovery staff. Discuss results of the procedure, expected outcome, and planned postoperative care in and out of the hospital with patient's family. After patient is awake, discuss the outcome of the surgery with the patient. Notify the referring physician of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). Dictate a detailed operative report for the patient's medical record. After discharge from recovery, examine the patient and check the wound and patient's progress. Review hospital notes (ie, nursing, pharmacy, dietary, discharge planner). Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write a progress note for patient's medical record. During the patient's stay in the hospital, examine the patient and check laboratory results and vital signs. Check urine output and output from the drain and remove the drain if appropriate. Check wounds and dressings and discuss patient's progress with the patient and/or family. Review patient's hospital medical records. Discuss postoperative care of the wound at home. Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write progress notes for the patient's medical record. On day of discharge, examine the patient. Check the wounds and patient's progress. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the wound with patient and/or family. Dictate a detailed hospital discharge summary.

During the initial post-operative office visit, examine the patient. Check vital signs and inspect all surgical incisions. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Review in detail the final pathology report, implications, follow-up plan, and the possible need for additional prostate cancer therapy. Review usage of pain medications, including discontinuance of narcotic analgesic medications and focusing discussion on utilization of non-narcotic analgesic medications as additional options for any persistent discomfort. Discuss expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises. Discuss penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, and write prescriptions for chosen medications, inclusive of phosphodiesterase 5 (PDE5) inhibitors. Answer questions from the patient and/or family. Schedule the next office visit. Mark the appropriate diagnosis

and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

At the second post-operative office visit, review bladder control and continence. Review bladder control exercises and additional therapies, inclusive of writing a referral for pelvic floor physical therapy. Review erectile function and determine if additional alterations should be made to the previously prescribed therapies; consider changing PDE5 inhibitor prescription medication and/or dosage. Discuss utility of obtaining PSA blood tests in monitoring the prostate cancer disease state, inclusive of writing a referral for a PSA blood test be obtained just prior to the next scheduled visit. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

Physical effort required	7%	47%	53%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	13%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
New codes were created to account for the combined claims of laparoscopic radical prostatectomy and pelvic lymph node dissection. 55866 (laparoscopic radical prostatectomy) and 35871 (pelvic lymph node dissection) being billed together greater than 75% of the time. Thus, 55868 is a new code.

Prostate cancer at the time of intervention has undergone a migration towards a more aggressive, advanced disease-state. This is multi-factorial, inclusive of decreased PSA-screening and higher utilization of active surveillance for low-risk disease (i.e., Gleason 3+3=6 prostate cancer). National treatment guidelines no longer support radical prostatectomy or radiation therapy for patients with low-risk prostate cancer as first line therapy due to multiple studies demonstrating the safety of active surveillance protocols. The urologic community has accepted this change in treatment algorithm as demonstrated by a 2023 article in JAMA demonstrating an increase in active surveillance utilization from 26.5% in 2014 to

59.6% in 2021 (Cooperberg, et al). While urologists are appropriately moving away from surgical intervention for low-risk disease, in parallel, the decrease in PSA-screening has also yielded more patients presenting for prostatectomy with advanced disease states. Data published in 2019 and 2020 found a decline in the incidence of localized prostate cancer and an increase in the incidence of de novo metastatic disease (Butler, et al and Sheng, et al). In 2021, a study examined 528 patients who underwent radical prostatectomy for prostate cancer, noting a significant decrease in the proportion of low-risk disease and a trend toward a higher proportion of intermediate-risk disease (Hoeh, et al). Another 2021 study looked at 447 patients undergoing radical prostatectomy, finding a shift in these patients from years prior, inclusive of unfavorable disease characteristics such as higher PSA and tumor grade at the time of surgical intervention (Garg, et al). Similarly, a 2021 JAMA article examined 5700 radical prostatectomy patients treated at the VA from 2000 to 2017, demonstrating that the proportion of low-risk tumors decreased by 44%, while intermediate risk tumors increased by 29%, and high-risk tumors increased by 15% (Vaculik, et al). Surgery for intermediate and high-risk prostate cancer is significantly more intense and technically challenging secondary to the increased tumor burden, with goals of obtaining negative margins, while also maintaining potency and continence. Given this migration towards an increased-risk, aggressive prostate cancer disease state, the population undergoing prostatectomy has changed, meeting the threshold for compelling evidence.

Recommendation:

We recommend a crosswalk to the current RVW of 55866 of 22.46. This represents a value well below the 25th percentile but maintains the current relativity among codes within the family. We had a strong survey with 69 respondents. Median survey experience was 10, with a maximum procedure number of 105. The most common KRS selected was 58548. 45% of survey respondents selecting this KRS felt 55868 was much more intense and complex than the KRS.

Utilization of 55866 was stable between 2017 and 2022, with between 17,000 to 19,000 claims per year. It is likely that utilization of this code will decrease, as it had been previously billed with 38571 (see Background section) 75% of the time. It is likely that 55868 will be utilized more than 55866, since it will represent a combination of laparoscopic radical prostatectomy with pelvic lymph node dissection. With this code being put into the fee schedule, inclusive of laparoscopic radical prostatectomy and lymphadenectomy, it is likely claims for 55866 will decline.

55868 represents a laparoscopic version of 55842. CMS has previously rejected the prior RUC recommendation for 55842 and assigned a value equal to the 55840. To maintain this relativity within the code family we are therefore recommending the same RVW for 55868 as we are recommending for 55866.

Median intraservice time from the survey was 210 minutes. We are recommending a total time of 414 minutes, with an increase in twenty minutes in immediate post-service time for same day evaluation and management services. We are also recommending a half day discharge day 99238 per RUC standards. The 90 day global period includes two level four office visits. A RUC database search of RUC reviewed 090 day global codes since 2014 reveals 4 codes with an intraservice time between 190 and 210 minutes. The RVW range for these codes is 22.00-41.50. 55868 would fit well within the fee schedule at the recommended value of 22.46, well below the 25th percentile.

Pre-time package 3 and Post-time package 9B are selected with time adjustments based on survey results and RUC standards.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38571 and 55866

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 5000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 5000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 4000 Percentage 100.00 %

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55869 Tracking Number H10 Original Specialty Recommended RVU: **32.00**
Presented Recommended RVU: **29.91**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **29.35**

CPT Descriptor: Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed; with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with a prostate specific antigen (PSA) level of 11.2 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 4+4=8 in both lobes. He is counseled on the risks and benefits of treatment options and has chosen robotic-assisted laparoscopic radical prostatectomy with bilateral pelvic lymphadenectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 6% , Overnight stay-less than 24 hours 48% , Overnight stay-more than 24 hours 46%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 91%

Description of Pre-Service Work: On the day before the surgery, review patient's medical record, preoperative lab results, transrectal ultrasound images, and pathology reports. Write preoperative orders and send electronically to the hospital. Dictate a preoperative H&P. On the day of surgery, review the surgical procedure and postoperative recovery in and out of the hospital with the patient and/or family. Answer questions from the patient and/or family and obtain informed consent. Discuss the expected duration of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) with the anesthesiologist. Verify the availability of all necessary instruments. Review the position of the robotic arms, surgical console pedals, and hand controls and adjust as necessary. The anesthesiologist places the endotracheal tube followed by the orogastric tube and general anesthesia is induced. Prepare and drape the abdomen, genitalia, and perineum in standard fashion. The patient is placed in dorsal lithotomy position. Pad patient's wrists, elbows, shoulders, and legs and place and test sequential compression devices. Place both legs in stirrups, which are adjusted to assure proper positioning, and tuck both arms under sheets. Then place the patient in the maximal Trendelenburg position and pad all pressure points and adjust as needed. Once patient's position is satisfactory, level the table. The surgeon scrubs and gowns.

Description of Intra-Service Work: Place a urinary catheter into the bladder and inflate the balloon. Make a suprapubic incision and introduce a needle. Confirm an intraperitoneal position and create a pneumoperitoneum. Place a midline trocar and insert a zero-degree lens camera. Inspect the abdomen and pelvis for visceral injury or abnormal anatomy. Make four additional incisions after appropriate measurements and place four additional trocars under direct vision. Adjust the table to place the patient in a steep Trendelenburg position and advance the robot. Dock the four robotic arms individually and check pressure points. Make appropriate adjustments to the robotic arms at the surgical console. Next, introduce the laparoscope and dissect the seminal vesicles and vas deferens. Incise the peritoneum at the reflection point of the anterior rectum and the posterior bladder. Identify the vas deferens on each side and then divide. Carefully dissect the seminal vesicles using the harmonic scalpel to divide all bleeding vessels until the structures are completely freed. Dissect the space just posterior to the seminal vesicles to open Denonvilliers' fascia to reveal a prerectal fat plane.Then turn attention to the

pelvic lymph node dissection. The peritoneum is incised overlying the external iliac vessels, and lymph node dissection is performed. Boundaries of the dissection are the genitofemoral nerve laterally, the circumflex iliac vein or Cloquet's node inferiorly, the bladder medially, the bifurcation of the common iliac artery superiorly, and the floor of the obturator fossa deep. All lymph-node-bearing tissue in this area is removed to include external iliac, internal iliac, and obturator (hypogastric) lymph nodes. Clips are used to control the lymphatic channels. The lymph nodes are extracted through one of the trocar port sites and sent for pathologic analysis. This pelvic node dissection is completed bilaterally.

Turn attention to complete mobilization of the opening of the peritoneum and mobilization of the bladder. Divide the median umbilical ligaments and urachus close to the umbilicus. Use careful blunt dissection to reflect the bladder away from the abdominal wall and expose the endopelvic fascia. Clear away the fat overlying the endopelvic fascia and incise the endopelvic fascia bilaterally to free the prostate away from the lateral pelvic side wall. Circumscribe, cauterize, and divide the superficial dorsal vein complex and identify and dissect the apex of the prostate. Ligate the deep dorsal vein complex with sutures or divide with an endoscopic stapling device. Identify the bladder neck-prostate junction using a variety of maneuvers and then separate the bladder from the prostate on both sides. Identify the bladder neck and open. Bring the catheter through the bladder neck and hold anteriorly, exposing the posterior bladder neck, which is then divided. Carefully separate the remainder of the prostate off of the bladder posteriorly and open the tissue overlying the seminal vesicles. Withdraw these structures into the area of dissection and use as traction. Isolate, cauterize, or clip the lateral vascular pedicles to the base of the prostate and bladder and then divide. Identify both neurovascular bundles and meticulously and carefully dissect them off of the prostate surface from the base to the apex of the gland. Divide the dorsal vein complex using sharp dissection around the apex of the prostate. Rock the prostate back and forth and continue dissection along the lateral pedicle plane to define the apex of the prostate posteriorly. Identify the urethra and use sharp dissection to divide the anterior and posterior urethra and the rectourethralis muscle. Unfasten the final attachments and put the specimen into the endosac and place out of the surgical field. Decrease the pneumoperitoneum and inspect the entire surgical field for evidence of bleeding. Once hemostasis is obtained, reconstruct the bladder neck with multiple interrupted sutures and perform the vesicourethral anastomosis using interrupted sutures. Pass a catheter into the bladder and test the anastomosis by placing 200 ml of saline into the bladder to distend it. Place a drain through one of the abdominal side ports. Inspect all four trocar sites and all surgical sites at 5 mm Hg pressure before the trocars are removed under direct vision. Extract the specimen by enlarging the midline incision and transferring the endosac bag to this area, where it is removed. Close the rectus fascia using suture, inject local anesthetic in all five of the trocar incisions, and close the trocar incisions with interrupted 2-0 nylon sutures. Place sterile dressings over each incision and secure the catheter to the patient's thigh with a catheter strap.

Description of Post-Service Work: Apply dressings. Transfer the patient from the operating table to the postoperative stretcher. Accompany patient to the recovery area and transfer to the recovery area bed. Write postoperative orders and review recovery area care and medications with recovery staff. Discuss results of the procedure, expected outcome, and planned postoperative care in and out of the hospital with patient's family. After patient is awake, discuss the outcome of the surgery with the patient. Notify the referring physician of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). Dictate a detailed operative report for the patient's medical record. After discharge from recovery, examine the patient and check the wound and patient's progress. Review hospital notes (ie, nursing, pharmacy, dietary, discharge planner). Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write a progress note for patient's medical record. During the patient's stay in the hospital, examine the patient and check laboratory results and vital signs. Check urine output and output from the drain and remove the drain if appropriate. Check wounds and dressings and discuss patient's progress with the patient and/or family. Review patient's hospital medical records. Discuss postoperative care of the wound at home. Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write progress notes for the patient's medical record. On day of discharge, examine the patient. Check the wounds and patient's progress. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the wound with patient and/or family. Dictate a detailed hospital discharge summary.

During the initial post-operative office visit, examine the patient. Check vital signs and inspect all surgical incisions. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Review in detail the final pathology report, implications, follow-up plan, and the possible need for additional prostate cancer therapy. Review usage of pain medications, including discontinuance of narcotic analgesic medications and focusing discussion on utilization of non-narcotic analgesic medications as additional options for any persistent discomfort. Discuss expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises. Discuss penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, and write prescriptions for chosen medications, inclusive of phosphodiesterase 5 (PDE5)

inhibitors. Answer questions from the patient and/or family. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

At the second post-operative office visit, review bladder control and continence. Review bladder control exercises and additional therapies, inclusive of writing a referral for pelvic floor physical therapy. Review erectile function and determine if additional alterations should be made to the previously prescribed therapies; consider changing PDE5 inhibitor prescription medication and/or dosage. Discuss utility of obtaining PSA blood tests in monitoring the prostate cancer disease state, inclusive of writing a referral for a PSA blood test be obtained just prior to the next scheduled visit. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	11%	33%	56%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	17%	83%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	6%	94%
Physical effort required	0%	29%	71%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	3%	11%	86%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	21%	29%	46%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	21%	79%
Physical effort required	0%	54%	46%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
New codes were created to account for the combined claims of laparoscopic radical prostatectomy and pelvic lymph node dissection. 55866 (laparoscopic radical prostatectomy) and 35871 (pelvic lymph node dissection) being billed together greater than 75% of the time. Thus, 55869 is a new code.

Prostate cancer at the time of intervention has undergone a migration towards a more aggressive, advanced disease-state. This is multi-factorial, inclusive of decreased PSA-screening and higher utilization of active surveillance for low-risk disease (i.e., Gleason 3+3=6 prostate cancer). National treatment guidelines no longer support radical prostatectomy or radiation therapy for patients with low-risk prostate cancer as first line therapy due to multiple studies demonstrating the safety of active surveillance protocols. The urologic community has accepted this change in treatment algorithm as demonstrated by a 2023 article in JAMA demonstrating an increase in active surveillance utilization from 26.5% in 2014 to

59.6% in 2021 (Cooperberg, et al). While urologists are appropriately moving away from surgical intervention for low-risk disease, in parallel, the decrease in PSA-screening has also yielded more patients presenting for prostatectomy with advanced disease states. Data published in 2019 and 2020 found a decline in the incidence of localized prostate cancer and an increase in the incidence of de novo metastatic disease (Butler, et al and Sheng, et al). In 2021, a study examined 528 patients who underwent radical prostatectomy for prostate cancer, noting a significant decrease in the proportion of low-risk disease and a trend toward a higher proportion of intermediate-risk disease (Hoeh, et al). Another 2021 study looked at 447 patients undergoing radical prostatectomy, finding a shift in these patients from years prior, inclusive of unfavorable disease characteristics such as higher PSA and tumor grade at the time of surgical intervention (Garg, et al). Similarly, a 2021 JAMA article examined 5700 radical prostatectomy patients treated at the VA from 2000 to 2017, demonstrating that the proportion of low-risk tumors decreased by 44%, while intermediate risk tumors increased by 29%, and high-risk tumors increased by 15% (Vaculik, et al). Surgery for intermediate and high-risk prostate cancer is significantly more intense and technically challenging secondary to the increased tumor burden, with goals of obtaining negative margins, while also maintaining potency and continence. Given this migration towards an increased-risk, aggressive prostate cancer disease state, the population undergoing prostatectomy has changed, meeting the threshold for compelling evidence.

Recommendation:

We recommend a crosswalk to 44144 (Colectomy, partial; with resection, with colostomy or ileostomy and creation of mucofistula) with an RVW of 29.91. This value is well below the 25th percentile but maintains budget neutrality within the family of codes and maintains appropriate relativity within the family of codes.

We had a strong survey with 71 respondents. Median survey experience was 10, with a maximum procedure number of 250. The most common KRS selected was 58575. 56% of survey respondents selecting this KRS felt 55869 was much more intense and complex than the KRS.

Complete extended bilateral pelvic lymph node dissection adds significant technical complexity and intensity to robotic prostatectomy as nodes must be carefully removed from the external iliac vessels, the area surrounding the obturator nerve, and proximally to the bifurcation of the common iliac. This dissection requires significant care and explains the increase in intra-service time for this procedure compared to the base code.

Median intraservice time from the survey was 230 minutes. We are recommending a total time of 434 minutes with an increase in twenty minutes in immediate post-service time for same day evaluation and management services. We are also

recommending a half day discharge day 99238 per RUC standards. The 90 day global period includes two level four office visits. A RUC database search of RUC reviewed 090 day global codes since 2014 reveals 5 codes with an intraservice time between 210 and 240 minutes. The RVW range for these codes is 25.00-45.13. 55869 would fit well within the fee schedule at the recommended crosswalk RVW of 29.91.

Pre-time package 3 and Post-time package 9B are selected with time adjustments based on survey results and RUC standards.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38571 and 55866

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 25000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 10,000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 98% , In the ASC 2%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 3% , Overnight stay-less than 24 hours 56% , Overnight stay-more than 24 hours 41%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 91%

Description of Pre-Service Work: On the day before the surgery, review patient's medical record, preoperative lab results, prostate imaging, and urodynamic reports. Write preoperative orders and send electronically to the hospital. Dictate a preoperative history and physical examination (H&P). On the day of surgery, review the surgical procedure and postoperative recovery in and out of the hospital with the patient and/or family. Answer questions from the patient and/or the patient's family and obtain informed consent. Discuss the expected length of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) with the anesthesiologist. Verify the availability of all necessary instruments. Review the position of the robotic arms, surgical console pedals, and hand controls and adjust as necessary. General anesthesia is induced. The patient is placed in dorsal lithotomy position. Pad the patient's wrists, elbows, shoulders, and legs and place and test sequential compression devices. Place patient's legs in stirrups, which are adjusted to assure proper positioning, and both arms are tucked under sheets. Place the patient in the maximal Trendelenburg position and pad all pressure points and adjust as needed. Once the patient's position is satisfactory, level the table. Prepare and drape the abdomen, genitalia, and perineum in standard fashion. Place a urinary catheter into the bladder and inflate the balloon. The surgeon scrubs and gowns.

Description of Intra-Service Work: Make a suprapubic incision and introduce a needle. Confirm an intraperitoneal position and create a pneumoperitoneum. Place a midline trocar and insert a zero-degree lens camera. Inspect the abdomen and pelvis for visceral injury or abnormal anatomy. Make five additional incisions after appropriate measurements, and place five additional trocars under direct vision. Adjust the table to place the patient in a steep Trendelenburg position and advance the robot. The four robotic arms are individually docked and pressure points are checked. Make appropriate adjustments to the robotic arms at the surgical console. Next, introduce the laparoscope and mobilize the colon so it is away from the bladder. Make an incision in the posterior bladder wall. Place several stay sutures in the bladder wall to expose the base of the bladder. Identify the ureteral orifices and survey the prostate anatomy to assess for median lobe location and relational anatomy to the bladder. Make an incision at the junction of the prostate and the bladder neck. Carry the incision circumferentially along the capsule of the prostate out laterally and distally. Rock the prostate back and forth and continue dissection along the lateral pedicle plane to define the apex of the prostate posteriorly. Unfasten the final attachments and place the specimen into the endosac and place out of the surgical field. Decrease the pneumoperitoneum and inspect the

entire surgical field for evidence of bleeding. Once hemostasis is obtained, advance the bladder neck to the urethral mucosa using fine monofilament suture. Hemostasis is also achieved using cautery and suture. Close the posterior bladder wall with suture. Pass a catheter into the bladder and test the closure by placing 200 ml of saline into the bladder to distend it. Place a drain through one of the abdominal side ports. Inspect all six trocar sites and all surgical sites at 5-mm Hg pressure before the trocars are removed under direct vision. Extract the specimen by enlarging the midline incision and transferring the endosac bag to this area, where it is removed. Close the rectus fascia using suture, inject local anesthetic into all five of the trocar incisions, and close the trocar incisions with interrupted 2-0 nylon sutures. Place sterile dressings over each incision and secure the catheter to the patient's thigh with a catheter strap.

Description of Post-Service Work: Transfer the patient from the operating table to the postoperative stretcher. Accompany the patient to the recovery area and transfer to the recovery area bed. Write postoperative orders and review recovery area care and medications with the recovery staff. Discuss the results of the procedure, expected outcome, and planned postoperative care in and out of the hospital with the patient's family. After the patient is awake, discuss the outcome of the surgery with the patient. Notify the referring physician of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). Dictate a detailed operative report for the patient's medical record. After discharge from recovery, examine the patient and check the wound and patient's progress. Review hospital notes (ie, nursing, pharmacy, dietary, discharge planner). Answer questions from the patient, the patient's family, and nursing/other staff. Write orders as necessary. Write a progress note for the patient's medical record. During the patient's stay in the hospital, check laboratory results and vital signs. Examine the patient. Check urine output and output from the drain and remove the drain if appropriate. Check wounds and dressings and discuss the patient's progress with the patient and/or the patient's family. Review the patient's hospital medical records. Discuss postoperative care of the wound at home. Answer questions from the patient, the patient's family, and nursing/other staff. Write orders as necessary. Write progress notes for patient's medical record. On day of discharge, examine the patient. Check the wounds and the patient's progress. Review all patient hospital medical records and answer questions from the patient and/or the patient's family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the wound with the patient and/or the patient's family. Dictate a detailed hospital discharge summary.

Apply dressings. Transfer the patient from the operating table to the postoperative stretcher. Accompany patient to the recovery area and transfer to the recovery area bed. Write postoperative orders and review recovery area care and medications with recovery staff. Discuss results of the procedure, expected outcome, and planned postoperative care in and out of the hospital with patient's family. After patient is awake, discuss the outcome of the surgery with the patient. Notify the referring physician of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). Dictate a detailed operative report for the patient's medical record. After discharge from recovery, examine the patient and check the wound and patient's progress. Review hospital notes (ie, nursing, pharmacy, dietary, discharge planner). Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write a progress note for patient's medical record. During the patient's stay in the hospital, examine the patient and check laboratory results and vital signs. Check urine output and output from the drain and remove the drain if appropriate. Check wounds and dressings and discuss patient's progress with the patient and/or family. Review patient's hospital medical records. Discuss postoperative care of the wound at home. Answer questions from patient, patient's family, and nursing and other staff. Write orders as necessary. Write progress notes for the patient's medical record. On day of discharge, examine the patient. Check the wounds and patient's progress. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the wound with patient and/or family. Dictate a detailed hospital discharge summary.

During the initial post-operative office visit, examine the patient. Check vital signs and inspect all surgical incisions. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Review in detail the final pathology report, implications, follow-up plan, and the possible need for additional prostate cancer therapy. Review usage of pain medications, including discontinuance of narcotic analgesic medications and focusing discussion on utilization of non-narcotic analgesic medications as additional options for any persistent discomfort. Discuss expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises. Discuss penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, and write prescriptions for chosen medications, inclusive of phosphodiesterase 5 (PDE5) inhibitors. Answer questions from the patient and/or family. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician.

At the second post-operative office visit, ensure the patient's voiding has improved, check their post-void residual, and wean any medications they were on preoperatively for their benign prostatic hyperplasia (BPH). Review bladder control and continence. Review bladder control exercises and additional therapies, inclusive of writing a referral for pelvic floor physical therapy. Review erectile function and determine if additional alterations should be made to the previously prescribed therapies; consider changing PDE5 inhibitor prescription medication and/or dosage. Mark the appropriate diagnosis and CPT code on the encounter form (superbill). Dictate patient progress notes for the office medical record and a letter to the referring physician..

SURVEY DATA

RUC Meeting Date (mm/yyyy)	09/2024					
Presenter(s):	Dr. Jonathan Kiechle, Dr. Seth Cohen					
Specialty Society(ies):	AUA					
CPT Code:	55867					
Sample Size:	5002	**Resp N:**	69			
Description of Sample:	AUA surveyed a total of 5002 of its members.					
	Low	**25th pctl**	**Median***	**75th pctl**	**High**	
Service Performance Rate	0.00	3.00	**10.00**	25.00	105.00

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	33%	28%	22%	17%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	34%	44%	22%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	33%	33%	34%
Physical effort required	11%	50%	39%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	28%	28%	44%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	58%	14%	28%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	29%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	43%	57%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	58%	28%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
55867 was recommended for survey as part of the family of prostatectomy codes. Survey of this family of codes was required due to 55866 (laparoscopic radical prostatectomy) and 35871 (pelvic lymph node dissection) being billed together greater than 75% of the time.

Recommendation:
We recommend maintaining the existing work RVU of 19.53. We had a strong survey with 61 respondents. Median survey experience was 5, with a maximum procedure number of 100. The most common KRS selected was 50543. 17% of survey respondents selecting this KRS felt 55867 was much more intense and complex than the KRS.

55867 was last surveyed in 2022. Current survey results show the same intraservice time with a minimal decrease in pre-time. Median intraservice time from the survey was 180 minutes. We are recommending a total time of 372 minutes, with an increase in twenty minutes over the survey time in immediate post-service time for same day evaluation and

management services. We are also recommending a half day discharge day 99238 per RUC standards. The 90 day global period includes one level four and one level three office visit. A RUC database search of RUC reviewed 090 day global codes since 2014 reveals 19 codes with an intraservice time between 170 and 190 minutes. The RVW range for these codes is 16.03-45.00.

Pre-time package 3 and Post-time package 9B are selected with time adjustments based on survey results and RUC standards.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55867

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3519
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on analysis using Premier Healthcare Database (PHD). This is a new code as of 2022.

Specialty Urology Frequency 3519 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,300
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 2300 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
NA

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 55867

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

FACILITY DIRECT PE INPUTS

CPT CODE(S): 55840, 55842, 55845, 55866, 55868, 55869, 55867
SPECIALTY SOCIETY(IES): AUA
PRESENTER(S): Dr. Jonathan Kiechle, Dr. Seth Cohen

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2025

CPT Code	Long Descriptor	Global Period
55840	Prostatectomy, retropubic radical, with or without nerve sparing;	090
55842	Prostatectomy, retropubic radical, with or without nerve sparing; with lymph node biopsy(s) (limited pelvic lymphadenectomy)	090
55845	Prostatectomy, retropubic radical, with or without nerve sparing; with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes.	090
55866	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed;	090
55868	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed; with lymph node biopsy(ies) (limited pelvic lymphadenectomy)	090
55869	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed; with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes	090
55867	Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed.	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55840	A 65-year-old male with elevated prostate-specific antigen (PSA) levels undergoes biopsy, which shows a Gleason score of 3 + 3, low-risk prostate cancer. After counseling about treatment options, the patient undergoes open radical retropubic prostatectomy.
55842	A 65-year-old male with elevated prostate-specific antigen (PSA) levels undergoes biopsy that shows Gleason score of 3 + 4, intermediate-risk prostate cancer. After counseling about treatment options, he undergoes open radical retropubic prostatectomy with limited pelvic lymph node dissection
55845	A 65-year-old man with elevated prostate-specific antigen (PSA) levels undergoes biopsy that shows a Gleason score of 4 + 4, high-risk prostate cancer. After negative staging evaluation and counseling of management options, he undergoes open radical retropubic prostatectomy with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes.
55866	A 48-year-old male with a prostate-specific antigen (PSA) level of 3.5 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 7 in both lobes. He is counseled on the risks and benefits of surgery versus radiation and has chosen robotic-assisted laparoscopic radical prostatectomy.
55868	A 65-year-old male with a prostate specific antigen (PSA) level of 5.5 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 3+4=7 in both lobes. He is counseled on the risks and benefits of treatment options and has chosen robotic-assisted laparoscopic radical prostatectomy with lymph node sampling.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

55869	A 65-year-old male with a prostate specific antigen (PSA) level of 11.2 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 4+4=8 in both lobes. He is counseled on the risks and benefits of treatment options and has chosen robotic-assisted laparoscopic radical prostatectomy with bilateral pelvic lymphadenectomy.
55867	A 65-year-old male who is symptomatic due to obstruction from prostatic enlargement chose to undergo laparoscopic simple suprapubic prostatectomy

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA's RVS Committee Expert Panel reviewed the current code PE details for codes 55840, 55842, 55845, 55866, and 55867 and discussed how the codes have changed since the prior review to determine if any revisions are needed to the current inputs. The expert panel also discussed the new codes 55868 and 55869 to determine appropriate PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   55840, 55842, 55845, 55866, 55867

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   The expert panel is recommending an increase in the aggregate cost of clinical labor, supplies and equipment compared to the existing inputs.

   Flawed methodology of prior review – missing required supplies.

   Clinical labor time and equipment time are consistent with standards and based on the physician work survey number and level of E/M visits.

   Current disposable supplies for codes were based on minimal standard 90-day global supply assignment and did not consider the additional supplies required for these procedures:

   SM022, *sanitizing cloth-wipe (surface, instruments, equipment)*, is needed to clean hard surfaces at each postoperative visit. This is consistent with the addition of SM022 to E/M office visit codes as this was not included in the E/M office visit pack.

   SB044, *underpad 2ft x 3ft (Chux)*, will be used at the first post-operative visit due to the need for a bladder fill and void during the visit

   SC051, *10-12 ml syringe*, used to remove catheter at first post-operative visit

SC062, *syringe, Toomey,* used to fill the bladder for trial of void

SH069, *sodium chloride 0.9% irrigation (500-1000mL*), used to fill the bladder for trial of void during first post-operative visit

SL038, *cup-container, sterile, graduate 1000mL*- used for trial of void during first post-operative visit

SJ009*, basin, irrigation*- used to irrigate catheter prior to fill and void during first post-op visit

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

c. Post-service period:

The clinical staff work includes the standard activities involved in any E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instruction.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes. Packs are all established packs as defined by CMS. SA048 - CMS SA052 - CMS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, post-op incision care (staple)	**SA052**	**pack**	
kit, staple removal		kit	1
povidone soln (Betadine)		ml	10
gauze, sterile 4in x 4in		item	2
gloves, sterile		pair	1
steri-strip (6 strip uou)		item	2
swab-pad, alcohol		item	2
tape, surgical paper 1in (Micropore)		inch	12
tincture of benzoin, swab		item	1

kit, suture removal	**SA031**		**kit**
metal Littauer (hook-tipped) scissors		1	item
Posi-Grip plastic forceps		1	item
3" x 3" gauze sponge		1	item
tray		1	item

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EQ168 – default
EF031 – default
EF014 – default
EF031 – default

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
010-Day Global Post-Operative Visits Screen

September 2014

Laparoscopy Lymphadenectomy

In January 2014, the RUC reviewed all 010-day global services (based on 2012 Medicare utilization data) and identified 18 services with greater than 1.5 office visits and 2012 Medicare utilization data over 1,000. The RUC requested these services be surveyed for physician work and for the work and practice expense to be reviewed at the September 2014 RUC meeting. At the September meeting, the RUC noted that even though the Medicare claims data indicate the potential for a hospital visit for these services, the typical patient for each of these service is younger than Medicare age (approximately 60 years old), following a clinical review and a review of the survey data, the RUC does not recommend the inclusion of a hospital visit for any of these services.

38570 ***Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple***
The RUC reviewed the survey results and agreed on the following physician time components: pre-service time of 53 minutes (the standard pre-time package 4, with 10 minutes removed from scrub, dress and wait to match the survey results of 38571), intra-service time of 60 minutes and immediate post-service time of 30 minutes (the standard post-service package 9B, with 3 minutes removed to match the survey results for this service). The RUC agreed with the specialty that a "difficult patient" pre-service package should be utilized, as the patient typically has metastatic prostate cancer with comorbidities (i.e. cardiovascular disease, BPH urinary retention, etc.). The RUC agreed that a full discharge day (99238) is appropriate for this inpatient procedure. The RUC also agreed that the following office visits during the 010-day global period were justified: one 99212 office visit which includes the removal of sutures, examination of wounds and checking for evidence of DVT or lymphocele, and one 99213 office visit which includes examination of wounds and primarily discussing pathology and what direction the patient will go for treatment (ie radiation treatment, hormonal therapy, etc.).

The RUC discussed the low number of survey responses and agreed that the low number was permissible, as the service had low Medicare utilization (2013 Medicare volume of 1,488) and urology only performed 38% of that volume in 2013.

The RUC reviewed the survey 25th percent work RVU of 12.00 and agreed with the specialty that the survey results were overvalued. The specialty societies indicated and the RUC agreed that the current work RVU of 9.34 appropriately accounts for the work required to perform this service. The RUC compared the surveyed code to CPT code 31239 *Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy* (work RVU= 9.04, intra-service time of 60 minutes, total time of 168 minutes) and noted that with identical intra-service time and higher total time, the current work value of 9.34 is an appropriate value relative to the comparator code. To further justify a work RVU of 9.34 for 38570, the RUC reviewed MPC code 50590 *Lithotripsy, extracorporeal shock wave* (work RVU= 9.77, intra-service time of 60 minutes, total time of 207 minutes) and noted that both services have identical intra-service time, whereas the survey code has slightly more total time, which confirms that maintaining the current value for 38570 would be appropriate. **The RUC recommends a work RVU of 9.34 for CPT code 38570.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

38571 ***Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy***
The RUC reviewed the survey results from 32 urologists and agreed on the following physician time components: pre-service time of 53 minutes (the standard pre-time package 4, with 10 minutes removed from scrub, dress and wait to match the survey results), intra-service time of 90 minutes and immediate post-service time of 30 minutes (the standard post-service package 9B, with 3 minutes removed to match the survey results for this service). The RUC agreed with the specialty that the pre-time package should be for a "difficult patient", as the patient typically has metastatic prostate cancer with comorbidities (i.e. cardiovascular disease, BPH urinary retention, etc.). The RUC agreed that a full discharge day (99238) is appropriate for this inpatient procedure. The RUC also agreed that the following office visits during the 010-day global period were justified: one 99212 office visit which includes the removal of sutures, examination of wounds and checking for evidence of DVT or lymphocele, and one 99213 office visit which includes the examination of wounds and primarily discussing pathology and what direction the patient will go for treatment (ie radiation treatment, hormonal therapy, etc.).

The RUC reviewed the survey respondents' estimated physician work values and agreed that the survey 25th percentile work RVU of 12.00 is appropriate. The RUC compared the survey code to the MPC code 53445 *Insertion of inflatable urethral/bladder neck sphincter, including placement of pump, reservoir, and cuff* (work RVU= 13.00, intra-service time of 90 minutes and total time of 314 minutes) and noted that both services have identical intra-service time, whereas the surveyed code has less total time, justifying a somewhat lower work value for the surveyed code. To further justify a work RVU of 12.00, the RUC reviewed CPT code 36818 *Arteriovenous anastomosis, open; by upper arm cephalic vein transposition* (work RVU= 11.89, intra-service time of 90 minutes, total time of 238 minutes) and noted that both codes have identical intra-service time, whereas the survey code has somewhat more total time (250 minutes vs. 238 minutes), which further justifies a work value of 12.00 for the survey code. **The RUC recommends a work RVU of 12.00 for CPT code 38571.**

38572 ***Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling (biopsy), single or multiple***
The RUC reviewed the survey results from 97 gynecologists and gynecologic oncologists and agreed with the specialty on the following physician time components: 70 minutes of pre-service time (the standard pre-time package 4, with 12 minutes added to positioning and 5 minutes removed from scrub, dress and wait time), 120 minutes of intra-service time and 30 minutes of immediate post-service time (standard post-service package 9A). The RUC agreed with the specialty that 12 additional minutes above standard pre-service positioning time is warranted, as special attention is required to pad arms, legs, and pressure points when the patient is secured to the table to prevent patient movement when the patient is placed in the reverse Trendelenburg position or when the patient is turned from side to side. Additional time is also required for equipment positioning relative to the patient and to other equipment to insure access to the operative site, including the scope and video equipment, intra-operative imaging equipment, surgical instruments and anesthesia lines. Five minutes were removed from the standard scrub, dress and wait time to match the survey results. The RUC agreed that a full discharge day (99238) is appropriate for this inpatient procedure. The RUC also agreed that the following office visits during the 010-day global period were justified: one 99214 office visit, which includes the inspection of the wound, abdomen, lymphatic system, neurologic and musculoskeletal systems and pelvic exam with a focus on swelling or irritation, as well as review of post-op lab results and instructing patient on analgesic use, bowel/bladder functions, and home medications; and one 99213 office visit, which includes discussion of pathology report and subsequent treatment options, as well as removal of sutures and examination of the wound.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey 25th percent work RVU of 20.00 and agreed with the specialty that the survey results were overestimated. To determine an appropriate work value, the RUC compared the surveyed code to MPC code 60500 *Parathyroidectomy or exploration of parathyroid(s);* (work RVU= 15.60, intra-service time of 120 minutes and total time of 313 minutes) and noted that since both services have identical intra-service time, similar total times (313 minutes vs. 321 minutes) and represent analogous physician work, they should be valued similarly. Therefore, the RUC recommends a direct work RVU crosswalk from code 60500 to survey code 38572.

To further justify a work RVU of 15.60 for CPT code 38572, the RUC reviewed CPT code *Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)* (work RVU= 14.56, intra-service time of 120 minutes and total time of 279 minutes) and noted that both codes have identical intra-service times, whereas the surveyed code has more total time, which justifies a higher work value for 38572. **The RUC recommends a work RVU of 15.60 for CPT code 38572.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Practice Expense
The RUC reviewed and approved the direct practice expense inputs with modifications as approved by the Practice Expense Subcommittee.

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
38570	Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple	010	9.34 (No Change)
38571	Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy	010	12.00
38572	Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling (biopsy), single or multiple	010	15.60

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:38570 Tracking Number Original Specialty Recommended RVU: **9.34**
Presented Recommended RVU: **9.34**
Global Period: 010 RUC Recommended RVU: **9.34**

CPT Descriptor: Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 61-year-old male presents with a PSA of 13.6, with a prostatic nodule and a positive needle biopsy for prostatic carcinoma. After discussion with his physician, a laparoscopic retroperitoneal lymph node sampling is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 61%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 4% , Overnight stay-less than 24 hours 39% , Overnight stay-more than 24 hours 57%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 36%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 4%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Pre-Service Work- Day before surgery:
- Review pre-op lab results
- Review medical record
- Write pre-op orders (to be emailed or faxed to hospital)
- Obtain and review all imaging studies if necessary

Pre-Service work- Day of surgery:
- Obtain and review records and previous history, laboratory studies and all imaging studies before the procedure;
- Change into scrub clothes.
- Review surgical procedure, post-op recovery in and out of hospital with patient and family
- Physician sign and explain informed consent in holding area
- Foley catheter inserted
- Mark “site of surgery”, “side” in holding area
- Speak to anesthesiologist about expected length of procedure and any special concerns (ie., jet ventilator; gated or non-gated)
- Verify all necessary instruments are available
- Scrub and dress in operative gown
- "Time out" for patient identification
- Place patient on surgical table in supine position
- Wait for anesthesiologist to administer general anesthetic
- Prep and drape the surgical site

Description of Intra-Service Work:

- Pneumoperitoneum is established
- Laparoscopic trocars are placed under direct vision.
- The abdomen and pelvis are explored visually for lymphadenopathy and/or metastatic disease.
- The peritoneum is incised overlying the external iliac vessels and all lymph node bearing tissue medial to the pelvic sidewall, beneath the external iliac vein, and around the obturator nerve is dissected free.
- A sampling of the lymph nodes are extracted through one of the trocar port sites and sent for pathologic analysis.
- Hemostasis is achieved
- A drain is placed through a lateral port site.
- The ports are all removed under direct vision
- The trocar site incisions are closed using 4-0 maxon sutures
- The wounds are cleaned and dried

Description of Post-Service Work: Post-service work, same day as procedure through discharge

- Sterile bandages applied.
- Remove drapes
- Wait for anesthesiologist to awaken patient
- Remove Foley catheter if indicated
- Assist in transfer of patient from surgical table to post-op stretcher
- Accompany anesthesiologist with patient to recovery area
- Assist in transfer of patient to recovery area bed
- Monitor vital signs as appropriate
- Review recovery area care and medications with staff
- Discuss procedure with patient as necessary in recovery area when awake
- Conduct post-op pain assessment
- Write any further necessary orders, check pain status
- Dictate operative report
- Call referring physician as necessary
- Meet with family or friend, give pre-printed post op instructions and prescriptions as indicated. (This was also discussed with patient before procedure).

Post-op Office work- After discharge from hospital:

- Examine patient and check surgical sites for ecchymosis
- Remove sutures
- Check vital signs
- Conduct post-op pain assessment
- Check urinalysis
- Answer questions from patient and family
- Write necessary prescriptions
- Schedule next office visit
- Dictate patient progress notes for office medical record
- Dictate letter to referring physician

		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 11 **% of respondents:** 47.8 **%**

TIME ESTIMATES (Median)	**CPT Code: 38570**	**Key Reference CPT Code:** 58661	**Source of Time** **RUC Time**

Median Pre-Service Time	53.00	55.00
Median Intra-Service Time	60.00	90.00
Median Immediate Post-service Time	30.00	30.00
Median Critical Care Time	0.0	0.00
Median Other Hospital Visit Time	0.0	19.00
Median Discharge Day Management Time	38.0	0.00
Median Office Visit Time	39.0	23.00
Prolonged Services Time	0.0	0.00
Median Subsequent Observation Care Time	0.0	0.00
Median Total Time	**220.00**	**217.00**
Other time if appropriate		

INTENSITY/COMPLEXITY MEASURES (Mean)	**(of those that selected Key Reference code)**	
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	3.64	3.45
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.91	3.55
Urgency of medical decision making	3.55	3.18
Technical Skill/Physical Effort (Mean)		
Technical skill required	4.09	3.82
Physical effort required	4.00	3.64
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality	3.82	3.27
Outcome depends on the skill and judgment of physician	4.18	3.73
Estimated risk of malpractice suit with poor outcome	3.82	4.00

INTENSITY/COMPLEXITY MEASURES	**CPT Code**	**Reference Service 1**
Time Segments (Mean)		
Pre-Service intensity/complexity	3.45	3.45
Intra-Service intensity/complexity	4.09	3.73
Post-Service intensity/complexity	3.45	3.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The AUA sent a "do you do letter" to a random number of AUA and its subspecialty, Society of Urologic Oncologists members. The surveys were then sent to the individual physicians who answered that they do the procedure and would complete the RUC survey. The survey was sent to 92 individuals and of those individuals, 23 responses were received for a response rate of 25%.

Urology performs this procedure 37.57% of the Medicare 2013 utilization of 1,488 procedures, which calculates to approximately 699 times for the year. The RUC approved changes to the minimum survey sample size based on Medicare utilization data that requires 30 respondents for codes with less than 100,000 procedures. Unfortunately, the AUA knew there would be a problem meeting this requirement because of the low utilization and only 23 respondents complete the survey for this code. The AUA believes that the survey responses do represent an adequate representation of urologists who perform this procedure.

Due to the limited number of 10 day global procedures, the AUA's key reference service list consisted of codes with 10 and 90 global procedures.

The AUA RUC expert panel reviewed the survey results, which determined that 60 minutes of intra-service time is necessary to complete this procedure. There is a 60 minute decrease in the current intra-service time of 120 minutes. The current work RVU is 9.34. The median work value from the survey is 14.00. The pre-service time package 4-FAC was chosen which reduced the surveyed pre-service time from 90 minutes to 63 minutes and the post-service package 9B was chosen which increased the surveyed post-service time from 30 minutes to 33 minutes.

When this code was reviewed in June 1993, no hospital visits were associated with this procedure. However, the survey data reported that one hospital visit and one full day discharge visit is necessary as well as two level 99213 office visits for this code. Although the intra-service time decreased significantly, the total time increased from 242 to 280 minutes.

The chart below shows comparable RUC reviewed codes to the surveyed code. The panel reviewed the intraservice time and the total time of those procedures; however the comparison codes were reviewed before the preservice and postservice time packages were instituted.

CPT Code	Descriptor	Global	Work RVU	PRE-Service Package	PRE Time	Intra Time	Post Time	OV	Hosp Visits	Discharge Day	Total Time	RUC Approved
Comparison Codes												
27690	Transfer or transplant of single tendon (with muscle redirection or rerouting); superficial (eg, anterior tibial extensors into midfoot)	90	9.17	None	58	60	20	99212 (2) 99213 (3)		99238 (.5)	258	Apr-08
35701	Exploration (not followed by surgical repair), with or without lysis of artery; carotid artery	90	9.19	None	55	60	30	99212 (1) 99213 (1)	99232 (1)	99238 (1)	262	Aug-00
64821	Sympathectomy; radial artery	90	9.33	None	50	60	30	99212 (3) 99213 (1)	99231 (1)	99238 (1)	269	Apr-01
64822	Sympathectomy; ulnar artery	90	9.33	None	50	60	30	99212 (3) 99213 (1)	99231 (1)	99238 (1)	269	Apr-01

It is the recommendation of the AUA RUC expert panel that current work RVU of 9.34 should be maintained for CPT code 38570.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38570

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty General Surgery How often? Sometimes

Specialty Gynecology/Oncology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1860
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare X 125%

Specialty Urology Frequency 699 Percentage 37.58 %

Specialty General Surgery Frequency 536 Percentage 28.81 %

Specialty Gynecology/Oncology Frequency 341 Percentage 18.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,488
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Urology Frequency 559 Percentage 37.56 %

Specialty General Surgery Frequency 429 Percentage 28.83 %

Specialty Gynecology/Oncology Frequency 273 Percentage 18.34 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 38570

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:38571 Tracking Number Original Specialty Recommended RVU: **14.76**
Presented Recommended RVU: **14.76**
Global Period: 010 RUC Recommended RVU: **12.00**

CPT Descriptor: Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 61-year-old male presents with PSA of 13.6, with a prostatic nodule and a positive needle biopsy for prostatic carcinoma. After discussion with his physician, a laparoscopic bilateral total pelvic lymphadenectomy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 3% , Overnight stay-less than 24 hours 56% , Overnight stay-more than 24 hours 41%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 32%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 6%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work:
Day before surgery:
- Review pre-op lab results
- Review medical record
- Write pre-op orders (to be emailed or faxed to hospital)
- Obtain and review all imaging studies if necessary

Pre-Service work- Day of surgery:
- Obtain and review records and previous history, laboratory studies and all imaging studies before the procedure;
- Change into scrub clothes.
- Review surgical procedure, post-op recovery in and out of hospital with patient and family
- Physician sign and explain informed consent in holding area
- Foley catheter inserted
- Mark “site of surgery”, “side” in holding area
- Speak to anesthesiologist about expected length of procedure and any special concerns (ie., jet ventilator; gated or non-gated)
- Verify all necessary instruments are available
- Scrub and dress in operative gown
- "Time out" for patient identification
- Place patient on surgical table in supine position
- Wait for anesthesiologist to administer general anesthetic

Description of Intra-Service Work:

• Prep and drape the surgical site
• Pneumoperitoneum is established
• Laparoscopic trocars are placed under direct vision.
• The abdomen and pelvis are explored visually for lymphadenopathy and/or metastatic disease.
• The peritoneum is incised overlying the external iliac vessels and lymph node dissection is performed. Boundaries of the dissection are the genitofemoral nerve laterally, the circumflex iliac vein or Cloquet's node inferiorly, the bladder medially, the bifurcation of the common iliac artery superiorly, and the floor of the obturator fossa deep.
• All lymph node bearing tissue in this area is removed to include external iliac, internal iliac and obturator (hypogastric) lymph nodes.
• The lymph nodes are extracted through one of the trocar port sites and sent for pathologic analysis.
• Hemostasis is achieved
• A drain is placed through a lateral port site.
• The ports are all removed under direct vision
• The trocar site incisions are closed using 4-0 maxon sutures
• The wounds are cleaned and dried
• Sterile bandages applied.

Description of Post-Service Work:

Post-service work, same day as procedure through discharge

• Remove drapes
• Wait for anesthesiologist to awaken patient
• Remove Foley catheter if indicated
• Assist in transfer of patient from surgical table to post-op stretcher
• Accompany anesthesiologist with patient to recovery area
• Assist in transfer of patient to recovery area bed
• Monitor vital signs as appropriate
• Review recovery area care and medications with staff
• Discuss procedure with patient as necessary in recovery area when awake
• Conduct post-op pain assessment
• Write any further necessary orders, check pain status
• Dictate operative report
• Call referring physician as necessary
• Meet with family or friend, give pre-printed post op instructions and prescriptions as indicated. (This was also discussed with patient before procedure).

Post-op Office work- After discharge from hospital:

• Examine patient and check surgical sites for ecchymosis
• Remove sutures
• Check vital signs
• Conduct post-op pain assessment
• Check urinalysis
• Answer questions from patient and family
• Write necessary prescriptions
• Schedule next office visit
• Dictate patient progress notes for office medical record
• Dictate letter to referring physician

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
51992	090	14.87	**RUC Time**

CPT Descriptor Laparoscopy, surgical; sling operation for stress incontinence (eg, fascia or synthetic)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
53445	090	13.00	**RUC Time**	1,995

CPT Descriptor 1 Insertion of inflatable urethral/bladder neck sphincter, including placement of pump, reservoir, and cuff

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
52601	090	15.26	**RUC Time**	47,713

CPT Descriptor 2 Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 11 **% of respondents:** 34.3 **%**

TIME ESTIMATES (Median)	**CPT Code: 38571**	**Key Reference CPT Code:** 51992	**Source of Time** **RUC Time**

Median Pre-Service Time	53.00	60.00
Median Intra-Service Time	90.00	75.00
Median Immediate Post-service Time	30.00	40.00
Median Critical Care Time	0.0	0.00
Median Other Hospital Visit Time	0.0	118.00
Median Discharge Day Management Time	38.0	0.00
Median Office Visit Time	39.0	62.00
Prolonged Services Time	0.0	0.00
Median Subsequent Observation Care Time	0.0	0.00
Median Total Time	**250.00**	**355.00**
Other time if appropriate		

INTENSITY/COMPLEXITY MEASURES (Mean)	**(of those that selected Key Reference code)**	
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	3.36	3.36
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.45	3.09
Urgency of medical decision making	3.18	3.00
Technical Skill/Physical Effort (Mean)		
Technical skill required	4.00	3.55
Physical effort required	3.64	3.27
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality	4.00	3.36
Outcome depends on the skill and judgment of physician	4.09	3.55
Estimated risk of malpractice suit with poor outcome	3.64	3.73

INTENSITY/COMPLEXITY MEASURES	**CPT Code**	**Reference Service 1**
Time Segments (Mean)		
Pre-Service intensity/complexity	3.64	3.55
Intra-Service intensity/complexity	3.91	3.73
Post-Service intensity/complexity	3.09	2.91

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The AUA sent a "do you do letter" to a random number of AUA and its subspecialty, Society of Urologic Oncologists, members. The surveys were then sent to the individual physicians who answered that they do the procedure and would complete the RUC survey. The survey was sent to 92 individuals and of those individuals, 32 responses were received for a response rate of 34.7%. In 2013, 9,864 of these procedures were performed in the Medicare population. The RUC approved changes to the minimum survey sample size based on Medicare utilization data that requires 30 respondents for codes with less than 100,000 procedures so the minimum number of respondents was met for this code.

