AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

April 2023

Laser Treatment-Skin – Tab 08

In October 2015, CPT codes 96920, 96921 and 96922 were identified via the high-volume growth screen with Medicare utilization of 10,000 or more that increased by at least 100% from 2008 through 2013. At that time, the RUC recommended that the specialty societies develop a CPT Assistant article to ensure the codes were being used correctly which was published in September 2016. This was the third article created for this code set, with articles also published in June 2012 and May 2013.

In January 2022, the Relativity Assessment Workgroup reviewed these services again noting that their utilization continues to steadily increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that they believed the growth is appropriate due to changes in treatment and medication for psoriasis. However, due to the continued growth, the Workgroup recommended, and the RUC agreed, that CPT codes 96920, 96921 and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting.

In April 2022, the specialty societies indicated, and the RUC agreed, that CPT codes 96920-96922 be referred to the CPT Editorial Panel for editorial review at the September 2022 CPT meeting. Since the CPT descriptor was established in 2002, psoriasis is the only approved indication and use for this treatment modality. Although, the specialty societies have noted that the indications have expanded beyond what is currently noted in the code descriptors to include laser treatment for other inflammatory skin disorders such as vitiligo, atopic dermatitis, alopecia areata, etc. This issue was deferred to the February 2023 CPT meeting to complete the full CCA and submit literature supporting excimer laser treatment for other inflammatory skin disorders as the changes were deemed more than editorial given that expanded indications would change the physician work. This issue was subsequently withdrawn from the February 2023 CPT Editorial Panel meeting agenda as it was determined that existing literature was insufficient and did not support expanded indications at this time. Thus, this issue was surveyed for the April 2023 RUC meeting, without any revisions to code descriptors, since the available 2021 Medicare data indicates that the typical patient is being treated for psoriasis (96920, psoriasis = 79.3%).

The RUC expressed concern with the survey that the times have decreased and there was not a proportionate decrease in work. However, there have been multiple reviews of this code set, and the valuation of the codes is currently based on the original valuation over two decades ago in 2002, where the time was *lower* than what is in the database now. Subsequent review in 2012 adopted new survey times while maintaining the work value from 2002 for CPT codes 96920 and 96922. For both the parent code 96920 and the code 96922 with the largest treatment area, the total RVUs have not changed since first implemented more than 20 years ago. *Thus, the current value is based on a lower time than the time in the database currently* (please see the table below).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

	2002 Intra Time	2002 Total Time	2002 RUC Rec.	2002 CMS RVU	2012 Intra Time	2012 Total Time	2012 RUC Rec.	2012 CMS RVU	Current Intra Time	Current Total Time	Current CMS RVU
96920	17	27	1.15	1.15	23	37	1.15	1.15	23	35	1.15
96921	20	30	1.17	1.17	30	42	1.30	1.30	30	42	1.30
96922	30	40	2.10	2.10	45	57	2.10	2.10	45	57	2.10

96920 ***Excimer laser treatment for psoriasis; total area less than 250 sq cm***
The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and concurred that the survey respondents overvalued the service. The RUC determined that changes in intra-service and total time for the procedure warranted a direct work RVU crosswalk to CPT code 20606 *Arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.00, 10 minutes intra-service time, and 27 minutes total time) which falls below the survey 25th percentile and has identical intra-service time that appropriately accounts for the physician work involved in this service. The RUC noted that code 20606, when compared to fifteen recently RUC-reviewed 000-day global codes with the same intra-service time and similar total time, the crosswalk value of 1.00 falls in the middle of the range in terms of work RVUs. The RUC recommends 10 minutes of pre-service time, 10 minutes of intra-service time, 3 minutes of post-service time, and 23 minutes total time as supported by the survey.

To justify the crosswalk value, the RUC compared the surveyed code to MPC codes 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07, 12 minutes intra-service time, and 24 minutes total time) and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10, 10 minutes intra-service time, and 24 minutes total time) and noted that both comparator codes involve similar intra-service time and slightly more physician work.

For additional support, the RUC compared the surveyed code to MPC codes 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84, 10 minutes intra-service time, and 22 minutes total time) and 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 10 minutes intra-service time, and 27 minutes total time) and noted that the multi-specialty points of comparison values have the same intra-service time and appropriately bracket the recommendation. The RUC concluded that CPT code 96920 should be valued based on a direct work RVU crosswalk to CPT code 20606 which falls below the 25th percentile as supported by the survey. **The RUC recommends a work RVU of 1.00 for CPT code 96920.**

96921 ***Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm***
The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and concurred that the survey respondents overvalued the service. The RUC determined that changes in intra-service and total time for the procedure warranted a direct work RVU crosswalk to CPT code 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07, 12 minutes intra-service time and 24 minutes total time) which falls below the survey 25th percentile and has identical intra-service time that appropriately accounts for the physician work involved in this service. The RUC noted that, crosswalk code 12011,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

when compared to four recently RUC-reviewed 000-day global codes with the same intra-service time and similar total time, the crosswalk value of 1.07 falls in the middle of the range in terms of work RVUs. The recommendation also provides for a stepwise progression of the procedure based on the size of the wound or lesion. The RUC recommends 10 minutes of pre-service time, 12 minutes of intra-service time, 3 minutes of post-service time, and a total time of 25 minutes as supported by the survey.

To justify the crosswalk value, the RUC compared the surveyed code to MPC codes 11980 *Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)* (work RVU = 1.10, 12 minutes intra-service time and 27 minutes total time) and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10, 10 minutes intra-service time and 24 minutes total time) and noted that both MPC codes involve similar intra-service time and slightly more physician work.

For additional support, the RUC compared the surveyed code to MPC codes 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.00, 7 minutes intra-service time and 17 minutes total time) and 12002 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm* (work RVU = 1.14, 15 minutes intra-service time and 27 minutes total time) and noted that the multi-specialty points of comparison values appropriately bracket the recommendation. The RUC concluded that CPT code 96921 should be valued based on a direct work RVU crosswalk to CPT code 12011 which falls below the 25th percentile as supported by the survey. **The RUC recommends a work RVU of 1.07 for CPT code 96921.**

96922 *Excimer laser treatment for psoriasis; over 500 sq cm*
The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and determined that the survey 25th percentile work RVU of 1.32 appropriately accounts for the physician work involved in this service. The RUC agreed that the current value would be inappropriate given the decrease in survey time. However, the work associated with this service has not changed since it was last surveyed. The RUC recommends 10 minutes of pre-service time, 18 minutes of intra-service time, 3 minutes of post-service time, and 31 minutes total time as supported by the survey. It was noted that much of the resetting and re-prepping is intra-service time as indicated in the description of the work. Typically, seven sites are treated, requiring repeated prep, and draping after the procedure is underway.

To justify a work RVU of 1.32, the RUC compared CPT code 96922 to the to the top key reference service code 12007 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); over 30.0 cm* (work RVU = 2.90, 35 minutes intra-service time and 54 minutes total time) and noted that the intra-service time is nearly twice that of the surveyed code and intensity is more justifying a higher value. The RUC also compared CPT code 96922 to MPC code 12004 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm* (work RVU = 1.44, 17 minutes intra-service time and 29 minutes total time) and noted that the surveyed code involves similar intra-service time and slightly less physician work. For additional support, the RUC compared CPT code 96922 to MPC code 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22, 15 minutes intra-service time and 27 minutes total time) and noted that the surveyed code has more intra-service and total time and is therefore valued higher than the comparator code. The RUC concluded that CPT code

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96922 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation also provides a stepwise progression of the procedure based on the size of the wound or lesion. **The RUC recommends a work RVU of 1.32 for CPT code 96922.**

Practice Expense
The Practice Expense (PE) Subcommittee discussed the compelling evidence argument that there has been a notable change in the dominant practice model (eg, pay-per-use subscription-based model) since the code set was last surveyed in 2012 and, in addition, that the patient population has changed. The Subcommittee accepted compelling evidence based on "Evidence that there has been a change in equipment or practice expense cost."

Based on acceptance of compelling evidence, the PE Subcommittee carefully considered the direct practice expense inputs including three new supply inputs for *laser, excimer*, *pay per use* based on size of treatment area. This piece of equipment is typically used via a subscription or a rental model. The dermatologist does not own the laser, rather the laser is placed in the dermatologist's office, and the practice buys a series of treatments. These treatments are purchased in packs of 10 and are based upon the size of the area being treated which corresponds to the three supply codes. A fourth new supply input was included for *Mupirocin 2% Topical Ointment 22 grams*. Following the laser treatment, the physician applies mupirocin to areas of blistering, erosion, and/or impending skin breakdown. The Subcommittee modified this item to reflect a per gram basis.

The PE Subcommittee made several modifications to the spreadsheet including revisions to the clinical staff minutes for CA011 *Provide education/obtain consent*, CA014 *Confirm order, protocol exam* and CA035 *Review home care instructions, coordinate visits/prescriptions*. Also, an additional pair of SB023 *gloves, non-sterile, nitrile* was added to CPT code 96922 which is typical for the larger area. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RUC Database Flag
The RUC recommends a flag for CPT codes 96920, 96921 and 96922 as "Do Not Use to Validate for Physician Work" since the times are not representative.

CPT Referral
At the April 2023 meeting, the RUC voted to recommend an editorial change to CPT to add "(ie, excimer)" after "Laser treatment" for clarity in code 96920. The CPT Executive Committee voted to further editorially revise code 96920 to align with the intended use of these services exclusively for psoriasis. These editorial revisions are for the CPT 2024 code set. The changes are editorial and do not involve a change in work.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

SUMMARY OF RECOMMENDATION

CPT Code:96920 Tracking Number Original Specialty Recommended RVU: **1.07**
Presented Recommended RVU: **1.00**
Global Period: 000 Current Work RVU: **1.15** RUC Recommended RVU: **1.00**

CPT Descriptor: Excimer laser treatment for psoriasis; total area less than 250 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has still less than 250 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further (unwanted UV exposure) and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023					
Presenter(s):	Alice Gottlieb, MD, FAAD, Alexandra Flamm, MD, FAAD, Howard Rogers, MD, FAAD, Alina Bridges, MD, FAAD					
Specialty Society(ies):	American Academy of Dermatology Association (AADA)					
CPT Code:	96920					
Sample Size:	250	**Resp N:**	41			
Description of Sample:	The AADA used a targeted vendor survey approach, which was approved by the Research Subcommittee. We inquired and received vendor lists from the 2 manufacturers of the excimer laser. A total of 250 surveys went out to all names provided - 225 from one manufacturer and 25 from the other.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	43%	57%	

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	57%	29%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	29%	29%	42%
Physical effort required	29%	29%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	14%	57%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity			60%	40%	

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	20%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	60%	20%	20%
Physical effort required	20%	40%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	60%	20%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
In 2008, CPT codes 96920, 98921, and 96922, excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, Unlisted special dermatological service or procedure, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation
The expert panel reviewed the survey data. We acknowledge the decrease in intraservice time from the survey. However, our expert panel, which includes psoriasis experts who have frequently performed this procedure for many years, felt that the time and work associated with this code has not changed since it was last surveyed. Additionally, the survey

respondents clearly indicated relative stability in the work from current values for this code. That being said, it was felt that both the current values and the 25th percentile would be inappropriate given the decrease in survey time.

Therefore, the expert panel recommends a crosswalk from CPT code 20606, which has a wRVU of 1.00. This is under the 25th percentile survey value of 1.11 and the current wRVU of 1.15.

CPT code 20606 describes arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting. This code has the exact same intraservice time as our median data at 10 minutes and a similar total time at 27 minutes. This code was last valued in 2014 by the RUC based on survey data and is also a 0 day global.

It was felt that this crosswalk would maintain relativity well when compared to other codes with similar times. On a RUC database review of 0 day global codes valued since 2010 with the same intraservice time and similar total times (between 22 and 24 minutes), the proposed value of 1.00 would fall within range of the resulting RVWs values, and would not be the most highly valued code within this grouping.

Key Reference Service
The most chosen reference codes by survey participants are common dermatologic procedures.

- **96574** Debridement of premalignant hyperkeratotic lesion(s) (ie,targeted curettage, abrasion) followed with photodynamic therapy by external application of light todestroy premalignant lesions of the skin and adjacentmucosa with application and illumination /activation of photosensitizing drug(s) provided by a physician or other qualified healthcare professional, per day
- **12005** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 12.6 cm to 20.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 17% and 12% respectively, and therefore the society was not confident these were representative for comparison.

MPC Codes
Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96920*	Excimer laser treatment for psoriasis; total area less than 250 sq cm	1.15	35	7	23	5
96920**	Excimer laser treatment for psoriasis; total area less than 250 sq cm	1.00	23	10	10	3
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	0.84	22	7	10	5
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	27	12	10	5

*Current
**Recommendation

Summary
In summary, our expert panel recommends using the survey median intraservice work of 10 minutes, and crosswalking the wRVU values from CPT code 20606, as the surveyed wRVU for 96920 was similar at the 25th percentile (1.11) and higher at the median (1.45) to current values, but the times indicated were less.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96920

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 176000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 176000 Percentage 0.76 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 88,673 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This rationale is based on the 2021 Medicare utilization rates for the year 2021.

Specialty Dermatology Frequency 88673 Percentage 76.50 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further (unwanted UV exposure) and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023		
Presenter(s):	Alice Gottlieb, MD, Alexandra Flamm, MD, Howard Rogers, MD, Alina Bridges, MD		
Specialty Society(ies):	American Academy of Dermatology Association (AADA)		
CPT Code:	96921		
Sample Size:	250	**Resp N:**	41
Description of Sample:	The AADA used a targeted vendor survey approach, which was approved by the Research Subcommittee. We inquired and received vendor lists from the 2 manufacturers of the excimer laser. A total of 250 surveys went out to all names provided - 225 from one manufacturer and 25 from the other.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
12006	000	2.39	**RUC Time**

CPT Descriptor
Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 20.1 cm to 30.0 cm

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
11308	000	1.46	**RUC Time**

CPT Descriptor
Shaving of epidermal or dermal lesion, single lesion, scalp, neck, hands, feet, genitalia; lesion diameter over 2.0 cm

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36620	000	1.00	**RUC Time**	549,202

CPT Descriptor 1 Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
12002	000	1.14	**RUC Time**	129,274

CPT Descriptor 2 Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm

Other Reference CPT Code	Global	Work RVU	Time Source
12011	000	1.07	**RUC Time**

CPT Descriptor Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 6 **% of respondents:** 14.6 **%**

Number of respondents who choose 2nd Key Reference Code: 5 **% of respondents:** 12.1 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity		17%	33%	50%	

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making		33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	33%	33%

Physical effort required		50%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	17%	50%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity				100%	

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making		60%	40%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required		40%	60%
Physical effort required			100%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome		40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In 2008, CPT codes 96920, 98921, and 96922, Excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC

meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, Unlisted special dermatological service or procedure, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process
The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation
The expert panel reviewed the survey data. It was felt that both the current values and the 25th percentile would be inappropriate given the decrease in survey time. However, our expert panel, which included work experts who frequently perform this procedure, felt that the work associated with this code has not changed it was last surveyed. It was also noted that the request for survey arose from a utilization screen as opposed to other mechanisms. Additionally, the survey respondents indicated relative stability in the RVWs, as per the survey data.

Therefore, the expert panel recommends a crosswalk from CPT code 12011, which has a wRVU of 1.07. This is under the 25th percentile survey value of 1.25 and the current wRVU of 1.30.

CPT code 12011 describes a simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less. 12011 has the same intraservice time, at 12 minutes, a similar total time, at 24 minutes, to the surveyed time for 96921. This code was last valued in April 2010 by the RUC based on survey data. This code is additionally an MPC code.

It was felt that this crosswalk would maintain relativity well when compared to other codes with similar times. On a RUC database review of 0-day global codes valued since 2010 with the same intraservice time and similar total times (between 23 and 27 minutes), the proposed value of 1.07 would fall within range of the resulting RVWs values, and would not be the most highly valued code within this grouping.

Key Reference Service
The most chosen reference codes by survey participants are common dermatologic procedures.

- **12006** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 20.1cm to 30.0cm
- **11308** Shaving of epidermal or dermal lesion, single lesion, scalp, neck, hands, feet, genitalia; lesion diameter over 2.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 14% and 12% respectively, and therefore the society was not confident these were representative for comparison.

MPC Codes
Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96921*	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	1.30	42	7	30	5
96921**	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	1.07	25	10	12	3
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	1.00	17	7	7	3
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	24	12	7	5
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	1.14	27	7	15	5

*Current
**Recommendations

Summary
In summary, our expert panel recommends using the survey median intraservice work of 12 minutes, and crosswalking the wRVU values from CPT code 12011, as the surveyed wRVU for 96921 was similar at the 25th percentile (1.25) and higher at the median (1.57) to current values, but the times indicated were less.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96921

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50,848
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 50848 Percentage 78.30 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,424 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2021 Medicare utilization rate.

Specialty Dermatology Frequency 25424 Percentage 78.30 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

CPT Descriptor: Excimer laser treatment for psoriasis; over 500 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has more than 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further unwanted UV exposure and potential redness after treatment.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	14%	57%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	29%	71%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	28%	14%	28%

Physical effort required	14%	29%	57%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	29%	57%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	14%	43%	14%	29%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	40%	40%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	29%	14%	14%
Physical effort required	0%	29%	71%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	57%	14%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
In 2008, CPT codes 96920, 98921, and 96922, excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC

meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, *Unlisted special dermatological service or procedure*, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation

The expert panel reviewed the survey data. It was felt that the current value would be inappropriate given the decrease in survey time. Our expert panel, which included work experts who frequently perform this procedure, felt that the work associated with this code has not changed it was last surveyed. It was also noted that the request for survey arose from a utilization screen as opposed to other mechanisms. However, in contrast to the other codes in this family, the RVW data for 96922 decreased similarly to the time.

Therefore, the expert panel recommends the 25th percentile, with a wRVU of 1.32. This would represent a decrease from current value of 2.10.

Key Reference Service

The most chosen reference codes by survey participants are common dermatologic procedures.

- **12007** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); over 30.0 cm
- **12018** Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; over 30.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 17.5% and 17.5% respectively, and therefore society was not confident these were representative for comparison.

