RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
31627	**Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure[s])**	High Volume Growth11	September 2025	ATS, CHEST	May 2026

Background: In April 2025, the Relativity Assessment Workgroup identified CPT code 31627 via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies should submit action plans for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code 31627.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
33361	**Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; percutaneous femoral artery approach**	RAW Flag - Co-surgeon status / New Technlogy-New Services List	September 2025	AATS, ACC, SCAI, STS	February 2026

Background: CPT codes 33361-33366 were on the New Technology/New Services list and noted in the RUC database as “Do not use to validate physician work” because of the unique co-surgery status for 33361-33366 and that CPT code 33364 did not meet the survey threshold of 30 responses. In April 2025, the Relativity Assessment Workgroup (RAW) reviewed three years of available Medicare claims data (2021, 2022 and 2023). The RUC recommended that these services should be surveyed for September 2025. The patient population has changed on who is receiving these services and it is no longer the sickest, most complicated patients, but will be available to more candidates and these services may be used to treat aortic regurgitation. In September 2025, the specialty societies request that these services be referred to CPT to delete or revise the codes to address changes in the approaches utilized for the procedures prior to re-surveying them. As such, the specialty societies did not survey the TAVR codes for the September 2025 RUC meeting and plan to submit a code change application to CPT by the November 3, 2025, deadline for review at the February 2026 CPT meeting. The RUC agreed and recommended CPT codes 33361-33366 be referred to the CPT Editorial Panel for the February 2026 meeting.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
36557	**Insertion of tunneled centrally inserted central venous catheter, without subcutaneous port or pump; younger than 5 years of age**	Site of Service Anomaly - 2023	January 2024	ACR, ACS, APSA, OEIS, SIR, SVS	May 2026

Background: In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 36558 via the site of service anomaly screen, for services with Medicare utilization over 10,000 in 2019-2021 that are typically performed in the inpatient hospital setting, yet only include a half discharge day management visit (99238). The RAW reviewed the action plan in September 2023, and agreed with the specialty societies that the entire family of services (36557-36566) be surveyed for the January 2024 RUC meeting. The specialty societies also requested changing the global period from a 010-day to a 000-day to account for variability in site of service based on the patient presentation and specialty performing the procedure. However, when the specialty societies were preparing to survey the services, they determined they could not proceed and instead requested to revise the codes through the CPT process prior to surveying. The specialty societies noted that the ages listed within some of the current code descriptors do not accurately reflect the variation of physician work (e.g., babies versus infants versus children versus adults). Additionally, some of the code descriptors are antiquated and include outdated practices and techniques technology that no longer exist or are incorrectly described, which may cause incorrect reporting. For example, patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. Finding an access location in a patient in which access issues have become harder, takes more time, includes more risk, and potentially requires additional interventions. The RUC recommends that CPT codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 be referred to the May 2024 CPT Editorial Panel meeting for revision. revision. In September 2024, the applicants withdrew the CCA citing that the specialties that most frequently use these codes were not involved in development of the code structure. The applicants requested a workgroup to be formed to develop a unified code structure. The CPT Editorial Panel indicated the specialties societies should work together to come up with a comprehensive solution. In September 2025 a CCA was submitted but withdrawn. The applicants believed there is significantly different physician work in the care of premature infants. Additionally, the applicants based the division of age on CPT precedent in pediatric coding, which is already widely accepted by coders. There was not sufficient time for this group of applicants, representing seven societies, to come to a consensus with the Panel's new revisions in advance of the meeting. Therefore the applicants withdrew their application and requested a workgroup.

36565	**Insertion of tunneled centrally inserted central venous access device, requiring 2 catheters via 2 separate venous access sites; without subcutaneous port or pump (eg, Tesio type catheter)**	Site of Service Anomaly - 2023	January 2024	ACR, ACS, OEIS, SIR, SVS	May 2026

Background: In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 36558 via the site of service anomaly screen, for services with Medicare utilization over 10,000 in 2019-2021 that are typically performed in the inpatient hospital setting, yet only include a half discharge day management visit (99238). The RAW reviewed the action plan in September 2023, and agreed with the specialty societies that the entire family of services (36557-36566) be surveyed for the January 2024 RUC meeting. The specialty societies also requested changing the global period from a 010-day to a 000-day to account for variability in site of service based on the patient presentation and specialty performing the procedure. However, when the specialty societies were preparing to survey the services, they determined they could not proceed and instead requested to revise the codes through the CPT process prior to surveying. The specialty societies noted that the ages listed within some of the current code descriptors do not accurately reflect the variation of physician work (e.g., babies versus infants versus children versus adults). Additionally, some of the code descriptors are antiquated and include outdated practices and techniques technology that no longer exist or are incorrectly described, which may cause incorrect reporting. For example, patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. Finding an access location in a patient in which access issues have become harder, takes more time, includes more risk, and potentially requires additional interventions. The RUC recommends that CPT codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 be referred to the May 2024 CPT Editorial Panel meeting for revision. revision. In September 2024, the applicants withdrew the CCA citing that the specialties that most frequently use these codes were not involved in development of the code structure. The applicants requested a workgroup to be formed to develop a unified code structure. The CPT Editorial Panel indicated the specialties societies should work together to come up with a comprehensive solution. In September 2025 a CCA was submitted but withdrawn. The applicants believed there is significantly different physician work in the care of premature infants. Additionally, the applicants based the division of age on CPT precedent in pediatric coding, which is already widely accepted by coders. There was not sufficient time for this group of applicants, representing seven societies, to come to a consensus with the Panel's new revisions in advance of the meeting. Therefore the applicants withdrew their application and requested a workgroup.

44950	**Appendectomy;**	Site of Service Anomaly - 2025	September 2025	ACS, APSA, ASCRS (colon), SAGES	May 2026

Background: In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 44970 Appendectomy; as a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. These services were placed directly on the level of interest form to survey for September 2025. The RAW also worked with the specialty societies and identified codes 44950, 44955 and 44960 as part of this family of services. In September 2025, the specialty societies indicated that the ACS National Surgical Quality Improvement Program (NSQIP®) and NSQIP® Pediatric database analysis revealed considerable variability in both length of hospital stay and operative time for appendectomy procedures, influenced by multiple factors such as surgical approach, patient age, whether the disease was complicated or uncomplicated, and whether the surgery was performed as an interval appendectomy or for tumor. In light of these findings, the specialty societies indicated that new and revised codes are needed to more accurately describe and differentiate physician work. The specialty societies indicated they will submit a CPT code change application for the CPT 2028 cycle. The RUC agreed and recommended that codes 44950, 44955, 44960 and 44970 be referred to the CPT Editorial Panel for revision for CPT 2028, preferably by the May 2026 CPT meeting/September 2026 RUC meeting.

99408	**Alcohol and/or substance (other than tobacco) abuse structured screening (eg, AUDIT, DAST), and brief intervention (SBI) services; 15 to 30 minutes**	CMS-Other - Utilization over 30,000	September 2025	ACP, ANA, APA (psychology), ASA, NASW	February 2026

Background: In October 2017, code G0396 was identified on the CMS/Other source codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to maintain the physician work and refer to CPT to editorially remove "screening" from 99408 and 99409 to "assessment" to mirror G0396. At the February 2018 CPT meeting, the Panel postponed until time uncertain this request to revise codes 99408-99409 to identify assessment of alcohol and/or substance abuse. As a rationale for postponement, the Panel said that the service described in this application did not meet the General Criteria for Category I because the proposed service is not unique or well defined, and does not describe a service that is clearly identified and distinguished from existing services already described in CPT by other codes. The Panel's additional rationale for postponement of this item was to allow the relevant specialty societies an opportunity to submit a new code change application to address the differences between assessment and screening services. A CCA has not been submitted, thus the specialty societies were requested to submit an action plan for September 2025 on how to address this service. In September 2025, the specialty societies indicated they would submit a CCA for the CPT February 2026 meeting to formally request that "screening" be replaced with "assessment" in the descriptors for CPT codes 99408 and 99409 to eventually replace G0396 and G0397.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting

(list separately in addition to code for g3002. when using g3003, 15 minutes must be met or exceeded.)**		September 2025	AAPM&R, ANA, ASA, ASIPP, NASS	Time uncertain

Background: In April 2025, the Relativity Assessment Workgroup identified G3002 via the CMS Other source with 2023 Medicare utilization over 20,000 screen. The specialty societies should submit action plans for review at the September 2025 RAW meeting to determine how to address this service and if current CPT codes exist to report these services described by the G code, new CPT codes should be created, or the G code should be surveyed. In September 2025, the RUC recommended to refer G3002 and G3003 to CPT to be considered under the CPT Value-Based Care Workgroup.

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
36248	**Selective catheter placement, arterial system; additional second order, third order, and beyond, abdominal, pelvic, or lower extremity artery branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)**	CMS Fastest Growing / Harvard Valued - Utilization over 30,000-Part6	September 2025	Refer to CPT Assistant	ACR, OEIS, SIR, SVS	

Background: In April 2025, the Relativity Assessment Workgroup identified CPT code 36248 via the Harvard valued with 2023 Medicare utilization over 30,000 screen. The specialty societies should submit action plans for review at the September 2025 RAW meeting on how to address these services. In September 2025, the RUC recommended to refer to CPT Assistant for the specialty societies to develop an article to provide additional guidance for appropriate coding and utilization of CPT 36248. Code 36248 is designated for use when an additional selective catheterization of a second or third-order vessel is performed. This code should apply only to named vessels, not to branches arising from those vessels.

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
92065	**Orthoptic training; performed by a physician or other qualified health care professional**	Harvard Valued - Utilization over 30,000-Part4 / Work Neutrality 2023	September 2025	Review action plan. 0.71	AAO, AOA (optometry)	

Background: In April 2025, the Relativity Assessment Workgroup identified four issues for codes that were reviewed for CPT 2023 (April 2021, October 2021, and January 2022) that have more than 10% increase in work RVUs from what was projected. The specialty societies should submit an action plan for Orthoptic Training (92065-92066) review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Assistant to develop a Q&A discussing the circumstances in which each code should be reported. Review again when on the new technology list in April 2027.

B	Pre-Service Positioning (IWPUT = 0.0224)	1	1	3	3	0	1
C	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	6	15	20	1	5
	DETAILS						
A	History and Exam (Performance and review of appropriate Pre-Tests)	5	10	10	15	4	9
A	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2	2	4	1	1
A	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3	5	5	2	3
A	Communicate with other professionals	0	0	5	5	0	2
A	Check/set-up room, supplies and equipment	1	1	5	5	0	1
A	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1	5	5	0	1
A	Prepare/ review/ confirm procedure	1	1	1	1	0	0
B	Perform/ supervise patient positioning	1	1	3	3	0	1
C	Administer local/topical anesthesia	1	1	0	0	1	5
C	Observe (wait anesthesia care)	0	0	10	15	0	0
C	Dress and scrub for procedure	5	5	5	5	0	0

**If the procedure does not require local anesthesia, 1 minute should be removed from pre-service time

1 Straightforward Patient/Straightforward Procedure (No anesthesia care)
2 Difficult Patient/Straightforward Procedure (No anesthesia care)
3 Straightforward Patient/Difficult Procedure
4 Difficult Patient/Difficult Procedure
5 Procedure with minimal anesthesia care (If no anesthesia care deduct 1 minute)
6 Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect

Additional Positioning Times for Spinal Surgical Procedures

SS1	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
SS2	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
SS3	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
SS4	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
SS5	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

Additional Positioning Times for Spinal Injection Procedures

SI1	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
SI2	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
SI3	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
SI4	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

Additional Positioning Times for Urological Procedures

U1	Dorsal Lithotomy	5 Minutes

Notes:

- Roll-over cells for additional detail where available
- Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice

209XX		September 2	Ablation Therapy – Bone Tumors	04	CPT 2027	April 2031	In Setember 2025, the RUC placed this service on the New Technology/New Services list to be re-reviewed by the RUC after three years of data are available. The specialty societies expect this to be a low-volume service. Given that this procedure describes open cryosurgery and involves liquid nitrogen, the technology utilized, and the technique involved with these supplies are not widely practiced and are unfamiliar to most orthopaedic surgeons at this time.	☐

							service 33361 for the percutaneous femoral artery approach and delete some of the very low utilized codes and create one code for all other approaches. In April 2025, the RUC recommended to survey for September 2025. The patient population has changed on who is receiving these services and it is no longer the sickest, most complicated patients, but will be available to more candidates and these services may be used to treat aortic regurgitation. The Workgroup indicated if National Coverage Determinations (NCDs) for these services having a co-surgery designation, the specialties could submit a CCA if any code descriptor changes are necessary.

33363	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open axillary artery approach	Apr 2012	Transcatheter Aortic Valve Replacement	12	CPT 2013	September 2025	Surveyed again in April 2018 and the RUC indicated that CPT codes 33361, 33362, 33363, 33364, 33365 and 33366 will remain on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. In April 2024, the Workgroup indicated to Review an update from the specialty societies in 1 year (April 2025). The specialty societies indicated a couple changes: 1) The patient population has changed and is/will be performed on not just the sickest patients but will be available to more candidates and these services may be used to treat aortic regurgitation. 2) The services are changing and co-surgery may not necessarily be necessary in the future. The specialties may pursue a request for CMS to removal of the National Coverage Determination (NCD) regarding co-surgeons for these services. 3) Coding changes may be necessary to keep the highest performed	☐

51721	Insertion of transurethral ablation transducer for delivery of thermal ultrasound for prostate tissue ablation, including suprapubic tube placement during the same session and placement of an endorectal cooling device, when performed	Sep 2023	MRI-Monitored Transurethral Ultrasound Ablation of Prostate	07	CPT 2025	April 2029		☐
52284	Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed	Jan 2023	Cystourethroscopy with Urethral Therapeutic Drug Delivery	08	CPT 2024	April 2028		☐
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	Apr 2014	Cystourethroscopy Insertion Transprostatic Implant	16	CPT 2015	October 2018	Survey for January 2019	☑
52442	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)	Apr 2014	Cystourethroscopy Insertion Transprostatic Implant	16	CPT 2015	October 2018	Survey for January 2019	☑
52443	Cystourethroscopy with initial transurethral anterior prostate commissurotomy with a nondrug-coated balloon catheter followed by therapeutic drug delivery into the prostate by a drug-coated balloon catheter, including transrectal ultrasound and fluoroscopy, when performed	Jan 2025	Cystourethroscopy	09	CPT 2026	April 2030		☐
52597	Transurethral robotic-assisted waterjet resection of prostate, including intraoperative planning, ultrasound guidance, control of postoperative bleeding, complete, including vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy, when performed	Sep 2024	Transurethral Robotic-assisted Resection of Prostate	07	CPT 2026	April 2030		☐
53854	Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy	Jan 2018	Transurethral Destruction of Prostate Tissue	13	CPT 2019	April 2023	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
53855	Insertion of a temporary prostatic urethral stent, including urethral measurement	Feb 2009	Temporary Prostatic Urethral Stent Insertion	12	CPT 2010	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
53860	Transurethral radiofrequency micro-remodeling of the female bladder neck and proximal urethra for stress urinary incontinence	Apr 2010	Transurethral Radiofrequency Bladder Neck and Urethra	12	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
53865	Cystourethroscopy with insertion of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate	Jan 2024	Bladder Neck and Prostate Procedures	05	CPT 2025	April 2029	CPT codes 5XX05 and 5XX06 will be placed on the New Technology list to be reviewed in three years to ensure correct valuation, patient population, and utilization assumptions.	☐
53866	Catheterization with removal of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate	Jan 2024	Bladder Neck and Prostate Procedures	05	CPT 2025	April 2029	CPT codes 5XX05 and 5XX06 will be placed on the New Technology list to be reviewed in three years to ensure correct valuation, patient population, and utilization assumptions.	☐
55706	Biopsies, prostate, needle, transperineal, stereotactic template guided saturation sampling, including imaging guidance	Apr 2008	Saturation Biopsies	15	CPT 2009	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	☑
55708	Biopsy, prostate, transrectal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance, first targeted lesion	Sep 2024	Prostate Biopsy Services	08	CPT 2026	April 2030		☐

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
55710	Biopsy, prostate, transperineal, ultrasound-guided (ie, sextant) with MRI-fusion-guidance biopsy, first targeted lesion	Sep 2024	Prostate Biopsy Services	08	CPT 2026	April 2030		☐
55711	Biopsy, prostate, transrectal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion	Sep 2024	Prostate Biopsy Services	08	CPT 2026	April 2030		☐
55712	Biopsy, prostate, transperineal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion	Sep 2024	Prostate Biopsy Services	08	CPT 2026	April 2030		☐
55715	Biopsy, prostate, each additional, MRI-ultrasound fusion or in-bore CT- or MRI-guided targeted lesion (List separately in addition to code for primary procedure)	Sep 2024	Prostate Biopsy Services	08	CPT 2026	April 2030		☐
55866	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed;	Oct 2009	Laparoscopic Radical Prostatectomy	14	CPT 2011	September 2014	Survey for April 2015. Specialty society should consider surveying 55845 and 55866 at the same time.	☑
55874	Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed	Jan 2017	Peri-Prostatic Implantation of Biodegradable Material	13	CPT 2018	April 2022	In April 2022, recommended to remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
55877	Ablation, irreversible electroporation, prostate, 1 or more tumors, including imaging guidance, percutaneous	Jan 2025	Irreversible Electroporation of Tumors	08	CPT 2026	April 2030		☐
55880	Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (HIFU), including ultrasound guidance	Oct 2019	Transrectal High Intesity Focused US Prostate Ablation	06	CPT 2021	April 2025	In April 2025, the RUC recommended remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
55881	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation;	Sep 2023	MRI-Monitored Transurethral Ultrasound Ablation of Prostate	07	CPT 2025	April 2029		☐
55882	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducer for delivery of thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed	Sep 2023	MRI-Monitored Transurethral Ultrasound Ablation of Prostate	07	CPT 2025	April 2029		☐
57423	Paravaginal defect repair (including repair of cystocele, if performed), laparoscopic approach	Apr 2007	Laparoscopic Paravaginal Defect Repair	C	CPT 2008	September 2011	Remove, code does not need to be re-evaluated	☑
57425	Laparoscopy, surgical, colpopexy (suspension of vaginal apex)	Oct 2008	Laparoscopic Revision of Prosthetic Vaginal Graft	7	CPT 2010	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
57426	Revision (including removal) of prosthetic vaginal graft, laparoscopic approach	Oct 2008	Laparoscopic Revision of Prosthetic Vaginal Graft	7	CPT 2010	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
57465	Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect (List separately in addition to code for primary procedure)	Jan 2020	Computer-Aided Mapping of Cervix Uteri	14	CPT 2021	April 2025	In April 2025, the RUC recommended remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑
58541	Laparoscopy, surgical, supracervical hysterectomy, for uterus 250 g or less;	Feb 2006	Laparoscopic Supracervical Hysterectomy	13	CPT 2007	September 2013	Survey April 2014	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
58542	Laparoscopy, surgical, supracervical hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)	Feb 2006	Laparoscopic Supracervical Hysterectomy	13	CPT 2007	September 2013	Survey April 2014	☑
58543	Laparoscopy, surgical, supracervical hysterectomy, for uterus greater than 250 g;	Feb 2006	Laparoscopic Supracervical Hysterectomy	13	CPT 2007	September 2013	Survey April 2014	☑
58544	Laparoscopy, surgical, supracervical hysterectomy, for uterus greater than 250 g; with removal of tube(s) and/or ovary(s)	Feb 2006	Laparoscopic Supracervical Hysterectomy	13	CPT 2007	September 2013	Survey April 2014	☑
58570	Laparoscopy, surgical, with total hysterectomy, for uterus 250 g or less;	Apr 2007	Laparoscopic Total Hysterectomy	D	CPT 2008	September 2013	Survey April 2014	☑
58571	Laparoscopy, surgical, with total hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)	Apr 2007	Laparoscopic Total Hysterectomy	D	CPT 2008	September 2013	Survey April 2014	☑
58572	Laparoscopy, surgical, with total hysterectomy, for uterus greater than 250 g;	Apr 2007	Laparoscopic Total Hysterectomy	D	CPT 2008	September 2013	Survey April 2014	☑
58573	Laparoscopy, surgical, with total hysterectomy, for uterus greater than 250 g; with removal of tube(s) and/or ovary(s)	Apr 2007	Laparoscopic Total Hysterectomy	D	CPT 2008	September 2013	Survey April 2014	☑
58580	Transcervical ablation of uterine fibroid(s), including intraoperative ultrasound guidance and monitoring, radiofrequency	Jan 2023	Transcervical RF Ablation of Uterine Fibroids	09	CPT 2024	April 2028		☐
58674	Laparoscopy, surgical, ablation of uterine fibroid(s) including intraoperative ultrasound guidance and monitoring, radiofrequency	Jan 2016	Laparoscopic Radiofrequency Ablation of Uterine Fibroids	18	CPT 2017	October 2020	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	☑

99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional, initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan, review by the psychiatric consultant with modifications of the plan if recommended, entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant, and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	April 2023	In January 2020, the RUC identified Psychiatric Collaborative Care Management Services via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommended that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. However, due to the incorrect reporting of these services by one specific provider, the referral for a CPT Assistant article was removed. This family is on the new technology/new services screen and is scheduled for review at the April 2023	☑

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

Example

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2025

Ablation Therapy-Bone Tumors – Tab 4

In February 2025, the CPT Editorial Panel approved new Category I add-on code 209XX to describe and report cryoablation during an open surgical procedure where the bone is frozen after a tumor resection. The physician work involves applying liquid nitrogen to the bone defect to freeze it. Typically, this open therapy is performed to address large or complex tumors rather than using percutaneous methods. CPT code 209XX was surveyed for the April 2025 meeting, and the specialty recommended an interim value with the intention to re-survey for the September 2025 RUC meeting. The RUC determined that the specialty society may survey CPT code 209XX with an amended ZZZ survey template that specifically asks respondents whether pre- and post-service time is associated with this add-on service for the September 2025 RUC meeting.

209XX ***Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)***
The RUC reviewed survey results from 31 orthopaedic surgeons who self-designate as musculoskeletal oncologists and recommends the survey 25th percentile work RVU of 2.70, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 5 minutes of pre-service evaluation time, 25 minutes of intra-service time and 2 minutes of immediate post-service time, which equals 32 minutes of total time.

In their rationale, the specialty society clarified that 5 minutes of pre-service evaluation time is appropriate and typical for discussing the purpose of ablation therapy after tumor excision and describing the technical aspects of the procedure with the patient and/or family. This technique might be a preferred intervention compared to percutaneous cryoablation (CPT code 20983 *Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; cryoablation*) for bone tumors in certain cases, particularly for large or complex tumors, because it allows for more precise and complete tumor destruction with better direct visualization and protection of neurovascular and soft tissue structures. The specialty society also confirmed that three 5-6-minute freeze-thaw cycles of cryoablation represent the typical physician work involved with this procedure.

To support the recommended work RVU of 2.70, the RUC compared the surveyed code to the top key reference service code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time, 32 minutes total time) and second key reference service code 22515 *Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (eg, kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; each additional thoracic or lumbar vertebral body (List separately in addition to code for primary procedure)* (work RVU = 4.00, 30 minutes intra-service time, 32 minutes total time). The RUC notes that together the two key reference services make for strong comparator codes, recognizing they bracket the survey 25th percentile work RVU of 2.70. The top key reference service requires 25 minutes of intra-service time, which is identical to the code surveyed. Moreover, both key reference services require

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

32 minutes of total time, which is the same total as CPT code 209XX. In terms of intensity/complexity, the RUC also acknowledges that CPT code 209XX is slightly more intense to perform than the top key reference service and slightly less intense to perform than the second key reference service. In their rationale, the specialty societies detailed that CPT code 209XX describes an ablation procedure that is more intense/complex than CPT code 20702 due to the need to meticulously protect the popliteal artery, tibial nerve, common peroneal nerve, and the surrounding skin, muscles, and tendons during the procedure, to which the RUC agreed. Thus, the RUC recommendation of the survey 25th percentile work RVU of 2.70 appropriately reflects the work and time required to perform CPT code 209XX, and also maintains relativity across comparable services. **The RUC recommends a work RVU of 2.70 for CPT code 209XX.**

Practice Expense
The RUC recommends no direct practice expense inputs for CPT code 209XX as it is a facility-based add-on service.

New Technology
CPT code 209XX will be placed on the New Technology/New Services list to be re-reviewed by the RUC in three years. The specialty society expects this to be a low-volume service. Given that this procedure describes open cryosurgery and involves liquid nitrogen, the technology utilized and the technique involved with these supplies are not widely practiced and unfamiliar to most orthopaedic surgeons at this time.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:209XX Tracking Number A3 Original Specialty Recommended RVU: **2.70**
Presented Recommended RVU: **2.70**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **2.70**

CPT Descriptor: Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female who has just undergone intralesional surgical treatment of a giant cell tumor of bone involving the distal femur also requires additional local adjuvant treatment of the resultant defect. [Note: This is an add-on service. Only consider the additional work related to the ablation therapy for eradication the bone tumor, including adjacent soft tissue when involved by tumor extension.]