Due to the limited number of 10 day global procedures, the AUA's key reference service list consisted of codes with 10 and 90 global procedures.

The AUA RUC expert panel reviewed the survey results, which determined that 90 minutes of intra-service time is necessary to complete this procedure. There is a 90 minute decrease in the current intra-service time of 180 minutes. The current work RVU is 14.76. The median work value from the survey is 15.00. The pre-service time package 4-FAC was chosen which increased the pre-service time from 60 minutes to 63 minutes and the post-service package 9B was chosen which increased the post-service time from 32 minutes to 33 minutes.

When this code was reviewed in August 1995, no hospital visits were associated with this procedure. However, the survey data reported that one hospital visit and one full day discharge visit is necessary as well as two level 99213 office visits for this code. Although the intra-service time decreased significantly, the total time increased from 272 to 310 minutes.

The chart below shows comparable RUC reviewed codes to the surveyed code. The panel reviewed the intra-service time and the total time of those procedures; however the comparison codes were reviewed before the pre-service and post-service time packages were instituted.

CPT Code	Descriptor	Global	Work RVU	PRE-Service Package	PRE Time	Intra Time	Post Time	OV	Hosp Visits	Discharge Day	Total Time	RUC Approved
Comparison Codes												
29807	Arthroscopy, shoulder, surgical; repair of SLAP lesion	90	14.67	None	55	90	30	99212 (3) 99213 (2)		99238 (.5)	288	Apr-01
69714	Implantation, osseointegrated implant, temporal bone, with percutaneous attachment to external speech processor/cochlear stimulator; without mastoidectomy	90	14.45	None	55	90	30	99212 (3) 99213 (1)		99238 (1)	284	Apr-00

It is the recommendation of the AUA RUC expert panel that current work RVU of 14.76 should be maintained to CPT code 38571.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38571

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty Gynecology/Oncology How often? Sometimes

Specialty Obstertics/Gynecology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 12330
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare X 125%

Specialty Urology Frequency 9913 Percentage 80.39 %

Specialty Gynecology Frequency 1836 Percentage 14.89 %

Specialty Obstetrics/Gynecology Frequency 499 Percentage 4.04 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,864
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Urology Frequency 7931 Percentage 80.40 %

Specialty Gynecology/Oncology Frequency 1469 Percentage 14.89 %

Specialty Obstetrics/Gynecology Frequency 399 Percentage 4.04 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 38571

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Presented Recommended RVU: **15.60**
Global Period: 010 RUC Recommended RVU: **15.60**

CPT Descriptor: Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling (biopsy), single or multiple

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old woman underwent a total abdominal hysterectomy and bilateral salpingo-oophorectomy for abnormal bleeding and biopsy evidence of endometrial hyperplasia. The final pathology report revealed a deeply invasive adenocarcinoma confined to the uterine corpus. In order to complete surgical staging a laparoscopy with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling was performed.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 99% , In the ASC 0%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 10% , Overnight stay-less than 24 hours 74% , Overnight stay-more than 24 hours 16%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 22%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 8%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work:
•Review medical records with attention to imaging and labs, including glucose testing
•Assure appropriate selection, timing, and administration of pre-surgical antibiotic
•Meet with patient and family to review planned procedure and post-operative management
•Review informed consent with patient
•Review length and type of anesthesia with anesthesiologist.
•Verify that all required instruments and supplies are available, including laparoscopic equipment.
•Supervise placement of additional IV access and possible arterial line (no access to arms intraoperatively)
•Insert or supervise Foley catheter placement
•Assist with positioning, including belts, bear huggers, pads and sandbags to cradle patient
•Monitor placement of prophylactic DVT compression devices on legs
•Perform tilt test, checking for slide as well as ventilation issues
•Indicate areas of skin to be prepped and mark surgical incisions
•Scrub and gown.
•Perform surgical "time out" with operating surgical team.
•Inject local anesthesia into planned trocar sites

Description of Intra-Service Work:
•Place vaginal probe, when indicated

•Perform examination under anesthesia, when indicated
•Perform skin incision for initial trocar placement and instill carbon dioxide for insufflation of abdomen
•Perform addition incisions and insert trocars and instruments (up to 6 sites)
•Perform endoscopic inspection and evaluation of abdomen and pelvis
•Perform lysis of adhesions, as necessary
•Mobilize large and small bowel for exposure as necessary, enter the retroperitoneal space, and perform bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling: identify internal and external iliac vessels; dissect genitofemoral nerves and obturator nerve; identify and protect ureter; identify aorta and IVC; ligate vascular and lymphatic channels adjacent to the lymph nodes; mobilize lymph nodes away from nerves, vascular structure and ureter
•Excise and remove biopsy specimens
•Irrigate and perform hemostasis throughout procedure
•Review frozen section results with pathology as indicated
•Place drain(s), as indicated, and secure in place with a suture
•Remove individual trocars under direct laparoscopic vision, checking for bleeding
•Remove final trocar, allowing carbon dioxide to escape from the abdomen
•Confirm sponge, needle, and instrument counts prior to closure
•Close wounds: subcutaneous tissue is approximated with interrupted sutures; skin incisions are closed in subcuticular fashion. .

Description of Post-Service Work:
•Apply sterile dressings
•Remove manipulators, probes, when indicated
•Discuss postoperative recovery care with anesthesia and nursing staff.
•Instruct nursing staff in care of drains, tubes and other devices.
•Complete operating room record
•Monitor stabilization of patient and transfer to recovery room
•Write postoperative orders
•Dictate operative report
•Discuss procedure and outcome with family and patient (when awake)
•Write orders for transferring to surgical floor and discuss ongoing care with floor nurses.
•Assess patient status daily
•Remove packs, drains, catheters, when indicated
•Order and review labs
•At discharge, provide patient instructions for activity and diet
•Write orders for discharge medications
•Complete discharge summary/medical records as required
•Perform follow-up visits as clinically indicated during the global period
•Review pathology and laboratory reports, as applicable
•Discuss progress with referring physician(s) (verbal and written).
•Dictate progress notes for medical chart

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
58548	090	31.63	**RUC Time**

CPT Descriptor Laparoscopy, surgical, with radical hysterectomy, with bilateral total pelvic lymphadenectomy and para-aortic lymph node sampling (biopsy), with removal of tube(s) and ovary(s), if performed

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
60500	090	15.60	**RUC Time**	15,298

CPT Descriptor 1 Parathyroidectomy or exploration of parathyroid(s);

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
52649	090	14.56	**RUC Time**	3,310

CPT Descriptor 2 Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 41 **% of respondents:** 42.2 **%**

TIME ESTIMATES (Median)	**CPT Code: 38572**	**Key Reference CPT Code: 58548**	**Source of Time RUC Time**
Median Pre-Service Time	70.00	75.00	
Median Intra-Service Time	120.00	240.00	
Median Immediate Post-service Time	30.00	45.00	
Median Critical Care Time	0.0	0.00	
Median Other Hospital Visit Time	0.0	80.00	
Median Discharge Day Management Time	38.0	38.00	
Median Office Visit Time	63.0	86.00	
Prolonged Services Time	0.0	0.00	
Median Subsequent Observation Care Time	0.0	0.00	
Median Total Time	**321.00**	**564.00**	
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES (Mean)	**(of those that selected Key Reference code)**	
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	4.29	4.44
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	4.46	4.46
Urgency of medical decision making	4.20	4.22
Technical Skill/Physical Effort (Mean)		
Technical skill required	4.78	4.85
Physical effort required	4.59	4.61
Psychological Stress (Mean)		
The risk of significant complications, morbidity and/or mortality	4.68	4.78
Outcome depends on the skill and judgment of physician	4.78	4.76
Estimated risk of malpractice suit with poor outcome	4.49	4.44

INTENSITY/COMPLEXITY MEASURES	**CPT Code**	**Reference Service 1**
Time Segments (Mean)		
Pre-Service intensity/complexity	4.22	4.22
Intra-Service intensity/complexity	4.46	4.68

Post-Service intensity/complexity	3.71	3.90

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

In January 2014, the RUC reviewed 010-day global services (based on 2012 Medicare utilization data) and identified 18 services with >1.5 office visits and 2012 Medicare utilization > 1,000. The RUC requested these services be surveyed for work and review the practice expense for the September 2014 RUC meeting. As such, ACOG surveyed CPT Code 38572. It was a robust survey for a low volume code, with almost 100 responses.

The survey data support maintaining two office visits in the postoperative period. In fact, the survey data strongly support updating the postoperative office visits from two 99213 visits to one 99213 and one 99214. Below is a discussion of the services performed during the postoperative office visits for this procedure:

Visit #1 – 99214
Patient is seen 2-3 days postoperatively. The surgeon addresses wound healing, bowel and bladder functions, and pain control. The exam includes inspection of the wound, abdomen, lymphatic system, neurologic and musculoskeletal systems and pelvic exam with a focus on swelling or irritation. Post-op labs are reviewed with additional CBC, glucose for diabetic patients and possible U/A. Surgical procedure and intraoperative findings are discussed. Instructions are given on analgesic use, bowel/bladder functions, and home medications.

Visit #2 – 99213
Patient returns for discussion of pathology report and subsequent treatment options. The surgeon assesses pain control and wound healing and other symptoms or concerns presented by the patient/family. Wound is examined and dressing is changed with removal of sutures. Extremities and groin area is examined for swelling. Instructions are given for additional follow-up care and management of underlying malignancy.

Reference Service List
CPT Code 38572 has a 010 global period. As gynecologists perform very few codes with a 10-day global period , the development of a reference service list was complicated. The specialty attempted to include as many 10-day codes as possible, drawing as needed from other obstetrics/gynecology services familiar to gynecologists. As a result, the RSL for this procedure included services with both 010 and 090 global periods.

Pre Service Time
We are recommending Pre-time Package #4 (difficult patient/difficult procedure) with additional time as discussed below.

Positioning
We are recommending an addition of 12 minutes to the package time for positioning. Additional time is required for patient positioning, with special attention to padding arms, legs, and pressure points when the patient is secured to the table to prevent the patient movement when patient is placed in reverse Trendelenburg position or when turned from side to side. Additional time is also required for equipment positioning relative to the patient and to other equipment to insure access to the operative site, including the scope and video equipment, intra-operative imaging equipment, surgical instruments, and anesthesia lines. A total positioning time of 15 minutes appropriately accounts for the time required for this work.

Scrub/Dress/Wait
We are recommending a reduction of 5 minutes from the package SDW time to correspond to the survey median time for this activity.

Survey Results and Physician Work RVU Recommendation
The surveyed procedure intra time decreased from 180 minutes to 120 minutes, possible due to changes in technique. . In addition, hospital systems may have become more efficient for this procedure and technology may have improved visualization of nodes for dissection. These factors have allowed surgeons to take on more medically and surgically complex patients. Current data confirms increasing BMI, increased rate of comorbidities including cardiovascular disease, obstructive sleep apnea and diabetes in this population. Previously complex cases were performed in an open fashion but technology has allowed more complex patients to undergo laparoscopy for lymphadenectomy

To account for the changes in intra time, the specialty society is recommending a direct crosswalk to CPT code 60500 to establish physician work RVUs. We believe these recommendations maintain relativity within the specialty and in the larger house of medicine. Although 60500 has three office visits, these visits are at lower level. Total time for 60500 is comparable to 38572.

	CPT Code	Descriptor	Work RVUs	Total Time	Pre	Intra	Post	PostOp
	58545	*Laparoscopy, surgical, myomectomy, excision; 1 to 4 intramural myomas with total weight of 250 g or less and/or removal of surface myomas*	15.55	334	60	120	30	238(1) 213(2) 232(1)
MPC	60500	*Parathyroidectomy or exploration of parathyroid(s);*	15.60	313	72	120	40	238(.5) 212 (1) 213 (2)
SURVEYED	38572	*Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling (biopsy), single or multiple*	15.60	321	70	120	30	238(1) 213(1) 214(1)
	50541	*Laparoscopy, surgical; ablation of renal cysts*	16.86	319	60	120	15	238(1) 213(2) 231(2)

Conclusion

In summary, the specialty society is recommending a physician work value of 15.60, based on survey results and a direct crosswalk to MPC code 60500.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38572

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Gynecology/Oncology How often? Commonly

Specialty Ob/Gyn How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. A national frequency rate is not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,281
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2013 Version of the RUC database

Specialty Gynecology/Oncology Frequency 1552 Percentage 68.04 %

Specialty OB/GYN Frequency 480 Percentage 21.04 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 38572

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor: 38570 Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple
Global Period: 010 Meeting Date: September 2014

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The AUA Practice Expense Workgroup consists of six urologists from across the country in both academic and private practice. The clinical staff time, supplies and equipment were reviewed by this workgroup to determine what is necessary to perform the procedure in the facility setting.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: 38570 is the current CPT code. We will use the current PE direct inputs as the comparison.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: NA

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: NA

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Complete pre-service diagnostic and referral forms
Coordinate pre-service surgery services
Schedule space and equipment in facility
Provide pre-service education/obtain consent

Intra-Service Clinical Labor Activities:

None

Post-Service Clinical Labor Activities:

Follow-up phone calls and prescriptions

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor: 38571 Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy
Global Period: 010 Meeting Date: September 2014

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The AUA Practice Expense Workgroup consists of six urologists from across the country in both academic and private practice. The clinical staff time, supplies and equipment were reviewed by this workgroup to determine what is necessary to perform the procedure in the facility setting.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: 38571 is the current CPT code. We will use the current PE direct inputs as the comparison.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: NA

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: NA

5. Please describe in detail the clinical activities of your staff:

CPT Code: 38572
Specialty Society('s): ACOG

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor: *Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling (biopsy), single or multiple*

Global Period: 010 **Meeting Date:** September 2014

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

A standard RUC survey was conducted for physician work. An expert panel reviewed the recommendations for physician work and updated practice expense recommendations.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:

CPT Code 38572 is an existing code. The current direct practice expense details are included on the spreadsheet.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

The RUC database currently reflects PE clinical/equipment time for one post-operative visit. This is an error. The RUC database correctly includes two postoperative office visits from the previous review of this service. The current survey also indicates two postoperative office visits. As such, the correct clinical staff time needs to be updated to reflect current survey data.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:
The standard inputs for 090-day codes have been recommended for this procedure. The approved time of 30 minutes for a 10-day global procedure requiring extensive use of clinical staff has been included. The patient will be placed under general anesthesia and is undergoing a major laparoscopic procedure. This will require at least 30 minutes of clinical staff pre-service time, which is only half of the standard time for most other major operations.

Intra-Service Clinical Labor Activities:
The standard time for discharge day management has been recommended for this procedure.

Post-Service Clinical Labor Activities:
Standard times to ready patient/records and assist physician at each post-op office visit have been applied.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2016

Laparoscopic Total Pelvic Lymphadenectomy

The CPT Editorial Panel created a new code to describe the laparoscopic bilateral total pelvic lymphadenectomy at their May 2016 meeting.

38573 Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling, peritoneal washings, peritoneal biopsy(s), omentectomy, and diaphragmatic washings, including biopsy(s) when performed
The RUC reviewed the survey data from 65 gynecology and oncology physician providers and recommends the survey 25th percentile work RVU of 20.00. The RUC recommends the following physician time: pre-service time of 68 minutes, intra-service time of 180 minutes, and immediate post-service time of 30 minutes with a half day discharge day (0.5 – 99328) and two post-operative office visits (1 – 99213, 1 – 99214). The RUC compared this service to similar service 60650 *Laparoscopy, surgical, with adrenalectomy, partial or complete, or exploration of adrenal gland with or without biopsy, transabdominal, lumbar or dorsal* (work RVU=20.73, intra-service time of 180 minutes) and determined that both services have identical intra-service time and comparable physician work and should therefore be valued similarly. To validate a work RVU of 20.00, the RUC compared the survey code to top key reference code 38572 *Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling (biopsy), single or multiple* (work RVU=15.60, intra-service time of 120 minutes) and noted that the reference code has lower intra-service time, and the survey respondents indicated that the survey code is somewhat to much more intense to perform, further justifying this valuation.

The RUC discussed the limited services with 010 day global periods and thus comparison to other major procedures with 010 global periods is difficult, however, the IWPUT is consistent with other major procedures. The typical patient has had a prior recent hysterectomy and the physician is concerned about injuring bowel and blood vessels while accessing the peritoneal cavity. Techniques such as an open approach (Hasson), or insertion of the verees needle and trocar in the left upper quadrant is considered. Additional adhesions are universally encountered, including inflammation related to the recent procedure. After development of appropriate spaces, and completion of the lymphadenectomy, the physician must bring the omentum into view. An omentectomy is challenging given the course of the transverse colon from the hepatic flexure to the splenic flexure. Attachments to the colon need to be taken down carefully to ensure the physician does not cause traumatic or thermal injury to the bowel. The lesser sac is eventually entered and then attachments just below the greater curvature of the stomach are taken down and the vessels sealed and cut. The physician must ensure avoidance of the vasculature in the splenic hilum as well as tearing of the splenic capsule. Finally, extraction of the omentum requires a larger incision than typically required for lymph nodes and hence a minilaparotomy is almost always necessary. Given the comparison codes and intensity of this service, the RUC determined the 25th percentile of the survey results accurately reflects the work of this service. **The RUC recommends a work RVU of 20.00 for CPT code 38573.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense:
The Practice Expense Subcommittee reviewed the recommended equipment for this procedure and agreed that it was not typical to have EQ170 *light, fiberoptic headlight w-source*. The Subcommittee agreed to add the standard exam light (EQ168). In addition, the pelvic exam pack supply item SA051 was added. The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:38573 Tracking Number J1 Original Specialty Recommended RVU: **24.00**
Presented Recommended RVU: **20.00**
Global Period: 010 RUC Recommended RVU: **20.00**

CPT Descriptor: Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling peritoneal washings, peritoneal biopsy(s), omentectomy, and diaphragmatic washings, including biopsy(s) when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old female has undergone a laparoscopic hysterectomy and bilateral salpingo-oophorectomy for what was thought to be a benign ovarian mass. Subsequently, the final pathology showed a grade 1 ovarian cancer. The patient was counseled about her risks of recurrence and was offered a laparoscopic surgical staging of the ovarian malignancy.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 6% , Overnight stay-less than 24 hours 74% , Overnight stay-more than 24 hours 20%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 31%

Description of Pre-Service Work: The history and physical exam are reviewed and updated. Medicine reconciliation is performed. Labs, imaging studies, and biopsies are reviewed. The discontinuation of any high risk medication is verified. Appropriate antibiotic coverage is determined consistent with procedure risks and patient's known allergies. The method and timing of DVT prophylaxis is considered and implementation is assured. The procedure is verified with the patient and any remaining questions are answered. Physician changes into scrub clothes. The instruments and anticipated supplies are checked for completeness and functionality. The appropriate images are displayed in the operating room. Following induction of anesthesia a second IV is inserted. The patient is placed safely in dorsal lithotomy position. The arms are wrapped in foam and safely tucked alongside the body and all joints are inspected to prevent nerve compression. A tilt test is performed to verify the patient will tolerate maximum trendelenberg from a cardiopulmonary status and physical positioning. There is verification that the IVs, arterial-line, pulse oximetry and blood pressure monitoring are functioning with the arms tucked. The patient is placed back into a horizontal position. An oral-gastric tube is placed to decompress the stomach. The face and eyes are protected with pads or shields. The extent of surgical prep is delineated. Physician scrubs. The surgical timeout is performed. The patient is draped.

Description of Intra-Service Work: A bimanual and rectovaginal exam is performed under anesthesia to assess nodularity in the cul de sac or pelvic masses. A foley catheter is inserted into the bladder. A sponge stick in placed in the vagina . A diagnostic laparoscopy is performed, 5-6 laparoscopic ports are placed in the abdomen ranging in size from 5-12mm. The patient is assessed for intra-abdominal metastases, diaphragmatic metastases and retroperitoneal adenopathy. Biopsies of any suspicious lesions are performed. Adhesions from the prior surgery involving bowel and omentum are lysed. The bowels and bowel mesentery are systematically evaluated for the presence of metastatic disease. Peritoneal cytology is obtained. Patient is placed in steep trendelenberg and the bowel is mobilized and dissected out of the pelvis. The retroperitoneum is opened bilaterally to identify the ureters, paravesical and pararectal spaces. A pelvic lymphadenectomy is performed. The nodes from the external and internal iliac, lower common illiac and obturator spaces are placed in a bag and removed separately. The peritoneum over the aorta and vena cava are opened and ureters, inferior mesenteric artery and renal vessels are identified. Peri-aortic lymph node sampling is performed. Lymph nodes are placed in a bag and

removed from the abdomen. An omentectomy is performed by dissecting it free from the transverse colon and stomach. The omentum is placed in a bag and removed through a small mini-laparotomy incision. After completing the staging, hemostasis is confirmed and the pelvis and abdomen are inspected for any injuries. The mini-laparotomy is closed. The instruments and ports are removed and all port sites are closed

Description of Post-Service Work: The oral-gastric tube is removed. The prep is washed off the skin. The transfer of patient to recovery area is supervised. Vital signs are checked and immediate pain assessment is made. Recovery and postoperative medications are ordered and initiated. Patient condition, findings and anticipated outcome is conveyed to family members. The anticipated recovery process and criteria for discharge are conveyed. Procedure documentation is created and reviewed. Labeled images from procedure are transferred to the medical record. The patient is assessed again later in the day to evaluate for any post-procedural complications and the findings at surgery are discussed with the patient. The patient is assessed again the following day, laboratory studies are obtained and reviewed and the patient is assessed for appropriateness of discharge. Plans for discharge are made. Prescriptions for pain medications, DVT prophylaxis, resuming home medications and home therapy are processed. Restrictions of activities and precautions are outlined. Post-procedure follow-up is scheduled.

First Visit: Level 4 Office Visit (99214)
The patient is first seen 1-2 days post-discharge. A detailed history is performed to assess for pain, cardio-pulmonary status, return of bowel function, ileus, nausea and vomiting, bladder function and urinary retention, signs of infection or eroma, retroperitoneal bleeding, lymphedema of the groin, lower abdomen, perineum, or lower extremities, assessment for DVTs and nerve damage. Medications are reviewed. A detailed exam including vitals, neurologic status, skin for infections, musculoskeletal for DVTs, cardio-pulmonary exam, exam of perineum, GI exam for bowel function or hernias and lymphatic exam for lymphedema. Laboratory studies are ordered, reviewed and prescriptions are filled as needed.

Second Visit: Level 4 Office Visit (99214)
The patient is next seen at 7-10 days after the procedure. A detailed history is taken to review pain, bowel and bladder function, vaginal bleeding or discharge, any signs of infection, DVTs, lymphedema, lymphocysts or post-operative complications. Medications are reviewed. Chronic medical conditions are assessed for changes in the post op period. A detailed exam is performed including general appearance, vital signs, cardiopulmonary exam, GI exam for bowel function and hernias, skin to assess for infection, lymphatic exam to assess for edema of groins, lower abdomen and external genitalia. An assessment for hematoma formation, seroma and lymphocyst formation is performed. Pathology is reviewed and timing for therapy is addressed. Prescriptions are filled as needed.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	1.00	0.85
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	1.03	0.85
Urgency of medical decision making	0.79	0.55
Technical Skill/Physical Effort (Mean)		
Technical skill required	1.30	0.60
Physical effort required	1.33	0.65

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	1.06	0.85
Outcome depends on the skill and judgment of physician	1.12	0.75
Estimated risk of malpractice suit with poor outcome	0.88	0.55

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	1.24	0.80

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The CPT Editorial Panel created a new code (38573) for reporting bilateral total pelvic lymphadenectomy, peri-aortic lymph node sampling, peritoneal biopsies, and omentectomy.

Methodology

ACOG was granted research subcommittee approval to use a mixed global period (010 and 090) reference service list.

Survey Data

ACOG received 65 completed RUC physician work surveys. The ACOG RUC workgroup reviewed the survey data and believes the median work value of 24.00 RVUs appropriately ranks this new procedure with services in OB/GYN and MPCs.

	CPT	IWPUT	wRVU	Total Time	PreTime	Intra Time	Post Time	99232	99231	99238	99214	99213	99212

Reference	58548	0.089	31.63	585	76	240	45	1	2	1	1	2	

Positioning Time

The society requests 5 extra minutes of positioning time to put the patient in the dorsal lithotomy position. The society also requests 5 additional minutes of positioning time, for a total of 13 minutes. The additional 5 minutes are needed because an additional IV is placed since anesthesia will not have access to the arms. The arms are carefully wrapped in foam and confirmed to be in a neutral position. The arms are tucked along the side of the

abdomen. Confirmation that IV lines, BP cuff and pulse oximetry are functioning with the arms tucked is required. Confirmation that no compression of nerves in the arms, hands, legs and feet is also performed. The patient is then placed into steep trendelenberg to confirm that there is no compromise to the patient's cardiopulmonary function in this position. Once it is confirmed that steep trendelenberg position is well tolerated, the patient is placed back into a horizontal position. A naso gastric tube is placed to decompress the stomach. The face and eyes are padded or shielded to prevent injury

Intensity
The society is recommending an IWPUT of 0.102 for this new procedure. The society has limited services with 010 day global periods and thus comparison to other major procedures with 010 global periods is difficult. However, they believe this IWPUT is consistent with other major procedures.

This patient has had a prior recent hysterectomy and the physician has to be concerned about injuring bowel and blood vessels while accessing the peritoneal cavity. Techniques such as an open approach (Hasson), or insertion of the verees needle and trocar in the LUQ can be considered. Additional adhesions are universally encountered, including inflammation related to the recent procedure. After development of appropriate spaces, and completion of the lymphadenectomy, one has to bring the omentum into view. Omentectomy is challenging given the course of the transverse colon from the hepatic flexure to the splenic flexure. Attachments to the colon need to be taken down carefully to ensure one does not cause traumatic or thermal injury to the bowel. The lesser sac is eventually entered and then attachments just below the greater curvature of the stomach need to be taken down, vessels sealed and cut. As you get closer to the splenic flexure, one needs to ensure avoidance of the vasculature in the splenic hilum as well as tearing of the splenic capsule. Finally, extraction of the omentum requires a larger incision than typically required for lymph nodes and hence a minilaparatomy is almost always necessary.

Post Operative Visits
The society is requesting two level four office visits for this procedures, supported by survey data.

First Visit: Level 4 Office Visit (99214)
The patient is first seen 1-2 days post-discharge. A detailed history is performed to assess for pain, cardio-pulmonary status, return of bowel function, ileus, nausea and vomiting, bladder function and urinary retention, signs of wound hematoma or seroma, retroperitoneal bleeding, lymphedema of the groin, lower abdomen, perineum, or lower extremities, and assessment for DVTs and nerve damage. Medications are reviewed. A detailed exam including vital signs, neurologic status, skin for hematoma or seroma, lower extremity exam for DVTs, cardio pulmonary exam, exam of perineum for edema and bruising, GI exam for bowel function or hernias and lymphatic exam for lymphedema. Laboratory studies are ordered, reviewed and prescriptions are filled as needed.

Second Visit: Level 4 Office Visit (99214)
The patient is next seen at 7-10 days after the procedure. A detailed history is taken to review pain, bowel and bladder function, vaginal bleeding or discharge, any signs of infection, DVTs, lymphedema, lymphocysts or post-operative complications. Medications are reviewed. Chronic medical conditions are assessed for changes in the post op period. A detailed exam is performed including general appearance, vital signs, cardiopulmonary exam, GI exam for bowel function and hernias, skin to assess for infection, lymphatic exam to assess for edema of groins, lower abdomen and external genitalia. An assessment for hematoma formation, seroma and lymphocyst formation is performed. Pathology is reviewed and timing for therapy is addressed. Prescriptions are filled as needed.

Recommendation
The specialty society is recommending 24.00 work RVUs for this new procedure with a total time of 377 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 38572 and 49329

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Gynecology/Oncology How often? Commonly

Specialty Obstetrics/Gynecology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 7000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty GynecologyOncology Frequency 5950 Percentage 85.00 %

Specialty ObstetricsGynecology Frequency 1050 Percentage 15.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that 40% of the ovarian cancers are in the Medicare population. However, given the utilization of the unlisted code 49329, under current reporting mechanisms only roughly 1,000 could be current reported.

Specialty GynecologyOncology Frequency 2380 Percentage 85.00 %

Specialty ObstetricsGynecology Frequency 420 Percentage 15.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 58548

CPT Code: 38573
Specialty Society('s): ACOG

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor:

Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy and peri-aortic lymph node sampling peritoneal washings, peritoneal biopsy(s), omentectomy, and diaphragmatic washings, including biopsy(s) when performed

(Do not report 38573 in conjunction with 38562, 38564, 38570, 38571, 38572, 38589, 38770, 38780, 49255, 49320, 49326, 58541, 58542, 58543, 58544, 58548, 58550, 58552, 58553, 58554)

Global Period: 010 **Meeting Date:** October 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

ACOG convened a workgroup consisting of their CPT/RUC committee members and SGO representatives. The workgroup developed these practice expense recommendations based on the physician survey results, the clinical aspects of the procedure and standard PE committee inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison. You must provide an explanation for the selection of reference codes. Reference Code Rationale:

We included CPT Code 38572 as a PE reference code. It was chosen as the key reference service on the physician work survey and includes similar direct practice expense inputs as the newly created service.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

We are requesting "Extensive use of Clinical Staff" for this 010 service. This procedure is typically performed to complete surgical staging of an unexpected cancer diagnosis and the timing of the procedure in relation to the antecedent operation is very short. Services with 010 global periods do not typically include a service of this intensity. Clinical staff is intimately involved with explanation to all stakeholders regarding this procedure. Clinical staff is involved with patient education as well as a new cancer diagnosis and the need for complete staging of the malignancy. The teaching for anticoagulation needs and preoperative prophylactic therapy associated with a cancer and a second pelvic operation is more robust. Management of medical co-morbidities associated with this procedure are complex and time-intensive.

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Complete pre-service diagnostic and referral forms (5)
Clinical staff is utilized for explanation of need for the second operation to stakeholders (i.e. insurance carrier nurse) during a prior global period.

Coordinate pre-surgery services/review test/exam results (10)
Obtain pathology reports from referring clinical team and any other consulting pathology services. Obtain slides, if needed, for physician review. Obtain initial operative report to determine extent of gross pathology for surgical-procedure planning.

Schedule space and equipment in facility (5)
Standard scheduling protocols with additional notification of possible need for post-operative ICU care.

Provide pre-service education/obtain consent (7)
Standard consent with additional education for a new cancer diagnosis and explanation of need for complete surgical staging. Additional education for DVT prophylaxis, bowel prep, and comorbidity management with a second operation. Review of supplements and medications is critical with use of DVT prophylaxis.

PRE phone calls & prescriptions (3)
Anticoagulation prophylaxis and preoperative antibiotics for bowel prep.

Intra-Service Clinical Labor Activities

Standard Discharge Management (12)

Post-Service Clinical Labor Time

Post-Operative day 3 office visit (99214) to evaluate postoperative progress reviewing bowel, bladder, lymphatic, neurologic sequelae as well as DVT surveillance, seroma development and routine wound evaluation of multiple incisions. History involves multiple system discussion and physical exam includes vulvar and vaginal exam for seroma development in addition to routine post-operative evaluation of multiple systems.

Post-Operative day 10 office visit (99214) to evaluate postoperative progress reviewing bowel, bladder, lymphatic, neurologic sequelae as well as DVT surveillance, seroma development and routine wound evaluation of multiple incisions. History involves multiple system discussion and physical exam includes vulvar and vaginal exam for seroma development in addition to routine post-operative evaluation of multiple systems.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2024

Transurethral Robotic-assisted Resection of Prostate – Tab 07

In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 0421T via the high-volume Category III codes screen with Medicare utilization over 1,000. The RAW requested an action plan for the September 2023 RUC meeting to determine if a Category I code should be created. In September 2023, the RAW recommended that this service be referred to the CPT Editorial Panel. In May 2024, the CPT Editorial Panel created a new Category I code to report transurethral robotic-assisted waterjet resection of the prostate, including ultrasound guidance. The existing Category III code and related parentheticals were deleted. The code family was surveyed for the September 2024 RUC meeting.

52500 ***Transurethral resection of bladder neck (separate procedure)***
The RUC reviewed the survey results from 57 urologists and determined that the survey 25th percentile work RVU of 6.00 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes pre-service evaluation time, 7 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 30 minutes intra-service time, 15 minutes immediate post-service time, 0.5-99238, 1-99214 and 1-99213, which totals 169 total minutes. The pre-service positioning time was increased from the pre-service time package of 3 minutes to 7 minutes as indicated by the survey respondents to account for placing the patient in the dorsal-lithotomy position. The RUC noted some variability of the pre-service positioning and scrub/dress/wait time across this family of codes but maintained the standard not to exceed times as indicated by the survey respondents.

This service is typically performed in the hospital setting. However, most patients are discharged on the same day, thus a half discharge day management visit is appropriate. The survey respondents indicated two post-operative office visits are necessary following this procedure. The RUC agreed with the specialty societies that the two post-operative office visit levels are one 99213 and one 99214. During the 99214 post-operative office visit, issues of moderate complexity, including the management of chronic illness with progression or side effects of treatment are addressed. The urinary catheter is removed. Typically following catheter removal, patients will develop urinary incontinence as their external urethral sphincter becomes solely responsible for the maintenance of continence following the opening up of the prostate or bladder neck. Patients also will typically have significant dysuria requiring significant counseling that this is a normal and expected outcome, secondary to the destruction or removal of prostate adenoma. The physician also discusses interventions of moderate risk, including prescription drug management. Prescription drug management is required to discuss and offer patients medications, including anticholinergic or beta-3 agonist medications to help limit post-operative symptoms within the 90-day global period. During the 99213 post-operative office visit, the physician will again discuss prescription drugs, change doses, and address side effects. However, the decision-making complexity is low with the management of a stable chronic illness.

This procedure is a resection of the bladder neck that requires the surgeon to work in a narrow space between the trigone of the bladder and the ureteral orifices and the hypertrophied bladder neck to relieve the patient's urinary obstruction. A cystoscope is inserted into the bladder through the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

penis and an electrical current is typically used to resect the hypertrophied bladder neck to relieve the patient's obstructive symptoms. Significant care must be taken to ensure the ureters are not injured, and to ensure that the bladder neck, while resected, is also preserved, and not perforated. Following the conclusion of the resection, care must be taken to ensure all tissue chips and blood clots are removed from the bladder to avoid obstruction of the urinary catheter.

The RUC compared the surveyed code to the top key reference code 53854 *Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy* (work RVU = 5.93, 25 minutes intra-service time and 137 minutes total time) and determined that these services require similar physician work and time to perform and are valued appropriately relative to one another. The RUC compared the surveyed code to the second top key reference service 57240 *Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time) and determined that the surveyed service requires less physician work and time to perform and thus is appropriately valued lower. For additional support, the RUC referenced MPC code 54530 *Orchiectomy, radical, for tumor; inguinal approach* (work RVU = 8.46, 30 minutes intra-service time and minutes 246.5 minutes total time), which requires more total time, thus valued higher. The RUC determined that the survey 25th percentile work value of 6.00 appropriately places CPT code 52500 relative to other services in the Medicare Physician Payment Schedule (MFS) based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 6.00 for CPT code 52500.**

52597 ***Transurethral robotic-assisted waterjet resection of prostate, including intraoperative planning, ultrasound guidance, control of postoperative bleeding, complete, including vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy, when performed***

The RUC reviewed the survey results from 50 urologists and determined that the survey 25th percentile work RVU of 10.25 appropriately accounts for the work required to perform this service. The RUC recommends 32 minutes pre-service evaluation time, 10 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 60 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238, 1-99214 and 1-99213, which totals 234 minutes. The pre-service positioning time was increased from the pre-service time package of 3 minutes to 10 minutes as indicated by the survey respondents to account for placing the patient in the dorsal-lithotomy position and positioning of the robotic arm and the transrectal ultrasound.

This service is typically performed in the hospital setting. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical. The RUC confirmed that the immediate post-service time of 40 minutes appropriately accounts for the immediate care of the patient (20 minutes), as well as the post-operative care for the patient within the next 23 hours (20 minutes). As per CMS' policy for 23-hour stay hospital outpatient services, the 20 minutes is derived from the intra-service time of the post-operative hospital visit that is typically performed on the same day. The survey respondents indicated that they perform a 99232 hospital visit and the RUC determined that the time should be captured in the immediate post-service time.

The survey respondents indicated that two post-operative office visits are necessary following this procedure. The RUC agreed with the specialty societies that the two post-operative office visits levels are one 99213 and one 99214. During the 99214 post-operative office, visit issues of moderate complexity, including the management of chronic illness with progression or side effects of treatment are addressed. The urinary catheter is

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

removed. Typically following catheter removal, patients will develop urinary incontinence as their external urethral sphincter becomes solely responsible for the maintenance of continence following the opening up of the prostate or bladder neck. Patients also will typically have significant dysuria requiring significant counseling that this is a normal and expected outcome, secondary to the destruction or removal of prostate adenoma. The physician also discusses interventions of moderate risk, including prescription drug management. Prescription drug management is required to discuss and offer patients medications, including anticholinergic or beta-3 agonist medications to help limit post-operative symptoms within the 90-day global period. During the 99213 post-operative office visit, the physician will again discuss prescription drugs, change doses, and address side effects. However, the decision-making complexity is low with the management of a stable chronic illness.

This procedure requires precise ultrasound mapping of the contour of the prostate to ensure adequate waterjet resection without perforation of the prostate capsule, undermining of the bladder neck, or damage to the external urethral sphincter. Real-time ultrasound guidance is used throughout the robotic ablation process to ensure procedural success and patient safety. Following the conclusion of the waterjet resection, care must be taken to ensure adequate hemostasis using a resectoscope and cautery. All tissue chips and blood clots must be removed from the bladder, or the catheter will become obstructed causing discomfort and potential bladder perforation.

To support the survey 25th percentile work RVU of 10.25, the RUC compared the surveyed code to MPC codes 57240 *Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time) and 57250 *Posterior colporrhaphy, repair of rectocele with or without perineorrhaphy* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time), noting that these services all require the same intra-service time of 60 minutes and similar physician work.

For additional support, the RUC referenced MPC codes 54530 *Orchiectomy, radical, for tumor; inguinal approach* (work RVU = 8.46, 30 minutes intra-service time and minutes 246.5 minutes total time) and 54437 *Repair of traumatic corporeal tear(s)* (work RVU = 11.50, 60 minutes intra-service time and 264 minutes total time), which brackets the surveyed code. The RUC determined that the survey 25th percentile work value of 10.25 appropriately places CPT code 52597 relative to other services in the MFS based on time, work, intensity, and complexity**. The RUC recommends a work RVU of 10.25 for CPT code 52597.**

52601 ***Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)***
The RUC reviewed the survey results from 60 urologists and determined that the survey 25th percentile work RVU of 10.00 appropriately accounts for the work required to perform this service. The RUC recommends 26 minutes pre-service evaluation time, 7 minutes pre-service positioning time, 7 minutes pre-service scrub/dress/wait time, 60 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238, 1-99214 and 1-99213, which totals 222 minutes. The pre-service positioning time was increased from the pre-service time package of 3 minutes to 7 minutes as indicated by the survey respondents to account for placing the patient in the dorsal-lithotomy position. The RUC noted some variability of the pre-service positioning and scrub/dress/wait time across this family of codes, however maintained the standard not to exceed times as indicated by the survey respondents.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

This service is typically performed in the hospital setting. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical. The RUC confirmed that the immediate post-service time of 40 minutes appropriately accounts for the immediate care of the patient (20 minutes) as well as the post-operative care for the patient within the next 23 hours (20 minutes). As per CMS' policy for 23-hour stay hospital outpatient services, the 20 minutes is derived from the intra-service time of the post-operative hospital visit that is typically performed on the same day. The survey respondents indicated that they perform a 99232 hospital visit and the RUC determined that the time should be captured in the immediate post-service time.

The survey respondents indicated that two post-operative office visits are necessary following this procedure. The RUC agreed with the specialty societies that the two post-operative office visits levels are one 99213 and one 99214. During the 99214 post-operative office visit, issues of moderate complexity, including the management of chronic illness with progression or side effects of treatment are addressed. The urinary catheter is removed. Typically following catheter removal, patients will develop urinary incontinence as their external urethral sphincter becomes solely responsible for the maintenance of continence following the opening up of the prostate or bladder neck. Patients also will typically have significant dysuria requiring significant counseling that this is a normal and expected outcome, secondary to the destruction or removal of prostate adenoma. The physician also discusses interventions of moderate risk, including prescription drug management. Prescription drug management is required to discuss and offer patients medications, including anticholinergic or beta-3 agonist medications to help limit post-operative symptoms within the 90-day global period. During the 99213 post-operative office visit, the physician will again discuss prescription drugs, change doses, and address side effects. However, the decision-making complexity is low with the management of a stable chronic illness.

This procedure is intense throughout as the prostatic urethra sits between the trigone of the bladder and the external urethral sphincter. Care must be taken to prevent damage to the external sphincter, which can result in significant stress urinary incontinence, and prevent damage to the trigone of the bladder and the ureters. Care must also be taken to preserve the bladder neck as undermining of the bladder neck can lead to significant complications including urinary extravasation. Following the conclusion of the resection, care must be taken to ensure all tissue chips are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

To support the survey 25th percentile work RVU of 10.00, the RUC compared the surveyed code to MPC codes 57240 *Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time) and 57250 *Posterior colporrhaphy, repair of rectocele with or without perineorrhaphy* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time), noting that these services all require the same intra-service time of 60 minutes and similar physician work. The RUC noted that 52601 also requires the same intra-service time and similar physician work as the 52597 in this family of services and should be valued similarly.

For additional support, the RUC referenced MPC codes 54530 *Orchiectomy, radical, for tumor; inguinal approach* (work RVU = 8.46, 30 minutes intra-service time and minutes 246.5 minutes total time) and 54437 *Repair of traumatic corporeal tear(s)* (work RVU = 11.50, 60 minutes intra-service time and 264 minutes total time) and determined that together these services bracket the surveyed code. The RUC determined that the survey 25th percentile work value of 10.00 appropriately places CPT code 52601 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 10.00 for CPT code 52601.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

52630 ***Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)***
The RUC reviewed the survey results from 60 urologists and determined that given that there is no compelling evidence to indicate there has been a recent change in physician work, the RUC recommends maintaining the current work RVU of 6.55 for this service. The RUC recommends 26 minutes pre-service evaluation time, 7 minutes pre-service positioning time, 7 minutes pre-service scrub/dress/wait time, 50 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238, 1-99214 and 1-99213, which totals 212 minutes. The pre-service positioning time was increased from the pre-service time package of 3 minutes to 7 minutes as indicated by the survey respondents to account for placing the patient in the dorsal-lithotomy position. The RUC noted some variability of the pre-service positioning and scrub/dress/wait time across this family of codes, however maintained the standard not to exceed times as indicated by the survey respondents.

This service is typically performed in the hospital setting. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical. The RUC confirmed that the immediate post-service time of 40 minutes appropriately accounts for the immediate care of the patient (20 minutes) as well as the post-operative care for the patient within the next 23 hours (20 minutes). As per CMS' policy for 23-hour stay hospital outpatient services, the 20 minutes is derived from the intra-service time of the post-operative hospital visit that is typically performed on the same day. The survey respondents indicated that they perform a 99232 hospital visit and the RUC determined that the time should be captured in the immediate post-service time.

The survey respondents indicated that two post-operative office visits are necessary following this procedure. The RUC agreed with the specialty societies that the two post-operative office visits levels are one 99213 and one 99214. During the 99214 post-operative office visit, issues of moderate complexity, including the management of chronic illness with progression or side effects of treatment are addressed. The urinary catheter is removed. Typically following catheter removal, patients will develop urinary incontinence as their external urethral sphincter becomes solely responsible for the maintenance of continence following the opening up of the prostate or bladder neck. Patients also will typically have significant dysuria requiring significant counseling that this is a normal and expected outcome, secondary to the destruction or removal of prostate adenoma. The physician also discusses interventions of moderate risk, including prescription drug management. Prescription drug management is required to discuss and offer patients medications, including anticholinergic or beta-3 agonist medications to help limit post-operative symptoms within the 90-day global period. During the 99213 post-operative office visit, the physician will again discuss prescription drugs, change doses, and address side effects. However, the decision-making complexity is low with the management of a stable chronic illness.

The specialty societies indicated that the 10-minute decrease in intra-service time is most likely due to the diffusion of improved resection technology for completing transurethral resection of the prostate adding validity to the survey information. During the 50 minutes of intra-service, the intensity is the same throughout the procedure. A cystoscope is inserted into the bladder through the penis and an electrical current is used to resect residual or regrown prostate tissue following prior procedural intervention to relieve the patient's obstruction. This procedure typically is more intense, though performed in a shorter period of time due to the re-operative nature of the procedure. While less tissue typically has to be removed, the prostate does not regrow in a smooth or normal expected anatomic way following prior procedural intervention, and the surgeon must be careful to correctly identify regrown tissue compared to bladder, locate the ureters, and ensure that the resection performed safely to relieve the obstruction. Furthermore, the proliferation of bladder outlet procedure technologies has increased the complexity for the typical patient undergoing this re-operative restriction.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the top key reference code 53854 *Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy* (work RVU = 5.93, 25 minutes intra-service time and 137 minutes total time) and determined the surveyed code requires twice as much intra-service time and more physician work to resect the residual or regrowth of obstructive prostate tissue, including vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy, thus should be valued higher.

For additional support, the RUC compared the surveyed code to MPC codes 26113 *Excision, tumor, soft tissue, or vascular malformation, of hand or finger, subfascial (eg, intramuscular); 1.5 cm or greater* (work RVU = 7.13, 58 minutes intra-service time and 214 minutes total time) and 54530 *Orchiectomy, radical, for tumor; inguinal approach* (work RVU = 8.46, 30 minutes intra-service time and minutes 246.5 minutes total time) and determined that the current work value of 6.55 appropriately places CPT code 52630 relative to other services in the MFS based on time, work, intensity and complexity. **The RUC recommends a work RVU of 6.55 for CPT code 52630.**

52647 ***Laser coagulation of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/ or dilation, and internal urethrotomy are included if performed)***
The specialty societies noted that the utilization of CPT code 52647 has always been low and continues to decline, with only 90 claims in the 2022 Medicare data. Additionally, the specialty society understands that the manufacturer of the device for laser coagulation of the prostate, which is used in services reported by CPT code 52647, is no longer making the necessary device. Given the low volume of 52647, the code could not be surveyed and properly valued within the code family. Therefore, AUA submitted a code change application (CCA) requesting the deletion of CPT code 52647 which was considered at the September 2024 CPT Editorial Panel meeting. **The CPT Editorial Panel approved the request to delete CPT code 52647 for CPT 2026.**

52648 ***Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/ or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)***
The RUC reviewed the survey results from 47 urologists and determined that the survey 25th percentile work RVU of 10.05 appropriately accounts for the work required to perform this service. The RUC recommends 32 minutes pre-service evaluation time, 7 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 60 minutes intra-service time, 35 minutes immediate post-service time, 0.5-99238, 1-99214 and 1-99213, which totals 226 minutes. The pre-service positioning time was increased from the pre-service time package of 3 minutes to 7 minutes as indicated by the survey respondents to account for placing the patient in the dorsal-lithotomy position. The RUC noted some variability of the pre-service positioning and scrub/dress/wait time across this family of codes, however maintained the standard not to exceed times as indicated by the survey respondents.

This service is typically performed in the hospital setting. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical. The RUC confirmed that the immediate post-service time of 35 minutes appropriately accounts for the immediate care of the patient (15 minutes) as well as the post-operative care for the patient within the next 23 hours (20 minutes). As per CMS' policy for 23-hour stay hospital outpatient services, the 20 minutes is derived from the intra-service time of the post-operative hospital visit that is typically performed on the same day.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The targeted survey respondents indicated that two post-operative office visits are necessary following this procedure. The RUC agreed with the specialty societies that the two post-operative office visits levels are one 99213 and one 99214. During the 99214 post-operative office visit, issues of moderate complexity, including the management of chronic illness with progression or side effects of treatment are addressed. The urinary catheter is removed. Typically following catheter removal, patients will develop urinary incontinence as their external urethral sphincter becomes solely responsible for the maintenance of continence following the opening up of the prostate or bladder neck. Patients also will typically have significant dysuria requiring significant counseling that this is a normal and expected outcome, secondary to the destruction or removal of prostate adenoma. The physician also discusses interventions of moderate risk, including prescription drug management. Prescription drug management is required to discuss and offer patients medications, including anticholinergic or beta-3 agonist medications to help limit post-operative symptoms within the 90-day global period. During the 99213 post-operative office visit, the physician will again discuss prescription drugs, change doses, and address side effects. However, the decision-making complexity is low with the management of a stable chronic illness.

To complete this procedure, a cystoscope is inserted into the bladder through the penis and laser energy is used to vaporize the enlarged, obstructing prostate, to relieve the patient's urinary obstruction. The laser is also used to achieve appropriate hemostasis at the conclusion of vaporization. CPT code 52648 involves the prostatic urethra, which sits between the trigone of the bladder and the external urethral sphincter. Care must be taken throughout laser vaporization to prevent damage to the external sphincter, which can result in significant stress urinary incontinence, and prevent damage to the trigone of the bladder and the ureters. Care must also be taken to preserve the bladder neck as undermining the bladder neck can lead to significant complications including urinary extravasation. Following the conclusion of the resection, care must be taken to ensure all tissue chips and blood clots are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation. CPT code 52648 uses laser vaporization, which is a different technology than that used to perform CPT codes 52601 and 52597, however, ultimately the physician work is the same.