MPC Codes

Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96922*	Excimer laser treatment for psoriasis; over 500 sq cm	2.10	57	7	45	5
96922**	Excimer laser treatment for psoriasis; over 500 sq cm	1.32	31	10	18	3
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	1.22	27	7	15	5
12004	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm	1.44	29	7	17	5

*Current
**Recommendation

Summary

In summary, our expert panel recommends using the survey median intraservice work of 18 minutes, and recommending the 25th percentile of wRVU data at 1.37, which would align with the noted decreases in time within the survey data and still maintain relativity within the code family.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96922

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 28048
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 28048 Percentage 82 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 14,024 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This rationale is based on the 2021 Medicare utilization rates for the year 2021

Specialty Dermatology Frequency 14024 Percentage 82.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

Meeting Date: April 2023

CPT Code	Long Descriptor	Global Period
96920	Excimer laser treatment for psoriasis; total area less than 250 sq cm	000
96921	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	000
96922	Excimer laser treatment for psoriasis; over 500 sq cm	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
96920	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has still less than 250 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.
96921	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has between 250 sq cm and 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.
96922	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has more than 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Subject Matter Experts who perform this procedure as routine reviewed current PE inputs and modified them to reflect current practice.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   N/A
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   This code is **not** typically reported with an E/M service in any setting.
   See the *Billed Together* tab in the RUC Database.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   Dermatology dominates the reporting in all settings with 76.7% of all billing for this service in the non-facility setting and 76.5% in all sites.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   The society is requesting an increase in practice expense. Since surveying the code last in 2012, the business model for the excimer laser has changed. The primary company for the excimer laser, STRATA, which controls the majority of the market of the lasers in the United States, has provided evidence that the purchase model is no longer dominant. They have presented an attestation stating that the majority of their business model is through the partnership program (eg, subscription-based model) that is a pay-per-use. The current equipment cost represents outdated data and a flawed methodology.

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are recommending an addition of 2 mins for positioning given the need for multiple repositionings to access areas to be treated that need to have EMLA applied before the procedure begins.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Previously 5 minutes, maintain current.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Room preparation is completed including turning on the FDA approved excimer laser (308 nm) as it takes time to warm up. The patient is greeted by clinical staff, brought to treatment room and provided with a gown. Clinical staff ensures appropriate medical records are available. The clinical staff obtains vital signs including temperature, respiratory rate, BP and pulse. Clinical staff reviews the treatment procedure with the patient, obtains patient consent and confirms the order. Once the patient is gowned, photos are obtained of the treatment areas. EMLA cream is applied to pre-determined areas prone to pain or burning. The patient is positioned by the clinical staff to allow for ease of initial treatment.

    b. Service period (includes pre, intra and post):

The clinical staff is present with the physician and actively assists the physician throughout the procedure. The clinical staff ensures the patient is wearing the required UV goggles throughout the treatment. The physician and clinical staff also wear UV goggles. Face shields are worn by physician and clinical staff to prevent any splashing due to mineral oil or other ointments. Clinical staff assists the physician with patient re-positioning the patient throughout the entire treatment, holding any body parts to ease access (including holding skin folds back), shifting or replacing and taping the fenestrated

drapes, as well as applying necessary topical agents throughout the procedure. Clinical staff applies ice packs to previously treated areas where there is discomfort. During the procedure the clinical staff and physician will change gloves as needed due to the use of mineral oil and other ointments.

c. Post-service period:

The clinical staff provides disposable towels for the patient to clean off excess mineral oil and ointments. The patient is monitored by clinical staff in the room and the treated areas are checked for any redness, burns or other reactions. Clinical staff applies mupirocin 2% topical ointment and sunscreen to areas as directed by the physician. Instructions are given to the patient regarding home care, including any special attention a treated area may need. The clinical staff clean the treatment room and carefully clean the laser. The clinical staff will remind the patient when to return for the next treatment and answer any questions the patient presents.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Assist physician as noted above in 10b

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

On line 129, 130, and 131, we added the laser, excimer, pay per use based on size of treatment area. This piece of equipment is typically used via a subscription or a rental model. The dermatologist does not own the laser, rather the laser is placed in the dermatologist's office, and the practice buys a series

of treatments. These treatments are purchased generally in packs of 10 and are based upon the size of the area being treated which corresponds to the 3 codes. We have included a paid invoice as well as a usage agreement from the manufacturer.

On line 132 we added Mupirocin 2% Topical Ointment 22 grams. Following the laser treatment, the physician applies mupirocin to areas of blistering, erosion, and/or impending skin breakdown. An invoice is attached.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes -SA048

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	SA048	pack		5.02
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

CMS Code	Useful Life	Price	Utilization Rate	Min/Year	Cost/Year
EQ168 light, exam	10	1232.887	0.5	150000	0.003271745
EF031 table, power	10	5906.76	0.5	150000	0.015674926
ED005 camera, digital system, 12 megapixel (medical grade)	5	5607.182	0.5	150000	0.022216755

The EQ168 light is used during pre-, intra and post-service time and thus tied to the entire clinical staff time (line 10). The light allows the clinical staff and physician to easily identify the plaques as well as take well-lit photos. The light is also used during the procedure to illuminate the treatment areas to allow the physician to achieve optimal results and minimize potential risks that may occur. During post-service the light is on to allow the physician and clinical staff to identify any areas of concern and allow for ease to apply any ointments.
The EF031 table, power is used for the entirety of the procedure and tied to the entire clinical staff time (line 10).
The ED005 camera is used to capture images of the patient's lesions in pre-service time as part of the initial 2 minutes for set-up of the procedure (CA016). The photos are used by the physician to track the course of treatment and clearance of lesions over time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

SPECIALTY SOCIETY: _American Academy of Dermatology Association
PRESENTER(S): Lawrence Green, MD, FAAD, Brent Moody, MD, FAAD, Howard Rogers, MD, FAAD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2025

Lactation Care Services – Tab 17

In May 2025, the CPT Editorial Panel approved two codes to report lactation care directed by a physician or qualified health care professional (QHP) for the first 30 minutes and each additional 15 minutes thereafter. CPT code 978XX is intended to be used by the supervising physician/QHP to report lactation care services ordered by a physician/QHP and provided by a lactation consultant/counselor in the office or other outpatient setting for a mother-baby dyad. The specialty society surveyed code 978XX for the September 2025 RUC meeting while determining that the new add-on code 978X1 was practice expense only.

978XX ***Lactation care directed by a physician or other qualified health care professional, including history, assessment, training, and report; first 30 minutes***

The RUC reviewed the survey results from 131 pediatricians and concurred that the survey respondents overvalued the physician work involved in performing this service. The RUC determined that a direct crosswalk to CPT code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU = 0.18, 5 minutes intra-service time and 7 minutes total time) appropriately accounts for the physician work involved in this service. The RUC determined a crosswalk code was warranted due to a flawed survey and potential misunderstanding by survey respondents regarding who was performing the service. The specialty clarified that there is physician/QHP supervisory work while the lactation consultant performs the service. This work is very similar to 99211 in that a physician/QHP provides supervision and guidance to clinical staff, reviews documentation and provides care coordination and develops a treatment plan.

The RUC recommends 5 minutes intra-service time and 2 minutes immediate post-service time for 7 minutes total time to appropriately match the crosswalk code. The RUC questioned whether there is an overlap with Evaluation and Management (E/M) services on the same day. However, the specialty society clarified that the typical patient is seen for a well-child visit during which time the need for lactation care services is identified by the physician/QHP and the mother-baby are seen on a different day by the lactation consultant. The visit is not urgent and therefore does not typically occur on the same day as an E/M but is scheduled thereafter. The lactation consultation is also not intended for the inpatient setting but is typically performed after discharge in the physician office setting. The specialty society further clarified that this new code will typically be reported only once per mother-baby lifetime. The RUC discussed the physician work in the post-service period, which consists of a review of documentation of the lactation consultant (approximately 3 pages), the infant's weight change and the growth chart. A care plan is established and care coordination provided, including ordering durable medical equipment supplies (breast pump and supplies, nipple shield, supplemental nursing system) and/or prescriptions (e.g., for mastitis, yeast infection). The RUC concurred that there is physician work involved, which is similar to care management services.

To justify a work RVU of 0.18, the RUC compared the surveyed code to MPC code 94010 *Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation* (work RVU = 0.17, 5 minutes intra-service

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

time and 7 minutes total time), noting a strong comparison with identical intra-service and total times and a nearly identical amount of physician work for the two services. The RUC also compared the surveyed code to MPC code 71046 *Radiologic examination, chest; 2 views* (work RVU = 0.22, 4 minutes intra-service time and 6 minutes total time) and noted that the comparator code involves more physician work and intensity and is therefore appropriately valued higher than the surveyed code. The RUC further noted that these MPC codes appropriately bracket the recommendation.

For additional support, the RUC compared the surveyed code to CPT code 94060 *Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration* (work RVU = 0.22, 5 minutes intra-service time and 8 minutes total time), noting the identical intra-service times, yet the comparator code involves slightly more physician work, total time, and intensity, and is therefore appropriately valued higher than the surveyed code.

The RUC concluded that the surveyed code should be valued based on a direct crosswalk for both work RVU and times to CPT code 99211 and agreed the crosswalk value below the survey minimum is appropriate in this instance. **The RUC recommends a work RVU of 0.18 for CPT code 978XX.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs for CPT code 978XX and new add-on code 978X1 which is a practice expense only code. The Subcommittee made a single modification to the inputs to reflect the request for a new clinical staff type for *Lactation Consultant*. The specialty society provided supportive documentation for the new clinical labor type, stating that the lactation consultant does not have to be an RN but must be certified. The specialty society recommended that clinical staff type L051A *RN* be used as a proxy for the *Lactation Consultant* staff type.

The Subcommittee also clarified that the new equipment item *scale, infant, digital, fine gradation* is in the exam room for the entire visit as the baby is weighed multiple times, before and after feedings on each breast. **The RUC recommends the non-facility direct practice expense inputs as modified by the Practice Expense Subcommittee including a request for a new clinical labor type, *Lactation Consultant*.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Education and Training for Patient Self-Management** **Lactation Care Services (new Green heading)** Code 978XX is used by the supervising physician or other qualified health care professional (QHP) to report lactation care services ordered by a physician or other QHP and provided by a lactation consultant/counselor in the office or other outpatient setting for a mother/baby dyad.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Lactation care may include counseling, education, hands-on instruction, and risk factor reduction to support individuals through all stages of breastfeeding, addressing latch, milk supply, infant feeding, pumping, and special circumstances. Education and training in lactation should be personalized to the breastfeeding infant and mother.

If a significant, separately identifiable E/M service is performed by the same physician or other QHP on the same day as directed lactation services, the physician or other QHP may report the appropriate level of E/M service and append modifier 25.

The qualifications of the lactation consultant/counselor must be recognized by a physician society, nonphysician health care professional society/association, or other appropriate source.

(Lactation care may only be reported once per date of service for either the infant or the mother)

(For lactation care provided by a physician or other QHP to an individual, see the appropriate evaluation and management codes, including office or other outpatient services [99202, [99203], [99204], [99205], [99211], [99212], [99213], [99214], [99215]], initial and subsequent hospital inpatient or observation care [[99221], [99222], [99223], [99231], [99232], [99233], [99234], [99235], [99236]], new or established patient office or other outpatient consultations [99242, [99243], [99244], [99245]], inpatient or observation consultations [99252, [99253], [99254], [99255]], emergency department services [99281, [99282], [99283], [99284], [99285]], home or residence services [99341, [99342], [99344], [99345], [99347], [99348], [99349], [99350]])

(For lactation care provided in a facility as part of newborn care services, see normal newborn care codes [99460, [99461], [99462], [99463]] and neonatal critical care services codes [[99468], [99469], [99471], [99472], [99477], neonatal intensive care services [99478], [99479], [99480]]. For lactation counseling done in a facility as part of hospital care, see hospital inpatient and observation care services [99221-[99239]])

Re: Tab 17 Lactation Care Services (978XX, 978X1)

Dear Dr. Silva:

The American Academy of Pediatrics (AAP) is writing to inform you of an unfortunate incident impacting the reporting of the survey data for the new Lactation Care Services CPT code 978XX and development of our time and work RVU recommendations. The AAP conducted a survey of 978XX for the September 2025 RUC meeting including a random sample of the applicable subset of society members. A total of 142 responses were received. On the last day the survey was open (Monday, June 16, 2025), we learned of an inappropriate comment posted on a listserv of an external organization at 12:52 pm. Data in the Summary Spreadsheet was separated by surveys completed before and after the listserv posting. Recommendations are based on the first set of data (131 respondents).

Sincerely,

Steven Krug, MD
RUC Advisor
American Academy of Pediatrics

American Occupational Therapy Association

Submitted via email to: Rebecca.Gierhahn@ama-assn.org

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dr. Silva,

The American Occupational Therapy Association thanks the AMA for the opportunity to review the proposed values of Tab 17 Lactation Care Services. Occupational therapy practitioners frequently work with postpartum individuals and infants in areas such as feeding, positioning, and caregiver education related to lactation care. They are also one of the many kinds of lactation care providers that pursue separate certification as lactation counselors.

Our RVS committee reviewed the recommendations for work and PE offered by the medical specialties surveying the codes. The committee included practitioners familiar with the RUC process as well as infant feeding and lactation counseling.

AOTA supports lactation care services that allow for its performance under supervision, however, we think it's important for the PE subcommittee and RUC to be aware that with development of these new codes, there are now four different ways in which the same service might be reported. In addition to this new service and direct physician reporting through E/M codes, QHPs who cannot report E/M services would report the direct delivery of lactation care under CPT reflective of their own scope of practice. For an occupational therapist, or other QHP who cannot report E/M, but is directly delivering lactation care, it would be reported under CPT codes in the PM&R section of the CPT code set related to feeding and swallowing such as 97535 or 92526. As the PE subcommittee reviews the medical society's recommendations, it is important to consider the relativity between all of these mechanisms for reporting in its final recommendations.

Sincerely,

Mary Walsh-Sterup

Mary Walsh-Sterup
AOTA HCPAC advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:978XX Tracking Number R1 Original Specialty Recommended RVU: **0.18**
Presented Recommended RVU: **0.18**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **0.18**

CPT Descriptor: Lactation care directed by a physician or other qualified health care professional, including history, assessment, training, and report; first 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A mother presents with her 2-week-old female child with reports of difficulty with breastfeeding and concern of inadequate nutrition for her child. She has been breastfeeding every 3 hours. After acute medical conditions have been excluded, the physician recommends lactation consulting and care services.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A [Note: initial identification of need is typically done at a prior E/M service [same day or different day]

Description of Intra-Service Work: Communicate with lactation consultant/counselor regarding the purpose and goals of the visit. Provide supervision and guidance to the lactation consultant/counselor as necessary. Review any data of concern and answer questions that may arise. Speak directly to mother as needed.

Description of Post-Service Work: Review documentation of lactation consultant/counselor, infant's weight change and growth chart. Establish care plan and provide care coordination as necessary, including ordering DME supplies (breast pump and supplies, nipple shield, supplemental nursing system) and/or prescriptions (e.g., for mastitis, yeast infection).

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	1.30	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selected, 20 minutes must be met or exceeded.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99484	XXX	0.93	**RUC Time**

CPT Descriptor Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
94010	XXX	0.17	**RUC Time**	838,062

CPT Descriptor 1 Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
71046	XXX	0.22	**RUC Time**	6,114,523

CPT Descriptor 2 Radiologic examination, chest; 2 views

Other Reference CPT Code	Global	Work RVU	Time Source
94060	XXX	0.22	**RUC Time**

CPT Descriptor Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 85 **% of respondents:** 64.8 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 13.7 **%**

TIME ESTIMATES (Median)

• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	61%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	39%	50%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	56%	22%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the September 2025 CPT Editorial Panel Meeting, two new CPT codes, 978XX and 978X1 were added under "Medicine/Education and Training for Patient Self-Management" section to report lactation care directed by a physician or other qualified health care professional (QHP) for the first 30 minutes and each additional 15 minutes thereafter, respectively. Code 978XX is intended to be used by the supervising physician or other QHP to report lactation care services ordered by a physician or other QHP and provided by a lactation consultant/counselor in the office or other outpatient setting for a mother/baby dyad. The

lactation consultant/counselor's time drives reporting 978XX and units of 978X1 (the latter is a PE only code). The qualifications of the lactation consultant/counselor must be recognized by a physician society, nonphysician health care professional society/association, or other appropriate source. The typical lactation consultant/counselor in a physician's office or other outpatient setting is a registered nurse. The typical patient is seen for a well-child visit during which time the need for lactation care services are identified by the physician or other QHP and the mother-baby dyad are seen on a different day by the lactation consultant/counselor. If a significant, separately identifiable E/M service is performed by the same physician or other QHP on the same day as the directed lactation services, the physician or other QHP may report the appropriate level of E/M service and append modifier 25. Lactation care provided by a physician or other QHP who may report E/M services should report the appropriate E/M code.

Survey Process

The AAP conducted a survey of 978XX for the September 2025 RUC meeting including a random sample of the applicable subset of society members. A total of 142 responses were received. On the last day of the survey, the AAP learned of an inappropriate comment posted on a listserv of an external organization. Data in the Summary Spreadsheet was separated by surveys completed before and after the listserv posting. Recommendations are based on the first set of data (131 respondents). The AAP convened an expert panel of members representing various practice sizes, types and geographic locations to develop the following recommendations.

Recommendations

Despite requiring survey respondents to attest to having read the CPT code descriptors and introductory language for this code, the Expert Panel determined the survey results were flawed in that survey respondents appeared to answer the survey questions as if they were directly performing lactation care services, rather than providing oversight of the services being provided by a lactation consultant/counselor within their office/outpatient setting.

The Expert Panel therefore recommends a direct crosswalk to **CPT code 99211** ***Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional*** with a **work RVU of 0.18**. This code is an XXX-day global code, is on the MPC list, was last reviewed by the RUC April 2019, and represents a clinically similar service in that a physician or QHP provides supervision and guidance to clinical staff, reviews documentation, and provides care coordination and develops a treatment plan. **The Expert Panel recommends 0 minutes pre-service time, 5 minutes intra-service time, and 2 minutes post-time for a total time of 7 minutes.**

Comparison to XXX-day global codes with similar intra-service time and total time:

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Intra Time	Immed. Post Time	Total Time	Time Source	Most Recent RUC Review	IWPUT	MPC	2023 Medicare Utilization
73120	Radiologic examination, hand; 2 views	XXX	0.16	1	4	1	6	RUC	2016-04	0.0288	Yes	226,183
94010	Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation	XXX	0.17	0	5	2	7	RUC	2019-10	0.025	Yes	838,062
90471	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)	XXX	0.17	0	7	0	7	RIC	2021-04	0.0243		315,781
95919	Quantitative pupillometry with	XXX	0.18	1	5	1	7	RUC	2021-10	0.027		140

	physician or other qualified health care professional interpretation and report, unilateral or bilateral											
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	XXX	0.18	0	5	2	7	RUC	2019-04	0.027	Yes	1,542,130
94060	Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration	XXX	0.20	0	5	3	8	RUC	2019-10	0.0306		794,425
72190	Radiologic examination, pelvis; complete, minimum of 3 views	XXX	0.25	1	5	1	7	RUC	2019-01	0.041		1,587,553
77073	Bone length studies (orthoroentgenogram, scanogram)	XXX	0.26	1	5	1	7	RUC	2018-04	0.043		69,355
71101	Radiologic examination, ribs, unilateral; including posteroanterior chest, minimum of 3 views	XXX	0.27	1	5	1	7	RUC	2016-04	0.045		241,355

These examples illustrate that the recommended value and time for code 978XX are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion

For code 978XX, *Lactation care directed by a physician or other qualified health care professional, including history, assessment, training, and report; first 30 minutes*, the AAP recommends a crosswalk to CPT code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* with a **work RVU of 0.18 and pre-service time of 0 minutes, intra-service time of 5 minutes, and post-service time of 2 minutes for a total time of 7 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) NA

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1,701,443
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. CDC Breastfeeding data (2021) "ever breastfeeding" rate of 84.1%. CDC birth rate for 2023 = 3,596,017. 2022 Formula and Breastfeeding Trends Survey 2022 indicated 97% of breastfeeding moms seek support and 58% of those utilized a lactation consultant. Pediatricians are one of several specialties who would provide this service.