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Discuss the purpose of ablation therapy after tumor excision with the patient and/or family, including a brief description of the technical aspects of the procedure. Outline the risks, including damage to adjacent tissues and structures. Review sequence and timing of the cryoablation with OR team. Confirm the availability and presence of the supplies and equipment needed to perform cryoablation, including liquid nitrogen, funnels, saline solution and warming device, silicone sheeting for soft tissue protection, and protective devices for the surgical team (eg, goggles and gloves).

Description of Intra-Service Work: Following resection/removal of the tumor (separately reported), the resulting defect is carefully inspected. The popliteal artery, tibial nerve, common peroneal nerve and the surrounding skin, muscles, and tendons are protected with silicone sheets. Thermocouples are placed around and within the lesion to monitor the temperature and the extent of freezing, ensuring proper treatment while safeguarding the surrounding healthy tissue. Liquid nitrogen is slowly poured into the defect through a funnel, with attention given to prevent spillage onto surrounding soft tissues and skin. Warm saline is applied to soft tissue areas to avoid freezing damage. After 5-6 minutes of freezing, the area is thoroughly irrigated with warm normal saline, and the bone is dried to complete the freeze-thaw cycle. This procedure (liquid nitrogen application, warm saline application to protect soft tissues, 5-6 minutes of freezing, warm normal saline irrigation, drying of bone) is repeated for a total of three freeze-thaw cycles of cryoablation.

Description of Post-Service Work: Document the cryoablation preparation, materials, and procedure in the medical record.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Background

New add-on code 209XX was created to report open cryosurgery for reduction or eradication of bone tumor , where liquid nitrogen is used directly on a bone tumor and local soft tissue after intralesional management of the tumor. This technique might be preferred over percutaneous cryoablation (20983, where a probe is inserted through the skin) for bone tumors in certain cases, particularly for large or complex tumors, because it allows for more precise and complete tumor destruction with better direct visualization and protection of neurovascular and soft tissue structures.

Prior Survey of 209XX (April 2025)
The standard ZZZ-global code survey defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" Although the definition acknowledges that pre- and post-service time may apply to the add-on service and respondents are instructed to review the global period definition, the survey only provides a single field labeled "intra-service time" for entering time, which can lead to confusion when estimating total time.

Based on the 04/2025 survey, the RUC recommended an intra-service time of 25 minutes and an interim work RVU of 2.78, which was the survey 25th percentile.

A request was approved by the RUC to re-survey code 209XX using a revised survey tool that allows survey respondents to include pre- and/or post-service time, if applicable.

Survey Process
The AAOS and the Musculoskeletal Tumor Society (MSTS) each sent survey requests to members of their respective organizations. While there is considerable membership overlap between AAOS and MSTS, both comprised of orthopaedic surgeons, the Research Subcommittee required that data from the MSTS survey responses be reported separately on the RUC Summary Spreadsheet, as MSTS currently does not have a RUC advisor.

Recommendation - RVW
We recommend the survey 25th percentile work RVU of 2.70. This compares well with the key reference code 20702 which is less intense, but has the same times.

Recommendation - Time
We recommend 5 minutes of pre-service and 2 minutes of post-service time for the activities describe in the description of work. These activities are not part of the primary procedure, but instead are additional work before and after the skin-to-skin intraoperative work.

Comparison of Key Reference Codes
Both key reference codes involve additional pre-service and post-service work that is not part of the primary procedures. The ablation procedure 209XX is more complex and intense than 20702 due to the need to meticulously protect the popliteal artery, tibial nerve, common peroneal nerve, and the surrounding skin, muscles, and tendons during the procedure. The intensity/complexity measures clearly support the increased relative intensity.

Summary
It is recognized that reliably assigning specific time segments to add-on codes presents several challenges. When requesting a physician to estimate additional time necessary for an add-on procedure—without providing a precise definition—and while noting that intra-service time is defined as skin-to-skin, there is a risk of omitting any pre-service or post-service time exclusively attributable to the added service or procedure. Most add-on codes, according to CPT and CMS guidelines, are designed to describe additional intra-service work furnished in conjunction with a primary procedure and billed accordingly. Therefore, it is crucial to distinguish a distinct procedure that is always performed together with another and designated as an add-on, from procedures that represent only extra intra-service effort. Code 209XX falls into the category of a complete separate procedure that is always reported with another procedure and therefore has been designated as an add-on service, even though it will include pre-, intra-, and post-service components. The recommended times and value appropriately reflect an additional procedure with an add-on designation.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 209XX in conjunction with 21601, 21602, 21603, 22100, 22101, 22102, 22110, 22112, 22114, 23140, 23145, 23146, 23150, 23155, 23156, 24110, 24115, 24116, 24120, 24125, 24126, 25120, 25125, 25126, 25130, 25135, 25136, 26200, 26205, 26210, 26215, 27065, 27066, 27067, 27355, 27356, 27357, 27635, 27637, 27638, 28100, 28102, 28103, 28104, 28106, 28107, 28108)

Subject: Practice Expense, Tab 4, Ablation Therapy – Bone Tumors

---

Tab 4 CPT code 209XX is a facility-only add-on service that will have no related direct practice expense input. Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2025

Ablation Therapy – Bone Tumors– Tab 4

In February 2025, the CPT Editorial Panel approved a new Category I add-on code to describe and report cryoablation during an open surgical procedure where the bone is frozen after a tumor resection. The physician work involves applying liquid nitrogen into the bone defect to freeze it. Typically, this is utilized for large or complex tumors rather than percutaneous methods, where a device or a probe is put through the skin. The new add-on code was surveyed for the April 2025 RUC meeting.

Family of Services
Despite all three codes involving bone tumors, the specialty societies indicated that percutaneous approach CPT codes 20982 and 20983 are not part of the same code family as the new open approach add-on code 209XX. In preparation for the April 2025 RUC meeting, the specialty societies submitted a letter to the RUC that provides a detailed explanation about how these codes are dissimilar and a comprehensive rationale supporting their decision to survey only CPT code 209XX and not the other two existing codes. CPT codes 20982 and 20983 both describe stand-alone percutaneous procedures for radiofrequency ablation (20982) and cryoablation (20983), whereas 209XX describes an add-on open procedure performed after surgical curettage of the bone tumor. Thus, the two percutaneous procedures are not clinically similar to 209XX and do not require comparable physician work. Both percutaneous procedures are performed by a small number of physicians overall, and among the physicians who use these codes, the annual case volumes are relatively low. The specialty societies reiterated the substantial differences between the stand-alone percutaneous procedures and the new add-on open bone tumor ablation procedure. They also confirmed this would not create a rank order anomaly across these services. **The RUC agreed with the specialty societies that CPT codes 20982 and 20983 are not in the same code family and do not need to be resurveyed with CPT code 209XX for the April 2025 RUC meeting. The RUC submits no recommendation for CPT codes 20982 and 20983. The RUC notes that a small percentage (15%) of these services were reported incorrectly, rather than an unlisted code for the open approach. As such, a small budget neutrality adjustment is included in the RUC's utilization assumptions.**

ZZZ Survey Template
The specialty societies submitted a second letter to the RUC, indicating their intention to make an interim recommendation for CPT code 209XX at the April 2025 RUC meeting until this code can be resurveyed for the September 2025 RUC meeting using a different survey instrument. In their rationale, the specialty societies explained that the standard ZZZ survey instrument used to survey CPT code 209XX did not provide survey respondents with the opportunity to accurately account for and estimate any potential pre-service and post-service time required to perform this service. In rare circumstances, specialty societies may provide justification and request that an amended ZZZ survey instrument with pre- and post-service time be used when surveying.

In their explanation, the specialty societies described that the pre-service work involved with CPT code 209XX includes further discussion with the patient, which includes describing the ablation therapy and outlining potential risks, particularly to the adjacent tissues and structures.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Additional time is also needed to ensure the medical team is set up and fully prepared to perform this procedure, which is rarely done and requires using a variety of supplies for handling liquid nitrogen, including funnels, silicone sheets to place around soft tissues, and special types of protective goggles and gloves. The intra-service time involved with this service includes the placement of the protective silicone sheets, attaching a probe or thermocouple to monitor the temperature and the extent of freezing, carefully pouring the liquid nitrogen into the defect through a funnel, letting it sit and freeze the bone for 5-6 minutes, administering warm saline around the soft tissue as necessary to avoid freezing damage, and drying the bone to complete the freeze-thaw cycle. This cryoablation cycle is repeated three times.

Considering that the standard ZZZ survey instrument only has a single field to enter intra-service time, the specialty societies believe this may have confused survey respondents and led to a potential underestimation of the pre-service, post-service, and total time necessary to perform this procedure. Due to this potentially being a flawed survey, the specialty societies prepared an interim recommendation for CPT code 209XX using the current survey results. They intend on resurveying for the September 2025 RUC meeting using an amended ZZZ survey instrument with pre- and post-serve time, which would provide survey respondents with the opportunity to report additional pre- and/or post-service time if applicable. **The RUC determined that the specialty societies may survey 209XX with the amended ZZZ survey template that specifically asks the respondent whether pre- and post-service time is associated with this add-on service for the September 2025 RUC meeting.**

209XX ***Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)***
The RUC reviewed survey results from 37 orthopaedic surgeons who are self-designated as musculoskeletal oncologists and recommends an interim work RVU of 2.78, which is consistent with the survey 25th percentile work RVU and appropriately accounts for the physician work typically required to perform this service. The RUC recommends 25 minutes of intra-service and total time.

To support the recommended work RVU of 2.78, the RUC compared the surveyed code to the top key reference code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time, 32 minutes total time) and the second key reference code 61797 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure)* (work RVU = 3.48, 30 minutes intra-service and total time). The RUC recognizes that the two key reference services bracket the survey 25th percentile work RVU and estimated measured intensity. The surveyed code requires identical intra-service time compared to the top key reference code, but also has greater complexity and intensity to perform, thus supporting a higher work RVU. Survey respondents who selected the top key reference also agreed that the surveyed code is more intense/complex to perform. CPT code 209XX requires slightly less time and intensity compared to the second key reference code, further supporting the survey 25th percentile work RVU. **The RUC recommends an interim work RVU of 2.78 for CPT code 209XX and a resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

Practice Expense
The RUC recommends no direct practice expense inputs for CPT code 209XX as it is a facility-based add-on service.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

New Technology
CPT code 209XX will be placed on the New Technology/New Services list to be re-reviewed by the RUC in three years. The specialty societies expect this to be a low-volume service. Given that this procedure describes open cryosurgery and involves liquid nitrogen, the technology utilized, and the technique involved with these supplies are not widely practiced and are unfamiliar to most orthopaedic surgeons at this time.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Subject: Tab 4 Ablation Therapy – Bone Tumors (Codes +209XX, 20982, 20983)

Dear Dr. Silva:

On behalf of the American College of Radiology, Society of Interventional Radiology, and the Outpatient Endovascular and Interventional Society, we write to explain why the new add-on CPT code 209XX *(Ablation therapy for reduction or eradication of bone tumors, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)*) is not in the same family as existing percutaneous bone tumor ablation procedures, 20982 *(Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency)* and 20983 *(Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; cryoablation)*.

Background

CPT codes 20982 and 20983 were created in 2004 and 2015, respectively. In February 2025, the CPT Editorial Panel approved a new Category I CPT code, 209XX, for open bone tumor ablation as an add-on code to open surgical procedures, which is scheduled to be valued at the April 2025 RUC meeting.

Procedures are not clinically similar

Despite these three codes all involving bone tumors, they are not similar in the nature, time, or intensity of physician work. Percutaneous ablation procedures involve image-guided placement of linear, metallic ablation probes through the skin and soft tissues into and around target tumor(s), followed by energy-mediated tumor treatment with imaging monitoring, and they are standalone procedures. In contrast, 209XX's Description of Procedure from the Code Change Application (CCA) describes it as an ***add-on open procedure*** performed after surgical curettage of the bone tumor in which "liquid nitrogen is gently poured using a funnel into the defect…" This bears no resemblance to the work performed in codes 20982 or 20983.

Little to no overlap between performing specialties

New code 209XX is anticipated to be performed "significantly, if not exclusively" by orthopedic and hand surgeons.

In contrast, over 90% of the claims data from 20982 and 20983 arise outside those specialties, predominantly from diagnostic and interventional radiologists. According to the 209XX CCA, approximately 15% of open procedures are miscoded as percutaneous, so the true degree of specialty overlap is even smaller.

No change to the existing procedure or patient population

Documented in the 209XX CCA (excluding those procedures which are being miscoded), open bone tumor ablation procedures are currently being reported with unlisted CPT codes. As such, the addition of this new code will not be expected to change the type, length of time, and intensity of physician work, or the patient population of codes 20982 or 20983.

Logistical barriers

CPT codes 20982 and 20983 have low utilization and are performed by a small number of physicians. Based on the latest available claims data from 2023, only seven physicians billed 20982 more than 11 times and zero physicians billed 20983 more than 11 times. This makes the probability of a valid survey very low.

For these reasons, the undersigned societies have concluded that existing codes 20982 and 20983 are not in the same family as the new, add-on open surgical code 209XX and therefore we have not surveyed them for the April 2025 RUC Meeting.

We look forward to discussion with the RUC at the upcoming meeting.

RE: Tab 4, Ablation Therapy – Bone Tumors

Dear Dr. Silva,

The AAOS has provided the survey results from the current survey for 209XX and are recommending the 25th percentile work RVU and median intraservice time until we can resurvey code 209XX using a survey instrument that includes the ability to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

- **Rationale: Resurvey of 209XX**

The current standard ZZZ-global code survey defines the ZZZ global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time that is shown as "intra-service time" which can be confusing with respect to time estimation. The current 2025 survey resulted in an intraservice time of 25 minutes. However, preservice and postservice time that we believe is applicable to code 209XX was not collected.

Thank you for allowing us to provide this information. We will be available to respond to any RUC member questions.

Sincerely,
William Creevy, MD
RUC Advisor, American Academy of Orthopaedic Surgeons

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:209XX Tracking Number A3 Original Specialty Recommended RVU: **2.78**
Presented Recommended RVU: **2.78**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **2.78**

CPT Descriptor: Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female who has just undergone intralesional surgical treatment of a giant cell tumor of bone involving the distal femur also requires additional local adjuvant treatment of the resultant defect. [Note: This is an add-on service. Only consider the additional work related to the ablation therapy for eradication the bone tumor, including adjacent soft tissue when involved by tumor extension.]

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Discuss the purpose of ablation therapy after tumor excision with the patient and/or family, including a brief description of the technical aspects of the procedure. Outline the risks, including damage to adjacent tissues and structures. Review sequence and timing of the cryoablation with OR team. Confirm the availability and presence of the supplies and equipment needed to perform cryoablation, including liquid nitrogen, funnels, saline solution and warming device, silicone sheeting for soft tissue protection, and protective devices for the surgical team (eg, goggles and gloves).

Description of Intra-Service Work: Following resection/removal of the tumor (separately reported), the resulting defect is carefully inspected. The popliteal artery, tibial nerve, common peroneal nerve and the surrounding skin, muscles, and tendons are protected with silicone sheets. Thermocouples are placed around and within the lesion to monitor the temperature and the extent of freezing, ensuring proper treatment while safeguarding the surrounding healthy tissue. Liquid nitrogen is slowly poured into the defect through a funnel, with attention given to prevent spillage onto surrounding soft tissues and skin. Warm saline is applied to soft tissue areas to avoid freezing damage. After 5-6 minutes of freezing, the area is thoroughly irrigated with warm normal saline, and the bone is dried to complete the freeze-thaw cycle. This procedure (liquid nitrogen application, warm saline application to protect soft tissues, 5-6 minutes of freezing, warm normal saline irrigation, drying of bone) is repeated for a total of three freeze-thaw cycles of cryoablation.

Description of Post-Service Work: Document the cryoablation procedure in the medical record.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	22%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

New add-on code 209XX was created to report open cryosurgery for reduction or eradication of bone tumor , where liquid nitrogen is used directly on a bone tumor and local soft tissue after intralesional management of the tumor. This technique might be preferred over percutaneous cryoablation (20983, where a probe is inserted through the skin) for bone tumors in certain cases, particularly for large or complex tumors, because it allows for more precise and complete tumor destruction with better visualization and control of neurovascular and soft tissue structures.

The current standard ZZZ-global code survey defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-service time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice time of 25 minutes. However, preservice and postservice time as applicable was not collected. As we believe this resulted in a flawed survey, we have provided the

survey results from the current survey and are **recommending the 25th percentile work RVU and median intraservice time as interim until we can resurvey code 209XX** using a survey instrument that includes the ability for survey respondents to report additional pre- and/or post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 209XX in conjunction with 21601, 21602, 21603, 22100, 22101, 22102, 22110, 22112, 22114, 23140, 23145, 23146, 23150, 23155, 23156, 24110, 24115, 24116, 24120, 24125, 24126, 25120, 25125, 25126, 25130, 25135, 25136, 26200, 26205, 26210, 26215, 27065, 27066, 27067, 27355, 27356, 27357, 27635, 27637, 27638, 28100, 28102, 28103, 28104, 28106, 28107, 28108)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 20999; 22899; 23929; 24999; 25999; 26989; 27299; 27599; 27899; 28899

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Sometimes

Tab 4 CPT code 209XX is a facility-only add-on service that will have no related direct practice expense input. Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2025

Intraosseous Fiducial Marker Placement – Tab 05

In May 2025, the CPT Editorial Panel approved the addition of two codes and guidelines to report percutaneous intraosseous fiducial marker placement for the first target site and each additional target site, respectively. Intraosseous fiducial marker placement procedures involve image-guided placement of localization markers to facilitate safety, accuracy, and efficiency in future therapeutic interventions. The specialties clarified that these codes are not new technology but are new codes to more accurately describe existing technology.

209X1 ***Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site***
The RUC reviewed the survey results from 33 diagnostic radiologists and interventional radiologists and determined that the survey 25th percentile work RVU of 3.00 appropriately accounts for the physician work involved in this service. The RUC recommends 18 minutes pre-service evaluation time, 6 minutes positioning time, 6 minutes scrub/dress/wait time, 30 minutes intra-service time, 20 minutes immediate post-service time for 80 minutes total time, as supported by the survey.

The pre-service time matches the selected time package 2 *FAC Difficult Pat/Straightforward Procedure(no sedation/anes)* in the facility-setting. This includes 5 additional minutes for positioning time due to the prone setup of the patient within the CT bore, monitoring, lines, tubes, and equipment within a CT room and ensuring that all devices attached to the patient are able to clear and slide in and out of the CT gantry in order to maintain sterility and procedural success. Moreover, it was clarified that the physician is present for the entirety of the initial CT scan in the pre-service work. It is typical that the physician will help the CT technologist adjust the field of view, the extent of the scan, etc., as these are challenging patients and complex scans.

To justify a work RVU of 3.00, the RUC compared CPT code 209X1 to the to the top key reference service code 32408 *Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed* (work RVU = 3.18, 40 minutes intra-service time and 101 minutes total time) and to the second key reference service code 49406 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous* (work RVU = 4.00, 40 minutes intra-service time and 95 minutes total time) noting that the reference services involve more intra-service and total time than the surveyed code and are appropriately valued higher.

For additional support, the RUC compared the surveyed code with CPT code 33997 *Removal of percutaneous right heart ventricular assist device, venous cannula, at separate and distinct session from insertion* (work RVU = 3.00, 30 minutes intra-service time and 75 minutes total time) which involves an equivalent amount of physician work, identical intra-service time, and similar total time.

The RUC noted that the survey 25th percentile value is appropriately bracketed by MPC codes 10030 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst), soft tissue (eg, extremity, abdominal wall, neck), percutaneous* (work RVU = 2.75

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

and 30 minutes intra-service time and 76 minutes total time) and 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU = 4.00 and 40 minutes intra-service time and 95 minutes total time). The RUC concluded that CPT code 209X1 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 3.00 for CPT code 209X1.**

209X2 ***Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site***

The RUC reviewed the survey results from 30 diagnostic radiologists and interventional radiologists and determined that the survey 25th percentile work RVU of 1.76 appropriately accounts for the physician work involved in this add-on service. The RUC recommends 28 minutes of intra-service time as supported by the survey. It was clarified that the CT is repeated for the entire field of view for the add-on service; it must be repeated for each new localization to ensure accurate needle placement, especially in the case of patient movement. It was further clarified that the frequency of patients who would require the add-on service would be rare.

To justify a work RVU of 1.76, the RUC compared CPT code 209X2 to the top key reference service code 19082 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)* (work RVU = 1.65, 25 minutes intra-service time and 30 minutes total time) and noted that the intra-service time is greater for the surveyed code, justifying the higher work value. The RUC also compared CPT code 209X2 to the second key reference service code 64634 *Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional facet joint (List separately in addition to code for primary procedure)* (work RVU = 1.32, 20 minutes intra-service and total time) and noted that the reference service has less intra-service and total time and is appropriately valued lower than the surveyed code. Moreover, 100% of those survey respondents who selected the second top key reference code rated the surveyed code as more overall intense/complex relative to the key reference service. It was noted that the top key reference code is a much better comparison for marker placement, although it is in the soft tissues rather than within the bone, like the 209X2 code.

For additional support, the RUC compared the surveyed code to CPT code 36474 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)* (work RVU = 1.75, 30 minutes intra-service and total time) and noted the similar physician work, intra-service and total time. The surveyed code is slightly more intense and complex, justifying the slightly higher work value.

The RUC also noted that the surveyed code is appropriately bracketed by MPC codes 37253 *Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)* (work RVU = 1.44 and 20 minutes intra-service time and 21 minutes total time) and 36227 *Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)* (work RVU = 2.09 and 15

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes intra-service and total time). The RUC concluded that CPT code 209X2 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.76 for CPT code 209X2.**

Practice Expense
For CPT code 209X1, the Practice Expense (PE) Subcommittee acknowledged that pre-service clinical activity time for 000- and 010-day global codes is presumed to be zero. The Subcommittee agreed with the specialties' use of the pre-service time package for "Extensive Use of Clinical Staff" in the non-facility for a 000-day global code and approved similar facility pre-service time. The specialty societies confirmed that use of CA006 *Confirm availability of prior images/studies* is typical, and the standard minutes for CA006 and CA007 *Review patient clinical extant information and questionnaire* were approved as recommended.

The specialties confirmed that moderate sedation is typical for these codes. Therefore, since the service is performed with moderate sedation, the PE Subcommittee ensured that duplicate PE inputs do not exist with those listed for the moderate sedation codes. There was discussion regarding EF027 *table, instrument, mobile,* and the specialty societies confirmed that this table is used to hold the sterile equipment for the procedure and is separate from the one used for moderate sedation.

In addition, the PE Subcommittee agreed with the various clinical staff types: L037D *RN/LPN/MT*, L041A *Vascular Interventional Technologist*, L046A *CT Technologist*, and L051A *RN*, as specified for performing the numerous clinical activities and confirmed that the vascular tech is only present for the intra-service period.

Two modifications were made to the supply inputs to remove SJ041 *povidone soln (Betadine*) and SK075 *skin marking pen, sterile (Skin Skribe)* from code 209X2. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Musculoskeletal System** **General** **Other Procedures**				
✚▲*[20985]*		*Computer-assisted surgical navigational procedure for musculoskeletal procedures, ~~image-less~~ (List separately in addition to code for primary procedure)* *(Do not report [20985] in conjunction with [61781]-[61783])* *([20986], [20987] have been deleted)*		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

~~*(For computer-assisted navigational procedures with image guidance based on pre-operative and intraoperatively-obtained images, see [0054T], [0055T])*~~

Intraosseous fiducial marker placement procedures involve image-guided placement of localization markers to facilitate safety, accuracy, and efficiency in future therapeutic interventions. This is intended to be a standalone procedure, used to facilitate surgical guidance or administration of radiation therapy, and is not meant to be a component of, or an add-on service to, a bone biopsy procedure. If a separate and distinct bone biopsy procedure is performed, this may be reported with [20220], [20225].

●209X1	H1	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site	000	3.00

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:209X1 Tracking Number H1 Original Specialty Recommended RVU: **3.00**
Presented Recommended RVU: **3.00**
Global Period: 000 Current Work RVU: **0.0** RUC Recommended RVU: **3.00**

CPT Descriptor: Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 57-year-old female with obesity presents with a disc protrusion at T6-T7 and has myelopathic symptoms. The spine surgeon requests placement of a fiducial marker in the T7 pedicle to assist with localization.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 94% , In the ASC 3%, In the office 3%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Initial positioning and preparation of the patient is supervised with the technologist and nursing staff. A pre-procedural "time out" is performed. The patient undergoes an initial computed tomography (CT) scan of the entirety of the thoracic spine to facilitate accurate localization of the site of concern. The level of the disc protrusion or the lesion is identified on the initial CT images. This is confirmed by counting from above and below while comparing to findings on prior cross-sectional imaging. The planned approach is finalized and the entry site is marked. Conscious sedation is administered. The skin overlying the pedicle is marked, prepped, and draped in the usual aseptic fashion

Medical records and previous imaging are reviewed. Consult with referring physician and other health care professionals as necessary (eg, discuss approach and desired location of marker with respect to surgical plans). Appropriate guidance method and initial approach are determined based upon prior imaging and surgical plans. Procedure details, including alternatives and risks, are discussed with the patient and/or family, and informed consent is obtained. An IV is started for access and for moderate sedation as needed. The setup in the procedure suite is reviewed, including coordination of positioning with the need for imaging and the capacity to get adequate images in all necessary planes.