To support the survey 25th percentile work RVU of 10.05, the RUC compared the surveyed code to MPC codes 57240 *Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time) and 57250 *Posterior colporrhaphy, repair of rectocele with or without perineorrhaphy* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time), noting that these services all require the same intra-service time of 60 minutes and similar physician work. The RUC noted that 52648 also requires the same intra-service time and similar physician work as codes 52597 and 52601 in this family of services and should be valued similarly.

For additional support, the RUC referenced MPC codes 50590 *Lithotripsy, extracorporeal shock wave* (work RVU = 9.77, 60 minutes intra-service time and 207 minutes total time) and 54437 *Repair of traumatic corporeal tear(s)* (work RVU = 11.50, 60 minutes intra-service time and 264 minutes total time) and determined that together these services appropriately bracket the surveyed code. The RUC determined that the survey 25th percentile work value of 10.05 appropriately places CPT code 52648 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 10.05 for CPT code 52648.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

52649 ***Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)***
The RUC reviewed the survey results from 30 urologists and determined maintaining the current work RVU of 14.56 appropriately accounts for the work required to perform this service. The RUC recommends 36 minutes pre-service evaluation time, 10 minutes pre-service positioning time, 5 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238, 1-99214 and 1-99213, which totals 263 minutes. The pre-service positioning time was increased from the pre-service time package of 3 minutes to 10 minutes as indicated by the survey respondents to account for placing the patient in the dorsal-lithotomy position. The RUC noted some variability of the pre-service positioning and scrub/dress/wait time across this family of codes, however maintained the standard not to exceed times as indicated by the survey respondents.

This service is typically performed in the hospital setting. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical. The RUC confirmed that the immediate post-service time of 40 minutes appropriately accounts for the immediate care of the patient (20 minutes) as well as the post-operative care for the patient within the next 23 hours (20 minutes). As per CMS' policy for 23-hour stay hospital outpatient services, the 20 minutes is derived from the intra-service time of the post-operative hospital visit that is typically performed on the same day. The survey respondents indicated that they perform a 99232 hospital visit and the RUC determined that the time should be captured in the immediate post-service time.

The random survey respondents indicated that two post-operative office visits are necessary following this procedure. The RUC agreed with the specialty societies that the two post-operative office visits levels are one 99213 and one 99214. During the 99214 post-operative office visit, issues of moderate complexity, including the management of chronic illness with progression or side effects of treatment are addressed. The urinary catheter is removed. Typically following catheter removal, patients will develop urinary incontinence as their external urethral sphincter becomes solely responsible for the maintenance of continence following the opening up of the prostate or bladder neck. Patients also will typically have significant dysuria requiring significant counseling that this is a normal and expected outcome, secondary to the destruction or removal of prostate adenoma. The physician also discusses interventions of moderate risk, including prescription drug management. Prescription drug management is required to discuss and offer patients medications, including anticholinergic or beta-3 agonist medications to help limit post-operative symptoms within the 90-day global period. During the 99213 post-operative office visit, the physician will again discuss prescription drugs, change doses, and address side effects. However, the decision-making complexity is low with the management of a stable chronic illness.

The specialty societies indicated that the 30-minute decrease in intra-service time from when this was last surveyed in 2010 has likely occurred due to the diffusion of skilled surgeons performing this procedure nationally. Utilization of this code has increased substantially over the past ten years as increasing surgeon skill has allowed for the treatment of larger prostate glands with laser enucleation of the prostate. Studies have demonstrated improved voiding outcomes for patients with prostates greater than 100 grams undergoing laser enucleation compared to other bladder outlet procedure options. The increase in the typical prostate being treated with laser enucleation has led to a significant increase in procedural intensity.

CPT code 52649 involves laser enucleation to remove a majority of the patient's prostate adenoma from the inside out, as opposed to the other procedures in this family. For this service, the surgeon introduces a cystoscope with a laser bridge through the penis and makes an incision in the prostate adenoma using the laser. The laser is then used to continue this incision between the prostate capsule and the adenoma to the level of the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

prostatic capsule of the apex. The surgeon then carefully works towards the base of the prostate, enucleating the adenoma, and slowly dissecting it away from the capsule, pushing it into the bladder. Following the enucleation of the adenoma, a morcellator is introduced to the cystoscope, and the adenoma is morcellated within the bladder. Significant care must be taken throughout enucleation to prevent damage to the external sphincter, the bladder neck, and the ureters. Significant care must be taken during morcellation to prevent damage to the bladder from the morcellation process.

Care must also be taken to avoid perforating the capsule posteriorly and damaging the rectum, as the planes are quite challenging to see, especially with large prostate adenomas. Compared to the other procedures included in this family of codes, the concern for rectal injury caused by posterior perforation of the capsule is significantly higher, due to the inside-out approach that occurs with laser enucleation of the prostate. This approach does allow a greater amount of prostate tissue to be removed but significantly increases the difficulty and intensity required to perform CPT code 52649 compared to the other codes within this family. Therefore, the RUC believes the current value of 14.56 appropriately values this service using magnitude estimation compared to services within this family.

The RUC compared the surveyed code to the top key reference code 55821 *Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); suprapubic, subtotal, 1 or 2 stages* (work RVU = 15.18, 120 minutes intra-service time and 315 minutes total time) and noted that half of the survey respondents who chose this key reference service indicated that the surveyed code was more to much more intense and complex to perform overall. The RUC determined that these services require similar physician work to perform, thus, should be valued similarly.

For additional support, the RUC referenced MPC codes 53440 *Sling operation for correction of male urinary incontinence (eg, fascia or synthetic)* (work RVU = 13.36, 90 minutes intra-service time and 248 minutes total time), which requires less intensity to perform than the surveyed code and 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time and minutes 283 minutes total time) and determined that these services appropriately bracket the surveyed code. The RUC determined that the current work value of 14.56 appropriately places CPT code 52649 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 14.56 for CPT code 52649.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

New Technology/New Services List
CPT code 52597 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

Work Neutrality
The RUC's recommendation for these codes will result in overall work savings that should be redistributed back to the Medicare conversion factor.

Attention: Susan Clark and Sherry Smith

Re: CPT code 52647

Dear Ms. Susan Clark and Ms. Smith,

The American Urological Association (AUA) is preparing survey recommendations for Tab 7, Transurethral Robotic-assisted Resection of Prostate, including CPT codes 52500, 52XX1, 52601, 52630, 52647, 52648, and 52649 for consideration at the September 2024 RUC panel meeting. When preparing for the survey, we realized that utilization for a code in the family to be surveyed was very low. Utilization for CPT code 52647 as captured in the current RUC database shows decreasing usage of this procedure over the last fifteen years, from a high of 3,590 services in 2008 to only 90 services in 2023. It is our understanding that the company Indigo, the manufacturer of the device for laser coagulation of the prostate, which is used in services reported by CPT code 52647, is no longer making the necessary device. Given the low volume of 52647, the code could not be surveyed and properly valued within the code family. Therefore, AUA has submitted a code change application (CCA) requesting the deletion of CPT code 52647 for consideration at the September 2024 CPT meeting.

Should you have any questions about this issue, please contact Justice Hempfield at Jhempfield@auanet.org. Thank you for your consideration. We look forward to collaborating with you on these important issues.

Sincerely,

Jonathan Kiechle, MD
RUC Advisor and Presenter for the American Urological Association

SUMMARY OF RECOMMENDATION

CPT Code:52500 Tracking Number I1 Original Specialty Recommended RVU: **6.00**
Presented Recommended RVU: **6.00**
Global Period: 090 Current Work RVU: **8.14** RUC Recommended RVU: **6.00**

CPT Descriptor: Transurethral resection of bladder neck (separate procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old man has an American Urological Association (AUA) symptom index of 29/35. Prior medical treatment with both finasteride and alpha blockers was unsuccessful in improving his urinary symptoms. Peak urinary flow rate is 3 ml/sec, cystometrogram is normal. Cystoscopy reveals a small prostate with a tight, hypertrophied, bladder neck.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 52.63% , In the ASC 43.86%, In the office 3.51%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 73.33% , Overnight stay-less than 24 hours 23.33% , Overnight stay-more than 24 hours 3.33%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Review results of previous testing and imaging. Review preoperative laboratory tests including urinalysis and urine culture. Review the planned procedure and postoperative management with the patient and family/caregiver. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Verify availability of all required instruments and supplies. Check video equipment for white balance. Provide assistance in placing patient in dorsal lithotomy position. Prepare and drape the penis and perineal area. Scrub and gown. Perform a surgical time out with the operating surgical team and anesthesia team.

Description of Intra-Service Work: Place the resectoscope per urethra to the bladder. Perform full cystoscopy to evaluate the bladder for any abnormalities and to identify anatomic landmarks including the ureteral orifices. The hypertrophied bladder neck is identified. The electrocautery loop and handpiece are introduced through the resectoscope sheath. Full circumferential resection of the bladder neck is performed to relieve the urinary obstruction. Following resection all bleeding vessels are cauterized. The bladder is irrigated with the Ellick evacuator to remove blood clots and tissue chips. Cystoscopy is repeated to ensure complete evacuation of all resected tissue and confirm lack of injury to the ureteral orifices and external urethral sphincter. The resectoscope is removed. Three way catheter is placed and continuous bladder irrigation is initiated.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal lithotomy to supine position. Write a brief operative note. Monitor patient stabilization in the recovery room. Post-operative orders are written and the procedure and expected care are reviewed with the recovery room nursing staff including the need to titrate continuous bladder irrigation. The procedure, expected outcome, planned postoperative care in the hospital, and expected outpatient follow-up are discussed with the patient's family. The procedure is discussed with the patient in the recovery room when awake. A postoperative pain assessment is conducted, and proper drainage of the catheter is ensured. Dictate an operative report and complete medical record documentation. During office visits, examine the patient. Check vital signs and inspect urine drainage from the catheter. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Check a post-void residual volume. Answer questions

from the patient and/or family. Discuss remaining or new urinary symptoms including the likelihood of dysuria following catheter removal. Discuss possible medication adjustments for any new or residual urinary symptoms. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	75%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52500 was included in the family of codes for endoscopic management of bladder outlet obstruction. The family was identified for re-evaluation due to the creation of the new category I code 52597.

Recommendation:
We are recommending the survey 25th percentile RVW of 6.00. We had a strong survey with 57 respondents with a median experience of 4 procedures. Median intraservice time was 30 minutes, a 15 minute decrease compared to the prior survey of this code in 2010. This decrease in time has likely occurred due to improved cystoscopic technology for completing bladder neck resection adding validity to the survey information. During the 30 minutes of intra-service time however the procedure is quite intense as resection of the bladder neck requires the surgeon to work in a narrow space between the trigone of the bladder and the ureteral orifices and the hypertrophied bladder neck. Significant care must be taken throughout the entirety of the resection to ensure the ureters are not injured. Following conclusion of the resection, care

must be taken to ensure all tissue chips are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

We are recommending median intraservice time of 30 minutes and a total time of 169 minutes with a half day discharge day. The survey did recommend two level three post-operative visits in the 90 day global period. We are recommending one level 4 visit and one level 3 visit. During the post-operative period, prescription medication management typically takes places as pre-operative bladder outlet medications will be stopped and new medications for bladder overactivity and/or dysuria are often prescribed. The side effects of treatment of the patient's chronic illness which has been managed surgically are discussed and managed.

A database search demonstrates 16 RUC reviewed codes with a 090 day global reviewed since 2014 with an intra-service time between 25 and 35 minutes. 52500 with an RVW of 6.00, intra-service time of 30 minutes and total time of 169 minutes would fit well within this portion of the fee schedule with an RVW range of 3.91-12.13.

Pre-time package 3 and Post-time package 8b are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioning in dorsal-lithotomy. Post-time is reduced to be consistent with the survey.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52500

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty UROLOGY How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on current claims data.

Specialty Urology Frequency 4,000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,334
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database

Specialty Urology Frequency 2334 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:52597 Tracking Number I2 Original Specialty Recommended RVU: **10.25**
Presented Recommended RVU: **10.25**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **10.25**

CPT Descriptor: Transurethral robotic-assisted waterjet resection of prostate, including intraoperative planning, ultrasound guidance, control of postoperative bleeding, complete, including vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy, when performed (Do not report 52597 in conjunction with 52500, 52601, 52630, 76872)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male presents with worsening obstructive, lower urinary tract symptoms while on medical therapy with alpha blockers and five-alpha reductase inhibitors. Digital rectal examination reveals a smooth 100-gram prostate without nodularity. The patient elects to proceed with transurethral robotic-assisted waterjet resection of the prostate.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 96% , In the ASC 4%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 18% , Overnight stay-less than 24 hours 60% , Overnight stay-more than 24 hours 21.83%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 94.87%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Review results of previous testing and imaging. Review preoperative laboratory tests including urinalysis and urine culture. Review the planned procedure and postoperative management with the patient and family/caregiver. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Verify availability of all required instruments and supplies. Check video equipment for white balance. Prime the water ablation tubing. Provide assistance in placing patient in dorsal lithotomy position. Ensure the robotic arms are appropriately attached to the surgical table. Prepare and drape the penis and perineal area. Scrub and gown. Perform a surgical time out with the operating surgical team and anesthesia team.

Description of Intra-Service Work: Ultrasound gel is injected per rectum using the toomey syringe. The ultrasound is placed into the patient's rectum after attached the device to the stepper unit. Multi-planar images of the prostate and bladder are obtained to identify critical structures inlcuding the prostatic capsule, bladder neck and prostatic apex. Prostate volume measurements are obtained. The water ablation handpiece is inserted per urethra under direct vision. Pancystoscopy is performed to evaluate the bladder for any abnormalities. The water ablation handpiece is secured to the robotic articulating arm. Appropriate alignment of the handpiece and ultrasound images are confirmed by direct vision and ultrasound imaging. Test water jets from the handpiece are utilized to verify alignment of the robotic water jet. Treatment zones are planned using real time transrectal ultrasound to align treatment zones with patient's prostatic anatomy. Contouring is performed using 5 individual zonal locators throught the robotic software. The bladder neck zone is carefully mapped out as this area is treated with 120 degrees of ablation instead of 165 degrees for other treatment zones. The verumontanum protection zone is also carefully mapped out for preservation. Ablation of the prostate gland is initiated at the bladder neck. The surgeon carefully monitors the ablation zone with ultrasound imaging throughout ablation. At the level of the bladder neck care is taken to ensure undermining of the bladder neck and subsequent extaravsation of urine does not occur. Pump pressures are monitored and increased or decreased as necessary throughout ablation to open the urinary channel without

perforating the capsule. The suction is carefully monitored to ensure that no tissue occludes the water evacuation system during ablation as this can lead to bladder perforation. After completion of the first treatment pass, repeat ultrasound images are used and treatment plan adjustments are made. The robotic water-jet is again aligned at the bladder neck and second pass treatment is initiated. Second pass treatment is again monitored in real time to ensure adeqaute ablation on ultrasound imaging without undermining or perforation. The robotic waterjet handpiece is removed. Resectoscope is placed per urethra and bipolar cautery is used to achieve adequate hemostasis. Ellick evacuator is used to remove and remaining clot or tissue fragments. A catheter is placed and continuous bladder irrigation is initiated.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal lithotomy to supine position. Write a brief operative note. Monitor patient stabilization in the recovery room. Post-operative orders are written and the procedure and expected care are reviewed with the recovery room nursing staff including the need to titrate continuous bladder irrigation. The procedure, expected outcome, planned postoperative care in the hospital, and expected outpatient follow-up are discussed with the patient's family. The procedure is discussed with the patient in the recovery room when awake. A postoperative pain assessment is conducted, and proper drainage of the catheter is ensured. Dictate an operative report and complete medical record documentation. After discharge of the patient from the recovery area, the patient is examined, and any postoperative laboratory test results are assessed. Postoperative pain assessment is conducted, and the catheter is hand irrigated to remove any accumulated blood clots. The need for continued catheter traction or continued continuous bladder irrigation is determined. Patient hospital medical record notes, such as nursing, pharmacy, and discharge planning, are reviewed. Patient and family questions are answered. Nurses questions are answered. Any additional orders are written. A progress note is prepared for the medical record. On the day of discharge, the patient is examined. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the catheter with patient and/or family. Dictate a detailed hospital discharge summary. During office visits, examine the patient. Check vital signs and inspect urine drainage from the catheter. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Check a post-void residual volume. Answer questions from the patient and/or family. Discuss remaining or new urinary symptoms including the likelihood of dysuria following catheter removal. Discuss possible medication adjustments for any new or residual urinary symptoms. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	37%	52%
Physical effort required	16%	26%	58%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	21%	74%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	8%	25%	33%	17%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	33%	25%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	42%	8%	50%
Physical effort required	33%	25%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	8%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52597 is a new category I code that describes transurethral robotic-assisted waterjet resection of prostate, including intraoperative planning, ultrasound guidance. This new category I code replaces the prior category III code 0421T.

Recommendation:
We are recommending the survey 25th percentile RVW of 10.25. We had a strong survey with 50 respondents with a median experience of 20 procedures. Median intraservice time was 60 minutes. The procedure involves careful mapping of the contour of the prostate to ensure adequate waterjet resection without perforation of the prostate capsule, undermining of the bladder neck, or damage to the external urethral sphincter. Real time ultrasound guidance is used throughout the robotic ablation process to ensure procedural success and patient safety. Following conclusion of the waterjet resection, care must be taken to ensure adequate hemostasis using a resectoscope and cautery. All tissue chips and blood clots must be removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

We are recommending median intraservice time of 60 minutes and a total time of 234 minutes with a half day discharge day. Immediate post-service time was increased by twenty minutes for same-day evaluation and management services. The survey did recommend two level three post-operative visits in the 90 day global period. We are recommending one level 4 visit and one level 3 visit. During the post-operative period, prescription medication management typically takes places as pre-operative bladder outlet medications will be stopped and new medications for bladder overactivity and/or dysuria are typically prescribed. The side effects of treatment of the patient's chronic illness which has been managed surgically are discussed and managed.

A database search demonstrates 30 RUC reviewed codes with a 090 day global reviewed since 2014 with an intra-service time between 55 and 65 minutes. 52597 with an RVW of 10.25, intra-service time of 60 minutes and total time of 234 minutes fits well within this portion of the fee schedule with an overall RVW range of 3.04-14.84.

Pre-time package 3 and Post-time package 9B are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioning in dorsal-lithotomy. Post-times are reduced based on survey results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)
(For transurethral waterjet ablation of prostate, use 52597)
(For other approaches, see 55801-55845) (52612, 52614, 52620 have been deleted. For first stage transurethral partial resection of prostate, use 52601. For second stage partial resection of prostate, use 52601 with modifier 58. For transurethral resection of residual or regrowth of obstructive prostate tissue, use 52630)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78-year-old male presents with urinary retention and wears a urinary catheter. He has failed alpha-blocker and 5-alpha-reductase inhibitor therapy. Digital rectal exam reveals a 65-gram prostate. The patient elects to have a transurethral resection of the prostate (TURP).

Percentage of Survey Respondents who found Vignette to be Typical: 96.67%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 91.67% , In the ASC 8.33%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 20% , Overnight stay-less than 24 hours 72.73% , Overnight stay-more than 24 hours 7.27%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 86.36%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Review results of previous testing and imaging. Review preoperative laboratory tests including urinalysis and urine culture. Review the planned procedure and postoperative management with the patient and family/caregiver. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Verify availability of all required instruments and supplies. Check video equipment for white balance. Provide assistance in placing patient in dorsal lithotomy position. Prepare and drape the penis and perineal area. Scrub and gown. Perform a surgical time out with the operating surgical team and anesthesia team.

Description of Intra-Service Work: The resectoscope is used to enter the bladder per urethra. Perform full cystoscopy to evaluate the bladder for any abnormalities and to identify anatomic landmarks including the ureteral orifices. The prostatic anatomy is carefully evaluated including the presence of a median lobe and the location of the verumontanum. The cutting loop is introduced through the scope. Resection is begun the midline to begin opening a channel and improve flow of irrigation through the scope. If a median lobe is present, the median lobe is resected taking care to avoid the ureteral orifices. Resection continues of the bilateral lateral lobes to completely open a wide channel into the bladder through the prostatic urethra. The external urinary sphincter is carefully preserved. Following vaporization all bleeding vessels are cauterized. The bladder is irrigated with the Ellick evacuator to remove blood clots and any tissue chips. Cystoscopy is repeated to ensure complete evacuation of all resected tissue and confirm lack of injury to the ureteral orifices and external urethral sphincter. The resectoscope is removed. Three way catheter is placed and continuous bladder irrigation is initiated.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal lithotomy to supine position. Write a brief operative note. Monitor patient stabilization in the recovery room. Post-operative orders are written and the procedure and expected care are reviewed with the recovery room nursing staff including the need to titrate

continuous bladder irrigation. The procedure, expected outcome, planned postoperative care in the hospital, and expected outpatient follow-up are discussed with the patient's family. The procedure is discussed with the patient in the recovery room when awake. A postoperative pain assessment is conducted, and proper drainage of the catheter is ensured. Dictate an operative report and complete medical record documentation. After discharge of the patient from the recovery area, the patient is examined, and any postoperative laboratory test results are assessed. Postoperative pain assessment is conducted, and the catheter is hand irrigated to remove any accumulated blood clots. The need for continued catheter traction or continued continuous bladder irrigation is determined. Patient hospital medical record notes, such as nursing, pharmacy, and discharge planning, are reviewed. Patient and family questions are answered. Nurses questions are answered. Any additional orders are written. A progress note is prepared for the medical record. On the day of discharge, the patient is examined. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the catheter with patient and/or family. Dictate a detailed hospital discharge summary. During office visits, examine the patient. Check vital signs and inspect urine drainage from the catheter. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Check a post-void residual volume. Answer questions from the patient and/or family. Discuss remaining or new urinary symptoms including the likelihood of dysuria following catheter removal. Discuss possible medication adjustments for any new or residual urinary symptoms. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	67%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	75%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	75%	17%
Physical effort required	8%	92%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	56%	36%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	33%	44%	12%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	44%	45%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	22%	22%	56%
Physical effort required	11%	56%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	33%	45%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52601 was included in the family of codes for endoscopic management of bladder outlet obstruction. The family was identified for re-evaluation due to the creation of the new category I code 52597.

Recommendation:
We are recommending the survey 25th percentile RVW of 10.00. We had a strong survey with 60 respondents with a median experience of 16 procedures. Median intraservice time was 60 minutes, a 15 minute decrease compared to the prior survey of this code in 2016. This decrease in time has likely occurred due to the diffusion of improved resection technology for completing transurethral resection of the prostate adding validity to the survey information. During the 60 minutes of intra-service time however the procedure is intense throughout as the prostatic urethra sits between the trigone of the bladder and the external urethral sphincter. Care must be taken to prevent damage to the external sphincter- which can result in significant stress urinary incontinence, and prevent damage to the trigone of the bladder and the ureters. Care must also be taken to preserve the bladder neck as undermining of the bladder neck can lead to significant complications including urinary

extravasation. Following conclusion of the resection, care must be taken to ensure all tissue chips are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

We are recommending median intraservice time of 60 minutes and a total time of 222 minutes with a half day discharge day. Immediate post-service time was increased by twenty minutes for same-day evaluation and management services. The survey did recommend two level three post-operative visits in the 90 day global period. We are recommending one level 4 visit and one level 3 visit. During the post-operative period, prescription medication management typically takes places as pre-operative bladder outlet medications will be stopped and new medications for bladder overactivity and/or dysuria are typically prescribed. The side effects of treatment of the patient's chronic illness which has been managed surgically are discussed and managed.

A database search demonstrates 30 RUC reviewed codes with a 090 day global reviewed since 2014 with an intra-service time between 55 and 65 minutes. 52601 with an RVW of 10.00, intra-service time of 60 minutes and total time of 222 minutes would fit well within this portion of the fee schedule with an overall RVW range of 3.04-14.84.

Pre-time package 3 and post-time package 9B are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioning in dorsal-lithotomy. Post-time is reduced based on the survey.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52601

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty UROLOGY How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Urology Frequency 50,000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 39,607 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on claims data

Specialty Urology Frequency 39607 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:52630 Tracking Number I4 Original Specialty Recommended RVU: **6.55**
Presented Recommended RVU: **6.55**
Global Period: 090 Current Work RVU: **6.55** RUC Recommended RVU: **6.55**

CPT Descriptor: Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included) (For resection of residual prostate tissue performed within the postoperative period of a related procedure performed by the same physician, append modifier 78) (For transurethral waterjet ablation of prostate, use 52597).

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 78 year old man 18 years post transurethral resection of the prostate (TURP) has developed significant obstructive voiding symptoms. In spite of 5 alpha reductase inhibitors, at cystoscopy the patient was found to have marked prostatic regrowth. He has elected transurethral resection of re-growth of prostate tissue.

Percentage of Survey Respondents who found Vignette to be Typical: 98.33%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 76% , In the ASC 23.33%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 28.26% , Overnight stay-less than 24 hours 71.74% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 81.82%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Review results of previous testing and imaging. Review preoperative laboratory tests including urinalysis and urine culture. Review the planned procedure and postoperative management with the patient and family/caregiver. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Verify availability of all required instruments and supplies. Check video equipment for white balance. Provide assistance in placing patient in dorsal lithotomy position. Prepare and drape the penis and perineal area. Scrub and gown. Perform a surgical time out with the operating surgical team and anesthesia team.

Description of Intra-Service Work: The resectoscope is used to enter the bladder per urethra. Perform full cystoscopy to evaluate the bladder for any abnormalities and to identify anatomic landmarks including the ureteral orifices. The prostatic anatomy is carefully evaluated including the presence of a median lobe and the location of the verumontanum. The cutting loop is introduced through the scope. Resection is begun the midline to begin opening a channel and improve flow of irrigation through the scope. If a median lobe is present, the median lobe is resected taking care to avoid the ureteral orifices. Resection continues of regrown tissue to completely open a wide channel into the bladder through the prostatic urethra. The external urinary sphincter is carefully preserved. Following vaporization all bleeding vessels are cauterized. The bladder is irrigated with the Ellick evacuator to remove blood clots and any tissue chips. Cystoscopy is repeated to ensure complete evacuation of all resected tissue and confirm lack of injury to the ureteral orifices and external urethral sphincter. The resectoscope is removed. Three way catheter is placed and continuous bladder irrigation is initiated.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal lithotomy to supine position. Write a brief operative note. Monitor patient stabilization in the recovery room. Post-operative orders are written and the procedure and expected care are reviewed with the recovery room nursing staff including the need to titrate continuous bladder irrigation. The procedure, expected outcome, planned postoperative care in the hospital, and expected

outpatient follow-up are discussed with the patient's family. The procedure is discussed with the patient in the recovery room when awake. A postoperative pain assessment is conducted, and proper drainage of the catheter is ensured. Dictate an operative report and complete medical record documentation. After discharge of the patient from the recovery area, the patient is examined, and any postoperative laboratory test results are assessed. Postoperative pain assessment is conducted, and the catheter is hand irrigated to remove any accumulated blood clots. The need for continued catheter traction or continued continuous bladder irrigation is determined. Patient hospital medical record notes, such as nursing, pharmacy, and discharge planning, are reviewed. Patient and family questions are answered. Nurses questions are answered. Any additional orders are written. A progress note is prepared for the medical record. On the day of discharge, the patient is examined. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the catheter with patient and/or family. Dictate a detailed hospital discharge summary. During office visits, examine the patient. Check vital signs and inspect urine drainage from the catheter. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Check a post-void residual volume. Answer questions from the patient and/or family. Discuss remaining or new urinary symptoms including the likelihood of dysuria following catheter removal. Discuss possible medication adjustments for any new or residual urinary symptoms. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52630 was included in the family of codes for endoscopic management of bladder outlet obstruction. The family was identified for re-evaluation due to the creation of the new category I code 52597.

Recommendation:
We are recommending maintaining the current value of 6.55 for 52630 which is below the survey 25th percentile RVW of 8.95. We had a strong survey with 60 respondents with a median experience of 5 procedures. Median intraservice time was 50 minutes, a 10 minute decrease compared to the prior survey of this code in 2010. This decrease in time has likely occurred due to the diffusion of improved resection technology for completing transurethral resection of the prostate adding validity to the survey information. During the 50 minutes of intra-service time however the procedure is intense throughout as the prostatic urethra sits between the trigone of the bladder and the external urethral sphincter. Care must be taken to prevent damage to the external sphincter- which can result in significant stress urinary incontinence, and prevent damage to the trigone of the bladder and the ureters. Care must also be taken to preserve the bladder neck as undermining of the bladder neck can lead to significant complications including urinary extravasation. Following conclusion of the resection,

care must be taken to ensure all tissue chips are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

We are recommending median intraservice time of 50 minutes and a total time of 212 minutes with a half day discharge day. Immediate post-service time was increased by twenty minutes for same-day evaluation and management services. We are also recommending one level 4 visit and one level 3 visit. During the post-operative period, prescription medication management typically takes places as pre-operative bladder outlet medications will be stopped and new medications for bladder overactivity and/or dysuria are typically prescribed. The side effects of treatment of the patient's chronic illness which has been managed surgically are discussed and managed.

A database search demonstrates 21 RUC reviewed codes with a 090 day global reviewed since 2014 with an intra-service time between 45 and 55 minutes. 52630 with an RVW of 6.55, intra-service time of 50 minutes and total time of 212 minutes would be the second lowest value code within this portion of the fee schedule that has an overall RVW range of 5.42-14.00.

Pre-time package 3 and post-time package 9B are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioning in dorsal-lithotomy. Post-time is reduced to be consistent with survey results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52630

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:52648 Tracking Number I6 Original Specialty Recommended RVU: **10.05**
Presented Recommended RVU: **10.05**
Global Period: 090 Current Work RVU: **12.15** RUC Recommended RVU: **10.05**

CPT Descriptor: Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/ or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male presents with worsening obstructive, lower urinary tract symptoms while on medical therapy with alpha blockers and five-alpha reductase inhibitors. Digital rectal examination reveals a smooth 100-gram prostate without nodularity. The patient elects to proceed with laser vaporization of the prostate.

Percentage of Survey Respondents who found Vignette to be Typical: 70.21%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 70% , In the ASC 29%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 48% , Overnight stay-less than 24 hours 51% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 76.47%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Review results of previous testing and imaging. Review preoperative laboratory tests including urinalysis and urine culture. Review the planned procedure and postoperative management with the patient and family/caregiver. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Verify availability of all required instruments and supplies. Check video equipment for white balance. Provide assistance in placing patient in dorsal lithotomy position. Prepare and drape the penis and perineal area. Scrub and gown. Perform a surgical time out with the operating surgical team and anesthesia team.

Description of Intra-Service Work: The laser resectoscope is used to enter the bladder per urethra. Perform full cystoscopy to evaluate the bladder for any abnormalities and to identify anatomic landmarks including the ureteral orifices. The prostatic anatomy is carefully evaluated including the presence of a median lobe and the location of the verumontanum. The laser is introduced through the scope. Vaporization is begun the midline to begin opening a channel and improve flow of irrigation through the scope. If a median lobe is present, the median lobe is vaporized taking care to avoid the ureteral orifices. Vaporization continues of the bilateral lateral lobes to completely open a wide channel into the bladder through the prostatic urethra. The external urinary sphincter is carefully preserved. Following vaporization all bleeding vessels are cauterized. The bladder is irrigated with the Ellick evacuator to remove blood clots and any tissue chips. Cystoscopy is repeated to ensure complete evacuation of all resected tissue and confirm lack of injury to the ureteral orifices and external urethral sphincter. The resectoscope is removed. Three way catheter is placed and continuous bladder irrigation is initiated.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal lithotomy to supine position. Write a brief operative note. Monitor patient stabilization in the recovery room. Post-operative orders are written and the procedure and expected care are reviewed with the recovery room nursing staff including the need to titrate continuous bladder irrigation. The procedure, expected outcome, planned postoperative care in the hospital, and expected outpatient follow-up are discussed with the patient's family. The procedure is discussed with the patient in the recovery room when awake. A postoperative pain assessment is conducted, and proper drainage of the catheter is ensured. Dictate an

operative report and complete medical record documentation. After discharge of the patient from the recovery area, the patient is examined, and any postoperative laboratory test results are assessed. Postoperative pain assessment is conducted, and the catheter is hand irrigated to remove any accumulated blood clots. The need for continued catheter traction or continued continuous bladder irrigation is determined. Patient hospital medical record notes, such as nursing, pharmacy, and discharge planning, are reviewed. Patient and family questions are answered. Nurses questions are answered. Any additional orders are written. A progress note is prepared for the medical record. On the day of discharge, the patient is examined. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the catheter with patient and/or family. Dictate a detailed hospital discharge summary. During office visits, examine the patient. Check vital signs and inspect urine drainage from the catheter. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Check a post-void residual volume. Answer questions from the patient and/or family. Discuss remaining or new urinary symptoms including the likelihood of dysuria following catheter removal. Discuss possible medication adjustments for any new or residual urinary symptoms. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	10%	10%	60%	20%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	50%	30%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	20%	20%	60%
Physical effort required	10%	40%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	70%	20%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	50%	33%	17%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	67%	16%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	50%	50%	0%
Physical effort required	33%	50%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	50%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52648 was included in the family of codes for endoscopic management of bladder outlet obstruction. The family was identified for re-evaluation due to the creation of the new category I code 52597.

Recommendation:
We are recommending the survey 25th percentile RVW of 10.05. We had a strong survey with 47 respondents with a median experience of 5 procedures. Median intraservice time was 60 minutes, the same intra-service time as the prior survey in 1994. The prostatic urethra sits between the trigone of the bladder and the external urethral sphincter. Care must be taken throughout laser vaporization to prevent damage to the external sphincter- which can result in significant stress urinary incontinence, and prevent damage to the trigone of the bladder and the ureters. Care must also be taken to preserve the bladder neck as undermining of the bladder neck can lead to significant complications including urinary extravasation. Following conclusion of the resection, care must be taken to ensure all tissue chips and blood clots are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

We are recommending median intraservice time of 60 minutes and a total time of 226 minutes with a half day discharge day. Immediate post-service time was increased by twenty minutes for same-day evaluation and management services. The survey did recommend two level three post-operative visits in the 90 day global period. We are recommending one level 4 visit and one level 3 visit. During the post-operative period, prescription medication management typically takes places as pre-operative bladder outlet medications will be stopped and new medications for bladder overactivity and/or dysuria are typically prescribed. The side effects of treatment of the patient's chronic illness which has been managed surgically are discussed and managed.

A database search demonstrates 30 RUC reviewed codes with a 090 day global reviewed since 2014 with an intra-service time between 55 and 65 minutes. 52648 with an RVW of 10.05, intra-service time of 60 minutes and total time of 226 minutes would fit well within this portion of the fee schedule with an overall RVW range of 3.04-14.84.

Pre-time package 3 and Post-time package 9B are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioning in dorsal-lithotomy. Post-time is reduced mased on survey.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

SUMMARY OF RECOMMENDATION

CPT Code:52649 Tracking Number I7 Original Specialty Recommended RVU: **14.93**
Presented Recommended RVU: **14.93**
Global Period: 090 Current Work RVU: **14.56** RUC Recommended RVU: **14.56**

CPT Descriptor: Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed) (Do not report 52649 in conjunction with 52000, 52276, 52281, 52601, 52647, 52648, 53020, 55250)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 63 year-old male with a long history of obstructive voiding symptoms experiences nocturia 5 to 6 times and a poor stream. His American Urological Association (AUA) symptom score is 32. On rectal examination, he is noted to have a markedly enlarged prostate which is smooth and symmetrical. A prostate-specific antigen (PSA) is 3.9 and a transrectal ultrasound reveals a 262 gm prostate. The patient elects laser Enucleation as a definitive treatment for his benign prostatic hyperplasia (BPH).

Percentage of Survey Respondents who found Vignette to be Typical: 83.33%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 96.67% , In the ASC 3.33%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 20% , Overnight stay-less than 24 hours 65.52% , Overnight stay-more than 24 hours 13.79%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 86.96%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Review results of previous testing and imaging. Review preoperative laboratory tests including urinalysis and urine culture. Review the planned procedure and postoperative management with the patient and family/caregiver. Review and obtain informed consent. Review the length and type of anesthesia with the anesthesiologist. Verify availability of all required instruments and supplies. Check video equipment for white balance. Provide assistance in placing patient in dorsal lithotomy position. Prepare and drape the penis and perineal area. Scrub and gown. Perform a surgical time out with the operating surgical team and anesthesia team.

Description of Intra-Service Work: The laser resectoscope is used to enter the bladder per urethra. Perform full cystoscopy to evaluate the bladder for any abnormalities and to identify anatomic landmarks including the ureteral orifices. The prostatic anatomy is carefully evaluated including the presence of a median lobe and the location of the verumontanum. The laser bridge, a 7 French laser stabilizing catheter and a 550 micron end firing holmium laser fiber are utilized. The holmium laser is set at 100 watts for dissection. Inspection of the prostatic urethra reveals a very large prostate with tri-lobar enlargement. Enucleation is begun by making an incision at the 5 o'clock location between the median lobe and left lateral lobe. Dissection is carried down to the capsule and from the bladder neck to the veru montanum. Once the groove has been cut, it is undermined on each side, thereby enucleating each lateral lobe of the prostate, as well as the median lobe. The anterior commissure is then divided at the 12 o'clock location and the anterior lobe dissected free. Hemostasis is achieved by defocusing the laser fiber. The large pieces of prostate tissue are then morcellated and extracted with an Ellik evacuator. Repeat cystoscopy is performed to confirm adequate hemostasis following morcellation. The cystoscope is removed. Three way catheter is placed and continuous bladder irrigation is initiated.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal lithotomy to supine position. Write a brief operative note. Monitor patient stabilization in the recovery room. Post-operative orders are written and the procedure and expected care are reviewed with the recovery room nursing staff including the need to titrate continuous bladder irrigation. The procedure, expected outcome, planned postoperative care in the hospital, and expected outpatient follow-up are discussed with the patient's family. The procedure is discussed with the patient in the recovery room when awake. A postoperative pain assessment is conducted, and proper drainage of the catheter is ensured. Dictate an operative report and complete medical record documentation. After discharge of the patient from the recovery area, the patient is examined, and any postoperative laboratory test results are assessed. Postoperative pain assessment is conducted, and the catheter is hand irrigated to remove any accumulated blood clots. The need for continued catheter traction or continued continuous bladder irrigation is determined. Patient hospital medical record notes, such as nursing, pharmacy, and discharge planning, are reviewed. Patient and family questions are answered. Nurses questions are answered. Any additional orders are written. A progress note is prepared for the medical record. On the day of discharge, the patient is examined. Review all patient hospital medical records and answer questions from patient and/or family. Write orders for postdischarge care and prescriptions for postoperative medications. Discuss postoperative care of the catheter with patient and/or family. Dictate a detailed hospital discharge summary. During office visits, examine the patient. Check vital signs and inspect urine drainage from the catheter. Prior to removal of the Foley catheter, fill the bladder with 250 ml of sterile saline with a Toomey syringe. then remove the urinary catheter. Check a post-void residual volume. Answer questions from the patient and/or family. Discuss remaining or new urinary symptoms including the likelihood of dysuria following catheter removal. Discuss possible medication adjustments for any new or residual urinary symptoms. Schedule the next office visit. Mark the appropriate diagnosis and CPT code on the encounter form. Dictate patient progress notes for the office medical record and a letter to the referring physician.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	20%	30%	40%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	60%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	40%	40%
Physical effort required	20%	60%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	30%	50%	20%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	14%	29%	57%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	14%	86%
Physical effort required	14%	29%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	43%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
52649 was included in the family of codes for endoscopic management of bladder outlet obstruction. The family was identified for re-evaluation due to the creation of the new category I code 52597.

Recommendation:
We are recommending the survey 25th percentile RVW of 14.93. We had a strong survey with 30 respondents with a median experience of 1 procedures. Median intraservice time was 90 minutes, a 30 minute decrease compared to the prior survey of this code in 2010. This decrease in time has likely occurred due to the diffusion of skilled surgeons performing this procedure nationally. We are recommending an increase in RVW for this code in the family. Utilization of this code has increased substantially over the past ten years as increasing surgeon skill has allowed for the treatment of larger prostate glands with laser enucleation of the prostate. Studies have demonstrated improved voiding outcomes for patients

with prostates greater than 100 grams undergoing laser enucleation compared to other bladder outlet procedure options. The increase in the typical prostate being treated with laser enucleation has led to a significant increase in procedural intensity. The prostatic urethra sits between the trigone of the bladder and the external urethral sphincter. Care must be taken to prevent damage to the external sphincter- which can result in significant stress urinary incontinence, and prevent damage to the trigone of the bladder and the ureters. Care must also be taken to preserve the bladder neck as undermining of the bladder neck can lead to significant complications including urinary extravasation. Care must also be taken to preserve the capsule of the prostate as too deep of an enucleation can lead to rectal injury or anterior pubo-prostatic fistulae. Following conclusion of the enucleation and morcellation, care must be taken to ensure all tissue chips are removed from the bladder or the catheter will become obstructed causing discomfort and potential bladder perforation.

We are recommending median intraservice time of 90 minutes and a total time of 263 minutes with a half day discharge day. Immediate post-service time was increased by twenty minutes for same-day evaluation and management services. The survey did recommend one level three post-operative visits in the 90 day global period. We are recommending one level 4 visit and one level 3 visit consistent with other codes within the family. During the post-operative period, prescription medication management typically takes places as pre-operative bladder outlet medications will be stopped and new medications for bladder overactivity and/or dysuria are typically prescribed. The side effects of treatment of the patient's chronic illness which has been managed surgically are discussed and managed.

A database search demonstrates 21 RUC reviewed codes with a 090 day global reviewed since 2014 with an intra-service time between 85 and 95 minutes. 52649 with an RVW of 14.93, intra-service time of 90 minutes and total time of 263 minutes would fit well within this portion of the fee schedule with an overall RVW range of 9.98-18.54.

Pre-time package 3 and Post-time package 9B are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioned in dorsal-lithotomy. Post time is reduced based on survey results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 52649

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty UROLOGY How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 12,500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on claims data

Specialty Urology Frequency 12,500 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,122
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on claims data

Specialty Urology Frequency 7122 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Turp

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 52649

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

FACILITY DIRECT PE INPUTS

CPT CODE(S): 52500, 52601, 52630, 52648, 52649, 52597
SPECIALTY SOCIETY(IES): AUA
PRESENTER(S): Dr. Jonathan Kiechle, Dr. Seth Cohen

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2024

CPT Code	Long Descriptor	Global Period
52500	Transurethral resection of bladder neck (separate procedure)	090
52601	Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete	090
52630	Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)	090
52648	Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/ or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	090
52649	Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	090
52597	Transurethral robotic-assisted waterjet resection of prostate, including intraoperative planning, ultrasound guidance, control of postoperative bleeding, complete, including vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy, when performed	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
52500	A 67-year-old man has an American Urological Association (AUA) symptom index of 29/35. Prior medical treatment with both finasteride and alpha blockers was unsuccessful in improving his urinary symptoms. Peak urinary flow rate is 3 ml/sec, cystometrogram is normal. Cystoscopy reveals a small prostate with a tight, hypertrophied, bladder neck.
52601	A 78-year-old male presents with urinary retention and wears a urinary catheter. He has failed alpha-blocker and 5-alpha-reductase inhibitor therapy. Digital rectal exam reveals a 65-gram prostate. The patient elects to have a transurethral resection of the prostate (TURP).
52630	A 78 year old man 18 years post transurethral resection of the prostate (TURP) has developed significant obstructive voiding symptoms. In spite of 5 alpha reductase inhibitors, at cystoscopy the patient was found to have marked prostatic regrowth. He has elected transurethral resection of re-growth of prostate tissue.
52648	A 68-year-old male presents with worsening obstructive, lower urinary tract symptoms while on medical therapy with alpha blockers and five-alpha reductase inhibitors. Digital rectal examination reveals a smooth 100-gram prostate without nodularity. The patient elects to proceed with laser vaporization of the prostate.
52649	A 63 year-old male with a long history of obstructive voiding symptoms experiences nocturia 5 to 6 times and a poor stream. His American Urological Association (AUA) symptom score is 32. On rectal examination, he is noted to have a markedly enlarged prostate which is smooth and symmetrical. A prostate-specific antigen (PSA) is 3.9 and a transrectal ultrasound reveals

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	a 262 gm prostate. The patient elects laser Enucleation as a definitive treatment for his benign prostatic hyperplasia (BPH).
52597	A 68-year-old male presents with worsening obstructive, lower urinary tract symptoms while on medical therapy with alpha blockers and five-alpha reductase inhibitors. Digital rectal examination reveals a smooth 100-gram prostate without nodularity. The patient elects to proceed with transurethral robotic-assisted waterjet resection of the prostate

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA's RVS Committee Expert Panel reviewed the current code PE details for codes 52500, 52601, 52630, 52648, and 52649 and discussed how the codes have changed since the prior review to determine if any revisions are needed to the current inputs. The expert panel also discussed the new codes 52597 to determine appropriate PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   52500, 52601, 52630, 52648, 52649

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   The expert panel is recommending an increase in the aggregate cost of clinical labor, supplies and equipment compared to the existing inputs.

   Flawed methodology of prior review – missing required supplies.

   Clinical labor time and equipment time are consistent with standards and based on the physician work survey number and level of E/M visits.

   Current disposable supplies for codes were based on minimal standard 90-day global supply assignment and did not consider the additional supplies required for these procedures:

   SM022, *sanitizing cloth-wipe (surface, instruments, equipment)*, is needed to clean hard surfaces at each postoperative visit. This is consistent with the addition of SM022 to E/M office visit codes as this was not included in the E/M office visit pack.

   SB044, *underpad 2ft x 3ft (Chux)*, will be used at the first post-operative visit due to the need for a bladder fill and void during the visit

   SC051, *10-12 ml syringe*, used to remove catheter at first post-operative visit

   SC056, *syringe 50-60ml,* used to fill the bladder for trial of void

SH069, *sodium chloride 0.9% irrigation (500-1000mL*), used to fill the bladder for trial of void during first post-operative visit

SL038, *cup-container, sterile, graduate 1000mL*- used for trial of void during first post-operative visit

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.

Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

c. Post-service period:

The clinical staff work includes the standard activities involved in any E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instruction.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

SA048	pack, minimum multi-specialty visit	pack

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SA048	pack, minimum multi-specialty visit 5.02	pack	$5.02	
	paper, exam table (7)	foot		
	gloves, non-sterile (2)	pair		
	gown, patient (1)	item		
	pillow case (1)	item		
	cover, thermometer probe (1)	item		

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EF031, table, power (Office Visits)
EQ250, ultrasound unit, portable (Office Visits)
EQ259, uroflowmeter, digital, w-chair (Office Visits)

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2024

Prostate Biopsy Services – Tab 08

In April 2022, the Relativity Assessment Workgroup (RAW) identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. Further, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The RAW requested action plans for September 2022 to determine if specific code bundling solutions should occur for 55700 and 76872. In September 2022, the RAW referred this issue to the CPT Editorial Panel for revision of code descriptors and/or introductory language to clarify when to and when not to report CPT code 76872 as a diagnostic procedure when performed at the same time as CPT code 55700. In May 2024, the CPT Editorial Panel deleted existing code 55700, revised codes 55705 and 76872, and added nine codes to clarify reporting for prostate biopsies and the imaging procedures that accompany them. The code family was surveyed for the September 2024 RUC meeting.

During the RUC discussion, it was clear that the survey respondents did not understand the coding structure. Specifically, the discussion revolved around the number of biopsies per code. A typical prostate biopsy, at minimum, requires 12-cores. The prostate is divided into sextants, and two biopsies are taken from each sextant for a 12-core biopsy. The transperineal approach to biopsy has changed the standard template by increasing the typical number of biopsies to 20, due to the improved access to the anterior portion of the prostate. MRI-fusion technology is used in conjunction to this standard template biopsy. When a lesion is identified on pre-biopsy MRI that requires specific targeting, taking biopsies of only a suspicious lesion is not typical practice. It is important to note that each biopsy is taken individually and the retrieved specimen is placed in a separate cup for pathological evaluation. From a survey standpoint, the data indicated that the long descriptors do not adequately describe these services. The survey intra-service time to take 20 biopsies was identical to the intra-service time to take two biopsies. For example, the specialty societies described that the survey response pre-time for 55710 *Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance biopsy, first targeted lesion* is less than the survey pre-time for 55712 *Biopsy, prostate, transperineal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion*, but 55710 is the more difficult procedure. Further, the intra-times are the same. This issue with the survey times also distorted the relative intensity between the family making it difficult to discern which service was the least to most difficult based on the number of biopsies per service. It seems as though, the minor difference between 55710 and 55712 is the language "ie, sextant" which implies a 12-core biopsy where two biopsies are taken from the six prostate sextant zones. The same issue exists for 55708 *Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance, first targeted lesion* which has less pre-time than 55711 *Biopsy, prostate, transrectal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion* and identical intra-service time. In summary, the pre-times should be flipped – more time for 55710 and 55708 and less for 55712 and 55711. In addition to these concerns, RUC members also mentioned a point of confusion in the language between "biopsy" and "biopsies" in the codes' long descriptors. Further, the language "first targeted lesion" is not clear as that can often mean more than one biopsy is obtained. While the codes were valued for the CPT 2026 cycle, the specialties and the RUC agreed that a new coding change application should be developed to the CPT Editorial Panel for restructuring in the CPT 2027 cycle.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

55705 ***Biopsy, prostate, any approach, nonimaging-guided***
The RUC reviewed the survey results from 50 urologists and recommends a work RVU of 1.93 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 15 minutes of pre-service evaluation time, 5 minutes positioning time, 5 minutes scrub/dress/wait time, 10 minutes intra-service time, 10 minutes immediate post-service time, and 45 minutes total time. The RUC is also recommending a global period change from a 010-day global to a 000-day global.