Specialty Pediatrics Frequency 1361155 Percentage 80.00 %

Specialty Frequency 0 Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Vast majority of pregnant women/babies do not qualify for Medicare.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90461

September 18, 2025

Scott Manaker, MD
AMA/RVS Update PE Subcommittee
American Medical Association
330 N. Wabash Avenue
Chicago, IL 60611

Re: Tab 17 Lactation Care Services

Dear Dr. Manaker:

Tab 17 on the September 2025 RUC agenda addresses 2 new category I codes to be used by the supervising physician or other qualified health care professional (QHP) to report lactation care services ordered by a physician or other QHP and provided by a lactation consultant/counselor in the office or other outpatient setting for a mother/baby dyad.

The "other outpatient setting" for both these codes includes hospital facility outpatient clinics. As such, the American Academy of Pediatrics recommends no direct practice expense inputs for the outpatient facility for these codes in Tab 17.

Thank you for your consideration of this information as you prepare for the upcoming meeting. Please contact Marsha Schofield at mschofield@aap.org if you have any questions.

Sincerely,

Steven Krug, MD
RUC Advisor
American Academy of Pediatrics

Melissa Holmes, MD, FAAP, DipABPM, NABBLM-C
Associate Chief Medical Informatics Officer
Assistant Professor, Department of Pediatrics
RUSH Pediatric Primary Care Center, RUSH Center for Breastfeeding & Lactation Medicine, Digital & Information Services
Expert Panel Member, Tab 17

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S): 978XX, 978X1**

SPECIALTY SOCIETY(IES): AAP

PRESENTER(S): Dr. Steven Krug, Dr. Suzanne Berman

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2025

CPT Code	Long Descriptor	Global Period
978XX	Lactation care directed by a physician or other qualified health care professional, including history, assessment, training, and report; first 30 minutes	XXX
978X1	…each additional 15 minutes (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
978XX	A mother presents with her 2-week-old female child with reports of difficulty with breastfeeding and concern of inadequate nutrition for her child. She has been breastfeeding every 3 hours. After acute medical conditions have been excluded, the physician recommends lactation consulting and care services.
978X1	A first-time mother presents with her 1-week-old female child with reports of difficulty with breastfeeding and concerns of inadequate nutrition for her child. She has been breastfeeding every 2 hours. After acute medical conditions have been excluded, the physician recommends lactation consultation and care services. She has already received 30 minutes of lactation consulting services and requires additional lactation counseling services.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The AAP convened an RVS Expert Panel to review practice expense data for CPT codes 978XX and 978X1. The panel included pediatricians from a variety of settings and practice sizes across the United States. They also received input from practice managers and clinical staff familiar with the direct expense inputs. The panel developed the direct practice expense recommendations for CPT Codes 978XX and 978X1 based on best practices and current AMA RUC/PE guidelines. There is no Bureau of Labor Statistics category for lactation consultant. The Expert Panel determined the typical lactation consultant/counselor in the office/outpatient setting is an RN so clinical staff type L051A RN was used as a proxy to capture their time for pricing purposes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The reference code for comparison of new code 978XX is 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* because it has similar staff work. The reference code for comparison of new code 978X1 is 99425 *Principal care management services, each additional 30 minutes of physician/QHP time per calendar month* as it represents a similar concept of staff work for an extended service. It is a PE only add-on code.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

No, codes 978XX and 978X1 represent a new procedure that is not expected to be typically reported on the same day as an E/M procedure in the non-facility setting.

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Our expert panel anticipates this service (978XX and 978X1) to be provided 80% of the time by pediatricians in the non-facility setting. We do not anticipate that the dominant provider in the non-facility will be different than for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Not applicable. These are new codes.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

Not applicable. These are new codes.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

978XX

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Service Period – Pre-service Clinical Labor Activities = L037D (RN/LPN/MTA)
CA010 Obtain vital signs: We are proposing 5 minutes for clinical staff to take the following vital signs on the baby: weight, length, head circumference, temperature.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Not applicable. These are new codes.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

978XX
Pre: Clinical staff greets mother/baby, ensures appropriate medical records are available. Prepares room, equipment and supplies. Measures baby's weight, length, head circumference, and temperature.
Intra: see question 11.
Post: Clinical staff cleans room/equipment. Lactation consultant reviews home care instructions with mother and coordinates any necessary follow-up visits. Finalizes documentation of procedure for supervising physician/QHP review.

    c. Post-service period:

978X1
Lactation consultant contacts mother to check for any follow-up questions and/or concerns and provide information on prescriptions for medications and/or DME supplies ordered by the supervising physician/QHP.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

978XX
The lactation consultant/counselor performs an appropriate history and focused examination of mother and baby. Observation of a feeding session is conducted and baby's weight is measured after feeding upon each breast. Appropriate counseling, education, hands-on instruction, and risk factor reduction to support the mother through all stages of breastfeeding, addressing latch, milk supply, infant feeding, pumping, and special circumstances is provided, personalized to the breastfeeding baby and mother. The lactation consultant/counselor consults with supervising physician/QHP on any data of concern or questions. Education material is provided for the mother and a summary report is submitted for the mother and baby.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

978X1
Following receipt of 30 minutes of lactation counseling services, the lactation consultant/counselor identifies the need to additional education and training based on observation of the feeding session, return demonstration and additional questions from the mother. The lactation consultant/counselor continues to provide education and training with observation of another feeding session and weight measurement performed if indicated.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    Not applicable.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    Not applicable.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    SEE PAGE 6

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    Not applicable.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Scale, infant, digital, fine gradation: Multiple paid invoices were obtained from various vendors used by our Expert Panel (see attached spreadsheet) and **the costs were averaged to determine the dollar amount included on the PE Spreadsheet: $1409.31.** Determining the success of a breastfeeding session requires pre- and post-feeding weights at a finer granularity than routine infant weight checks performed at well-child visits. Physician/QHP offices and other outpatient settings therefore typically purchase this version of a digital infant scale.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The estimated useful life of the infant digital scale is 5 years. These scales report to a finer gradation than other infant scales used in a physician/QHP practice and require special calibration services from the vendor. These calibration services get more expensive with each subsequent service, making purchasing a new scale more cost-effective (and thereby shortening the useful life of the scale).

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

Not applicable.

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

EF023 table, exam: default formula EF009 chair, medical recliner: default formula New scale, infant, digital, fine gradation: default formula

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

978X1 is expected to be provided 1,701,443 times nationally as the typical lactation care service is ~~45~~ 30-60 minutes. This estimate is based on: CDC Breastfeeding data (2021) "ever breastfeeding" rate of 84.1%. CDC birth rate for 2023 = 3,596,017. 2022 Formula and Breastfeeding Trends Survey 2022 indicated 97% of breastfeeding moms seek support and 58% of those utilized a lactation consultant. For estimation purposes, we used an average time of 45 minutes. Medicare utilization is expected to be 0 in a one-year period as the vast majority of pregnant women/babies do not qualify for Medicare.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

90461

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Supplies:
SM022: 2 sanitizing wipes included for 978XX to clean the infant scale and the vinyl slipcover of the nursing pillow
SB022: 3 non-sterile gloves include for 978XX as gloves are removed before documentation, changed after diaper exam, and changed after breast exam. 1 pair of non-sterile gloves included for 978X1 as gloves are removed before documentation.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

We recommend identifying a new staff type:
Description: Lactation consultant
Salary estimate: $54.00/hour.
Sources for salary estimate:
https://www.salary.com/research/salary/benchmark/lactation-consultant-salary
Other sources for salary estimate: Chetwynd E, Meyer A-M, Stuebe A, Costello R, Labbok M. Recognition of International Board Certified Lactation Consultants by Health Insurance Providers in the United States: Results of a National Survey of Lactation Consultants. *Journal of Human Lactation*. 2013;29(4):517-526. doi:10.1177/0890334413499974. This article reports salary range for 2011 at $31.00-$40.00/hour. Using the CPI Inflation Calculator (https://www.officialdata.org/us/inflation), this salary range translates to $44.65-$57.61 per hour in 2025 dollars.
Lactation consultant is not listed by the Bureau of Labor Statistics so we recommend using "registered nurses" as an appropriate proxy, noting an RN would require additional credentialing/certification to be qualified to serve as a lactation consultant.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Site of Service Anomaly

September 2025

Arthroplasty-Shoulder – Tab 18

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 23472 as having a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. The RAW concluded that CPT code 23472 represents a site of service anomaly since visits are currently included in the valuation of this service that are not typically occurring. The RAW also worked with the specialty society and identified code 23470 as part of this family of services. The RUC recommended that CPT code 23470 and 23472 be surveyed for September 2025.

23470 ***Arthroplasty, glenohumeral joint; hemiarthroplasty***
The RUC reviewed the survey results from 112 orthopaedic surgeons and determined a direct work RVU crosswalk to CPT code 67107 *Repair of retinal detachment; scleral buckling (such as lamellar scleral dissection, imbrication or encircling procedure), including, when performed, implant, cryotherapy, photocoagulation, and drainage of subretinal fluid* (work RVU= 16.00, intra-service time of 90 minutes, total time of 290 minutes) appropriately accounts for the work required to perform this service, noting that it is below the survey 25th percentile. Both procedures typically involve the same amount of intra-service time, similar complexity, and the same overall amount of physician work. The RUC recommends 43 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 35 minutes immediate post-service time, 0.5x 99238 discharge visit, 1x 99214 and 2x 99213 post-operative office visits, totaling 303 minutes. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit is typical. The 23-hour policy was applied to capture this visit as an additional 10 minutes of same data post-operative time. The specialty society explained that the level of complexity of the problem and the medical decision-making around the medication support a level 4 office visit for the first post-operative visit. The society noted that the surgeon is often prescribing or making decisions around prescribing narcotic and anticoagulation medication at the first post-operative office visit.

The specialty society added that there is no one dominant typical patient for this low volume procedure (as seen in the low percentage of survey respondents that found the vignette to be typical). Other examples of cases treated with this procedure, in addition to glenohumeral joint osteoarthritis typical patient included in the vignette, are after traumatic injury, with avascular necrosis or for osteomyelitis/joint infection.

The current value for 23470 is based on a review during the Harvard study that included responses from 11 general orthopaedic surgeons for intra-service time. The procedure for shoulder hemi-arthroplasty has undergone meaningful changes since 1990, both in technique and in the frequency, it is performed. Modern prostheses are designed with modular systems, allowing surgeons to modify humeral length, height, offset, and retroversion during the procedure. This helps to better match anatomical variations, restore proper muscle balance, and adjust for bone quality, when compared to earlier less customizable systems. These changes in complexity and modularity are manifest by the typical use of digital

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

templating performed prior to the procedure to assess for several data points and parameters including implant size and length and for humeral head offset, size, thickness, version, and positioning.

Initially, hemi-arthroplasty (HA) had broad indications and was commonly performed. Over time, studies have shown that "anatomic" total shoulder arthroplasty (ATSA) and especially "reverse" total shoulder arthroplasty (RTSA) provide better pain relief and functional outcomes, leading to a shift away from routine HA except in some cases of osteoarthritis, particular fracture scenarios, cases of avascular necrosis, or in younger patients with minimal glenoid wear. ATSA and RTSA yield improved pain and function compared to HA, especially for patients with glenoid-sided arthritic changes. Hemiarthroplasty can lead to glenoid erosion, joint space loss, and subchondral sclerosis, which can complicate or worsen outcomes if later revised to total shoulder arthroplasty. The overall decline in HA is due to advances in total shoulder arthroplasty, but mainly due to increased use of RTSA.

To support the recommended work RVU, the RUC compared the surveyed code to MPC code 19303 *Mastectomy, simple, complete* (work RVUs= 15.00, intra-service time of 90 minutes, total time of 283 minutes) and noted that although both services typically involve the same intra-service time, the surveyed code is a more intense service to perform and typically involves more total time. For additional support, the RUC also compared the surveyed code to CPT code 33956 *Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; insertion of central cannula(e) by sternotomy or thoracotomy, 6 years and older* (work RVU=16.00, intra-service time of 90 minutes, total time of 250 minutes) and noted that both services typically involve the same amount of intra-service time, whereas the reference code has less total time though is more intense to perform. **The RUC recommends a work RVU of 16.00 for CPT code 23470.**

23472 ***Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))***
The RUC reviewed the survey results from 123 orthopaedic surgeons and determined a direct work RVU crosswalk to CPT code 61798 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 complex cranial lesion* (work RVU= 19.85, intra-service time of 120 minutes, total time of 225 minutes) would be appropriate, noting that it is below the 25th percentile. Both procedures typically involve the same amount of intra-service time. The crosswalked neurosurgery procedure on a complex cranial lesion involves much less total time, though it is a more intense and complex service to perform, offsetting the time difference. The RUC recommends 50 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 120 minutes intra-service time, 35 minutes immediate post-service time, 0.5x 99238 discharge visit, 1x 99214 and 2x 99213 post-operative office visits, totaling 340 minutes. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit is typical. The 23-hour policy was applied to capture this visit as an additional 10 minutes of same data post-operative time. The specialty noted that the level of complexity of the problem and the medical decision-making around the medication support a level 4 office visit for the first post-operative visit. They also explained that the surgeon is often prescribing or making decisions around prescribing narcotic and anticoagulation medication at the first post-operative office visit. The specialty explained that this procedure typically requires 50 minutes of pre-service evaluation time to also sufficiently account for the time needed to perform and review digital templating with computer software prior to surgery to determine type, size, location, version, and positioning of total shoulder arthroplasty implants and fixation.

The specialty society noted that the typical operative technique for a total shoulder arthroplasty has changed since the last review 10 years ago to a "reverse total shoulder arthroplasty" (RTSA). In RTSA, the normal “ball-and-socket” structure of the shoulder is reversed: the artificial ball is

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

attached to the shoulder blade (glenoid), and the artificial socket is attached to the upper arm bone (humerus). This is the opposite of standard (anatomic) shoulder arthroplasty (ATSA). RTSA allows the large deltoid muscle to power the shoulder and move the arm. RTSA has expanded indications when compared to ATSA.

In 2012, ATSA was the main approach, best suited for patients with isolated osteoarthritis with an intact rotator cuff. RTSA was less commonly performed and was used for more limited indications. Today, RTSA is more widely utilized and preferred for complex cases which include, but are not restricted to, massive rotator cuff tear with or without osteoarthritis, failed previous surgery, deformity from prior fracture, osteoarthritis with reduced glenoid bone stock, and osteoarthritis with poor bone quality. These indications reflect a greater surgical complexity and a broader patient population. The specialty society presented supporting summary claims data that showed that the typical procedure in both the outpatient setting, and the inpatient setting is now performed using the RTSA surgical approach.

Modern RTSA technology and technique have been steadily advancing and now employ a wider variety of implants, materials, and increased modularity. Prosthetics have evolved in the last decade to better mimic anatomy; reduce wear, loosening, or notching; and improve patient function. The surgery often requires management of altered anatomy from prior procedures or trauma, adding complexity compared to primary shoulder arthroplasty on unaltered joints. The specialty also explained that patients who undergo RTSA often have more complex histories (e.g., multiple prior surgeries, chronic soft tissue deficiency, bone loss). RTSA patients present challenging postoperative rehabilitation needs, reflecting both increased surgical and clinical complexity.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference code 23616 *Open treatment of proximal humeral (surgical or anatomical neck) fracture, includes internal fixation, when performed, includes repair of tuberosity(s), when performed; with proximal humeral prosthetic replacement* (work RVU= 18.37, intra-service time of 120 minutes, total time of 413 minutes) and noted that both services typically involve the same amount of intraservice time. Although the reference code involves more total time, it is a much less intense service to perform which was confirmed by the survey respondents (86 percent of those that selected this key reference indicated 27472 was more intense and complex). For additional support, the RUC also compared the surveyed code to MPC code 35301 *Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision* (work RVU= 21.16, intra-service time of 120 minutes, total time of 404 minutes) and note that both services typically involve the same amount of intra-service time, whereas the reference code involve more total time justifying a higher valuation. **The RUC recommends a work RVU of 19.85 for CPT code 23472.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:23470 Tracking Number Original Specialty Recommended RVU: **17.89**
Presented Recommended RVU: **17.13**
Global Period: 090 Current Work RVU: **17.89** RUC Recommended RVU: **16.00**

CPT Descriptor: Arthroplasty, glenohumeral joint; hemiarthroplasty

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old female with moderate glenohumeral joint osteoarthritis undergoes shoulder hemiarthroplasty.

Percentage of Survey Respondents who found Vignette to be Typical: 40%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 91% , In the ASC 9%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 17% , Overnight stay-less than 24 hours 68% , Overnight stay-more than 24 hours 16%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 89%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review results of preadmission testing, including laboratory tests, radiographs, CT scans, and/or MRI scans. Re-examine patient to make sure that physical findings have not changed and update H&P. Meet with patient and/or family to review planned procedure and postoperative management. Obtain informed consent and review risks which include infection, nerve and blood vessel injury, and iatrogenic fracture. Verify all required instruments and supplies are available, including intraoperative imaging and/or fluoroscopy for documentation. Ensure that an array of implants are available for possible use in the OR. Perform and review digital templating with computer software to determine type, size, location, version, and positioning of implants and fixation. This includes assessment of range of motion and stability of the construct. Prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team. Assist with patient 'beach chair" positioning to ensure that the arm can be manipulated adequately for surgical access. Indicate the areas of skin to be prepared and mark surgical incision. Scrub and gown including donning surgical helmet system. Perform a second brief time out with the surgical team.

Description of Intra-Service Work: Under anesthesia, make a deltopectoral incision from the mid-clavicle to the mid-third of the humerus. Open the deltopectoral interval, allowing identification of the conjoined tendon and release subdeltoid adhesions. Retract the conjoined tendon medially. Provide careful protection around neurovascular structures during the procedure, including the axillary and musculocutaneous nerve. Ligate or cauterize the anterior circumflex humeral vessels. Divide, tag, and mobilize the subscapularis tendon. Incise the anterior capsule. Perform a wide capsular release for exposure and mobilization of the proximal humerus. Dislocate the shoulder anteriorly with intraoperative inspection and assessment of the humeral head. Remove osteophytes to identify the native humeral neck. Perform a precise resection of the proximal humeral head with an alignment jig referencing pre-operative digital templating. Ream the humeral canal and broach to accept the prosthesis. Protect the humeral head cut surface and retract the humeral head posteriorly to expose the glenoid fossa for assessment of articular cartilage and labrum and confirm that hemiarthroplasty is appropriate. Re-dislocate the humeral head and prepare and cleanse the humeral canal prior to placement of the prosthetic humeral component. Cement or press fit the humeral stem component within the humeral shaft in the proper degree of retroversion to prevent postoperative subluxation or dislocation. Place trial humeral head spacers and reduce the joint to test for stability and range of motion. Impact the final humeral head on the stem based on the trial results. Repair the subscapularis tendon. Re-approximate the deltopectoral interval and close the subcutaneous tissue and skin.