Description of Intra-Service Work: After evaluating the images for appropriate position and proposed percutaneous tract, local anesthesia is administered at the insertion site. Deep tissue anesthesia, as well as periosteal anesthesia, is administered via CT guidance. A bone biopsy needle is then introduced, via pedicular access. Using CT guidance, the needle is advanced to the level of the body-pedicle junction. The stylet is removed and the fiducial marker introducer system is advanced to the target within the cannula under CT guidance. The marker is deployed under CT guidance and the introducer system, followed by the needle, is removed. Hemostasis is obtained. The procedure site is cleaned and dressed. A post-procedure CT of the entirety of the thoracic spine is obtained. Marker placement at the appropriate level is confirmed by counting from above and below while comparing to findings on prior cross-sectional imaging.

Description of Post-Service Work: The patient is transferred to the post-anesthesia recovery area for hemodynamic monitoring and pain control as needed. Orders are completed and communication of any immediately relevant findings to nursing staff and other members of the patient care team is undertaken. A formal report of the procedure is dictated into the permanent medical record. The results and further management recommendations are discussed with the patient and family, as well as the requesting physician. The procedure report is reviewed and signed

Physical effort required	0%	57%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	29%	71%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In order to decrease the rate of wrong level and wrong site surgeries and to decrease operating room time, surgeons have increasingly opted to use presurgical fiducial markers for guidance in select cases. Trends such as the rising prevalence of overweight and obesity and the ability to perform minimally invasive complex surgeries at difficult to access sites have further solidified the importance of fiducial marker placement for surgical guidance. Although there are current codes that describe these marker placement procedures, for example, in the soft tissues and in the breast, there is not currently a code for intraosseous fiducial marker placement. Intraosseous placement is advantageous in that it prevents migration of the fiducial marker, facilitating more efficient scheduling of both the procedure and the surgery and reducing the risk of surgery at the incorrect site. It also improves localization with modern surgical techniques, improves confidence in localization, and thereby reduces operating room times.

At May 2025 CPT Editorial Panel meeting the societies of ACR and SIR requested the creation of two CPT codes to report placement of intraosseous fiducial marker(s). The two new CPT codes (290X1 and 209X2) were approved. CPT 209X1 represents the placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site. The second code, CPT 209X2 is an add-on code to 209X1 and represents the placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site (List separately in addition to code for primary procedure).

Methodology

A multi-disciplinary survey conducted by ACR, OEIS, and SIR was distributed to randomly selected members of the representative societies. A sample from the American Society for Spine Radiology was also included. The results within the summary file and within this SOR reflect the outcomes of the total survey responses (33).

Work RVU Recommendation for 209X1

We are recommending a value of 3.00 work RVUs, which represents the 25th percentile of the survey responses with noted experience in performing the placement of intraosseous fiducial markers.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 2 (Facility, Difficult Patient/Straightforward Procedure) with a pre-service evaluation of 18 minutes, pre-service positioning time of 1 minute, and pre-service scrub, dress, wait time of 6 minutes. We also selected a post-service package 8A (IV Sedation/Simple Procedure) with a time of 25 minutes.

The specialties recommend the following times

1. Evaluation: We recommend a pre-service evaluation time of 18 minutes, which matches the pre-package 2 (Facility, Difficult Patient/Straightforward Procedure) time.

2. Positioning: We recommend the time of 6 minutes, which is 5 minutes more than the package time. We believe this is warranted due to the prone set up of the patient within the CT bore, monitoring, lines, tubes, and equipment within a CT room and ensuring that all devices attached to the patient are able to clear and slide in and out of the CT gantry in order to maintain sterility and procedural success.

3. Scrub, dress, and wait: We recommend the time of 6 minutes, a decrease of 4 minutes from the median survey time, but matches the package time.

4. Post: We recommend a median survey time of 20 minutes, which 5 minutes less than the post package time. This aligns with the KRS 1 and 2 for this code and ensures proper recovery from the procedure.

Comparison with Key Reference Services

We are recommending a value of 3.00 work RVUs, which represents the 25th percentile of the survey responses with noted experience in performing the placement of intraosseous fiducial markers. This places 209X1 slightly below KRS 1, but a higher IWPUT. As a difficult patient/straightforward procedure, we believe this is appropriately supported.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST
209X1	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging	3.00	0.066	80	18	6	6	30	20

	guidance, when performed; first target site								
KRS 1 32408	Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed	3.18	0.047	101	30	5	6	40	20
KRS 2 49406	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); peritoneal or retroperitoneal, percutaneous	4.00	0.071	95	25	5	5	40	20

Comparison to MPC codes

The surveyed code compares well and is bracketed by 2 MPC codes, 10030 and 49405, which are familiar and utilized by the members of the societies of ACR, OEIS, and SIR and the recommended work RVUs of 3.00.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST
MPC 10030	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst), soft tissue (eg, extremity, abdominal wall, neck), percutaneous	2.61	0.1076	49	13	5	6	15	10
209X1	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site	3.00	0.066	80	18	6	6	30	20
MPC 49405	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous	4.00	0.071	95	25	5	5	40	20

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 22899, 77012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national number of services reported by CPT code 209X1 is estimated to be provided 2000 times nationally in a one-year period. This is a new code and thus the estimate is based on publications and reported volumes from several large institutions.

Specialty Diagnostic Radiology Frequency 1300 Percentage 65.00 %

Specialty Interventional Radiology Frequency 500 Percentage 25.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 670
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 209X1 is estimated to be provided 670 times nationally to Medicare patients in a one-year period.

Specialty Diagnostic Radiology Frequency 435 Percentage 64.92 %

Specialty Interventional Radiology Frequency 168 Percentage 25.07 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 20225

SUMMARY OF RECOMMENDATION

CPT Code:209X2 Tracking Number H2 Original Specialty Recommended RVU: **1.76**
Presented Recommended RVU: **1.76**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **1.76**

CPT Descriptor: Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 44-year-old male presents with multiple extramedullary intradural tumors, the two largest of which lie at the T3 and T9 levels. Following placement of a localization device within the right T3 pedicle, a second localization device is placed within the left T9 pedicle.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: After completion of placement of the first fiducial marker, the target is localized and the approach is planned for an additional marker in an identical fashion. Local and deep tissue anesthesia, as well as periosteal anesthesia is administered via computed tomography (CT) guidance. A bone biopsy needle is then introduced, via pedicular access. Using CT guidance, the needle is advanced to the level of the body-pedicle junction. The stylet is removed and the fiducial marker introducer system is advanced to the target within the cannula under CT guidance. The marker is deployed under CT guidance and the introducer system, followed by the needle, is removed. Hemostasis is obtained. The procedure site is cleaned and dressed. A post-procedure CT of the entirety of the thoracic spine is obtained. Marker placement at the appropriate level is confirmed by counting from above and below while comparing to findings on prior cross-sectional imaging.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)	09/2025

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In order to decrease the rate of wrong level and wrong site surgeries and to decrease operating room time, surgeons have increasingly opted to use presurgical fiducial markers for guidance in select cases. Trends such as the rising prevalence of overweight and obesity and the ability to perform minimally invasive complex surgeries at difficult to access sites have further solidified the importance of fiducial marker guidance.

Although there are current codes that describe these marker placement procedures, for example, in the soft tissues and in the breast, there is not currently a code for intraosseous fiducial marker placement. Intraosseous placement is advantageous in that it prevents migration of the fiducial marker, facilitating more efficient scheduling of both the procedure and the surgery and reducing the risk of surgery at the incorrect site. It also improves localization with modern surgical techniques.

At May 2025 CPT Editorial Panel meeting the societies of ACR and SIR requested the creation of two CPT codes to report placement of intraosseous fiducial marker(s). The two new CPT codes (290X1 and 209X2) were approved. CPT 209X1 represents the placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site. The second code, CPT 209X2 is an add-on code to 209X1 and represents the placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site (List separately in addition to code for primary procedure).

Methodology

A multi-disciplinary survey conducted by ACR, OEIS, and SIR was distributed to randomly selected members of the representative societies. A sample from the American Society for Spine Radiology was also included. The results within the summary file and within this SOR reflect the outcomes of the total survey responses (30).

Work RVU Recommendation for 209X2

We are recommending a value of 1.76 work RVUs, which represents the 25th percentile of the survey responses with noted experience in performing the additional placement of intraosseous fiducial markers.

Pre- and Post-Service Time Packages

As a ZZZ global services code, the societies have not elected any additional time related to the pre and/or post time packages for 209X2.

Comparison with Key Reference Services

We are recommending a value of 1.76 work RVUs, which represents the 25th percentile of the survey responses with noted experience in performing the placement of intraosseous fiducial markers. This places 209X2 slightly higher than KRS 1 and 2, but with a slightly lower IWPUT. Based on the survey data, we believe this is appropriately supported.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST
209X2	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site (List separately in addition to code for primary procedure)	1.76	0.063	28	0	0	0	28	0
KRS 1 19082	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)	1.65	0.064	30	0	1	4	25	0
KRS 2 64634	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, each	1.32	0.066	20	0	0	0	20	0

	additional facet joint (List separately in addition to code for primary procedure)								

Comparison to MPC codes

The surveyed code compares well and is bracketed by 2 MPC codes, 32753 and 36227, which are familiar and utilized by the members of the societies of ACR, OEIS, and SIR and the recommended work RVUs of 1.76. We are recommending a value of 1.76 work RVUs, which represents the 25th percentile of the survey responses with noted experience in performing the placement of intraosseous fiducial markers.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	POST
MPC 37253	Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)	1.44	0.0709	21	0	0	0	20	1
209X2	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site (List separately in addition to code for primary procedure)	1.76	0.063	28	0	0	0	28	0
MPC 36227	Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)	2.09	0.1393	15	0	0	0	15	0

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 22899, 77012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Interventional Radiology How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 100
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national number of services reported by CPT code 209X2 is estimated to be provided 100 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 65 Percentage 65.00 %

Specialty Interventional Radiology Frequency 25 Percentage 25.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 33 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 209X2 is estimated to be provided 33 times nationally to Medicare patients in a one-year period.

Specialty Diagnostic Radiology Frequency 21 Percentage 63.63 %

Specialty Interventional Radiology Frequency 8 Percentage 24.24 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 20225

NON-FACILITY DIRECT PE INPUTS
CPT CODE(S): 209X1, 209X2
SPECIALTY SOCIETY(IES): ACR, SIR,OEIS
PRESENTER(S): Dr. Andrew Moriarity, Dr. Michael Booker, Dr. Ben Northrup, Dr. Robert Kennedy and Dr. Curtis Anderson

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: SEPTEMBER 2025

CPT Code	Long Descriptor	Global Period
209X1	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site	000
209X2	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
209X1	A 57-year-old female with obesity presents with a disc protrusion at T6-T7 and has myelopathic symptoms. The spine surgeon requests placement of a fiducial marker in the T7 pedicle to assist with localization.
209X2	A 44-year-old male presents with multiple extramedullary intradural tumors, the two largest of which lie at the T3 and T9 levels. Following placement of a localization device within the right T3 pedicle, a second localization device is placed within the left T9 pedicle. [**Note:** This is an add-on service. Only consider the additional work related to the placement of the second intraosseous localization device.]

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   ACR, SIR and OEIS convened a panel of experts familiar with this service to evaluate the direct practice expense inputs for Intraosseous Fiducial Marker placement procedures.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The specialties selected CPT codes **32553** (Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-thoracic, single or multiple) and **20225** (Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)) as references for 209X1 and 209X2. These codes, when combined, contain the necessary components required to perform codes 209X1 and 209X2. In short, combining CPT codes 20225 and 32553 provides an accurate picture, in terms of similar patient type, equipment, and demands of the procedure.

   We also included CPT code 77012 (Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation) as the typical imaging guidance utilized for these procedures. The definitions of code 290X1 and 209X2 include imaging guidance (whereas reference codes 20225 and 32553 do not), as this would be most commonly performed using CT capabilities, code 77012 is used for reference to reflect the values represented by the now bundled imaging guidance.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Code **19082** (Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)) was selected for the ZZZ code as it provides an accurate picture, in terms of similar patient type, equipment, and demands of the procedure as code 209X2.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   No

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   Radiology is expected to be the dominant provider in the non-facility and the global.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   Intraosseous fiducial marker placement is a new procedure.

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, these are new service codes.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

CA016 – Prepare, set-up and start IV, initial positioning and monitoring of patient – The specialties are requesting 5 minutes (3 additional minutes above the 2 minute standard), since the patient will be prone and in a gantry. Additional time is needed to ensure the patient is properly positioned and with the more confined space of the CT bore and in prone position, this will require more time than the standard 2 minutes.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

No

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

CPT codes 209X1 and 209X2 describe new procedures and do not have existing time for obtaining vital signs. The specialties are recommending 5 minutes for *obtain vital signs* (CA010) for 209X1 to check the following vitals: measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA001: Complete pre-service diagnostic and referral forms (209X1) – (5) RN/LPN/MTA (L037D) is reviewing the diagnostic pre-service and referral forms to ensure complete and submitted appropriately.
CA002: Coordinate pre-surgery services (including test results) (209X1) – (3) RN/LPN/MTA (L037D) is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.
CA004: Provide pre-service education/obtain consent (209X1) – (7) RN/LPN/MTA (L037D) provide necessary education to the patient and patient's family/caregiver(s) to prepare for fiducial marker placement and for care after procedure. They also ensure consent forms are completed.
CA005: Complete pre-procedure phone calls and prescription. (209X1) – (3) RN/LPN/MTA (L037D) will answer any additional questions prior to the patient's visit, confirm that certain medications are being held before the procedure.
CA006: Confirm availability of prior images/studies (209X1) – (2) CT technologist (L046A) will confirm the previous imaging is available and accessible for the physician prior to the procedure for use in ensuring proper placement of fiducial marker(s).
CA007: Review patient clinical extant information and questionnaire (209X1) – (1) RN/LPN/MTA (L037D) CT technologist will review implant and surgical history

    b. Service period (includes pre, intra and post):

CA009: Greet patient, provide gowning, ensure appropriate medical records (209X1) – (3) RN/LPN/MTA (L037D) providing gowning, ensure appropriate medical records are available.

CA010: Obtain vital signs (209X1) – (5) RN/LPN/MTA (L037D) of weight and obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure before these procedures.
CA013: Prepare room, equipment and supplies (209X1) – (2) CT Technologist (L046A) work to prepare the room to allow for access to the posterior back area from prone position.
CA014: Confirm order, perform exam (209X1) – (1) CT Technologist (L046A) will confirm the orders for the fiducial marker placement using CT imaging guidance and prepare equipment
CA016: Prepare, set-up and start IV (209X1) – (5) CT Technologist (L046A) will prepare and start the IV on the patient for the fiducial marker placement procedure
CA018: Assist physician (209X1) – (30) CT Technologist (L046A) 100% physician time, assists the physician throughout the procedure performing the necessary CT imaging guidance for the physician and Vascular Interventional Technologist (L041A)100% Physician time, works with the physician to complete the procedure and handles equipment and supplies.
CA018: Assist physician (209X2) – (28) CT Technologist (L046A) 100% physician time, assists the physician throughout the procedure performing the necessary CT imaging guidance for the physician and Vascular Interventional Technologist (L041A)100% Physician time, works with the physician to complete the procedure and handles equipment and supplies.
CA022: Monitor patient (209X1) – (10) RN (L051A) will monitor the patient in recovery, which is expected to last 40 mins, using the ratio of 1:4, would be 10 minutes.
CA024: Clean room/equipment by clinical staff (209X1) – (3) CT Technologist (L046A) will clean the room and equipment during the immediate post period following the placement of fiducial markers
CA029: Check dressings (209X1) – (1) RN/LPN/MTA (L037D) will spend time checking the dressings to ensure no excessive bleeding by the patient following the placement of fiducial markers
CA030: Technologist QCs images in PACS (209X1) – (2) CT Technologist (L046A) QCs all images and makes sure the images transfer to PACS
CA032: Scans documents into PACS and completes exam in the RIS (209X1) – (1) CT Technologist (L046A) scans all documentation into PACS including any drawings/diagrams which may have been created
CA035: Review home care instructions, coordinate visits/prescriptions (209X1) – (2) RN/LPN/MTA (L037D) will review with patient and/or care givers instructions for home care, including limits on movement, pain control and incision care as well as coordinate prescriptions and any follow up care.

c. Post-service period:

CA038: Coordinate post procedure services (209X1) – (3) RN/LPN/MTA (L037D) communicates with patient and family concerning (potential) success of procedure, readiness for surgery, and associated instructions to aid in post-procedure / pre-surgical coordination.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

CA018: Assist physician (209X1) – (30) CT Technologist (L046A) 100% physician time, assists the physician throughout the procedure performing the necessary CT imaging guidance for the physician and Vascular Interventional Technologist (L041A)100% Physician time, works with the physician to complete the procedure and handles equipment and supplies.
CT Technologist: Confirm patient identity. Participate in timeout prior to beginning procedure. Help position patient prone on CT gantry. Perform initial CT of the area of interest. Review images with

physician. Help create multiplanar reconstructions when necessary. Help physician mark entry site. Perform serial CT scans during biopsy needle placement and adjustment. Perform scans during placement of fiducial delivery needle, as well as scans after fiducial placement. Confirm appropriate placement with physician. Help create multiplanar reconstructions when necessary. Perform final CT scan of the entire thoracic spine after needle removal. Assist in positioning patient during transfer from gantry to stretcher.
Vascular Interventional Technologist: Ensure all required equipment is in CT procedure room. Confirm size of marker with physician. Set up table. Confirm patient identity. Participate in timeout prior to beginning procedure. Help position patient prone on CT gantry. Assist in draping of patient and placement of sterile covers on CT controls. Help physician gown and glove. Drop sterile items on procedure tray as needed. Hand physician bone biopsy needle and fiducial marker delivery system, as well as additional required equipment as needed during the procedure. Assist in positioning patient during transfer from gantry to stretcher.

CA018: Assist physician (209X2) – (28) CT Technologist (L046A) 100% physician time, assists the physician throughout the procedure performing the necessary CT imaging guidance for the physician and Vascular Interventional Technologist (L041A)100% Physician time, works with the physician to complete the procedure and handles equipment and supplies.
CT technologist: Perform CT of the area of interest of the second target. Help with changes in patient positioning, if necessary. Review images with physician. Help create multiplanar reconstructions when necessary. Help physician mark entry site. Perform serial CT scans during biopsy needle placement and adjustment. Perform scans during placement of fiducial delivery needle, as well as scans after fiducial placement. Confirm appropriate placement with physician. Help create multiplanar reconstructions when necessary. Perform final CT scan of the entire thoracic spine after needle removal.
Vascular Interventional technologist: Ensure all required equipment for second fiducial marker placement is in CT procedure room. Confirm size of marker with physician. Add required new equipment to procedure table. Help reposition patient, if necessary. Assist in draping of second target site. Drop additional sterile items on procedure tray as needed. Hand physician bone biopsy needle and fiducial marker delivery system, as well as additional required equipment as needed during the procedure.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, we are recommending three established packs:
SA048 – pack, minimum multi-specialty visit
SA061 – tray, biopsy procedure
SA067 – tray, shave prep

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

SA061	tray, biopsy procedure	21.58	tray	1
	>0.9%, Sodium Chloride, 5ML			
	>specimen tubes and caps (2)			
	>slides, fully frosted end (2)			
	>25G X 5/8" needle			
	>22G X 1-1/2 " needle			
	>18G, 2" blunt needle			
	>10cc plastic syringe, luer lock (2)			
	>No. 11 scalpel assembly			
	>Needle stop			
	>PVP swab sticks (triples)			
	>Alcohol wipe			
	>1% Lidocaine HCl, 5ML (2 ampules)			
	>3X3 Gauze (3)			
	>Disposable Towel			
	>Fenestrated drape			
	>Puncture site bandage			
	>8" paper ruler			
	>sterile indicator			
	>hospital wrap			
SA067	tray, shave prep	1.27	tray	1
	>2 compartment tray			
	>absorbent towels (2)			
	>disposable double edged stainless			
	>gauze sponges (2)			
	>presoaped (castile) foam sponge			
	>underpad			
	>cotton tipped applicators (2)			

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

NO

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EL007- ROOM CT- HIGHLY TECHNICAL
EF027 – TABLE, INSTRUMENT, MOBILE - DEFAULT
EF014 – LIGHT, SURGICAL - DEFAULT
ED053 – PROFESSIONAL PACS WORKSTATION - equals ½ of physician pre-time + physician intra time
ED050 – TECHNOLOGIST PACS WORKSTATION - PACS Formula, equal to service period clinical staff

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

The specialties made the following changes to PE:

- Povidone soln (betadine) (SJ041) was removed from 209X2 since we have 2 chloraprep applicators (SJ091) already included
- Skin marking pen, sterile (SK075) was removed from 209X2

There was discussion about the mobile instrument table (EF027) and the societies confirmed that this table is used to hold the sterile equipment for the procedure and is separate from the one used for

moderate sedation. The specialties also confirmed that the vascular tech is only present for the intra-service.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

FACILITY DIRECT PE INPUTS

CPT CODE(S): 209X1
SPECIALTY SOCIETY(IES): ACR, SIR,OEIS
PRESENTER(S): Dr. Andrew Moriarity, Dr. Michael Booker, Dr. Ben Northrup, Dr. Robert Kennedy and Dr. Curtis Anderson

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: SEPTEMBER 2025

CPT Code	Long Descriptor	Global Period
209X1	Placement of localization marker(s) (eg, fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
209X1	A 57-year-old female with obesity presents with a disc protrusion at T6-T7 and has myelopathic symptoms. The spine surgeon requests placement of a fiducial marker in the T7 pedicle to assist with localization.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   ACR, SIR and OEIS convened a panel of experts familiar with this service to evaluate the direct practice expense inputs for Intraosseous Fiducial Marker placement procedures.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The specialties selected CPT codes **32553** (Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-thoracic, single or multiple) and **20225** (Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)) as references for 209X1. These codes, when combined, contain the necessary components required to perform codes 209X1 and 209X2. In short, combining CPT codes 20225 and 32553 provides an accurate picture, in terms of similar patient type, equipment, and demands of the procedure.

   We also included CPT code 77012 (Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation) as the typical imaging guidance utilized for these procedures. The definitions of code 290X1 and 209X2 include imaging guidance (whereas reference codes 20225 and 32553 do not), as this would be most commonly performed using CT capabilities, code 77012 is used for reference to reflect the values represented by the now bundled imaging guidance.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   Intraosseous fiducial marker placement is a new procedure.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, these are new service codes.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

No

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

CA001: Complete pre-service diagnostic and referral forms (209X1) – (5) RN/LPN/MTA (L037D) is reviewing the diagnostic pre-service and referral forms to ensure complete and submitted appropriately. CA002: Coordinate pre-surgery services (including test results) (209X1) – (3) RN/LPN/MTA (L037D) is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed. CA003: Schedule space and equipment in facility (209X1) – (5) RN/LPN/MTA (L037D) CA004: Provide pre-service education/obtain consent (209X1) – (7) RN/LPN/MTA (L037D) provide necessary education to the patient and patient's family/caregiver(s) to prepare for fiducial marker placement and for care after procedure. They also ensure consent forms are completed. CA005: Complete pre-procedure phone calls and prescription. (209X1) – (3) RN/LPN/MTA (L037D) will answer any additional questions prior to the patient's visit, confirm that certain medications are being held before the procedure. CA006: Confirm availability of prior images/studies (209X1) – (2) CT technologist (L046A) will confirm the previous imaging is available and accessible for the physician prior to the procedure for use in ensuring proper placement of fiducial marker(s).

CA007: Review patient clinical extant information and questionnaire (209X1) – (1) RN/LPN/MTA (L037D) CT technologist will review implant and surgical history

b. Service period (includes pre, intra and post):

N/A

c. Post-service period:

CA038: Coordinate post procedure services (209X1) – (3) RN/LPN/MTA (L037D) communicates with patient and family concerning (potential) success of procedure, readiness for surgery, and associated instructions to aid in post-procedure / pre-surgical coordination.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

No.

September 2025

Computer Assisted Surgical Navigation – Tab 06

In April 2024, the Relativity Assessment Workgroup (RAW) identified CPT code 20985 as part of the high-volume growth screen, with Medicare utilization over 10,000, which has increased by at least 100% from 2017 through 2022. Separately, codes 0054T and 0055T had been identified on the high-volume CPT Category III screen. The specialty society noted that codes 20985, 0054T, and 0055T represented the same service if minor changes were made in the 20985 code descriptor. In September 2024, the RAW reviewed the action plan for 20985 and recommended that the RUC refer CPT code 20985 to the CPT Editorial Panel for revision, to modify the descriptor and address overlap with codes 0054T and 0055T. At the February 2025 CPT Editorial Panel meeting, CPT code 20985 was revised to remove "image-less" for reporting computer-assisted surgical navigational procedures for musculoskeletal procedures. The two existing Category III codes will be deleted for CPT 2027.

CPT code 20985 was surveyed for the April 2025 meeting, and the specialty recommended an interim value with the intention to re-survey for the September 2025 RUC meeting. The RUC determined that the specialty society may survey CPT code 20985 with an amended ZZZ survey template that specifically asks respondents whether pre- and post-service time is associated with this add-on service for the September 2025 RUC meeting.