During this procedure, the surgeon must identify the prostate and any specific concerning nodules with finger guidance alone. The biopsy instrument is then introduced, using only the performing surgeon's opposite hand finger as a guide. Significant care must be taken to ensure adequacy of the biopsy samples, while simultaneously avoiding self-injury when performing this procedure, due to the non-imaging guided nature of the procedure. The specialties noted that this service typically has 12 biopsy samples via a finger approach. Given that this service is only done in the circumstance when an ultra-sound machine is not available, which is atypical across the country, this service's utilization is expected to be quite low.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 55876 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple* (work RVU = 1.73, 20 minutes intra-service, 59 minutes total time) and 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time). Of the survey respondents who chose CPT code 55876 as the key reference service, 44% indicated that the surveyed code was identical in intensity and complexity and 22% indicated that the surveyed code was more intense and complex when compared to the top key reference service code 55876. Moreover, 50% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 50% indicated that the surveyed code was more intense and complex when compared to the second key reference service code 55874. The complexity of the surveyed code, in a relatively short period of time, comes from the lack of imaging guidance. **The RUC recommends a work RVU of 1.93 for CPT code 55705.**

55707 ***Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant, ultrasound-localized discrete lesion[s])***
The RUC reviewed the survey results from 99 urologists and recommends a work RVU of 2.63 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 17 minutes of pre-service evaluation time, 5 minutes positioning time, 5 minutes scrub/dress/wait time, 15 minutes intra-service time, 8 minutes immediate post-service time, and 50 minutes total time.

This procedure includes a 12-core prostate biopsy performed transrectally with ultrasound guidance. The patients that receive this procedure either have not undergone prior MRI or have undergone MRI with no suspicious lesion identified. During the procedure, a topical anesthetic is administered and the ultrasound probe is placed transrectally. The prostate is identified and evaluated for any hyperechoic areas on the ultrasound. Local anesthesia is then injected, and 12 prostate biopsies are taken via prostate sextants which include any hyperechoic areas.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 55876 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple* (work RVU = 1.73, 20

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes intra-service, 59 minutes total time) and 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time). Of the survey respondents who chose CPT code 55876 as the key reference service, 44% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 50% indicated that the surveyed code was more intense and complex when compared to the top key reference service code 55876. Moreover, 60% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 40% indicated that the surveyed code was more intense and complex when compared to the second key reference service code 55874. **The RUC recommends a work RVU of 2.63 for CPT code 55707.**

55708 ***Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance, first targeted lesion***
The RUC reviewed the survey results from 80 urologists and recommends a work RVU of 3.39 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 20 minutes of pre-service evaluation time, 5 minutes positioning time, 5 minutes scrub/dress/wait time, 20 minutes intra-service time, 10 minutes immediate post-service time, and 60 minutes total time.

Within the code family, this procedure is substantially more complex when compared to code 55707. For this procedure, prior MRI imaging needs to be fused with real-time ultrasound imaging to identify the target lesion. Adequate prostate ultrasound images must be obtained and manually confirmed the appropriate fusion of the MRI image has taken place. The target lesion must be located on the ultrasound and typically, 2 biopsies will be taken out of the target lesion. Following the biopsy of the target lesion, complete sextant biopsies are obtained bringing the total number of typical biopsies to 14 for this procedure via transrectal approach.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 19085 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance* (work RVU = 3.64, 45 minutes intra-service, 82 minutes total time) and 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time). Of the survey respondents who chose CPT code 19085 as the key reference service, 30% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 70% indicated that the surveyed code was more intense and complex when compared to the top key reference service code 19085. Moreover, 40% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 60% indicated that the surveyed code was more intense and complex when compared to the second key reference service code 55874. **The RUC recommends a work RVU of 3.39 for CPT code 55708.**

55709 ***Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant, ultrasound-localized discrete lesion[s])***
The RUC reviewed the survey results from 60 urologists and recommends a work RVU of 3.23 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 20 minutes of pre-service evaluation time, 7 minutes positioning time, 5 minutes scrub/dress/wait time, 20 minutes intra-service time, 10 minutes immediate post-service time, and 62 minutes total time.

For this procedure, the typical transperineal prostate biopsy entails 20 biopsies to be obtained. This includes the typical sextant biopsies with an additional 8 biopsies taken from the anterior prostate. The transperineal approach allows for much easier access to this anterior location, which is not typically biopsied from a transrectal approach. The patients that receive this procedure either have not undergone prior MRI or have undergone

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

MRI with no suspicious lesion identified. During the procedure, a topical anesthetic is administered and the ultrasound probe is placed transrectally. The prostate is identified and evaluated for any hyperechoic areas on the ultrasound. Local anesthesia is then injected through the perineum and 20 biopsies are obtained, including any hyperechoic areas, using the transperineal biopsy guide to assist with the stability of the ultrasound probe throughout the biopsy process.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time) and 52214 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands* (work RVU = 3.50, 30 minutes intra-service, 79 minutes total time). Of the survey respondents who chose CPT code 55874 as the key reference service, 25% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 69% indicated that the surveyed code was more intense and complex when compared to the top key reference service code 55874. Moreover, 40% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 40% indicated that the surveyed code was more intense and complex when compared to the second key reference service code 52214. **The RUC recommends a work RVU of 3.23 for CPT code 55709.**

55710 ***Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance biopsy, first targeted lesion***
The RUC reviewed the survey results from 58 urologists and recommends a work RVU of 3.81 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 20 minutes of pre-service evaluation time, 8 minutes positioning time, 5 minutes scrub/dress/wait time, 25 minutes intra-service time, 10 minutes immediate post-service time, and 68 minutes total time.

For this procedure, the typical number of biopsies obtained is 22 including identification of a target lesion using MRI fusion guidance. Further, adequate prostate ultrasound images must be obtained and appropriate fusion of these images with the prior MRI must be confirmed manually by the physician. The target lesion must be located on the ultrasound, and multiple biopsies are obtained of the target lesion. Following the biopsy of the target lesion, complete sextant biopsies, including the anterior zone, are obtained. This procedure is more complex when compared to code 55709 and the second highest complexity to perform within the code family.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time) and 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75, 45 minutes intra-service, 118 minutes total time). Of the survey respondents who chose CPT code 55874 as the key reference service, 21% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 72% indicated that the surveyed code was more intense and complex when compared to the first key reference service code 55874. Moreover, 17% of survey respondents indicated that the surveyed code was identical in intensity and complexity and 75% indicated that the surveyed code was more intense and complex when compared to the second key reference service code 52352. **The RUC recommends a work RVU of 3.81 for CPT code 55710.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

55711 ***Biopsy, prostate, transrectal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion***
The RUC reviewed the survey results from 71 urologists and recommends a work RVU of 2.61 based on a direct crosswalk to code 47536 *Exchange of biliary drainage catheter (eg, external, internal-external, or conversion of internal-external to external only), percutaneous, including diagnostic cholangiography when performed, imaging guidance (eg, fluoroscopy), and all associated radiological supervision and interpretation* (work RVU = 2.61, 20 minutes intra-service time, 51 minutes total time), which maintains relativity within the family for this code. The RUC recommends 22 minutes of pre-service evaluation time, 5 minutes positioning time, 5 minutes scrub/dress/wait time, 20 minutes intra-service time, 10 minutes immediate post-service time, and 62 minutes total time.

For this procedure, prior MRI imaging is fused with real-time ultrasound imaging to identify the target lesion. The ultrasound probe is placed transrectally. The target lesion is identified after the appropriate fusion and imaging is obtained and the targeted lesion is biopsied. This procedure requires two biopsies be obtained in a transrectal fashion compared to 12 biopsies obtained transrectally in other family codes.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time) and 19085 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance* (work RVU = 3.64, 45 minutes intra-service, 82 minutes total time). The surveyed code is valued appropriately lower than the key reference service and other codes within this family given that only two biopsies are obtained during the procedure. **The RUC recommends a work RVU of 2.61 for CPT code 55711.**

55712 ***Biopsy, prostate, transperineal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion***
The RUC reviewed the survey results from 55 urologists and recommends a work RVU of 3.10 based on a direct crosswalk to code 33993 *Repositioning of percutaneous right or left heart ventricular assist device with imaging guidance at separate and distinct session from insertion* (work RVU = 3.10, 25 minutes intra-service time, and 70 minutes total time) which maintains relativity within the family for this code. The RUC recommends 25 minutes of pre-service evaluation time, 8 minutes positioning time, 5 minutes scrub/dress/wait time, 25 minutes intra-service time, 10 minutes immediate post-service time, and 73 minutes total time.

For this procedure, a single lesion is biopsied fusing prior MRI imaging with real-time ultrasound imaging to identify the target lesion. Adequate imaging must be obtained, and appropriate fusion technology must be used to manually identify the target lesion. Typically, two biopsies are obtained through the target lesion. The difference with this service when compared to family code 55711 is that the procedure is performed via a transperineal approach instead of a transrectal approach, even though the typical number of biopsies obtained is identical. The transrectal approach is more challenging than the transrectal approach given the additional work to get to the target lesion with the image guidance and needle placement.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time) and 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

calculus (ureteral catheterization is included) (work RVU = 6.75, 45 minutes intra-service, 118 minutes total time). The recommended work RVU is appropriately supported by the reference codes as the total time is above the top key reference code and below the second key reference code. **The RUC recommends a work RVU of 3.10 for CPT code 55712.**

55713 ***Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion***
The RUC reviewed the survey results from 50 urologists, radiologists, and interventional radiologists and recommends a work RVU of 4.00 based on a direct crosswalk to code 52441 *Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant* (work RVU = 4.00, 25 minutes intra-service time, and 81 minutes total time), which maintains relativity within the family for this code. The RUC recommends 30 minutes of pre-service evaluation time, 10 minutes positioning time, 9 minutes scrub/dress/wait time, 25 minutes intra-service time, 13 minutes immediate post-service time, and 87 minutes total time. The pre-service period of this code requires more time than the other family codes given the prone positioning that occurs in an MRI bore, the MRI coil focus for the prostate, and the transrectal device positioning.

For this procedure, a biopsy of a single targeted lesion as well as a sextant biopsy of the targeted lesion with 14 biopsies typically obtained. This procedure includes the real-time imaging guidance in-bore where images are acquired and utilized for the purpose of lesion localization, and avoidance of complex neurovascular structures as the biopsy device is advanced and targeted with re-imaging as needed, followed by the biopsy. This procedure does not include the fusion of previously acquired imaging with real-time ultrasound guidance as other codes in the family have required. Given that this service includes a single target lesion and the sextant biopsies, it is more challenging to perform and therefore should be valued higher than family code 55714.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75, 45 minutes intra-service, 118 minutes total time) and 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time). They surveyed code work RVU is appropriately bracketed by the key reference services given the lower intra-service and relative intensity to perform the service. **The RUC recommends a work RVU of 4.00 for CPT code 55713.**

55714 ***Biopsy, prostate, in-bore CT- or MRI-guided targeted lesion(s) only, first targeted lesion***
The RUC reviewed the survey results from 53 urologists, radiologists, and interventional radiologists and recommends a work RVU of 3.62 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 30 minutes of pre-service evaluation time, 10 minutes positioning time, 9 minutes scrub/dress/wait time, 30 minutes intra-service time, 13 minutes immediate post-service time, and 92 minutes total time. The pre-service period of this code requires more time than the other family codes given the prone positioning that occurs in an MRI bore, the MRI coil focus for the prostate, and the transrectal device positioning.

For this procedure, a biopsy of a single targeted lesion, in-bore, with two biopsies is typically obtained. This procedure includes real-time imaging guidance in-bore where images are acquired and utilized for the purpose of lesion localization, and avoidance of complex neurovascular structures as the biopsy device is advanced and targeted with re-imaging as needed, followed by the biopsy. This procedure does not include the fusion of

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

previously acquired imaging with real-time ultrasound guidance as other codes in the family have required. Given that this service does not include the sextant biopsies, this code should be valued relatively lower than family code 55713.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 19085 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance* (work RVU = 3.64, 45 minutes intra-service, 82 minutes total time) and 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75, 45 minutes intra-service, 118 minutes total time). The surveyed code is valued appropriately lower than the key reference services given the lower intra-service time. **The RUC recommends a work RVU of 3.62 for CPT code 55714.**

55715 ***Biopsy, prostate, each additional, MRI-ultrasound fusion or in-bore CT- or MRI-guided targeted lesion (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 69 urologists, radiologists, and interventional radiologists and recommends a work RVU of 1.05 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 20 minutes of intra-service time and total time.

This add-on procedure is intended to be used regardless of biopsy approach when an additional target lesion is identified on the MRI beyond the first lesion. It is expected that multiple biopsies would typically be taken from additional lesions. The work related to the first lesion is included in the other codes within this family.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 19086 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)* (work RVU = 1.82, 38 minutes intra-service, 43 minutes total time) and 10006 *Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion (List separately in addition to code for primary procedure)* (work RVU = 1.00, 15 minutes intra-service and total time). The work RVU is appropriately bracketed by the key reference services relative to the intra-service time required to perform this service. Further, code 10006 describes a similar service that uses image guidance to obtain biopsies of additional target lesions. **The RUC recommends a work RVU of 1.05 for CPT code 55715.**

55706 ***Biopsies, prostate, needle, transperineal, stereotactic template guided saturation sampling, including imaging guidance***
The RUC reviewed the survey results from 54 urologists and recommends a work RVU of 4.27 based on a direct crosswalk to code 31254 *Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)* (work RVU = 4.27, 30 minutes intra-service, and 83 minutes total time) which maintains relativity within the family for this code. The RUC recommends 25 minutes of pre-service evaluation time, 8 minutes positioning time, 5 minutes scrub/dress/wait time, 30 minutes intra-service time, 11 minutes immediate post-service time, and 79 minutes total time. The RUC is also recommending a global period change from a 010-day global to a 000-day global.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For this procedure, saturation biopsy of the prostate using a template grid and transperineal approach to obtain biopsies every three to four millimeters throughout the prostate gland. This procedure is the most intense and complex to perform within the code family given that between 40-60 biopsies are typically obtained based on the overall size of the prostate. This procedure requires anesthesia for patients to tolerate the procedure and remain in one position throughout the procedure to obtain true saturation biopsy of the prostate.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 52352 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)* (work RVU = 6.75, 45 minutes intra-service, 118 minutes total time) and 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* (work RVU = 3.03, 30 minutes intra-service, 70 minutes total time). The recommended work RVU is appropriately bracketed by the key reference services given the total time and intensity and complexity of obtaining between 40-60 biopsies.

For additional support, the RUC referenced code 43243 *Esophagogastroduodenoscopy, flexible, transoral; with injection sclerosis of esophageal/gastric varices* (work RVU = 4.27, 30 minutes intra-service, and 81 minutes total time) which supports the recommended work RVU given the similar times and identical work RVU. **The RUC recommends a work RVU of 4.27 for CPT code 55706.**

76872 *Ultrasound, transrectal*
The RUC reviewed the survey results from 87 urologists, radiologists, and interventional radiologists and recommends a work RVU of 0.67 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 6 minutes of pre-service evaluation time, 10 minutes intra-service time, 7 minutes immediate post-service time, and 23 minutes total time.

For this procedure, the physician fully evaluates the prostate for hypoechoic areas and prostatic calcifications. The prostate height and width are measured in the coronal plane and imaging is then changed to the sagittal plane and prostatic urethral length is measured to obtain appropriate prostatic volume measurements.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* (work RVU = 0.67, 15 minutes intra-service, 27 minutes total time) and 76998 *Ultrasonic guidance, intraoperative* (work RVU = 0.91, 12 minutes intra-service, 22 minutes total time). The surveyed code work RVU is appropriately supported by the key reference services given the similar times. **The RUC recommends a work RVU of 0.67 for CPT code 76872.**

Practice Expense
The Practice Expense (PE) Subcommittee concurred that there is compelling evidence to support an increase over the aggregate current cost for clinical staff time, supplies and equipment for the code family based on changes in technique/technology resulting in missing required supplies and equipment.

The PE Subcommittee reviewed the direct practice expense inputs and made several modifications including removing CA026 *Clean surgical instrument package* for urology codes 55705, 55707-55712 as there are no surgical instrument packages in the supplies to clean. A change in

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

clinical labor type from L051B *RN/ Diagnostic Medical Sonographer* to L037D *RN/LPN/MTA* was made for CPT code 76872 to align with the prostate biopsy code family, and also for 55713 and 55714 in CA010 and CA017. Additionally, the PE Subcommittee accepted five new supply items and one new equipment item for these services: *Transperineal ultrasound biopsy guide, Transrectal MRI- compatible -150mm fully automatic biopsy gun, Transrectal MRI-compatible needle guide, Disposable Prostate Core Biopsy Needle, Transrectal Ultrasound Biopsy Guide,* and *the UroNav system*. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology
CPT codes 55708, 55710, 55711, 55712, and 55715 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

Referral to CPT Editorial Panel
The RUC recommended to refer this entire code family to the CPT Editorial Panel for restructuring in the CPT 2027 cycle. Specifically, to ensure that the long descriptor language and related guidelines appropriately describe the services and number of biopsies performed per service. Additionally, the language of "first targeted lesion" was not clear to RUC members and the survey respondents as indicated by the identical intra-service times for services were few biopsies were obtained and services were numerous biopsies were obtained. Another RUC member noted that the language "Biopsy" and "Biopsies" was confusing as well. Additionally, the add-on code was thought to present a potential issue for improper coding due to lack of clarity on the number of biopsies performed, per service. The societies informed the RUC that they have a Coding Change Application prepared for the February 2025 CPT Editorial Panel meeting for the CPT 2027 cycle.

RUC Database Flag
The RUC recommends that this entire code family be flagged for "Do Not Use to Validate Physician Work" in the RUC database.

Work Neutrality
The RUC's recommendation for these codes will result in overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Male Genital System** **Prostate** **Incision** Prostate biopsies may be performed without (55705) or with (55706, 55707, 55708, 55709, 55710, 55711, 55712, 55713, 55714) imaging guidance. Imaging guidance may include ultrasound (55707, 55709), ultrasound with MRI-ultrasound fusion (55708, 55710, 55711, 55712), and in-bore CT or MRI guidance (55713, 55714). MRI-ultrasound (MR-US) fusion is a guidance technique that utilizes an independent				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

workstation to fuse a previously acquired (and previously reported) MRI dataset with real-time ultrasound imaging guidance to target a lesion(s) previously identified by MRI. Ultrasound-guided biopsies are typically performed in a systematic manner. This systematic biopsy divides the prostate into sextants (6 areas) which are: right base, right mid, right apex, left base, left mid, left apex. Typically, multiple biopsy cores are taken from each sextant. If discrete lesions are noted during the performance of a diagnostic ultrasound at the time of the biopsy procedure, additional targeted biopsies may be taken from each discrete lesion, but are not separately reported. MRI-ultrasound fusion biopsy includes the additional work of fusing the previously performed MRI with real-time ultrasound on an independent workstation and performing additional biopsies of the targeted lesions. CT- or MRI-guided targeted biopsies typically are performed "in-bore" (on the CT or MRI scanner itself) which includes needle placement access. Image-guided targeted biopsies performed on discrete or targeted lesions are reported once per lesion no matter the number of biopsy cores taken from that lesion. Systematic and targeted biopsies should not be confused with prostate saturation biopsy (55706) which is a unique procedure utilizing a template grid to take biopsies at 5 mm intervals through the entire prostate gland, with each specimen being labeled to the location where the core was taken. Diagnostic ultrasonography performed in the same session as prostate biopsy is included in 55706, 55707, 55708, 55709, 55710, 55711.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55705 Tracking Number J1 Original Specialty Recommended RVU: **1.88**
Presented Recommended RVU: **1.93**
Global Period: 000 Current Work RVU: **4.61** RUC Recommended RVU: **1.93**

CPT Descriptor: Biopsy, prostate; any approach, nonimaging-guided

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with a prostate nodule on rectal exam concerning for prostate cancer. Imaging guidance is not available. A transrectal finger-guided prostate biopsy is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 14% , In the ASC 10%, In the office 76%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 85.71% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 14.29%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is asked if an enema has been used and appropriate preoperative antibiotics taken. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. Local anesthetic is infiltrated around the prostate using finger guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. A finger is again placed per rectum and the prostate is identified. The biopsy gun is fired to take the first biopsy. The biopsy gun is then removed from the rectum. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. This process is repeated 12 times for a total of 12 sector biopsies from medial and lateral locations from the apex, base, and mid gland on the right and left sides of the prostate. Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). Rectal pressure is applied for hemostasis.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	11%	22%	44%	11%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	22%	56%	22%
Physical effort required	11%	56%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	33%	44%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	50%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	88%	12%
Physical effort required	0%	100	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	63%	37%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies

performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending the 25th percentile RVW of 1.93 for 55705. This service was previously typically reported with 55700 (RVW- 2.50). The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

The lack of imaging guidance for this code does increase the procedural intensity. The performing health professional must identify the prostate and any specific concerning nodules with finger guidance alone. The biopsy instrument must then be introduced using only the performing health professional's opposite hand finger as a guide. Significant care must be taken to both ensure adequacy of the biopsy samples while simultaneously avoiding self-harm when performing this procedure due to the non-imaging guided nature of the procedure.

A database search of RUC reviewed codes since 2014 with an intraservice time of 10 minutes, total time between 30 and 45 minutes and a 000-day global period reveals 13 codes. 55705 with a RVW of 1.93 would fit nicely within the fee schedule with 13 codes ranging from RVW 0.80 to 3.00.

We understand the import of surveys to the RUC process but unfortunately the intraservices times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 6 and Post-time package 7a are selected. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in left lateral decubitus position. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

SUMMARY OF RECOMMENDATION

CPT Code:55707 Tracking Number J2 Original Specialty Recommended RVU: **2.63**
Presented Recommended RVU: **2.63**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **2.63**

CPT Descriptor: Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant, ultrasound-localized discrete lesion[s])

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with an elevated prostate specific antigen (PSA). The patient elects to undergo a transrectal-ultrasound guided prostate needle biopsy.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 10% , In the ASC 14%, In the office 75%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is asked if an enema has been used and appropriate preoperative antibiotics taken. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table in left lateral decubitus position. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. Local anesthetic is infiltrated with around the seminal vesicles and prostate using imaging guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. The biopsy gun is fired to take the first biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. This process is repeated 12 times for a total of 12 sector biopsies from medial and lateral locations from the apex, base, and mid gland on the right and left sides of the prostate. Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). Rectal pressure is applied for hemostasis.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of

the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	44%	33%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	28%	66%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	72%	17%
Physical effort required	11%	56%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	33%	56%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	33%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	40%	47%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	67%	20%
Physical effort required	0%	86%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	53%	47%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies

performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending the 25th percentile RVW of 2.63 for 55707. This service was previously typically reported with 55700 (RVW- 2.50) and 76872 (RVW- 0.69). Both prior codes had an intraservice time of 15 minutes. The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

A database search of RUC reviewed codes since 2014 with an intraservice time of 15 minutes, total time between 45 and 55 minutes and a 000-day global period reveals 21 codes. 55707 with a RVW of 2.63 would be the highest value code with three codes valued at 2.43. However, if the search expands to include codes with an intraservice time of 20 minutes, 55707 fits nicely within the fee schedule with 35 codes ranging from RVW 1.10 to 2.70.

We understand the import of surveys to the RUC process but unfortunately the intraservices times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 6 and Post-time package 7b are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in left lateral decubitus position. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 76872

CPT Descriptor: Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance, first targeted lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. After a discussion of the patient's options, the patient chooses to undergo a transrectal ultrasound-guided prostate sextant biopsy with MRI-fusion guided biopsy of the targeted lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 20% , In the ASC 33.75%, In the office 46.25%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment and MRI fusion equipment is confirmed. Availability of appropriately marked and uploaded prostate MRI is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is asked if an enema has been used and appropriate preoperative antibiotics taken. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table in left lateral decubitus position. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. Starting at the base of the prostate ultrasound images are obtained moving in a steady, continuous pace towards the apex. This is done in conjunction with the MRI fusion software to allow for real time image fusion for targeted biopsy. Local anesthetic is infiltrated around the seminal vesicles and prostate using imaging guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. The targeted lesion is identified using ultrasound guidance with real-time fusion with the previously obtained MRI. After confirmation of the targeted lesion the biopsy gun is fired to take the first biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. A second core is taken from the targeted lesion to ensure appropriate sampling of the area. Attention is then turned to the non-targeted biopsies. 12 sector biopsies from medial and lateral locations from the apex, base, and mid gland on the right and left sides of the prostate are obtained using ultrasound guidance. Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). Following completion of all biopsies the ultrasound probe is removed. Rectal pressure is applied for hemostasis.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	30%	60%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	20%	80%
Physical effort required	0%	22%	78%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	0%	40%	60%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	40%	20%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	30%	70%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	20%	70%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending the 25th percentile RVW of 3.39 for 55708. This service was previously typically reported with 55700 (RVW- 2.50) and 76872 (RVW- 0.69). This code is substantially more complex than 55707. Prior MRI imaging needs to be fused with real-time ultrasound imaging to identify the target lesion. Adequate prostate ultrasound images must be obtained and appropriate fusion of the images with prior MRI must be confirmed manually by the physician. The target lesion must be located on the ultrasound and multiple biopsies are obtained of the target lesion. Following biopsy of the target lesion, complete sextant biopsies are obtained as in code 55707.

The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies. The additional work of obtaining adequate imaging, fusing the images with the prior MRI, confirming appropriateness of the fusion results, locating the lesion, and taking multiple biopsies of the lesion requires significant time as evidenced by the intraservice time of 20 minutes for code 55711 which is for a transrectal biopsy of just the target lesion without the subsequent sextant biopsies.

A database search of RUC reviewed codes since 2014 with an intraservice time of 20 minutes, total time between 55 and 65 minutes and a 000-day global period reveals 7 codes. 55708 with a RVW of 3.39 would be the second highest value code with an overall RVU range of 1.81-6.45.

We understand the import of surveys to the RUC process but unfortunately the intraservices times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 3 and Post-time package 7b are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in left lateral decubitus position. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 76872

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Claims data

Specialty Urology Frequency 50,000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 35,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Claims Data

Specialty Urology Frequency 35000 Percentage 100.00 %

SUMMARY OF RECOMMENDATION

CPT Code:55709 Tracking Number J4 Original Specialty Recommended RVU: **3.23**
Presented Recommended RVU: **3.23**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **3.23**

CPT Descriptor: Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant, ultrasound-localized discrete lesion[s])

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with an elevated prostate specific antigen (PSA). The patient elects to undergo a transperineal-ultrasound guided prostate needle biopsy.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 33.33% , In the ASC 35%, In the office 31.67%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is asked if appropriate preoperative antibiotics were taken. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. The perineal prostate guide is placed and secured on the ultrasound probe. The guide is then secured to the patient using the included needle trocar. Local anesthetic is infiltrated around the seminal vesicles and prostate using imaging guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. The biopsy gun is fired through the perineal guide to take the first biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. This process is repeated for the first three left posterior biopsies. Two biopsies are taken from each left posterior section (medial, lateral, base). The needle trocar is then repositioned for right posterior biopsies. Two biopsies are taken from each right posterior section (medial, lateral, base). The needle trocar is repositioned for left anterior biopsies. Two biopsies are taken from each left anterior section (medial, lateral). The needle trocar is then repositioned for right anterior biopsies. Two biopsies are taken from each right anterior section (medial, lateral). Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). The perineal biopsy guide is removed. The ultrasound probe is removed. Sterile dressing is applied.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are

managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:

We are recommending the 25th percentile RVW of 3.23 for 55709. This service was previously typically reported with 55700 (RVW- 2.50) and 76872 (RVW- 0.69). Both prior codes had an intraservice time of 15 minutes. The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

The transperineal prostate biopsy typically requires twenty biopsies to be obtained as explained in the description of work. Imaging guidance is used throughout to ensure appropriate sampling throughout the prostate gland at the recommend positions. Unfortunately, as discussed with the other codes in this family, survey results regarding intraservice time for the transperineal codes 55709, 55710, 55712, and 57706 are difficult to interpret given the significant difference in work involved with these codes.

A database search of RUC reviewed codes since 2014 with an intraservice time between 20 and 25 minutes, total time between 60 and 70 minutes and a 000-day global period reveals 8 codes. 55709 with a RVW of 3.23 would fit within this portion of the fee schedule with an overall RVW range of 1.81-6.45.

We understand the import of surveys to the RUC process but unfortunately the intraservices times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 3 and Post-time package 7b are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in dorsal lithotomy. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant) with MRI-fusion guidance biopsy, first targeted lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. The patient elects multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. The patient elects to undergo a transperineal ultrasound-guided prostate biopsy with MRI-fusion guided biopsy(ies) of the targeted lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 38% , In the ASC 34%, In the office 28%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment and MRI fusion equipment is confirmed. Availability of appropriately marked and uploaded prostate MRI is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment. A time-out is performed for patient identification.

Description of Intra-Service Work: A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. Starting at the base of the prostate ultrasound images are obtained moving in a steady, continuous pace towards the apex. This is done in conjunction with the MRI fusion software to allow for real time image fusion for targeted biopsy. The perineal prostate guide is placed and secured on the ultrasound probe. The guide is then secured to the patient using the included needle trocar. Local anesthetic is infiltrated around the seminal vesicles and prostate using imaging guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. The targeted lesion is identified using ultrasound guidance with real-time fusion with the previously obtained MRI. After confirmation of the targeted lesion the biopsy gun is fired to take the first biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. A second core is taken from the targeted lesion to ensure appropriate sampling of the area. Attention is then turned to the non-targeted biopsies. The biopsy gun is fired through the perineal guide to take the first non-targeted biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. This process is repeated for the first three left posterior biopsies. Two biopsies are taken from each left

posterior section (medial, lateral, base). The needle trocar is then repositioned for right posterior biopsies. Two biopsies are taken from each right posterior section (medial, lateral, base). The needle trocar is repositioned for left anterior biopsies. Two biopsies are taken from each left anterior section (medial, lateral). The needle trocar is then repositioned for right anterior biopsies. Two biopsies are taken from each right anterior section (medial, lateral). Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). The perineal biopsy guide is removed. The ultrasound probe is removed. Sterile dressing is applied.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	21%	29%	43%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	21%	79%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	21%	72%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	7%	21%	72%

• Estimated risk of malpractice suit with poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	17%	50%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	33%	59%
Physical effort required	8%	42%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	42%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending an RVW of 3.81 for 55710. This service was previously typically reported with 55700 (RVW- 2.50) and 76872 (RVW- 0.69). Both prior codes had an intraservice time of 15 minutes.

The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

The standard transperineal prostate biopsy typically requires twenty biopsies to be obtained as explained in the description of work. Imaging guidance is used throughout to ensure appropriate sampling throughout the prostate gland at the recommend positions. Unfortunately, as discussed with the other codes in this family, survey results regarding intraservice time for the transperineal codes 55709, 55710, 55712, and 57706 are difficult to interpret given the significant difference in work involved with these codes.

55710 requires the typical 20 biopsies performed with 55709 along with identification of a target lesion using MRI fusion guidance. Adequate prostate ultrasound images must be obtained and appropriate fusion of the images with prior MRI must be confirmed manually by the physician. The target lesion must be located on the ultrasound and multiple biopsies are obtained of the target lesion. Following biopsy of the target lesion, complete sextant biopsies are obtained as in code 55709.

A database search of RUC reviewed codes since 2014 with an intraservice time between 25 and 30 minutes, total time between 60 and 70 minutes and a 000-day global period reveals 29 codes. 55710 with a RVW of 3.81 would fit within this portion of the fee schedule with an overall RVW range of 1.90-4.57 and would maintain appropriate relativity within this complex family of codes.

We understand the import of surveys to the RUC process but unfortunately the intraservice times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 3 and Post-time package 7b are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in dorsal lithotomy. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Biopsy, prostate, transrectal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with rising prostate specific antigen (PSA) after radiation treatment for prostate cancer. A multi-parametric prostate MRI reveals a targeted lesion concerning for recurrent cancer. The patient elects to undergo a transrectal MRI-fusion guided biopsy of the targeted lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 95.77%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 25% , In the ASC 35%, In the office 40%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment and MRI fusion equipment is confirmed. Availability of appropriately marked and uploaded prostate MRI is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is asked if an enema has been used and appropriate preoperative antibiotics taken. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table in left lateral decubitus. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. Starting at the base of the prostate ultrasound images are obtained moving in a steady, continuous pace towards the apex. This is done in conjunction with the MRI fusion software to allow for real time image fusion for targeted biopsy. Local anesthetic is infiltrated around the seminal vesicles and prostate using imaging guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. The targeted lesion is identified using ultrasound guidance with real-time fusion with the previously obtained MRI. After confirmation of the targeted lesion the biopsy gun is fired to take the first biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. A second core is taken from the targeted lesion to ensure appropriate sampling of the area. Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). Following completion of all biopsies the ultrasound probe is removed. Rectal pressure is applied for hemostasis.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are

managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	40%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	10%	90%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	30%	70%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	20%	10%	70%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	37%	63%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	38%	62%
Physical effort required	0%	25%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending a crosswalk to code 31295 with an RVW of 2.70 below the 25th percentile RVW recommendation of 3.39 for 55711. This service was previously typically reported with 55700 (RVW- 2.50) and 76872 (RVW- 0.69). Prior MRI imaging is fused with real-time ultrasound imaging to identify the target lesion. Adequate prostate ultrasound images must be obtained and appropriate fusion of the images with prior MRI must be confirmed manually by the physician. The target lesion must be located on the ultrasound and multiple biopsies are obtained of the target lesion.

The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

A database search of RUC reviewed codes since 2014 with an intraservice time of 20 minutes, total time between 55 and 65 minutes and a 000-day global period reveals 7 codes. 55711 with a RVW of 2.70 would fit well within this portion of the fee schedule with a range of 1.81-6.45.

We understand the import of surveys to the RUC process but unfortunately the intraservice times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 3 and Post-time package 7b are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in left lateral decubitus position. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 76872

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 750
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Claims Data

Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **3.10**

CPT Descriptor: Biopsy, prostate, transperineal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with rising prostate specific antigen (PSA) after radiation treatment for prostate cancer. A multi-parametric prostate MRI reveals a targeted lesion concerning for recurrent cancer. The patient elects to undergo a transperineal MRI-fusion guided biopsy of the targeted lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 92.73%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 43.64% , In the ASC 34.55%, In the office 21.82%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment and MRI fusion equipment is confirmed. Availability of appropriately marked and uploaded prostate MRI is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. Starting at the base of the prostate ultrasound images are obtained moving in a steady, continuous pace towards the apex. This is done in conjunction with the MRI fusion software to allow for real time image fusion for targeted biopsy. The perineal prostate guide is placed and secured on the ultrasound probe. The guide is then secured to the patient using the included needle trocar. Local anesthetic is infiltrated around the seminal vesicles and prostate using imaging guidance. Time is allowed for the anesthetic to take effect. The patient is informed that there will be sounds and sensations related to the individual biopsies. The targeted lesion is identified using ultrasound guidance with real-time fusion with the previously obtained MRI. After confirmation of the targeted lesion the biopsy gun is fired to take the first biopsy. The biopsy gun is then removed keeping the ultrasound probe in place. The prostate specimen core is removed from the biopsy needle and placed on a sterile pad. The gun is prepared and reinserted through the probe for the next biopsy. A second core is taken from the targeted lesion to ensure appropriate sampling of the area. Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy). The perineal biopsy guide is removed. The ultrasound probe is removed. Sterile dressing is applied.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are

managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending a crosswalk to 31572 with an RVW of 3.01 for 55712, below the 25th percentile of 3.61. This service was previously typically reported with 55700 (RVW- 2.50) and 76872 (RVW- 0.69). Both prior codes had an intraservice time of 15 minutes.

The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

The standard transperineal prostate biopsy typically requires twenty biopsies to be obtained as explained in the description of work. Imaging guidance is used throughout to ensure appropriate sampling throughout the prostate gland at the recommend positions. Unfortunately, as discussed with the other codes in this family, survey results regarding intraservice time for the transperineal codes 55709, 55710, 55712, and 57706 are difficult to interpret given the significant difference in work involved with these codes.

55712 describes biopsy of a single lesion fusing prior MRI imaging with real-time ultrasound imaging to identify the target lesion. Adequate prostate ultrasound images must be obtained and appropriate fusion of the images with prior MRI must be confirmed manually by the physician. The target lesion must be located on the ultrasound and multiple biopsies are obtained of the target lesion. No additional biopsies are taken of the prostate. Despite this difference in work with 55710, survey results showed the same intraservice time for 55710 and 55712.

A database search of RUC reviewed codes since 2014 with an intraservice time of 25 and a 000-day global period reveals 14 codes. 55712 with a RVW of 3.10 would fit within this portion of the fee schedule with an overall RVW range of 1.78-4.00 and would maintain appropriate relativity within this complex family of codes.

We understand the import of surveys to the RUC process but unfortunately the intraservice times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 3 and Post-time package 7b are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in dorsal lithotomy. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 76872

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

SUMMARY OF RECOMMENDATION

CPT Code:55713 Tracking Number J8 Original Specialty Recommended RVU: **4.00**
Presented Recommended RVU: **4.00**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **4.00**

CPT Descriptor: Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. The patient elects to undergo an MRI-guided sextant biopsy with additional biopsy of the targeted lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 64% , In the ASC 20%, In the office 16%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Medical records and previous imaging are reviewed, and appropriate guidance method and initial approach are decided on based on prior imaging. Procedure details, including alternatives and risks, are discussed with the patient and/or family, and informed consent is obtained. MRI safety check and screening is performed. An IV is started for access, prophylactic antibiotics, and for moderate sedation as needed. The setup in the procedure suite is reviewed. Accurate calibration of the imaging equipment is ensured with the technologist. Initial positioning and preparation of the patient is supervised with the technologist and nursing staff. A surgical "time out" is performed. Non-contrast MRI images are obtained for adequate localization of the prostate. The patient and table are removed from the magnet bore. The skin is prepared with an appropriate surgical antiseptic solution, and local anesthesia is administered at the insertion site.

Description of Intra-Service Work: The patient is placed in the prone position on the MRI table. An MRI-compatible plastic needle guide with fiducial markers is inserted into the patient's rectum and a series of scans are performed with orthogonal planes to confirm localization of the lesion in question. Coordinates are determined for intended biopsy path. The needle guide position is adjusted as needed, the needle is then advanced, the biopsy device is deployed, and MRI images with the needle through the lesion is obtained for confirmation. At least 2 samples are typically taken. Sextant biopsy is then performed, adjusting the needle to obtain each sample and performing intermittent MRI as needed to ensure adequate coverage of the gland. Post-biopsy MRI images are obtained to evaluate for complications. Images are annotated and adjacent structures in the imaging field of view are evaluated. Specimens are labeled and sent to pathology.

Description of Post-Service Work: The area is covered with sterile dressing. The patient is transported to the recovery area for hemodynamic monitoring and pain control as needed. A formal report of the procedure is dictated into the permanent medical record. The results and further management are discussed with the patient and family, as well as the requesting physician. The procedure report is reviewed and signed.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	25%	38%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	63%	38%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	38%	50%
Physical effort required	13%	38%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	14%	43%	43%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	14%	86%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	14%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background – 55713

CPT codes 55700 *(Biopsy, prostate; needle or punch, single or multiple, any approach)* and 76872 *(Ultrasound, transrectal)* were identified on the 75% reported together screen, triggering review of the prostate biopsy code family. This resulted in the deletion of CPT code 55700 and the creation of nine new codes to describe prostate

biopsy procedures which are now typically performed using real-time imaging guidance including ultrasound-guidance, MRI-ultrasound fusion-guidance, CT-guidance or MRI-guidance.

Survey Process

The American College of Radiology (ACR) in partnership with American Urological Association American (AUA), Society of Interventional Radiology (SIR) and Outpatient Endovascular and Interventional Society (OEIS) conducted a random survey of our respective members. All specialty societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

The 25th percentile work RVU of 3.59 for 55713 represents a rank order issue with the 25th percentile work RVU for 55714. The work required for 55713 includes a sextant biopsy, where 12 biopsy samples are obtained in addition to single targeted lesion. Therefore, the specialties are recommending a crosswalk for 55713 to CPT code52441 (*Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant)*, which has a work RVU of 4.00.

Time Recommendation

Pre-time - The specialties have chosen pre-service package 3 – Difficult patient/straightforward procedure (no anesthesia care) – Total of 51 minutes

Pre-evaluation time: Standard package time of 33 minutes. The specialties are recommending the survey median time of 30 minutes.

Pre-positioning time: Standard package time of 3 minutes. The specialties are requesting an additional 7 minutes for a total of 10 minutes, corresponding to the survey median time.

- The additional time is needed for: Complex prone patient positioning in bore (CT/MRI), complex coil positioning, complex equipment maneuvering, complex patient safety and comfort. This is a delicate exam with invasive coil placement that requires extensive patient communication. The patient will be moved inside the bore of the machine and back out of the bore, while keeping constant visual clearance of other objects; the coil cord or various patient monitoring cords that could come in contact with the patient or coil that could denigrate the coil positioning and require correction and rescanning of the patient.
- Positioning must also ensure that there is adequate exposure to perform the sextant biopsy in addition to the target lesion.
-

Pre-Scrub/dress/wait: Standard package time of 15 minutes. The specialties are recommending the survey median time of 9 minutes.

Immediate Post-time

The specialties have chosen post-service package 8B - IV Sedation/ Complex Procedure, with a standard time of 15 minutes. The specialties are recommending the survey median time of 13 minutes.

Key Reference Services

Our top two chosen key reference services (KRS) are

- CPT code **52352** *(Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included)*
- CPT code **55874** *(Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed).*

55713 involves biopsy from a transrectal guided approach which is clinically similar to the transperineal 55874 procedure for placement using ultrasound-guidance in this anatomic region. There is more total time for the procedure because of the nature of using MR or CT guidance and which contributes to the higher intensity of

using intermittent imaging guidance in a technically challenging anatomic region and equipment environment. While both procedures involve needle passes, there are typically many more passes to obtain the sextant samples compared to placement of biodegradable material.

55713 and 52352 are performed in the similar anatomic region and the lower intra-service time results in an appropriately lower wRVU recommendation.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre-Eval	Pre-Posit	Pre-SDW	Intra	Post	IWPUT
55874	Transperineal placement of biodegradable material	3.03	70	13	6	6	30	15	0.074
55713	**Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion**	**4.00**	**87**	**30**	**10**	**9**	**25**	**13**	**0.110**
52352	Cystourethroscopy, with ureteroscopy	6.75	118	33	5	15	45	20	0.118

MPC Codes

The surveyed code compares well to the two MPC codes listed in the table below for comparison.
Both codes are within the urology family, involving a clinically similar anatomic region, and the intra-service times bracket 55713 with similar IWPUT.

- 52287 *(Cystourethroscopy, with injection(s) for chemodenervation of the bladder*)
- 52441 *(Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant)*

CPT	Descriptor	wRVU	Total Time	Pre-Eval	Pre-Posit	Pre-SDW	Intra	Post	IWPUT
52287	CYSTOSCOPY CHEMODENERVATION	3.20	58	7	5	10	21	15	0.120
55713	**Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion**	**4.00**	**87**	**30**	**10**	**9**	**25**	**13**	**0.110**
52441	Cystourethroscopy, with implant	4.00	81	26	5	10	25	15	0.116

Conclusion

The survey results and comparisons to the KRS and MPC codes support the specialties' recommendation of 4.00 RVUs for 55713, with 87 minutes of total time (30 minutes of pre-service evaluation, 10 pre-service position, 9 minutes pre-scrub, dress and wait, 25 minutes of intra time, and 13 minutes of post-service time).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 77021

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Interventional Radiology How often? Sometimes

Specialty Urology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 4182
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 55713 is estimated to be provided 4,182 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 0 Percentage 0.00 %

Specialty Interventional Radiology Frequency 1882 Percentage 45.00 %

Specialty Urology Frequency 416 Percentage 9.94 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,394
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 55713 is estimated to be provided 1,394 times to Medicare patients nationally in a one-year period. This is 1% of the deleted code 55700 which has 139,388 claims.

Specialty Diagnostic Radiology Frequency 627 Percentage 44.97 %

Specialty Interventional Radiology Frequency 627 Percentage 44.97 %

Specialty Urology Frequency 139 Percentage 9.97 %

Do many physicians perform this service across the United States? No

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	11%	33%	56%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	0%	89%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	25%	38%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	38%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	38%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background – 55714

CPT codes 55700 *(Biopsy, prostate; needle or punch, single or multiple, any approach)* and 76872 *(Ultrasound, transrectal)* were identified on the 75% reported together screen, triggering review of the prostate biopsy code family. This resulted in the deletion of CPT code 55700 and the creation of nine new codes to describe prostate

biopsy procedures which are now typically performed using real-time imaging guidance including ultrasound-guidance, MRI-ultrasound fusion-guidance, CT-guidance or MRI-guidance.

Survey Process

The American College of Radiology (ACR) in partnership with American Urological Association American (AUA), Society of Interventional Radiology (SIR) and Outpatient Endovascular and Interventional Society (OEIS) conducted a random survey of our respective members. All specialty societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

The specialties recommend a work RVU of 3.62, which is the survey 25th percentile value.

Time Recommendation

Pre-time - The specialties have chosen pre-service package 3 – Difficult patient/straightforward procedure (no anesthesia care) – Total of 51 minutes

Pre-evaluation time: Standard package time of 33 minutes. The specialties are recommending 30 minutes, consistent with our recommendation for CPT code 55713.

Pre-positioning time: Standard package time of 3 minutes. The specialties are requesting an additional 7 minutes for a total of 10 minutes, the survey median time.

- The additional time is needed for: Complex prone patient positioning in bore (CT/MRI), complex coil positioning, complex equipment maneuvering, complex patient safety and comfort. This is a delicate exam with invasive coil placement that requires extensive patient communication. The patient will be moved inside the bore of the machine and back out of the bore, while keeping constant visual clearance of other objects; the coil cord or various patient monitoring cords that could come in contact with the patient or coil that could denigrate the coil positioning and require correction and rescanning of the patient.

Pre-Scrub/dress/wait: Standard package time of 15 minutes. The specialties are recommending 9 minutes, consistent with our recommendation for CPT code 55713.

Immediate Post-time

The specialties have chosen post-service package 8B - IV Sedation/ Complex Procedure, with a standard time of 15 minutes. The specialties are recommending 13 minutes, consistent with our recommendation for CPT code 55713.

Key Reference Services

Our recommendation compares well to the top two chosen key reference services (KRS)

- CPT codes **19085** *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance)*
- CPT code **52352** *(Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with removal or manipulation of calculus (ureteral catheterization is included).*

55714 involves biopsy from a transrectal approach using MR or CT guidance in a technically challenging anatomic region and equipment environment. Code 19085 also involves biopsy guidance in the MR environment and the differences in intra-service time reflect the different patient positioning requirements. While both procedures involve needle passes, there are typically several more passes to obtain the prostate samples compared to biopsy and localization device placement in the breast.

55714 and 52352 are performed in the similar anatomic region and the lower intra-service time results in an appropriately lower wRVU recommendation.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre-Eval	Pre-Posit	Pre-SDW	Intra	Post	IWPUT
55714	**Biopsy, prostate, in-bore CT- or MRI-guided targeted lesion(s) only, first targeted lesion**	**3.62**	**92**	**30**	**10**	**9**	**30**	**13**	**0.079**
19085	Biopsy, breast, with placement of breast localization device(s)	3.64	82	13	3	6	45	15	0.064
52352	Cystourethroscopy, with ureteroscopy and/or pyeloscopy	6.75	118	33	5	15	45	20	0.118

MPC Codes

The surveyed code compares well to the two MPC codes listed in the table below for comparison.
Both codes are within the urology family involving a clinically similar anatomic region and similar intra times.

- 52287- *(Cystourethroscopy, with injection(s) for chemodenervation of the bladder*)
- 52441 – *(Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant)*

CPT	Descriptor	wRVU	Total Time	Pre-Eval	Pre-Posit	Pre-SDW	Intra	Post	IWPUT
52287	Cystoscopy Chemodenervation	3.20	58	7	5	10	21	15	0.120
55714	**Biopsy, prostate, in-bore CT- or MRI-guided targeted lesion(s) only, first targeted lesion**	**3.62**	**92**	**30**	**10**	**9**	**30**	**13**	**0.079**
52441	Cystourethroscopy, with implant	4.00	81	26	5	10	25	15	0.116

Conclusion

The survey results and comparisons to the KRS and MPC codes support the specialties' recommendation of 3.62 RVUs for 55714, with 92 minutes of total time (30 minutes of pre-service evaluation, 10 pre-service position, 9 minutes pre-scrub, dress and wait, 30 minutes of intra time, and 13 minutes of post-service time).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 77021

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Interventional Radiology How often? Sometimes

Specialty Urology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 4182
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 55714 is estimated to be provided 4,182 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 0 Percentage 0.00 %

Specialty Interventional Radiology Frequency 1882 Percentage 45.00 %

Specialty Urology Frequency 418 Percentage 9.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,394
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 55714 is estimated to be provided 1,394 times to Medicare patients nationally in a one-year period. This is 1% of the deleted code 55700 which has 139,388 claims.

Specialty Diagnostic Radiology Frequency 627 Percentage 44.97 %

Specialty Interventional Radiology Frequency 627 Percentage 44.97 %

Specialty Urology Frequency 139 Percentage 9.97 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 50434

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55715 Tracking Number J10 Original Specialty Recommended RVU: **1.05**
Presented Recommended RVU: **1.05**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **1.05**

CPT Descriptor: Biopsy, prostate, each additional, MRI-ultrasound fusion or in-bore CT- or MRI-guided targeted lesion (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: During an MRI-ultrasound fusion biopsy of a targeted lesion or CT or MRI guided prostate biopsy of a targeted lesion, additional target lesion(s) are additionally biopsied. [Note: This is an add-on service. Only consider the additional work related to the performance of further biopsies on additionally marked and targeted lesion(s) above and beyond the initial lesion.]

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The additional targeted lesion is identified on real-time ultrasound imaging. The biopsy gun and ultrasound are manipulated and directed towards the additional target lesion. After imaging confirmation that the biopsy gun is appropriately directed towards the targeted lesion a biopsy is taken through the lesion. The biopsy gun is then readjusted and a biopsy is obtained through a second area in the targeted lesion. Each prostate biopsy sample is placed into a formalin-filled container; each container is labeled appropriately (patient identification information and location of biopsy).

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	26%	37%	37%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	33%	61%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	37%	63%
Physical effort required	11%	37%	53%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	21%	74%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	55%	36%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	64%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	45%	45%
Physical effort required	0%	91%	9%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	73%	18%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies

performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending the 25th percentile RVW of 1.05. This service was previously typically reported with 55700 (RVW-2.50) and 76872 (RVW- 0.69). Both prior codes had an intraservice time of 15 minutes.