Description of Post-Service Work: Apply sterile dressings; remove drapes; prior to extubation, place the operative arm in a shoulder immobilizer; wait for reversal of anesthesia and extubation; remove surgical helmet system and assist in transfer of the patient from the OR table to a stretcher or bed; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with patient and family and answer questions; enter a brief operative note and a full operative report in the medical record; call referring physician and/or send a copy of the operative note; write comprehensive orders for post-anesthesia care unit (PACU) and floor care; complete medication reconciliation; order and review postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, National Surgical Quality Improvement Program [NSQIP], American Joint Replacement Registry [AJRR], and/or local registry).

Later the same day, review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, laboratory results, and other related data; review findings and outcome with patient and/or family; assess pain control and response to current medications and modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb position and alignment; check neurovascular status; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding therapy protocol; answer questions; counsel the patient and/or family regarding out of bed (OOB)/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative check progress note.

On the following day, review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; if the patient is ready to be discharged, finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb positioning; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, venous thromboembolism [VTE] prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications; write orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility (SNF), or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit work includes the following activities: review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply wound closure strips; assess limb alignment, swelling, strength, and range of motion (ROM); check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	10%	36%	43%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	31%	59%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	59%	34%
Physical effort required	10%	64%	26%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	46%	46%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	67%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	3300%	67%
Physical effort required	0%	25%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	25%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 23472 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. **Code 23470 for hemi-arthroplasty was added as a family code.**

Survey Process

Code 23470 has not been surveyed and is still based on the Harvard study. The AAOS and ASES agreed to review this code in conjunction with 23472. Each society sent survey requests to randomly selected members of their respective organizations. While there is considerable membership overlap between AAOS and ASES, both comprised of orthopaedic surgeons, the Research Subcommittee required that data from the ASES survey responses be reported separately on the RUC Summary Spreadsheet, as ASES currently does not have a RUC advisor.

Comment on Low Percentage Typical Patient

The survey respondents provided descriptions for their typical patient that can be summarized as one or more of the following: after traumatic injury, with avascular necrosis, for osteomyelitis/joint infection. As discussed in the compelling evidence section below, the performance of shoulder hemi-arthroplasty is decreasing and performed instead of total joint arthroplasty for a number of different reasons, so it is not unexpected for survey respondents to not agree with a single typical patient.

Compelling Evidence for Increased Procedure Intensity / Complexity

- ***Flawed methodology in the previous valuation.***

The current value for 23470 is based on a review during the Harvard study that included responses from 11 general orthopaedic surgeons for intra-service time. Work was set relative to code 23472. Pre-time and immediate post-time were imputed by algorithm. The postoperative visits (including "half" visits) were assigned for practice expense purposes by contract—"Derivation of Relative Values for Practice Expenses Using Extant Data," by Daniel L. Dunn, Ph.D. and Eric Latimer, Ph.D. of Harvard University, April 1, 1996. HCFA Contract # 500 92 0023, Harvard Subcontract to Rand Corporation. ***Based on this evidence, we believe a flawed methodology was used to assign postoperative visits that resulted in a flawed intensity.***

- ***Changes in patient and technology***

The procedure for shoulder hemi-arthroplasty has undergone meaningful changes since 1990, both in technique and in the frequency it is performed. Modern prostheses are designed with modular systems, allowing surgeons to modify humeral length, height, offset, and retroversion during the procedure. This helps to better match anatomical variations, restore proper muscle balance, and adjust for bone quality, when compared to earlier less customizable systems. These changes in complexity and modularity are manifest by the typical use of digital templating performed prior to the procedure to assess for several data points and parameters including implant size and length and for humeral head offset, size, thickness, version, and positioning.

Initially, hemi-arthroplasty (HA) had broad indications and was commonly performed. Over time, studies have shown that "anatomic" total shoulder arthroplasty (ATSA) and especially "reverse" total shoulder arthroplasty (RTSA) provide better pain relief and functional outcomes, leading to a shift away from routine HA except in some cases of osteoarthritis, particular fracture scenarios, cases of avascular necrosis, or in younger patients with minimal glenoid wear. ATSA and RTSA yield improved pain and function compared to HA, especially for patients with glenoid-sided arthritic changes. Hemiarthroplasty can lead to glenoid erosion, joint space loss, and subchondral sclerosis, which can complicate or worsen outcomes if later revised to total shoulder arthroplasty. The overall decline in HA is due to advances in total shoulder arthroplasty, but mainly due to increased use of RTSA. ***Based on this evidence, we believe advances in technology and technique has changed the complexity of the typical patient undergoing hemi-arthroplasty.***

Recommendation – 23470

Work RVU Recommendation

We **recommend a work RVU of 17.13 that is a direct crosswalk to code 67108.** Code 67108 has the same intraoperative time and slightly lower total time. Code 67108 was previously used as a crosswalk for code 27446, a code that has the same intraoperative time, similar total time, and includes a 99214 postoperative visit. A work RVU of 17.13 appropriately values 23470 relative to other arthroplasty codes.

Pre-service time

Pre-time package 4 is selected, with the following modifications:

Evaluation time: Add 3 minutes to the standard package time of 40 minutes (total time = 43 minutes) to perform and review digital templating with computer software prior to surgery to determine type, size, location, version, and positioning of hemi-arthroplasty implants and fixation.

Positioning: Add 12 minutes to the standard package time of 3 minutes (total time = 15 minutes). Patients are typically positioned in the beach chair (semi-sitting) position upright at an angle that usually ranges from 30° to 90° above horizontal, with the head and neck secured in a headrest. The scapula of the operative side is set off the edge of the bed to ensure full mobility and optimal exposure of the shoulder joint. The contralateral arm is padded and secured to prevent injury, while the operative arm is free to be mobilized as needed during surgery. The torso may be gently tilted or wrapped for additional stability, and padding is used under the legs and across bony prominences. Careful attention is

given to securing the patient and maintaining a neutral alignment of the head to avoid complications during surgery. A total of 15 minutes for beach chair positioning is consistent with other shoulder surgeries (eg, 23615, 23616, 23630, 23670, 23670, 34575, 24579).

Scrub, dress and wait: Subtract 5 minutes from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected

Subtract 8 minutes to be consistent with the survey median and add 10 minutes (total time = 35 minutes) to comport with the RUC policy of shifting the intraservice E/M time of a distinct E/M visit to the immediate postoperative time component.

Postoperative Work

Immediate postoperative work through discharge from recovery room: Apply sterile dressings; remove drapes; prior to extubation, place the operative arm in a shoulder immobilizer; wait for reversal of anesthesia and extubation; assist in transfer of the patient from the OR table to a stretcher or bed; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with patient and family and answer questions; enter a brief operative note and a full operative report in the medical record; call referring physician and/or send a copy of the operative note; write comprehensive orders for post-anesthesia care unit (PACU) and floor care; complete medication reconciliation; order and review postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, National Surgical Quality Improvement Program [NSQIP], American Joint Replacement Registry [AJRR], and/or local registry).

The following work is typically performed during a distinct and separate hospital E/M visit, however, RUC policy only allows recognition of patient face-to-face intraservice time: Review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, laboratory results, and other related data; review findings and outcome with patient and/or family; assess pain control and response to current medications and modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb position, and alignment; check neurovascular status; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding therapy protocol; answer questions; counsel the patient and/or family regarding out of bed (OOB)/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians, as needed; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative progress note.

The following work is typically performed for discharge management services on the day after surgery, if it is determined to be safe to discharge the patient**:** Review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb positioning; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, venous thromboembolism [VTE] prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications; write orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility (SNF), or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit 1 (99214): Review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply

wound closure strips; assess limb alignment, swelling, strength, and ROM; check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 2 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess limb alignment swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding return to driving; complete temporary handicap parking forms; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 3 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess limb alignment swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 23470

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

CPT Descriptor: Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female with severe glenohumeral joint osteoarthritis undergoes total shoulder arthroplasty.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 93% , In the ASC 7%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 9% , Overnight stay-less than 24 hours 65% , Overnight stay-more than 24 hours 26%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 89%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review results of preadmission testing, including laboratory tests, radiographs, CT scans, and/or MRI scans. Re-examine patient to make sure that physical findings have not changed and update H&P. Meet with patient and/or family to review planned procedure and postoperative management. Obtain informed consent and review risks which include infection, dislocation, nerve and blood vessel injury, iatrogenic fracture, and change in physical contour. Verify all required instruments and supplies are available, including intraoperative imaging and/or fluoroscopy for documentation. Ensure that an array of implants are available for possible use in the OR. Perform and review digital templating with computer software to determine type, size, location, version, and positioning of implants and fixation. This includes assessment of range of motion and stability of the construct. Prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team. Assist with patient 'beach chair" positioning to ensure that the arm can be manipulated adequately for surgical access. Indicate the areas of skin to be prepared and mark surgical incision. Scrub and gown including donning surgical helmet system. Perform a second brief time out with the surgical team.

Description of Intra-Service Work: Under anesthesia, make a deltopectoral incision from the mid-clavicle to the mid-third of the humerus. Open the deltopectoral interval, allowing identification of the conjoined tendon. Release subdeltoid adhesions. Retract the conjoined tendon medially. Provide careful protection around neurovascular structures during the procedure, including the axillary and musculocutaneous nerves. Ligate or cauterize the anterior circumflex humeral vessels. Divide, tag, and mobilize the subscapularis tendon. Incise the anterior capsule and protect the subscapularis. Perform a wide capsular release for exposure and mobilization of the proximal humerus. Dislocate the shoulder anteriorly with intraoperative inspection and assessment of the humeral head. Remove osteophytes to identify the native humeral neck. Perform a precise resection of the proximal humeral head with an alignment jig and referencing the pre-operative digital templating. Ream the humeral canal and broach to accept the prosthesis. Protect the humeral head cut surface and retract the humeral head posteriorly to expose the glenoid fossa. Expose the glenoid fossa with an extensive circumferential capsular release and excision of labrum if needed in order to allow maximum exposure while minimizing neurovascular risk. Assess the native version and size of the glenoid referencing the pre-operative digital templating. Use the appropriate guides and reference digital templating to ream the glenoid to place the base plate in the appropriate position and version. Secure the baseplate with central and peripheral screws, again referencing the pre-operative digital templating for screw placement. Impact and secure the appropriate sized glenosphere. Carefully bring the humeral head anterior to the

glenosphere and prepare and cleanse the humeral canal prior to placement of the prosthetic humeral component. Cement or press fit the humeral component within the humeral shaft. in the proper degree of retroversion to prevent postoperative subluxation or dislocation. Place trial humeral head spacer and reduce the joint to test for stability, range, of motion, and tension. Fixate the final polyethylene humeral spacer based on the trial results. Repair the subscapularis tendon. Through a stab wound, place drain deep to the deltoid. Re-approximate the deltopectoral interval and close the subcutaneous tissue and skin.

Description of Post-Service Work: Apply sterile dressings; attach drain to suction device; remove drapes; prior to extubation, place the operative arm in a shoulder immobilizer; wait for reversal of anesthesia and extubation; remove surgical helmet system and assist in transfer of the patient from the OR table to a stretcher or bed; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with patient and family and answer questions; enter a brief operative note and a full operative report in the medical record; call referring physician and/or send a copy of the operative note; write comprehensive orders for post-anesthesia care unit (PACU) and floor care; complete medication reconciliation; order and review postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, National Surgical Quality Improvement Program [NSQIP], American Joint Replacement Registry [AJRR], and/or local registry).

Later the same day, review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, laboratory results, and other related data; review findings and outcome with patient and/or family; assess pain control and response to current medications and modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb length, position, and alignment; check neurovascular status; assess function of drains; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding therapy protocol; answer questions; counsel the patient and/or family regarding out of bed (OOB)/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative check progress note.

On the following day, review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; if the patient is ready to be discharged, finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb positioning; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, venous thromboembolism [VTE] prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications; write orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility (SNF), or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit work includes the following activities: review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove sutures or staples; apply wound closure strips; assess limb length, alignment, swelling, strength, and range of motion (ROM); check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 23472 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. Code 23470 for hemi-arthroplasty was added as a family code.

Survey Process

Code 23472 has been surveyed three times in the past. In 1995 by the AAOS, in 2000 by the AAOS and ASES, and in 2012 by the AAOS and ASSH. The AAOS and ASES expressed a level of interest to review this code for the fourth time and each sent survey requests to randomly selected members of their respective organizations. While there is considerable membership overlap between AAOS and ASES, both comprised of orthopaedic surgeons, the Research

Subcommittee required that data from the ASES survey responses be reported separately on the RUC Summary Spreadsheet, as ASES currently does not have a RUC advisor.

Compelling for Increased Procedure Intensity / Complexity

The typical operative technique for a total shoulder arthroplasty has changed since the last review 10 years ago to a "reverse total shoulder arthroplasty" (RTSA). In RTSA, the normal “ball-and-socket” structure of the shoulder is reversed: the artificial ball is attached to the shoulder blade (glenoid) and the artificial socket is attached to the upper arm bone (humerus). This is the opposite of standard (anatomic) shoulder arthroplasty (ATSA). RTSA allows the large deltoid muscle to power the shoulder and move the arm. RTSA has expanded indications when compared to ATSA.

In 2012, ATSA was the main approach, best suited for patients with isolated osteoarthritis with an intact rotator cuff. RTSA was less commonly performed and was used for more limited indications. Today, RTSA is more widely utilized and preferred for complex cases which include, but are not restricted to, massive rotator cuff tear with or without osteoarthritis, failed previous surgery, deformity from prior fracture, osteoarthritis with reduced glenoid bone stock, and osteoarthritis with poor bone quality. These indications reflect a greater surgical complexity and a broader patient population.

The classic ATSA relies on a functioning rotator cuff to stabilize and move the shoulder. Previously, cases of osteoarthritis with rotator cuff tears were addressed with hemiarthroplasty because of the high failure rate of ATSA in the presence of a rotator cuff tear. RTSA has largely replaced hemiarthroplasty and has taken over some indications for ATSA by fundamentally modifying shoulder mechanics. By reversing the ball and socket, the center of rotation of the shoulder is shifted which confers stability and function by transferring mechanical advantage to the deltoid muscle, allowing motion and strength even with a deficient rotator cuff. This requires precise surgical planning and implant positioning to avoid complications such as instability or nerve injury. This need for precise positioning has led to the identification of a greater number or variables and data points that need to be assessed for both RTSA and ATSA, which in turn has resulted in the development of computer software which facilitates digital templating for both RTSA and ATSA. This digital templating that is performed prior to the procedure is now typical.

Modern RTSA technology and technique have been steadily advancing and now employ a wider variety of implants, materials, and increased modularity. Prosthetics have evolved in the last decade to better mimic anatomy; reduce wear, loosening, or notching; and improve patient function. The surgery often requires management of altered anatomy from prior procedures or trauma, adding complexity compared to primary shoulder arthroplasty on “virgin” joints.

Patients who undergo RTSA often have more complex histories (e.g., multiple prior surgeries, chronic soft tissue deficiency, bone loss). RTSA patients present challenging postoperative rehabilitation needs, reflecting both increased surgical and clinical complexity.

In summary, RTSA differs from previously performed classic shoulder replacement by modifying the joint’s mechanics, enabling improved function for patients once considered poor candidates for ATSA. Over the past decade, both the technology and indications for reverse procedures have expanded, making the surgery significantly more complex due to broader application, more challenging patient anatomy, and the need for specialized surgical skill and implant design.

Although there are no specific CPT or ICD diagnosis codes for RTSA and ATSA, distinct ICD procedure codes are available. As additional support, claims containing ICD-PCS codes for RTSA and ATSA were extracted from Pearl Diver’s Mariner database and sorted by outpatient and inpatient length of stay. While inpatient claims are required to include ICD-PCS codes, these ICD-PCS procedure codes are also sometimes present on outpatient claims. The following tables and graphs show that the transition from ATSA to RTSA between 2011 and 2022 followed similar patterns for both outpatient (≤ 1 LOS) and inpatient (≥ 2 LOS) stays. **Together, these data and the information above support compelling evidence of change in the operative procedure to a surgery with increased intensity and complexity since the prior review.**

Annual Trend of Reverse vs Anatomical TSA LOS ≤ 1 Day (Outpatient)					
Year	Reverse		Anatomical		All TSA
2011	760	30%	1,738	70%	2,498

It is a commercially available healthcare database containing de-identified patient records from insurance claims, including demographics, enrollment information, medical diagnoses, procedures, and dispensed medications.

Recommendation – 23472

Work RVU Recommendation

Comparison of current survey data with 2012 data reveals less intraoperative time, but as discussed above, at a higher complexity and intensity. The current survey data also indicate fewer hospital visits, but higher-level office work. These changes align with bundled payment models and cost-reduction strategies but also demonstrate that earlier discharges increase the clinical demands of postoperative ambulatory care, shifting more complex monitoring, complication prevention, and patient education to the outpatient setting.

We recommend a work RVU of 19.85 that is a crosswalk to 61798 This recommended work RVU reflects the increased intensity of the t more complex procedure, while also recognizing a decrease in total time.

Pre-service time

Pre-time package 4 is selected, with the following modifications:

Evaluation time: Add 10 minutes to the standard package time of 40 minutes (total time = 50 minutes) to perform and review digital templating with computer software prior to surgery to determine type, size, location, version, and positioning of total shoulder arthroplasty implants and fixation.

Positioning: Add 12 minutes to the standard package time of 3 minutes (total time = 15 minutes). Patients are typically positioned in the beach chair (semi-sitting) position upright at an angle that usually ranges from 30° to 90° above

horizontal, with the head and neck secured in a headrest. The scapula of the operative side is set off the edge of the bed to ensure full mobility and optimal exposure of the shoulder joint. The contralateral arm is padded and secured to prevent injury, while the operative arm is free to be mobilized as needed during surgery. The torso may be gently tilted or wrapped for additional stability, and padding is used under the legs and across bony prominences. Careful attention is given to securing the patient and maintaining a neutral alignment of the head to avoid complications during surgery. A total of 15 minutes for beach chair positioning is consistent with other shoulder surgeries (eg, 23615, 23616, 23630, 23670, 23670, 34575, 24579).

Scrub, dress and wait: Subtract 5 minutes from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected

Subtract 8 minutes to be consistent with the survey median and add 10 minutes (total time = 35 minutes) to comport with the RUC policy of shifting the intraservice E/M time of a distinct E/M visit to the immediate postoperative time component.