Based on parallel RAW review, CPT code 20985 and related family (eg, 20985 is reported with 27447 76% of the time) codes were identified for review at the April 2025 RUC meeting. The specialty societies indicated that CPT codes 20985, 27130, 27446 and 27447 were not a family of services as 20985 is an add-on code that can be reported with hundreds of different musculoskeletal procedures. The RUC noted that CPT code 20985 is reported 76 percent of the time with CPT code 27447. However, as CPT code 27447 has much more volume than 20985, only 18 percent of the claims that have code 27447 also include code 20985. The other joint arthroplasty codes are also currently not typically reported with computer-assisted surgical navigation. For the April 2025 meeting, CPT codes 27130 and 27447 were separately identified in a RAW site of service anomaly screen for services that are typically outpatient, though still have inpatient visits. Due to this separate identification, all four services will be reviewed at the September 2025 meeting.

20985 ***Computer-assisted surgical navigational procedure for musculoskeletal procedures (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 78 orthopaedic surgeons and recommends a work RVU of 2.50, maintaining the current value. The RUC recommends 10 minutes pre-service time and 20 minutes intra-service time and 1 minutes of post-service time, totaling 31 minutes. The specialties noted and the RUC concurred that 10 minutes of pre-service time is typical to account for the additional time and effort required to initiate and calibrate computer navigation equipment, as well as additional patient positioning time for the computer navigation to be used. The specialties noted and the RUC concurred that 1 minute of post-service time is necessary to apply dressings to additional wounds related to the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

computer navigation pins/trackers and to review and sign off on intraoperative computer navigation imaging. The RUC confirmed that this pre-service and post-service time is distinct from the base musculoskeletal procedures that 20985 would be performed with.

The RUC compared the surveyed code to the top key reference code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU= 2.50, intra-service 25 minutes and total time 32 minutes) and determined that both services typically involve very similar total time and should be valued the same. Of the survey respondents who selected this key reference code, 77 percent indicated that the surveyed code is more intense than key reference code 20702. Also, both procedures involve additional pre-service and post-service surgeon work that is not part of the primary "skin-to-skin" procedure.

For additional support the RUC referenced CPT code 33268 *Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)* (work RVU= 2.50, 20 minutes intra-service and total time) and noted that both services involve the same amount of intra-service time, though the reference code is a more intense service to perform with less total time. **The RUC recommends a work RVU of 2.50 for CPT code 20985.**

Practice Expense
The RUC recommends no direct practice expense inputs for CPT code 20985 as it is a facility-based add-on service.

Global Period: ZZZ Current Work RVU: **2.50** RUC Recommended RVU: **2.50**

CPT Descriptor: Computer-assisted surgical navigational procedure for musculoskeletal procedures (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Computer-assisted surgical navigation is utilized when a 65-year-old female undergoes a unilateral total knee arthroplasty. [Note: This is an add-on service. Only consider the additional work related to the computer-assisted surgical navigation.]

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to standard discussion of total knee replacement, spend additional time discussing use of computer navigation as an adjunct to the total knee procedure. This involves explaining the rationale for use of the system, how it helps align the knee, and that the surgery may be somewhat longer and more complicated. Describe the use of additional small incisions for placement of pins through the bone along with additional risks of wound-healing issues at the pin site and risk of a fracture through one of the pinholes. Before the surgical procedure and patient positioning, bring the computer navigation unit into the room. After the computer is operational, activate the navigation software and enter patient-specific information such as identifiers, surgeon, and side of surgery. Check set-up options for the program and adjust as necessary. Once patient has been positioned on operating table, move navigation unit into place so intraoperative trackers will be in the field of view of the cameras and surgeon will be able to see the computer screen.

Description of Intra-Service Work: Place pins through the tibia and femur to which clamps are attached to hold the trackers that will be used during the surgical procedure. If the pins are placed outside the intended surgical wound, insert them percutaneously through separate stab wounds and engage to one or both cortices. Use one or two pins on the tibia and femur. If the pins are placed inside the operative wound, place them after the surgical exposure. Other systems use small electromagnetic trackers that are also attached to the femur and tibia. Once pins are placed, secure navigation trackers to them. The trackers may be passive devices with reflective balls whose position is determined by infrared light signals sent from the camera system that senses their position. The trackers may also be active devices that emit infrared light signals that are sensed by a camera system. The initial part of the procedure is to register these trackers with the computer navigation system. Following activation and identification of the trackers, begin the registration process by moving the hip in a circular fashion to enable the computer software to identify the center of the sphere created in space, which is also the center of the femoral head. Following surgical exposure, identify the bony landmarks of the femur and tibia individually by directed digitization with a device that also has tracker components on it. Landmarks identified are generally the medial epicondyle, the lateral epicondyle, the distal femoral center, the axis of the femoral trochlear groove, the surfaces of the medial and lateral distal and posterior condyles, and the topography of the medial and lateral anterior distal femur. Register the tibia by digitizing the center of the tibial plateau, the anterior-posterior axis of the tibia, and the surfaces of the medial and lateral tibial condyles. Find the ankle center by digitizing tips of the medial and lateral malleoli and the point between them. After the anatomy has been registered, make an initial assessment of the knee's range of motion (ROM) with the

values displayed on the computer screen. In addition, determine amount of angular deformity and degree of ligament imbalance. With this information, some systems then also determine an optimal implant size and position with the bone cuts needed to place it. In all total knee systems, the instruments are designed to place metal cutting blocks used to guide the power saws for the bone cuts. With navigation, these are positioned and pinned into place using navigated guidance while following the position of the block relative to the bone on the computer screen. Once the blocks are placed, make the bone cuts with a saw in the same manner as it would be for a conventional total knee replacement procedure. However, once the cut is completed, with navigation there is an opportunity to check the accuracy of the cut, which may be off due to cutting errors made by the surgeon or deflection of the blade by sclerotic bone. With navigation, verify each cut with the opportunity to re-do or adjust the cut. The navigation verification and subsequent correction of the bony cuts involve extra time and work. Either the tibia or femur may be cut first in these systems. Implant sizing and positioning of additional cutting blocks to finish the shaping of the femur is done with navigated guidance followed by the saw cuts as would be done in a standard total knee replacement procedure. After the bony cuts are made, perform a trial reduction and use the navigation system to check the overall mechanical alignment. The navigation system allows shifting pivot points and adjusting rotational and three dimensional positioning of the implants. The navigation system can also be used to quantify whether the collateral ligaments are balanced (ie, equal tension on both sides) to determine if soft tissue releases are needed. The navigation system also shows whether the procedure has resulted in full ROM, especially extension to at least zero degree, or a straight knee. If these goals are not achieved, the appropriate surgical technique or modification of the implant choices is made using the navigation screen as a guide. Following the trial reduction and preparation of the bone, insert the implants, usually with bone cement for fixation. As the bone cement is curing, use the navigation to make minor adjustments in alignment and extension to ensure that alignment and ROM goals are maintained as the bone cement hardens. Once the implants are fixed, record final alignment, ligament stability, and ROM with the software system. At the conclusion of the surgical procedure, remove the trackers and back the pins out of the femur and tibia. Close pin wounds.

Description of Post-Service Work: Apply dressings to additional wounds related to computer navigation pins/trackers. Review and sign-off on computer navigation imaging.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	88%	13%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT Background
In September 2024, the RAW identified 20985 via the high-volume growth screen and recommended resurvey. At the previous April 2024 RUC meeting, codes 0054T and 0055T had been identified on the high-volume CPT Category III screen and were referred for repeat evaluation in 3 years. With the RUC recommendation to resurvey 20985, the societies included codes 0054T and 0055T for survey. While considering vignettes for the Category III codes, it became apparent that codes 20985, 0054T, and 0055T represented the same service if minor changes were made to the descriptor for 20985. Additionally, it was apparent that the high volume of reporting of 0054T and 0055T was likely reporting that should have been coded as 20985, if the wording for 20985 was clearer. For CPT 2027, a revised code descriptor for 20985 was approved to minimize miscoding and codes 0054T and 0055T will be deleted.

Prior Survey of 20985 – 2007 and 2011

In the 2007 survey and the 2011 survey of 20985, the standard ZZZ-global survey was used that correctly defined a ZZZ-global code as: "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)*." The survey tool included the ability for the survey respondent to indicate "pre-service time (*if applicable*); intra-service time (skin-to-skin); and immediate post-service time (*if applicable*)." For both prior surveys, the RUC agreed with the survey median pre-service time of 10 minutes because of the significant time and effort required to initiate and calibrate computer navigation equipment as well as additional patient positioning time for the computer navigation to be used. The RUC disagreed with additional post-service time as duplicate to the primary procedure.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, the survey used for the April 2025 survey included only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation. This survey instrument resulted in a median 25 minutes of intra-service time.

Prior Survey of 20985 – April 2025
At the April 2025 meeting, the AAOS noted that an incorrect survey instrument had been used, as code 20985 involves substantial work outside of the typical "skin-to-skin" intra-service activities represented by most ZZZ codes. For some add-on codes, there is additional pre-service and post-service work before/after skin-to-skin work

The RUC reviewed the April 2025 survey results from 113 orthopaedic surgeons and recommends an interim work RVU of 2.50, maintaining the current value. As interim, the RUC recommends 0 minutes pre-service time and 25 minutes intra-service time, totaling 25 minutes. The specialty societies did not survey for pre-service time and requested to resurvey with an amended survey instrument, specifically asking if separate pre-service time from the base code occurs for this service.

The RUC agreed with this request and submitted the interim recommendation to CMS.

Survey Process
The AAOS and AAHKS each sent survey requests to randomly selected members of their respective organizations. While there is considerable membership overlap between AAOS and AAHKS, both comprised of orthopaedic surgeons, the Research Subcommittee required that data from the AAHKS survey responses be reported separately on the RUC Summary Spreadsheet, as AAHKS currently does not have a RUC advisor. In contrast, during the 2012 survey, both AAOS and AAHKS conducted surveys but did not need to separate their data, since AAHKS had a RUC advisor at that time.

Recommendation - Time
We recommend the survey median times for pre-service, intra-service, and post-service as 10, 20, and 1 minute(s) respectively. The pre-service and intra-service times remain consistent with those reported in two prior surveys by experienced providers in 2007 and 2012. While the RUC previously considered additional post-service time to be duplicative of the primary procedure, we maintain that extra time is necessary to apply dressings to additional wounds related to computer navigation pins/trackers and to review and sign-off on intraoperative computer navigation imaging. The survey median of one additional minute for this post-service work after skin-to-skin work is both conservative and well-justified.

Comparison of Key Reference Codes
Code 20702 is a good comparison for 20985, as both procedures involve additional pre-service and post-service surgeon work that is not part of the primary "skin-to-skin" procedure. In contrast, code 61797 reflects extra intra-service time that is only skin-to-skin work required to treat an additional lesion and is considered more complex than 20985, as indicated by its higher intensity and work RVU.

Summary
It is recognized that reliably assigning specific time segments to add-on codes presents several challenges. When requesting a physician to estimate additional time necessary for an add-on procedure—without providing a precise definition—and while noting that intra-service time is defined as skin-to-skin, there is a risk of omitting any pre-service or post-service time exclusively attributable to the added service or procedure. Most add-on codes, according to CPT and CMS guidelines, are designed to describe additional intra-service work furnished in conjunction with a primary procedure and billed accordingly. Therefore, it is crucial to distinguish a distinct procedure that is always performed together with

another and designated as an add-on, from procedures that represent only extra intra-service effort. Code 20985 falls into the category of a complete separate procedure that is always reported with another procedure and therefore has been designated as an add-on service, even though it will include pre-, intra-, and post-service components. The recommended times and value appropriately reflect an additional procedure with an add-on designation.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 20985 may be reported for computer-assisted surgical navigation services performed in conjunction with any musculoskelatal procedure.

FREQUENCY INFORMATION

---

Tab 6 CPT code 20985 is a facility-only add-on service that will have no related direct practice expense input. Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2025

Sacroiliac Joint Arthrodesis – Tab 07

At the September 2024, the CPT Editorial Panel combined three code change applications (CCAs) to clarify the term "transfixation" through editorial changes to codes 27278 and 27279. In preparation for the January 2025 RUC meeting, the specialty societies delivered two separate letters to the RUC. In these letters, the specialty societies noted that the changes made by the CPT Editorial Panel to these codes are editorial and requested that neither be resurveyed for the January 2025 RUC meeting. The specialty societies requested affirmation by the RUC of the current value for both CPT codes 27278 and 27279, noting that the RUC will have an opportunity to review these codes as the result of a pending CPT CCA at the February 2025 CPT Editorial Panel meeting, which was brought forth independently by the specialty societies. The RUC noted it is well past the time for affirmation of 27279 in terms of when that service was last surveyed in April 2018. The RUC did not vote on affirmation for codes 27278 and 27279 and instead agreed to submit no recommendation.

CPT codes 27278 and 27279 were revised again at the May 2025 CPT Editorial Panel meeting. CPT code 27278 was revised to include imaging guidance, placement of intra-articular structural bone graft, metal, and/or synthetic device(s) without cortical piercing. CPT code 27279 was revised to include placement of transarticular and/or intra-articular device(s) that engage bone with intrinsic fixation (eg, screw(s), flange(s), blade(s)) piercing the lateral cortex of the sacrum and the medial cortex of the ilium. CPT codes 27278 and 27279 were surveyed for the September 2025 RUC meeting.

During the discussion at the RUC, it was noted that anesthesiology did not participate in the RUC survey for CPT code 27278. CY 2024 Medicare claims data obtained from the CY 2026 Proposed Rule show anesthesiology as the predominant specialty for CPT code 27278. The specialties submitted a letter that stated that the revised code descriptor does not shift the typical procedural work to justify resurvey. The letter further states that the code was effective for CPT 2024 and reevaluation would be premature at this time. CPT code 27278 was placed on the new technology/ new services list when it was reviewed for CPT 2024, and the Relativity Assessment Workgroup (RAW) will assess this service via that screen in April 2028. The RUC acknowledged the letter and stated that the specialties had the opportunity to survey and chose not to, therefore, cannot use a change in specialty as a compelling evidence argument in the future.

27278 ***Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of intra-articular structural bone graft, metal and/or synthetic device(s) without cortical piercing, including use of osteopromotive material and/or obtaining bone graft, when performed***

The RUC reviewed the survey results from 35 surgeons and recommends maintaining the current work RVU of 7.86, which preserves relativity within the family. The RUC recommends 33 minutes of pre-service evaluation time, 15 minutes positioning time, 15 minutes scrub/dress/wait time, 48 minutes intra-service time, 20 minutes immediate post-service time, 0.5-99238, 2-99213, totaling 196 minutes. The RUC agreed with the specialty recommendation that a half-day discharge visit and 2-99213 office visits are typical. The first post-operative office visit is two weeks post-surgery and involves wound assessment, confirmation of healing in the absence of infection, management of pain, and placement of imaging

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

or physical therapy orders. The second post-operative office visit is around 6 weeks post-surgery and includes imaging to evaluate healing, ensuring proper fusion, continuation of pain and medication management, and updates to the care plan and related physical therapy needs.

To support the recommended work RVU, the RUC compared the surveyed code to the top key reference codes 22869 *Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level* (work RVU = 7.03, 45 minutes intra-service, and 175 minutes total time) and 22867 *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level* (work RVU = 15.00, 90 minutes intra-service, and 271 minutes total time). The surveyed code work RVU is appropriately bracketed by the intra-service time and total time of both key reference codes. However, the surveyed code falls closer to the top key reference code 22869, although the surveyed code is valued slightly higher, which reflects a marginally longer intraoperative time and slightly greater post-service work. The RUC recognizes that CPT code 22869 is a strong point of comparison to the survey code in terms of intra-service time, total time and intensity.

For additional support, the RUC also referenced CPT code 29880 *Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU= 7.39, 45 minutes intra-service time, 199 minutes total time) and noted that the surveyed code is a somewhat more intense and complex procedure to perform and would have appropriate relativity with this reference service. Therefore, the recommendation to maintain the work RVU of 7.86 for CPT 27278 is well supported by the relativity of other codes in the MFS. **The RUC recommends a work RVU of 7.86 for CPT code 27278.**

27279 ***Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of transarticular and/or intra-articular device(s) that engage bone with intrinsic fixation (eg, screw[s], flange[s], blade[s]) piercing the lateral cortex of the sacrum and the medial cortex of the ilium (with or without piercing the lateral cortex of the ilium), including use of osteopromotive material and/or obtaining bone graft, when performed***

The RUC reviewed the survey results from 53 surgeons and recommends a work RVU of 11.00 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 33 minutes of pre-service evaluation time, 15 minutes positioning time, 14 minutes scrub/dress/wait time, 60 minutes intra-service time, 20 minutes immediate post-service time, 0.5-99238, 2-99213, 1-99212, totaling 223 minutes. The RUC agreed with the specialty recommendation that a half-day discharge visit and 2-99213 and 1-99212 office visits are typical. The post-operative office visits involve wound assessment, confirmation of healing in the absence of infection, management of pain, and placement of imaging or physical therapy orders. Further, follow-up imaging is necessary to evaluate healing and to ensure proper fusion. Lastly, continuation of pain and medication management, updates to the care plan, and related physical therapy needs as assessed at each visit.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference service codes 22867 *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level* (work RVU = 15.00, 90 minutes intra-service, and 271 minutes total time) and 63655 *Laminectomy for implantation of neurostimulator electrodes, plate/paddle, epidural* (work RVU = 10.92, 90 minutes intra-service, and 254 minutes total time). Survey respondents indicated that the surveyed code was identical, somewhat more, or much more intense/complex when compared to the first

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

key reference service code 22867. Survey respondents indicated that the surveyed code was identical or somewhat more complex when compared to the second key reference code 63655. The surveyed code intra-service time and total time are lower than the reference codes; however, the survey respondents indicated that the overall intensity/complexity of the surveyed code is very similar to the first key reference code 22867 and somewhat more than the second key reference code 63655. Therefore, the survey code recommended work RVU is appropriately supported by the key reference services.

For additional support, the RUC referenced code 63662 *Removal of spinal neurostimulator electrode plate/paddle(s) placed via laminotomy or laminectomy, including fluoroscopy, when performed* (work RVU = 11.00, 60 minutes intra-service, and 243 minutes total time). The codes have identical intra-service time, similar post-operative work, and similar total time and therefore, should be valued similarly. **The RUC recommends a work RVU of 11.00 for CPT code 27279.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for CPT codes 27278 and 27279 and made two adjustments to account for the use of moderate sedation. Since these services are performed with moderate sedation, the PE Subcommittee ensured that duplicate PE inputs do not exist with those listed for the moderate sedation codes. Therefore, the supply input SA054 *pack, post-op incision care (suture)* and the equipment item EQ032 *IV infusion pump* were removed to eliminate any duplication.

In addition, the PE Subcommittee discussed existing high-cost disposable supply item, SD356 *Dorsal SI Joint Arthrodesis Implant,* for CPT code 27278 noting that the specialties submitted an invoice to support a price increase from $11,500 to $12,500. Further, the PE Subcommittee acknowledged the new high-cost supply input, *Dorsal SI joint articular fixation device,* as recommended for CPT code 27279. **The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes.**

The Subcommittee also noted the appropriate Use of Clinical Staff pre-service standard time package for 090-day globals in the non-facility and facility. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Musculoskeletal System** **Pelvis and Hip Joint** **Fracture and/or Dislocation**				
[27216]		*Percutaneous skeletal fixation of posterior pelvic bone fracture and/or dislocation, for fracture patterns that disrupt the pelvic ring, unilateral (includes ipsilateral ilium, sacroiliac joint and/or sacrum)*		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(To report bilateral procedure, report [27216] with modifier 50)

(For percutaneous/minimally invasive arthrodesis of the sacroiliac joint without fracture and/or dislocation, ~~use~~*see [27278],* [27279])

[27218] *Open treatment of posterior pelvic bone fracture and/or dislocation, for fracture patterns that disrupt the pelvic ring, unilateral, includes internal fixation, when performed (includes ipsilateral ilium, sacroiliac joint and/or sacrum)*

(To report bilateral procedure, report [27218] with modifier 50)

(For percutaneous/minimally invasive arthrodesis of the sacroiliac joint without fracture and/or dislocation, ~~use~~*see [27278],* [27279])

Arthrodesis

~~*Code [27279] describes percutaneous arthrodesis of the sacroiliac joint using a minimally invasive technique to place an internal fixation device(s) that passes through the ilium, across the sacroiliac joint and into the sacrum, thus transfixing the sacroiliac joint. Report [27278] for the percutaneous placement of an intra-articular stabilization device into the sacroiliac joint using a minimally invasive technique that does not transfix the sacroiliac joint.*~~

~~Percutaneous sacroiliac (SI) joint fusion can be achieved utilizing intra-articular or transarticular device(s). Code [27278] describes the placement of intra-articular devices that do not pierce the cortices of the ilium or sacrum. Code [27279] describes the placement of intra-articular and/or transarticular device(s) that pierce the lateral or medial cortices of the ilium and the lateral cortex of the sacrum. Use [27279] to report hybrid SI joint fusion which consists of placement of both intra-articular and transarticular devices, at least one of which pierces the cortices.~~

Sacroiliac (SI) joint arthrodesis can be performed using a percutaneous/minimally invasive approach ([27278], [27279]) or an open approach ([27280]). Code [27278] is reported for percutaneous/minimally invasive placement of an intra-articular device(s) (eg, bone allograft, synthetic or metal device) into the SI joint that does not pierce the cortices of the ilium and the sacrum; for example, an allograft or device without integral screw(s), flange(s), or blade(s) that distracts and stabilizes the joint. Code [27279] is reported for percutaneous/minimally invasive placement into the SI joint of an intra-articular device(s) with intrinsic fixation (eg, screw[s], flange[s], blade[s]) that pierces the cortices of the ilium and the sacrum or a transarticular device(s) that crosses the SI joint that pierces the cortices of both the ilium and the sacrum. Code [27280] is reported for open arthrodesis of the SI joint.

Report [27279] for a hybrid sacroiliac joint construct, defined as intra-articular and separate transarticular devices placed for the same sacroiliac joint during the same operative session.

Codes [27278], [27279], [27280] include obtaining bone graft when performed and may only be reported once per SI joint. For bilateral procedures, report [27278], [27279], [27280] with modifier 50.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

▲27278	I1	Arthrodesis, sacroiliac joint, percutaneous~~,~~ or minimally invasive, including imaging ~~with image~~ guidance, ~~including~~ ~~includes obtaining bone graft when performed,~~ unilateral ~~placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s]), without placement of transfixation device~~; placement of intra-articular structural bone graft, metal and/or synthetic device(s) without cortical piercing, including use of osteopromotive material and/or obtaining bone graft, when performed ~~device(s), without cortical piercing~~ ~~(For arthrodesis, sacroiliac joint, with placement of a percutaneous transfixation device, use 27279)~~ (Do not report 27278 in conjunction with 27279, for the same joint) (For bilateral procedure, report 27278 with modifier 50)	090	7.86 (No Change) (2025 Work RVU = 7.86)
▲27279	I2	placement of transarticular ~~device(s)~~ and/or intra-articular device(s) ~~piercing the lateral or medial cortices of the ilium and the lateral cortex of the sacrum~~ that engage bone with intrinsic fixation (eg, screw[s], flange[s], blade[s]) piercing the lateral cortex of the sacrum and the medial cortex of the ilium (with or without piercing the lateral cortex of the ilium), including use of osteopromotive material and/or obtaining bone graft, when performed (Do not report 27278, 27279 in conjunction with 76000, 76942, 77002) (Do not report 27279 in conjunction with 27278 for the same joint) (For bilateral procedure, report 27279 with modifier 50) ~~(For percutaneous arthrodesis of the sacroiliac joint by intra-articular implant[s], use 27278)~~ ~~(For hybrid SI joint fusion procedures, use 27279)~~	090	11.00 (2025 Work RVU = 12.13)
[27280]	*Arthrodesis, sacroiliac joint, open, includes obtaining bone graft, including instrumentation, when performed* *(For percutaneous/minimally invasive arthrodesis of the sacroiliac joint without fracture and/or dislocation, ~~utilizing a transfixation device, use~~ see [27278], [27279])*			

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Category III Codes

#[0464T] *Visual evoked potential, testing for glaucoma, with interpretation and report*

(For visual evoked potential screening of visual acuity, use [0333T])

~~(To report percutaneous/minimally invasive [indirect visualization] arthrodesis of the sacroiliac joint with image guidance, use [27279])~~

Virtual Reality Patient Procedural Dissociation

[0773T] *Virtual reality (VR) procedural dissociation services provided by a physician or other qualified health care professional other than the physician or other qualified health care professional performing the diagnostic or therapeutic service that the VR procedural dissociation supports; initial 15 minutes of intraservice time, patient age 5 years or older*

✚*[0774T]* *each additional 15 minutes intraservice time (List separately in addition to code for primary service)*

(Use [0774T] in conjunction with [0773T])

([0775T] has been deleted)

~~(For percutaneous arthrodesis of the sacroiliac joint, see [27278], [27279])~~

[0807T] *Pulmonary tissue ventilation analysis using software-based processing of data from separately captured cinefluorograph images; in combination with previously acquired computed tomography (CT) images, including data preparation and transmission, quantification of pulmonary tissue ventilation, data review, interpretation and report*

(Do not report [0807T] in conjunction with [76000], [78579], [78582], [78598])

[0808T] *in combination with computed tomography (CT) images taken for the purpose of pulmonary tissue ventilation analysis, including data preparation and transmission, quantification of pulmonary tissue ventilation, data review, interpretation and report*

(Do not report [0808T] in conjunction with [71250], [71260], [71270], [71271], [76000], [78579], [78582], [78598])

(For percutaneous arthrodesis of the sacroiliac joint, see [27278], [27279])

Friday, June 6, 2025

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
American Medical Association
330 N. Wabash Avenue, Suite 39300
Chicago, IL 60611

Subject: Sacroiliac Joint Fusion

Dear Dr. Silva:

The American Society of Anesthesiologists (ASA) and North American Neuromodulation Society (NANS) appreciate the opportunity to comment on the recent revisions to CPT codes 27278 and 27279 and the related survey expectation for the September 2025 RUC meeting. While our societies initially indicated a willingness to participate in a resurvey of both codes, after further internal review and consideration of the relevant information, we respectfully request that our societies not be expected to resurvey both codes. Our rationale is provided below.