The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

This add-on code is meant to be used regardless of biopsy approach when an additional target lesion is identified on MRI beyond the first lesion. The work of the first lesion biopsy is included in the other codes in this family.

A database search of RUC reviewed codes since 2014 with an intraservice time of 20 and a ZZZ-day global period reveals 24 codes. 55715 with a RVW of 1.05 would fit within this portion of the fee schedule with an overall RVW range of 0.50-2.50 and given the difficulties in intraservice times within the survey would still maintain appropriate relativity within this complex family of codes.

We understand the import of surveys to the RUC process but unfortunately the intraservice times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code will be used in addition to codes 55708, 55710, 55711, 55712, 55713, 55714 when additional target lesions beyond the first are present.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55700 and 76872

CPT Descriptor: Biopsies, prostate, needle, transperineal, stereotactic template guided saturation sampling, including imaging guidance

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male previously presented four months ago with a prostate specific antigen (PSA) of 5.8 and a normal digital rectal exam. At that time, he underwent a standard 12 core transrectal biopsy which revealed high-grade prostatic intraepithelial neoplasia (PIN) involving the right mid-base and mid-apex of his prostate. He was followed carefully and a repeat PSA has now increased to 8.6. His digital rectal exam remains normal. Given his increasing PSA and prior history of high-grade PIN, it is elected to perform a transperineal stereotactic template guided saturation sampling of his prostate under general anesthesia.

Percentage of Survey Respondents who found Vignette to be Typical: 87.04%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 50.00% , In the ASC 44.44%, In the office 5.56%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Appropriate guidance method and approach are decided based on prior imaging or other clinical findings. Availability of ultrasound equipment is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. The surgeon confirms that the appropriate prophylactic antibiotics were ordered. Previous biopsy results are reviewed. The patient is asked if appropriate preoperative antibiotics were taken. The patient is confirmed to not be taking anticoagulants and nonsteroidal antiinflammatory medications. Preprocedure vital signs are checked. The patient is positioned on the procedural table. The patient is prepped with appropriate antiseptic solution. The surgeon washes his hands and puts on personal protective equipment.

Description of Intra-Service Work: A time-out is performed for patient identification. A digital rectal examination and dilation of the anus are performed. Topical anesthetic is applied to the colonic mucosa overlying the prostate; time is allowed for the anesthetic to take effect. The ultrasound probe is placed per rectum. The prostate is identified. Preliminary transrectal ultrasound is carried out and the biopsy template (grid) is positioned so that precise and exact coordinates for the prostate biopsies can be taken. The surgeon transperineally inserts the biopsy needle 40-60 times to be sure cores are taken at specific millimeter intervals through the template. Each specimen is removed from the biopsy needle, placed on telfa and the gun reloaded, then carefully reinserted through the biopsy template. Each core is then placed in a container with formalin and each bottle labeled. Each time the biopsy needle is reintroduced through the biopsy template, sagital and transverse ultrasound images are taken to ensure precise localization of the biopsy needle. Upon completion of the biopsies, the transrectal ultrasound probe is removed. The biopsy template is disassmbled. Perineal and rectal pressure is applied to prostate. Sterile dressing is applied.

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked, and any immediate complications are

managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postoperative pain is assessed. The patient and family are informed about what the pathologist will do with the tissue and when the biopsy results will be available. The paperwork required for pathology specimen submission and evaluation is prepared. The referring physician is called and informed of the outcome of the procedure and any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). An operative report is dictated

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	33%	38%	23%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	39%	55%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	61%	33%
Physical effort required	12%	34%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	12%	44%	44%

• Estimated risk of malpractice suit with poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	14%	43%	29%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	29%	57%
Physical effort required	17%	33%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	29%	71%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending a crosswalk to 45385 with an RVW of 4.57 for code 55706. There has been a significant increase in utilization of 55706 over the past ten years from 1,569 claims in 2012 to over 3,000 claims in 2022. The expert panel believes this increase in utilization has been driven by confusion about the appropriate use of this code. The code language includes the term transperineal and therefore the rise of non-saturation sampling transperineal biopsy has likely resulted in this significant utilization increase in the use of 55706. National cancer guidelines do not recommend saturation sampling for typical patients undergoing prostate biopsy. The expert panel believes that this confusion led to providers underestimating the intraservice time for a true saturation biopsy of the prostate, which is infrequently required or performed. This confusion is further supported by the difference in only five minutes of intraservice time reported by surveyees for code 55712 which requires typically two transperineal biopsies from a single target lesion with an intraservice time of 25 minutes and this saturation technique requiring typically 40 or more biopsies with a reported intraservice time of 30 minutes.

The results of the survey of this family of codes demonstrates the significant increase in complexity in coding being asked of physicians going from coding almost all prostate biopsy services with 55700 to a family of 12 different codes. The reported intraservice time for many codes in this survey family demonstrates confusion among the survey respondents. Codes have the same reported intraservice time whether they are meant to be used to report one biopsy or 13 (or more) biopsies.

A database search of RUC reviewed codes since 2014 with an intraservice time of 30 minutes, total time between 65 and 85 minutes and a 000-day global period reveals 18 codes. 55706 with a RVW of 4.57 would fit well within this portion of the fee schedule with an RVW range of 2.00-4.62.

We understand the import of surveys to the RUC process but unfortunately the intraservices times for these services are difficult to understand across the family of surveyed codes given the inherent difference in work between taking one biopsy and multiple biopsies. Therefore, we feel that the intraservice times as reported by the survey respondents are not reliable indicators of the work or time involved. We are requesting that after recommending values for this family of codes that the codes be sent back to CPT for the next cycle and that re-survey then be performed with a new set of codes and code descriptors that more clearly explain the work involved.

Pre-time package 3 and Post-time package 9a are selected. The patient is straightforward, and the biopsy procedure is complex.. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased to match survey times as the patient requires positioning in dorsal lithotomy. Post-time is decreased based on survey median results.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Ultrasound, transrectal

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old man with voiding difficulty, who is not responsive to alpha blockers or 5-alpha reductase inhibitors (5-ARI) and a prostate specific antigen (PSA) level of 0.8 ng/mL is evaluated for possible invasive or minimally invasive prostate surgery. Transrectal prostate ultrasound is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Laboratory and imaging studies are reviewed. Availability of ultrasound equipment is confirmed. Risks and benefits of the procedure are discussed with the patient and informed consent is obtained. Preprocedure vital signs are checked.

Description of Intra-Service Work: After a digital rectal examination is performed, gently insert the transrectal ultrasound probe into the rectum. Adjust the ultrasound-image controls to the size of the prostate. Using the coronal image, measure prostate height and width. Using the sagittal image, measure the prostatic urethral length. Then freeze the image to calculate the prostate volume from previous measurements, and note the presence or absence of hypoechoic areas, prostatic calcifications, and prostatic cysts. Also note the presence or absence of the prostate median lobe, and if present, note its size. Evaluate the seminal vesicles. Transfer the images to a picture archiving and communication system (PACS).

Description of Post-Service Work: The patient is assisted in transfer from the procedural table. Recovery area care and medications are reviewed with clinical staff. Postprocedure vital signs are checked and any immediate complications are managed. The procedure, expected outcome, signs and symptoms to watch for in subsequent days, and planned postoperative care are discussed with the patient and family. Postprocedural pain is assessed. A report is dictated.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
76942	XXX	0.67	**RUC Time**

CPT Descriptor Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
76998	XXX	0.91	**RUC Time**

CPT Descriptor Ultrasonic guidance, intraoperative

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74220	XXX	0.60	**RUC Time**	93,312

CPT Descriptor 1 Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.70	**RUC Time**	8,350,126

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 27 **% of respondents:** 31.0 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 20.6 **%**

TIME ESTIMATES (Median)

	CPT Code: 76872	Top Key Reference CPT Code: 76942	2nd Key Reference CPT Code: **76998**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	19%	56%	19%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	48%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	19%	48%	33%
Physical effort required	22%	59%	19%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	30%	52%	19%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	33%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	61%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	17%	39%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	50%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background and Compelling Evidence:

A new family of prostate biopsy codes was created due to the current prostate biopsy code, 55700, being billed more than 75% of the time with code 76872, ultrasound, transrectal. There has been significant technological change since the last RUC survey of 55700 in 2016. An increasing number of patients undergoing prostate biopsies are having biopsies

performed from a transperineal approach instead of the traditional transrectal biopsy. Prostate MRI has also been shown to have excellent sensitivity for the detection of clinically significant prostate cancer. Thus, many patients are undergoing pre-biopsy MRI with plan for image guided fusion biopsy of the suspicious lesion. This change in procedural technique and technology resulted in the need for a new family of codes to describe prostate biopsy work and meets the RUC threshold for compelling evidence.

Recommendation:
We are recommending the 25th percentile RVW of 0.67 for 76872. This does represent a decrease from current RVU. The intraservice time and total time from the survey decreased as well compared to the prior survey in 2012. A database search of RUC reviewed codes since 2014 with an intraservice time of 10 minutes, total time between 20 and 25 minutes and a XXX-day global period reveals 35 codes. 76872 with a RVW of 0.67 fits well within this portion of the fee schedule with codes ranging from 0.30-0.86 RVW.

Pre-time of 6 minutes and immediate post-time of 7 minutes are recommended based on survey median values.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76872

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty Diagnostic Radiology How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 75000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. claims data

Specialty Frequency 0 Percentage 0.00 %

Specialty Urology Frequency 69000 Percentage 92.00 %

Specialty Diagnostic Radiology Frequency 6000 Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 50,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. claims data

Specialty Urology Frequency 46000 Percentage 92.00 %

Specialty Diagnostic Radiology Frequency 4000 Percentage 8.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Prostate, Transrectal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 76872

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2024

CPT Code	Long Descriptor	Global Period
55705	Biopsy, prostate; any approach, nonimaging-guided (Do not report 55705 in conjunction with 55706, 55707, 55708, 55709, 55710, 55711, 55713, 55714, 55715, 76872, 76942, 77002, 77012, 77021) (For real-time spectral analysis of prostate tissue by fluorescence spectroscopy, use 0443T)	000
55707	Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant, ultrasound-localized discrete lesion[s]) (Do not report 55707 in conjunction with 55705, 55706, 55708, 55709, 55710, 55711, 55712, 55713, 55714, 55715, 76872, 76942) (For real-time spectral analysis of prostate tissue by fluorescence spectroscopy, use 0443T)	000
55708	Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant) with MRI-fusion guidance, first targeted lesion	000
55709	Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant, ultrasound-localized discrete lesion[s])	000
55710	Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant) with MRI-fusionguidance biopsy, first targeted lesion	000
55711	Biopsy, prostate, transrectal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion	000
55712	Biopsy, prostate, transperineal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion	000
55713	Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion	000
55714	Biopsy, prostate, in-bore CT- or MRI-guided targeted lesion(s) only, first targeted lesion	000
55715	Biopsy, prostate, each additional, MRI-ultrasound fusion or in-bore CT- or MRI-guided targeted lesion (List separately in addition to code for primary procedure)	ZZZ
55706	Biopsies, prostate, needle, transperineal, stereotactic template guided saturation sampling, including imaging guidance	000
76872	Ultrasound, transrectal (Do not report 76872 in conjunction with 45341, 45342, 45391, 45392, 46948, 55707, 55708, 55709, 55710, 55711, 55712, 55705, 55706, 0421T, 0619T)	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55705	A 62-year-old male presents with a prostate nodule on rectal exam concerning for prostate cancer. Imaging guidance is not available. A transrectal finger-guided prostate biopsy is performed.
55707	A 62-year-old male presents with an elevated prostate specific antigen (PSA). The patient elects to undergo a transrectal-ultrasound guided prostate needle biopsy.
55708	A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. After a discussion of the patient's options, the patient chooses to undergo a transrectal ultrasound-guided prostate sextant biopsy with MRI-fusion guided biopsy of the targeted lesion.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

55709	A 62-year-old male presents with an elevated prostate specific antigen (PSA). The patient elects to undergo a transperineal-ultrasound guided prostate needle biopsy.
55710	A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. The patient elects to undergo a transperineal ultrasound-guided prostate biopsy with MRI-fusion guided biopsy(ies) of the targeted lesion.
55711	A 62-year-old male presents with rising prostate specific antigen (PSA) after radiation treatment for prostate cancer. A multi-parametric prostate MRI reveals a targeted lesion concerning for recurrent cancer. The patient elects to undergo a transrectal MRI-fusion guided biopsy of the targeted lesion.
55712	A 62-year-old male presents with rising prostate specific antigen (PSA) after radiation treatment for prostate cancer. A multi-parametric prostate MRI reveals a targeted lesion concerning for recurrent cancer. The patient elects to undergo a transperineal MRI-fusion guided biopsy of the targeted lesion.
55713	A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. The patient elects to undergo an MRI-guided sextant biopsy with additional biopsy of the targeted lesion.
55714	A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. The patient elects to undergo an MRI-guided prostate biopsy of the targeted lesion.
55715	During an MRI-ultrasound fusion biopsy of a targeted lesion or CT or MRI guided prostate biopsy of a targeted lesion, additional target lesion(s) are additionally biopsied. [Note: This is an add-on service. Only consider the additional work related to the performance of further biopsies on additionally marked and targeted lesion(s) above and beyond the initial lesion.]
55706	A 58-year-old male previously presented four months ago with a prostate specific antigen (PSA) of 5.8 and a normal digital rectal exam. At that time, he underwent a standard 12 core transrectal biopsy which revealed high-grade prostatic intraepithelial neoplasia (PIN) involving the right mid-base and mid-apex of his prostate. He was followed carefully and a repeat PSA has now increased to 8.6. His digital rectal exam remains normal. Given his increasing PSA and prior history of high-grade PIN, it is elected to perform a transperineal stereotactic template guided saturation sampling of his prostate under general anesthesia.
76872	A 74-year-old man with voiding difficulty, who is not responsive to alpha blockers or 5-alpha reductase inhibitors (5-ARI) and a prostate specific antigen (PSA) level of 0.8 ng/mL is evaluated for possible invasive or minimally invasive prostate surgery. Transrectal prostate ultrasound is performed.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The RUC advisors from the AUA reviewed the current code PE details and discussed the changes from the old to new coding structure to determine what PE revisions were required.

The societies of AUA, ACR, SIR and OEIS convened a panel of experts familiar with this service to evaluate the direct practice expense inputs for Prostate Biopsy Services 55713 and 55714.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

Deleted code 55700 and edited code 55705 serve as the reference codes.

55700 and 76872 serve as the reference codes. These codes were typically billed together to entail both the image guidance and prostate biopsy service.

The specialties have included CPT code 19085 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance)* as a reference code. Biopsy performed with real-time guidance in the gantry of the MRI is an uncommon procedure, with the most typical example being breast. The safety profile of the environment makes this procedure different from other types of biopsy procedures and the specific positioning requirements between both the Breast MRI guided biopsy and Prostate MRI guided biopsy have added complexity compared to standard biopsy procedures.

The specialties also included CPT codes 55700 *(Biopsy, prostate; incisional, any approach)* and 77021 *(Magnetic resonance imaging guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation)*, which are the codes currently used to report the 55713 and 55714 procedures.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

No

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Urology- 98%

We believe Radiology/Interventional Radiology will be the dominant provider in the non-facility setting and this will be the same for the global setting. These services will be performed 5% of the time in the non-facility setting for 55713 and 55714.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The expert panel is recommending an increase in the aggregate cost of clinical labor, supplies and equipment compared to the existing inputs.

Flawed methodology of prior review – missing required supplies. Change in technology resulting in missing required supplies and equipment.

SB014, *drape, sterile, three-quarter sheet*, is needed to drape the patient for biopsy procedures rather than the non-sterile sheet used in the imaging only service 76872

SB028, *gown, surgical, sterile*- two surgical gowns are required, one for the health professional performing the biopsy and one for the assistant

SB034, *mask, surgical, with face shield,* two are required, one for the health professional performing the biopsy and one for the assistant

SC029, *needle, 18-27g*- needed to draw up lidocaine

SC042, *needle, spine, Sprotte*- used to perform prostatic block

SG035, *dressing, 3inx4in (Telfa, release)*, used to collect specimens from biopsy gun

The expert panel is recommending an increase in the aggregate cost of clinical labor, supplies and equipment compared to the existing inputs.

Flawed methodology of prior review – missing required supplies. Change in technology resulting in missing required supplies and equipment.

SB014, *drape, sterile, three-quarter sheet*, is needed to drape the patient for biopsy procedures rather than the non-sterile sheet used in the imaging only service 76872

SC029, *needle, 18-27g*- needed to draw up lidocaine

SC042, *needle, spine, Sprotte*- used to perform prostatic block

SG035, *dressing, 3inx4in (Telfa, release)*, used to collect specimens from biopsy gun

SG056, *gauze, sterile 4inx4in (10 pack)*- used to hold prostatic pressure and address intra-procedural bleeding

SJ043, *povidone swabsticks (3 pack)*, - used to clean the anus pre-procedurally

SJ089, *ultrasound transmission gel, sterile (single use)*- used for ultrasound imaging for guidance

SL036- *cup, biopsy- specimen sterile 4oz*,- used to send each specimen individually to pathology

Automatic biopsy gun- used to obtain biopsy samples

Transperineal ultrasound biopsy guide- used to guide needle alongside ultrasound equipment

Uronav- Used for fusion biopsies to fuse MRI images with real-time ultrasound

Disposable prostate core biopsy needle

The increase in aggregate cost can be attributed to the two new supply items, the Transrectal MRI-compatible biopsy gun and the associated needle guide. Both of these are required to perform the procedures described by CPT codes 55713 and 55714.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Prostate biopsy is an invasive procedure performed for the diagnosis of prostate cancer. Risks of biopsy include infection from translocated rectal bacteria and bleeding. The standard inputs for extensive use of clinical staff time are necessary for this family of services. Clinical staff must coordinate pre-procedural services including rectal swab and pre-procedural PSA testing. Antibiotics and enemas are often prescribed pre-procedurally. Patients need to be called to confirm they have stopped their anticoagulant and anti-platelet medications. Pre-procedural education is provided regarding expectations on the day of the procedure and expectations following the procedure.

For 55713 and 55714:

- **Prepare room, equipment, and supplies (CA013)** – the standard is 2 minutes. The specialties request 3 minutes, as complex biopsy equipment is involved.
- **Prepare, set-up and start IV, initial positioning and monitoring of patient (CA016)** – more time is required because the patient is prone and the device must be positioned along the rectum to ensure proper alignment for the transrectal biopsy approach

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

5 minutes for vital signs is requested. Post-procedural infection is a significant risk of prostate biopsy. A full set of vital signs including temperature, heart rate, respiratory rate, oxygen saturation, and blood pressure are obtained pre-procedurally to confirm the patient is appropriate to proceed with biopsy.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Clinical staff must coordinate pre-procedural services including rectal swab and pre-procedural PSA testing. Antibiotics and enemas are often prescribed pre-procedurally. Patients need to be called to confirm they have stopped their anticoagulant and anti-platelet medications. Pre-procedural education is provided regarding expectations on the day of the procedure and expectations following the procedure. For 55713 and 55714: • Confirm availability of prior images/studies • Review patient clinical extant information and questionnaire

    b. Service period (includes pre, intra and post):

Clinical staff greets the patient, provides a gown, and ensures appropriate records are available. 5 vital signs are obtained as above. Consent is obtained. The room is prepared and supplies and equipment are arranged. Imaging technology is prepared. The patient is positioned and local anesthetics are administered. The clinical staff assist the surgeon throughout the procedure. Following the procedure, the patient is monitored for vital sign changes and pain is assessed to ensure the patient tolerated the procedure. The imaging equipment, surgical equipment and room are cleaned. Images are reviewed and entered into the PACS system. Post-procedural instructions are discussed with the patient. For 55713 and 55714: • Greet patient, provide gowning, ensure appropriate medical records are available • Obtain vital signs • Provide education/obtain consent • Prepare room, equipment and supplies • Confirm order, protocol exam • Prepare, set-up and start IV, initial positioning and monitoring of patient • Sedate/apply anesthesia • Perform procedure/service

- Monitor patient following procedure/service
- Clean room/equipment by staff
- Review/read post-procedure x-ray, lab and pathology reports
- Check dressings, catheters, wounds
- Technologist archives and QC's images to/in PACS, checking for all images and dose page
- Review examination with interpreting MD
- Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.
- Review home care instructions, coordinate visits/prescriptions

c. Post-service period:

A post-procedural phone call is made by clinical staff to assess for any complications and answer any post-procedural questions.

For 55713 and 55714:

- Conduct patient communications

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff is present throughout the entirety of the procedure. The clinical staff helps to monitor the patient and ensure the patient is tolerating the procedure. The staff hands instruments and supplies to the surgeon including local anesthetic, ultrasound probe, biopsy gun. The staff labels the specimens and ensures that specimens are correctly labeled and prepared for pathology.

For 55713 and 55714:
Technologist initiates a time out ensuring they have correct patient and the correct site. The technologist explains the consent and answers any general questions, if there are any detailed exam specific questions the technologist will direct those to the physician to answer before the exam begins. The technologist opens all biopsy supplies and prepares the tray drawing up medications in front of the physician. Technologist works hip to hip with physician during the biopsy, handing supplies as holding the specimen cup(s) and working the vacuum assisted biopsy equipment. Technologist responsible for all imaging during the biopsy to confirm targeted location. Technologist will close and initial biopsy specimen(s) prior to moving the patient. The nurse will monitor the patient and hold pressure following the biopsy.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? One invoice pending

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? One price estimate pending

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

Transrectal Prostate Biopsy Guide- Used to guide needle placement alongside the ultrasound probe during biopsy Disposable prostate core biopsy needle Transrectal MRI-compatible - 150mm fully automatic biopsy gun – This is the equipment used to perform the biopsy. Transrectal MRI-compatible Needle Guide – The guide is required for make sure that the biopsy device follows the approach with MR guidance

18. Are you recommending a PE supply pack for this recommendation? Yes or No. Yes
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

The societies have included recommendations that include established PE supply packs (CMS defined):

SA019	kit, iv starter	1.07	
SA042	pack, cleaning and disinfecting, endoscope	19.43	
SA048	pack, minimum multi-specialty visit	5.02	
SA052	pack, post-op incision care (staple)	4.8	

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SA019	kit, iv starter	1.07	kit	
	latex-free tourniquet, QTY 1			
	alcohol prep pad, QTY 1			

	iodophor PVP swabstick, QTY 1			
	transparent dressing, QTY 1			
	8-ply gauze sponges (2" x 2"), QTY 2			
	tape strips (1/2" x 4"), QTY 2			
	tape strips (1" x 4"), QTY 2			
	dressing change label, QTY 1			
SA042	pack, cleaning and disinfecting, endoscope	19.43	pack	
	gloves, non sterile, QTY 4			
	gown, staff, impervious, QTY 1			
	face shield, splash protection, QTY 1			
	biohazard bag, QTY 1			
	gauze, sterile 4in x 4in (10 pack uou), QTY 1			
	alcohol isopropyl 70%, 60 ML			
	cleaning brush, endoscope, QTY 1			
	glutaraldehyde 3.4% (Cidex, Maxicide, Wavicide), 32 OZ			
	glutaraldehyde test strips (Cidex, Metrex), QTY 1			
SA048	pack, minimum multi-specialty visit	5.02	pack	
	paper, exam table, 7 FT			
	gloves, non sterile, QTY 2 pairs			
	gown, staff, QTY 1			
	pillow case, QTY 1			
	cover, thermometer probe, QTY 1			
SA052	pack, post-op incision care (staple)	4.8	pack	
	kit, staple removal (SA030), QTY 1			
	stainless steel, disposable skin staple remover, QTY 1			
	3x3 gauze sponge, QTY 1			
	povdone soln (Betadine), QTY 10ML			
	gauze, sterile 4in x 4in, QTY 2			
	gloves, sterile, QTY 1 pair			
	steri-strip (6 strip uou), QTY 2			
	swab-pad, alcohol, QTY 2			
	tape, surgical paper 1in (micropore), QTY 12 inch			
	tincture of benzoin, swab, QTY 1			

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Uronav- Used to fuse MRI images with real-time ultrasound to allow fusion targeted biopsy.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

10 Years

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

ED050	Technologist PACS workstation	5557	PACS
ED053	Professional PACS Workstation	15467.671	Other Formula
ED058	CAD Software	43308.12	Default
EF014	light, surgical	1256.667	Default
EF027	table, instrument, mobile	531.926	Default
EF031	table, power	5906.76	Default
EF034	table, ultrasound	8558.322	Default
EL008	room, MR	1559013.502	Highly Technical
ES018	fiberscope, flexible, cystoscopy	6998.699	Default
ES031	scope video system (monitor, processor, digital capture, cart, printer, LED light)	70673.3811	Default
EQ074	breast biopsy device w-system (Mammotome)	29862	Default
EQ168	light, exam	1232.887	Default
EQ250	ultrasound unit, portable	41612.533	Default
EQ371	Breast biopsy device (coil)	12238	Default
EQ375	Biopsy Guide	7000	Default
NEW	Uronav	181998.45	Default
ER086	Ultrasound probe	0	Default
ED047	Thermal Printer	0	Default

The "Other Formula" the professional PACS workstation is equal to½ physician pre-time + physician intra time

    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The standard of care is to send each biopsy separately. There are good studies that show the results are better when you send each biopsy separately. Therefore, we are requesting different cups for each specimen and the appropriate amount of formula (SL072).

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Clinical staff inputs
55713 and 55714
CA010 changed from RN/ Diagnostic to RN/LPN/MTA
CA017 changed from RN/ Diagnostic to RN/LPN/MTA

76872 – The specialty societies agreed to revise code 76872 clinical labor type from RN/Diagnostic to RN/LPN/MTA to align with the prostate biopsy code family.

CA026 (Line 89) – Removed cleaning time for all urology codes. This change was made because there are no surgical instrument packages in the supplies.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

55713	Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion	000
55714	Biopsy, prostate, in-bore CT- or MRI-guided targeted lesion(s) only, first targeted lesion	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55707	A 62-year-old male presents with an elevated prostate specific antigen (PSA). The patient elects to undergo a transrectal-ultrasound guided prostate needle biopsy.
55708	A 62-year-old male presents with an elevated prostate specific antigen (PSA). A multi-parametric prostate MRI reveals a targeted lesion concerning for cancer. After a discussion of the patient's options, the patient chooses to undergo a transrectal ultrasound-guided prostate sextant biopsy with MRI-fusion guided biopsy of the targeted lesion.
55711	A 62-year-old male presents with rising prostate specific antigen (PSA) after radiation treatment for prostate cancer. A multi-parametric prostate MRI reveals a targeted lesion concerning for recurrent cancer. The patient elects to undergo a transrectal MRI-fusion guided biopsy of the targeted lesion.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The RUC advisors from the AUA reviewed the current code PE details and discussed the changes from the old to new coding structure to determine what PE revisions were required.

The societies of AUA, ACR, SIR and OEIS convened a panel of experts familiar with this service to evaluate the direct practice expense inputs for Prostate Biopsy Services 55713 and 55714.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

Deleted code 55700 and current code 76872 serve as the reference codes.

The specialties have included CPT code 19085 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when*

performed, percutaneous; first lesion, including magnetic resonance guidance) as a reference code. Biopsy performed with real-time guidance in the gantry of the MRI is an uncommon procedure, with the most typical example being breast. The safety profile of the environment makes this procedure different from other types of biopsy procedures and the specific positioning requirements between both the Breast MRI guided biopsy and Prostate MRI guided biopsy have added complexity compared to standard biopsy procedures.

The specialties also included CPT codes 55700 *(Biopsy, prostate; incisional, any approach)* and 77021 *(Magnetic resonance imaging guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation)*, which are the codes currently used to report the 55713 and 55714 procedures.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

55707, 55708, 55711

The expert panel is recommending an increase in the aggregate cost of clinical labor, supplies and equipment compared to the existing inputs. The deleted code 55700 requested standard staff times associated with a minimal use of clinical staff facility procedure. This is not appropriate given the change in technology necessitating this new family of codes. Pre-surgical services and testing to ensure the patient is appropriate for anesthesia must be obtained. The availability of specific equipment including MRI fusion technology must be confirmed. Clinical staff must coordinate pre-procedural services including rectal swab and pre-procedural PSA testing. Antibiotics and enemas are typically prescribed pre-procedurally. Patients need to be called to confirm they have stopped their anticoagulant and anti-platelet medications. Pre-procedural education is provided regarding expectations on the day of the procedure and expectations following the procedure.

55713, 55714

We are recommending facility inputs for CPT codes 55713 and 55714. We are recommending the standard *minimal use of clinical staff* inputs, for a total of 15 minutes.

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and

has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

55707, 55708, 55711 Extensive clinical staff time is justified based on standard inputs for extensive clinical staff time. Pre-surgical services and testing to ensure the patient is appropriate for anesthesia must be obtained. The availability of specific equipment including MRI fusion technology must be confirmed. Clinical staff must coordinate pre-procedural services including rectal swab and pre-procedural PSA testing. Antibiotics and enemas are typically prescribed pre-procedurally. Patients need to be called to confirm they have stopped their anticoagulant and anti-platelet medications. Pre-procedural education is provided regarding expectations on the day of the procedure and expectations following the procedure.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

55707, 55708, 55711 Pre-surgical services and testing to ensure the patient is appropriate for anesthesia must be obtained. The availability of specific equipment including MRI fusion technology must be confirmed. Clinical staff must coordinate pre-procedural services including rectal swab and pre-procedural PSA testing. Antibiotics and enemas are typically prescribed pre-procedurally. Patients need to be called to confirm they have stopped their anticoagulant and anti-platelet medications. Pre-procedural education is provided regarding expectations on the day of the procedure and expectations following the procedure. 55713,55714 • Complete pre-service diagnostic and referral forms • Coordinate pre-surgery services (including test results) • Schedule space and equipment in facility • Provide pre-service education/obtain consent • Complete pre-procedure phone calls and prescription

   b. Service period (includes pre, intra and post):

N/A

   c. Post-service period:

A post-procedural phone call is made by clinical staff to assess for any complications and answer any post-procedural questions.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
   N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2024

Cerebral Perfusion & CT Angiography-Head & Neck – Tab 09

In April 2022, the Relativity Assessment Workgroup (RAW) identified Category III code 0042T with 2020 Medicare utilization over 1,000. The RAW requested an action plan for September 2022. In September 2022, the specialty societies indicated, and the RUC agreed, that the code should be referred to the CPT Editorial Panel. Category III code 0042T had increased utilization and now qualifies for Category I status.

In April 2022, the RAW identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. Further, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. In September 2022, the RAW recommended referring CPT codes 70496 and 70498 to the CPT Editorial Panel to create a code bundling solution.

In May 2024, the CPT Editorial Panel deleted the existing Category III code 0042T and created a bundled code for computed tomographic angiography (CTA), head and neck, as well as an add-on and a standalone code for computed tomographic (CT) cerebral perfusion analysis with and without concurrent CT or angiography of the same anatomy. Codes 70471-70473 were surveyed for the September 2024 RUC meeting, along with the existing standalone codes for CTA head (70496) and CTA neck (70498). Instructional and exclusionary parentheticals were also added throughout the code family.

70471 ***Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing***
The RUC reviewed the survey results from 65 radiologists and neuroradiologists and determined that the survey 25th percentile work RVU of 2.50 appropriately accounts for the physician work involved in this service. The RUC recommends 5 minutes of pre-service time, 30 minutes of intra-service time and 5 minutes of immediate post-service time as supported by the survey.

The RUC discussed the high intensity of the surveyed code which is typically an acute stroke situation. The specialties explained that CPT code 70471 is the most highly detailed of the CTA studies with many complex anatomic structures assessed including vasculature and soft tissue structures of the brain and neck. The cognitive load on the radiologist including the detailed spatial resolution of the images coupled with the time pressure and psychological stress associated with having to provide a result to the clinical team to triage the patient as quickly as possible to therapy, contributes to the significantly increased complexity of the surveyed code. CPT code 70471 is typically performed in the emergency room in patients with focal neurological deficits where there is clinical concern for large vessel occlusion.

The RUC compared CPT code 70471 to the top key reference service code 74712 *Magnetic resonance (eg, proton) imaging, fetal, including placental and maternal pelvic imaging when performed; single or first gestation* (work RVU = 3.00, 60 minutes intra-service time and 90 minutes total time) and noted that the intra-service time is twice that of the surveyed code justifying the higher value. However, the RUC also noted that

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

the higher intra-service time for the key reference service is offset by the intensity of the surveyed code. The reference code is one of the lengthier magnetic resonance studies with spatial resolution, less than a CTA. The work involved in magnetic resonance imaging (MRI) is related to the assessment of the different sequences acquired where there may be motion in between sequences of the fetus. The implications of the findings on the MRI are typically not associated with time-sensitive or intervenable conditions. Those intervenable conditions are not as time-sensitive as the CT angiogram head and neck. The MRI findings are often used to help counsel patients and families when any abnormalities are detected, while 70471 is a potentially life-saving service.

The RUC also referenced the second key reference MPC code 75635 *Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 2.40, 39 minutes intra-service time and 57 minutes total time) and again noted that the intensity of the surveyed code offsets the higher intra-service time for the key reference service. Over 90% of the survey respondents who selected the second key reference service rated 70471 as more intense and complex, justifying the higher work value for the surveyed code. The reference code is typically performed in the outpatient setting in patients with a known history of atherosclerotic disease, while 70471 is typically performed in the emergency department and is much more intense given that the impact of the exam will determine if the patient is a candidate for thrombolytic therapy or thrombectomy, which could significantly change patient's morbidity and mortality.

For additional support, the RUC compared CPT code 70471 to MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service time and 35 minutes total time) and noted that the comparator code has less intra-service and total time than 70471, thus has a lower work RVU. The RUC further compared the surveyed code to CPT code 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 2.20, 30 minutes intra-service time and 40 minutes total time) and noted that, although the times are similar, the CT abdomen is an outpatient study and therefore not as intense as 70471, justifying the higher value for the surveyed code.

The RUC concluded that CPT code 70471 should be valued at the 25th percentile work RVU as supported by the survey and appropriately bracketed by the key reference service codes. **The RUC recommends a work RVU of 2.50 for CPT code 70471.**

70472 ***Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 63 radiologists and neuroradiologists and determined that a direct work RVU crosswalk to CPT code 58110 *Endometrial sampling (biopsy) performed in conjunction with colposcopy (List separately in addition to code for primary procedure)* (work RVU = 0.77, 12 minutes intra-service and total time) accurately reflects the physician work necessary for this new add-on service. CPT code 70472 requires the assessment of multiple color maps that are generated while correlating with anatomic imaging to distinguish salvageable ischemic brain tissue from infarcted brain tissue. The RUC recommends 12 minutes intra-service and total time.

The RUC compared CPT code 70472 to the top key reference service code 76802 *Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

code for primary procedure) (work RVU = 0.83, 10 minutes intra-service and total time) and noted that the intra-service time is less than the surveyed code but the service is more intense, justifying the higher value for the reference code. The RUC also referenced the second key reference service code 19288 *Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure)* (work RVU = 1.28, 30 minutes intra-service time and 35 minutes total time) and noted that the reference service requires significantly more time than the surveyed code and is therefore appropriately valued higher. CPT code 19288 describes placement of a localization device using MRI which has more intra-service and total time than the surveyed code, but it requires some less intense time of imaging the patient during the procedure to ensure appropriate trajectory and placement of the device.

For additional support, the RUC compared CPT code 70472 to MPC code 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU = 0.80, 15 minutes intra-service and total time) and noted that the non-radiology comparator code has more intra-service and total time than the surveyed code justifying the higher value.

The RUC concluded that CPT code 70472 should be valued based on a direct work RVU crosswalk to CPT code 58110 which falls below the survey 25th percentile. **The RUC recommends a work RVU of 0.77 for CPT code 70472.**

70473 ***Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy***
The RUC reviewed the survey results from 57 radiologists and neuroradiologists and determined that the survey median work RVU of 1.00 appropriately accounts for the physician work involved in this service. CPT code 70473 requires the assessment of multiple color maps and synthesis of that information in conjunction with anatomic brain imaging to differentiate ischemic, salvageable brain tissue from infarcted brain tissue. The RUC recommends 5 minutes of pre-service time, 12 minutes of intra-service time and 5 minutes of immediate post-service time as supported by the survey.

The RUC compared CPT code 70473 to the top key reference service code 70486 *Computed tomography, maxillofacial area; without contrast material* (work RVU = 0.85, 10 minutes intra-service time and 16 minutes total time) and noted that the reference service requires evaluation of the soft tissues and bones of the face, but assessment is somewhat limited given the lack of contrast. The work in 70473 requires slightly more time because the study involves the synthesis of multiple points of information for decision-making compared to the work of 70486, justifying a higher value for the surveyed code.

The RUC also referenced the second key reference service code 70552 *Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)* (work RVU = 1.78, 20 minutes intra-service time and 32 minutes total time) and noted that the reference service involves similar work to 70473 in the evaluation of multiple sequences of the same anatomic region to assess for abnormalities. However, the reference service has more images and therefore more intra service time, thus justifying a higher value for the reference code.

For additional support, the RUC noted that CPT code 70473 is appropriately bracketed between MPC codes 74246 *Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

and effervescent agent) study, including glucagon, when administered (work RVU = 0.90, 15 minutes intra-service time and 22 minutes total time) and 70490 *Computed tomography, soft tissue neck; without contrast material* (work RVU = 1.28, 15 minutes intra-service time and 25 minutes total time).

The RUC concluded that CPT code 70473 should be valued at the median work RVU as supported by the survey and appropriately bracketed by both the key reference service codes and MPC codes. **The RUC recommends a work RVU of 1.00 for CPT code 70473.**

70496 *Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing*

The RUC reviewed the survey results from 63 radiologists and neuroradiologists and determined that the current work RVU of 1.75 appropriately accounts for the physician work involved in this service and falls slightly below the survey 25th percentile. The RUC recommends 5 minutes of pre-service time, 18 minutes of intra-service time and 5 minutes of immediate post-service time as supported by the survey.

The RUC discussed the high intensity of the surveyed code and the complexity of the patient population. The specialties explained that the patients in whom this service would be performed in isolation will likely be those patients who have had previous interventions either for aneurysm, occlusion, or stenosis and who are presenting with neurologic symptoms. In the last decade, the capabilities of neurointerventionalists have vastly expanded with new devices that can treat more distal diseases including clots in the M3 segment of the middle cerebral artery, as well as for therapy of smaller aneurysms. Because of this, the radiologist assesses more distal disease sites more carefully in smaller structures relative to when this was originally surveyed.

Furthermore, the work associated with 70496 is more intense than the prior survey because multiple studies have now shown the proven benefit of mechanical thrombectomy, therefore making CTA head and neck a critical component of stroke care where every minute counts to preserve brain function, leading to increased psychological stress when interpreting these studies. Since this code was last valued, additional reconstructed images, such as Maximum Intensity Projections (MIPS), are now in widespread use. Although there are more images to review, these MIP reconstructions allow radiologists to recognize focal stenosis or imaging findings of vasculitis more easily. This contributes to some of the decreased time spent reviewing images relative to the last time this was valued. The RUC acknowledged the two-minute decrease in time and also the increase in the number of images and the capabilities of the interventions. It was noted that due to the code bundling, the surveyed code will now be reported on a complex patient with prior interventions.

The RUC compared CPT code 70496 to the top key reference service code 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 2.20, 30 minutes intra-service time and 40 minutes total time) and noted that the intra-service time is much higher than the surveyed code justifying the higher value. The reference code requires an assessment of the vasculature of the abdomen and pelvis and is associated with more images given the larger anatomic region covered compared to the surveyed code. However, the RUC also noted that the intensity of the surveyed code offsets the higher intra-service time for the key reference service. CPT code 70496 is considered more intense, with 88% of survey respondents who selected the reference code indicating that the survey code had more overall intensity/complexity relative to the key reference code, which supports maintaining the current value.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC also referenced the second key reference code 71275 *Computed tomographic angiography, chest (noncoronary), with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 1.82, 25 minutes intra-service time and 35 minutes total time) and again noted that the intensity of the surveyed code offsets the higher intra-service time for the key reference service. The reference code is the assessment of the vasculature in the chest and covers a larger anatomic region than the surveyed code. However, over 90% of the survey respondents who selected the second key reference service rated 70496 as more intense and complex, justifying maintaining the work value for the surveyed code. CPT code 70496 is more intense than both reference codes given the potential devastating neurologic complications that could occur if a finding is missed.

For additional support, the RUC noted that CPT code 70496 is appropriately bracketed between MPC codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time) and 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* (work RVU = 2.01, 30 minutes intra-service time and 40 minutes total time). Both MPC comparison codes are associated with less intense work than the CT angiography head code. Accounting for the survey times and intensity differences, the recommended current work RVU is appropriately bracketed between codes 74176 and 74178.

The RUC concluded that the existing value of CPT code 70496, which falls below the survey 25th percentile work RVU, should be maintained and is appropriately bracketed by the comparator codes. **The RUC recommends a work RVU of 1.75 for CPT code 70496.**

70498 Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing

The RUC reviewed the survey results from 62 radiologists and neuroradiologists and determined that the current work RVU of 1.75 appropriately accounts for the physician work involved in this service and represents the survey 25th percentile. The RUC recommends 5 minutes of pre-service time, 18 minutes of intra-service time and 5 minutes of immediate post-service time as supported by the survey.

The RUC discussed the high intensity of the surveyed code and the complexity of the patient population. The expected typical patient for 70498 is a patient who has had prior intervention, likely prior stenosis in a carotid vessel, who is presenting with neurologic symptoms. Given that these patients had an identified abnormality or prior intervention, this patient population is more complex than when it was previously surveyed.

Furthermore, as with 70496, the work associated with 70498 is more intense than prior survey because multiple studies have now shown the proven benefit of mechanical thrombectomy, therefore making CTA head and neck a critical component of stroke care where every minute counts to preserve brain function, leading to increased psychological stress when interpreting these studies.

Since this code was last valued, additional reconstructed images, such as Maximum Intensity Projections (MIPS), are now standard use across practice. Although there are more images to review, these newly reconstructed images save some time for the radiologist to identify specific conditions such as vasculitis or dissection. Previously, this would have required more careful scrutiny of the source axial images and may not have been picked up previously.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 70498 to the top key reference service code 71275 *Computed tomographic angiography, chest (noncoronary), with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 1.82, 25 minutes intra-service time and 35 minutes total time) and noted that the higher intra-service time for the key reference service is offset by the intensity of the surveyed code. The reference code is the assessment of the vasculature in the chest and covers a larger anatomic region than the surveyed code. However, over three-fourths of the survey respondents who selected the top key reference service rated 70498 as more intense and complex, justifying maintaining the work value for the surveyed code.

The RUC also referenced the second key reference code 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 2.20, 30 minutes intra-service time and 40 minutes total time) and noted that the intra-service time is much higher than the surveyed code justifying the higher value. The reference code requires an assessment of the vasculature of the abdomen and pelvis and is associated with more images given the larger anatomic region covered compared to the surveyed code. However, the RUC also noted that the higher intra-service time for the key reference service is offset by the intensity of the surveyed code. CPT code 70498 is considered more intense, with nearly 80% of survey respondents who selected the reference code indicating that the survey code had more overall intensity/complexity relative to the key reference code, which supports maintaining the current value.
CPT code 70498 is more intense than both reference codes given the potential devastating neurologic complications that could occur if a finding is missed.

For additional support, the RUC noted that CPT code 70498 is appropriately bracketed between MPC codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time) and 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* (work RVU = 2.01, 30 minutes intra-service time and 40 minutes total time). Both MPC comparison codes are associated with less intense work than the CT angiography neck code. Accounting for the survey times and intensity differences, the recommended current work RVU is appropriately bracketed between codes 74176 and 74178.

The RUC concluded that the existing value of CPT code 70498 represents the survey 25th percentile and should be maintained as supported by the survey. **The RUC recommends a work RVU of 1.75 for CPT code 70498.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made one modification to CPT code 70472 to remove minutes from CA006 *Confirm availability of prior images/studies* and CA007 *Review patient clinical extant information and questionnaire* to eliminate duplication as 70472 is an add-on code. The PE Subcommittee agreed with the specialty recommendation to change the clinical staff type for CPT codes 70496 and 70498 from L041B *radiologic technologist* to L046A *CT Technologist*. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems,
American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva,

The American Academy of Neurology (AAN) wishes to comment on Tab 9 -Cerebral Perfusion & CT Angiography-Head & Neck, which is on the September 2024 RUC meeting agenda. The AAN indicated a level 2 interest, comment only, for tab 9 and wishes to provide the RUC with context on that decision. While the AAN was one of the requestors for the code change application at the CPT Editorial Panel, the society opted not to survey the code set. The consensus was that neurologists that perform the services being surveyed would be represented by ASNR and once we were to de-duplicate AAN/ASNR members from the survey sample, the AAN may not be able to achieve sufficient survey response rates.

The AAN would like to acknowledge we were aware of the survey and feel represented by the surveying societies. Please contact AAN staff should you have any questions or require anything further.

Sincerely,

Marianna V. Spanaki, MD, PhD, AAN RUC Advisor

Meghan Ward, MD, FAAN, AAN RUC Alternate Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70471 Tracking Number K1 Original Specialty Recommended RVU: **2.50**
Presented Recommended RVU: **2.50**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **2.50**

CPT Descriptor: Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A code stroke is activated in the emergency department on a 60-year-old male with sudden onset left-sided weakness.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for clinical appropriateness and review clinical history. Contact clinician if needed to clarify or modify order as needed based on clinical indication. Review laboratory studies to assess renal function. Review medical records for allergy history, absence of contraindications for contrast injection Adjust contrast product as needed. Request renal consult if necessary. Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise placement of an IV line. Communicate protocol to technologist.

Description of Intra-Service Work: Interpret scout views of area to be imaged. Review axial CT images of head and neck prior to contrast (if obtained). Supervise processing of two-dimensional reconstructions. Interpret the axial source images and the multiplanar reformats in brain, subdural, stroke, vascular, and bone windows. Evaluate brain parenchyma; ventricular system; subdural and subarachnoid spaces; meninges; calvarium; sella, cavernous sinuses, petrous temporal bones; skull base; fissures; foramina; and superficial soft tissues. Evaluate for origins of patient's symptoms, such as ischemia or infarction, hemorrhage, mass effect, hydrocephalus, white matter disease, congenital anomalies, and disorders of brain coverings. Evaluate major vascular structures for evidence of thrombosis, aneurysmal dilatation, dissection, atherosclerotic calcification. In the neck evaluate the parotid glands, submandibular glands, thyroid gland, paranasal sinuses, orbits (globes, orbital fat, extraocular muscles, lacrimal glands, optic nerves), nasal cavity, nasopharynx, oropharynx, oral cavity, hypopharynx, and larynx. Parapharyngeal, retropharyngeal, and carotid spaces; neck muscles; and lymph nodes are evaluated. The vasculature for stenosis, occlusion, or thrombosis is evaluated. The cervical spine and facial bones are evaluated. Masses and/or enlarged lymph nodes are counted and measured. Review axial CT angiographic images of the head and neck after administration of contrast. Supervise processing of two-dimensional and three-dimensional reconstructions. Interpret the axial source CTA images, the multiplanar reformats, and three-dimensional reformats in soft tissue, vascular, and bone windows. Evaluate brain parenchyma; ventricular system; subdural and subarachnoid spaces; meninges; calvarium; sella, cavernous sinuses, petrous temporal bones; skull base; fissures; foramina; and superficial soft tissues. Evaluate in detail the major vascular structures for evidence of thrombosis, embolus, aneurysmal dilatation, arteriovenous malformations, dissection, vascular anomalies, vascular variants, or atherosclerotic calcification. Assess for active extravasation of contrast in patients with intracranial bleeding. Assess perfusion and collateral differences between the cerebral hemispheres. Assess dural venous sinuses and jugular bulbs for stenosis,

thrombus, and fistulas. Evaluate cervical cord, vertebrae, and visualized lung apices. Evaluate the neck soft tissues including orbits, sinuses, nasopharynx, oropharynx, oral cavity, larynx, hypopharynx, visualized trachea, and esophagus. Evaluate parotid, submandibular, and thyroid glands. Evaluate for enlarged lymph nodes. Assess bony structures for fracture and abnormal lesions. Evaluate in detail the major arteries in the neck for stenosis (based on North American Symptomatic Carotid Endarterectomy Trial [NASCET] criteria) requiring either direct (obtaining measurements of diameters) or indirect comparison of the segment of stenosis with a normal segment distal to area of stenosis. Evaluate for thrombosis, embolus, aneurysms and/or pseudoaneurysms, vascular anomalies, vascular loops, dissections, vasculitis, and external compressions of the major arteries in the neck. Assess right innominate artery, bilateral common carotid, external carotid, internal carotid, and vertebral arteries. Evaluate aortic arch, visualized subclavian arteries, and visualized pulmonary vessels. Generate additional three-dimensional reformats that may help guide any open surgical procedure. Compare to all pertinent available prior studies. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: Confirm lack of complications from contrast agent such as allergic reaction or extravasation. Review and sign final report. Communicate findings to referring physician, emergency physician, and/or patient as necessary.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	41%	34%	24%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	41%	48%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	55%	31%
Physical effort required	3%	59%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	34%	59%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	10%	48%	43%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	5%	90%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	48%	52%
Physical effort required	0%	76%	24%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70496 *(Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* and 70498 *(Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* were identified as being reported together 75% or more and referred to CPT for bundling. Category III code 0042T has increased utilization and now qualifies for category I status. Patterns of CTP utilization include performance during the same imaging session as performance of CTA Head and Neck, CTA Head, and CT Head as well as performance as a standalone procedure.

The CPT Panel created a bundled code for CTA head and neck, as well as an add-on and a standalone code for CTP. These three codes were surveyed for the September 2024 RUC meeting, along with the existing standalone codes for CTA head and CTA neck.

Survey Process

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) conducted a random survey of our respective members. Both societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

We recommend a work RVU of 2.50, which is the survey 25th percentile value.

Time Recommendation

We recommend the median survey times of 5 minutes pre-service and 30 minutes intra-service and a post-service time of 5 minutes.