Postoperative Work

Immediate postoperative work through discharge from recovery room: Apply sterile dressings; remove drapes; prior to extubation, place the operative arm in a shoulder immobilizer; wait for reversal of anesthesia and extubation; assist in transfer of the patient from the OR table to a stretcher or bed; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with patient and family and answer questions; enter a brief operative note and a full operative report in the medical record; call referring physician and/or send a copy of the operative note; write comprehensive orders for post-anesthesia care unit (PACU) and floor care; complete medication reconciliation; order postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, National Surgical Quality Improvement Program [NSQIP], American Joint Replacement Registry [AJRR], and/or local registry).

The following work is typically performed during a distinct and separate hospital E/M visit, however, RUC policy only allows recognition of patient face-to-face intraservice time: Review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, laboratory results, and other related data; review findings and outcome with patient and/or family; assess pain control and response to current medications and modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb position, and alignment; check neurovascular status; assess function of drains; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding therapy protocol; answer questions; counsel the patient and/or family regarding out of bed (OOB)/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians, as needed; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative progress note.

The following work is typically performed for discharge management services on the day after surgery, if it is determined to be safe to discharge the patient**:** Review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb positioning; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, venous thromboembolism [VTE] prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications; write orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility (SNF), or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit 1 (99214): Review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply wound closure strips; assess limb alignment, swelling, strength, and ROM; check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 2 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess limb alignment, swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding return to driving; complete temporary handicap parking forms; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 3 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess limb alignment, swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Summary

The change in procedure and patient support a value with a higher intensity. In addition, the shift toward value-based alternative payment models has driven significant redesign in the care of total shoulder arthroplasty patients—producing shorter hospital stays, decreased reliance on post-acute care facilities, reduced hospital readmissions, and lower overall costs.

The valuation of CPT 23472 should capture the complete scope of physician work performed, rather than relying on outdated proxies or reduced service assumptions established nearly two decades ago that were meant to account for same-day discharges.

Based on current evidence, we recommend a work RVU of 19.85 for 23472, which remains below both the survey 25th percentile and the current assigned value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 23472

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Sometimes

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2025

CPT Code	Long Descriptor	Global Period
23470	Arthroplasty, glenohumeral joint; hemiarthroplasty	90
23472	Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))	90

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
23470	A 62-year-old female with moderate glenohumeral joint osteoarthritis undergoes shoulder hemiarthroplasty.
23472	A 65-year-old female with severe glenohumeral joint osteoarthritis undergoes total shoulder arthroplasty.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   AAOS and ASES surgeons reviewed and updated the current PE details for codes 23470 and 23472

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   Current codes are used for reference
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   No
   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A
   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	**Clinical Staff Work**
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of preservice imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including presurgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists. Confirms that all possible implants will be available.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status, and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions and outpatient follow-up. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

   c. Post-service period:

The clinical staff work includes the standard activities involved in office E/M visits including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instructions.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? ☒ **Yes** or ☐ No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

CMS established pack

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, post-op incision care (staple)	**SA052**	**pack**	
kit, staple removal		kit	1
povidone soln (Betadine)		ml	10
gauze, sterile 4in x 4in		item	2

gloves, sterile	pair	1
steri-strip (6 strip uou)	item	2
swab-pad, alcohol	item	2
tape, surgical paper 1in (Micropore)	inch	12
tincture of benzoin, swab	item	1

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
☐ Yes or ☒ **No**.
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Office Visits	+J91	

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

Current codes 23470 and 23472 should be maintained for PLI

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Site of Service Anomaly

September 2025

Arthroplasty-Hip – Tab 19

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 27130 as having a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. The RAW concluded that CPT code 27130 represents a site of service anomaly since visits are currently included in the valuation of this service that are not typically occurring. The RUC recommended that CPT code 27130 be surveyed for September 2025.

27130 ***Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft***
The RUC reviewed the survey results from 238 orthopaedic and hip/knee surgeons and determined a direct work RVU crosswalk to CPT code 67108 *Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique* (work RVU= 17.13, intra-service time of 90 minutes, total time of 295 minutes), noting that it is below the survey 25th percentile. Both procedures typically involve the same amount of intra-service time, similar complexity, and the same overall amount of physician work. The specialty noted and the RUC concurred that the work of 27130 and 27447 total knee replacement requires the same physician time and complexity to perform and therefore should be valued the same.

The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 40 minutes immediate post-service time, 0.5-99238 discharge visit, 1-99214 and 2-99213 post-operative office visits, for a total time of 305 minutes. The specialty society noted that 15 minutes of positioning time was typical to position the patient supine on a traction table or position the patient in the lateral decubitus. The specialty society noted that the level of complexity of the problem and the medical decision-making around the medication management, support a level 4 office visit for the first post-operative visit. The specialty society noted that the surgeon often prescribes or makes decisions around prescribing narcotic and anticoagulation medication at the first post-operative office visit.

The shift toward value-based alternative payment models has driven significant redesign in the care of total hip arthroplasty patients—producing shorter hospital stays, decreased reliance on post-acute care facilities and reduced hospital readmissions. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit is now typical. The 23-hour policy was applied to capture this visit as an additional 20 minutes of the same data post-operative time.

To support the recommended work RVU, the RUC compared the surveyed code to CPT codes 22554 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2* (work RVU= 17.69, intra-service time of

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

90 minutes, total time of 362 minutes) and 43770 *Laparoscopy, surgical, gastric restrictive procedure; placement of adjustable gastric restrictive device (eg, gastric band and subcutaneous port components)* (work RVU= 18.00, intra-service time of 90 minutes, total time of 367 minutes). All three codes typically involve the same amount of intra-service time, whereas the reference procedures each involve more total time. The RUC confirmed that these three procedures would have appropriate relativity with one another. **The RUC recommends a work RVU of 17.13 for CPT code 27130.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft	090	17.13 (2025 Work RVU = 19.60)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:27130 Tracking Number Original Specialty Recommended RVU: **18.00**
Presented Recommended RVU: **17.69**
Global Period: 090 Current Work RVU: **19.60** RUC Recommended RVU: **17.13**

CPT Descriptor: Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female has hip osteoarthritis not responding to nonoperative treatment. A total hip arthroplasty (THA) is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 93% , In the ASC 7%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 5% , Overnight stay-less than 24 hours 68% , Overnight stay-more than 24 hours 26%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 94%

Description of Pre-Service Work: On the day before and/or the day of surgery, the surgeon and/or qualified health care professional will complete the following work: Interview and examine the patient to confirm that the medical status and physical findings have not changed; update and sign the H&P; review the planned procedure and postoperative management with patient and family; confirm or update the consent; sign or mark the operative site; re-review results of preadmission testing, including laboratory studies, X rays, and/or computed tomographic (CT) scans, with special attention to radiographs that were used for sizing and ordering of special implants or allografts; confirm timing and administration of antibiotics; assure appropriate selection, timing, and administration of DVT prophylaxis; verify all required instruments and supplies are available, including intraoperative fluoroscopy. Confirm all potential implants are available for possible use in the OR. Prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team. Assist with positioning patient (lateral decubitus or supine traction table); pad bony prominences and apply thermal regulation drapes; prepare and drape; mark surgical incision; scrub and gown including donning surgical helmet system, and perform a second brief time out with the surgical team.

Description of Intra-Service Work: After incising the skin and the fascia, complete dissection for exposure of the femur and acetabulum. Assess limb length by placing markers in the pelvis and the femur. Perform a capsulotomy and dislocate the femoral head. Perform a femoral neck osteotomy at the proper height. Open the femoral canal and ream and then perform sequential rasping with the broach/trial femoral component until correct rotational and axial stability is achieved. Use a calcar planer on the femoral neck osteotomy, when indicated, to fashion the bone. Perform additional dissection and releases as needed to expose the acetabulum. Place appropriate retractors anteriorly as well as posteriorly. Remove all excess capsule and redundant labrum, as well as all osteophytes. Identify the base of the acetabulum by utilizing a small reamer. Once the reamer is placed down to the medial wall of the acetabulum, use sequential reamers in 1-2-mm increments up to the correct size based on the axial and off-center loading of the reamers. Insert trial acetabular implants and reduce the hip. Check the stability of the leg. Measure the length of the leg and adjust the implants as necessary. Once the proper implant sizing and joint stability are confirmed, insert the final femoral and acetabular components and reduce the hip joint. Make a final check for stability, limb length, range of motion (ROM), and impingement. Confirm sponge and needle counts. Copiously irrigate the wound with saline and/or other solutions. Close the wound in multiple layers, being careful to reattach the muscles to the proper structures.

Description of Post-Service Work: Apply sterile dressings; remove drapes; wait for reversal of anesthesia and extubation; remove surgical helmet system and assist in transfer of the patient from the OR table to a stretcher or bed; assess limb length and rotational alignment; monitor transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with family and answer questions; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the referring physician; write comprehensive orders for post-anesthesia care unit (PACU) and floor care; complete medication reconciliation; order postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, National Surgical Quality Improvement Program [NSQIP], American Joint Replacement Registry [AJRR], and/or local registry).

Later the same day, review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, laboratory results, and other related data; review findings and outcome with patient and/or family; assess pain control and response to current medications and modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb length, position, and alignment; check neurovascular status; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding physical therapy protocol; answer questions; counsel the patient and/or family regarding out of bed (OOB)/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative check progress note.

On the following day, review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; if the patient is ready to be discharged, finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb alignment and ROM; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, venous thromboembolism [VTE] prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); write orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility (SNF), or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit work includes the following activities: review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply wound closure strips; assess limb length, alignment, swelling, strength, and range of motion (ROM); check neurovascular status; review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and/or other related forms; communicate and coordinate care with other physicians and providers (eg, PCP, rheumatology, PT/OT); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	46%	45%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	61%	36%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	1%	52%	47%
Physical effort required	1%	12%	87%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	60%	34%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	12%	53%	35%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	37%	61%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	26%	74%
Physical effort required	0%	19%	81%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	12%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 27130 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested.

Survey Process

The AAOS and AAHKS each sent survey requests to randomly selected members of their respective organizations. While there is considerable membership overlap between AAOS and AAHKS, both comprised of orthopaedic surgeons, the Research Subcommittee required that data from the AAHKS survey responses be reported separately on the RUC Summary Spreadsheet, as AAHKS currently does not have a RUC advisor. In contrast, during the 2019 survey, both AAOS and AAHKS conducted surveys but did not need to separate their data, since AAHKS had a RUC advisor at that time.

Recommendation – 27130

Work RVU Recommendation

We **recommend a work RVU of 17.69 that is a direct crosswalk to code 22554.** A work RVU of 17.69 appropriately values 27130 relative to other arthroplasty codes.

Pre-service time

Pre-time package 4 is selected: difficult patient / difficult procedure.

Evaluation time: Standard 40 minute package time is recommended.

Positioning: Twelve minutes have been added to the standard package time of 3 minutes (total time = 15 minutes) to account for positioning the patient lateral decubitus or supine on a traction top table. This is consistent with both the survey median and historical RUC precedent for similar -procedures (eg, 27236, 27269).

Scrub, dress and wait: Five minutes have been subtracted from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected: general anesthesia or complex regional block / complex procedure. Subtract 13 minutes to be consistent with the survey median and add 20 minutes (total time = 40 minutes) to comport with the RUC policy of shifting the intraservice E/M time of a distinct E/M visit to the immediate postoperative time component.

Postoperative Work

Immediate postoperative work through discharge from recovery room: Apply sterile dressings; remove drapes; wait for reversal of anesthesia and extubation; assist in transfer of the patient from the OR table to a stretcher or bed; assess limb length and rotational alignment; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with family and answer questions; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the referring physician; write comprehensive orders for post-anesthesia care unit (PACU) and floor care; complete medication reconciliation; order postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, National Surgical Quality Improvement Program [NSQIP], American Joint Replacement Registry [AJRR], and/or local registry).

The following work is typically performed during a distinct and separate hospital E/M visit, however, RUC policy only allows recognition of patient face-to-face intraservice time: Review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, laboratory results, and other related data; review findings and outcome with patient and/or family; assess pain control and response to current medications and modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb length, position, and alignment; check neurovascular status; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding physical therapy protocol; answer questions; counsel the patient and/or family regarding out of bed (OOB)/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians, as needed; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative progress note.

The following work is typically performed for discharge management services on the day after surgery, if it is determined to be safe to discharge the patient**:** Review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb alignment and ROM; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient

and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, venous thromboembolism [VTE] prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); write orders for discharge to an inpatient rehabilitation facility, a skilled nursing facility (SNF), or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit 1 (99214): Review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply wound closure strips; assess limb length, alignment, swelling, strength, and ROM; check neurovascular status; review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 2 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess limb length, alignment swelling, strength, and ROM; check neurovascular status; order and review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol and activity limitations; counsel patient and/or family regarding return to driving; complete temporary handicap parking forms; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 3 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess limb length, alignment swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Summary

The shift toward value-based alternative payment models has driven significant redesign in the care of total hip arthroplasty patients—producing shorter hospital stays, decreased reliance on post-acute care facilities, reduced hospital readmissions, and lower overall costs.

The valuation of CPT 27130 should capture the complete scope of physician work performed, rather than relying on outdated proxies or reduced service assumptions established nearly two decades ago that were meant to account for same-day discharges.

Based on current evidence, we recommend a work RVU of 17.69, which remains below both the survey 25th percentile and the current assigned value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27130

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 174,976 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 - RUC database

Specialty orthopaedic surgery Frequency 173500 Percentage 99.15 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

Meeting Date: 09/2025

CPT Code	Long Descriptor	Global Period
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft	90

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
27130	A 72-year-old female has hip osteoarthritis not responding to nonoperative treatment. A total hip arthroplasty (THA) is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AAOS and AAHKS surgeons reviewed and updated the current PE details for codes 27130

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   Current code is used for reference

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   Clinical staff: Increased clinical staff time is due to change in level of postop office E/M
   Supplies:, SM022, sanitizing cloth-wipe (surface, instruments, equipment), is needed to clean hard surfaces at each postoperative visit. This is consistent with the addition of SM022 to E/M office visit codes as this was not included in the E/M multispecialty office visit pack.
   Equipment: Increased equipment time is due to change in level of postop office E/M

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	**Clinical Staff Work**
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of preservice imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including presurgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists. Confirms that all necessary implants will be available.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status, and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions and outpatient follow-up. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

   c. Post-service period:

The clinical staff work includes the standard activities involved in office E/M visits including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instructions.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? ☒ **Yes** or ☐ No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

CMS established pack

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Site of Service Anomaly

September 2025

Arthroplasty-Knee – Tab 20

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 27447 as having a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. The RAW concluded that CPT code 27447 represents a site of service anomaly since visits are currently included in the valuation of this service that are not typically occurring. The RAW also worked with the specialty societies and identified code 27446 as part of this family of services. The RUC recommended that CPT codes 27446 and 27447 be surveyed for September 2025.

27447 ***Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)***
The RUC reviewed the survey results from 245 orthopaedic and hip/knee surgeons and determined a direct work RVU crosswalk to CPT code 67108 *Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique* (work RVU= 17.13, intra-service time of 90 minutes, total time of 295 minutes) appropriately accounts for the work required to perform this service, noting that is below the survey 25th percentile. Both procedures typically involve the same amount of intra-service time, similar complexity and the same overall amount of physician work. The specialty society noted and the RUC concurred that the work of 27447 and 27130 total hip replacement require the same physician time and complexity to perform and therefore should be valued the same.

The RUC recommends 40 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, 40 minutes immediate post-service time, 0.5x 99238 discharge visit, 1-99214 and 2-99213 post-operative office visits, for a total time of 305 minutes. The specialty society noted and the RUC concurred that 15 minutes of positioning time was typical to account for the time needed to position the patient supine, as well as for applying and confirming the settings for a tourniquet. The specialty society noted that the level of complexity of the problem and the medical decision-making around the medication management, support a level 4 office visit for the first post-operative visit. The specialty society noted that the surgeon often prescribes or makes decisions around narcotic and anticoagulation medication at the first post-operative office visit.

The shift toward value-based alternative payment models has driven significant redesign in the care of total hip arthroplasty patients—producing shorter hospital stays, decreased reliance on post-acute care facilities and reduced hospital readmissions. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit is typical. The 23-hour policy was applied to capture this visit as an additional 20 minutes of the same data post-operative time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To support the recommended work RVU, the RUC compared the surveyed code to CPT codes 22554 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2* (work RVU= 17.69, intra-service time of 90 minutes, total time of 362 minutes) and 43770 *Laparoscopy, surgical, gastric restrictive procedure; placement of adjustable gastric restrictive device (eg, gastric band and subcutaneous port components)* (work RVU= 18.00, intra-service time of 90 minutes, total time of 367 minutes). All three codes typically involve the same amount of intra-service time, whereas the reference procedures each involve more total time. The RUC confirmed that these three procedures would have appropriate relativity with one another. **The RUC recommends a work RVU of 17.13 for CPT code 27447.**

Affirm RUC Recommendations
The RUC affirms its April 2021 work RVU recommendation of 17.13 for CPT code 27446.

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
(f)27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090	17.13 (Affirmed April 2021 RUC recommendation) (2025 Work RVU = 17.13)
27447	medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty) (For revision of total knee arthroplasty, use 27487) (For removal of total knee prosthesis, use 27488)	090	17.13 (2025 Work RVU = 19.60)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chicago, IL 60611

Subject: CPT Code 27446

Dear Dr. Silva,

The American Academy of Orthopaedic Surgeons (AAOS) is writing regarding CPT code 27446, *Arthroplasty, knee, condyle and plateau; medial OR lateral compartmen*t.

Code 27446 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey was conducted and the work RVU was reduced from 17.48 to 17.13, effective 2023. This was prior to the changes to hospital visit codes from "inpatient" to "inpatient or observation."

At the April 2024 RAW meeting, codes 27130 and 27447 were identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. Code 27446 was identified as a family code.

While AAOS acknowledges that 27446 is an arthroplasty code similar to 27447, we do not believe that 27446 is potentially misvalued or in need of a new survey, as it was recently reviewed and the value was reduced for CY 2023. Therefore, AAOS does not agree that code 27446 needs to be resurveyed at this time as the work has not changed. Instead, we ask to maintain the current value and times for 27446 that were recommended by the RUC and approved by CMS two years ago.