CPT code 27278

The revised descriptor for code 27278 allows for a broad range of procedural techniques and incorporates the procedures most commonly performed by anesthesiologists and other pain medicine physicians. This is supported by Medicare claims data. Year one Medicare claims data show that anesthesiologists and other pain medicine physicians are the predominant billers for code 27278.The revised descriptor does not alter the applicability of code 27278 to the predominant use case, nor does it shift the typical procedural work in a way that would justify resurvey by anesthesiology and other pain medicine.

Given that code 27278 took effect in 2024, providers are still in the early phases of using this code to report and bill for their clinical work. Revaluation at this time would be premature. Per RUC precedent, services with editorial descriptor changes are not typically resurveyed within such a narrow time frame, especially when the valuation is new, and the predominant use case has not changed. The RUC's New Technology screen already offers a clear and efficient pathway for re-review, timed to align with a time when meaningful, real-world utilization data are available. For these reasons, we respectfully request that anesthesiologists and other pain medicine physicians not be expected to resurvey CPT code 27278 for the September 2025 RUC meeting.

CPT code 27279

Anesthesiologists and other pain medicine physicians did not participate in the April 2018 RUC survey for code 27279 and continue to account for only a small share of total utilization. While some early-generation percutaneous SI joint fusion systems may have been used by our specialties, these scenarios have become increasingly rare. Over time, transfixation-based approaches have consolidated within surgical specialties, particularly orthopedic surgery and neurosurgery.

The revised descriptor for code 27279 describes a more surgically complex procedure involving intrinsic fixation with cortical bone engagement, requiring advanced anatomical targeting. These characteristics are well beyond the typical procedural training and clinical scope of

anesthesiologists and other pain medicine physicians. Including anesthesiologists and other pain medicine physicians in a resurvey would not reflect real-world practice patterns and could distort the valuation of the physician work involved in this more technically demanding procedure.

We appreciate the RUC's thoughtful consideration of these issues and remain available to provide additional data or clarification as needed. Should you have any questions, please contact Helen Olkaba at h.olkaba@asahq.org.

Sincerely,

Richard W. Rosenquist, M.D., FASRA
ASA RUC Advisor

Damean Freas, D.O.
NANS RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:27278 Tracking Number I1 Original Specialty Recommended RVU: **7.86**
Presented Recommended RVU: **7.86**
Global Period: 090 Current Work RVU: **7.86** RUC Recommended RVU: **7.86**

CPT Descriptor: Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of intra-articular structural bone graft, metal and/or synthetic device(s) without cortical piercing, including use of osteopromotive material and/or obtaining bone graft, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male with sacroiliac (SI) joint pain not amenable to conservative treatment undergoes percutaneous/minimally invasive arthrodesis of the SI joint.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 40% , In the ASC 46%, In the office 14%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 64% , Overnight stay-less than 24 hours 29% , Overnight stay-more than 24 hours 7%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Review medical records including laboratory tests and retrieve and review relevant preoperative diagnostic imaging studies (eg, plain films and magnetic resonance images [MRIs]). Meet with patient and family and/or caregiver to review planned procedure and postoperative management. Review and obtain informed consent from patient. Update preoperative H&P as required. Assure appropriate selection, timing, and administration of presurgical antibiotic(s). Verify that all required instruments and supplies are available. Review length of procedure, anticipated blood loss, and postoperative needs with care team. After placement of urinary catheter and anesthesia lines with patient in the supine position, turn patient to the prone position on the procedure room table and pad bony prominences. Assess the position of the extremities and head and adjust as needed. Scrub and gown. Perform a time out with operating surgical team. With the patient positioned prone on the procedure table, adjust the patient's position as needed to allow unimpeded use of fluoroscopy. Prepare the patient's lower back and buttocks and then drape with a surgical barrier.

Description of Intra-Service Work: Perform imaging in multiple obliquities to establish optimal view to access the SI joint. Use a 22-gauge 3.5- or 5-inch spinal needle to infiltrate the working site with local anesthesia from the skin to the periosteum. Mark the target location with a hemostat and surgical marker. Make a 1.5-cm incision and obtain hemostasis with electrocautery. Perform a blunt dissection down to the joint and once again establish hemostasis. Then insert a guide pin into the SI joint space and confirm on multiple oblique and lateral views. Adjust the position of the guide pin to establish optimum access to the SI joint. Next, depending on the system, advance a coaxial dilator over the guide pin to the posterior cortical line of the sacrum, which is again confirmed in the optimal view. Once alignment is confirmed, gently tap the outer working portal on the handle with a mallet until the hard stop on the outer working portal meets the posterior cortical line of the sacrum. Once the working portal is fully seated on the sacrum, remove the internal dilator and guide pin. Depending on the system used, decorticate the SI joint using either a drilling or broaching system. Carefully load the physician-prepared cortical allograft with demineralized bone matrix on the back table into a delivery insertion system. Then carefully insert the allograft and delivery system into the working portal and advance them to the decorticated area of the SI joint. Deploy the allograft using an inserter and mallet. Once the allograft position is satisfactorily established, remove the working portal. After the working portal is removed, close the wound with deep dermal suture and the skin with cyanoacrylate glue.

Description of Post-Service Work: Apply sterile dressings. Assist with patient transfer to a stretcher. Communicate with patient and family/caregiver regarding the postoperative regimen. Communicate with health care professionals, including written and oral reports and orders. Review and interpret images on a picture archiving and communication system (PACS), write a postoperative note and document the procedure in the medical record, and write orders for recovery nurses for pain medication adjustments and activity restrictions. Later the same day, assess the patient prior to discharge to home. Visit the patient to review interval chart notes; answer patient and family/caregiver questions; assess neurovascular status; assess pain score and adjust pain medication as necessary; document the services provided in the medical record; discuss home restrictions (eg, activity, bathing) with patient and family/caregiver; write prescriptions for medications needed post discharge; and complete all appropriate medical records, including discharge instructions and insurance forms. Office: Examine patient in the office during the 90-day global period to remove dressings, assess wound healing, and redress wound. Order and review periodic imaging, as necessary. Assess pain score and write medication orders, as necessary. Order occupational or physical therapy and assess functional recovery. Revise treatment plan(s) and communicate with patient and family or caregiver, as necessary. Discuss progress with primary care physician (PCP) orally and in writing. Dictate progress notes for medical record.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	7%	31%	31%	31%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	46%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	39%	46%	15%
Physical effort required	39%	46%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	46%	39%	15%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	78%	11%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	67%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	67%	22%
Physical effort required	11%	67%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	56%	22%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2027, codes 27278 and 27279 were revised to better distinguish reporting for percutaneous/minimally invasive sacroiliac joint arthrodesis. The following specialty societies participated in the current survey of both codes: AAOS, AANS, CNS, NASS, ACR, SIR, ASIPP, and OEIS. In addition, surveys were sent to physicians trained to implant various devices associated with these procedures (ie, targeted vendor list).

Due to significant overlap in membership among the participating societies, the work summary spreadsheet presents survey results organized by specialty category (pain medicine, radiology, surgery) and by vendor, rather than by individual society.

Recommendation – 27278

We recommend maintaining the current work RVU of 7.86 that was established for CY 2024. The intra-time is only slightly greater than the prior survey and the work for the procedure has not changed.

Pre-time

Package 3 is selected with the following modifications:

Evaluation time: Standard time of 33 minutes which is less than the survey median.

Positioning time: Add 12 minutes (total time = 15 minutes). After placement of anesthesia lines with patient in the supine position, the patient is turned to the prone position with padding of bony prominences and adjustment of the extremities and head as needed.

Scrub, dress, wait time: Standard time of 15 minutes.

Immediate Post-time

Package 8b: Subtract 8 minutes (total time = 20 minutes) to be consistent with the survey median.

Comparison to Key Reference

The recommended RVU of 7.86 is slightly higher than, but consistent with, key reference code 22869, reflecting marginally longer intraoperative time and slightly greater post-service work.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27278

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthestiology How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Specialty Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,585
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Federal Register - NPRM for 2026
File: cms-1832-p_2024_utilization_data_crosswalked_to_2026

Specialty Anesthestiology Frequency 446 Percentage 28.13 %

Specialty Interventional Pain Management Frequency 324 Percentage 20.44 %

Specialty Pain Management Frequency 498 Percentage 31.41 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 27278

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:27279 Tracking Number I2 Original Specialty Recommended RVU: **12.13**
Presented Recommended RVU: **12.13**
Global Period: 090 Current Work RVU: **12.13** RUC Recommended RVU: **11.00**

CPT Descriptor: Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of transarticular and/or intra-articular device(s) that engage bone with intrinsic fixation (eg, screw[s], flange[s], blade[s]) piercing the lateral cortex of the sacrum and the medial cortex of the ilium (with or without piercing the lateral cortex of the ilium), including use of osteopromotive material and/or obtaining bone graft, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male with sacroiliac (SI) joint pain not amenable to conservative treatment undergoes percutaneous/minimally invasive arthrodesis of the SI joint.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 60% , In the ASC 38%, In the office 2%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 59% , Overnight stay-less than 24 hours 38% , Overnight stay-more than 24 hours 3%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Review medical records with attention to imaging and laboratory tests. Meet with patient and family to review planned procedure and postoperative management. Review informed consent with patient. Update preoperative history and physical exam. Assure appropriate selection, timing, and administration of presurgical antibiotic. Verify that all required instruments and supplies are available. Review length of procedure, anticipated blood loss, and perioperative needs with anesthesiologist. After placement of urinary catheter and anesthesia lines in the supine position, turn the patient prone on an operating room table, pad bony prominences, and apply thermal regulation drapes. Assess the position of the extremities and head and adjust as needed. Obtain preoperative fluoroscopic images of the pelvis and sacrum. Confirm the fluoroscope is positioned to enable true lateral imaging of the sacrum and pelvis as well as inlet, outlet, internal, and external oblique views. Indicate areas of skin to be prepared and mark surgical incisions. Scrub and gown. Perform a time-out with operating surgical team.

Description of Intra-Service Work: Make an incision and dissect through the subcutaneous tissue and fascia to access the sacroiliac joint either for placement of a transarticular or intra-articular device. Place guide pins either across the sacroiliac joint or into the sacroiliac joint depending upon the type of implant being placed. Place the soft tissue protectors over the pins to prevent soft tissue damage during preparation of the sacrum, ileum, and SI for implant placement and fusion. Using cannlated drill, chisel, or other device prepare the sacrum, ileum, and SI joint for implant placement and fusion. Collect the bone removed during the drilling process for later grafting. While leaving the soft tissue protector in place, working through the soft tissue protector, remove the cartilage on the sacral and iliac sides of the SI joint using appropriate instruments. Employ direct and indirect visualization to confirm access to and debridement of the joint. After debridement of the joint place bone graft material into the SI joint. Place either transarticular or intra-articual device with intrinsic fixaton that pierces the lateral cortex of the sacrum and medial cortex of the ilium stabilizing the sacroiliac joint for fusion. Confirm the final position of the implant with fluoroscopic imaging, direct and indirect visualization, tactile feedback from the inserter device, and digital palpation of the implant on the lateral surface of the ilium. Remove all pins and soft tissue protectors from the surgical incision. Inspect the wound and control any bleeding. Irrigate the incision and close the wound in layers.

Description of Post-Service Work: Facility: Apply sterile dressings. Assist with patient transfer to a stretcher. Communicate with patient and family/caregiver regarding the postoperative regimen. Communicate with health care professionals, including written and oral reports and orders. Review and interpret images on a picture archiving and communication system (PACS), write a postoperative note and document the procedure in the medical record, and write orders for recovery nurses for pain medication adjustments and activity restrictions. Later the same day, assess the patient prior to discharge to home. Visit the patient to review interval chart notes; answer patient and family/caregiver questions; assess neurovascular status; assess pain score and adjust pain medication as necessary; document the services provided in the medical record; discuss home restrictions (eg, activity, bathing) with patient and family/caregiver; write prescriptions for medications needed post discharge; and complete all appropriate medical records, including discharge instructions and insurance forms. Office: Examine the patient in the office during the 90-day global period to remove dressings, assess wound healing, and redress wound. Remove sutures when appropriate. Order and review periodic imaging, as necessary. Assess pain score and write medication orders, as necessary. Check narcotic prescription registries. Order occupational or physical therapy and assess functional recovery. Revise treatment plan(s) and communicate with patient and family or caregiver, as necessary. Discuss progress with primary care physician (orally and in writing). Dictate progress notes for medical record.

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	50%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	66%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	66%	17%
Physical effort required	17%	50%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	50%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

For CPT 2027, codes 27278 and 27279 were revised to better distinguish reporting for percutaneous/minimally invasive sacroiliac joint arthrodesis. The following specialty societies participated in the current survey of both codes: AAOS,

AANS, CNS, NASS, ACR, SIR, ASIPP, and OEIS. In addition, surveys were sent to physicians trained to implant various devices associated with these procedures (ie, targeted vendor list).

Due to significant overlap in membership among the participating societies, the work summary spreadsheet presents survey results organized by specialty category (pain medicine, radiology, surgery) and by vendor, rather than by individual society.

Recommendation – 27279

We recommend maintaining the current work RVU of 12.13 that was established by CMS in 2020. The intra-time has not changed and the total physician work for the typical patient has not changed.

Pre-time

Package 3 is selected with the following modifications:

Evaluation time: Standard time of 33 minutes which is less than the survey median.

Positioning time: Add 12 minutes (total time = 15 minutes). After placement of anesthesia lines with patient in the supine position, the patient is turned to the prone or posterolateral position with padding of bony prominences and adjustment of the extremities and head as needed.

Scrub, dress, wait time: Subtract 1 minute (total time = 14 minutes) to be consistent with the survey median.

Immediate Post-time

Package 8b: Subtract 8 minutes (total time = 20 minutes) to be consistent with the survey median.

Discussion

In 2014, before survey requests were distributed, society staff identified that a physician had emailed an unspecified number of colleagues regarding the new code and had suggested a specific work RVU. As a result, a new "communication disclosure" question was added to the survey instrument to ensure that any individuals who had been contacted in this manner would be excluded from participating in the survey.

At that time, the code had just transitioned from Category III to Category I, and only 28 survey responses were received—many from physicians with limited or no direct experience performing the procedure. Based on this limited and less experienced dataset, the RUC determined that a crosswalk to code 62287 was the most appropriate valuation method.

In the 2018 Final Rule, code 27279 was nominated for review as a potentially misvalued code following a stakeholder recommendation that the code was misvalued and should be increased. The RUC added the code to its survey list for the next meeting.

Specialties participating in the 2018 survey argued that compelling evidence for revaluation existed, citing flaws in the original 2014 methodology, which they believed underestimated intraoperative intensity. They noted that the initial valuation was based on a limited survey sample of just 28 respondents—many without relevant experience—at a time when the technology was new and rarely performed. In addition, the RUC valuation had relied on a crosswalk to establish the work RVU based on perceived intensity. By 2018, utilization had expanded considerably, and the new survey represented a larger and more robust assessment of physician work and intensity. Despite these arguments, the RUC rejected the compelling evidence claim, concluding that the intensity of work for 27279 that the RUC determined had not changed since 2014, and maintained the prior valuation based on a crosswalk to 62287. [Note, code 62287 has recently been revised at CPT and is on the current 2025 meeting agenda for presentation of survey data.]

In the 2020 Proposed Rule, CMS initially proposed accepting the RUC recommendation to retain the 2014 work RVU of 9.03. However, in the 2020 Final Rule, CMS acknowledged extensive public comments providing evidence that the existing work RVU understated the intensity of the procedure. CMS agreed with the RUC's position that survey data is critical for accurate valuation, but expressed concern that 27279 was still based on a 2014 crosswalk rather than updated, representative survey data.

After reviewing the RUC's survey results and stakeholder feedback, CMS concluded that 27279 remained undervalued at 9.03. CMS rejected comparisons by commenters to both the analogous open procedure (27280) and other codes without similar time values. Instead, CMS finalized a work RVU of 12.13, directly crosswalked to code 57288, *Sling operation for stress incontinence, fascia or synthetic*, an open procedure with identical intraservice time and comparable total procedural time and intensity.

The current 2025 survey, incorporating input from a broader range of specialties, confirms that intraservice time remains unchanged, with only slight decreases observed in preservice and immediate postservice times.

Based on the comprehensive review of historical valuation, survey data, and stakeholder input, we conclude that maintaining the existing work RVU of 12.13 for code 27279 remains appropriate and accurately reflects the procedural intensity and physician work associated with this service.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27279

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Orthopaedic surgery How often? Sometimes

Specialty Neurosurgery How often? Sometimes

Specialty Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6091
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Federal Register - NPRM for 2026
File: cms-1832-p_2024_utilization_data_crosswalked_to_2026

Specialty Orthopaedic surgery Frequency 2276 Percentage 37.36 %

Specialty Neurosurgery Frequency 1658 Percentage 27.22 %

Specialty Pain Management Frequency 835 Percentage 13.70 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 27279

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2025

CPT Code	Long Descriptor	Global Period
27278	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of intra-articular structural bone graft, metal and/or synthetic device(s) without cortical piercing, including use of osteopromotive material and/or obtaining bone graft, when performed	090
27279	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of transarticular device(s) and/or intra-articular device(s) that engage bone with intrinsic fixation (eg, screw[s], flange[s], blade[s]) piercing the lateral cortex of the sacrum and the medial cortex of the ilium (with or without piercing the lateral cortex of the ilium), including use of osteopromotive material and/or obtaining bone graft, when performed	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
27278	A 50-year-old male with sacroiliac (SI) joint pain not amenable to conservative treatment undergoes percutaneous/minimally invasive arthrodesis of the SI joint.
27279	A 50-year-old female with sacroiliac (SI) joint pain not amenable to conservative treatment undergoes percutaneous/minimally invasive arthrodesis of the SI joint.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   AANS, AAOS, ACR, ASIPP, CNS, NANS, NASS, OEIS, and SIR convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for CPT 27278 and 27279.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   The current values for CPT 27278 and 27279 are listed as the reference code for PE.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-

facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

27278 - Interventional radiology, per the current survey results nearly 50% were radiology based. There is no claims data yet available for 27278 but based on the survey and estimated dominant specialty in January 2023, it is not expected to change.

27279 - The surgery specialties, according to the current survey results, were nearly 62% surgery based. Per RUC database, 2023 claims data, reflects orthopedic and neurosurgery are the top two specialties, accounting for 67.7%.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

27278 - To evaluate if the cost of the supply item, SD356, had changed since the RUC January 2023 meeting when this was a new procedure represented as code 2X000, the societies requested an updated invoice for the supply item from the same vendor to perform the evaluation.

The new invoice, from the original vendor, does reflect there has been an increase in the cost of the supply, SD356, Dorsal SI Joint Arthrodesis Implant. Based on this updated cost of the supply implant, the PE spreadsheet reflects an increased cost for supply item SD356 from the current value of $11,500 to recommended value of $12,500.

27279 - Since CPT 27279 was last surveyed for April 2018 meeting, advancements in the technology for the dorsal SI joint articular fixation procedure in the office setting/office-based lab (OBL) can be safely performed. Due to this, the societies are requesting PE to be established in the non-facility setting.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, code 27278 and 27279 remain 090-day global

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

27278 & 27279 - We are requesting 5 minutes for vital signs to measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure before these procedures.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

27278 & 27279

- CA001 - Complete pre-service diagnostic and referral forms (5) – During this time RN/LPN/MTA (L037D) is reviewing the diagnostic pre-service and referral forms to ensure complete and submitted appropriately.
- CA002 - Coordinate pre-surgery services (10) - During this time the RN/LPN/MTA (L037D) is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed. In addition, the staff is arranging an preoperative medical clearances and primary care staff the medical fitness for procedure.
- CA004 - Provide pre-service education/obtain consent (10) – RN/LPN/MTA (L037D) provide necessary education to the patient and patient's family/caregiver(s) to prepare for the arthrodesis and for care after procedure. Staff also ensure consent forms are completed.
- CA005 - Complete pre-procedure phone calls and prescription – (10) – RN/LPN/MTA (L037D) complete calls and prescriptions prior to 27278 to ensure everything is ready to proceed with the procedure

    b. Service period (includes pre, intra and post):

27278 & 27279

- CA009 - Greet the patient (3) RN/LPN/MTA (L037D) providing gowning, ensure appropriate medical records are available.
- CA010 - Obtain vital signs (5) RN/LPN/MTA (L037D) of weight, obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure before these procedures.
- CA012 - Review requisition, assess for special needs (3) RN/LPN/MTA (L037D) review the requisition and determine if there are special considerations for the patient related to allergies, mobility or cognitive ability
- CA013 - Prepare room, equipment and supplies (2) RN/LPN/MTA (L037D) work to prepare the room to allow for access to the low back area from both posterior and lateral orientation
- CA014 - Confirming order and protocol exam (1) RN/LPN/MTA (L037D) will verify the orders for imaging match the procedure and the equipment is ready for the procedure

- CA016 - Prepare, set-up and start IV, initial positioning and monitoring of patient (2) RN/LPN/MTA (L037D) will start the IV and initially position the patient for the procedure to start monitoring them until the physician is present and begins the procedure

27278

- CA018 - Assist Physician (48) - Vascular Interventional Technologist (L041A)100% Physician time - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from puncture to close. This staff person directly works with the physician to complete the procedure and handles equipment and supplies and maintains their sterility.
- CA020 - VI Tech/Nurse blend (36/12) - Circulating staff in the room that acquires images, opens supplies, adjusts and connects equipment. This by convention has been a 75% Vascular Interventional Technologist (L041A) 25% RN/LPN/MTA (L037D) role for interventional procedures.

27279

- CA018 - Assist Physician (60) - Vascular Interventional Technologist (L041A)100% Physician time - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from puncture to close. This staff person directly works with the physician to complete the procedure and handles equipment and supplies and maintains their sterility.
- CA020 - VI Tech/Nurse blend (45/15) - Circulating staff in the room that acquires images, opens supplies, adjusts and connects equipment. This by convention has been a 75% Vascular Interventional Technologist (L041A) 25% RN/LPN/MTA (L037D) role for interventional procedures.

27278 & 27279

- CA024 - Cleaning room/equipment by clinical staff (3) RN/LPN/MTA (L037D) will clean the room and equipment during the immediate post period following the placement of implants.
- CA026 – Clean surgical equipment package (15) RN/LPN/MTA (L037D) will clean the medium instrument pack, listed within the equipment section of the PE spreadsheet, during the immediate post period following the placement of implants
- CA027 - Complete post-procedure x-ray, lab, and pathology reports (2) RN/LPN/MTA (L037D) following discussion with the physician will complete necessary paperwork for follow-up exams/tests for the patient.
- CA029 - Check dressings (1) RN/LPN/MTA (L037D) will spend time checking the dressings to ensure no excessive bleeding by the patient following the placement of implants.
- CA030 - Technologist QC's images in PACS (2) - The Vascular Interventional Technologist (L041A) QCs all images and makes sure the images transfer to PACS.
- CA031 - Review examination with interpreting MD/DOs (2) – VI Tech (L041A) reviews the images to confirm accuracy and completeness of imaging record of procedure.
- CA032 - Scan exam documents into PACS (1) - VI Tech (L041A) scans all documentation into PACS including any drawings/diagrams which may have been created

c. Post-service period:

27278

- CA039 - Post-operative visits (72) – RN/LPN/MTA (L037D) will work with the physician over the course of the post operative period and as part of the visits to collect necessary

information for the physician, review current status and vitals of the patient and communicate these with the physician and assist in documenting within the medical record.

27279

- CA039 - Post-operative visits (99) – RN/LPN/MTA (L037D) will work with the physician over the course of the post operative period and as part of the visits to collect necessary information for the physician, review current status and vitals of the patient and communicate these with the physician and assist in documenting within the medical record.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

27278 & 27279
Assist Physician - Vascular Interventional Technologist (L041A)100% Physician time - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from puncture to close. This staff person directly works with the physician to complete the procedure and handles equipment and supplies and maintains their sterility.

Nurse /VI Tech blend - Circulating staff in the room that acquires images, opens supplies, adjusts and connects equipment. This by convention has been a 75% Vascular Interventional Technologist (L041A) 25% RN/LPN/MTA (L037D) role for interventional procedures. This staff member operates the fluoroscopy machine obtaining images, adjusting imaging parameters, opening sterile and nonsterile supplies and otherwise assists in a mobile capacity while not scrubbed in.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

For CPT 27278 and 27279 we have included a Vascular Interventional Technologist at 75% of the physician work time to perform the image acquisition portion of the procedure and a nurse blend at 25% of the physician time as the circulator.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

27279

- A new supply, dorsal SI joint articular fixation device, is included within the PE spreadsheet. An invoice has been provided to support the cost of the supply, $14,451. This supply item is used for the dorsal transfixation of the SI joint.