Key Reference Services

Our recommendation is bracketed by the following key reference services (KRS):

- CPT code **75635** *(Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* is typically performed in the outpatient setting in patients with known history of atherosclerotic disease. 70471 is typically performed in the ER setting in patients with focal neurological deficits where there is clinical concern for large vessel occlusion. This service is much more intense given that the impact of the exam will determine if the patient is a candidate for thrombolytic therapy or thrombectomy, which could significantly change patient's morbidity and mortality. This is also supported by surveyees who indicated the 70471 is more intense than 75635.
- CPT code **74712** (*Magnetic resonance (eg, proton) imaging, fetal, including placental and maternal pelvic imaging when performed; single or first gestation*) is one of the lengthier MR studies with spatial resolution less than a CT. The work involved in the MRI is related to the assessment of the different sequences acquired where there may be motion in between sequences of the fetus. The implications of the findings on the MRI are typically not associated with time-sensitive or intervenable conditions. Those intervenable conditions are not as time-sensitive as the CT Angiogram head and neck. Most of the time, the MRI findings are used to help counsel patients and family of any abnormalities detected. 70471 is the most highly detailed CTA studies with many complex anatomic structures assessed including vasculature and soft tissue structures of the brain and neck. The cognitive load on the radiologist including the detailed spatial resolution of the images coupled with the time pressure and psychological stress associated with having to provide a result to the clinical team to triage the patient as quickly as possible to therapy, contributes to the significantly increased complexity relative to 74712.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
75635	CTA abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s)	2.40	57	10	39	8	0.051
70471	**Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing performed, and image postprocessing**	**2.50**	**40**	**5**	**30**	**5**	**0.076**
74712	MRI fetal, including placental and maternal pelvic imaging	3.00	90	15	60	15	0.039

MPC Codes

CPT code 70471 compares well with the two MPC codes below:

- CPT code **75635** *(Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* has more intra-service and total time, but is less intense due to the type of anatomy involved, which is reflected in the lower RVU. This is also one of our key reference codes.
- CPT code **72158** *(Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar)* has less intra- and total time than 70471, which translates into the lower work RVU.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
72158	MR lumbar spine without and with	2.29	35	5	25	5	0.083
75635	CT angiography abdominal aorta	2.40	57	10	39	8	0.051
70471	**Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing performed, and image postprocessing**	**2.50**	**40**	**5**	**30**	**5**	**0.076**

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation of 2.50 RVU with 5 minutes of pre-, 30 minutes of intra-, and 5 of minutes post-service time for CT code 70471.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70496 and 70498

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty DIAGNOSTIC RADIOLOGY How often? Commonly

Specialty INTERVENTIONAL RADIOLOGY How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1705200
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70471 is estimated to be provided 1,705,200 times nationally in a one-year period.

Specialty Frequency 0 Percentage 0.00 %

Specialty DIAGNOSTIC RADIOLOGY Frequency 1636992 Percentage 96.00 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 51156 Percentage 3.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 568,400 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70471 is estimated to be provided 568,400 times to Medicare patients nationally in a one-year period.

Specialty DIAGNOSTIC RADIOLOGY Frequency 545664 Percentage 96.00 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 17052 Percentage 3.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
CAT/CT/CTA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 70498

CPT Descriptor: Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 63-year-old male presents with difficulty speaking and left arm numbness. Computed tomography (CT) cerebral perfusion is performed during the same session as a CTA head and neck to determine if patient is candidate for neuroendovascular intervention. A previously performed CT head without contrast did not demonstrate intracranial hemorrhage. [Note: This is an add-on service. Only consider the additional work related to the performance of CT cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy.]

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Obtain and interpret scout views of area to be imaged. Evaluate the multi-timepoint axial images for correct timing of contrast and degree of motion throughout the exam. Interpret the multi-timepoint axial source images in brain, subdural, stroke, vascular, and bone windows. Supervise post-processed source images provided by the technologist. This includes arterial input function, venous outflow function, and evaluating the provided time curves of these functions. Additional post-processing imaging includes detailed color encoded maps such as, but not limited to, relative cerebral blood volume, relative cerebral blood flow, mean transit time, and Tmax. Radiologists compare the color encoded maps for mismatches. Perform quantitative measurements of areas of abnormality. Compare to all pertinent available prior studies. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work:

Technical skill required	18%	18%	64%
Physical effort required	45%	36%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70496 *(Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* and 70498 *(Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* were identified as

being reported together 75% or more and referred to CPT for bundling. Category III code 0042T has increased utilization and now qualifies for category I status. Patterns of CTP utilization include performance during the same imaging session as performance of CTA Head and Neck, CTA Head, and CT Head as well as performance as a standalone procedure.

The CPT Panel created a bundled code for CTA head and neck, as well as an add-on and a standalone code for CTP. These three codes were surveyed for the September 2024 RUC meeting, along with the existing standalone codes for CTA head and CTA neck.

Survey Process

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) conducted a random survey of our respective members. Both societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

We recommend a work RVU of 0.77, which is below 25th percentile value based on the crosswalk to CPT code 58110 (*Endometrial sampling (biopsy) performed in conjunction with colposcopy (List separately in addition to code for primary procedure)*.

Time Recommendation

We recommend the median survey time of 12 minutes of intra-service work.

Key Reference Services

Our recommendation is bracketed by the key reference services (KRS) below. 70472 requires the assessment of multiple different color maps that are generated while correlating with anatomic imaging to distinguish salvageable ischemic brain tissue from infarcted brain tissue.

- CPT code **76802** (*Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure*) is used to assess fetal measurements to confirm gestational age. 76802 has slightly less intra-service time, which is reflected in the lower work RVU. As supported by our surveyees' responses, the IWPUT for 76802 is appropriately higher.
- CPT code **19288** (*Placement of breast localization device(s) (eg clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure*) is placement of a localization device using MRI which has more intra-service and total time than 70472, which is also reflected in the higher work RVU. CPT code 19288 requires some less intense time of imaging the patient during the procedure to ensure appropriate trajectory and placement of the device, which is reflected in the lower IWPUT.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
76802	Ultrasound, 14 week transabdominal	0.83	10	0	10	0	0.083
70472	**Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)**	**0.77**	**12**	**0**	**12**	**0**	**0.064**
19288	MRI Placement of breast localization device(s)	1.28	35	5	30	0	0.041

MPC Codes

CPT code 70472 compares well with two non-radiology MPC codes:

- CPT code **51797** *(Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure))* has slightly more intra-service time and a slightly lower work RVU than CPT code 70472.
- CPT code **64484** *(Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* has a slightly higher work RVU, with less intra-service time than CPT code 70472.

70472 is more intense than CPT code 51797 but less intense than CPT code 64484. Accounting for the survey times and intensity differences, the recommended 0.77 work RVU is appropriately bracketed between CPT codes 51797 and 64484.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
51797	Intraabdominal pressure test	0.80	15	0	15	0	0.053
70472	**Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)**	**0.77**	**12**	**0**	**12**	**0**	**0.064**
64484	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance	1.00	10	0	10	0	0.100

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation of 0.77 RVU with 12 minutes of intra-service time for CPT code 70472.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0042T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty DIAGNOSTIC RADIOLOGY How often? Commonly

Specialty INTERVENTIONAL RADIOLOGY How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 21561
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70472 is estimated to be provided 21,561 times nationally in a one-year period.

Specialty Frequency 0 Percentage 0.00 %

Specialty DIAGNOSTIC RADIOLOGY Frequency 20483 Percentage 95.00 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 1078 Percentage 4.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,187
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70472 is estimated to be provided 7,187 times to Medicare patients nationally in a one-year period.

Specialty DIAGNOSTIC RADIOLOGY Frequency 6828 Percentage 95.00 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 359 Percentage 4.99 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70473 Tracking Number K3 Original Specialty Recommended RVU: **1.00**
Presented Recommended RVU: **1.00**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.00**

CPT Descriptor: Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male with proximal right middle cerebral artery thrombus is identified prior to transfer from an outside facility for thrombectomy. CTA head and neck was performed at the outside facility prior to transfer. CT cerebral perfusion performed upon arrival at thrombectomy facility to determine if penumbra present.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for clinical appropriateness and review clinical history. Review chart noting how many CT scans the patient has had for background information on history of radiation exposure. Review laboratory studies to assess renal function. Review medical records for allergy history, absence of contraindications for contrast injection (renal failure, sickle cell anemia, multiple myeloma, asthma, etc). Adjust contrast product and amount to be injected. Supervise placement of an IV line. Review any applicable prior studies. Search health information exchange for any studies not performed at affiliated institution. Communicate protocol to technologist.

Description of Intra-Service Work: Interpret scout views of area to be imaged. Evaluate the multi-timepoint axial images for correct timing of contrast and degree of motion throughout the exam. Interpret the multi-timepoint axial source images in brain, subdural, stroke, vascular, and bone windows. Evaluate brain parenchyma; ventricular system; subdural and subarachnoid spaces; meninges; calvarium; sella, cavernous sinuses, petrous temporal bones; skull base; fissures; foramina; and superficial soft tissues. Evaluate for origins of patient's symptoms, such as ischemia or infarction, hemorrhage, mass effect, hydrocephalus, white matter disease, congenital anomalies, and disorders of brain coverings. Evaluate major vascular structures for evidence of thrombosis, aneurysmal dilatation, dissection, or atherosclerotic calcification. Post-process source images including choosing arterial input function, venous outflow function, and evaluating time curves of these functions. Further post-processing includes creating different color encoded maps such as, but not limited to, relative cerebral blood volume, relative cerebral blood flow, mean transit time, and Tmax. Compare the color encoded maps for mismatches. Perform quantitative measurements of areas of abnormality. Compare to all pertinent available prior studies. Document radiation dose administered and ensure database entry if appropriate. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: Confirm lack of complications from contrast agent such as allergic reaction or extravasation. Review and sign final report. Communicate findings to referring physician, emergency physician, and/or patient as necessary.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	38%	38%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	63%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	63%	38%
Physical effort required	13%	38%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	13%	88%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	33%	50%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	17%	83%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	67%	33%
Physical effort required	0%	83%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70496 *(Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* and 70498 *(Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* were identified as being reported together 75% or more and referred to CPT for bundling. Category III code 0042T has increased utilization and now qualifies for category I status. Patterns of CTP utilization include performance during the same imaging session as performance of CTA Head and Neck, CTA Head, and CT Head as well as performance as a standalone procedure.

The CPT Panel created a bundled code for CTA head and neck, as well as an add-on and a standalone code for CTP. These three codes were surveyed for the September 2024 RUC meeting, along with the existing standalone codes for CTA head and CTA neck.

Survey Process

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) conducted a random survey of our respective members. Both societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

We recommend a work RVU of 1.00, which is the survey median value. The median value allows for an appropriate valuation of this service relative to 70472 without creating a rank order anomaly. As our surveyees indicate, the intra service work of 70473 is the same as 70472, and median value allows for the appropriate valuation of the pre-service and post-service work for this service.

Time Recommendation

We recommend the median survey times of 5 minutes pre-service and 12 minutes intra-service and a post-service time of 5 minutes.

Key Reference Services

Our recommendation is bracketed by the key reference services (KRS) below. 70473 requires the assessment of multiple color maps and synthesis of that information in conjunction with anatomic brain imaging to differentiate ischemic, salvageable brain tissue from infarcted brain tissue.

- CPT code **70486** (*Computed tomography, maxillofacial area; without contrast material*) requires evaluation of the soft tissues and bones of the face, but assessment is somewhat limited given the lack of contrast. The work in 70473 is slightly more time (resulting in a higher work RVU) because this study requires the synthesis of multiple points of information for decision-making compared to the work of 70486.
- CPT code **70552** (*Magnetic resonance (eg, proton) imaging, brain (including brain stem); with contrast material(s)*) is similar work to 70473 in the evaluation of multiple sequences of the same anatomic region to assess for abnormalities. 70552 has more images than 70473 and therefore is associated with more intra service time, reflected in the higher work RVU.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70486	CT, maxillofacial area without contrast.	0.85	16	3	10	3	0.072

70473	**Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy**	**1.00**	**22**	**5**	**12**	**5**	**0.065**
70552	MRI brain, with contrast	1.78	32	5	20	7	0.076

MPC Codes

CPT code 70473 compares well with two radiology MPC codes:

- CPT code **74246** *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered)* has more intra-service time but the same total time as 70473. The difference in intensity is reflected in the lower work RVU and resulting IWPUT.
- CPT code **70490** *(Computed tomography, soft tissue neck; without contrast material)* has slightly higher intra- and total time than CPT code 70473, which is reflected in the slightly higher work RVU.

Accounting for the survey times and intensity differences, the recommended 1.00 work RVU is appropriately bracketed between CPT codes 74246 and 70490.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74246	X-Ray, upper GI tract; double-contrast study	0.90	22	4	15	3	0.050
70473	**Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy**	**1.00**	**22**	**5**	**12**	**5**	**0.065**
70490	Computed tomography, soft tissue neck; without contrast material	1.28	25	5	15	5	0.070

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation of 1.00 RVU with 5 minutes of pre-, 12 minutes of intra-, and 5 of minutes post-service time for CPT code 70473.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0042T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

CPT Descriptor: Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old patient presents with acute onset aphasia and right-sided weakness. Computed tomography angiography (CTA) of the head is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for clinical appropriateness and review clinical history. Review chart noting how many CT scans the patient has had for background information on history of radiation exposure. Review laboratory studies to assess renal function. Review medical records for allergy history. Adjust contrast product as needed. Request renal consult if necessary. Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise placement of an IV line. Review any applicable prior studies. Search health information exchange for any studies not performed at affiliated institution. Communicate protocol to technologist

Description of Intra-Service Work: Interpret scout views of area to be imaged. Review axial CT images of head prior to contrast (if obtained). Supervise processing of two-dimensional reconstructions. Interpret the axial source images and the multiplanar reformats in brain, subdural, stroke, vascular, and bone windows. Evaluate brain parenchyma; ventricular system; subdural and subarachnoid spaces; meninges; calvarium; sella, cavernous sinuses, petrous temporal bones; skull base; fissures; foramina; and superficial soft tissues. Evaluate for origins of patient's symptoms, such as ischemia or infarction, hemorrhage, mass effect, hydrocephalus, white matter disease, congenital anomalies, and disorders of brain coverings. Evaluate major vascular structures for evidence of thrombosis, aneurysmal dilatation, dissection, or atherosclerotic calcification. Compare to all pertinent available prior studies.

Review axial CT angiographic images of the head after administration of contrast. Supervise processing of two-dimensional and three-dimensional reconstructions. Review the axial source CTA images, multiplanar reformats, and three-dimensional reformats in brain, subdural, stroke, vascular, and bone windows. Evaluate brain parenchyma; ventricular system; subdural and subarachnoid spaces; meninges; calvarium; sella, cavernous sinuses, petrous temporal bones; skull base; fissures; foramina; and superficial soft tissues. Evaluate in detail the major vascular structures for evidence of thrombosis, embolus, aneurysmal dilatation, arteriovenous malformations, dissection, vascular anomalies, vascular variants, or atherosclerotic calcification. Assess for active extravasation of contrast in patients with intracranial bleeding. Assess for perfusion and collateral differences between the cerebral hemispheres. Generate additional three-dimensional reformats that may help guide any open surgical procedure. Compare to all pertinent available prior studies. Document radiation dose administered and ensure database entry if appropriate. Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: Confirm lack of complications from contrast agent such as allergic reaction or extravasation. Review and sign final report. Communicate findings to referring physician, emergency physician, and/or patient as needed.

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	42%	42%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	25%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	33%	67%
Physical effort required	0%	58%	42%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	9%	73%	18%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	36%	64%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	45%	55%
Physical effort required	0%	64%	36%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	9%	91%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70496 *(Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* and 70498 *(Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* were identified as being reported together 75% or more and referred to CPT for bundling. Category III code 0042T has increased utilization and now qualifies for category I status. Patterns of CTP utilization include performance during the same imaging session as performance of CTA Head and Neck, CTA Head, and CT Head as well as performance as a standalone procedure.

The CPT Panel created a bundled code for CTA head and neck, as well as an add-on and a standalone code for CTP. These three codes were surveyed for the September 2024 RUC meeting, along with the existing standalone codes for CTA head and CTA neck.

Survey Process

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) conducted a random survey of our respective members. Both societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

We recommend the current work RVU of 1.75, which is below the survey 25th percentile. This also maintains relativity with our recommendation for CPT code 70498.

Time Recommendation

We recommend the median survey times of 5 minutes pre-service, 18 minutes intra-service, and a post-service time of 5 minutes.

Key Reference Services

Our recommendation is supported by the top two key reference services listed below.

- CPT code **74174** (*Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing*)
- CPT code **71275** (*Computed tomographic angiography, chest (noncoronary), with contrast material(s), including noncontrast images, if performed, and image postprocessing*)

CPT code 74174 requires an assessment of the vasculature of the abdomen and pelvis and is associated with more images given the larger anatomic region covered compared to 70496. This is reflected in the higher intra-service and total time, as well as the work RVU. CPT code 71275 is the assessment of the vasculature in the chest and covers a larger anatomic region than 70496. This is reflected in the slightly higher intra-service and total time, as well as the work RVU. CPT code 70496 is more intense than both CPT codes 71275 and 74174, given the potential devastating neurologic complications that could occur if a finding is missed.

The work associated with 70496 is more intense than prior survey because it was in 2015 that multiple studies including the Multicenter Randomized Clinical Trial of Endovascular Treatment for Acute Ischemic Stroke in the Netherlands (MR CLEAN), Endovascular Revascularization with Solitaire Device versus Best Medical Therapy in Anterior Circulation Stroke within 8 h (REVASCAT), Endovascular Treatment for Small Core and Proximal Occlusion Ischemic Stroke (ESCAPE), Solitaire™ FR as Primary Treatment for Acute Ischemic Stroke (SWIFT PRIME) and Extending the Time for Thrombolysis in Emergency Neurological Deficits with Intra-Arterial Therapy (EXTEND IA) all showed the proven benefit of mechanical thrombectomy and therefore making CTA head and neck a critical part for stroke care where every minute counts to preserve brain leading to increased psychological stress when interpreting these studies.

Furthermore, the patients in which this service would be performed in isolation will likely be those patients who have had previous interventions either for aneurysm, occlusion or stenosis who are presenting with neurologic symptoms. In the last decade, the capabilities of neurointerventionalists have vastly expanded with new devices

that can treat more distal disease including clots in the M3 segment of middle cerebral artery, as well as for therapy of smaller aneurysms. Because of this, the radiologist assesses more distal disease sites more carefully in smaller structures relative to when this was originally surveyed.

Since this code was last valued, maximum intensity projections (MIPS), additional reconstructions, are now in wide-spread use. Although there are more images to review, these MIP reconstructions allow radiologists to recognize focal stenosis or imaging findings of vasculitis more easily. This likely contributes to some of the decreased time spent reviewing relative to the last time this was valued.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
70496	**Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing**	**1.75**	**28**	**5**	**18**	**5**	**0.085**
71275	CTA, chest, with contrast	1.82	35	5	25	5	0.064
74174	CTA, abdomen & pelvis, with contrast material(s)	2.20	40	5	30	5	0.066

MPC Codes

CPT code 70496 (*Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing*) compares well with the two MPC codes below:

- CPT code **74176** *(Computed tomography, abdomen and pelvis; without contrast material)* has more intra-service and total time, but a slightly lower work RVU than CPT code 70496, which is appropriate as it is a less-intense service.
- CPT code **74178** *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)* has more intra-service and total time than CPT code 70496, which is reflected in the difference in work RVU.

Both MPC comparison codes are associated with less intense work than the CT angiography head code. Accounting for the survey times and intensity differences, the recommended 1.75 work RVU is appropriately bracketed between CPT codes 74176 and 74178.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74176	CT abdomen & pelvis without	1.74	32	5	22	5	0.069
70496	**Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing**	**1.75**	**28**	**5**	**18**	**5**	**0.085**
74178	CT abdomen & pelvis without and with	2.01	40	5	30	5	0.060

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation of 1.75 RVU with 5 minutes of pre-, 18 minutes of intra-, and 5 of minutes post-service time for CPT code 70496.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70496

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty DIAGNOSTIC RADIOLOGY How often? Commonly

Specialty INTERVENTIONAL RADIOLOGY How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 187364
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70496 is estimated to be provided 187,364 times nationally in a one-year period.

Specialty Frequency 0 Percentage 0.00 %

Specialty DIAGNOSTIC RADIOLOGY Frequency 179869 Percentage 95.99 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 5621 Percentage 3.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 62,455 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70 496 is estimated to be provided 62,455 times to Medicare patients nationally in a one-year period.

Specialty DIAGNOSTIC RADIOLOGY Frequency 59956 Percentage 95.99 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 1874 Percentage 3.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
CAT/CT/CTA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 70496

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:70498 Tracking Number K5 Original Specialty Recommended RVU: **1.75**
Presented Recommended RVU: **1.75**
Global Period: XXX Current Work RVU: **1.75** RUC Recommended RVU: **1.75**

CPT Descriptor: Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 69-year-old patient presents with recurrent episodes of left arm, face, and leg weakness. Computed tomography angiography (CTA) of the neck is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for clinical appropriateness and review clinical history. Review chart noting how many CT scans the patient has had for background information on history of radiation exposure. Review laboratory studies to assess renal function. Review medical records for allergy history, absence of contraindications for contrast injection (renal failure, sickle cell anemia, multiple myeloma, asthma, etc). Adjust contrast product as needed. Request renal consult if necessary. Review the nature and risks of contrast reaction with the patient and obtain informed consent where applicable. Supervise placement of an IV line. Review any applicable prior studies. Search health information exchange for any studies not performed at affiliated institution. Communicate protocol to technologist.

Description of Intra-Service Work: Review axial CT angiographic images of the neck after administration of contrast. Supervise processing of two-dimensional and three-dimensional reconstructions. Interpret the axial source CTA images, the multiplanar reformats, and three-dimensional reformats in soft tissue, vascular, and bone windows. Evaluate visualized brain parenchyma, cervical cord and vertebrae, and visualized lung apices. Evaluate the neck soft tissues including orbits, sinuses, nasopharynx, oropharynx, oral cavity, larynx, hypopharynx, visualized trachea, and esophagus. Evaluate parotid, submandibular, and thyroid glands. Evaluate for enlarged lymph nodes. Assess bony structures for fracture and abnormal lesions. Evaluate in detail the major arteries in the neck for stenosis (based on North American Symptomatic Carotid Endarterectomy Trial [NASCET] criteria) requiring either direct (obtaining measurements of diameters) or indirect comparison of the segment of stenosis with a normal segment distal to area of stenosis. Evaluate for thrombosis, embolus, aneurysms and/or pseudoaneurysms, vascular anomalies, vascular loops, dissections, and external compressions of the major arteries in the neck. Assess right innominate artery, bilateral common carotid, external carotid, internal carotid, and vertebral arteries. Evaluate aortic arch, visualized subclavian arteries, and visualized pulmonary vessels. Assess jugular veins, innominate veins, and subclavian veins for patency, thrombus, or fistulas. Compare to all pertinent available prior studies. Document radiation dose administered and ensure database entry if appropriate . Compare to all pertinent available prior studies. Dictate report.

Description of Post-Service Work: Confirm lack of complications from contrast agent such as allergic reaction or extravasation. Review and sign final report. Communicate findings to referring physician, emergency physician, and/or patient.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	22%	61%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	39%	61%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	72%	28%
Physical effort required	0%	78%	22%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	17%	83%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	21%	50%	29%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	36%	57%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	14%	86%
Physical effort required	0%	50%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT codes 70496 *(Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* and 70498 *(Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing)* were identified as being reported together 75% or more and referred to CPT for bundling. Category III code 0042T has increased utilization and now qualifies for category I status. Patterns of CTP utilization include performance during the same imaging session as performance of CTA Head and Neck, CTA Head, and CT Head as well as performance as a standalone procedure.

The CPT Panel created a bundled code for CTA head and neck, as well as an add-on and a standalone code for CTP. These three codes were surveyed for the September 2024 RUC meeting, along with the existing standalone codes for CTA head and CTA neck.

Survey Process

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) conducted a random survey of our respective members. Both societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation

We recommend the current work RVU of 1.75, which is the survey 25th percentile value and maintains relativity with CPT code 70496.

Time Recommendation

We recommend the median survey times of 5 minutes pre-service and 18 minutes intra-service and a post-service time of 5 minutes.

Key Reference Services

Our recommendation compares well to the top two key reference services listed below:

- CPT code **71275** (*Computed tomographic angiography, chest (noncoronary), with contrast material(s), including noncontrast images, if performed, and image postprocessing*)
- CPT code **74174** (*Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing)*

CPT code 74174 requires an assessment of the vasculature of the abdomen and pelvis and is associated with more images given the larger anatomic region covered compared to 70498. This is reflected in the higher intra-service and total time, as well as the work RVU. CPT code 71275 is the assessment of the vasculature in the chest and covers a larger anatomic region than 70498. This is reflected in the slightly higher intra-service and total time, as well as the work RVU. CPT code 70498 is more intense than both CPT codes 71274 and 74174, given the potential devastating neurologic complications that could occur if a finding is missed.

The work associated with 70498 is more intense than prior survey because it was in 2015 that multiple studies including the Multicenter Randomized Clinical Trial of Endovascular Treatment for Acute Ischemic Stroke in the Netherlands (MR CLEAN), Endovascular Revascularization with Solitaire Device versus Best Medical Therapy in Anterior Circulation Stroke within 8 h (REVASCAT), Endovascular Treatment for Small Core and Proximal Occlusion Ischemic Stroke (ESCAPE), Solitaire™ FR as Primary Treatment for Acute Ischemic Stroke (SWIFT PRIME) and Extending the Time for Thrombolysis in Emergency Neurological Deficits with Intra-Arterial Therapy (EXTEND IA) all showed the proven benefit of mechanical thrombectomy and therefore making CTA head and neck a critical part for stroke care where every minute counts to preserve brain leading to increased psychological stress when interpreting these studies.

The expected typical patient for 70498 is a patient who has had prior intervention, likely prior stenosis in a carotid vessel, who is presenting with neurologic symptoms. Given that these patients had an identified

abnormality or prior intervention, this patient population is more complex than when it was previously surveyed.

Since this code was last valued, additional reconstructed images, such as Maximum Intensity Projections (MIPS), are now standard use across practice. Although there are more images to review, these new reconstructed images save some time for the radiologist to identify specific conditions such as vasculitis or dissection. This would have previously required more careful scrutiny of the source axial images and may not have been picked up previously.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74174	CTA, abdomen & pelvis, with contrast material(s)	2.20	40	5	30	5	0.066
71275	CTA, chest, with contrast	1.82	35	5	25	5	0.064
70498	**Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing**	**1.75**	**28**	**5**	**18**	**5**	**0.085**

MPC Codes

CPT code 70498 (*Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing*) compares well with the two MPC codes below:

- CPT code **74176** *(Computed tomography, abdomen and pelvis; without contrast material)* has more intra-service and total time, but a slightly lower work RVU than CPT code 70498, which is appropriate as it is a less-intense service.
- CPT code **74178** *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)* has more intra-service and total time than CPT code 70498, which is reflected in the difference in work RVU.

Both MPC comparison codes are associated with less intense work than the CT angiography neck code. Accounting for the survey times and intensity differences, the recommended 1.75 work RVU is appropriately bracketed between MPC codes 74176 and 74178.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74176	CT abdomen & pelvis without	1.74	32	5	22	5	0.69
70498	**Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing**	**1.75**	**28**	**5**	**18**	**5**	**0.085**
74178	CT abdomen & pelvis without and with	2.01	40	5	30	5	0.060

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation of 1.75 RVU with 5 minutes of pre-, 18 minutes of intra-, and 5 of minutes post-service time for CPT code 70498.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 70498

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty DIAGNOSTIC RADIOLOGY How often? Commonly

Specialty INTERVENTIONAL RADIOLOGY How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 261836
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70498 is estimated to be provided 261,836 times nationally in a one-year period.

Specialty Frequency 0 Percentage 0.00 %

Specialty DIAGNOSTIC RADIOLOGY Frequency 248744 Percentage 94.99 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 7855 Percentage 2.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 87,279 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 70498 is estimated to be provided 87,279 times to Medicare patients nationally in a one-year period.

Specialty DIAGNOSTIC RADIOLOGY Frequency 82915 Percentage 94.99 %

Specialty INTERVENTIONAL RADIOLOGY Frequency 2618 Percentage 2.99 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
CAT/CT/CTA: Brain/Head/Neck

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 70498

CPT CODE(S): 70471, 70496 and 70498
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2024

CPT Code	Long Descriptor	Global Period
70471	Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing	XXX
	Vignette	
	A code stroke is activated in the emergency department on a 60-year-old male with sudden onset left-sided weakness.	

CPT Code	Long Descriptor	Global Period
70496	Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing	XXX
	Vignette	
	A 68-year-old patient presents with acute onset aphasia and right-sided weakness. Computed tomography angiography (CTA) of the head is ordered.	

CPT Code	Long Descriptor	Global Period
70498	Computed tomographic angiography, neck, with contrast material(s), including noncontrast images, if performed, and image postprocessing	XXX
	Vignette	
	A 69-year-old patient presents with recurrent episodes of left arm, face, and leg weakness. Computed tomography angiography (CTA) of the neck is ordered.	

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The societies of ACR & ASNR convened a panel of experts familiar with this service to evaluate the direct practice expense inputs for Computed tomography angiography 70471, 70496, and 70498.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   As these are existing codes, the specialties are using the current inputs for CPT codes 70496 and 70498 as a reference in making our direct PE input recommendations for CPT codes 70496, 70498, and 70471. 70471 is a bundled code consisting of 70496 and 70498.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70471, 70496 and 70498
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   No.

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   Radiology is the expected predominant provider in the nonfacility setting as well as dominate in the global setting.
   - 70496 – 98.8% in the global and 86.4% in the non-facility
   - 70498 – 98.8% in the global and 82% in the non-facility

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   The PE inputs for CPT codes 70496 and 70498 were last reviewed in 2014, prior to the creation of the technologist and professional PACS workstations. In our recommendations, we are including both PACS workstations in our equipment costs, as appropriate, which is contributing to a higher equipment and overall PE cost for these two codes. The room times have also increased for these codes as a result of the application of the highly technical formula. Our recommendation for new code 70471 also includes the PACS workstations, as it is a bundle of codes 70496 and 70498.

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70471, 70496 and 70498
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

- **CA013 (Prepare room, equipment and supplies) –** The specialties are requesting two additional minutes (total of 4 minutes), which is typical for codes requiring contrast administration.
- **CA016 (Prepare, set-up and start IV, initial positioning and monitor of patient) –** Increase to 5 mins from 2 min standard. This extra time is necessary to ensure appropriate positioning of the patient for several reasons: (1) patient comfort to minimize the possibility of motion artifact; (2) to ensure that the entire head or neck will remain in the field of view and (3) to ensure that the arms and other objects do not lead to artifacts such as beam hardening or quantum mottle; (4) to ensure appropriate positioning of the injector and support devices relative to the patient and (5) to ensure an adequate view of the IV site by the technologist to evaluate for extravasation during power injection.
- **CA030 (Technologist QC's images in PACS…) –** The specialties are requesting an additional minute (total of 3 minutes). In the CY 2017 Medicare Physician Fee Schedule (MPFS) final rule, CMS finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, "Technologist QCs images in PACS, checking for all images, reformats, and dose page." This establishes 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case—such as CT/MR, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

When 70496 and 70498 were reviewed in April 2014, 2 minutes was the standard for *"Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist."* Since the new PE spreadsheet update, this activity has been split into CA007 *(Review patient clinical extant information and questionnaire)* and CA014 *(Confirm order, protocol exam)*, each with 1 minute as the standard. Therefore, we have recommended 1 minute each for CA007 and CA014 for CPT codes 70496, 70498, and 70471.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

- Confirm availability of prior images/studies

- Review patient clinical extant information and questionnaire

b. Service period (includes pre, intra and post):

- Greet patient, provide gowning, ensure appropriate medical records are available
- Provide education/obtain consent
- Prepare room, equipment and supplies
- Confirm order, protocol exam
- Prepare, set-up and start IV, initial positioning and monitoring of patient
- Perform procedure/service—NOT directly related to physician work time
- Clean room/equipment by clinical staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD/DO
- Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue

c. Post-service period:

N/A.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Bring patient into CT room and assist patient onto CT table. Position patient's anatomy for anatomic coverage and comfort. Step behind shielding to control panel. Set appropriate exposure parameters. Instruct patient to hold still. Obtain scout image. Confirm appropriate patient positioning to ensure adequate coverage of anatomic region and potential pathology. Adjust patient positioning if needed. Set acquisition parameters. Instruct patient to hold still. Obtain axial images. Confirm appropriate imaging coverage. The images are checked for quality and the above steps are repeated for any additional coverage needed. During 70471, the CT angiographic head images and CT angiographic neck images are separated to perform reconstructions separately for each anatomic site. Coronal and sagittal reformations are performed. MIPS are performed. 3-D post processing is performed of the vessels. 3D post-processing images for the head include tumble images of the Circle of Willis including the anterior and posterior circulation with exclusion of extra-cranial vessels and anatomic structures that obscure 3D view of the arteries. 3D post-processing images of the neck include subtracting out vessels and anatomic structures that interfere with the appearance of the arteries in the neck. Center line images of the carotid artery are generated for assessment of areas of stenosis. Send the images from the console to the image archive. Explain to the patient that he/she will be receiving a letter and copy of the CT report shortly. Explain that if prior images need to be obtained, it may delay the interpretation of the CT. Mention to the patient that if he/she has any questions about the CT results, the patient should call the Radiology Department and ask to speak with one of the radiologists.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70471, 70496 and 70498
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, we are recommending SA114 (kit, contrast imaging), an established package for 70496, 70498, and 70471.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70471, 70496 and 70498

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

    N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

    N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

    Clinical Staff Revision – CPT codes 70496 and 70498 currently list L041B (radiologic technologist) as the clinical staff for these procedures. Upon re-review, the specialties feel that L046A (CT Technologist) is the more appropriate staff to perform these procedures. We have adjusted our clinical staff type recommendations for CPT codes 70496, 70498, and 70471.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70472 and 70473
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2024

CPT Code	Long Descriptor	Global Period
70472	Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)	ZZZ
	Vignette	
	A 63-year-old male presents with difficulty speaking and left arm numbness. Computed tomography (CT) cerebral perfusion is performed during the same session as a CTA head and neck to determine if patient is candidate for neuroendovascular intervention. A previously performed CT head without contrast did not demonstrate intracranial hemorrhage. ***Note: This is an add-on service. Only consider the additional work related to the performance of CT cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy.***	

CPT Code	Long Descriptor	Global Period
70473	Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy	XXX
	Vignette	
	A 62-year-old male with proximal right middle cerebral artery thrombus is identified prior to transfer from an outside facility for thrombectomy. CTA head and neck was performed at the outside facility prior to transfer. CT cerebral perfusion performed upon arrival at thrombectomy facility to determine if penumbra present.	

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The societies of ACR & ASNR convened a panel of experts familiar with this service to evaluate the direct practice expense inputs for Computed Tomography Cerebral Perfusion, CPT codes 70472 and 70473.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   CPT code 0042T is the current code, however, this code has no current PE inputs. Therefore, the specialties have included CPT code 70460 *(Computed tomography, head or brain; with contrast material(s))* as reference code. This is because CT head perfusion is essentially a multi-timepoint CT head with contrast material.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70472 and 70473
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

No.

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Radiology is the expected predominant provider in the nonfacility setting as well as dominant in the global setting. • 0042T – 99.3% in the global and 100.0% in the non-facility

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

70472 and 70473 are replacing 0042T which is being deleted. 0042T currently has no PE inputs. The specialties are recommending the appropriate supplies, labor and equipment inputs for 70472 and 70473.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

For 70473 only;

- **CA013 (Prepare room, equipment and supplies) –** The specialties are requesting two additional minutes (total of 4 minutes), which is typical for codes requiring contrast administration.
- **CA016 (Prepare, set-up and start IV, initial positioning and monitor of patient) –** Increase to 5 mins from 2 min standard. This extra time is necessary to ensure appropriate positioning of the patient for several reasons: (1) patient comfort to minimize the possibility of motion artifact; (2) to ensure that the entire head will remain in the field of view and (3) to ensure that the arms and other objects do not lead to artifacts such as beam hardening or quantum mottle; (4) to ensure appropriate positioning of the injector and support devices relative to the patient and (5) to ensure an adequate view of the IV site by the technologist to evaluate for extravasation during power injection.
- **CA030 (Technologist QC's images in PACS…) –** The specialties are requesting an additional minute (total of 3 minutes). In the CY 2017 Medicare Physician Fee Schedule (MPFS) final rule, CMS finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, "Technologist QCs images in PACS, checking for all images, reformats, and dose page." This establishes 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case—such as CT/MR, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

- Confirm availability of prior images/studies
- Review patient clinical extant information and questionnaire

    b. Service period (includes pre, intra and post):

- Greet patient, provide gowning, ensure appropriate medical records are available *(70473 only)*
- Provide education/obtain consent *(70473 only)*

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 70472 and 70473
SPECIALTY SOCIETY(IES): ACR & ASNR
PRESENTER(S): Andrew Moriarity, MD; Jacob Ormsby, MD, Melissa Chen, MD, Cindy Yuan, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

For CPT code 70472, the specialties made the following revisions:

- **CA006, Confirm availability of prior images/studies –** Removed the 2 minutes.
- **CA007, Review patient clinical extant information and questionnaire** – Removed 1 minute.

These activities are duplicative, since 70472 is an add-on code.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2024

Colon Motility Services – Tab 10

In April 2023, the Relativity Assessment Workgroup (RAW) identified codes 91120 and 91122 as reported together 75% or more based on 2021 Medicare claims data. The RUC noted that these services are reported together 95% of the time and the specialty societies should develop a code bundling solution via the CPT Editorial Panel. In May 2024, the CPT Editorial Panel added two codes to report rectal sensation testing and anal manometry with rectal sensation and balloon expulsion test, respectively. The two existing Category I codes 91120 and 91122 were deleted. The two new codes were surveyed for the September 2024 RUC meeting.

Compelling Evidence
The RUC agreed with the specialty societies that there is compelling evidence to support a change in physician work for the code family based on a documented change in technique/technology. When reviewing this family of services, the RUC considered that for 91124 there is documentation in clinical literature of an increase in barostat procedure time consistent with current RUC survey data. In the last 20 years since this code was created, there have been substantial updates to the protocols used for rectal sensation, tone and compliance testing (e.g., barostat) resulting in changes to physician time. Clinical literature references indicate that it takes 60 minutes of active physician time to perform barostat testing. In addition, in reviewing 91125, the RUC determined that there is documentation in the clinical literature of a change in anorectal manometry technology and technique from conventional water-perfusion manometry to high-resolution solid-state manometry. There have been substantial advances in anorectal manometry technology and technique in the last 20 years. In 1995, the standard or "conventional" manometry was performed using non-high resolution, water-perfused catheters. In 2007, high-resolution manometry was introduced in which solid-state catheters could record and display simultaneous and dynamic information from the whole anal canal and distal rectum. Improved spatial resolution and signal processing allowed for data to be displayed as spatiotemporal color-contour pressure topography plots rather than overlapping line tracings improving diagnostic yield and accuracy. The use of high-resolution anorectal manometry is now typical.

The RUC concurred that there is compelling evidence that the physician work for these services has changed due to change in physician technique/technology.

91124 ***Rectal sensation, tone, and compliance study (eg, barostat)***
The RUC reviewed the survey results from 68 gastroenterologists and colon and rectal surgeons and determined that the survey median work RVU of 3.05 appropriately accounts for the physician work involved in this infrequent service. The RUC recommends 10 minutes of pre-service time, 60 minutes of intra-service time and 15 minutes of immediate post-service time as supported by the survey. While the survey median pre-service evaluation time was 12 minutes, the specialties recommended 10 minutes for consistency with similar XXX global procedures. The specialties also noted the procedure requires more pre- and post-time than the related capsule codes in which patients swallow a capsule and then return a recording device several hours later. The 60 minutes intra-service time is comprised of active, collaborative, physical technical work that takes 50 minutes of combined physician and clinical staff time. There is an additional 40 minutes of clinical staff only time, during which patients are

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

monitored for two 20 minute adaptation and equilibration periods, as well as an additional 10 minutes of physician-only time for cognitive interpretation.

The RUC compared CPT code 91124 to the top key reference service MPC code 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.* (work RVU = 3.50 and 88 minutes total time) and noted that the reference service involves similar time and intensity, justifying the median work value for the surveyed code. The RUC also referenced the second key reference service code 91112 *Gastrointestinal transit and pressure measurement, stomach through colon, wireless capsule, with interpretation and report* (work RVU = 2.10, 40 minutes intra-service time and 60 minutes total time) and noted that the reference service requires much less intra-service time and total time, thus the surveyed code is appropriately valued higher.

For additional support, the RUC noted that CPT code 91124 is appropriately bracketed between MPC codes 99205 and 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time). It was further noted that at the median value, the surveyed code fits centrally in comparison to XXX global codes with similar intra-service time and total time.

The RUC concluded that CPT code 91124 should be valued at the median work RVU as supported by the survey and appropriately bracketed by both the key reference service codes and MPC codes. **The RUC recommends a work RVU of 3.05 for CPT code 91124.**

91125 ***Anorectal manometry, with rectal sensation and rectal balloon expulsion test, when performed***
The RUC reviewed the survey results from 76 gastroenterologists and colon and rectal surgeons and determined that the survey median work RVU of 2.70 appropriately accounts for the physician work involved in this service. CPT code 91125 is a new code for anorectal manometry, with rectal sensation and rectal balloon expulsion testing, and represents the bundling solution for deleted CPT codes 91120 *Rectal sensation, tone, and compliance test (ie, response to graded balloon distention)* and 91122 *Anorectal manometry*.

The RUC recommends 10 minutes of pre-service time, 45 minutes of intra-service time and 15 minutes of immediate post-service time as supported by the survey. The intra-service time is comprised of 30 minutes to perform all the maneuvers of the digital rectal examination with the nurse (RN/LPN/MTA) present and 15 minutes of cognitive physician work to review and interpret the multiple components, images and quantitative measurements. CPT code 91125 has a physical technical component involving the insertion and manipulation of an anorectal catheter, not just a cognitive interpretation component like the related capsule codes (91112, 91113). Because of this, a more extensive review of the medical record and discussion with the patient is required to ensure that the maneuvers and protocols performed are safe and tailored to their individual history. More specific positioning is also required in terms of post time where patients swallow a capsule, and the data is uploaded hours later for physician interpretation and asynchronous communication with patients.

The RUC discussed the intensity of the surveyed code and agreed that the median value places it in the correct rank order with the related procedures that include: the smart pill, barostat, colon capsule, anorectal manometry, code capsule endoscopy, and the 99205 office visit.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared CPT code 91125 to the top key reference service code 91112 *Gastrointestinal transit and pressure measurement, stomach through colon, wireless capsule, with interpretation and report* (work RVU = 2.10, 40 minutes intra-service time and 60 minutes total time) and noted that the reference service requires less intra-service and total time and is less intense than the surveyed code. CPT code 91125 is considered more intense, with 95% of survey respondents who selected the reference code indicating that the surveyed code has more overall intensity/ complexity relative to the key reference code. The work related to 91112 is less intense and complex because it involves a swallowed capsule that passively captures transit and pressure measurements, while 91125 requires active participation from the physician to elicit and measure response to various maneuvers. The RUC also referenced the second key reference service code 91113 *Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), colon, with interpretation and report* (work RVU = 2.41, 45 minutes intra-service time and 60 minutes total time) and noted that the reference service involves similar work to 91125 but is less intense with less total time, justifying a higher work value for the surveyed code.

For additional support, the RUC noted that CPT code 91125 is appropriately bracketed between MPC codes 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60, 60 minutes total time) and 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.* (work RVU = 2.80, 70 minutes total time).

The RUC concluded that CPT code 91125 should be valued at the median work RVU as supported by the survey and further, that the intensity at the median maintains relativity amongst the GI test codes. **The RUC recommends a work RVU of 2.70 for CPT code 91125.**

Practice Expense

The Practice Expense Subcommittee reviewed the direct practice expense inputs and made one modification to reallocate 3 minutes from the post-service activity CA040 *Perform additional positioning of patient* to the pre-service (of the service period) activity CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient*. The specialties explained that 30 minutes was requested for CA024 *Clean room/equipment by clinical staff* rather than CA025 *Clean scope* because a catheter is utilized as the "equipment," not a scope, although the work is similar. The PE Subcommittee accepted two new supply items for use in CPT codes 91124 and 91125, *Anorectal expulsion balloon* and S*heath, catheter.* The specialty societies explained the submission of three updated invoices for the separate components of EQ070 *barostat system, with hardware & software.* **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:91124 Tracking Number L1 Original Specialty Recommended RVU: **3.05**
Presented Recommended RVU: **3.05**
Global Period: XXX Current Work RVU: **NA** RUC Recommended RVU: **3.05**

CPT Descriptor: Rectal sensation, tone, and compliance study (eg, barostat)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female presents with a three-year history of refractory constipation. She has no desire to defecate and manually disimpacts herself once a week. She has tried several prescription laxatives and suppositories without relief. Rectal examination suggests impaired rectal sensation as evidenced by a large amount of hard stool. Rectal sensation, tone, and compliance test (eg, barostat) is ordered for further evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient history and prior diagnostic studies. Review allergies and medications. Assess patient for relative contraindications, such as recent colorectal surgery, severe rectal inflammation, active rectal bleeding, and strictures. Educate patient about the nature of the procedure, why it is being performed, and possible complications. Confirm that patient has appropriately prepared for the procedure (e.g. fasting, medication guidance and rectal cleansing). Verify that equipment is available and operational. Supervise patient positioning.

Description of Intra-Service Work: Perform a digital rectal examination. Insert a probe with a highly compliant balloon connected to a computerized distending device into the rectum and tape in position. After the adaptation period to stabilize anal tone, measure basal tone. Perform stepwise graded balloon distention to determine minimal distending pressure and set operating pressure. Perform a conditioning distention followed by an equilibration period. Perform ascending isobaric distensions to assess rectal pressure-volume relationships and calculate compliance. Perform random order phasic isobaric distensions while patient signals perception of sensations (e.g. gas, urgency, discomfort and pain) to identify sensory thresholds. Perform a stimulus (e.g. pharmacological) to assess rectal contractile and sensory responses. Deflate and remove probe and balloon. Review tracings, quantitative measurements and qualitative thresholds to identify disorders of rectal tone, compliance and visceral sensitivity. Formulate interpretation.

Description of Post-Service Work: Assess patient's condition and monitor for any complications. Prepare a report and enter it into the electronic medical record. Communicate the findings to the patient and send a copy of the report to the referring physician. Contact the referring physician to discuss the findings as needed.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	6%	59%	33%	2%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	61%	35%	4%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	10%	88%
Physical effort required	2%	4%	94%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	71%	25%	4%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	25%	58%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	8%	92%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	8%	92%
Physical effort required	0%	25%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	17%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In April 2023, the Relativity Assessment Workgroup (RAW) of the RUC identified three code pairs for services performed by the same physician on the same date of service 75% of the time or more, including CPT codes 91120 and 91122. According to the RUC database, CPT code 91120 Global & 26 modifier was billed 9,330 in 2022 and it was reported together with 91122 96.1% of the time. CPT code 91122 Global & 26 modifier was billed 17,726 in 2022 and it was reported together with 91120 50.5% of the time.

The RUC determined that the ACG, AGA and ASGE should submit a CPT application that reflected a bundled code that includes anorectal manometry with sensation testing. The CPT Editorial Panel accepted a proposal at the May 2024 CPT Editorial Panel meeting to add new Category I CPT codes to report testing for rectal sensation, tone and compliance (91124) and anorectal manometry (91125) and delete codes 91120 and 91122. These new codes reflect the bundled services that the RUC requested with updates to reflect the way the services are currently performed.

Our multi-specialty consensus panel reviewed the survey data for codes 91124 and 91125 comparing the data and work RVUs (wRVUs) to the current data for similar XXX-day global codes.

Overall Compelling Evidence for Tab 10

We offer the following compelling evidence arguments for Tab 10 which are explained in detail below, organized by code:

- Documentation in clinical literature of an increase in barostat procedure time consistent with current survey data (91124)
- Documentation in clinical literature of a change in anorectal manometry technology and technique from conventional water-perfusion manometry to high-resolution solid-state manometry (91125)
- Evidence that incorrect assumptions were made in the previous valuation of the 91120 and 91122 services:
    - Flawed survey methodology
        - The intra-service time descriptions for 91120 were written ambiguously as reflected in the intra-service time description which has features unique to barostat ("the balloon was connected to a computerized distending device") but also features unique to anorectal manometry ("while being monitored, the patient is asked to defecate the balloon").
        - The value assigned to 91120 in 2004 was based on codes whose values were created from a building block methodology rather than survey data.
        - The 1995 survey for 91122 had only 4 responses.

Compelling Evidence for 91124 (barostat)

Code 91120 was created in 2004. In the last 20 years, there have been substantial updates to the protocols used for rectal sensation, tone and compliance testing (eg barostat) resulting in changes to physician time. The studies below indicate that it takes 60 minutes of active physician time to perform barostat testing.

- Vanhoutvin SA, Troost FJ, Kilkens TO, Lindsey PJ, Hamer HM, Jonkers DM, Venema K, Brummer RJ. The effects of butyrate enemas on visceral perception in healthy volunteers. Neurogastroenterol Motil. 2009 Sep;21(9):952-e76. doi: 10.1111/j.1365-2982.2009.01324.x. Epub 2009 May 19. PMID: 19460106
- Fox M, Thumshirn M, Fried M, Schwizer W. Barostat measurement of rectal compliance and capacity. Dis Colon Rectum. 2006 Mar;49(3):360-70. doi: 10.1007/s10350-005-0295-2. PMID: 16421659.
- Gladman MA, Dvorkin LS, Lunniss PJ, et al. Rectal hyposensitivity: a disorder of the rectal wall or the afferent pathway? An assessment using the barostat. American Journal of Gastroenterology 2005;100:106-14.

Here is an excerpt from Vanhoutvin *et al* 2009:

> *The barostat protocol consisted of four subprotocols, each designed for the measurement of specific parameters of interest.*
>
> *Balloon unfolding This part of the protocol consisted of one single distension at a balloon pressure of **20mmHg for 1 min**, to ensure that the balloon was placed correctly without folds that may impair the airflow.*
>
> *Minimal distension pressure The second part of the protocol consisted of a staircase distension protocol with **pressure steps of 1 mmHg with a duration of 30s each and a range from 0 to 20mmHg.** The minimal distension pressure (MDP), which is the minimal balloon pressure needed to overcome the intra-abdominal pressure, was defined as the first pressure at which respiratory curves were present in the volume recording of*

the balloon. The entire protocol was performed up to the 20mmHg pressure in all subjects as a sensitization step prior to the compliance and perception measurements. The obtained MDP value was set to zero as a reference point. During this protocol, the volunteers were asked to report the moment at which they could sense the balloon for the first time. This pressure was defined as the threshold for first sensation.