Respectfully,

William Creevy, MD, AAOS RUC Advisor
Hussein Elkousy, MD, AAOs RUC Alternate Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:27447 Tracking Number Original Specialty Recommended RVU: **18.00**
Presented Recommended RVU: **17.69**
Global Period: 090 Current Work RVU: **19.60** RUC Recommended RVU: **17.13**

CPT Descriptor: Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old female has knee osteoarthritis not responding to nonoperative treatment. A total knee arthroplasty (TKA) is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 89% , In the ASC 11%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 11% , Overnight stay-less than 24 hours 61% , Overnight stay-more than 24 hours 28%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 92%

Description of Pre-Service Work: On the day before and/or the day of surgery, the surgeon and/or qualified health care professional will complete the following work: Interview and examine the patient to confirm that the medical status and physical findings have not changed; update and sign the H&P; review the planned procedure and postoperative management with the patient and family; confirm or update the consent; sign or mark the operative site; re-review results of preadmission testing, including laboratory studies, X rays, and/or CT scans, with special attention to radiographs that were used for sizing and ordering of special implants or allografts; confirm timing and administration of antibiotics; assure appropriate selection, timing, and administration of DVT prophylaxis; verify all required instruments and supplies are available; confirm all potential implants are available for possible use in the OR; prior to the induction of anesthesia, complete a comprehensive timeout and checklist review with the surgical team; pad bony prominences, and apply thermal regulation drapes; assess position of the extremities and head and adjust as needed; place patient's leg properly on the table and position with proper bolstering to aid surgical exposure; place a tourniquet on the proximal thigh; prepare and drape; mark surgical incision; scrub and gown including donning surgical helmet system, and perform a second brief time out with the surgical team.

Description of Intra-Service Work: After the tourniquet is elevated and following exsanguination, utilize an acceptable surgical incision to expose the joint. After everting or subluxating the patella, perform appropriate soft tissue elevation and removal to expose and visualize the joint. Use care and attention to evaluate the ligament balance of the knee. Final ligament balancing usually occurs after the bony cuts are performed. Remove the remnant meniscal tissue and overlying osteophytes and, if indicated, release the cruciate ligaments. Measure the patella and then resect the articular surface at the appropriate depth. Select the optimal component size and drill the fixation holes. Drill the femur intramedullary canal and apply the distal femoral cutting block. Confirm alignment of the block and make the distal femoral resection. Evaluate the anteroposterior (AP) and midline (ML) size of the distal femur and select the appropriate implant size following which the remaining chamfer and AP bone cuts of the distal femur are made. Subluxate the tibia forward and apply the tibial cutting guide, confirm the optimal position in all planes, and make the bone cut. Size the tibia for the appropriate implant and prepare the bone. Insert the trial components and perform a trial reduction of the prosthetic knee. Assess overall limb alignment, soft tissue and ligamentous balance, and prosthetic interactions. Perform further refinement of the soft tissue balance, the bone resections for alignment, and the prosthetic implant interaction as indicated to optimize the prosthetic longevity. Then remove the trials. Clean the bony surfaces with pulsatile lavage. Cement the final implants into place. After

the cement has set place the final polyethylene insert onto the tibial prosthesis. Confirm knee stability, ROM, and alignment. Release the tourniquet, obtain hemostasis, and close the wound in layers.

Description of Post-Service Work: Apply sterile dressings; remove drapes; wait for reversal of anesthesia and extubation; remove surgical helmet system and assist in transfer of the patient from the OR table to a stretcher or bed; assess limb length and rotational alignment; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with family and answer questions; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the referring physician; write comprehensive orders for PACU and floor care; complete medication reconciliation; order postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Later the same day, review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, lab results, and other related data; review findings and outcome with patient and family; assess pain control and response to current medications; modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess limb length, position, and alignment; check neurovascular status; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding physical therapy protocol; answer questions; counsel the patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative check progress note.

On the following day, review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; if the patient is ready to be discharged, finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess limb alignment and ROM; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, VTE prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); write orders for discharge to an inpatient rehabilitation facility, a SNF, or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit work includes the following activities: review PT/OT and/or rehab/SNF notes; review results of laboratory tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply wound closure strips; assess standing limb alignment, and limb swelling, strength, and range of motion (ROM); check neurovascular status; review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs], VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, visiting nurse agency [VNA]); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and/or other related forms; communicate and coordinate care with other physicians and providers (eg, PCP, rheumatology, PT/OT); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Overall intensity/complexity	0%	0%	9%	58%	33%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	33%	65%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	26%	72%
Physical effort required	5%	16%	79%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	14%	81%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 27447 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested.

Survey Process

The AAOS and AAHKS each sent survey requests to randomly selected members of their respective organizations. While there is considerable membership overlap between AAOS and AAHKS, both comprised of orthopaedic surgeons, the Research Subcommittee required that data from the AAHKS survey responses be reported separately on the RUC Summary Spreadsheet, as AAHKS currently does not have a RUC advisor. In contrast, during the 2019 survey, both AAOS and AAHKS conducted surveys but did not need to separate their data, since AAHKS had a RUC advisor at that time.

Recommendation – 27477

Work RVU Recommendation

We **recommend a work RVU of 17.69 that is a direct crosswalk to code 22554.** A work RVU of 17.69 appropriately values 27477 relative to other arthroplasty codes.

Pre-service time

Pre-time package 4 is selected: difficult patient / difficult procedure.

Evaluation time: Standard 40 minute package time is recommended.

Positioning: Twelve minutes have been added to the standard package time of 3 minutes (total time = 15 minutes) to account for positioning the patient supine, application of a tourniquet, confirming tourniquet settings, and validating function. This is consistent with both the survey median and historical RUC precedent for similar procedures (eg, 27511-27514, 27519, 27535, 27540, 27556-27558).

Scrub, dress and wait: Five minutes have been subtracted from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected: general anesthesia or complex regional block / complex procedure. Subtract 13 minutes to be consistent with the survey median and add 20 minutes (total time = 40 minutes) to comport with the RUC policy of shifting the intraservice E/M time of a distinct E/M visit to the immediate postoperative time component.

Postoperative Work

Immediate postoperative work through discharge from recovery room: Apply sterile dressings; remove drapes; wait for reversal of anesthesia and extubation; assist in transfer of the patient from the OR table to a stretcher or bed; assess limb rotational alignment; assist in transport of patient from OR to recovery room; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff, including regional blocks and/or patient-controlled analgesia; discuss procedure and outcome with family and answer questions; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the referring physician; write comprehensive orders for PACU and floor care; complete medication reconciliation; order postoperative radiographs; and enter procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

The following work is typically performed during a distinct and separate hospital E/M visit, however, RUC policy only allows recognition of patient face-to-face intraservice time: Review nursing notes; discuss status and progress with nursing staff; review vital signs, I/O, lab results, and other related data; review findings and outcome with patient and family; assess pain control and response to current medications; modify orders accordingly; assess urinary function; examine the surgical site; reinforce dressing as needed; assess standing limb alignment; check neurovascular status; reposition the limb and/or immobilization devices as needed; counsel the patient and/or family regarding physical therapy protocol; answer questions; counsel the patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed, and use of sequential compressive devices; review postoperative radiographs; communicate and coordinate care with medical consult and other physicians, as needed; communicate and coordinate pain control with anesthesia staff, including status of current modalities (eg, blocks, catheters); update orders; and write postoperative progress note.

The following work is typically performed for discharge management services on the day after surgery, if it is determined to be safe to discharge the patient**:** Review nursing notes; discuss status and progress with nursing staff; review PT/OT notes; discuss status and progress with PT/OT staff; review discharge plan notes; discuss status and progress with case manager; finalize and confirm discharge plans; review notes from other physicians and discuss as appropriate; review vital signs, I/O, lab results, and other related data; interview patient and obtain interval history; assess pain control and response to current medications; assess gastrointestinal and urinary function; examine surgical site; change dressing as needed; assess standing limb alignment and limb ROM; check neurovascular status; reposition limb and/or immobilization devices as needed; finalize and confirm discharge plans with patient and/or family; counsel

patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications, VTE prophylaxis); complete daily progress note; complete discharge summary and associated forms and documents; write prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); write orders for discharge to an inpatient rehabilitation facility, a SNF, or home; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicate and coordinate follow-up care with other physicians; and enter postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Office visit 1 (99214): Review PT/OT and/or rehab/SNF notes; review results of lab tests (eg, INR, hemoglobin, platelets); interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; remove/change dressing; examine surgical site; remove staples; apply wound closure strips; assess standing limb alignment, and limb swelling, strength, and ROM; check neurovascular status; review imaging with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 2 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess standing limb alignment, and limb swelling, strength, and ROM; check neurovascular status; order imaging and review with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding return to driving; complete temporary handicap parking forms; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, rheumatology); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office visit 3 (99213): Review PT/OT and/or rehab/SNF notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT/OT; examine surgical site; assess standing limb alignment and limb swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding therapy protocol, and activity limitations; counsel patient and/or family regarding dental procedures and other invasive procedures (eg, colonoscopy); counsel patient and/or family regarding medications for DVT prophylaxis; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, NSAIDs, VTE prophylaxis); check narcotic prescription registries; complete forms for home care services (eg, VNA); complete PT/OT forms, referrals, or prescriptions; complete disability, back to work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, Rheumatologist); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Summary

The shift toward value-based alternative payment models has driven significant redesign in the care of total knee arthroplasty patients—producing shorter hospital stays, decreased reliance on post-acute care facilities, reduced hospital readmissions, and lower overall costs.

The valuation of CPT 27447 should capture the complete scope of physician work performed, rather than relying on outdated proxies or reduced service assumptions established nearly two decades ago that were meant to account for same-day discharges.

Based on current evidence, we recommend a work RVU of 17.69, which remains below both the survey 25th percentile and the current assigned value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27447

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
313,723 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.
Please explain the rationale for this estimate. 2023 - RUC database

Specialty orthopaedic surgery Frequency 310000 Percentage 98.81 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - Knee replacement

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 27447

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2025

CPT Code	Long Descriptor	Global Period
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	90

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
27447	A 74-year-old female has knee osteoarthritis not responding to nonoperative treatment. A total knee arthroplasty (TKA) is performed.

Recommendation for 27446 – Maintain current inputs

CPT Code	Long Descriptor	Global Period
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	90

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
27446	A 67-year-old obese female (body mass index [BMI] > 30) with osteoarthritis of the knee joint presents with increased varus of the right knee affecting activities of daily living (ADL). She is a non-insulin-dependent diabetic. At operation, she undergoes a unicompartmental knee replacement.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   AAOS and AAHKNS surgeons reviewed and updated the current PE details for code 27447. Code 27446 was not surveyed—request is to maintain current PE details.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   Current codes are used.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   No
   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   27447:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Clinical staff: Increased clinical staff time is due to change in level of postop office E/M Supplies: SM022, sanitizing cloth-wipe (surface, instruments, equipment), is needed to clean hard surfaces at each postoperative visit. This is consistent with the addition of SM022 to E/M office visit codes as this was not included in the E/M multispecialty office visit pack. Equipment: Increased equipment time is due to change in level of postop office E/M

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	**Clinical Staff Work**
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of preservice imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including presurgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists. Confirms that all necessary implants will be available.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status, and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions and outpatient follow-up. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

c. Post-service period:

The clinical staff work includes the standard activities involved in office E/M visits including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instructions.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? ☒ **Yes** or ☐ No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

CMS established pack

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

DESCRIPTION	Code	Unit	Item Qty

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service Anomaly*

April 2021

Knee Arthroplasty – Tab 18

In October 2020, the Relativity Assessment Workgroup identified CPT code 27446 with Medicare data from 2017-2019e that was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management (E/M) services within the global period and 2019e Medicare utilization over 10,000. The Workgroup concluded that CPT code 27446 represents a site of service anomaly since visits are currently included in the valuation of this service that are not typically occurring. The RUC recommended that CPT code 27446 be surveyed for January 2021 with the appropriate code family. At the January 2021 meeting, the specialty societies submitted a request to defer survey until April 2021 due to logistical reasons including timing and a desire to be placed on the Research Subcommittee agenda "to review a proposed revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work." The RUC recommended that CPT code 27446 be surveyed for April 2021 with the appropriate code family.

Pre-Service Work
In October 2019 during review of CPT code 27447 *Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*, the specialties noted that considerable work by the clinical staff, surgeons, and qualified healthcare providers (QHPs) is required to facilitate, coordinate, validate and document the assessment and optimization of patients prior to total joint replacement surgery. The service has also evolved in that patients are more frequently discharged home rather than to inpatient rehabilitation or skilled nursing facilities. This deliberate reduction in post-acute care service requires considerable work by the surgeon and QHPs prior to surgery.

The RUC agreed that the pre-service planning activities are being performed on a routine basis for the typical patient; however, the 090-day global period structure does not allow inclusion of this work. In addition, the current code does not include this additional work in the descriptor. The RUC discussed options on how to capture these pre-service activities performed by the physician or QHP. The RUC indicated that separate planning codes may be developed, or current codes such as the prolonged service codes may be reported for these activities. It was recognized that such codes are intended to capture a single episode of time and that the added work in the preoperative period does not occur in such units of time (e.g., 30 minutes in one session as opposed to over the course of a few days/calls).

The RUC affirmed the October 2019 recommendation for CPT code 27447 and noted that the pre-service time discussion also applies to family code 27446. The RUC recommends that the specialty, and other interested parties, consider developing a CPT coding application to address this preoperative period issue.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

27446 ***Arthroplasty, knee, condyle and plateau; medial OR lateral compartment***
The RUC reviewed the survey results from 126 orthopaedic and hip/knee surgeons and concurred that the survey median (19.60) and 25th percentile (18.60) work RVU overvalued the physician work for this service. Therefore, the RUC determined that a direct work RVU crosswalk to CPT code 67108 *Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique* (work RVU= 17.13, 90 minutes intra-service time and 295 minutes total time) appropriately accounts for relative physician work. The crosswalk code was surveyed in 2015 and has identical intra-service time as 27446 and similar total time and intensity. The RUC notes that the crosswalk value of 17.13 work RVUs includes three key considerations: no change in intraoperative time, one day less of hospital E/M work, and an increase in level of postoperative office work.

The RUC recommends the following physician time components: 40 minutes pre-service evaluation, 15 minutes pre-service positioning, 15 minutes pre-service scrub/dress/wait time, 90 minutes intra-service time, and 45 minutes immediate post-service time, 0.5-99238 discharge visit, 2-99213 and 1-99214 office visits, 310 minutes total time. Pre-service time package 4 is recommended with an increase of 12 minutes to positioning time (total = 15 minutes) to account for assisting with appropriately positioning the patient, padding bony prominences, and applying thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; placing the patient's leg properly on the table and positioning with proper bolstering to aid surgical exposure; placing a tourniquet on the proximal thigh; confirming tourniquet settings and validating function. This is consistent with both the survey median and historical RUC precedent for many similar orthopaedic extremity surgical codes. In addition, the package time for scrub/dress/wait was reduced to 15 minutes to be consistent with the survey median.

The RUC discussed the CMS 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy as it relates to the post-service time for the survey code. This policy excludes inclusion of inpatient visit codes in the global payment for services that are typically reported as outpatient services. CMS labels surgical services that are typically performed in the outpatient setting and require a hospital stay of less than 24-hours as 23-hour stay outpatient services. In the CY2011 Final Rule, CMS finalized a policy to no longer allow codes with outpatient claims status to include bundled subsequent inpatient hospital visits (eg 99231-99233) into the surgical global payment. Instead, the Agency permits the allocation of the intra-service portion of the typically performed subsequent hospital visit to the immediate post-service time of the procedure. For code 27446, per the CMS policy, the intra-service time is reallocated from the same-day E/M code 99232 to the immediate post-service time of the outpatient service (adding 20 minutes of intra-service time from 99232). Though the median survey immediate post-service time was 25 minutes, the CMS 23-hour stay policy was applied resulting in 45 total post-service minutes. The RUC recommends post-service time package 9b and, following the CMS 23-hour policy, the E/M same day visit is not shown and instead the intra-service time of 20 minutes has been added to the median survey post time of 25 minutes (total=45 minutes). In addition, following the CMS 23-hour policy, the next day final evaluation of the patient and discharge management work is indicated as a discounted 0.5 x 99238 – or one-half of an E/M service (0.64 RVUs; 19 min).

For the post-service office visits, the RUC recommends the survey median response of three total office visits: 1-99214 and 2-99213. The first office visit is typically at 2 weeks following surgery; both the estimated total time and medical decision-making support 99214. The subsequent office visits are typically at 6 weeks and 10 weeks after surgery; both the estimated total time and medical decision-making support 99213 for both

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

visits. Discussion around the 99214-visit clarified that there is management of medication, particularly at that first visit when there is often increased pain that necessitates an opioid adjustment and justifies the level 4 office visit.

To justify the crosswalk value of 17.13 work RVUs, the RUC compared the survey code to the key reference service codes 27130 *Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft* (work RVU = 19.60, 100 minutes intra-service time and 377 minutes total time) and 23472 *Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))* (work RVU = 22.13, 140 minutes intra-service time and 448 minutes total time) and noted that the physician work and intra-service and total time of the survey code are lower than the two reference services while the intensity of the survey code is slightly higher than either reference service. The RUC further noted that the CMS 23-hour policy impacts the intensity of work per unit time and may falsely elevate the IWPUT because, if the recommendation included the full discharge day visit time of 38 minutes rather than 19 minutes (0.5-99238) and if the 99232 hospital visit remained at the full time (40 minutes), rather than adding only 20 minutes to the immediate post service time, the total time would have been 349 minutes (similar to current value of 345), with a final IWPUT of 0.101 and WPUT of 0.049, both of which are below the current values.

In addition to the comparison to total hip arthroplasty, the RUC also compared CPT code 27446 to CPT code 27447 *Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)* (work RVU = 19.60, 97 minutes intra-service time and 374 minutes total time) which was recently approved by the RUC in October 2019 and re-affirmed at this meeting. The RUC noted that a value below 17.13 RVUs would create a rank order anomaly between 27446 unicompartmental knee arthroplasty (UKA) and 27447 total knee replacement (TKA). Below is a comparison of CPT codes 27446 to 27447:

	27446 (UKA)	**27447 (THA)**
Work RVU	17.13	19.60
Pre-time	70	70
Intra-time	90	97
Post-time	150	207
Total time	310	374
IWPUT	0.119	0.112
WPUT	0.055	0.052

The RUC agreed that UKA is more complex and intense than TKA for several reasons:

1. UKA is less common than TKA; default is total knee, while preserving natural structure with a partial knee when appropriate is more complex.
2. UKA has higher failure and revision rate compared to TKA (~ 2X) requiring more complex considerations for repair.
3. Smaller incisions are employed to limit injury to the quadriceps mechanism, but must still allow visualization of the other compartments to assess articular cartilage damage (which might preclude UKA and require TKA).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

4. The cruciate ligaments (ACL and PCL) are retained, compared to TKA where the ACL +/-PCL are resected; this makes exposure and stability/balancing more difficult.
5. Although basic alignment devices and cutting guides are used for the bone resection, like TKA, free-hand refinements and/or use of additional technology (e.g., computer-aided, robotic assisted) that add complexity to the procedure are typically employed.
6. In a TKA, the entire articular surface of both tibia and femur are resected and replaced; in a UKA, only part of the joint is resected and replaced; alignment of the prosthetic surface with the native articular cartilage is required which adds complexity.