18. Are you recommending a PE supply pack for this recommendation? **Yes** or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

27278 & 27279
Yes, we are recommending the following established supply packs:

- SA048 (pack, minimum multi-specialty visit)
- SA054 pack, post-op incision care (suture)

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**5.02**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

EQ168	light, exam		1232.887	Default	0.003271745
EF031	table, power		5906.76	Other Formula	0.015674926
EL011	room, angiography		1193425.21	Highly Technical	4.521910978
EQ138	instrument pack, medium ($1500 and up)		1500	Instrument Packs	0.00697135
ED050	Technologist PACS workstation		5557	PACS	0.022017924
EQ110	electrocautery-hyfrecator, up to 45 watts		837.5	Default	0.002222496

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

27278 & 27279
The equipment item, EL011 (room, angiography) includes a floor-mounted patient table with floating tabletop designed for angiographic exams and interventions (with peistepping for image intensifiers 13in+). We have also listed EF031 (table, power) within the equipment section. The equipment formula to calculate the time for EF031 utilizes "Other Formula" and the value of time identified by CA039 (post-operative visits (total time)) rather than "Office Visits" which would include time from

pre, intra and post service time, all duplicative due to the fact there is a table already accounted for in the angiography room.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Per discussion at the table the following items were adjusted on the PE spreadsheet:

Removed supply pack from both codes as glue is used to close the incision(s), not sutures:

SA054	pack, post-op incision care (suture)	Quantity of 1

Removed equipment time from both codes due to moderate sedation:

EQ032	IV infusion pump		2439.096	Default	0.006472694

Per the discussion it was supported for a sterile gown for the physician and VI tech during the procedure for a quantity of 2 total sterile gowns for each procedure code. These gowns are separate from the single sterile gown allocated as part of the moderate sedation pack which is used by different staff.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

FACILITY DIRECT PE INPUTS **CPT CODE(S): 27278 & 27279**

SPECIALTY SOCIETY(IES): AANS, AAOS, ACR, ASIPP, CNS, NANS, NASS, OEIS, SIR

PRESENTER(S): Clemens Schirmer, MD (AANS/CNS), Hussein Elkousy, MD (AAOS), Kano Mayer, MD (NASS), Robert Kennedy, MD (SIR), Andrew Moriarity, MD (ACR), Curtis Anderson, MD (OEIS)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2025

CPT Code	Long Descriptor	Global Period
27278	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of intra-articular structural bone graft, metal and/or synthetic device(s) without cortical piercing, including use of osteopromotive material and/or obtaining bone graft, when performed	090
27279	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of transarticular device(s) and/or intra-articular device(s) that engage bone with intrinsic fixation (eg, screw[s], flange[s], blade[s]) piercing the lateral cortex of the sacrum and the medial cortex of the ilium (with or without piercing the lateral cortex of the ilium), including use of osteopromotive material and/or obtaining bone graft, when performed	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
27278	A 50-year-old male with sacroiliac (SI) joint pain not amenable to conservative treatment undergoes percutaneous/minimally invasive arthrodesis of the SI joint.
27279	A 50-year-old female with sacroiliac (SI) joint pain not amenable to conservative treatment undergoes percutaneous/minimally invasive arthrodesis of the SI joint.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AANS, AAOS, ACR, ASIPP, CNS, NANS, NASS, OEIS, and SIR convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for CPT 27278 and 27279.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The current values for CPT 27278 and 27279 are respectively listed as reference codes for PE.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, both codes 27278 and 27279 remain 090-day global

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Both 27278 and 27279 • CA001 - Complete pre-service diagnostic and referral forms (5) – During this time RN/LPN/MTA (L037D) is reviewing the diagnostic pre-service and referral forms to ensure complete and submitted appropriately. • CA002 - Coordinate pre-surgery services (20) - During this time the RN/LPN/MTA (L037D) is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed. In addition, the staff is arranging a preoperative medical clearance and coordinating with dialysis centers and primary care staff the medical fitness for procedure. • CA003 - Schedule space and equipment in facility (8) - RN/LPN/MTA (L037D) must schedule availability in the OR and confirm availability of the procedure specific Equipment and supplies. • CA004 - Provide pre-service education/obtain consent (20) – RN/LPN/MTA (L037D) provide necessary education to the patient and patient's family/caregiver(s) to prepare for the arthrodesis and for care after procedure. Staff also ensure consent forms are completed. • CA005 - Complete pre-procedure phone calls and prescription – (7) – RN/LPN/MTA (L037D) complete calls and prescriptions prior to the procedure to ensure everything is ready to proceed with the procedure.

   b. Service period (includes pre, intra and post):

Both 27278 and 27279

- CA036 - Discharge day management (6) – RN/LPN/MTA (L037D) complete discharge instructions review with the patient and patient's family/caregiver(s) prior to discharge.

c. Post-service period:

Code 27278

- Post-operative visits (72) – RN/LPN/MTA (L037D) will work with the physician over the course of the post operative period and as part of the visits to collect necessary information for the physician, review current status and vitals of the patient and communicate these with the physician and assist in documenting within the medical record.

Code 27229

- Post-operative visits (99) – RN/LPN/MTA (L037D) will work with the physician over the course of the post operative period and as part of the visits to collect necessary information for the physician, review current status and vitals of the patient and communicate these with the physician and assist in documenting within the medical record.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Both 27278 and 27279
- SA048 (pack, minimum multi-specialty visit)
- SA054 pack, post-op incision care (suture)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**5.02**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

Equipment Code	EQUIPMENT		Purchase Price	Equipment Formula	Cost Per Minute	
EF031	table, power		5906.76	Other Formula	0.015674926

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Hip and Pelvis Arthrodesis Revisions – Tab 4

In May 2022, the CPT Editorial Panel created Category III code 0775T for CPT 2023 to report percutaneous sacroiliac (SI) joint arthrodesis using an intra-articular implant(s), such as bone allograft material or synthetic devices. In September 2022, the Panel replaced Category III code 0775T with a new Category I code 27278 *Arthrodesis, sacroiliac joint, percutaneous, with image guidance, including placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s]), without placement of transfixation device*, which was surveyed for and valued at the January 2023 RUC meeting. CPT code 27278 was flagged for new technology and is expected to be re-reviewed by the RUC in 2027.

CPT code 27279 *Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixation device* was added as a family code to the January 2023 level of interest (LOI) form. However, the specialty societies requested that this code not be re-reviewed with 27278, therefore, the RUC submitted no recommendation for 27279 at the January 2023 RUC meeting.

At the September 2024 CPT Editorial Panel meeting, three separate code change applications (CCAs) were submitted that proposed changes to the guidelines and codes 27278 and 27279. The CPT Editorial Panel combined the CCAs and addressed the matter to further clarify the term "transfixation" through editorial changes to these codes.

In preparation for the January 2025 RUC meeting, the specialty societies delivered two separate letters to the RUC that detail the revisions to each of these codes made by the CPT Editorial Panel and presented a comprehensive timeline outlining the CCAs considered at previous CPT Editorial Panel meetings. In these letters, the specialty societies note that the changes made by CPT to these codes are editorial and request that neither be resurveyed for the January 2025 RUC meeting. The specialty societies requested affirmation by the RUC of the current value for both CPT codes 27278 and 27279, noting that the RUC will have an opportunity to review these codes via the Relativity Assessment Workgroup's new technology screen or as the result of a pending CPT CCA at the February 2025 CPT Editorial Panel meeting which was brought forth independently by the specialty societies. The RUC noted it is well past the time for affirmation of 27279 in terms of when that service was last surveyed in April 2018. The RUC did not vote on affirmation for codes 27278 and 27279 and instead agreed to submit no recommendation.

The RUC submits no recommendation regarding CPT codes 27278 and 27279 as they were not re-reviewed or re-surveyed for the January 2025 RUC meeting.

***27279**, 27280, 27282, 27284, 27286, 27580, 27870, 27871, 28295, 28296, 28298, 28299, 28705, 28715, 28725, 28730, 28735, 28737, 28740, 28750, 28755, 28760, 29907)*

(For implant removal after failed drug delivery device placement, see 22862, 22864, 23334, 23335, 24160, 25250, 25251, 27090, 27091, 27488, 27704)

(For partial replacement after successful eradication of infection with removal of drug delivery implant, see 23470, 24360, 24361, 24362, 24365, 24366, 25441, 25442, 25443, 25444, 25445, 27125, 27236, 27438, 27440, 27441, 27442, 27443, 27446)

Pelvis and Hip Joint
Fracture and/or Dislocation

27216 *Percutaneous skeletal fixation of posterior pelvic bone fracture and/or dislocation, for fracture patterns that disrupt the pelvic ring, unilateral (includes ipsilateral ilium, sacroiliac joint and/or sacrum)*

(To report bilateral procedure, report 27216 with modifier 50)

(For percutaneous/minimally invasive arthrodesis of the sacroiliac joint without fracture and/or dislocation, ~~use~~ see 27278, 27279)

27218 *Open treatment of posterior pelvic bone fracture and/or dislocation, for fracture patterns that disrupt the pelvic ring, unilateral, includes internal fixation, when performed (includes ipsilateral ilium, sacroiliac joint and/ or sacrum)*

(To report bilateral procedure, report 27218 with modifier 50)

(For percutaneous/minimally invasive arthrodesis of the sacroiliac joint without fracture and/or dislocation, ~~use~~ see 27278, 27279)

Arthrodesis

~~Code 27279 describes percutaneous arthrodesis of the sacroiliac joint using a minimally invasive technique to place an internal fixation device(s) that passes through the ilium, across the sacroiliac joint and into the sacrum, thus transfixing the sacroiliac joint. Report 27278 for the percutaneous placement of an intra-articular stabilization device into the sacroiliac joint using a minimally invasive technique that does not transfix the sacroiliac joint.~~

Percutaneous sacroiliac (SI) joint fusion can be achieved utilizing intra-articular or transarticular device(s). Code 27278 describes the placement of intra-articular devices that do not pierce the cortices of the ilium or sacrum. Code 27279 describes the placement of intra-articular and/or transarticular device(s) that pierce the lateral or medial cortices of the ilium and the lateral cortex of the sacrum. Use 27279 to report hybrid SI joint fusion which consists of placement of both intra-articular and transarticular devices, at least one of which pierces the cortices.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

▲27278	N1	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, with image guidance, ~~including~~ includes obtaining bone graft when performed, unilateral; placement of intra-articular device(s), without cortical piercing ~~implant(s)~~ ~~(eg, bone allograft[s], synthetic device[s]), without placement of transfixation device~~ ~~(For arthrodesis, sacroiliac joint, with placement of a percutaneous transfixation device, use 27279)~~ (For bilateral procedure, report 27278 with modifier 50) (Do not report 27278 in conjunction with 27279, for the same joint)	090	No Recommendation (2025 Work RVU = 7.86)
▲27279	N2	~~Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed,~~ placement of transarticular device(s) ~~and placement of *transfixing* transfixation~~ and/or intra-articular device(s) piercing the lateral or medial cortices of the ilium and the lateral cortex of the sacrum ~~(For percutaneous arthrodesis of the sacroiliac joint by intra-articular implant[s], use 27278)~~ (For bilateral procedure, report 27279 with modifier 50) (For hybrid SI joint fusion procedures, use 27279) (Do not report 27279 in conjunction with 27278, for the same joint)	090	No Recommendation (2025 Work RVU = 12.13)
27280	*Arthrodesis, sacroiliac joint, open, includes obtaining bone graft, including instrumentation, when performed* (For percutaneous/minimally invasive arthrodesis of the sacroiliac joint without fracture and/or dislocation, ~~utilizing a transfixation device, use~~ see 27278, 27279) *(To report bilateral procedure, report 27280 with modifier 50)*

Subject: Code 27278 for Hip and Pelvis Arthrodesis Revisions

Dear Dr. Silva:

On behalf of the American College of Radiology (ACR), Society of Interventional Radiology (SIR), American Roentgen Ray Society (ARRS), Radiological Society of North America (RSNA), Association of Academic Radiology (AAR), and Outpatient Endovascular and Interventional Society (OEIS) we are writing in regards to resurveying the revised code for SI joint arthrodesis (27278) approved at the September 2024 CPT Editorial Panel Meeting.

Tabs 25, 34, and 37 were voted on and accepted with modifications (ie, on-site Option E) as a single Panel action. Modifications included:

1. Revision of the Category I/Surgery/Musculoskeletal System/Pelvis and Hip Joint/Fracture and/or Dislocation/Arthrodesis subsection guidelines.
2. Revision of code 27278 by removing language that noted “transfixation.”
3. Revision of code 27278 to reflect a family – parent/child relationship with 27279.
4. Addition of the terms “or minimally invasive”, “unilateral” and “device(s), without cortical piercing” to code 27278 as part of the common language needed for both codes in the family (ie, for 27278 and 27279).
5. Rearrangement of language in code 27278 (ie, “includes obtaining bone graft when performed,”) and deletion of the term “including” to capture additional common language within the “parent” portion of the first code in the family.
6. Deletion of the term “implant(s) (eg, bone allograft[s], synthetic device[s]),” within code 27278.
7. Deletion of a parenthetical note following 27278, regarding reporting for “transfixation” procedures.
8. Deletion of a note following code 27279 that directed the use of 27278 for percutaneous arthrodesis of the SI joint with intra-articular implants.
9. Addition of exclusionary parenthetical notes following codes 27278 and 27279 to restrict reporting 27278 and 27279 together.

We do not believe we need to resurvey 27278 because this was recently surveyed in 2022 for the January 2023 RUC meeting. The changes to this code (ie, for the implant without transfixation) are editorial. Specifically, the changes were made to clarify further transfixation, such as piercing the cortices of the iliac bone and sacrum, which this code/procedure does not do; thus, the changes to this code are purely editorial. Based on this, we are requesting reaffirmation by the RUC of the current values for code 27278 for CY 2026.

For code 27279, the undersigned societies are not the primary providers of this service. We were made aware of the letter written by the surgical societies regarding this code. Should further revisions to 27279 affect the code family, the undersigned societies would prefer to readdress changes at that time. We, therefore, defer discussions of 27279 to its interested societies.

The undersigned specialty society advisors are available to meet with RUC representatives and staff should they need to discuss this further. Please contact staff at amaleki@sirweb.org with additional questions or concerns or to schedule a meeting.

Subject: Tab 4 Codes 27278, 27279 – SI Joint

Dear Dr. Silva:

On behalf of the American Academy of Orthopaedic Surgeons, American Association of Neurological Surgeons, Congress of Neurological Surgeons, International Society for the Advancement of Spine Surgery, and the North American Spine Society, we are writing to a requested survey of revised codes for SI joint arthrodesis (27278 and 27279) approved at the September 2024 CPT Editorial Panel Meeting.

Three separate code change applications (CCAs) were submitted that proposed changes to the guidelines and/or codes 27278 and 27279. **Our societies disagreed with many of the proposed changes.**

One CCA indicated that code 27279 was brought forth to the Editorial Panel resulting in a code that was "directional" piercing both the lateral and medial cortices of the ilium and the lateral cortex of the sacrum. The term transfixation was used to describe this "across both iliac cortices and the SI joint" fixation. This CCA indicated that this term contradicts the FDA definition of transfixation and revisions were necessary. Another CCA also disagreed with the prior change in terminology that defined transfixation and indicated that it caused confusion with providers and coders. The CCA indicated that the definition focused on final anatomical placement and was not consistent with plain English meaning of the term 'fixation' and did not reflect the multiple approaches and device designs to fixate (transfix) the SI joint. A third CCA proposed different nuanced terminology to the guidelines to expand the current code concept of "into the joint" and "across the joint," adding that into the joint plus stabilization (inside-out) should be reported with 27278. This is different from the other two CCAs that proposed that the 'inside-out' stabilization should be reported with 27279. No literature was submitted with any of the CCAs to support a new code. Instead, the literature described various approaches and devices which use three different techniques.

Advisors from the undersigned specialty societies were present at the Panel meeting as well as at a facilitation meeting that was held the night before the CPT Editorial Panel meeting adjourned. Throughout the CPT process and review of the multiple CCAs, we consistently stated that a third code for devices that are placed into the joint that include fixation that pierce the medial iliac and/or the lateral sacrum needed a separate code and this could be supported by the literature associated with the 3 CCAs. However, during the facilitation meeting, we were told by AMA counsel that no CCA was submitted for a third code and that a new third code could not be created. Therefore, the Panel instead bundled what should have been a third code (including "hybrid procedures" – the simultaneous use of two different techniques and implants) into code 27279 – without any CCA or supporting literature. If "hybrid procedures" deserve a

separate code, then we believe that literature was needed, a CCA was needed, and a third code should have been created.

Furthermore, the lateral/posterolateral "across both cortices of the ilium and the SI joint" transfixation procedure (27279) is not typically performed in the office but the code has now been revised to include posterior "into the joint" procedures that are performed in the office.

We would also like to note that societies were told there is a lack of Level 1 evidence for the new procedure that was bundled into revised code 27279, further questioning the bundling of a new distinct procedure into 27279.

We continue to believe there are three broad categories of percutaneous SI joint fusion/stabilization procedures:

1. posterior into the joint (intra-articular) without fixation;
2. posterior/posterolateral into the joint (intra-articular) with **stabilization**; and
3. lateral/posterolateral across both cortices of the ilium and across the SI joint with fixation of the sacrum.

Surveying a revised code that bundled procedure #2 (a new and distinct procedure) above into the current 27279 as described by #3 above would be incorrect. #2 is typically done in the office and #3 is done typically in a facility. These are not the same procedures and should not be a single code. Approach matters – drilling across the ilium and into the sacrum as described in the intra-work description for current code 27279 is not the same work as placing a device into the SI joint and (for example) placing screws inside-out through the device into adjacent bone. A comparison of the intra service description of 27279 to the CPT approved description of procedure for revised code 27279 makes this clear.

While we appreciate the Panel's efforts to find a solution that would satisfy all interested stakeholders as an imperative at the meeting, issues remain with the code revisions. The Panel may have agreed that a third code was needed, but because (per legal counsel) there was no CCA submitted to suggest a new code, they instead modified 27279 to include a new code. We do not understand why the Panel could not create a needed third code yet were allowed to merge a distinct third procedure into code 27279.

If the Panel truly believes the work of 27279 has not changed with the revised descriptor because they believe the work for the "posterior into the joint with fixation" procedure is the same as "current across the joint fixation" code 27279, then this is an editorial change and no survey is needed. If the RUC and the Panel believe that work has changed, then current code 27279 should be maintained and a new code for the new procedure should be established before a survey is conducted.

For these reasons, the undersigned societies feel we are not able to survey the revised codes and have submitted a code change application to account for the third code that is not described by either current code (27278 or 27279) but represents different work. We ask that the RUC reaffirm its prior recommendation for these codes and note that the RUC will have the opportunity to review survey data for the family of new and revised codes after CPT considers the CCA at the February 2025 CPT Editorial Panel Meeting.

Specialty society advisors are available to meet with RUC representatives and staff should they feel further discussion is necessary. Please reach out to staff at willer@aaos.org with additional questions or concerns or to schedule meeting.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2025

Cardiac Contractility Modulation – Tab 8

In May 2025, the CPT Editorial Panel approved a new family of 11 Category I CPT codes for insertion, removal, and replacement of cardiac contractility modulation (CCM) systems, generators, and leads in several combinations. A separate set of four codes was created to describe the corresponding CCM programming, interrogation, and remote interrogation services. All 11 of the insertion, removal, and replacement/repositioning/revision CCM codes, as well as three programming, interrogation, and remote interrogation CCM services that involve physician work, were surveyed for the September 2025 RUC meeting.

CCM is an implantable device-based therapy for heart failure with reduced ejection fraction that delivers non-excitatory biphasic electrical signals to the right ventricular septal wall during the heart's absolute refractory period. This therapy does not initiate a new cardiac depolarization or a contraction but enhances cardiac contractility with improved calcium handling and calcium-induced release from the cellular sarcoplasmic reticulum. CCM therapy is intended for patients with moderate to severe heart failure symptoms to improve their quality of life and reverse cardiac remodeling. 80% of patients who undergo CCM have concomitant devices, such as defibrillators or pacemakers, making these CCM services more complex and intense. The current technology employs transvenous implantation of two ventricular leads, actively fixated to the right ventricular septum, spaced roughly 2 centimeters apart, connected to a generator that is a unit that requires recharging on a weekly basis. Intraoperative assessment entails adequate positioning, sensing thresholds, capturing thresholds to assure stability to stimulate, ruling out extracardiac pain through stimulation of intercostal musculature, and ruling out electromagnetic interference with already present devices.

CCM Code Family

The specialty societies detailed the four code subsets within the CCM code family, which include CCM insertion services (33X01-33X04), CCM removal services (33X05-33X08), CCM replacement, repositioning, and revision services (33X09-33X11), and CCM programming, interrogation, and remote interrogation services (93X01-93X03). The RUC discussed the relative value of physician work across all services within this code family, determining that the CCM removal services typically require more physician work than their corresponding CCM insertion services. Moreover, CCM replacement, repositioning, and revision services require less physician work than both removal and insertion services, followed by CCM programming, interrogation, and remote interrogation services, which require considerably less time than the 11 surgical CCM services. The RUC agreed with the described relativity and the subsequent rank order between these services.

Comparison to Permanent Pacemaker Pulse Generator Procedures

Many of the key reference services selected by the survey respondents compared the CCM surgical codes and programming/interrogation codes to analogous permanent pacemaker pulse generator surgical, programming and interrogation codes. In contrast to a pacemaker, which modulates the heart's rhythm, the cardiac contractility modulation system's impulses are designed to modulate the strength of contraction of the heart muscle. Unlike pacemakers, these systems stimulate for specific time intervals to improve myocardial function. Stimulation from a CCM device is considered non-excitatory, meaning it does not induce a heartbeat. CCM signals are delivered using a sophisticated timing algorithm during the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

heart's absolute refractory period. Rather than induce a contraction, CCM signals create changes at the cellular level to increase contractile strength of the heart.

For the CCM surgical procedure codes, the specialties noted that there is a substantial difference in the type of leads the EP cardiologist or electrophysiologist is working with and how they place them relative to the pacemaker insertion/removal procedures. One right ventricular lead is placed on the high septum and a second lead is placed in the mid-septum. These are two leads in the ventricle that are specifically located on the ventricular septum within a certain distance that has to be tested with one another so they can interact, because the timing of those two leads is critical in delivering the non-excitatory impulse during the absolute refractory period. Placement of CCM leads requires more skill relative to the placement of pacemaker leads, where positioning was less critical. An additional lead may also be placed in the right atrial appendage, though an atrial lead is used in an extreme minority of cases. Each lead for CCM has a helical coil fixation, whereas many other types of ventricular leads are passive fixation tines that enter into the trabeculum of the right ventricle, which have no ability to place them anywhere else aside from the apex of the heart.

Insertion of Permanent CCM System

In reviewing this subset of services within the CCM code family, the RUC determined the rank order for the CCM surgical insertion services is as follows: CPT code 33X01 (insertion of the entire CCM system); CPT code 33X04 (insertion of dual transvenous electrode); CPT code 33X03 (insertion of a single transvenous electrode); and CPT code 33X02 (insertion of pulse generator), respectively. The post-operative office visit is necessary for assessing the wound to see if it is healing appropriately, removing the dressing, and prescribing any required antibiotics or analgesic medications. Moreover, the RUC notes that for the four CCM insertion codes, the pre-service scrub/dress/wait time and immediate post-service time were adjusted as necessary to align with the survey results.

33X01 ***Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes***

The RUC reviewed survey results from 51 electrophysiologists and heart failure specialists and recommends the survey 25th percentile work RVU of 8.83, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 90 minutes of intra-service time, 20 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 210 minutes of total time.

The physician work involved with CPT code 33X01 describes insertion of the entire CCM system, which includes the pulse generator, the appropriate number of transvenous electrodes as determined by the physician prior to the procedure (either two right ventricular leads only or two right ventricular leads and a right atrial lead, depending on the patient), as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other insertion codes, 33X01 requires the most physician time and work since it involves the insertion of every implantable CCM component. Furthermore, the specialty societies anticipate that this service will be the most frequently performed of this code family.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To support the recommended work RVU of 8.83, the RUC compared the surveyed code to the top key reference service 33208 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); atrial and ventricular* (work RVU = 8.52, 60 minutes intra-service time, 231 minutes total time) and second key reference service 33217 *Insertion of 2 transvenous electrodes, permanent pacemaker or implantable defibrillator* (work RVU = 5.59, 120 minutes intra-service time, 262 minutes total time). The RUC acknowledges that the surveyed code requires a similar amount of physician work compared to the top key reference service and significantly more physician work than the second key reference service. The RUC recognizes that together the top two key reference services selected by survey respondents bracket CPT code 33X01 in terms of intra-service time. Despite requiring less total time overall than the two key reference services, the RUC also notes that the surveyed code is slightly more intense/complex than the top key reference service and significantly more intense/complex than the second key reference service. Thus, comparison between these services is appropriate and relativity is maintained based on the physician work involved with these services.