Compliance Directly after finishing the MDP measurements, the third part of the protocol was initiated. This part of the protocol, designed for compliance measurement, which represents the elasticity of the rectum in mL mmHg−1, consisted of a staircase distension protocol with ***pressure steps of 3 mmHg with a duration of 30s each and a range of 0–33 mmHg.***

Visceral perception Subsequently, the distension protocol of the visceral perception measurements was initiated. This protocol consisted of ***semi-random distensions (at 4, 13, 10, 19, 16, 25, 22, 31, 28, 37, 34, 43, 40, 49, 46, 55, 52, 61, 58, 67, 64, 71mmHg above MDP respectively) with a duration of 1 min each, interspaced with 30-s intervals at MDP.*** *Thirty seconds after the start of each distension, volunteers scored the sensation of pain and discomfort on a 10-cm visual analogue scale (VAS) and urge on a six-point scale (0=no feeling, 1=just sensible, 2=clearly sensible/light urge, 3=normal urge, 4=strong urge/have to run to toilet, 5=maximum/stop) represented by six buttons on an electronic control panel (distender II perception panel),18,19 which was directly linked to the barostat equipment. The procedure was stopped when the maximum score for pain, urge or discomfort was reached.*

The aggregated time for this protocol as highlighted in bold is as follows: balloon unfolding (**1 minute**) + minimal distention pressure (20 pressure steps x 30s each = **10 minutes**) + compliance (11 pressure steps x 30s each = **5.5 minutes**) + visceral perception (22 distentions x (1 minute duration + 30s rest interval) = **33 minutes**) = **49.5 minutes**. When considering time for intraprocedural patient instruction, transitions between subprotocols, and physician interpretation of qualitative and quantitative measurements, this aligns well with the survey data indicating an intra-service time of 60 minutes.

We also question the original methodology used to value 91120. The intra-service time descriptions were written ambiguously. This ambiguity is reflected in the intra-service time description for 91120 which has features unique to barostat ("the balloon was connected to a computerized distending device") but also features unique to anorectal manometry ("while being monitored, the patient is asked to defecate the balloon"). The creation of new code numbers (91124 and 91125), that represent nonoverlapping intra-service work, along with CCI edits preventing concurrent reporting, is our effort to correct the flawed descriptions used in 2004.

Additionally, the RUC Rationale from the RUC database indicates that the RUC decided that 91120 was clinically similar to 91034 and 91037 and crosswalked its value to those codes. However, 91034 and 91037 were not valued consistent with current RUC methodology. The RUC set the value for 91034 and 91037 based on a building block methodology and no intra-service time for 91037 is listed in the RUC database under the RUC Survey Data tab. Therefore, the value assigned to 91120 in 2004 was based on codes whose values were created from a building block methodology rather than survey data.

91037 RUC Rationale from the RUC database: CPT created four new codes and deleted two existing codes to describe a new method of monitoring intra-esophageal pH levels. This new technology is a telemetry-based system for measuring acid reflux involving the placement of a monitoring capsule that is temporarily inserted and attached to the patient's esophagus. The capsule monitors the presence of acid and transmits pH levels via radiofrequency telemetry to an external receiver that the patient wears for up to 72 hours. Current codes do not accurately describe this procedure...

91034 and 91037
The RUC identified other codes that would serve as a proxy for the pre and post service work for codes 91034 Esophagus, gastroesophageal reflux test; with nasal catheter pH electrode(s) placement, recording, analysis and interpretation and 91037, Esophageal function test, gastroesophageal reflux test with nasal catheter intraluminal impedance electrode(s) placement, recording, analysis and interpretation. The RUC agreed that the preservice work for all four codes under review was equivalent to a 99212 Office or other outpatient visit for the evaluation and management of an established patient (work RVU= .45; total time=15 minutes). The post service work was equated to the physician interpretation work associated with code 93224 Electrocardiographic monitoring for 24 hours by continuous original ECG waveform recording and storage, with visual superimposition scanning; includes recording, scanning analysis with report, physician review and interpretation (work RVU= .52; total

time16 minutes). **Therefore, the recommended RVU and physician time would be a combination of the values from these two reference codes (.45 + .52 = .97 and 15 minutes + 16 minutes =31 minutes). The RUC recommends a work RVU of .97 and total physician time of 31 minutes for codes 91034 and 91037**

91120 RUC Rationale from the RUC database: The RUC reviewed the specialty's survey results for 91120 Rectal sensation, tone, and compliance test (ie, response to graded balloon distention). The survey respondents recommended a median work RVU of 2.0, a 25th percentile work RVU of 1.70 and low work RVU of 1.30. The survey respondents indicated that 91120 was comparable to the reference service code 91122 Anorectal manometry (Work RVU=1.77). However, the specialty society indicated that the reference code 91122 is not a good comparison when examining service time and intensity associated with this code. Accordingly, the specialty society based the values on the work value assigned to codes presented at the January 2004 RUC meeting, 91034 Esophagus, gastroesophageal reflux test, with nasal catheter PH electrode(s), recording, analysis and interpretation (Work RVU=0.97) and 91037 Esophageal function test, with nasal catheter intraluminal impedance electrode(s) recording, analysis and interpretation (Work RVU=0.97). The RUC felt that these codes were comparable in terms of the time and intensity. In addition, this valuation will keep this family of diagnostic codes in the proper rank order. The RUC recommends adjusting the physician pre-service time to 15 minutes, the intra-service time of 15 minutes and the post-service time of 15 minutes, totaling 45 minutes. Therefore, the RUC recommends a work RVU of 0.97 and total physician time of 45 minutes for code 91120.

Based on documentation in clinical literature of procedure time consistent with the current survey data and previous flawed methodology used in establishing the 2004 value for 91120, we believe 91124 meets compelling evidence for consideration of a physician work RVU of 3.05 RVUs.

Compelling Evidence for 91125 (anorectal manometry)
Code 91122 was last reviewed by the RUC in 1995 with a survey sample size of 13 and 4 responses; using 4 responses to determine times and values would not be accepted under current methodology.

In addition, there have been substantial advances in anorectal manometry technology and technique in the last 20 years. In 1995, the standard or “conventional” manometry was performed using non-high resolution, water-perfused catheters with 3-6 widely spaced unidirectional sensors. This catheter was moved in and out of the anorectum using the “pull through” technique mentioned in the intra-service work description for 91122 in the RUC database. This movement would generate pressure line-tracings that were interpreted separately to reflect anal and rectal pressures. In 2007, high-resolution manometry was introduced in which solid-state catheters now with up to 256 closely-spaced circumferential sensors could record and display simultaneous and dynamic information from the whole anal canal and distal rectum. Improved spatial resolution and signal processing allowed for data to be displayed as spatiotemporal color-contour pressure topography plots rather than overlapping line tracings improving diagnostic yield and accuracy (Dinning et al, 2015). At this time, greater than 50% of institutions worldwide and 75% in North and South America are using high-resolution anorectal manometry (Carrington et al, 2017) highlighting that the work described in 91122 is no longer typical.

- Carrington EV, Heinrich H, Knowles CH, Rao SS, Fox M, Scott SM; International Anorectal Physiology Working Party Group (IAPWG). Methods of anorectal manometry vary widely in clinical practice: Results from an international survey. Neurogastroenterol Motil. 2017 Aug;29(8):e13016. doi: 10.1111/nmo.13016. Epub 2017 Jan 18. PMID: 28101937.
- Dinning PG, Carrington EV, Scott SM. The use of colonic and anorectal high-resolution manometry and its place in clinical work and in research. Neurogastroenterol Motil. 2015 Dec;27(12):1693-708. doi: 10.1111/nmo.12632. Epub 2015 Jul 30. PMID: 26224550.

Based on documentation in clinical literature of a change in technology and technique and a flawed survey methodology with only 4 responses when 91122 was surveyed in 1995, we believe 91125 meets compelling evidence for consideration of a physician work RVU of 2.70 RVUs.

91124 – Discussion and Recommendation
Code 91124 is a new code for rectal sensation, tone, and compliance study (eg, barostat) that was approved by the CPT Editorial Panel at its May 2024 meeting. The ACG, AGA, ASGE and ASCRS conducted a survey for the September 2024 RUC meeting and received 68 responses.

We recommend the survey median **wRVU of 3.05**.

Pre- time: 10 minutes. While the survey median pre-service evaluation is 12 minutes, we recommend 10 minutes for consistency with similar XXX-day procedures.

Post-time: 15 minutes of immediate post-service time, reflecting the survey median.

Intra-service time: 60 minutes is appropriate, reflecting the survey median.

Key Reference Services
Two reference services were selected more often than others: 99205 and 91112. However, code 99205 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.*) was selected most often (48/68).

Comparison to other GI tests:
When organized by IWPUT and using the median RVU, the new codes for barostat testing (91124) and anorectal manometry (91125) fit logically between the most similar GI test codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 91120

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Gastroenterology How often? Commonly

Specialty Colorectal Surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 300
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimated commercial volume for 91124 is based on feedback from experts who perform the procedure and volume in the past 12 months as reported by survey takers. National volume is estimated to be three times Medicare, which we estimated at 100 per year.

Specialty Gastroenterology Frequency 164 Percentage 54.66 %

Specialty Colorectal Surgery Frequency 30 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 100
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimated Medicare volume for 91124 is based on feedback from experts who perform the proceduer and volume in the past 12 months as reported by survey takers.

Specialty Gastroenterology Frequency 55 Percentage 55.00 %

Specialty Colorectal Surgery Frequency 10 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

SUMMARY OF RECOMMENDATION

CPT Code:91125 Tracking Number L2 Original Specialty Recommended RVU: **2.70**
Presented Recommended RVU: **2.70**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **2.70**

CPT Descriptor: Anorectal manometry, with rectal sensation and rectal balloon expulsion test, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old female has noted worsening constipation and fecal incontinence. Despite trials of both laxatives and anti-diarrheals, she continues to have symptoms. Blood tests and a colonoscopy were normal. An anorectal manometry is ordered to evaluate anorectal function.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient history and prior diagnostic studies. Review allergies and medications. Assess patient for relative contraindications, such as recent colorectal surgery, severe rectal inflammation, active rectal bleeding, and strictures. Educate patient about the nature of the procedure, why it is being performed, and possible complications. Confirm that the patient has appropriately prepared for the procedure (e.g. fasting, medication guidance, and rectal cleansing). Verify that equipment is available and operational. Supervise patient positioning.

Description of Intra-Service Work: Perform digital rectal examination. Insert lubricated anorectal manometry catheter, identify anatomic landmarks, and proceed with insertion such that rectal balloon is located at least 3-5 cm above the upper border of the anal canal. Allow for an adaptation period to stabilize anal tone. Measure basal anal resting tone. Perform voluntary anal squeeze maneuvers separated by recovery intervals to evaluate anal contractility. Perform an endurance squeeze followed by a recovery interval. Perform cough maneuvers to evaluate anorectal cough reflex. Perform simulated defecation push maneuvers separated by recovery intervals to evaluate rectal propulsive pressure and anal sphincter contractile response. Perform a series of rapid rectal distentions to assess rectoanal inhibitory reflex. Identify sensory thresholds by performing progressive balloon distentions while patient reports sensations (e.g. first sensation, desire to defecate, urgency, and discomfort). Perform balloon expulsion testing to evaluate evacuation. Review images, quantitative measurements and qualitative thresholds to identify disorders of rectoanal inhibitory reflex, anal tone and contractility, rectoanal coordination, and/or rectal sensation. Apply hierarchical criteria to indicate clinical relevance of findings and formulate interpretation.

Description of Post-Service Work: Assess patient's condition and monitor for any complications. Prepare a report and enter it into the electronic medical record. Communicate the findings to the patient and send a copy of the report to the referring physician. Contact the referring physician to discuss the findings as needed.

Technical skill required	0%	0%	100%
Physical effort required	0%	40%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	20%	80%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In April 2023, the Relativity Assessment Workgroup (RAW) of the RUC identified three code pairs for services performed by the same physician on the same date of service 75% of the time or more, including CPT codes 91120 and 91122. According to the RUC database, CPT code 91120 Global & 26 modifier was billed 9,330 in 2022 and it was reported together with 91122 96.1% of the time. CPT code 91122 Global & 26 modifier was billed 17,726 in 2022 and it was reported together with 91120 50.5% of the time.

The RUC determined that the ACG, AGA and ASGE should submit a CPT application that reflected a bundled code that includes anorectal manometry with sensation testing. The CPT Editorial Panel accepted a proposal at the May 2024 CPT Editorial Panel meeting to add new Category I CPT codes to report testing for rectal sensation, tone and compliance (91124) and anorectal manometry (91125) and delete codes 91120 and 91122. These new codes reflect the bundled services that the RUC requested with updates to reflect the way the services are currently performed.

A multi-specialty consensus panel of gastroenterologists and colon and rectal surgeons reviewed the survey data for codes 91124 and 91125 comparing the data and work RVUs (wRVUs) to the current data for similar XXX-day global codes.

Overall Compelling Evidence for Tab 10

We offer the following compelling evidence arguments for Tab 10 which are explained in detail below, organized by code:

- Documentation in clinical literature of an increase in barostat procedure time consistent with current survey data (91124)
- Documentation in clinical literature of a change in anorectal manometry technology and technique from conventional water-perfusion manometry to high-resolution solid-state manometry (91125)
- Evidence that incorrect assumptions were made in the previous valuation of the 91120 and 91122 services:
  - Flawed survey methodology
    - The intra-service time descriptions for 91120 were written ambiguously as reflected in the intra-service time description which has features unique to barostat ("the balloon was connected to a computerized distending device") but also features unique to anorectal manometry ("while being monitored, the patient is asked to defecate the balloon").
    - The value assigned to 91120 in 2004 was based on codes whose values were created from a building block methodology rather than survey data.
    - The 1995 survey for 91122 had only 4 responses.

Compelling Evidence for 91124 (barostat)

Code 91120 was created in 2004. In the last 20 years, there have been substantial updates to the protocols used for rectal sensation, tone and compliance testing (eg barostat) resulting in changes to physician time. The studies below indicate that it takes 60 minutes of active physician time to perform barostat testing.

- Vanhoutvin SA, Troost FJ, Kilkens TO, Lindsey PJ, Hamer HM, Jonkers DM, Venema K, Brummer RJ. The effects of butyrate enemas on visceral perception in healthy volunteers. Neurogastroenterol Motil. 2009 Sep;21(9):952-e76. doi: 10.1111/j.1365-2982.2009.01324.x. Epub 2009 May 19. PMID: 19460106
- Fox M, Thumshirn M, Fried M, Schwizer W. Barostat measurement of rectal compliance and capacity. Dis Colon Rectum. 2006 Mar;49(3):360-70. doi: 10.1007/s10350-005-0295-2. PMID: 16421659.
- Gladman MA, Dvorkin LS, Lunniss PJ, et al. Rectal hyposensitivity: a disorder of the rectal wall or the afferent pathway? An assessment using the barostat. American Journal of Gastroenterology 2005;100:106-14.

Here is an excerpt from Vanhoutvin *et al* 2009:

The barostat protocol consisted of four subprotocols, each designed for the measurement of specific parameters of interest.

*Balloon unfolding This part of the protocol consisted of one single distension at a balloon pressure of **20mmHg for 1 min**, to ensure that the balloon was placed correctly without folds that may impair the airflow.*

*Minimal distension pressure The second part of the protocol consisted of a staircase distension protocol with **pressure steps of 1 mmHg with a duration of 30s each and a range from 0 to 20mmHg.** The minimal distension pressure (MDP), which is the minimal balloon pressure needed to overcome the intra-abdominal*

pressure, was defined as the first pressure at which respiratory curves were present in the volume recording of the balloon. The entire protocol was performed up to the 20mmHg pressure in all subjects as a sensitization step prior to the compliance and perception measurements. The obtained MDP value was set to zero as a reference point. During this protocol, the volunteers were asked to report the moment at which they could sense the balloon for the first time. This pressure was defined as the threshold for first sensation.

Compliance Directly after finishing the MDP measurements, the third part of the protocol was initiated. This part of the protocol, designed for compliance measurement, which represents the elasticity of the rectum in mL mmHg−1, consisted of a staircase distension protocol with ***pressure steps of 3 mmHg with a duration of 30s each and a range of 0–33 mmHg.***

Visceral perception Subsequently, the distension protocol of the visceral perception measurements was initiated. This protocol consisted of ***semi-random distensions (at 4, 13, 10, 19, 16, 25, 22, 31, 28, 37, 34, 43, 40, 49, 46, 55, 52, 61, 58, 67, 64, 71mmHg above MDP respectively) with a duration of 1 min each, interspaced with 30-s intervals at MDP.*** *Thirty seconds after the start of each distension, volunteers scored the sensation of pain and discomfort on a 10-cm visual analogue scale (VAS) and urge on a six-point scale (0=no feeling, 1=just sensible, 2=clearly sensible/light urge, 3=normal urge, 4=strong urge/have to run to toilet, 5=maximum/stop) represented by six buttons on an electronic control panel (distender II perception panel),18,19 which was directly linked to the barostat equipment. The procedure was stopped when the maximum score for pain, urge or discomfort was reached.*

The aggregated time for this protocol as highlighted in bold is as follows: balloon unfolding (**1 minute**) + minimal distention pressure (20 pressure steps x 30s each = **10 minutes**) + compliance (11 pressure steps x 30s each = **5.5 minutes**) + visceral perception (22 distentions x (1 minute duration + 30s rest interval) = **33 minutes**) = **49.5 minutes**. When considering time for intraprocedural patient instruction, transitions between subprotocols, and physician interpretation of qualitative and quantitative measurements, this aligns well with the survey data indicating an intra-service time of 60 minutes.

We also question the original methodology used to value 91120. The intra-service time descriptions were written ambiguously. This ambiguity is reflected in the intra-service time description for 91120 which has features unique to barostat ("the balloon was connected to a computerized distending device") but also features unique to anorectal manometry ("while being monitored, the patient is asked to defecate the balloon"). The creation of new code numbers (91124 and 91125), that represent nonoverlapping intra-service work, along with CCI edits preventing concurrent reporting, is our effort to correct the flawed descriptions used in 2004.

Additionally, the RUC Rationale from the RUC database indicates that the RUC decided that 91120 was clinically similar to 91034 and 91037 and crosswalked its value to those codes. However, 91034 and 91037 were not valued consistent with current RUC methodology. The RUC set the value for 91034 and 91037 based on a building block methodology and no intra-service time for 91037 is listed in the RUC database under the RUC Survey Data tab. Therefore, the value assigned to 91120 in 2004 was based on codes whose values were created from a building block methodology rather than survey data.

91037 RUC Rationale from the RUC database: CPT created four new codes and deleted two existing codes to describe a new method of monitoring intra-esophageal pH levels. This new technology is a telemetry-based system for measuring acid reflux involving the placement of a monitoring capsule that is temporarily inserted and attached to the patient's esophagus. The capsule monitors the presence of acid and transmits pH levels via radiofrequency telemetry to an external receiver that the patient wears for up to 72 hours. Current codes do not accurately describe this procedure...

91034 and 91037
The RUC identified other codes that would serve as a proxy for the pre and post service work for codes 91034 Esophagus, gastroesophageal reflux test; with nasal catheter pH electrode(s) placement, recording, analysis and interpretation and 91037, Esophageal function test, gastroesophageal reflux test with nasal catheter intraluminal impedance electrode(s) placement, recording, analysis and interpretation. The RUC agreed that the preservice work for all four codes under review was equivalent to a 99212 Office or other outpatient visit for the evaluation and management of an established patient (work RVU= .45; total time=15 minutes). The post service work was equated to the physician interpretation work associated with code 93224 Electrocardiographic monitoring for 24 hours by continuous original ECG waveform recording and storage, with visual superimposition scanning;

includes recording, scanning analysis with report, physician review and interpretation (work RVU= .52; total time16 minutes). **Therefore, the recommended RVU and physician time would be a combination of the values from these two reference codes (.45 + .52 = .97 and 15 minutes + 16 minutes =31 minutes). The RUC recommends a work RVU of .97 and total physician time of 31 minutes for codes 91034 and 91037**

91120 RUC Rationale from the RUC database: The RUC reviewed the specialty's survey results for 91120 Rectal sensation, tone, and compliance test (ie, response to graded balloon distention). The survey respondents recommended a median work RVU of 2.0, a 25th percentile work RVU of 1.70 and low work RVU of 1.30. The survey respondents indicated that 91120 was comparable to the reference service code 91122 Anorectal manometry (Work RVU=1.77). However, the specialty society indicated that the reference code 91122 is not a good comparison when examining service time and intensity associated with this code. Accordingly, the specialty society based the values on the work value assigned to codes presented at the January 2004 RUC meeting, 91034 Esophagus, gastroesophageal reflux test, with nasal catheter PH electrode(s), recording, analysis and interpretation (Work RVU=0.97) and 91037 Esophageal function test, with nasal catheter intraluminal impedance electrode(s) recording, analysis and interpretation (Work RVU=0.97). The RUC felt that these codes were comparable in terms of the time and intensity. In addition, this valuation will keep this family of diagnostic codes in the proper rank order. The RUC recommends adjusting the physician pre-service time to 15 minutes, the intra-service time of 15 minutes and the post-service time of 15 minutes, totaling 45 minutes. Therefore, the RUC recommends a work RVU of 0.97 and total physician time of 45 minutes for code 91120.

Based on documentation in clinical literature of procedure time consistent with the current survey data and previous flawed methodology used in establishing the 2004 value for 91120, we believe 91124 meets compelling evidence for consideration of a physician work RVU of 3.05 RVUs.

Compelling Evidence for 91125 (anorectal manometry)
Code 91122 was last reviewed by the RUC in 1995 with a survey sample size of 13 and 4 responses; using 4 responses to determine times and values would not be accepted under current methodology.

In addition, there have been substantial advances in anorectal manometry technology and technique in the last 20 years. In 1995, the standard or “conventional” manometry was performed using non-high resolution, water-perfused catheters with 3-6 widely spaced unidirectional sensors. This catheter was moved in and out of the anorectum using the “pull through” technique mentioned in the intra-service work description for 91122 in the RUC database. This movement would generate pressure line-tracings that were interpreted separately to reflect anal and rectal pressures. In 2007, high-resolution manometry was introduced in which solid-state catheters now with up to 256 closely-spaced circumferential sensors could record and display simultaneous and dynamic information from the whole anal canal and distal rectum. Improved spatial resolution and signal processing allowed for data to be displayed as spatiotemporal color-contour pressure topography plots rather than overlapping line tracings improving diagnostic yield and accuracy (Dinning et al, 2015). At this time, greater than 50% of institutions worldwide and 75% in North and South America are using high-resolution anorectal manometry (Carrington et al, 2017) highlighting that the work described in 91122 is no longer typical.

- Carrington EV, Heinrich H, Knowles CH, Rao SS, Fox M, Scott SM; International Anorectal Physiology Working Party Group (IAPWG). Methods of anorectal manometry vary widely in clinical practice: Results from an international survey. Neurogastroenterol Motil. 2017 Aug;29(8):e13016. doi: 10.1111/nmo.13016. Epub 2017 Jan 18. PMID: 28101937.
- Dinning PG, Carrington EV, Scott SM. The use of colonic and anorectal high-resolution manometry and its place in clinical work and in research. Neurogastroenterol Motil. 2015 Dec;27(12):1693-708. doi: 10.1111/nmo.12632. Epub 2015 Jul 30. PMID: 26224550.

Based on documentation in clinical literature of a change in technology and technique and a flawed survey methodology with only 4 responses when 91122 was surveyed in 1995, we believe 91125 meets compelling evidence for consideration of a physician work RVU of 2.70 RVUs.

91125 – Discussion and Recommendation
Code 91125 is a new code for anorectal manometry, with rectal sensation and rectal balloon expulsion testing was approved by the CPT Editorial Panel at its May 2024 meeting. The ACG, AGA, ASGE and ASCRS conducted a survey for the September 2024 RUC meeting and received 76 responses.

We recommend the median **wRVU of 2.70**.

Pre-time: 10 minutes is appropriate, reflecting the survey median.

Post-time: 15 minutes is appropriate, reflecting the survey median.

Intra-service time: 45 minutes is appropriate, reflecting the survey median.

Key Reference Services
The top key reference service, code 91112, was selected by 79% of the respondents. Code 91112 requires slightly less intra-service and total service time. The complexity and intensity measures correctly indicate that code 91125 is much more complex and intense than 91112. The work related to 91112 is less intense and complex because it involves a swallowed capsule that passively captures transit and pressure measurements, while 91125 requires active participation of the physician to elicit and measure response to various maneuvers. The second key reference service, code 91113, was selected by 7% of the respondents who rated all intensity and complexity measures for survey code 91124 as greater.

Comparison to other GI tests:
When organized by IWPUT and using the median RVW, the new codes for barostat testing (91124) and anorectal manometry (91125) fit logically between the most similar GI test codes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 91120, 91122

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Gastroenterology How often? Commonly

Specialty Colorectal Surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 53178
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2022 CMS Medicare volume is 17,726. National volume is estimated to be three times Medicare (17,726)*3= 53,178

Specialty Gastroenterology Frequency 22300 Percentage 41.93 %

Specialty Colorectal Surgery Frequency 9000 Percentage 16.92 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 17,726 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database volume = 17,726 for code 91122 which is one of the codes that was bundled to create 91125

Specialty Gastroenterology Frequency 7450 Percentage 42.02 %

Specialty Colorectal Surgery Frequency 3000 Percentage 16.92 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 91122

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2024

CPT Code	Long Descriptor	Global Period
91124	Rectal sensation, tone, and compliance study (eg, barostat)	XXX
91125	Anorectal manometry, with rectal sensation and rectal balloon expulsion test, when performed	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
91124	A 35-year-old female presents with a three-year history of refractory constipation. She has no desire to defecate and manually disimpacts herself once a week. She has tried several prescription laxatives and suppositories without relief. Rectal examination suggests impaired rectal sensation as evidenced by a large amount of hard stool. Rectal sensation, tone, and compliance test (eg, barostat) is ordered for further evaluation.
91125	A 66-year-old female has noted worsening constipation and fecal incontinence. Despite trials of both laxatives and anti-diarrheals, she continues to have symptoms. Blood tests and a colonoscopy were normal. An anorectal manometry is ordered to evaluate anorectal function.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The ACG, AGA, ASGE and ASCRS convened an RVS expert panel of the surveying specialty societies to review practice expense data for codes 91124 and91125. The panel included both sub-specialists and generalists from within the specialties of a variety of settings across the United States. They also received input from practice managers and clinical staff familiar with the direct expense inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The reference code for comparison of new code 91124 is 91120 because it includes components of barostat with similar clinical activities. Code 91120 was created 20 years ago and has experienced major changes to staff protocol.

   Code 91125 is a new code that represents the combination of codes 91120 and 91122; for this reason, the reference codes for comparison to 91125 are 91120 and 91122 with similar clinical activities.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

No, we do not anticipate 91124 and 91125 will be typically reported with an E/M. Codes 91124 and 91125 are new codes, but they were created based on 91120 and 91122. Code 91120 was billed 9.7% of the time with an office E/M and 13% of the time with a non-facility E/M according to the RUC database. Code 91122 was billed 16% of the time with an office E/M and 20.6% of the time with a non-facility E/M.

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

91124: There is no dominant specialty based on data for 91120, but the top/dominant provider is gastroenterology. Gastroenterology provides 91120 in the non-facility 46.2% of the time. Gastroenterology is also the top/dominant provider for the global.

91125: There is no dominant specialty based on data for 91120 and 91122, but the top/dominant provider for both codes is gastroenterology. Gastroenterology provides 91120 in the non-facility 46.2% of the time and 91122 29.3% of the time. Gastroenterology is also the top/dominant provider for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

There has been a change in technique and knowledge for barostat (formerly 91120, now 91124) that has led to a significant change in clinical staff time.

Since the creation of code 91120 in 2004, there have been substantial updates to the protocols used for rectal sensation, tone and compliance testing (eg barostat). Notably for clinical staff time, not only are staff required to assist physicians during active clinical testing (50 minutes), but they also monitor patients during two adaptation and equilibration periods lasting 20 minutes. Research over the last 20 years has shown that resting anal tone is significantly altered after barostat catheter insertion through the anal canal and an adaptation period is required to allow for anal tone to return to baseline and stabilize after intubation. Similarly, research has shown that performing a "conditioning" distention followed by a 20-minute equilibration period prior to phasic distensions leads to more reproducible compliance measurements and sensory thresholds.

Fox M, Thumshirn M, Fried M, Schwizer W. Barostat measurement of rectal compliance and capacity. Dis Colon Rectum. 2006 Mar;49(3):360-70. doi: 10.1007/s10350-005-0295-2. PMID: 16421659.

Gladman MA, Dvorkin LS, Lunniss PJ, et al. Rectal hyposensitivity: a disorder of the rectal wall or the afferent pathway? An assessment using the barostat. American Journal of Gastroenterology 2005;100:106-14.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

The global period for 91124 is XXX, which is the same as 91120.

Code 91125 is a combination of code 91120 (an XXX-day global code) and 91122 (a 0-day global code). CPT recommended the XXX-day global period for 91125 and it was surveyed using the XXX-day global survey instrument. While 91122 has a 0-day global period, it was last evaluated in 1995 and CMS and the RUC now assign these tests XXX-day global periods. For these reasons, we agree with the CPT Panel that the XXX-day global period is appropriate for 91125 and does not reflect a transition in global periods.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

91124 Intra-Service Clinical Labor Activities = RN/LPN/MTA
CA013 (Prepare room, equipment and supplies) standard = 2 minutes
We recommend 15 additional minutes to prepare the room, equipment and supplies for a total of 17 minutes. Clinical staff must set up the equipment, including the following activities:
1. Calibrate rectal barostat equipment
2. Tie balloon to the catheter and reinforce with paraffin wrap.
3. Test catheter to assure that the balloon deploys properly and that there is no leakage.
4. Fan fold barostat balloon for easier insertion.

CA024 (Clean room/equipment by clinical staff) standard = 3 minutes
We recommend 27 additional minutes to clean the room and equipment for a total of 30 minutes. This is consistent with the standard for flexible scope cleaning (CA025). Similar to flexible endoscopes, after catheter use it is standard for the nurse to rinse and dry the ~~anorectal manometry~~ barostat catheter and then package it for sanitization per manufacturer instructions by sterile processing.

91125 Intra-Service Clinical Labor Activities = RN/LPN/MTA
CA013 (Prepare room, equipment and supplies) standard = 2 minutes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We recommend 15 additional minutes to prepare the room, equipment and supplies for a total of 17 minutes. Clinical staff must set up the equipment, including the following activities:
1. Turn on the ManoScan High Resolution machine. Turn on computer tower.
2. Connect the manometry catheter to the ManoScan HRM Module with red connector to red input and blue connector to blue input. Push connector straight in. Do not turn or twist for this will damage connector pins.
3. Click the ManoScan 3.0 icon to open the application.
4. Select the catheter by its serial number. Enter patient information before calibration.
5. Click the 'Start' button to enter patient's information, which includes first and last name, medical record number, date of birth, sex, height in feet and inches, attending physician, referring physician, nurse performing the procedure, procedure name, and indication for procedure (s).
7. Click 'Next' to calibrate the catheter with patient information. Follow software instructions to complete catheter calibration.
8. Remove catheter from calibration chamber and apply the ManoShield AR sheath.
9. Tie the balloon to the catheter with two strings at non-sensor locations along the catheter. Test catheter with air syringe to assure that the balloon deploys properly and that there is no leakage.

CA024 (Clean room/equipment by clinical staff) standard = 3 minutes
We recommend 27 additional minutes to clean the room and equipment for a total of 30 minutes. This is consistent with the standard for flexible scope cleaning (CA025). Similar to flexible endoscopes, after catheter use it is standard for the nurse to rinse and dry the anorectal manometry catheter and then package it for sanitization per manufacturer instructions by sterile processing.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

Not applicable

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

For reference codes 91120 and 91122, the time allocated to CA010 prior to CMS increasing the clinical activity to 5 minutes in CY 2018 was as follows:
91120 = 3 minutes for CA010
91122 = 3 minutes for CA010

For new codes 91124 and 91125, we are requesting 3 minutes because 3 vital signs are taken
Level 1 (1-3 vitals) = 3 minutes

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

91124 and 91125 Pre-Service Period Clinical Labor Activities = L037D (RN/LPN/MTA)
- 3 minutes to complete pre-service diagnostic and referral forms (CA001)
- 3 minutes to coordinate pre-surgery services (including test results) (CA002)
- 3 minutes to complete pre-procedure phone calls and prescription (CA005)

b. Service period (includes pre, intra and post):

91124 and 91125 Service Period – Pre-service Clinical Labor Activities = L037D (RN/LPN/MTA)
- 3 minutes to greet patient, provide gowning, ensure appropriate medical records are available (CA009)
- 3 minutes to obtain vital signs, Level 1 (1-3 vital signs) (CA010)
- 3 minutes to provide education/obtain consent (CA011)
- 17 minutes to prepare room, equipment and supplies (CA013)
- 5 minutes to prepare, set-up and start IV, initial positioning and monitoring of patient, and additional positioning of patient in the left lateral position with knees and hips bent at a 90° angle and hips close to the edge of the exam table in preparation for rectal exam and catheter insertion (CA016)

91124 Service Period – Intra-service Clinical Labor Activities = L037D (RN/LPN/MTA)
- 90 minutes to perform procedure/service not directly related to physician work time (CA021)

91125 Service Period – Intra-service Clinical Labor Activities = L037D (RN/LPN/MTA)
- 30 minutes to assist physician or other qualified healthcare professional---directly related to physician work time (67%) (CA019)

91124 and 91125 Service Period – Post-service Clinical Labor Activities = L037D (RN/LPN/MTA)
- 30 minutes to clean room/equipment by clinical staff (CA024)

c. Post-service period:

91124 and 91125 Post-Service Clinical Labor Activities = RN/LPN/MTA
- 3 minutes to conduct patient communications (CA037)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Intra-service of the service period clinical staff activities

91124:
-Assist physician with barostat catheter insertion.
-Clean rectal area and tape catheter to the buttock using Tegaderm once insertion is complete.
-Make sure stopcock is turned on to the catheter and flush each line to remove air.
-Connect catheter to port on barostat machine.
-Monitor patient for discomfort or trauma during 20-minute adaptation period.
-Initiate barostat software.
-Record basal tone determined and verbalized by physician in logbook.
-While physician instructs patient, initiate barostat software sequence needed to identify operating pressure.
-Record operating pressure determined and verbalized by physician in logbook and set operating pressure on barostat machine.
-Perform conditioning distension and exclusively monitor patient for 20-minute equilibration period as patient returns to sensory motor baseline.

-While physician guides patient, initiate ascending isobaric distention protocol and record pressures and volumes verbalized by physician.
-While physician guides patient through sensory protocol, initiate and adjust distention protocol and record pressure, volume and sensory thresholds verbalized by patient and physician.
-Offer and assist patient with using bedpan prior to stimulus.
-Prepare and administer stimulus.
-Monitor patient for reaction to stimulus and record pressure and volume values as directed by physician.
-Exit barostat software program.
-Manually deflate barostat balloon and remove catheter.

91125:
-Make sure stopcock is turned on to the catheter and flush each line to remove air.
-Assist physician in confirming adequate manometry catheter insertion based on computer software interface.
-Monitor for 3-minute acclimation period and then capture resting pressure frame on computer software.
-After physician instructs patients on rectal squeeze maneuvers, coach patient through cycles of 5s squeeze maneuvers followed by 30s recovery periods, ensuring adequate capture on computer software.
-Capture endurance squeeze followed by 60s recovery.
-After physician instructs patients on rectal push maneuvers, coach patient through cycles of 15s push maneuvers followed by 30s recovery periods, ensuring adequate capture on computer software.
-Assist physician with balloon inflation and capture frame for rectoanal inhibitory reflux on computer software.
-After physician instructs patients on sensory testing, assist with incremental balloon inflations and capture sensory thresholds on computer software.
-After physician instructs patients on cough maneuvers, capture cycles of cough maneuvers followed by 30s recovery periods on computer software.
-Complete manometry study on computer software in coordination with physician removal of catheter.
-Assist physician in placing expulsion balloon and filling with warm water using syringe.
-Assist patient in sitting upright and transferring to private commode.
-Monitor and assist patient during balloon expulsion testing.
-Escort patient back to procedure room for discharge.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

Not applicable

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

Not applicable

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

Not applicable

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

In the 91124-91125 invoice summary are invoices for the following supplies:

Assy, ManoShield AR, 04260167482248; MSS-3599. This is the sheath for the reusable catheter required for the manometry system (EQ181). When the anorectal manometry was originally performed, it used water perfusion. Using the sheath for the reusable catheter is the current standard.

Single-Use Anorectal Expulsion Catheter, 230620. This is the anorectal expulsion balloon necessary to perform the anorectal manometry test.

We also included an invoice for EQ070, the barostat system with hardware and software, that reflects the current total cost of the system is $39,275 in comparison to the price $23,625 from the 2024 CMS Direct PE Inputs Medical Supplies Listing. We request the RUC share this invoice with CMS.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, we are recommending SA048 (*pack, minimum multi-specialty visit*) for 91124 and 91125, which is an established package of supplies as defined by CMS.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
SB036 - paper, exam table (unit price = $0.01)		foot	7
SB022 - gloves, non-sterile (unit price = $0.30)		pair	2
SB026 - gown, patient (unit price = $0.59)		item	1

SB037 - pillow case (unit price = $0.47)	item	1
SB004 - cover, thermometer probe (unit price = $0.22)	item	1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Not applicable

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Not applicable

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

91124 Equipment and Formula
EQ070 (barostat system, with hardware & software) = default
EF070 (table, exam) = default
EF014 (light, surgical) = default

91125 Equipment and Formula
EF070 (table, exam) = default
EF014 (light, surgical) = default
EQ181 (manometry system (computer, transducers, catheter)) = default

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

Not applicable

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

91124 = 91120
91125 = 91122

ADDITIONAL INFORMATION

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2024

Immunization Counseling – Tab 11

In May 2024, the CPT Editorial Panel created three new time-based codes to report vaccine counseling performed where a vaccine is not administered. These services were surveyed and reviewed at the September 2024 RUC meeting.

Vaccine counseling services performed by physicians and other QHPs is critical to increasing vaccination rates and combatting hesitancy. These services entail listening to patient concerns, answering questions, and building trust; selecting counseling strategies and conveying information in a manner specific to each patient's concerns, cultural beliefs, and literacy level; providing patients with appropriate resources; and planning with patients to immunize in the future or engage in alternative preventive strategies. These activities are above and beyond those captured in an Evaluation and Management (E/M) or preventive visit.

90482 ***Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; 3 minutes up to 10 minutes***
The RUC reviewed the survey results from 148 physicians and determined the survey 25th percentile work RVU of 0.24 appropriately accounts for the work required to perform this service. The RUC recommends 6 minutes of intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an E/M office visit or preventive medicine visit.

The RUC compared the surveyed code to the top two key reference services CPT code 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service and total time) and 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes intra-service and total time). The RUC agreed that these services require the same physician work and similar physician time to perform, thus, should be valued the same. The RUC agreed that the intensity and risk associated with counseling to possibly administer a life-saving vaccine or provide herd immunity in a given community is greater for this service than the key reference services.

For additional support, the RUC referenced MPC codes 99281 *Emergency department visit for the evaluation and management of a patient that may not require the presence of a physician or other qualified health care professional* (work RVW = 0.25 and 10 minutes intra-service time and total time), 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVW = 0.28, 7 minutes intra-service time and 13 minutes total time) and 92081 *Visual field examination, unilateral or bilateral, with interpretation and report; limited examination (eg, tangent screen, Autoplot, arc perimeter, or single stimulus level automated test, such as Octopus 3 or 7 equivalent)* (work RVW = 0.30, 7 minutes intra-service time and 10 minutes total time). The RUC determined that the survey 25th percentile work value of 0.24 appropriately places CPT code 90482 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.24 for CPT code 90482.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

90483 ***Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 10 minutes up to 20 minutes***
The RUC reviewed the survey results from 127 physicians and determined the survey 25th percentile work RVU of 0.50 appropriately accounts for the work required to perform this service. The RUC recommends 13 minutes of intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an E/M office visit or preventive medicine visit.

The specialty societies stated that immunization counseling codes 90483 and 90484 will most often be reported in visits where the physician or QHP must counsel the patient on multiple vaccines, address patient concerns, and develop future immunization or preventive strategies for each of these vaccines. The typical patient has done exploration on the internet and comes to the visit with numerous questions and concerns about some, if not all, of the immunizations in question. The need to tailor counseling strategies to each patient, their cultural backgrounds, and the unique concerns they may have about each immunization contributes to the higher levels of intensity, complexity, and psychological stress identified by respondents.

The RUC compared the surveyed code to the top key reference service CPT code 99407 *Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes* (work RVU = 0.50 and 15 minutes intra-service and total time) and determined that these services require the same physician work and a similar amount of physician time to perform, thus should be valued the same. The RUC compared the surveyed code to the second top key reference service, 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded* (work RVU = 0.70 and 16 minutes total time). The RUC agreed that the surveyed code requires less physician work, slightly less physician time and is slightly less intense to perform than 99212, thus should be valued lower.

For comparison, the RUC looked at a scenario if a physician provided administration of an immunization with counseling, reporting CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes total time) and also provided a second immunization, CPT code 90461 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)* (work RVU = 0.18 and 5 minutes total time), the result is 12 minutes total time and a work RVU of 0.42. The RUC determined this scenario was an appropriate comparison because CPT code 90483 involves the physician/QHP having a more in-depth and difficult discussion with the patient, requiring more time and intensity, providing 13 minutes of counseling as indicated by the 127 physician survey respondents.

For additional support, the RUC referenced MPC codes 76857 *Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)* (work RVW = 0.50 and 7 minutes intra-service time and 17 minutes total time) and 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

analyzer full threshold programs 30-2, 24-2, or 30/60-2) (work RVW = 0.50, 10 minutes intra-service time and 13 minutes total time). The RUC determined that the survey 25th percentile work value of 0.50 appropriately places CPT code 90483 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.50 for CPT code 90483.**

90484 ***Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 20 minutes***
The RUC reviewed the survey results from 139 physicians and determined the survey 25th percentile work RVU of 0.75 appropriately accounts for the work required to perform this service. The RUC recommends 22 minutes of intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an E/M office visit or preventive medicine visit.

The specialty societies stated that immunization counseling codes 90483 and 90484 will most often be reported in visits where the physician or QHP must counsel the patient on multiple vaccines, address patient concerns, and develop future immunization or preventive strategies for each of these vaccines. The typical patient has done exploration on the internet and comes to the visit with numerous questions and concerns about some if not all of the immunizations in question. The need to tailor counseling strategies to each patient, their cultural backgrounds, and the unique concerns they may have about each immunization contributes to the higher levels of intensity, complexity, and psychological stress identified by respondents.

The RUC compared the surveyed code to the top key reference service CPT code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time) and determined that CPT code 90484 requires less physician work and time to perform, thus should be valued lower. The RUC compared the surveyed code to the second top key reference service, 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded* (work RVU = 0.70 and 16 minutes total time). The RUC agreed that the surveyed code requires slightly more physician work and time to perform, thus, should be valued higher than 99212.

For comparison to 22 minutes of immunization administration *with counseling*, a physician would need to report CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes total time), plus 3 additional immunizations, CPT code 90461 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)* (work RVU = 0.18 and 5 minutes total time), totaling 0.78 work RVUs. The RUC determined the survey 25th percentile work RVU of 0.75 and total time of 22 minutes for 90484 immunization counseling demonstrates the correct relativity compared to immunization administration with counseling services.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC referenced MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVW = 0.75 and 20 minutes intra-service time and 26 minutes total time), 95972 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional* (work RVW = 0.80, 23 minutes intra-service time and 36 minutes total time), and 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84, 10 minutes intra-service time and 22 minutes total time). The RUC determined that the survey 25th percentile work value of 0.75 appropriately places CPT code 90484 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.75 for CPT code 90484.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made one modification to reduce the time for documentation for clinical activity CA034 *Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)* from 3 to 2 minutes for codes 90482-90484 to eliminate any duplication between CA034 and CA008 *Perform regulatory mandated quality assurance activity (pre-service)*. The PE Subcommittee also discussed supply item SK012 *CDC information sheets* and agreed that the quantity recommended for each code is consistent with the corresponding vignette. Specifically, two vaccines are mentioned in the vignette for both 90482 and 90483, so two CDC information sheets are recommended for each code. For code 90484, the vignette references a two-month, routine well-child visit, such visits typically involve 5-7 immunizations, so six CDC information sheets are recommended. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

G-Code Request for Deletion
The RUC requests that CMS delete codes G0310-G0313, as there is no longer a need for these G-codes with the creation of new CPT codes 90482-90484.

Evaluation and Management
Preventive Medicine Services

The following codes . . .

Immunization/vaccine/toxoid products, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. For immunization administration and immunization risk/benefit counseling, see 90460, 90461, 90471-90474, 90480, 96380, 96381. For immunization risk/benefit counseling without administration, see 90482, 90483, 90484. For *immunization*/vaccine/toxoid products, see 90380, 90381, 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322.

Medicine
Immune Globulins, Serum or Recombinant Products

90378 *Respiratory syncytial virus, monoclonal antibody, recombinant, for intramuscular use, 50 mg, each*

(For physician or other qualified health care professional [QHP] immunization counseling of 3 minutes or greater when the immunization is not administered on the same date, see 90482, 90483, 90484)

90380 *Respiratory syncytial virus, monoclonal antibody, seasonal dose; 0.5 mL dosage, for intramuscular use*

(For physician or other qualified health care professional [QHP] immunization counseling of 3 minutes or greater when the immunization is not administered on the same date, see 90482, 90483, 90484)

90381 *1 mL dosage, for intramuscular use*

(Do not report 90380, 90381 in conjunction with 96372)

(For administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, see 96380, 96381)

(For physician or other qualified health care professional [QHP] immunization counseling of 3 minutes or greater when the immunization is not administered on the same date, see 90482, 90483, 90484)

Immunization Administration for Vaccines/Toxoids

Report vaccine immunization administration codes (90460, 90461, 90471-90474, 90480 in addition to the vaccine and toxoid code(s) (90476-90759, 91304, 91318, 91319, 91320, 91321, 91322).

Report codes 90460 and 90461 only when the physician or other qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine other than when performed for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccines. For immunization administration of any vaccine, other than SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines, that is not accompanied by face-to-face physician or other qualified health care professional counseling to the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

patient/family/guardian or for administration of vaccines to patients over 18 years of age, report codes 90471-90474. (See also ***Instructions for Use of the CPT Codebook*** *for definition of reporting qualifications.)*

Report 90480 for immunization administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines only. This code is used for administration and counseling that involves the use of COVID-19 vaccines for immunization against contracting disease. This includes administration of COVID-19 vaccine for all age populations.

For physician or other qualified health care professional (QHP) immunization counseling of three minutes or greater when the immunization is not administered on the same date, see 90482, 90483, 90484.

If more than one immunization is recommended and the patient/family/caregiver accepts one or more immunization(s) and declines one or more immunization(s), use 90460, 90461, 90471, 90472, 90473, 90474, 90480, 96380, 96381 as indicated for immunization administration and see 90482, 90483, 90484 for immunization counseling for those immunizations for which administration did not occur on the same day that counseling was performed.

If a significant separately identifiable evaluation and management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99242, 99243, 99244, 99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96372, 96374, 96375, 96380, 96381, 96380, 96381.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372-96379)

90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*

✚*90461* *each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)*

(Use 90460 for each vaccine administered. For vaccines with multiple components [combination vaccines], report 90460 in conjunction with 90461 for each additional component in a given vaccine)

(Do not report 90460, 90461 in conjunction with 91304, 91318, 91319, 91320, 91321, 91322, unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter)

(For physician or other qualified health care professional immunization counseling of 3 minutes or greater when one or more immunizations are not administered on the same date, see 90482, 90483, 90484)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

✚*90474*	*each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)*
	(Use 90474 in conjunction with 90460, 90471, 90473)
	(Do not report 90473, 90474 in conjunction with 91304, 91318, 91319, 91320, 91321, 91322, unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter)

CPT Descriptor: Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; 3 minutes up to 10 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 32-year-old male presents for a routine appointment. The physician recommends vaccination with influenza and COVID-19. The patient is hesitant to accept the immunizations. The patient states he will think about it for the future.

Percentage of Survey Respondents who found Vignette to be Typical: 74%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified healthcare professional (QHP) informs the patient and/or caregiver that the patient is due for specific immunizations. The patient and/or caregiver is hesitant to receive the immunizations, so the physician/QHP engages them in a conversation to explore and listen to their concerns, answers their questions, shows empathy, and builds trust through acknowledgement of concerns. The physician/QHP chooses counseling strategies specific to each patient and/or caregiver's hesitation level and personalizes the information based on cultural beliefs, vaccine concerns, and literacy level. The physician/QHP provides the patient and/or caregiver with educational resources and reliable websites. The physician/QHP works together with the patient and/or caregiver to develop a plan for immunizing.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	2%	5%	40%	47%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	44%	49%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	71%	22%
Physical effort required	13%	80%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	31%	62%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	4%	4%	48%	35%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	39%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	61%	22%
Physical effort required	13%	74%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	43%	48%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the May 2024 CPT Editorial Panel meeting, the panel created 3 new codes (90482, 90483, and 90484) for immunization counseling services where a vaccination is not ultimately administered. These codes were created to account for the substantial time physicians and other QHPs spend counseling patients on vaccine efficacy, safety, and importance outside of E/M and preventive

care service activities. The 3 codes are reported based on the amount of time spent counseling a patient. The service may be performed in person or via telehealth.

The creation of these codes follows 2 CMS coverage decisions related to state Medicaid programs: (1) CMS will fully fund (100% Federal Medical Assistance Percentage) state Medicaid payment for COVID-19 vaccine counseling for children when provided separately from COVID-19 immunization administration and require coverage under the Early and Periodic Screening, Diagnostic and Treatment (EPSDT) benefit; and (2) CMS will require counseling of routine childhood immunizations under the EPSDT. CMS created 6 new G-codes for vaccine counseling when a vaccine is not provided. However, these codes are unnecessarily complex. The American Academy of Pediatrics and American Academy of Family Physicians submitted a code change application to CPT for codes that would more appropriately capture the work encompassed in immunization counseling and more appropriately support payment. These codes are critical to supporting broader efforts across the medical community to combat vaccine hesitancy, and ensuring the availability of payment for this work. Per the CPT Code Change Application, the services may be performed in non-facility and facility settings and are recommended to be classified as a preventive service to support health equity and access to care.