For additional support, the RUC compared CPT code 27446 to MPC codes 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time and 283 minutes total time) and 37215 *Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection* (work RVU = 17.75, 103 minutes intra-service time and 337 minutes total time) and noted that the multi-specialty points of comparison code values appropriately bracket the survey code recommendation. The RUC concluded that CPT code 27446 should be valued based on a direct work RVU crosswalk to CPT code 67108 which falls below the survey 25th percentile. **The RUC recommends a work RVU of 17.13 for CPT code 27446.**

Affirm RUC Recommendations
The RUC affirms its October 2019 work RVU recommendation of 19.60 for CPT code 27447.

Office Visits Included in Codes with a Surgical Global Period
The RUC strongly believes that it is appropriate to apply the increased valuation of the office visits to the visits incorporated in the surgical global packages. The RUC recommends that CMS apply the office visit increases uniformly across all services and specialties. CMS should not hold specific specialties to a different standard. The RUC urges CMS to apply the 2021 office visit increases to the office visits included in surgical global payment, as it has done historically.

Practice Expense
The Practice Expense (PE) Subcommittee discussed and accepted the compelling evidence argument that the clinical work involved in the service had changed. Based on acceptance of compelling evidence, the PE Subcommittee carefully considered the clinical staff activities and discussed the specialty society recommendation of an additional 15 minutes for CA002 *Coordinate pre-surgery services (including test results)* and CA004 *Provide pre-service education/obtain consent*. The PE Subcommittee noted that the standard pre-service time package is 60 minutes for 090-day global period services and questioned the justification for the additional preclinical time. After thorough discussion, the PE Subcommittee reduced the recommendation to the standard 090-day pre-service clinical staff times for CPT code 27446 and affirmed the standard times for 27447. The PE Subcommittee with guidance from the CPT Editorial Panel representative also provided some potential options for the specialties to consider capturing any additional preclinical staff time, including possibly using existing codes including the 99415 prolonged services clinical staff code (under consideration at this meeting) or alternatively, generating a new CPT code description to truly capture the additional work. **The RUC recommends the direct practice expense inputs for CPT code 27446 as modified by the PE Subcommittee**.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The Practice Expense Subcommittee reviewed and affirmed the direct practice inputs for CPT code 27447 from October 2019 without modification. **The RUC recommends the direct practice expense inputs for CPT code 27447 as affirmed by the Practice Expense Subcommittee.**

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090	17.13
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	090	19.60 (Affirmed October 2019 RUC recommendation)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Global Period: 090 Current Work RVU: **17.48** RUC Recommended RVU: **17.13**

CPT Descriptor: Arthroplasty, knee, condyle and plateau; medial OR lateral compartment

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old obese female (BMI > 30) with osteoarthritis of the knee joint presents with increased varus of the right knee affecting activities of daily living. She is a non-insulin-dependent diabetic. At operation, she undergoes a unicompartmental knee replacement.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 87% , In the ASC 13%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 27% , Overnight stay-less than 24 hours 64% , Overnight stay-more than 24 hours 9%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 94%

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered; timing and administration are confirmed. Appropriate selection, timing and administration of DVT prophylaxis are assured. Appropriate selection of preemptive multimodal analgesic medications performed and timing and admistration are confirmed in conjunction with coordination of supplemental regional blocks and/or planned local anesthetic infiltration. Results of preadmission testing are reviewed, including laboratory tests, X rays, CT scans, and/or MRIs, with special attention to radiographs and scaled radiographs that were used for sizing and ordering of special implants. The patient is re-examined to make sure that physical findings have not changed and history and physical are updated. The patient and family are met with to review planned procedure and postoperative management, including an opioid sparing pain management protocol. Informed consent is reviewed with the patient. It is verified that all required instruments and supplies are available, including intraoperative imaging/fluoroscopy. It is ensured that an array of implants is available for possible use in the operating room. An estimate of the appropriate-size component is determined by templating with radiographs. The patient is positioned, bony prominences are padded, and thermal regulation drapes are applied. The position of the extremities and head are assessed and adjusted as needed. The patient's leg is placed properly on the table and positioned with proper bolstering to aid surgical exposure. A tourniquet is placed on the proximal thigh. Areas of skin to be prepared are indicated, and surgical incisions are marked. A surgical "time out" is performed with the operating surgical team.

Description of Intra-Service Work: After limb exsanguination, the tourniquet is elevated. An appropriate incision for unicompartmental knee arthroplasty is used. After exposure, the knee is carefully inspected visually for the presence of arthritis in the two nonoperative compartments. The ACL is inspected and tested. The remnant meniscus and the osteophytes of the operative compartment are removed. The tibia is exposed sufficiently to allow proximal (usually medial) resection of the tibia without injury to the ACL, PCL, or MCL. After adequate distal femoral resection has been made, the femur is sized, and the appropriate jig to complete the posterior and posterior chamfer cut is used to cut and drill the femur. Posterior femoral osteophytes can then be removed. Then the improved visualization allows proper sizing and preparation of the tibial surface. Once the trial implants have been placed, a complete examination of the alignment, ligamentous balance, range of motion, and patellar tracking is done. The appropriate implants are then selected. The knee is prepared for cementing with careful retractor placement, pulsatile lavage, and suction to dry the cut bony surface. Cement is applied to the tibial surface, and the tibial component is impacted. Excess cement is then removed from the posterior tibial recess. Then the femoral component is cemented as well. A trial polyethylene is used to pressurize the components onto the bony surface. After the cement has cured, excess cement is carefully removed from around the components. Then the correct

polyethylene is placed, the knee is again tested, the tourniquet is deflated, and hemostasis is achieved. The knee wound is closed in layers

Description of Post-Service Work:

Immediate postoperative work through discharge from recovery room includes: Application of sterile dressings; removal of drapes; assessing limb alignment compared to the opposite extremity; assessing limb perfusion and pulses; waiting for reversal of anesthesia and extubation; assisting in transfer of the patient from the OR table to a stretcher or bed; assisting in transport of patient from operating room to recovery room; monitoring patient stabilization in the recovery room; completing a careful neurologic and vascular examination of the extremity; discussing postoperative recovery care with anesthesia and nursing staff, including regional blocks discussing procedure and outcome with patient and family and answering questions; entering a brief operative note and a full operative report in the medical record; calling referring physician and/or sending a copy of the operative note; writing comprehensive orders for PACU and floor care; completing medication reconciliation; ordering and reviewing postoperative radiographs; and entering procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Hospital visit #1 (day of surgery later in the day) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing vital signs, I/O, labs, and other related data; reviewing findings and outcome with patient and/or family; assessing pain control and response to current medications; modify orders accordingly; assessing urinary function; examining the surgical site; reinforce dressing as needed; assessing limb position and alignment, repositioning the limb needed ; checking neurovascular status; counseling the patient and/or family regarding therapy protocol; answer questions; counseling the patient and/or family regarding OOB/ambulation, incentive spirometry, upright position in bed and use of sequential compressive devices; communicating and coordinating care with medical consult and other physicians; communicating and coordinating pain control with anesthesia, including status of current modalities (eg, blocks); updating orders; and writing “postoperative check” progress note.

Hospital discharge management (postoperative day #1) includes the following work: Reviewing nursing notes; discussing status and progress with nursing staff; reviewing PT/OT notes; discussing status and progress with PT/OT staff; reviewing discharge plan notes; discussing status and progress with case management; finalizing and confirming discharge plans; reviewing notes from other physicians and discussing as appropriate; reviewing vital signs, I/O, labs and other related data; interviewing patient and obtaining interval history; assessing pain control and response to current medications; assessing gastrointestinal and urinary function; examining surgical site; changing dressing as needed; assessing limb alignment and ROM; checking neurovascular status; repositioning limb as needed; finalizing and confirming discharge plans with patient and/or family; counselling patient and/or family regarding therapy protocol and activity limitations after discharge; reviewing postoperative instructions (eg, wound care, pain medications, VTE prophylaxis); completing daily progress note; completing discharge summary and associated forms and documents; writing prescriptions for medications and devices (eg, walker, wheelchair, bedside commode, raised toilet seat); checking narcotic prescription registries; writing orders for discharge home.; completing medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; communicating and coordinating follow-up care with other physicians; and entering postoperative data into longitudinal outcome databases or registries (eg, NSQIP, AJRR).

Post-operative office visits: the work is performed by the physician and QHP; the detailed times are provided in the supplementary table.

Office visit #1 (99214): this visit typically occurs 2 weeks after surgery.

Review PT/OT and/or rehab/SNF/VNA notes to assess progress with therapy; review results of labs related to anticoagulation for DVT prophylaxis (e.g. INR, Hb, Plts); to assess therapeutic response and/or monitor for side effects; discuss findings at surgery, review procedure details and answer questions; review post-operative radiographs with patient and/or family; interview patient and obtain history and/or review data obtained by clinical staff; assess pain control, response to current medications and side-effects; assess function, mobility and progress with ambulation and compare with reports from PT/OT/rehab; discuss gastrointestinal and urinary function to assess for medication side effects; remove dressing; examine surgical site; assess limb alignment, swelling, strength and ROM; check neurovascular status; remove sutures or staples; apply steri-strips, sterile dressing and compressive wrap or stockings; counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation); counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet; Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering; check narcotic prescription registries; write order for narcotic prescription, re-fill or new medication; write order

for non-narcotic prescription as appropriate (e.g. NSAIDs, gabapentin); write order for prescriptions for continued VTE prophylaxis based on patient risk assessment and mobilization, re-fill or new medication; vomplete medication reconcillation; counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression; complete forms/referrals for continued PT/OT and/or home care services (e.g. VNA); complete disability, FMLA, out of/return to work and other related forms; communicate and coordinate care with other physicians and health care providers (eg, PT/OT, PCP); enter diagnosis code(s) and office visit codes in the EHR or other similar system; write or dictate and sign progress note; enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry).

Office visit #1: Level of service determination based upon medical decision making (LOS = 99214)

(1) Number and complexity of problems = MODERATE: 1 chronic illness (osteoarthritis of knee) with side effects (pain and limited mobility) of treatment (surgery) is assessed and managed; OR 1 acute complicated injury (surgical trauma) is assessed and managed, including body systems that are not directly part of the injured organ (e.g. GI, neurologic, vascular); treatment options are associated with morbidity

(2) Amount and complexity of data = LIMITED: review external notes and review results of tests

(3) Risk of complications from testing and/or treatment = MODERATE: (a) prescription drug management - assessment and plan for multi-modal pain management, including use of narcotic pain medication with tapering, as well as non-narcotic medicationsrenew, adjust and/or change medications; (b) prescription drug management - assessment and plan for VTE prophylaxis; renew, adjust and/or change medications

Post-operative office visit #2 (99213): this visit typically occurs six weeks after surgery

Review PT/OT notes to assess progress with therapy; interview patient and obtain history and/or review data obtained by clinical staff; assess pain control, response to current medications and side-effects; assess function, mobility and progress with ambulation and compare with reports from PT/OT; assess gastrointestinal to assess for medication side effects; examine surgical site to assess wound healing and signs of infection; assess limb alignment, swelling, strength and ROM; counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation); counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics and provide/review instruction sheet; counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering; write order for non-narcotic prescription as appropriate (e.g. NSAIDs); complete medication reconcillation; counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression; complete forms/referrals for continued PT/OT; complete disability, FMLA, out of/return to work and other related forms; enter diagnosis code(s) and office visit codes in the EHR or other similar system; order radiographs for next visit; write or dictate and sign progress note; enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry).

Office visit #2: Level of service determination based upon medical decision making (LOS = 99213)

(1) Number and complexity of problems = LOW: stable chronic illness (knee osteoarthritis) or acute uncomplicated illness (major surgery)

(2) Amount and complexity of data = LIMITED: review external notes and ordering test (radiographs)

(3) Risk of complications from testing and/or treatment = LOW; non-narcotic medications and PT

Post-operative office visit #3 (99213): this visit typically occurs 10 weeks after surgery

Review PT/OT notes to assess progress with therapy; interview patient and obtain history and/or review data obtained by clinical staff; assess pain control, response to current medications and side-effects; assess function, mobility and progress with ambulation and compare with reports from PT/OT; examine surgical site to assess wound healing and signs of infection; assess limb alignment, swelling, strength and ROM; review radiographs with independent interpretation; counsel patient and/or family regarding therapy protocol and activity (e.g. driving, exercise, sports); counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics and provide/ review instruction sheet; counsel patient/family regarding timing of next office visit and communicate interval care plan

based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression; complete forms/referrals for continued PT/OT; complete disability, FMLA, out of/return to work and other related forms; enter diagnosis code(s) and office visit codes in the EHR or other similar system; write or dictate and sign progress note; enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)

Office visit #3: Level of service determination based upon medical decision making (LOS = 99213)

(1) Number and complexity of problems = LOW: stable chronic illness (knee osteoarthritis) or acute uncomplicated illness (major surgery)

(2) Amount and complexity of data = MODERATE: review external notes, review results of tests (radiographs) and independent interpretation of test (radiographs)

(3) Risk of complications from testing and/or treatment = LOW: non-narcotic medications and PT

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
27130	090	19.60	**RUC Time**

CPT Descriptor Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
23472	090	22.13	**RUC Time**

CPT Descriptor Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
19303	090	15.00	**RUC Time**	25,487

CPT Descriptor 1 Mastectomy, simple, complete

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
37215	090	17.75	**RUC Time**	10,340

CPT Descriptor 2 Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection

Other Reference CPT Code	Global	Work RVU	Time Source
67107	090	16.00	**RUC Time**

CPT Descriptor Repair of retinal detachment; scleral buckling (such as lamellar scleral dissection, imbrication or encircling procedure), including, when performed, implant, cryotherapy, photocoagulation, and drainage of subretinal fluid

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 71 **% of respondents:** 56.3 **%**

Number of respondents who choose 2nd Key Reference Code: 21 **% of respondents:** 16.6 **%**

TIME ESTIMATES (Median)

	CPT Code: 27446	Top Key Reference CPT Code: 27130	2nd Key Reference CPT Code: **23472**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	59%	27%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	58%	39%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	38%	49%	13%
Physical effort required	8%	61%	31%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	58%	34%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	81%	14%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	81%	19%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	76%	19%
Physical effort required	0%	81%	19%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	76%	24%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In October 2020, the Relativity Assessment Workgroup (RAW) flagged code 27446 as including inpatient E/M visits from the RUC review in 2013, but 2019 Medicare utilization showed the procedure being performed less than 50% of the time with an inpatient facility status. The RAW recommended that 27446 be surveyed.

At the January 2021 RUC meeting, AAOS and AAHKS submitted a letter indicating code 27446 would be surveyed for the April 2021 meeting after the Research Subcommittee reviewed a revised survey instrument to address additional preoperative time and resources.

During discussion, the RUC also asked the societies to present a recommendation for reaffirmation of code 27447.

The societies instead requested that 27447 be allowed on the reference service list since this code was surveyed in 2019 and the RUC recommendation was accepted and implemented by CMS in 2021.

However, the RUC asked that the code not be listed on the RSL and that the data for the code be included in the recommendation for re-affirmation.

Recommendation – 27446

The survey median work RVU of 19.60 and the 25th percentile work RVU of 18.60 are both above the current work RVU of 17.48 for code 27446. There is no compelling evidence to support an increase in work RVU.

The intraoperative time of 90 minutes for this procedure has not changed with the new survey.

Although there is a decrease of one day in the hospital, there is an increase in the level of office visits.

We recommend work RVU of 17.13 using a direct crosswalk to code 67108, *Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique,* which was surveyed in 2015 and has the same intra-service time as 27446 and similar total time.

CPT code 27446 requires more pre-service and more same-day post-operative work; while CPT code 67108 has a greater number of post-operative visits. The intra-service times are exactly the same. The total times are quite similar – 310 minutes for 27447 and 295 minutes for 67108.

The following table compares 27446 and 67108:

	Crosswalk Comparison	
	27446	**67108**
	Uni-knee joint replacement	Repair retinal detachment
wRVU	17.13	17.13
2019 Utilization	15,803	16,523
Facility Status	typically admitted or overnight	typically same-day discharge
Inpatient	31%	<1%
Outpatient Hosp	31%	52%
ASC	18%	46%
Pre-time	70 (package 4)	51 (package 3)
Intra-time	90	90
Immed post time	45	20
Other Hosp time	0[1]	0
Discharge day	0.5 x 99238[2]	0.5 x 99238[3]
Office visit time	86	115
Total time	310	295
IWPUT	0.119	0.114
WPUT	0.055	0.058

Notes:
1. Separate hospital E/M visit time discounted and shifted to immediate post-time component
2. Next day (or later) discharge management work discounted by 50%
3. Discharge management work discounted due to overlap with immediate postop time on same day

Pre-Service Time

We recommend package 4 for pre-service package time which is the current pre-service package.

Adjustments have been made to the package times for evaluation and scrub/dress/wait time to be consistent with the survey median times.

Twelve minutes have been added to the standard package time of 3 minutes (total of 15 minutes) to assist with positioning the patient, pad bony prominences, and apply thermal regulation drapes; assess position of the extremities and head and adjust as needed; place patient's leg properly on the table and position with proper bolstering to aid surgical exposure; place a tourniquet on the proximal thigh; confirm tourniquet settings and validate function. This is consistent with both the survey median and historical RUC precedent for many similar orthopaedic codes for extremity operations.

Intraoperative (Intraservice) Time

The societies recommend 90 minutes intraoperative time, which is the survey median. This is also the current intraoperative time

Post-Service Facility Work

The societies recommend Immediate Post-Service package 9b but following the CMS 23-hour policy, the E/M same day visit is not shown and instead the intraservice time of 20 minutes has been added to the median survey post time of 25 minutes (total=45 minutes). In addition, following the CMS 23-hour policy, the next day final evaluation of the patient and discharge management work is indicated as a discounted 0.5 x 99238 – or one-half of an E/M service.

The RUC has accepted what we believe to be a flawed 23-hour policy for (a) adding only the intra-time for the same day post-operative visit to the immediate post-service time and (b) allowing only 50% of the time for discharge day service code 99238. However, the full and complete E/M work is still provided the day of surgery and the day of discharge. This adjustment of survey data results in an artificial increase in the IWPUT, which alone cannot be the basis for a work RVU recommendation.

A facility E/M visit is not just intra-service time, there is typically pre- and post-service work necessary for review of records, documentation and discussions with family and other health care providers. Similarly, on the next day for an overnight stay after surgery, the final evaluation and discharge management work is not less work compared with a patient on the medicine service. If there were any logic and consistency to this policy, then a physician should only be able to report one-half unit of a discharge code for next day discharge after an overnight stay for observation – but instead the physician reports a full unit of the code. We believe that postoperative work by the surgeon is being inappropriately discounted.

If our recommendation included the full discharge day visit time of 38 minutes rather than 19 minutes (0.5 x 99238) and if we kept the 99232 hospital visit at the full time (40 minutes), rather than deleting it and adding only 20 minutes to the immediate post service time, the final time would have been 349 minutes (similar to current value of 345), with a final IWPUT of 0.101 and WPUT of 0.049, both of which are below the current values.