For additional support, the RUC compared the surveyed code to MPC code 14040 *Adjacent tissue transfer or rearrangement, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; defect 10 sq cm or less* (work RVU = 8.60, 90 minutes intra-service time, 223 minutes total time). The RUC notes that this reference requires 90 minutes of intra-service time, which is identical to the surveyed code, and while it requires slightly more time, 33X01 is a more intense/complex service to perform. Overall, the RUC recommendation of the 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 8.83 for CPT code 3XX01.**

33X02 ***Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes; pulse generator only***
The RUC reviewed survey results from 39 electrophysiologists and heart failure specialists and recommends a work RVU of 5.80 based on a direct crosswalk to CPT code 33240 *Insertion of implantable defibrillator pulse generator only; with existing single* lead (work RVU = 5.80, 45 minutes intra-service time, 135 minutes total time) to appropriately account for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 40 minutes of intra-service time, 16 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 156 minutes of total time.

The physician work involved with CPT code 33X02 describes insertion of the pulse generator, as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other insertion codes, 33X02 requires the least physician time and work since it only involves the insertion of the pulse generator and not the insertion of a single or dual transvenous electrode(s). The specialty societies anticipate that this service will be performed infrequently, less than 33X01 and similarly to 33X03 and 33X04.

The RUC recognizes that the top key reference service 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU = 6.05, 45 minutes intra-service time, 181 minutes total time) requires similar intra-service time and more total time than the surveyed code. Moreover, the second key reference service 33208 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); atrial and ventricular* (work RVU = 8.52, 60 minutes intra-service time, 231 minutes total time) requires significantly more intra-service and total time than the surveyed code. To support the recommended value, the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC found crosswalk CPT code 33240 to be a more appropriate service to compare to CPT code 33X02 in terms of intra-service time, total time, and overall measured intensity/complexity compared to the key reference services selected by survey respondents.

For additional support, the RUC compared the surveyed code to CPT code 67924 *Repair of entropion; extensive (eg, tarsal strip or capsulopalpebral fascia repairs operation)* (work RVU = 5.93, 40 minutes intra-service time, 149 minutes total time) and CPT code 46948 *Hemorrhoidectomy, internal, by transanal hemorrhoidal dearterialization, 2 or more hemorrhoid columns/groups, including ultrasound guidance, with mucopexy, when performed* (work RVU = 5.57, 40 minutes intra-service time, 163 minutes total time). Together, these two comparator codes bracket the RUC recommended work RVU of 5.80 percentile work RVU, and both codes require 40 minutes of intra-service time, which is identical to the surveyed code. While both of these comparator codes require more total time, both services are slightly less intense/complex to perform than CPT code 33X02, which is reasonable based on the differences in work and time between these procedures. Overall, the RUC's direct crosswalk recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 5.80 for CPT code 33X02.**

33X03 ***Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes; transvenous electrode, single***
The RUC reviewed survey results from 40 electrophysiologists and heart failure specialists and recommends the survey 25th percentile work RVU of 6.00, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 50 minutes of intra-service time, 17 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 167 minutes of total time.

The physician work involved with CPT code 33X03 describes insertion of a single transvenous electrode, as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other insertion codes, 33X03 requires less physician time and work than CPT codes 33X01 and 33X04, but more than 33X02, since it does not involve the insertion of a dual transvenous electrode or the pulse generator. The specialty societies anticipate that this service will be performed infrequently, less than 33X01 and similar to 33X02 and 33X04.

To support the recommended work RVU of 6.00, the RUC compared the surveyed code to MPC code 15823 *Blepharoplasty, upper eyelid; with excessive skin weighting down lid* (work RVU = 6.81, 45 minutes intra-service time, 161 minutes total time). Overall, the RUC recommendation of the 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 6.00 for CPT code 33X03.**

33X04 ***Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes; transvenous electrode, dual***
The RUC reviewed survey results from 39 electrophysiologists and heart failure specialists and recommends the survey 25th percentile work RVU of 6.23, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 60 minutes of intra-service

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

time, 20 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 180 minutes of total time.

The physician work involved with CPT code 33X04 describes insertion of a dual transvenous electrode, as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other insertion codes, 33X04 requires less physician time and work than CPT codes 33X01, but more than 33X02 and 33X03, since it involves the insertion of a dual (not a single) transvenous electrode and does not include insertion of the pulse generator. The specialty societies anticipate that this service will be performed infrequently, less than 33X01 and similar to 33X02 and 33X04.

To support the recommended work RVU of 6.23, the RUC compared the surveyed code to the key reference service 33208 *Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); atrial and ventricular* (work RVU = 8.52, 60 minutes intra-service time, 231 minutes total time). For additional support, the RUC compared the surveyed code to MPC code 52630 *Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)* (work RVU = 6.55, 60 minutes intra-service time, 222 minutes total time). The RUC notes this service requires the same amount of intra-service time as the surveyed code, and despite it requiring more total time overall, CPT code 33X04 is more intense/complex to perform. Overall, the RUC recommendation of the survey 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 6.23 for CPT code 3XX04.**

Removal of Permanent CCM System

In reviewing this subset of services within the CCM code family, the RUC determined the rank order for the CCM removal services is as follows: CPT code 33X04 (removal of the entire CCM system); CPT code 33X08 (removal of dual transvenous electrode); CPT code 33X07 (removal of single electrode); and CPT code 33X06 (removal of pulse generator), respectively. Compared to the CCM insertion services and CCM replacement/repositioning/revision services, the CCM removal services typically require more time and involve more physician work, as the transvenous electrodes need to be located and entanglements have to be navigated carefully to mitigate the risk of bleeding. Of all the CCM insertion and removal services, removing just the pulse generator (CPT code 33X06) requires the least amount of physician work and time since it is the least risky and complicated to perform. The post-operative office visit is necessary for assessing the wound to see if it is healing appropriately, removing the dressing, and prescribing any required antibiotics or analgesic medications. Moreover, the RUC notes that for the four CCM removal codes, the pre-service evaluation time, pre-service scrub/dress/wait time, and immediate post-service time were adjusted as necessary in order to align with the survey results.

33X05 ***Removal of permanent cardiac contractility modulation system; pulse generator and transvenous electrodes***

The RUC reviewed survey results from 39 electrophysiologists and heart failure specialists and recommends the survey 25th percentile work RVU of 9.90, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 114 minutes of intra-service

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

time, 40 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 254 minutes of total time.

The physician work involved with CPT code 33X05 describes removal of the entire CCM system, which includes the pulse generator, the appropriate number of transvenous electrodes as determined by the physician prior to the procedure (either two right ventricular leads only or two right ventricular leads and a right atrial lead, depending on the patient), as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other removal codes, 33X05 requires the most physician time and work since it involves the removal of every implantable CCM component. Furthermore, the specialty societies anticipate that this service will be the most frequently performed of this code family.

The survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty societies added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of the procedure, increasing it from the survey median of 20 minutes to 40 minutes (7 minutes above the selected time package). The RUC agreed with this allocation of post-service time based on the conventions of the 23-Hour policy.

To support the recommended work RVU of 9.90, the RUC compared the surveyed code to CPT code 14021 *Adjacent tissue transfer or rearrangement, scalp, arms and/or legs; defect 10.1 sq cm to 30.0 sq cm* (work RVU = 9.72, 116 minutes intra-service time, 288 minutes total time) to support the RUC recommended work RVU of 9.90. The RUC notes that both services require nearly an identical amount of intra-service time. The RUC acknowledges that while the surveyed code requires less total time than 14021, it is a more intense/complex procedure to perform overall compared to the reference code. Comparison between these services is reasonable despite differences in total time, and the RUC notes that it is appropriate that CPT code 33X05 has a slightly greater work RVU than CPT code 14021. Overall, the RUC recommendation of the survey 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 9.90 for CPT code 33X05.**

33X06 ***Removal of permanent cardiac contractility modulation system; pulse generator and transvenous electrodes; pulse generator only***
The RUC reviewed survey results from 40 electrophysiologists and heart failure specialists and recommends a work RVU of 4.91 based on a direct crosswalk to CPT code 21040 *Excision of benign tumor or cyst of mandible, by enucleation and/or curettage* (work RVU = 4.91, 37 minutes intra-service time, 137 minutes total time) to appropriately account for the physician work typically required to perform this service. The RUC recommends 35 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 38 minutes of intra-service time, 18 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 151 minutes of total time.

The physician work involved with CPT code 33X06 describes the removal of the pulse generator, as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other removal codes, 33X06 requires the least physician time and work

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

since it only involves the removal of the pulse generator and not the removal of a single or dual transvenous electrode(s). The specialty societies anticipate that this service will be performed infrequently, less than 33X01, and similar to some of the other insertion codes.

To support the recommended work RVU of 4.91, the RUC compared the surveyed code to the second key reference service 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU = 6.05, 45 minutes intra-service time, 181 minutes total time). To support the recommended value, the RUC found crosswalk CPT code 21040 to be a more appropriate service to compare to CPT code 33X06 in terms of intra-service time and measured intensity/complexity compared to the second key reference service selected by survey respondents.

For additional support, the RUC compared the surveyed code to CPT code 21030 *Excision of benign tumor or cyst of maxilla or zygoma by enucleation and curettage* (work RVU = 4.91, 33 minutes intra-service time, 133 minutes total time). The RUC notes that both the reference CPT code and surveyed code have the same work RVU and require nearly identical intra-service time and similar total time. Additionally, both services require similar intensity/complexity to perform. Overall, the RUC's direct crosswalk recommendation appropriately reflects the physician work and time required to perform this service and maintain relativity within this code family and across comparable services. **The RUC recommends a work RVU of 4.91 for CPT code 33X06.**

33X07 ***Removal of permanent cardiac contractility modulation system; pulse generator and transvenous electrodes; transvenous electrode, single***

The RUC reviewed survey results from 36 electrophysiologists and heart failure specialists and recommends a work RVU of 7.49 based on a direct crosswalk to CPT code 11970 *Replacement of tissue expander with permanent implant* (work RVU = 7.49, 60 minutes intra-service time, 216 minutes total time), to appropriately account for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 62 minutes of intra-service time, 40 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 202 minutes of total time.

The physician work involved with CPT code 33X07 describes the removal of a single transvenous electrode, as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other removal codes, 33X03 requires less physician time and work than CPT codes 33X05 and 33X08, but more than 33X06, since it does not involve the removal of a dual transvenous electrode or the pulse generator. The specialty societies anticipate that this service will be performed infrequently, less than 33X01, and similar to some of the other insertion codes.

The survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty societies added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of the procedure, increasing it from the survey median of 20 minutes to 40 minutes (7 minutes above the selected time package). The RUC agreed with this allocation of post-service time based on the conventions of the 23-Hour policy.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC found crosswalk CPT code 11970 to be a more appropriate service compared to CPT code 33X07 in terms of intra-service time, total time, and overall measured intensity/complexity compared to the key reference services selected by survey respondents. To support the recommended work RVU of 7.49, the RUC compared the surveyed code to MPC code 26113 *Excision, tumor, soft tissue, or vascular malformation, of hand or finger, subfascial (eg, intramuscular); 1.5 cm or greater* (work RVU = 7.13, 58 minutes intra-service time, 214 minutes total time). For additional support, the RUC also referenced MPC code 21556 *Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm* (work RVU = 7.66, 60 minutes intra-service time, 234 minutes total time). The RUC recognizes that together the two MPC comparator codes bracket the RUC recommended work RVU of 7.49 for CPT code 33X07. Overall, the direct crosswalk recommendation appropriately reflects the physician work and time required to perform this service and maintain relativity within this code family and across comparable services. **The RUC recommends a work RVU of 7.49 for CPT code 33X07.**

33X08 ***Removal of permanent cardiac contractility modulation system; pulse generator and transvenous electrodes; transvenous electrode, dual***

The RUC reviewed survey results from 38 electrophysiologists and heart failure specialists and recommends a work RVU of 8.60 based on a direct crosswalk to CPT code 14040 *Adjacent tissue transfer or rearrangement, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; defect 10 sq cm or less* (work RVU = 8.60, 90 minutes intra-service time, 223 minutes total time) to appropriately account for the physician work typically required to perform this service. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 90 minutes of intra-service time, 40 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visits, which equals 230 minutes of total time.

The physician work involved with CPT code 33X08 describes the removal of a dual transvenous electrode, as well as fluoroscopic guidance and programming of sensing and therapeutic parameters. Compared to the other removal codes, 33X04 requires less physician time and work than CPT codes 33X01, but more than 33X02 and 33X03, since it involves the removal of a dual (not a single) transvenous electrode and does not include removal of the pulse generator. The specialty societies anticipate that this service will be performed infrequently, less than 33X01, and similar to some of the other insertion codes.

The survey results indicate that this procedure is typically performed in a hospital setting, that patients were not typically discharged on the same day as the procedure, and that a 23-hour stay (less than 24 hours) with a subsequent hospital visit is typical. Per the 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy, the specialty societies added 20 minutes of intra-service time from CPT code 99232 to the immediate post-service time of the procedure, increasing it from the survey median of 20 minutes to 40 minutes (7 minutes above the selected time package). The RUC agreed with this allocation of post-service time based on the conventions of the 23-Hour policy.

To support the recommended work RVU of 8.60, the RUC compared the surveyed code to CPT code 64568 *Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator* (work RVU = 9.00, 90 minutes intra-service time, 275 minutes total time). For additional support, the RUC compared the surveyed code to CPT code 50593 *Ablation, renal tumor(s), unilateral, percutaneous, cryotherapy* (work RVU = 8.88, 90 minutes intra-service time, 207 minutes total time).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Additionally, the RUC acknowledges that the direct crosswalk code 14040 is on the MPC list. Overall, the RUC's direct crosswalk recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 8.60 for CPT code 33X08.**

Replacement, Repositioning, and Revision of Permanent CCM System

In reviewing this subset of services within the CCM code family, the RUC determined the rank order for the CCM replacement, repositioning, and revision services is as follows: CPT code 33X09 (removal and replacement of pulse generator); CPT code 33X11 (relocation or revision of skin pocket for pulse generator); and CPT code 33X10 (repositioning of transvenous electrode(s)), respectively. Compared to the CCM insertion services and CCM removal services, the CCM replacement/repositioning/revision services typically require less time and involve less physician work overall. Aside from implanting and removing just the pulse generator (CPT codes 33X02 and 33X06), this subset of services is less risky and complicated to perform than the CCM insertion and removal services. The post-operative office visit is necessary for assessing the wound to see if it is healing appropriately, removing the dressing, and prescribing any required antibiotics or analgesic medications. Moreover, the RUC notes that for the four CCM replacement/repositioning/revision codes, the pre-service evaluation time, pre-service scrub/dress/wait time, and immediate post-service time were adjusted as necessary in order to align with the survey results.

33X09 ***Removal and replacement of permanent cardiac contractility modulation system, pulse generator only***

The RUC reviewed survey results from 41 electrophysiologists and heart failure specialists and recommends the survey 25th percentile work RVU of 6.00, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 39 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 45 minutes of intra-service time, 18 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 162 minutes of total time. The post-operative office visit is necessary for assessing the wound to see if it is healing appropriately, removing the dressing, and prescribing any required antibiotics or analgesic medications.

The physician work involved with CPT code 33X09 describes the removal and replacement of just the pulse generator in the CCM system. Compared to the other replacement/repositioning/revision codes, 33X09 requires more physician time and work since it involves removing and replacing the pulse generator, not just relocating/revising the existing pulse generator or repositioning a transvenous electrode. The specialty societies anticipate that this service will be performed infrequently, less than 33X01, and similar to some of the other insertion codes.

To support the recommended work RVU of 6.00, the RUC compared the surveyed code to the top key reference service 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU = 6.05, 45 minutes intra-service time, 181 minutes total time). For additional support, the RUC compared the surveyed code to MPC code 67917 *Repair of ectropion; extensive (eg, tarsal strip operations)* (work RVU = 5.93, 33 minutes intra-service time, 142 minutes total time) and MPC code 52630 *Transurethral resection; residual or regrowth of obstructive prostate tissue including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)* (work RVU = 6.55, 60 minutes intra-service time, 222 minutes total time). The RUC notes that together these two services bracket the RUC-recommended

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

survey 25th percentile work RVU of 6.00, as well as the intra-service and total time. Both reference codes also bracket the surveyed code in measured intensity/complexity. Overall, the RUC recommendation of the survey 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 6.00 for CPT code 33X09.**

33X10 ***Repositioning of previously implanted cardiac contractility modulation transvenous electrode(s), including fluoroscopic guidance and programming of sensing and therapeutic parameters***
The RUC reviewed survey results from 42 electrophysiologists and heart failure specialists and recommends the survey 25th percentile work RVU of 5.00, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 37 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 60 minutes of intra-service time, 18 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visits, which equals 175 minutes of total time. The post-operative office visit is necessary for assessing the wound to see if it is healing appropriately, removing the dressing, and prescribing any required antibiotics or analgesic medications.

The physician work involved with CPT code 33X10 describes repositioning a previously implanted CCM transvenous electrode. Compared to the other replacement/repositioning/revision codes, 33X10 requires less physician work overall compared to 33X09 and more than 33X11, since repositioning electrodes is more involved than revising the skin pocket but less so than removing and replacing the pulse generator. The specialty societies anticipate that this service will be performed infrequently, less than 33X01, and similar to some of the other insertion codes.

To support the recommended work RVU of 5.00, the RUC compared the surveyed code to the top key reference service 33215 *Repositioning of previously implanted transvenous pacemaker or implantable defibrillator (right atrial or right ventricular) electrode* (work RVU = 4.92, 60 minutes intra-service time, 179 minutes total time). For additional support, the RUC compared the surveyed code to MPC code 63661 *Removal of spinal neurostimulator electrode percutaneous array(s), including fluoroscopy, when performed* (work RVU = 5.08, 55 minutes intra-service time, 165 minutes total time). Overall, the RUC recommendation of the survey 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 5.00 for CPT code 33X10.**

33X11 ***Relocation or revision of skin pocket for implanted cardiac contractility modulation pulse generator***
The RUC reviewed survey results from 42 electrophysiologists and heart failure specialists and recommends a work RVU of 5.25 based on a direct crosswalk to CPT code 33227 *Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; single lead system* (work RVU = 5.25, 45 minutes intra-service time, 124 minutes total time) to appropriately account for the physician work typically required to perform this service. The RUC recommends 37 minutes of pre-service evaluation time, 3 minutes of pre-service positioning time, 15 minutes of pre-service scrub/dress/wait time, 45 minutes of intra-service time, 18 minutes of immediate post-service time, 0.5-99238 discharge visit and 1-99213 post-operative office visit, which equals 160 minutes of total time. The post-operative office visit is necessary for assessing the wound to see if it is healing appropriately, removing the dressing, and prescribing any required antibiotics or analgesic medications.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The physician work involved with CPT code 33X11 describes relocating/revising the skin pocket for the implanted CCM pulse generator. Compared to the other replacement/repositioning/revision codes, 33X11 requires less physician work overall, since removing and replacing the pulse generator and relocating electrodes requires more work to perform. The specialty societies anticipate that this service will be performed infrequently, less than 33X01, and similar to some of the other insertion codes.

To support the recommended work RVU of 5.25, the RUC compared the surveyed code to MPC code 33213 *Insertion of pacemaker pulse generator only; with existing dual leads* (work RVU = 5.28, 46 minutes intra-service time, 125 minutes total time) and MPC code 53850 *Transurethral destruction of prostate tissue; by microwave thermotherapy* (work RVU = 5.42, 45 minutes intra-service time, 151 minutes total time). Overall, the RUC's direct crosswalk recommendation appropriately reflects the physician work and time required to perform this service and maintain relativity within this code family and across comparable services. **The RUC recommends a work RVU of 5.25 for CPT code 33X11.**

Cardiac Contractility Modulation Programming, Interrogation, and Remote Interrogation Services

In reviewing this subset of services within the CCM code family, the RUC determined the rank order for the CCM programming, interrogation, and remote interrogation services is as follows: CPT code 93X01 (programming CCM system in person); CPT code 93X02 (interrogation device evaluation in person); and CPT code 93X03 (interrogation device evaluation remote), respectively. Compared to the CCM insertion, removal, and replacement/repositioning/revision services, these services typically require significantly less time and involve less physician work overall.

93X01 ***Programming of the cardiac contractility modulation system (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, including review and report by a physician or other qualified health care professional***

The RUC reviewed survey results from 47 cardiologists and recommends the survey 25th percentile work RVU of 0.90, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 6 minutes pre-service evaluation time, 15 minutes intra-service time and 8 minutes immediate post-service time, which equals 29 minutes of total time.

To support the recommended work RVU of 0.90, the RUC compared the surveyed code to the top key reference service 93281 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system* (work RVU = 0.85, 15 minutes intra-service time, 32 minutes total time).

For additional support, the RUC compared the surveyed code to MPC code 74246 *Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered* (work RVU = 0.90, 15 minutes intra-service time, 22 minutes total time) and MPC code 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93, 15 minutes intra-service time, 20 minutes total time). Overall, the RUC recommendation of the survey 25th

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 0.90 work CPT code 93X01.**

93X02 ***Interrogation device evaluation (in person) with analysis, review, and report by a physician or other qualified healthcare professional, including connection, recording, and disconnection, per patient encounter, implantable cardiac contractility modulation system***
The RUC reviewed survey results from 47 cardiologists and recommends the survey 25th percentile work RVU 0.80, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 6 minutes pre-service evaluation time, 15 minutes intra-service time and 7 minutes immediate post-service time, which equals 28 minutes of total time.

Compared to CPT code 93X01, which describes programming the CCM system, CPT code 93X02, which describes interrogation of information collected by the CCM system, requires less physician work. The initial programming of the CCM system for 93X01 involves a more detailed analysis of the CCM data, and additional measurements and parameters are taken and assessed to see that the device is functioning properly. For 93X02, the physician reviews how the CCM is functioning based on the current programmed parameters.

To support the recommended work RVU of 0.80, the RUC compared the surveyed code to the top key reference service 93280 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system* (work RVU = 0.77, 15 minutes intra-service time, 32 minutes total time) and second key reference service 93281 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system* (work RVU = 0.85, 15 minutes intra-service time, 32 minutes total time).

For additional support, the RUC compared the surveyed code to MPC code 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81, 11 minutes intra-service time, 21 minutes total time) and 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time, 26 minutes total time). Overall, the RUC recommendation of the survey 25th percentile work RVU appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and across comparable services. **The RUC recommends a work RVU of 0.80 for CPT code 93X02.**

93X03 ***Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system, with interim analysis, review, and report(s) by a physician or other qualified health care professional***
The RUC reviewed survey results from 44 cardiologists and recommends a work RVU of 0.60 based on a direct crosswalk to CPT code 93294 *Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system, or leadless pacemaker system with interim analysis, review(s) and report(s) by a physician or other qualified health care professional* (work RVU = 0.60, 10 minutes intra-service time, 20 minutes total time) to appropriately account for the physician work typically required to perform this service. The RUC recommends 5

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes pre-service evaluation time, 11 minutes intra-service time and 5 minutes immediate post-service time, which equals 21 minutes of total time.

Compared to CPT code 93X01 and 93X03, CPT code 93X03, which describes remote interrogation of information collected by the CCM system, requires less physician work. Compared to the initial programming involved with 93X01 and the in-person interrogation involved with 93X02, the remote interrogation involves the physician assessing the same measurements and parameters but over the course of less intra-service and total time, thus justifying a lower work RVU.

To support the recommended work RVU of 0.60, the RUC compared the surveyed code to CPT 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56, 10 minutes intra-service time, 18 minutes total time). For additional support, the RUC compared the surveyed code to MPC code 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time, 16 minutes total time). The RUC acknowledges that this service has an identical work RVU and requires identical intra-service time as the surveyed code. Overall, the RUC's direct crosswalk recommendation appropriately reflects the physician work and time required to perform this service and maintain relativity within this code family and across comparable services. **The RUC recommends a work RVU of 0.60 for CPT code 93X03.**

Flawed Vignette

In a letter presented to the RUC, the specialty societies communicated that a flaw in the vignette for CPT code 93X03 was discovered, which describes the physician work of interpreting data collected remotely from the prior 90-day period. The specialty societies explained that the CCM device is not programmed remotely, nor does it have the ability to be. The use of the word "programming" rather than "interrogation" was an error in the original coding change application and was not caught until the conclusion of the survey. Essentially, CPT code 93X03 should have the same vignette as CPT code 93X04, which is a technical code for remote interrogation. The RUC recommended a direct crosswalk to a comparable interrogation device evaluation code to appropriately account for the physician work typically required to perform this service and maintain relativity within this code family and across comparable services.

Practice Expense

The PE Subcommittee reviewed the direct practice expense inputs and made several modifications to the inputs for the XXX global codes 93X01-93X04. The Subcommittee removed the clinical staff time for CA009 *Greet patient, provide gowning, ensure appropriate medical records are available*, CA010 *Obtain vital signs*, CA011 *Provide education/obtain consent*, and CA027 *Complete post-procedure diagnostic forms, lab and x-ray requisitions* from CPT codes 93X01 and 93X02 to avoid duplication with other interrogation/programming codes, such as CPT codes 93284 and 93289. Similarly, the PE Subcommittee removed SA048 *pack, minimum multi-specialty visit* from 93X01 and 93X02 due to overlap with other interrogation/programming codes. In addition, the PE Subcommittee, and the specialties discussed who typically performs the intra-service of the service period work and agreed to change the clinical staff type for CA021 *Perform procedure/service---NOT directly related to physician work time* from L037D *RN/LPN/MTA* blend to L037A *Electrodiagnostic Technologist* for CPT codes 93X01, 93X02, and 93X04, and reduced times to 10, 5, and 18 minutes, respectively.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For CPT codes 33X01-33X11, the PE Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. The number of office visits was adjusted formulaically for CPT codes 33X05, 33X07, 33X08, and 33X10 as determined by the RUC.