The U.S. is experiencing a rise in vaccine hesitancy, reflected in data on vaccination rates and surveys of public sentiment. The share of kindergarten-aged children who received all state-required vaccines declined between the 2019-20 and 2021-22 school years from 95% to 93% (CDC, 2024). Additionally, the share of Americans who believe it is important for their children to be vaccinated has declined over the last 2 decades. Over the same period, the share of U.S. adults who believe vaccines to be more dangerous than the diseases they are developed to prevent has risen (Gallup, 2024). This hesitancy is leading to an increase in immunization-preventable illnesses that are burdening the U.S. healthcare system. Exemplifying this issue, the U.S. experienced a measles resurgence (CDC, 2024), and other immunization-preventable diseases such as pertussis, shingles, COVID-19, human papillomavirus (HPV), and respiratory syncytial virus (RSV) continue to burden the U.S. healthcare system.

Vaccine counseling services by physicians and other QHPs is critical to increasing vaccination rates and combatting hesitancy. These services entail listening to patient concerns, answering questions, and building trust; selecting counseling strategies and conveying information in a manner specific to each patient's concerns, cultural beliefs, and literacy level; providing patients with appropriate resources; and making a plan with patients to immunize in the future or engage in alternative preventive strategies. These activities are above and beyond those captured in an E/M or preventive visit.

Survey Process

Supporting broad representation across the primary care specialties that would typically provides immunization counseling services, the American Academy of Family Physicians (AAFP), American Academy of Pediatrics (AAP), American College of Physicians (ACP), and American Osteopathic Association (AOA) conducted a survey of all 3 codes.
The survey was sent to a random sample of 15,847 physicians. The number of respondents for each code and percent of respondents who found the vignette typical are as follows:

- 90482: 148 respondents, 74% found the vignette typical
- 90483: 127 respondents, 62% found the vignette typical
- 90484: 139 respondents, 87% found the vignette typical

The surveying societies convened an expert panel that evaluated survey results and developed the following recommendations.

The surveying societies added a question to the survey, which was approved by the research committee, seeking to ascertain if this service would be stand-alone or more typically reported with an E/M visit. The societies and the RSC struggled with the best way to word the question that respondents would understand. Ultimately, the question was worded as follows:

In what percent of patients do you provide this service with an Evaluation/Management or Preventive Medicine service?
In more than 50% of patients
In less than or equal to 50% of patients

Based on survey results, the societies believe that the question was written in a way that could easily be misinterpreted by those not familiar with RUC process. Some likely interpreted the question to ask "do you provide this service at the majority of your visits" where we would expect them to say no, while others may have interpreted the question as intended ("do you provide this service with another service the majority of time") where we would expect them to say yes. The ambiguity of the question unfortunately negates the value of the response. Because of this we have opted to rely on expert panel to address this issue. The expert panel's consensus was that this service would typically be reported with an E/M. This is reflected in the section of the work SOR below regarding "Services Reported with Multiple CPT Codes" and the PE SOR.

Recommendations

Based on the strong response to the survey, the specialty societies recommend the survey 25th percentile of 0.24 work RVUs and the survey median of 6 minutes of intra-service time, which also serves as total time.

While the work RVU for this service is slightly greater than the key reference service (99406), 53% of respondents rated the overall intensity/complexity of this service as greater than the top KRS. Additionally, 62% of respondents reported the psychological stress

of 90482 as greater than that of the top KRS, 90406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes.*

Respondents likely found 90482 to be more intense/complex because (1) the typical patient for this encounter is highly reluctant to receive a vaccine, unlike the typical patient for 90406 which may be interested in quitting smoking or may recognize the harms of smoking, (2) the effort and skill required to engage in the appropriate counseling strategies to address concerns of a vaccine-hesitant patient is greater, and (3) how the provider handles the conversation may influence whether or not the patient returns to the provider for overall care.

Conclusion

For code 90482, *immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; 3 minutes up to 10 minutes*, the societies recommend the survey 25th percentile, **a work RVU of 0.24 and intra-service time of 6 minutes**.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) 90482 will typically be reported with an office/outpatient E/M code (99202-99215) or a preventive services code (99381-99397).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT	Global	wRVU	Pre	Intra	Post
4.	99213	XXX	1.30	5	20	5
5.	90482	XXX	0.30	0	6	0
6.	Total		1.60	5	26	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Commonly

Specialty Internal Medicine How often? Commonly

Specialty Pediatrics How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 2974702

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Overall utilization was calculated using influenza vaccine administrations as a proxy for overall encounters that may result in counseling. The total U.S. population (333.3 million) was multiplied by the share of adults who received the flu vaccine (50%) based on 2022 CDC data. We then determined 35% of these encounters would occur outside the pharmacy setting (IQVIA Institute, 2022), allowing the patient to potentially receive counseling by a physician or QHP. Of these visits, the societies assumed 20% of patients would be vaccine hesitant and require counseling (Gallup, 2024), and only 30% of counseling encounters would not result in a vaccination. This resulted in 3,499,650 immunization counseling visits without vaccine administration. Among these visits, we estimated that 85% would report 90482 (of duration under 10 minutes), 10% would report 90483 (of duration 10-20 minutes), and 5% would report 90484 (of duration greater than 20 minutes).

Specialty Family Medicine Frequency 1041145 Percentage 34.99 %

Specialty Internal Medicine Frequency 1041145 Percentage 34.99 %

Specialty Pediatrics Frequency 892411 Percentage 30.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 324,448 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. There are 61.2 million Americans who are eligible for Medicare. Adults age 65 and older who received influenza and pneumococcal vaccines was 66% in 2022 (CDC, 2023). This number was used to estimate the share of Medicare beneficiaries who would have an encounter where vaccine counseling may occur. In 2022, approximately 35% of pneumococcal and flu vaccines were provided outside the pharmacy setting, thus allowing patients to receive counseling (IQVIA Institute, 2022) by a physician or QHP. Of these visits, the societies assumed 9% of patients would be vaccine hesitant and require counseling (ASPE, 2021), and only 30% of counseling encounters would not result in a vaccination. This resulted in 381,704 immunization counseling visits without vaccine administration. Among these visits, we estimated that 85% would report 90482 (of duration under 10 minutes), 10% would report 90483 (of duration 10-20 minutes), and 5% would report 90484 (of duration greater than 20 minutes).

Specialty Family Medicine Frequency 162224 Percentage 50.00 %

Specialty Internal Medicine Frequency 162224 Percentage 50.00 %

Specialty Pediatrics Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

CPT Descriptor: Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 10 minutes up to 20 minutes.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 28-year-old pregnant female presents for a scheduled prenatal appointment. The physician recommends vaccination with Tdap and influenza. The patient has significant safety concerns related to her fetus. Patient declines vaccination.

Percentage of Survey Respondents who found Vignette to be Typical: 62%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified healthcare professional (QHP) informs the patient and/or caregiver that the patient is due for specific immunizations. The patient and/or caregiver is hesitant to receive the immunizations, so the physician/QHP engages them in a conversation to explore and listen to their concerns, answers their questions, shows empathy, and builds trust through acknowledgement of concerns. The physician/QHP chooses counseling strategies specific to each patient and/or caregiver's hesitation level and personalizes the information based on cultural beliefs, vaccine concerns, and literacy level. The physician/QHP provides the patient and/or caregiver with educational resources and reliable websites. The physician/QHP works together with the patient and/or caregiver to develop a plan for immunizing.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	33%	49%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	38%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	69%	27%
Physical effort required	9%	87%	4%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	29%	69%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	2%	10%	25%	50%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	40%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	23%	48%	30%
Physical effort required	20%	58%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	8%	82%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the May 2024 CPT Editorial Panel meeting, the panel created 3 new codes (90482, 90483, and 90484) for immunization counseling services where a vaccination is not ultimately administered. These codes were created to account for the substantial time physicians and other QHPs spend counseling patients on vaccine efficacy, safety, and importance outside of E/M and preventive

care service activities. The 3 codes are reported based on the amount of time spent counseling a patient. The service may be performed in person or via telehealth.

The creation of these codes follows 2 CMS coverage decisions related to state Medicaid programs: (1) CMS will fully fund (100% Federal Medical Assistance Percentage) state Medicaid payment for COVID-19 vaccine counseling for children when provided separately from COVID-19 immunization administration and require coverage under the Early and Periodic Screening, Diagnostic and Treatment (EPSDT) benefit; and (2) CMS will require counseling of routine childhood immunizations under the EPSDT. CMS created 6 new G-codes for vaccine counseling when a vaccine is not provided. However, these codes are unnecessarily complex. The American Academy of Pediatrics and American Academy of Family Physicians submitted a code change application to CPT for codes that would more appropriately capture the work encompassed in immunization counseling and more appropriately support payment. These codes are critical to supporting broader efforts across the medical community to combat vaccine hesitancy, and ensuring the availability of payment for this work. Per the CPT Code Change Application, the services may be performed in non-facility and facility settings and are recommended to be classified as a preventive service to support health equity and access to care.

The U.S. is experiencing a rise in vaccine hesitancy, reflected in data on vaccination rates and surveys of public sentiment. The share of kindergarten-aged children who received all state-required vaccines declined between the 2019-20 and 2021-22 school years from 95% to 93% (CDC, 2024). Additionally, the share of Americans who believe it is important for their children to be vaccinated has declined over the last 2 decades. Over the same period, the share of U.S. adults who believe vaccines to be more dangerous than the diseases they are developed to prevent has risen (Gallup, 2024). This hesitancy is leading to an increase in immunization-preventable illnesses that are burdening the U.S. healthcare system. Exemplifying this issue, the U.S. experienced a measles resurgence (CDC, 2024), and other immunization-preventable diseases such as pertussis, shingles, COVID-19, human papillomavirus (HPV), and respiratory syncytial virus (RSV) continue to burden the U.S. healthcare system.

Vaccine counseling services by physicians and other QHPs is critical to increasing vaccination rates and combatting hesitancy. These services entail listening to patient concerns, answering questions, and building trust; selecting counseling strategies and conveying information in a manner specific to each patient's concerns, cultural beliefs, and literacy level; providing patients with appropriate resources; and making a plan with patients to immunize in the future or engage in alternative preventive strategies. These activities are above and beyond those captured in an E/M or preventive visit.

Survey Process

Supporting broad representation across the primary care specialties that would typically provides immunization counseling services, the American Academy of Family Physicians (AAFP), American Academy of Pediatrics (AAP), American College of Physicians (ACP), and American Osteopathic Association (AOA) conducted a survey of all 3 codes.

The survey was sent to a random sample of 15,847 physicians. The number of respondents for each code and percent of respondents who found the vignette typical are as follows:

- 90482: 148 respondents, 74% found the vignette typical
- 90483: 127 respondents, 62% found the vignette typical
- 90484: 139 respondents, 87% found the vignette typical

The surveying societies convened an expert panel that evaluated survey results and developed the following recommendations.

The surveying societies added a question to the survey, which was approved by the research committee, seeking to ascertain if this service would be stand-alone or more typically reported with an E/M visit. The societies and the RSC struggled with the best way to word the question that respondents would understand. Ultimately, the question was worded as follows:

In what percent of patients do you provide this service with an Evaluation/Management or Preventive Medicine service?
In more than 50% of patients
In less than or equal to 50% of patients

Based on survey results, the societies believe that the question was written in a way that could easily be misinterpreted by those not familiar with RUC process. Some likely interpreted the question to ask "do you provide this service at the majority of your visits" where we would expect them to say no, while others may have interpreted the question as intended ("do you provide this service with another service the majority of time") where we would expect them to say yes. The ambiguity of the question unfortunately negates the value of the response. Because of this we have opted to rely on expert panel to address this issue. The expert panel's consensus was that this service would typically be reported with an E/M. This is reflected in the section of the work SOR below regarding "Services Reported with Multiple CPT Codes" and the PE SOR.

Recommendations

Based on the strong response to the survey, the specialty societies recommend the survey median of **0.70 work RVUs and the survey median of 13 minutes of intra-service time, which also serves as total time**.

While the work RVU for this service is slightly greater than the key reference service (99407), 62% of respondents rated the overall intensity/complexity of this service as greater than the top KRS. Additionally, 69% of respondents reported the psychological stress

of 90482 as greater than that of the top KRS, 90407 *Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes.*

Respondents likely found 90483 to be more intense/complex because (1) the typical patient for this encounter is highly reluctant to receive a vaccine, unlike the typical patient for 90406 which may be interested in quitting smoking or may recognize the harms of smoking, (2) the effort and skill required to engage in the appropriate counseling strategies to address concerns of a vaccine-hesitant patient is greater, and (3) how the provider handles the conversation may influence whether or not the patient returns to the provider for overall care.

Additionally, the expert panel believes that the immunization counseling codes 90483 and 90484 will most often be reported in visits where the physician or QHP must counsel the patient on multiple vaccines, address patient concerns, and develop future immunization or preventive strategies for each of these vaccines. The typical patient has done extensive research on the internet and has come to the visit with numerous questions and concerns about some if not all of the immunizations in question. The need to tailor counseling strategies to each patient, their cultural backgrounds, and the unique concerns they may have about each immunization contributes to the higher levels of intensity, complexity, and psychological stress identified by respondents.

Conclusion

For code 90483, *immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 10 minutes, up to 20 minutes*, the societies recommend the survey median, a work RVU of 0.70 and intra-service time of 13 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) 90483 would typically be reported with an office/outpatient E/M code (99202-99215) or a preventive services code (99381-99397).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT	Global	wRVU	Pre	Intra	Post
4.	99213	XXX	1.30	5	20	5
5.	90483	XXX	0.70	0	13	0
6.	Total		2.00	5	33	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Commonly

Specialty Internal Medicine How often? Commonly

Specialty Pediatrics How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 349968
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Overall utilization was calculated using influenza vaccine administrations as a proxy for overall encounters that may result in counseling. The total U.S. population (333.3 million) was multiplied by the share of adults who received the flu vaccine (50%) based on 2022 CDC data. We then determined 35% of these encounters would occur outside the pharmacy setting (IQVIA Institute, 2022), allowing the patient to potentially receive counseling by a physician or QHP. Of these visits, the societies assumed 20% of patients would be vaccine hesitant and require counseling (Gallup, 2024), and only 30% of counseling encounters would not result in a vaccination. This resulted in 3,499,650 immunization counseling visits without vaccine administration. Among these visits, we estimated that 85% would report 90482 (of duration under 10 minutes), 10% would report 90483 (of duration 10-20 minutes), and 5% would report 90484 (of duration greater than 20 minutes).

Specialty Family Medicine Frequency 122488 Percentage 35.00 %

Specialty Internal Medicine Frequency 122488 Percentage 35.00 %

Specialty Pediatrics Frequency 104990 Percentage 30.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 38,170 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. There are 61.2 million Americans who are eligible for Medicare. Adults age 65 and older who received influenza and pneumococcal vaccines was 66% in 2022 (CDC, 2023). This number was used to estimate the share of Medicare beneficiaries who would have an encounter where vaccine counseling may occur. In 2022, approximately 35% of pneumococcal and flu vaccines were provided outside the pharmacy setting, thus allowing patients to receive counseling (IQVIA Institute, 2022) by a physician or QHP. Of these visits, the societies assumed 9% of patients would be vaccine hesitant and require counseling (ASPE, 2021), and only 30% of counseling encounters would not result in a vaccination. This resulted in 381,704 immunization counseling visits without vaccine administration. Among these visits, we estimated that 85% would report 90482 (of duration under 10 minutes), 10% would report 90483 (of duration 10-20 minutes), and 5% would report 90484 (of duration greater than 20 minutes).

Specialty Family Medicine Frequency 19085 Percentage 50.00 %

Specialty Internal Medicine Frequency 19085 Percentage 50.00 %

Specialty Pediatrics Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 20 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 2-month-old male and his parents present for a scheduled telehealth follow-up visit following immunization refusal at the routine 2-month well-child routine appointment. Parents agree to bring the child for a nurse visit so he can receive immunizations.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified healthcare professional (QHP) informs the patient and/or caregiver that the patient is due for specific immunizations. The patient and/or caregiver is hesitant to receive the immunizations, so the physician/QHP engages them in a conversation to explore and listen to their concerns, answers their questions, shows empathy, and builds trust through acknowledgement of concerns. The physician/QHP chooses counseling strategies specific to each patient and/or caregiver's hesitation level and personalizes the information based on cultural beliefs, vaccine concerns, and literacy level. The physician/QHP provides the patient and/or caregiver with educational resources and reliable websites. The physician/QHP works together with the patient and/or caregiver to develop a plan for immunizing.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the May 2024 CPT Editorial Panel meeting, the panel created 3 new codes (90482, 90483, and 90484) for immunization counseling services where a vaccination is not ultimately administered. These codes were created to account for the substantial time physicians and other QHPs spend counseling patients on vaccine efficacy, safety, and importance outside of E/M and preventive care service activities. The 3 codes are reported based on the amount of time spent counseling a patient. The service may be performed in person or via telehealth.

The creation of these codes follows 2 CMS coverage decisions related to state Medicaid programs: (1) CMS will fully fund (100% Federal Medical Assistance Percentage) state Medicaid payment for COVID-19 vaccine counseling for children when provided separately from COVID-19 immunization administration and require coverage under the Early and Periodic Screening, Diagnostic and Treatment (EPSDT) benefit; and (2) CMS will require counseling of routine childhood immunizations under the EPSDT. CMS created 6 new G-codes for vaccine counseling when a vaccine is not provided. However, these codes are unnecessarily complex. The American Academy of Pediatrics and American Academy of Family Physicians submitted a code change application to CPT for codes that would more appropriately capture the work encompassed in immunization counseling and more appropriately support payment. These codes are critical to supporting broader efforts across the medical community to combat vaccine hesitancy, and ensuring the availability of payment for this work. Per the CPT Code Change Application, the services may be performed in non-facility and facility settings and are recommended to be classified as a preventive service to support health equity and access to care.

The U.S. is experiencing a rise in vaccine hesitancy, reflected in data on vaccination rates and surveys of public sentiment. The share of kindergarten-aged children who received all state-required vaccines declined between the 2019-20 and 2021-22 school years from 95% to 93% (CDC, 2024). Additionally, the share of Americans who believe it is important for their children to be vaccinated has declined over the last 2 decades. Over the same period, the share of U.S. adults who believe vaccines to be more dangerous than the diseases they are developed to prevent has risen (Gallup, 2024). This hesitancy is leading to an increase in immunization-preventable illnesses that are burdening the U.S. healthcare system. Exemplifying this issue, the U.S. experienced a measles resurgence (CDC, 2024), and other immunization-preventable diseases such as pertussis, shingles, COVID-19, human papillomavirus (HPV), and respiratory syncytial virus (RSV) continue to burden the U.S. healthcare system.

Vaccine counseling services by physicians and other QHPs is critical to increasing vaccination rates and combatting hesitancy. These services entail listening to patient concerns, answering questions, and building trust; selecting counseling strategies and conveying information in a manner specific to each patient's concerns, cultural beliefs, and literacy level; providing patients with appropriate resources; and making a plan with patients to immunize in the future or engage in alternative preventive strategies. These activities are above and beyond those captured in an E/M or preventive visit.

Survey Process

Supporting broad representation across the primary care specialties that would typically provides immunization counseling services, the American Academy of Family Physicians (AAFP), American Academy of Pediatrics (AAP), American College of Physicians (ACP), and American Osteopathic Association (AOA) conducted a survey of all 3 codes.
The survey was sent to a random sample of 15,847 physicians. The number of respondents for each code and percent of respondents who found the vignette typical are as follows:

- 90482: 148 respondents, 74% found the vignette typical
- 90483: 127 respondents, 62% found the vignette typical
- 90484: 139 respondents, 87% found the vignette typical

The surveying societies convened an expert panel that evaluated survey results and developed the following recommendations.

The surveying societies added a question to the survey, which was approved by the research committee, seeking to ascertain if this service would be stand-alone or more typically reported with an E/M visit. The societies and the RSC struggled with the best way to word the question that respondents would understand. Ultimately, the question was worded as follows:

In what percent of patients do you provide this service with an Evaluation/Management or Preventive Medicine service?
In more than 50% of patients
In less than or equal to 50% of patients

Based on survey results, the societies believe that the question was written in a way that could easily be misinterpreted by those not familiar with RUC process. Some likely interpreted the question to ask "do you provide this service at the majority of your visits" where we would expect them to say no, while others may have interpreted the question as intended ("do you provide this service with another service the majority of time") where we would expect them to say yes. The ambiguity of the question unfortunately negates the value of the response. Because of this we have opted to rely on expert panel to address this issue. The expert panel's consensus was that this service would typically be reported with an E/M. This is reflected in the section of the work SOR below regarding "Services Reported with Multiple CPT Codes" and the PE SOR.

Recommendations

Based on the strong response to the survey, the specialty societies recommend the survey median of 1.15 work RVUs and the survey median of 22 minutes of intra-service time, which also serves as total time.

The recommended work RVU for this service is less than that of the key reference service (99213), and 63% of respondents rated the overall intensity/complexity of this service as greater than the top KRS. Additionally, 82% of respondents reported the psychological stress of 90484 as greater than that of the top KRS, 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded*.

The expert panel believes that the immunization counseling codes 90483 and 90484 will most often be reported in visits where the physician or QHP must counsel the patient on multiple vaccines, address patient concerns, and develop future immunization or preventive strategies for each of these vaccines. The typical patient has done extensive research on the internet and has come to the visit with numerous questions and concerns about some if not all of the immunizations in question. The need to tailor counseling strategies to each patient, their cultural backgrounds, and the unique concerns they may have about each immunization contributes to the higher levels of intensity, complexity, and psychological stress identified by respondents.
Respondents likely found 90484 to be more intense/complex because the encounter entails providing counseling to an exceptionally reluctant patient, and the need for the physician or other QHP to tailor their counseling strategy over the visit to address multiple immunizations.

Conclusion

For code 90484, *immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 20 minutes*, the societies recommend the survey median, a work RVU of 1.15 and intra-service time of 22 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) 90484 will typically be billed with an office/outpatient E/M code (99202-99215) or a preventive services code (99381-99397).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT	Global	wRVU	Pre	Intra	Post
3.	99213	XXX	1.30	5	20	5
4.	90484	XXX	1.15	0	22	0
5.	Total		2.45	5	42	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Medicine How often? Commonly

Specialty Internal Medicine How often? Commonly

Specialty Pediatrics How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 174983
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Overall utilization was calculated using influenza vaccine administrations as a proxy for overall encounters that may result in counseling. The total U.S. population (333.3 million) was multiplied by the share of adults who received the flu vaccine (50%) based on 2022 CDC data. We then determined 35% of these encounters would occur outside the pharmacy setting (IQVIA Institute, 2022), allowing the patient to potentially receive counseling by a physician or QHP. Of these visits, the societies assumed 20% of patients would be vaccine hesitant and require counseling (Gallup, 2024), and only 30% of counseling encounters would not result in a vaccination. This resulted in 3,499,650 immunization counseling visits without vaccine administration. Among these visits, we estimated that 85% would report 90482 (of duration under 10 minutes), 10% would report 90483 (of duration 10-20 minutes), and 5% would report 90484 (of duration greater than 20 minutes).

Specialty Family Medicine Frequency 61244 Percentage 35.01 %

Specialty Internal Medicine Frequency 61243 Percentage 34.99 %

Specialty Pediatrics Frequency 52495 Percentage 30.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 19,085 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. There are 61.2 million Americans who are eligible for Medicare. Adults age 65 and older who received influenza and pneumococcal vaccines was 66% in 2022 (CDC, 2023). This number was used to estimate the share of Medicare beneficiaries who would have an encounter where vaccine counseling may occur. In 2022, approximately 35% of pneumococcal and flu vaccines were provided outside the pharmacy setting, thus allowing patients to receive counseling (IQVIA Institute, 2022) by a physician or QHP. Of these visits, the societies assumed 9% of patients would be vaccine hesitant and require counseling (ASPE, 2021), and only 30% of counseling encounters would not result in a vaccination. This resulted in 381,704 immunization counseling visits without vaccine administration. Among these visits, we estimated that 85% would report 90482 (of duration under 10 minutes), 10% would report 90483 (of duration 10-20 minutes), and 5% would report 90484 (of duration greater than 20 minutes).

Specialty Family Medicine Frequency 9543 Percentage 50.00 %

Specialty Internal Medicine Frequency 9542 Percentage 49.99 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99213

SS Rec Summary

PRESENTER(S):_____Suzanne Berman, MD, Brad Fox, MD, Charles J. Hamori, MD, Steven E. Krug, MD, Paul Martin, DO____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2024

CPT Code	Long Descriptor	Global Period
90482	Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; 3 minutes up to 10 minutes	XXX
90483	Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; 10 minutes up to 20 minutes	XXX
90484	Immunization counseling by physician or other qualified health care professional when immunization(s) is not administered by provider on the same date of service; greater than 20 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
90482	A 32-year-old male presents for a routine appointment. The physician recommends vaccination with influenza and COVID-19. The patient is hesitant to accept the immunizations. The patient states he will think about it for the future.
90483	A 28-year-old pregnant female presents for a scheduled prenatal appointment. The physician recommends vaccination with Tdap and influenza. The patient has significant safety concerns related to her fetus. Patient declines vaccination.
90484	A 2-month-old male and his parents present for a scheduled telehealth follow-up visit following immunization refusal at the routine 2-month well-child routine appointment. Parents agree to bring the child for a nurse visit so he can receive immunizations.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC Advisors from AAFP, AAP, ACP, and AOA acted as an expert panel and communicated via email to develop the recommended PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   We are using CPT code 90460 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other QHP; first or only component of each vaccine or toxoid administered*) as our reference code due to the fact it also involves immunization counseling, albeit with subsequent administration of the vaccine. Code 90460 is a recently PE-reviewed immunization administration service.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S):__ 90482, 90483, 90484_____**

SPECIALTY SOCIETY(IES):__AAFP, AAP, ACP, AOA_____

PRESENTER(S):_____Suzanne Berman, MD, Brad Fox, MD, Charles J. Hamori, MD, Steven E. Krug, MD, Paul Martin, DO____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   These are new services. Although survey respondents indicated these services are not typically reported with an E/M service in the non-facility setting, respondents also indicated the vignette in each case does reflect the typical patient. Each vignette describes a patient presenting for an E/M service (either preventive or problem-oriented). The expert panel believes these services will typically be reported in addition to an E/M service, including in the non-facility setting.

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   These are new services. We anticipate pediatrics will be the dominant specialty in the non-facility setting in the non-Medicare population. Among the Medicare population, we anticipate either internal medicine or family medicine will be the dominant specialty in the non-facility setting.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   (Not applicable)

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

(Not applicable)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA007 (Review patient clinical extant information and questionnaire) – Clinical staff reviews the patient's chart for immunizations that are recommended, due, or missing and for previous immunization refusals. (1 minute requested) CA008 (Perform regulatory mandated quality assurance activity (pre-service)) – Clinical staff check to see whether relevant vaccine(s) is in stock and performs state requirements related to vaccine maintenance and storage. (1 minute requested) – Revised at meeting

    b. Service period (includes pre, intra and post):

CA034 (Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)) – Clinical staff assures documentation of refusal is in the patient's chart and relevant clinical registry log (state, local, etc.) and noted for purposes of applicable quality reporting program(s). (2 minutes requested) – Revised at meeting

    c. Post-service period:

(Not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

(Not applicable)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    (Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    (Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    (Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    (Not applicable)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    (Not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    (Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

NO

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

(Not applicable)

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Regarding medical supply SK012 (CDC information sheet), the quantity recommended for each code is consistent with the corresponding vignette. Specifically, two vaccines are mentioned in the vignette for both 90482 and 90483, so two CDC information sheets are recommended for each code. For code 90484, the vignette references a two-month, routine well-child visit. Per Bright Futures guidelines, such visits typically involve 5-7 immunizations, so six CDC information sheets are recommended.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S):__ 90482, 90483, 90484_____**

SPECIALTY SOCIETY(IES):__AAFP, AAP, ACP, AOA_____

PRESENTER(S):_____Suzanne Berman, MD, Brad Fox, MD, Charles J. Hamori, MD, Steven E. Krug, MD, Paul Martin, DO____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

For question 10.a, the description of CA008 was revised to read as follows, consistent with the discussion at the meeting:

"CA008 (Perform regulatory mandated quality assurance activity (pre-service)) – Clinical staff check to see whether relevant vaccine(s) is in stock and performs state requirements related to vaccine maintenance and storage. (1 minute requested)"

For question 10.b, the parenthetical for CA034 was revised to read "(2 minutes requested)," consistent with the committee's decision to reduce this from 3 to 2 across all three codes.

CA034 (Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)) – Clinical staff assures documentation of refusal is in the patient's chart and relevant clinical registry log (state, local, etc.) and noted for purposes of applicable quality reporting program(s). (2 minutes requested)

These modifications were made to eliminate duplication between the two clinical activities.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

DESCRIPTION	CPT_Cod	Short Description	Sum of Aggregate NF Global & TC Cost
atherectomy device (Spectronetics laser or Fox Hollow)			$ 212,944,140
Reentry device (Frontier, Outback, Pioneer)			$ 168,646,062
Varithena (foam)			$ 99,667,706
Embolic Protection Device Spider FX (EV3, documentation available)			$ 88,532,831
subcutaneous cardiac rhythm monitor system			$ 81,964,328
Venaseal (glue)			$ 71,157,515
covered stent (VIABAHN, Gore)			$ 69,182,190
human amniotic membrane allograft mounted on a non-absorbable self-retaining ring			$ 64,566,906
Kyphoplasty kit, first fracture			$ 44,054,272
IVUS catheter			$ 42,361,160
kit, sinus surgery, balloon (maxillary, frontal, or sphenoid)			$ 35,126,112
Urolift Implant and implantation device			$ 23,577,750
LC Beads (2mL vial)			$ 22,299,857
Esketamine (84 mg vial)			$ 22,196,799
Biodegradable Material Kit - PeriProstatic			$ 22,160,410
Detachable coil			$ 19,416,667
Cryoablation handpiece and 2 canisters (one per side)			$ 16,577,433
Trial lead kit			$ 15,708,761
venous stent system			$ 14,392,000
Trial lead array			$ 10,498,335
FISH pre-treatment kit			$ 8,712,245
Radiofrequency Stylus / wand			$ 8,533,824
stent, self expanding 2-5 mm XPERT (Abbott)			$ 8,464,379
kit, for percutaneous thrombolytic device (Trerotola)			$ 8,287,499
TULSA-PRO Disposable Kit			$ 7,780,038
VivAer Stylus			$ 7,521,150
Kyphoplasty kit, additional fracture			$ 6,777,090
kit, eustachian tube procedure			$ 6,013,920
Hysteroscopic tissue removal device			$ 4,598,729
stent, vascular, deployment system, Cordis SMART			$ 4,571,567
kit, Rezum delivery device			$ 4,243,160
plate, surgical, reconstruction, left, 5 x 16 hole			$ 3,814,104
kit, CVA catheter, tunneled, with subcut port			$ 3,133,329
Esketamine (56 mg vial)			$ 2,119,350
catheter, RF ablation, endoscopic			$ 1,696,500
Claravein Kit			$ 1,430,111
Voice Augmentation Gel			$ 1,312,708
Ellipsys Vascular Access Catheter			$ 1,217,494
tray, RTS applicator (MammoSite)			$ 1,176,390
stent, balloon, implantable			$ 903,422
iTIND device			$ 817,717
Absorabable nasal implant and delivery device			$ 803,985
implantable interstitial glucose sensor			$ 789,000
kit, transurethral microwave thermotherapy			$ 653,050
plasma LDL adsorption column (Liposorber)			$ 617,169
Wavelinq EndoAVF catheters			$ 616,000
IVC filter			$ 537,863
probe, radiofrequency, 3 array (StarBurstSDE)			$ 373,107
EECP compression equipment package			$ 356,379
SmartPill capsule			$ 338,507
probe, cryoablation, renal			$ 327,662
Kit, probe, cryoablation, prostate (Galil-Endocare)			$ 228,000
kit, vertebroplasty (LP2, CDO)			$ 211,565
human amniotic membrane allograft			$ 204,575
laser tip, diffuser fiber			$ 173,550
3C patch system			$ 164,214
kit, stent, urethral, prostatic, insertion tool and surveyor			$ 147,554
kit, transurethral needle ablation (TUNA)			$ 126,000
hysteroscope, ablation device			$ 108,927

kit, PICC with subcut port	$	94,800
EECP electrical equipment package	$	81,039
Dorsal SI Joint Arthrodesis Implant	$	80,500
kit, pleural catheter insertion	$	80,411
kit, photopheresis procedure	$	66,494
kit, probe, radiofrequency, XIi-enhanced RF probe	$	51,133
kit, capsule, ESO, endoscopy w-application supplies (ESO)	$	35,937
Renessa probe	$	35,309
kit, locatable guide, ext. working channel, w-b-scope adapter	$	35,160
strut, replacement, dynamic external fixation	$	27,273
Viabil covered biliary stent	$	24,892
stent, GORE VIATORR TIPS Endoprosthesis	$	22,615
intrastromal corneal ring	$	20,610
RF Electrodes 18 Gauge 70 mm Length	$	19,830
probe, cryoablation (Visica ICE 30 or 40)	$	6,861
probe, endometrial cryoablation (Her Option)	$	5,180
catheter, balloon, lacrimal	$	4,339
catheter, balloon, thermal ablation (Thermachoice)	$	3,813
catheter, CVA, system, tunneled w-port, dual (LifeSite)	$	3,500
catheter, intradiscal (spineCATH)	$	2,760
RFA Handpiece, sterile (Sonata)	$	2,500
Optilume DCB, guidewire, and inflation device	$	2,245
ORBERA Intragastric Balloon System (balloon, placement catheter and connection tube with 3-way val	$	1,850
PillCam COLON capsule	$	1,250
kit, hysteroscopic tubal implant for sterilization	$	1,178
tray, scoop, fast track system	$	750
Spherusol	$	124
Grand Total	**$**	**1,245,645,418**

AMA/Specialty Society RVS Update Committee **Tab 13**
Practice Expense Subcommittee
September 26, 2024

Members Present: Scott Manaker, MD, PhD, (Chair), Amy Aronsky, DO, Gregory Barkley, MD, Michael Booker, MD, Eileen Brewer, MD, Joseph Cleveland, MD, Neal Cohen, MD, David Han, MD, Katie Jordan, OTD, OTR/L, Mollie MacCormack, MD, Dheeraj Mahajan, MD, Bradley Marple, MD, Tye Ouzounian, MD, Richard Rausch, DPT, Donald Selzer, MD, Elisabeth Volpert, DNP, APRN, Thomas Weida, MD, Adam Weinstein, MD, and Tim Swan, MD (CPT Resource)

I. High-Cost Supplies

At the January 2024 meeting, the Practice Expense (PE) Subcommittee expressed its continued concern with the issue of high-cost supplies and the need to address the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology. At the same meeting, a RUC member suggested that codes with high-cost disposable supplies be flagged for PE re-review.

In April 2024, the PE Subcommittee continued to examine this issue, noting that the 2024 Medicare Physician Payment Schedule includes 82 supply items with a purchase price of more than $500. These high-cost supplies represent $1.26 billion in direct costs for 2024 and 18 percent of all practice expense supply costs in the non-facility setting. Moreover, the Subcommittee noted the significant scaling factors that are applied for budget neutrality as part of the PE methodology, which may result in payments that are lower than the cost to provide a service. At the same meeting, the Relativity Assessment Workgroup (RAW) discussed this issue to determine if a useful screen should be developed to identify any potentially misvalued services.

For the September 2024 meeting, the discussion and analysis of the high-cost supplies issue was referred to the RAW meeting (Tab 14). AMA staff provided data which show:

- There are 69 services in which the total practice expense payment does not cover the total direct supply expense for the code.
- There are 53 of these 69 services in which a high cost disposable supply is over $500.
- For 6 of these 53 services, the practice expense payment does not even cover the cost of a single high-cost supply utilized in the provision of the service.

The RAW examined the data and considered whether codes with high-cost disposable supplies should be flagged for PE re-review through development of a High-Cost Disposable Supplies Screen. The Workgroup indicated that it would be part of existing precedent to identify services for PE review only. The Workgroup also discussed whether new invoices should be required for supplies over $500 for the RUC to submit to CMS. Staff emphasized that for over ten years, **the RUC has called on CMS to separately identify and pay for high-cost disposable supplies priced more than $500 using appropriate HCPCS codes. The RAW requested formation of a joint CPT and RUC workgroup to address the issue of high-cost disposable supplies.**

II. Radiology-specific Clinical Activities

At the April 2024 RUC meeting, the PE Subcommittee considered the use of Clinical Activity (CA) code CA014 *Confirm order, protocol exam*. The guidelines for this clinical activity specify "For use in imaging services only. 1 minute standard." It was noted that CA014 has been repeatedly requested for non-imaging procedures despite the instructions which state that the task is only for imaging. Further, protocoling exams has a very specific meaning in CT and MRI that describes the work of choosing which

imaging sequences or contrast phases to perform. The task of verifying the correct patient and procedure or medication happens in nearly every procedure (aka the "time out") or medication administration, and is not intended to receive additional time in a relative system. After considering a database search that showed over 20 of the 66 codes with CA014 greater than 0 minutes are non-imaging, **the PE Subcommittee agreed that the CA014 minutes could be allocated in the non-radiology codes.** The Subcommittee discussed how the work being described in the injection and immunization codes, for example, is broadly performed across the code set and is not strictly protocoling.

For the September 2024 meeting, the PE Subcommittee discussed examples for CA014 to include in the *Practice Expense Direct Input Benchmarks* document. For example, CA010 *Obtain vital signs* specifies different levels and vital signs for consistency:

5. The obtaining of vital signs, standardized into 3 levels of service with the following times: Level 0 (no vital signs taken) = 0 minutes, Level 1 (1-3 vitals) = 3 minutes, Level 2 (4-6 vitals) = 5 minutes. (Approved April 2000).

The PE Subcommittee determined updates to the Benchmarks for CA014 to read as follows:

7. **Confirm order, protocol exam, standardized to 1 minute.<u>, e.g., selecting which imaging sequences or contrast phases to perform in CT and MRI. 0 minutes for verifying the correct patient and procedure/ medication (aka the "time out").</u>**

The PE Subcommittee further determined that for the six codes below which state "For use in imaging services," the statement should be removed such that the specialties can justify the 1 or 2 minute standard for each procedure as needed.

CA006	Confirm availability of prior images/studies	General Activity	For use in imaging services. 2 minute standard.
CA007	Review patient clinical extant information and questionnaire	General Activity	For use in imaging services. 1 minute standard.
CA014	Confirm order, protocol exam	General Activity	For use in imaging services. 1 minute standard.
CA030	Technologist QC's images in PACS, checking for all images, reformats, and dose page	General Activity	For use in imaging services, Baseline time for this activity is 2 minutes.
CA031	Review examination with interpreting MD/DO	General Activity	For use in imaging services, Standard time for this activity is 2 minutes.
CA032	Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.	General Activity	For use in imaging services, Standard time for this activity is 1 minute.

The PE Subcommittee determined updates to CA006, CA007, CA014, CA030, CA031, and CA032 to simply state: "2 minute standard" or "1 minute standard".

In addition, the Subcommittee specifically discussed the 2 minute standard for CA006. This standard was developed in 2014, and members acknowledged that the review of images using PACS is much quicker, yet the number of images has greatly increased. Thus, two minutes was still found to be appropriate for confirming the availability of prior images/studies.

III. Equipment Inputs Less than $500

CMS definition and rule related to direct medical equipment is that it must be at least $500 and all equipment inputs under $500 are considered indirect expense. The PE Subcommittee discussed that there are eleven equipment items in the current equipment database that are less than the $500 threshold that CMS has established for equipment, as listed below.

Equipment Description	CMS Code	Useful Life	Purchase Price
camera, digital (6 mexapixel)	ED004	5	152.50
Diabetes Educator Curriculum	EQ306	5	200.00
endoscope, ultrasound radial probe	ES045	7	0.00
Injector, Provis (for angiography room)	EL049		0.00
kit, vision	ES058	10	410.00
pulse oxymetry recording software (prolonged monitoring)	EQ212	5	387.00
Respiratory Impedance Plethysmography Belts (pair)	EQ337	5	87.00
Respiratory impedance Plethysmography Belts (pair) (Pediatric)	EQ349	5	199.75
slide warmer	EP051	7	425.59
ultrasound digital scope, endoscopic ultrasound	ES091		0.00
work samples, small tools (Valpar 1)	EQ267	7	361.20

It was surmised that this could be an artifact of the medical supply and equipment repricing project. CY 2022 marked the final year of the 4-year market-based transition for supply and equipment pricing. When the items above were repriced, they should have been removed from the equipment listing when the repricing brought them under the threshold. These items would not be considered supplies as they are reusable. The PE Subcommittee agreed that the equipment inputs listed above should be considered indirect expense like all other equipment under $500.

CMS indicated that it would be open to comments and suggestions for future rulemaking if there is an interest in addressing these equipment items. The Agency noted that "the small number of equipment items with costs under $500 have very low inclusion in CPT codes, aside from ED004, and their costs are so low that they have little effect on the rate setting."

Considering the CMS definition that medical equipment must be at least $500 and all equipment inputs under $500 are considered indirect expense, the PE Subcommittee agreed that the 11 inputs (above) should no longer be listed as equipment as they are less than $500. The RUC should ask CMS to remove these items from its equipment list and from the specific codes to conform to the definition of direct medical equipment and to ensure that the rule remains consistently applied.

IV. Practice Expense Recommendations for CPT 2026

The table below corresponds to the final PE spreadsheets as adopted at the meeting. Please refer to the specific spreadsheets for details on the practice expense input recommendations for each tab.

Tab	Title	PE Input Changes	Consent Calendar
4	Limb Lengthening/Shortening-Femur	No Changes	
5	Limb Lengthening/Shortening-Tibia	No Changes	

6	Laparoscopic Prostatectomy	Standard 90-day global inputs. Oct 2016 & Sept 2014 RUC Recs (38570, 38571, 38572, 38573) – Reviewed & made no changes.	X
7	Transurethral Robotic-assisted Resection of Prostate	No Changes	
8	Prostate Biopsy Services	Modifications	
9	Cerebral Perfusion & CT Angiography – Head & Neck	Modifications	
10	Colon Motility Services	Modifications	
11	Immunization Counseling	Modifications	

AMA/Specialty Society RVS Update Committee

Other Relativity Assessment Workgroup Related Recommendations – October 2024

Developmental Test Administration (96112)

In September 2024, the Relativity Assessment Workgroup reviewed 95851 *Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour* via the Different Performing Specialty from Survey screen. CMS data show that five nurse practitioners in four practices are reporting 40% of these services. **The RUC would like to notify CMS of possible misreporting of CPT code 96112, based on the 2022 Medicare Physician & Other Practitioners – by Provider and Service data**. The Relativity Assessment Workgroup will review again in 3 years (September 2027).

Laryngoscopy (31525), Nasal Endoscopy (31231) and Removal Impacted Cerumen (69210)

In September 2024, the Relativity Assessment Workgroup reviewed 31525 *Laryngoscopy direct, with or without tracheoscopy; diagnostic, except newborn,* 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* and 69210 *Removal impacted cerumen requiring instrumentation, unilateral* via the Reported Together 75% or More screen.

The 2022 Medicare utilization shows that CPT code 31525 was reported with CPT code 31231 80% of the time and CPT code 31325 was reported with CPT code 69210 75% of the time. Therefore, these codes appeared on the screen and the RAW reviewed to determine if a code bundling solution was necessary.

The specialty societies indicated that although the Medicare utilization shows that these services are billed together, the publicly available CMS 2022 Medicare Physician & Other Practitioners – by Provider and Service data shows that that one Otolaryngology practice located in California is the top provider for all these three codes.

Specifically, in total, their practice reported these services as follows in 2022:

31525 – 23,572 claims across six providers, one of which reported 19,314 claims alone. That would require the practice to have reported this code just under 64 times per day if the practice worked 365 days per year to produce the volume in the data set. The next most common practitioner not affiliated with this practice performed this service 548 times.

31231 – 27,383 claims across six providers, one of which reported 17,858 claims alone. That would require the practice to have reported this code 75 times per day if the practice worked 365 days per year to produce the volume in the data set. The next most common practitioner not affiliated with this practice performed this service 2,538 times.

69210 – 27,319 claims across six providers, one of which reported 22,333 claims alone. That would require the practice to have reported this code just under 75 times per day if the practice worked 365 days per year to produce the volume in the data set. The next most common practitioner not affiliated with this practice performed this service 4,026 times.

Therefore, the specialty society indicated to the RUC that based on the lack of clinical justification to report these services together frequently they believe it is appropriate to maintain these codes as they are. There is no clinical justification for combining these codes, and it seems the billed together data is likely being driven by one practice in the country.

The specialty societies already submit notification to CMS of possible misreporting of these services. **The RUC reiterates to CMS of the possible misreporting of CPT codes 31525, 31231 and 69210, based on the 2022 Medicare Physician & Other Practitioners – by Provider and Service data.** The Relativity Assessment Workgroup will review again in 3 years (September 2027).

Different Performing Specialty from Survey

In April 2024, the Relativity Assessment Workgroup identified services where the top two dominant specialties performing services based on 2022 Medicare utilization more than 10,000 and where the top specialty performing over 50% of the Medicare claims did not survey the service or the top two specialties did not survey the service. **The specialty societies should submit action plans for review at the September 2024 RAW meeting.**

Please check all recommended actions that apply:

(If necessary, please clearly mark and attach all supplemental information)

❑ **Survey**
❑ **Refer to CPT Editorial Panel**
X Refer to CPT Assistant (specify article *or* Q&A)
X Maintain
❑ **Other Action (please describe):**

Rationale for Recommended Action:

Background: CPT code 96112 describes developmental test administration with interpretation and report, first hour. The top three diagnosis codes for this code reported in the RUC database are:

- F41, Other anxiety disorders (21.8%)
- F03, Other anxiety disorders (13.5%)
- G47, Sleep disorders (13.5%)

Code 96112 was surveyed in 2017 by the American Academy of Neurology (AAN), the American Academy of Pediatrics (AAP), and the American Psychological Association (APA).

The society advisors noted that the typical patient was a pediatric patient on the autism spectrum. Medicare data would not capture a service/providers who work with this population. The typical providers of this service would be billing Medicaid or commercial insurance.

Society advisors also noted that other codes created by CPT and surveyed at the same time are probably more appropriate to use for the top diagnoses listed in the RUC database (e.g., 96121 (*Neurobehavioral status exam, each addl hour*), 96132 (*Neuropsychological testing evaluation services, 1st hour)*).

Question Raised by the RAW
Code 96112 was identified by the RAW because there is a different performing specialty than surveyed the code. Nurse Practitioners (NPs) were the top reporting specialty in 2022.

Specialty	% Reported
Nurse practitioner	68.6%
Family medicine	11.2%
Cardiology	6.4%

The society advisors considered a range of evidence-based reasons that address the RAW's concerns and support their recommendation of maintaining.

- A limited number of nurse practitioners were identified as performing the service. CY 2022 utilization data by NPI for code 96112 was pulled from the CMS public data file, available **HERE**.[1] Analyzing the data, it was found that the volume is highly concentrated to a small number of NPIs. The volume was also highly geographically concentrated.
    - While NPs make up 40% of the volume, these services were reported by a mere 24 NPIs.
    - Of the top 10 billing NPIs, which make up 60% of the volume, nine are from California, and seven are NPs.
    - The top six billers billed over 1,000 units and made up 44% of the volume. All are from California; five are NPs, and one is a cardiologist.

[1] Due to data management rules, results from the public CMS data file may vary from the numbers in the RUC database.

Based on this very concentrated utilization of code 96112, the societies concluded that a RUC survey would not be successful, nor would it address the issue of ensuring an appropriate understanding of the code. Advisors concluded that a *CPT Assistant* article focused on the correct reporting would be more effective.

Advisors found the highly concentrated utilization of this service strange and confusing. They thought it could be driven by several local factors, such as a coverage policy or local clinical needs. Ultimately though, they concluded this issue was out of their purview and the RUC's purview.

Timeline (please list expected CPT/RUC meetings as applicable):

Mark the screen complete at the September 2024 RUC meeting.

Specialties will draft a *CPT Assistant* article.

Rationale for Recommended Action:

Upon learning that these code combinations had hit the RAW billed together screen our RUC advisors convened to explore why these practice patterns may have emerged. Clinically, there is no clear justification for frequently reporting these services together, as they are distinct disease processes and these procedures would not be expected to occur in the same office visit. Despite this, the RAW billed together data clearly indicates that the volume of claims where these services are being billed together is coming from Otolaryngology practices, including Physician Assistants employed by Otolaryngology practices.

To try to further understand these practice patterns, our Advisors reviewed the publicly available 2022 Medicare Physician & Other Practitioners – by Provider and Service data for the above CPT codes. These data sets identified a clear trend with one Otolaryngology practice located in California, who is the top provider (Otolaryngologist and Physician Assistant's combined) for all three of these CPT codes in 2022. Specifically, in total their practice reported these services as follows in 2022:

69210 – 27,319 claims across six providers, one of which reported 22,333 claims alone. That would require the practice to have reported this code just under 75 times per day if the practice worked 365 days per year to produce the volume in the data set. The next most common practitioner not affiliated with this practice performed this service 4026 times.

31231 – 27,383 claims across six providers, one of which reported 17,858 claims alone. That would require the practice to have reported this code 75 times per day if the practice worked 365 days per year to produce the volume in the data set. The next most common practitioner not affiliated with this practice performed this service 2538 times.

31525 – 23,572 claims across six providers, one of which reported 19,314 claims alone. That would require the practice to have reported this code just under 64 times per day if the practice worked 365 days per year to produce the volume in the data set. The next most common practitioner not affiliated with this practice performed this service 548 times.

Based on the lack of clinical justification to report these services together frequently we believe it is appropriate to maintain these codes as they are. There is no clinical justification for combining these codes, and it seems the billed together data is likely being driven by one practice in the country. Separately, we have notified CMS of our findings regarding the combinations of these codes.

Timeline (please list expected CPT/RUC meetings as applicable):

Education of this physician practice will occur no later than October 1, 2024, and a copy of the letter will be provided to the RAW for informational purposes.