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

New Technology
CPT codes 33X01-33X11 and 93X01-93X04 will be placed on the New Technology list to be reviewed by the RUC in three years.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Cardiovascular System** **Heart and Pericardium** **Cardiac Contractility Modulation (Blue Heading)** A cardiac contractility modulation (CCM) system consists of a pulse generator plus up to two electrodes (leads). In contrast to a pacemaker or a defibrillator, which modulate the heart's rhythm, the cardiac contractility modulation system's impulses are designed to modulate the strength of contraction of the heart muscle. Unlike pacemakers, these systems stimulate for specific time intervals in order to improve myocardial function. Stimulation from a CCM device is considered non-excitatory, meaning it does not induce a heartbeat. CCM signals are delivered using a sophisticated timing algorithm during the heart's absolute refractory period. Rather than induce a contraction, CCM signals create changes at the cellular level to increase contractile strength of the heart. For implantation of a cardiac contractility modulation system, use 33X01. All catheterization and imaging guidance required to complete a CCM procedure are included in each insertion code. The pulse generator is implanted in a subcutaneous pocket in the pectoral region. If only a pulse generator is implanted without insertion of transvenous electrodes, report 33X02. Do not report removal of the pulse generator (33X06) separately with this service. In certain circumstances, relocation or revision of the skin pocket may be required and is reported using 33X11. When revision of a skin pocket involves incision and drainage of a hematoma or complex wound infection, see [10140], [10180], [11042], [11043], [11044], [11045], [11046], [11047], as appropriate. When skin pocket relocation is performed as part of an explant of an existing pulse generator followed by replacement with a new generator, the pocket relocation (33X11) may be reported separately. Skin pocket relocation includes all procedures associated with the initial pocket (eg, opening the pocket, incision and drainage of hematoma or abscess if performed, and any closure performed), in addition to the creation of a new pocket for the new generator to be placed. The electrodes (leads) of an implantable CCM system are placed transvenously under fluoroscopic guidance. One right ventricular lead is placed on the high septum and a second lead is placed in the mid-septum. An additional lead may also be placed in the right atrial appendage,				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

though an atrial lead is used in an extreme minority of cases. For each lead that is removed without insertion of a pulse generator, see 33X07, 33X08. Repositioning of a transvenous lead is reported using 33X10. Contractility evaluation and programming of sensing and therapeutic parameters (93X01, 93X02) is performed each time a pulse generator or lead is implanted or replaced and should not be reported separately.				
●33X01	J1	Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes (Do not report 33X01 in conjunction with 33X02, 33X03, 33X04, 33X09, 93X01, 93X02, 93286, 93287, 93452, 93453, 93458, 93459, 93460, 93461)	090	8.83

Cardiac Contractility Modulation (Red Heading)

Interrogation device evaluation: For an evaluation of a cardiac contractility modulation (CCM) system, programmed parameters, sensing and polarity function, lead(s), battery, patient charging compliance, capture and sensing function, therapy delivery windows, therapy delivery percentage, presence or absence of therapy being withheld for atrial or ventricular tachyarrhythmias, and underlying heart rhythm are evaluated. In addition, ventricular sensing and detection and therapies are evaluated and altered depending on the interrogated data, patient's rhythm, symptoms, percentage of therapy delivered, and condition.

Programming device evaluation: A procedure performed for patients with a cardiac contractility modulation system. All device functions, including programmed parameters, lead(s), battery, patient charging session data, capture and sensing function, therapy delivery windows, therapy delivery percentage, presence or absence of therapy being withheld for atrial or ventricular tachyarrhythmias, and underlying heart rhythm are evaluated.

***Interrogation device evaluation (remote)*:** For remote interrogation device evaluation (93X03, 93X04), the CCM is remotely interrogated for data encompassing up to a 90-day period of monitoring. Codes 93X03, 93X04 are only reported once per 90-day monitoring period. Data for all device functions including the programmed parameters, lead(s), battery, automatic capture, and sensing function are reviewed by the technician with 93X04 and analyzed by the physician or other qualified health care professional with 93X03.

●93X01	J12	Programming of the cardiac contractility modulation system (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, including review and report by a physician or other qualified health care professional (Do not report 93X01 in conjunction with 33X01, 33X02, 33X03, 33X04, 33X05, 33X06, 33X07, 33X08, 33X09, 33X10)	XXX	0.90

Category III Codes

~~Codes [0408T] [0418T] describe procedures related to cardiac contractility modulation *(CCM)* systems *(CCM)*. These systems consist of a pulse generator, *plus one atrial and* two ventricular pacemaker electrodes (leads), and one atrial pacemaker electrode (lead), if when performed. In contrast to a pacemaker or a defibrillator, which modulate the heart's rhythm, the CCM system's impulses are designed to modulate the strength of contraction of the heart muscle. Unlike pacemakers, these systems stimulate for specific time intervals in order to improve myocardial function.~~

~~*All catheterization and imaging guidance required to complete a CCM procedure are included in the work of each code. Left heart catheterization with a high fidelity transducer is intrinsic to the CCM procedure. Left heart catheterization codes ([93452], [93453], [93458], [93459], [93460], [93461]) at the time of CCM placement, replacement, or revision may not be reported separately.*~~ ~~Each CCM procedure code includes all imaging guidance in addition to placement of right ventricular leads, and, when performed, placement of the atrial pacemaker lead.~~ ~~Removal of only the CCM pulse generator is reported with [0412T]. If only the pulse generator is removed and replaced at the same session without any right atrial and/or right ventricular lead(s) inserted or replaced, report [0414T]. For removal and replacement of the pulse generator and leads, individual codes for removal of the generator ([0412T]) and removal of the leads ([0413T] for each lead removed) are used in conjunction with the insertion/replacement system code ([0408T]). When individual transvenous electrodes are inserted or replaced, report using [0410T] and [0411T], as appropriate. When the entire system is inserted or replaced, report with [0408T].~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

~~Revision of the CCM generator skin pocket is included in [0408T], [0412T], [0414T]. Relocation of a skin pocket for a CCM may be necessary for various clinical situations such as infection or erosion. Relocation is reported with [0416T], and follows conventions for pacemaker skin pocket relocation.~~

~~Repositioning of a CCM electrode is reported using [0415T].~~

~~CCM device evaluation codes [0417T], [0418T] may not be reported in conjunction with pulse generator and lead insertion or revision codes.~~

~~For remote interrogation device evaluation ([0948T], [0949T]), the CCM is remotely interrogated for data encompassing up to a 90-day period of monitoring. Codes [0948T], [0949T] are only reported once per 90-day monitoring period. Data for all device functions, including the programmed parameters, lead(s), battery, automatic capture, and sensing function, are reviewed by the technician with ([0948T]) and analyzed by the physician or other qualified health care professional with ([0949T]).~~

~~[0408T] Insertion or replacement of permanent cardiac contractility modulation system, including contractility evaluation when performed, and programming of sensing and therapeutic parameters; pulse generator with transvenous electrodes~~

~~[0409T] pulse generator only~~

~~[0410T] atrial electrode only~~

~~[0411T] ventricular electrode only~~

([0408T], [0409T], [0410T], [0411T] have been deleted)

(For insertion of cardiac contractility modulation system, see 33X01, 33X02, 33X03, 33X04)

~~(Report [0410T], [0411T] once for each transvenous electrode inserted or replaced)~~

~~(If the entire system is inserted or replaced, report [0408T])~~

~~[0412T] Removal of permanent cardiac contractility modulation system; pulse generator only~~

~~[0413T] transvenous electrode (atrial or ventricular)~~

([0412T], [0413T] have been deleted)

(For removal of cardiac contractility modulation system, see 33X05, 33X06, 33X07, 33X08)

~~(Report [0413T] once for each transvenous electrode removed)~~

~~(For removal of the pulse generator and all 3 leads, use [0412T] plus [0413T] once for each electrode removed)~~

~~(If transvenous electrodes are removed and replaced, report [0413T] once for each electrode removed in conjunction with [0410T], [0411T], as appropriate)~~

~~[0414T] Removal and replacement of permanent cardiac contractility modulation system pulse generator only~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

([0414T] has been deleted)

(For removal and replacement permanent of cardiac contractility modulation system, pulse generator only, use 33X09)

~~(For removal and replacement of the pulse generator plus all three electrodes, report [0408T] in conjunction with [0412T], [0413T] once for each transvenous electrode removed)~~

~~[0415T] Repositioning of previously implanted cardiac contractility modulation transvenous electrode (atrial or ventricular lead)~~

([0415T] has been deleted)

(For repositioning of implanted cardiac contractility modulation, use 33X10)

~~(Do not report [0408T], [0409T], [0410T], [0411T], [0414T], [0415T] in conjunction with [93286], [93287], [93452], [93453], [93458], [93459], [93460], [93461])~~

~~(Do not report [0415T] in conjunction with [0408T], [0410T], [0411T])~~

~~[0416T] Relocation of skin pocket for implanted cardiac contractility modulation pulse generator~~

([0416T] has been deleted)

(For relocation of skin pocket for implanted cardiac contractility modulation, use 33X11)

~~[0417T] Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, including review and report, implantable cardiac contractility modulation system~~

~~(Do not report [0417T] in conjunction with [0408T], [0409T], [0410T], [0411T], [0412T], [0413T], [0414T], [0415T], [0418T])~~

([0417T] has been deleted)

(For programming [in person] of an implantable cardiac contractility modulation system, use 93X01)

~~[0418T] Interrogation device evaluation (in person) with analysis, review and report, includes connection, recording and disconnection per patient encounter, implantable cardiac contractility modulation system~~

([0418T] has been deleted)

(For interrogation [in person] of an implantable cardiac contractility modulation system, use 93X02)

~~(Do not report [0418T] in conjunction with [0408T], [0409T], [0410T], [0411T], [0412T], [0413T], [0414T], [0415T], [0417T])~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

#●~~[0948T]~~	~~Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system with interim analysis, review and report(s) by a physician or other qualified health care professional~~ ([0948T] has been deleted) (For interrogation device evaluation [remote] for cardiac contractility modulation system by a physician or other qualified health care professional, use 93X03)
#●~~[0949T]~~	~~Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system, remote data acquisition(s), receipt of transmissions, technician review, technical support, and distribution of results~~ ([0949T] has been deleted) (For interrogation device evaluation [remote] for cardiac contractility modulation system by technician review, technical support, use 93X04)

Chicago, IL 60611

Re: Tab 8 Cardiac Contractility Modulation (CCM)

Dear Dr. Silva:

In preparing recommendation materials for the upcoming RUC meeting a flaw in the vignette for one code was discovered. Code 93X03 (*Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system, with interim analysis, review, and report(s) by a physician or other qualified health care professional)* describes the physician work of interpreting data collected remotely from the prior 90-day period.

The vignette provided in the May 2025 CPT Coding Changes document for 93X03, which revised the vignette submitted in CPT code change application, was:

> A 65-year-old male has a history of symptomatic heart failure with fatigue and is not a candidate for cardiac resynchronization therapy. Implantation of a cardiac contractility modulation system was performed in the past and requires adjustment in programming of parameters.

However, this device is not programmed remotely. It does not have that ability. It is possible that will occur in the future, but no CCM devices are or can be programmed remotely now. Use of the word "programming" rather than "interrogation" was an early error in the original application that worked all the way through CPT review, editing, and then RUC survey.

The vignette used for 93X04 *(Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system, remote data acquisition(s), receipt of transmissions, technician review, technical support, and distribution of results),* which is the technical code for remote interrogation, was correct in the Coding Changes document and should be the same vignette used for 93X03.

> A 65-year-old male with a cardiac contractility modulation system for heart failure is followed with interrogation device evaluations (remote) for device functionality and performance.

For the time being we have left the incorrect vignette in the SOR to be corrected after consideration by the RUC. Thank you for your consideration of this information as you prepare

for the upcoming meeting. We are ready to follow your guidance for rectifying this error going forward. Please contact Matt Minnella at mminnella@acc.org if you have questions or instructions.

Sincerely,

Mark Schoenfeld, MD
HRS RUC Advisor

Richard Wright, MD
ACC RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:33X01 Tracking Number J1 Original Specialty Recommended RVU: **8.83**
Presented Recommended RVU: **8.83**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **8.83**

CPT Descriptor: Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes (do not report 33X01 in conjunction with 33X02, 33X03, 33X04, 33X09, 93X01, 93X02, 93286, 93287, 93452, 93453, 93458, 93459, 93460, 93461)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: a 65-year-old male has a history of symptomatic heart failure with fatigue and is not a candidate for cardiac resynchronization therapy. the cardiologist inserts a cardiac contractility modulation system.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 90% , In the ASC 8%, In the office 2%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 56% , Overnight stay-less than 24 hours 44% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 95%

Description of Pre-Service Work: Surgical: Review patient's history and pertinent noninvasive diagnostic studies, with special attention to cerebrovascular symptoms, cardiac symptoms, and other comorbidities that would place patient at high risk for surgery. Perform physical examination to determine if the patient has had prior procedures that required subclavian vein cannulation, evidence of subclavian vein occlusion, prior mastectomy or breast augmentation, and any current central venous lines, rashes, infection, and other implanted devices. Pay special attention to medications, including antiplatelet agents and anticoagulants that the patient may be taking or needs to be taking. Review all pre-procedural blood tests, focusing on coagulation and renal function studies. Consider that renal insufficiency is present and pay attention to whether patient has received appropriate renal protective agents and hydration.
Based on review of all previous diagnostic studies, estimate the range of introducer sheaths, guiding catheters, leads, pacemakers, programmers, pacing system analyzer, external defibrillator, and recording equipment that may be required, and ensure all items are available for use. Decide on whether the patient will be receiving two right ventricular leads only or two right ventricular leads and a right atrial lead. In particular, pay attention to other implantable devices such as pacemakers and implantable cardioverter-defibrillators that may need reprogramming in the peri-procedural period. Discuss procedure details, including alternatives and risks, with patient and/or family. Obtain informed consent. Assess patient's airway and respiratory status to evaluate the type of intravenous sedation that is required and safe. If intravenous sedation will not be adequate, then arrange for and provide general anesthesia support.

Radiological: Check interventional suite to ensure proper function and configuration of imaging equipment, including compliance with all radiation safety issues. Ensure all technical personnel have been familiarized with the implantation technique and are fully familiar with all required devices, especially the external defibrillator, recording equipment, programmer for the cardiac contractility modulation device, programmer for other implanted devices, and pacing system analyzer. Supervise selection of all equipment, including leads and cardiac contractility generator, and verify all needed equipment is available. Locate and review prior films and diagnostic studies. Don radiation protection. Supervise proper positioning of patient.

Anesthesia: Discuss with anesthesia provider or support staff (i.e., RN) performing sedation that procedure and need for adjustment of level of sedation throughout the procedure to ensure safety and avoid long-term adverse effects after implantation (i.e., chest discomfort with stimulation).

Ensure ECG and hemodynamic monitors are in place and functioning. Position transcutaneous defibrillation patches. Supervise or prepare and drape the patient for sterile procedure.

Description of Intra-Service Work: All of the following steps are performed under fluoroscopic guidance. Direct technical personnel throughout procedure. Infiltrate skin inferior to the clavicle with local anesthetic. Make a skin incision to the pectoralis major fascia with blunt and sharp dissection to produce a pocket. Use electrocautery for dissection and/or hemostasis. Under fluoroscopic and/or ultrasound guidance and utilizing anatomic guidance for landmarks, access axillary, cephalic, or subclavian veins usually via needle puncture. Repeatedly access the vein or retain guidewires to ensure access for each of the leads that are intended to be placed. Take care to avoid puncture of the subclavian artery or to enter the pleural space and stay lateral to the subclavius muscle to avoid complications. Advance a J-wire into the vein and position in the right atrium under fluoroscopy. Introduce a peel-away introducer. Advance the first right ventricular lead into position either utilizing shaped lead stylets or preformed shaped inner sheaths. Place the lead along the right ventricular septum and deploy the active fixation mechanism as appropriate. Assess the lead position by electrogram morphology, slew rate, pacing impedance, capture thresholds, and electrogram amplitude. Position the suture tie-down sleeve and suture to the lead and the pectoralis major muscle fascia, allowing for the appropriate amount of slack in the lead to reduce the likelihood of dislodgement. Advance the second right ventricular lead into position either utilizing shaped lead stylets or preformed shaped inner sheaths. Place the lead along the right ventricular septum and deploy the active fixation mechanism as appropriate. Assess the lead position by electrogram morphology, slew rate, pacing impedance, capture thresholds, and electrogram amplitude. Ensure the two leads have appropriate separation under fluoroscopy and through the programmer. If the patient has a concomitant ICD or pacemaker, testing is performed to confirm that function or the cardiac contractility modulation device does not impact appropriate function of the ICD and vice versa, commonly referred to as crosstalk between the two devices If crosstalk is observed, multiple remedial steps may be performed including reprogramming of either or both the ICD (or pacemaker) and cardiac contractility modulation device or reposition of either or both pacemaker leads. The leads may require repositioning to ensure adequate sensing and impedance characteristics are confirmed with a pacing system analyzer. Position the suture tie-down sleeve and suture to the lead and the pectoralis major muscle fascia, allowing for the appropriate amount of slack in the lead to reduce the likelihood of dislodgement. If indicated, advance the right atrial lead through a peel away sheath into the right atrium. Using shaped stylets, deploy into appropriate position. Position the suture tie-down sleeve and suture to the lead and the pectoralis major muscle fascia, allowing for the appropriate amount of slack in the lead to reduce the likelihood of dislodgement.

Inspect the pocket for hemostasis and then irrigate with solution. Interrogate cardiac contractility modulation generator and program to settings appropriate to the underlying conditions of the patient. Put appropriate leads into the cardiac contractility modulation header and tighten the set screws. Wrap leads carefully beneath the pacemaker and place the generator into the pocket. Awaken the patient to assess for chest discomfort to ensure appropriate positioning of leads. Close pocket utilizing suture, staples, and/or medical adhesive as appropriate. Apply an appropriate dressing, with consideration for a pressure dressing if anticoagulation is anticipated. Re-interrogate generator to ensure lead connections are correct and tight.

Description of Post-Service Work: Ensure BP and HR are stable and normal upon arrival to recovery area. Write postoperative orders. Communicate with family and referring physicians. Review results of procedure with patient when sedation wears off. Dictate procedure note, including interpretation of lead, pulse generator, and rhythm status. Review, revise, and sign final report. Send formal report to PCP and referring providers. Review postoperative PA and lateral chest X ray for lead position. Review telemetry or Holter monitor recordings obtained until discharge. Prior to discharge, test ventricular sensing and capture functions, battery function, device diagnostics. Ensure patient understands process for charging of the device. Document the function in a device follow-up database. Check the incision and pocket for bleeding, hematoma, and cellulitis prior to discharge. Manage discharge day, including communication with PCP, patient and/or family, and staff. Hold extensive discussions with patient about timing of follow-up visits, monitoring by remote and in-clinic evaluations, and keeping the incision clean and dry, and reporting signs of infection. At post-op visit(s) assess the wound with respect to appropriate healing, remove the dressing, prescribe any required antibiotics or analgesic medications.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	10%	66%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	10%	87%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	14%	86%
Physical effort required	0%	38%	62%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	31%	69%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	30%	60%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	10%	50%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	40%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

CPT approved a new family of Category I codes for implantation, removal, and replacement of cardiac contractility modulation (CCM) systems, generators, and leads in several combinations. Those 11 codes constitute the first portion of this tab. A separate set of four codes was created for programming, interrogation, and remote interrogation PC/TC.

This heart failure therapy was approved by the FDA in 2019, but only recently met CPT Category I criteria. The service utilization remains modest and the societies deployed a targeted survey of physicians identified by the vendor paired with a random list of physicians for each set of services. Each code met the minimum survey threshold of 30 responses. Only one of the device hardware codes—the main implantation code—was performed by a majority of survey respondents. Each of the other ten device hardware codes survey responses are broken out by performers and non-performers in the summary spreadsheet, because the typical respondent had not actually provided the service.

As we often see in the cardiology space for new and uncommon services like this, times and RVUs do not completely align at the 25th or median RVUs. Recommendations are based on both of those survey data points, but in a manner that should maintain relativity within the family and in a manner that generally comports with reference services and comparators.

33X01: Insertion of CCM system, pulse generator and transvenous electrodes
The societies convened a panel of physicians to review the survey data. Code 33X01 will be used to report insertion of a cardiac contractility modulation system including pulse generator and transvenous electrodes. As described above, the panel reviewed the pre-service time and selected package 4 for a difficult patient/difficult procedure and post-service package 9B for complex anesthesia procedures with time removed based on the survey.

Respondents indicated the patient will be discharged the same day and seen once in the office during the 90-day global period. This comports with the experience of the panel. Therefore, we recommend one 99213 office visit.

The median survey intra-service time of 90 minutes is greater than the first key reference service code 33208, insertion of pacemaker with transvenous electrodes, intra-service time of 60 minutes but is less than the second key reference service code 33217, insertion of two transvenous electrodes for pacemaker or implantable defibrillator, intra-service time of 120 minutes.

At the recommended value the IWPUT for 33X01 is 0.063 which is similar to the 1st KRS of 0.059. We feel it makes sense for the IWPUT to be aligned with the 1st KRS as the 33X01 is clinically very similar to 33208.

The societies recommend the survey 25th percentile wRVU of 8.83 with times of 58/90/20, plus one 99213 for post op care, and one half-day discharge visit for patients discharged the same day as procedure.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0408T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Electrophysiologist How often? Sometimes

Specialty Cardiologist How often? Sometimes

Specialty Interventional Cardiologist How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 2158
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 had the highest utilization of this service as a Category III code at 1,079. With a pending Medicare NCD and promotion of the service to a Category I code we anticipate significant growth from that floor.

Specialty Electrophysiologist Frequency 1295 Percentage 60.00 %

Specialty Cardiologist Frequency 648 Percentage 30.02 %

Specialty Interventional Cardiologist Frequency 216 Percentage 10.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,619
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on majority of patients being Medicare beneficiaries as vignette for typical patient is of Medicare age.

Specialty Electrophysiologist Frequency 971 Percentage 59.97 %

Specialty Cardiologist Frequency 485 Percentage 29.95 %

Specialty Interventional Cardiologist Frequency 162 Percentage 10.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33208

SUMMARY OF RECOMMENDATION

CPT Code:33X02 Tracking Number J2 Original Specialty Recommended RVU: **6.00**
Presented Recommended RVU: **5.80**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **5.80**

CPT Descriptor: Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator only

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male has a history of symptomatic heart failure with fatigue and is not a candidate for cardiac resynchronization therapy. patient had previously implanted cardiac contractility modulation leads and has now completed radiation therapy in the chest, so a new pulse generator needs to be inserted.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 92% , In the ASC 5%, In the office 3%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 83% , Overnight stay-less than 24 hours 17% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 83%

Description of Pre-Service Work: Surgical: Review patient's history and pertinent noninvasive diagnostic studies, with special attention to cerebrovascular symptoms, cardiac symptoms, and other comorbidities that would place patient at high risk for surgery. Perform physical examination to determine location of previously placed pacing leads and integrity of skin pocket. Pay special attention to medications, including antiplatelet agents and anticoagulants that the patient may be taking or needs to be taking. Review all pre-procedural blood tests, focusing on coagulation and renal function studies. In particular, pay attention to other implantable devices such as pacemakers and implantable cardioverter-defibrillators that may need reprogramming in the peri-procedural period. Discuss procedure details, including alternatives and risks, with patient and/or family. Obtain informed consent. Assess patient's airway and respiratory status to evaluate the type of intravenous sedation that is required and safe. If conscious sedation will not be adequate, then arrange for and provide general anesthesia support.

Radiological: Check interventional suite to ensure proper function and configuration of imaging equipment, including compliance with all radiation safety issues. Ensure all technical personnel have been familiarized with the implantation technique and are fully familiar with all required devices, especially the external defibrillator, recording equipment, programmer for the cardiac contractility modulation device, programmer for other implanted devices, and pacing system analyzer. Supervise selection of all equipment and verify all needed equipment is available. Supervise proper positioning of patient. Don radio-protection equipment if it is anticipate fluoroscopy is needed to find previously placed pacing leads for connection.

Anesthesia: Discuss with anesthesia provider or support staff (i.e., RN) performing sedation that procedure and need for adjustment of level of sedation throughout the procedure to ensure safety and avoid long-term adverse effects after implantation (i.e., chest discomfort with stimulation).

Ensure ECG and hemodynamic monitors are in place and functioning. Position transcutaneous defibrillation patches. Supervise or prepare and drape the patient for sterile procedure.

Description of Intra-Service Work: Infiltrate skin inferior to the clavicle with local anesthetic. Make a skin incision to the pectoralis major fascia with blunt and sharp dissection and electrocautery to produce a pocket or enter previously created pocket. Use electrocautery for dissection and/or hemostasis. Locate the previously placed pacing leads.