If we included a full discharge day service for 99238 (38 minutes), but maintained the transfer of only 20 minutes for 99232 to the immediate post-service time, the final time would have been 329 minutes, with an IWPUT of 0.112 and WPUT of 0.052. These values are similar to the current values.

In essence, the increases in IWPUT and WPUT for our recommended value of 17.13, are an artifact of the current RUC methodology and is not reflective of the intrinsic intensity and complexity inherent to the procedure.

Post-Service Office Visits

The societies recommend the survey median response of three total office visit; 1 x 99214 and 2 x 99213. These visits are described in the post-service description of work.

The work at the post-operative office visits is typically performed by the physician and QHP. The total estimated times listed in the supplementary tables below reflect this combined work.

The first office visit is typically at 2 weeks following surgery; both the estimated total time and medical decision-making support 99214.

The subsequent office visits are typically at 6 weeks and 10 weeks after surgery; both the estimated total time and medical decision-making support 99213 for both visits.

Tables With Estimated Times For Office Visits

OFFICE VISIT #1: two weeks after surgery (LOS = 99214)		
Work completed by the physician and/or QHP		**Minutes**
1.	Review PT/OT and/or rehab/SNF/VNA notes to assess progress with therapy	1-2
2.	Review results of labs related to anticoagulation for DVT prophylaxis (e.g. INR, Hb, Plts); to assess therapeutic response and/or monitor for side effects	1-2
3.	Discuss findings at surgery and review procedure details; answer questions	2
4.	Review post-operative radiographs with patient and/or family	
5.	Interview patient and obtain history and/or review data obtained by clinical staff	2-3
6.	Assess pain control, response to current medications and side-effects	
7.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
8.	Assess gastrointestinal and urinary function to assess for medication side effects	
9.	Remove dressing; examine surgical site	3-3
10.	Assess limb alignment, swelling, strength and ROM	
11.	Check neurovascular status	
12.	Remove sutures or staples; apply steri-strips, sterile dressing and compressive wrap or stockings	4
13.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
14.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	
15.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	
16.	Check narcotic prescription registries	4
17.	Write order for narcotic prescription; re-fill or new medication	
18.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs, gabapentin)	
19.	Write order for prescriptions for continued VTE prophylaxis based on patient risk assessment and mobilization; re-fill or new medication	
20.	Complete medication reconcillation	
21.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
22.	Complete forms/referrals for continued PT/OT and/or home care services (e.g. VNA)	2-3
23.	Complete disability, FMLA, out of/return to work and other related forms	
24.	Communicate and coordinate care with other physicians and health care providers (e.g., PT/OT, PCP)	2-3
25.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
26.	Write or dictate and sign progress note	
27.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**32-40**
	REQUIRED TIME	**30-39**

OFFICE VISIT #2: six weeks after surgery (LOS = 99213)		
Work completed by the physician and/or QHP		**Minutes**
1.	Review PT/OT notes to assess progress with therapy	1-2
2.	Interview patient and obtain history and/or review data obtained by clinical staff	3
3.	Assess pain control, response to current medications and side-effects	
4.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
5.	Assess gastrointestinal to assess for medication side effects	
6.	Examine surgical site; assess wound healing and signs of infection	2-3
7.	Assess limb alignment, swelling, strength and ROM	
8.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
9.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	
10.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	

11.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs)	2-3
12.	Complete medication reconcillation	
13.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
14.	Complete forms/referrals for continued PT/OT	2-3
15.	Complete disability, FMLA, out of/return to work and other related forms	
16.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
17.	Order radiographs for next visit	
18.	Write or dictate and sign progress note	
19.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**21-27**
	REQUIRED TIME	**20-29**

OFFICE VISIT #3: ten weeks after surgery (LOS = 99213)		
Work completed by the physician and/or QHP		**Minutes**
1.	Review PT/OT notes to assess progress with therapy	1-2
2.	Interview patient and obtain history and/or review data obtained by clinical staff	3
3.	Assess pain control, response to current medications and side-effects	
4.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
5.	Examine surgical site; assess wound healing and signs of infection	2-3
6.	Assess limb alignment, swelling, strength and ROM	
7.	Review radiographs; independent interpretation	2-3
8.	Counsel patient and/or family regarding therapy protocol and activity (e.g. driving, exercise, sports)	2-3
9.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	2-3
10.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
11.	Complete forms/referrals for continued PT/OT	2-3
12.	Complete disability, FMLA, out of/return to work and other related forms	
13.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
14.	Write or dictate and sign progress note	
15.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**22-29**
	REQUIRED TIME	**20-29**

Comparison to Total Knee Arthroplasty (27447)

Total knee arthroplasty (27447) was recently approved by the RUC in October 2019 and will be re-affirmed at this meeting.

CPT code 27447 was not permitted to be on the RSL, so survey respondents did not compare 27446 to 27447.

The table below compares 27446 (unicompartmental knee arthroplasty) to 27447 (total knee arthroplasty).

	27446 (UKA)	27447 (THA)
wRVU	17.13	19.60
Pre-time	70	70
Intra-time	90	97
Post-time	150	207
Total time	310	374
IWPUT	0.119	0.112
WPUT	0.055	0.052

The IWPUT of 0.119 for 27446 is greater than 27447 (TKA) of 0.112.

We believe UKA is in fact more complex and intense than TKA for several reasons:

1. UKA is less common than TKA; Medicare volume in 2019 was 20X for TKA v UKA
2. UKA has higher failure and revision rate compared to TKA (~ 2X)
3. Smaller incisions are employed to limit injury to the quadriceps mechanism, but must still allow visualization of the other compartments to assess articular cartilage damage (which might preclude UKA and require TKA)
4. The cruciate ligaments (ACL and PCL) are retained, compared to TKA where the ACL +/-PCL are resected; this makes exposure and stability/balancing more difficult
5. Although basic alignment devices and cutting guides are used for the bone resection, similar to TKA, free-hand refinements and/or use of additional technology (e.g. computer-aided, robotic assisted) are typically employed
6. In a TKA, the entire articular surface of the both tibia and femur are resected and replaced; in a UKA, only part of the joint is resected and replaced; alignment of the prosthetic surface with the native articular cartilage is required

A value below 17.13 would create a ***rank order anomaly*** with 27447 (TKA).

Key Reference Code Comparison

Respondents who chose 27130 as a reference indicated the intensity/complexity of 27446 to be similar/more complex and intense than 27130. Respondents who chose 23472 as a reference indicated the intensity/complexity of 27446 to be similar/more than 23472.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	17.13	0.119	310	70	90	150
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft	19.60	0.109	377	70	100	207
23472	Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder)).	22.13	0.089	448	75	140	233

MPC Code Comparison

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
19303	Mastectomy, simple, complete	15.00	0.102	283	58	90	135
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	17.13	0.119	310	70	90	150
37215	Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection	17.75	0.109	322	80	103	139

Other Code Comparison

Codes 63620 and 67108 bracket and offer further support of the recommended wRVU of 17.13 for 27446.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	POST
63620	Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 spinal lesion	15.60	0.136	195	25	90	80
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	17.13	0.119	310	70	90	150
67108	Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique	17.13	0.114	295	51	90	154

Summary

The survey data is valid and robust.

The current wRVU is greater than the median and 25th percentile; there is no compelling evidence for an increase.

Given the decrease in total time (which we believe has methodological flaws and is artificially low), we do not recommend maintaining the current value.

We recommend the cross walked wRVU of 17.13, which takes into account three key considerations:

(1) No change in intraoperative time
(2) One day less of hospital E/M work
(3) Increase level of postoperative office work

Work RVU below 17.13 would create a rank order anomaly with CPT code 27447 (total knee replacement).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27446

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopedic surgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
15,803 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty orthopaedic surgery Frequency 15567 Percentage 98.50 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - Knee replacement

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 27446

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Tables With Estimated Times For Office Visits

OFFICE VISIT #1: two weeks after surgery (LOS = 99214)		
Work completed by the physician and/or QHP		**Minutes**
28.	Review PT/OT and/or rehab/SNF/VNA notes to assess progress with therapy	1-2
29.	Review results of labs related to anticoagulation for DVT prophylaxis (e.g. INR, Hb, Plts); to assess therapeutic response and/or monitor for side effects	1-2
30.	Discuss findings at surgery and review procedure details; answer questions	2
31.	Review post-operative radiographs with patient and/or family	
32.	Interview patient and obtain history and/or review data obtained by clinical staff	2-3
33.	Assess pain control, response to current medications and side-effects	
34.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
35.	Assess gastrointestinal and urinary function to assess for medication side effects	
36.	Remove dressing; examine surgical site	3-3
37.	Assess limb alignment, swelling, strength and ROM	
38.	Check neurovascular status	
39.	Remove sutures or staples; apply steri-strips, sterile dressing and compressive wrap or stockings	4
40.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
41.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	
42.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	
43.	Check narcotic prescription registries	4
44.	Write order for narcotic prescription; re-fill or new medication	
45.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs, gabapentin)	
46.	Write order for prescriptions for continued VTE prophylaxis based on patient risk assessment and mobilization; re-fill or new medication	
47.	Complete medication reconcillation	
48.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
49.	Complete forms/referrals for continued PT/OT and/or home care services (e.g. VNA)	2-3
50.	Complete disability, FMLA, out of/return to work and other related forms	
51.	Communicate and coordinate care with other physicians and health care providers (e.g., PT/OT, PCP)	2-3
52.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
53.	Write or dictate and sign progress note	
54.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**32-40**
	REQUIRED TIME	**30-39**

OFFICE VISIT #2: six weeks after surgery (LOS = 99213)		
Work completed by the physician and/or QHP		**Minutes**
20.	Review PT/OT notes to assess progress with therapy	1-2
21.	Interview patient and obtain history and/or review data obtained by clinical staff	3
22.	Assess pain control, response to current medications and side-effects	
23.	Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
24.	Assess gastrointestinal to assess for medication side effects	
25.	Examine surgical site; assess wound healing and signs of infection	2-3
26.	Assess limb alignment, swelling, strength and ROM	
27.	Counsel patient and/or family regarding wound care, therapy protocol and activity (e.g. driving, bathing, leg elevation)	3
28.	Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental,	

	GI) about need for prophylactic antibiotics; review instruction sheet	
29.	Counsel patient/family regarding multi-modal pain management and use of narcotic pain medication with tapering	
30.	Write order for non-narcotic prescription as appropriate (e.g. NSAIDs)	2-3
31.	Complete medication reconcillation	
32.	Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
33.	Complete forms/referrals for continued PT/OT	2-3
34.	Complete disability, FMLA, out of/return to work and other related forms	
35.	Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
36.	Order radiographs for next visit	
37.	Write or dictate and sign progress note	
38.	Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
	TOTAL TIME	**21-27**
	REQUIRED TIME	**20-29**

OFFICE VISIT #3: ten weeks after surgery (LOS = 99213)	
Work completed by the physician and/or QHP	**Minutes**
16. Review PT/OT notes to assess progress with therapy	1-2
17. Interview patient and obtain history and/or review data obtained by clinical staff	3
18. Assess pain control, response to current medications and side-effects	
19. Assess function, mobility and progress with ambulation; compare with reports from PT/OT/rehab	
20. Examine surgical site; assess wound healing and signs of infection	2-3
21. Assess limb alignment, swelling, strength and ROM	
22. Review radiographs; independent interpretation	2-3
23. Counsel patient and/or family regarding therapy protocol and activity (e.g. driving, exercise, sports)	2-3
24. Counsel patient and/or family regarding planned or emergent invasive procedures (e.g. dental, GI) about need for prophylactic antibiotics; review instruction sheet	2-3
25. Counsel patient/family regarding timing of next office visit and communicate interval care plan based on synthesis of interval history, physical exam, wound assessment, pain control and therapy progression	2-3
26. Complete forms/referrals for continued PT/OT	2-3
27. Complete disability, FMLA, out of/return to work and other related forms	
28. Enter diagnosis code(s) and office visit codes in the EHR or other similar system	4
29. Write or dictate and sign progress note	
30. Enter post-operative data into longitudinal outcome registries (e.g. NSQIP, AJRR, and/or local registry)	2-3
TOTAL TIME	**22-29**
REQUIRED TIME	**20-29**

SPECIALTY SOCIETY(IES):AAOS, AAHKS
PRESENTER(S): Adolph Yates, MD; William Creevy, MD; Hussein Elkousy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 04/2021

CPT Code	Long Descriptor	Global Period
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
27446	A 67-year-old obese female (BMI > 30) with osteoarthritis of the knee joint presents with increased varus of the right knee affecting activities of daily living. She is a non-insulin-dependent diabetic. At operation, she undergoes a unicompartmental knee replacement.
27447	A 74-year-old female has knee osteoarthritis not responding to nonoperative treatment. A total knee arthroplasty (TKA) is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   A panel of clinicians representing each specialty society involved in the RUC survey process for the code collaborated to develop and approve the PE recommendations.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):
   Current codes are used for reference.

3. Is this code(s) typically reported with an E/M service?
   NO

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   N/A

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:
   N/A

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

n/a

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and/or caregiver to ensure all relevant history and diagnostic information is included
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, reviews patient medical status, confirms preoperative cleansing protocol, and answers final pre-admission questions.

   b. Service period (includes pre, intra and post):

6 minutes (standard)
Office clinical staff will assist with necessary post-discharge care via phone or electronically, such as: responding to patient/family questions about home activity restrictions; confirmation of discharge antibiotics if needed, and pain medication; coordination with other physicians and QHPs involved in the care of the patient for transfer of records; and transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge.

-

   c. Post-service period:

125 minutes - standard time for <u>current</u> (2021) office visit E/Ms
Clinical staff will greet the patient, provide gowning, and ensure that all appropriate medical records are available including interval imaging and labs, physical therapy reports, and chart notes from other physicians. Clinical staff will obtain vital signs, prepare the room and necessary supplies, assist with patient positioning for exam, review and document history, systems and medications. Clinical staff will assist the physician during the exam which may include wound and drain (if present) assessment, neurovascular assessment, ROM assessment, and staple removal when appropriate. Clinical staff will clean the room and answer any patient/family questions about home care including activity limitations and reinforcement of physical therapy activities. Clinical staff will assist the physician

with orders for medication and physical therapy changes. Clinical staff will assist with answering patient, family, caregiver, therapist, other clinician questions and help process changes in care.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

n/a

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

n/a

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

n/a

13. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

SA048	pack, minimum multi-specialty visit
SA052	pack, post-op incision care (staple)

14. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**4.0507**

tincture of benzoin, swab		item	1	

15. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice and the useful life. Identify and explain the invoice here:

n/a

16. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

n/a

17. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Time is equal to office visit total time based on 2019 E/M visit time – not based on actual E/M visit time.

18. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

n/a

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

19. If this is a PE only code please select a crosswalk based on a similar specialty mix:

n/a

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise

the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated and resubmitted asap.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: New Technology / New Services

September 2025

Transcatheter Aortic Valve Replacement (TAVR) – Tab 21

CPT codes 33361-33366 were on the New Technology/New Services list and noted in the RUC database as "Do not use to validate physician work" because of the unique co-surgery status for 33361-33366 (-62 co-surgeon modifier is required) and CPT code 33364 did not meet the survey threshold of 30 responses. In April 2025, the Relativity Assessment Workgroup (RAW) reviewed three years of available Medicare claims data (2021, 2022 and 2023). The RUC recommended that these services be surveyed for September 2025. The patient population has changed on who is receiving these services, and it is no longer the sickest, most complicated patients, but will be available to more candidates, and these services may be used to treat aortic regurgitation.

In September 2025, the specialty societies request that these services be referred to CPT to address changes in the approaches utilized for the procedures prior to re-surveying them. As such, the specialty societies did not survey the TAVR codes for the September 2025 RUC meeting and plan to submit a code change application to CPT by the November 3, 2025, deadline for review at the February 2026 CPT meeting. **The RUC agreed and recommended that CPT codes 33361-33366 be referred to the CPT Editorial Panel for the February 2026 meeting.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
33361	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; percutaneous femoral artery approach	000	Refer to CPT Feb 2026 (2025 Work RVU = 22.47)
33362	open femoral artery approach	000	Refer to CPT Feb 2026 (2025 Work RVU = 24.54)
33363	open axillary artery approach	000	Refer to CPT Feb 2026 (2025 Work RVU = 25.47)
33364	open iliac artery approach	000	Refer to CPT Feb 2026 (2025 Work RVU = 25.97)

Subject: Tab 21 – Transcatheter Aortic Valve Replacement (TAVR) codes (33361, 33362, 33363, 33364, 33365, 33366)

Dear Dr. Silva:

The TAVR codes were reviewed by the Relativity Assessment Workgroup (RAW) at the April 2025 RUC meeting due to the codes inclusion on the New Technology/New Services list and noted in the RUC database as "Do not use to validate physician work" because of the unique co-surgery status for 33361-33366 and that CPT code 33364 did not meet the survey threshold of 30 responses. Based on a review of the most recent three years of data and changes to the indications for the procedures to include low-risk patients, the RUC recommended that these services should be surveyed for September 2025.

Representatives from the American Association for Thoracic Surgery, American College of Cardiology, Society of Cardiovascular Angiography & Interventions and the Society of Thoracic Surgeons decided that the codes should be submitted to CPT to address changes in the code set, which includes adding, deleting and/or revising the codes to address changes in the approaches utilized for the procedures prior to re-surveying them.

As such, the societies did not survey the TAVR codes for the September 2025 RUC meeting and plan to submit a code change application to CPT by the November 3, 2025 deadline for review at the February 2026 CPT meeting.

Sincerely,

Stephen Lahey, MD

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Site of Service Anomaly*

September 2025

Appendectomy – Tab 22

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 44970 *Laparoscopy, surgical, appendectomy* as a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. These services were placed directly on the level of interest form to survey for September 2025. The RAW also worked with the specialty societies and identified codes 44950, 44955 and 44960 as part of this family of services.

In September 2025, the specialty societies indicated that the ACS National Surgical Quality Improvement Program (NSQIP®) and NSQIP® Pediatric database analysis revealed considerable variability in both length of hospital stay and operative time for appendectomy procedures. This is influenced by multiple factors such as surgical approach, patient age, whether the disease was complicated or straightforward, and whether the surgery was performed as an interval appendectomy or for tumor. In light of these findings, the specialty societies indicated that new and revised codes are needed to more accurately describe and differentiate global physician work for these services. The specialty societies indicated they will submit a CPT code change application for the CPT 2028 cycle.

The RUC agreed and recommended that codes 44950, 44955, 44960 and 44970 be referred to the CPT Editorial Panel for revision for CPT 2028, preferably by the May 2026 CPT meeting/September 2026 RUC meeting.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Excision			
(f)44950	Appendectomy; (Incidental appendectomy during intra-abdominal surgery does not usually warrant a separate identification. If necessary to report, add modifier 52)	090	Refer to CPT May 2026 (2025 Work RVU = 10.60)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(f)44955	when done for indicated purpose at time of other major procedure (not as separate procedure) (List separately in addition to code for primary procedure)	ZZZ	Refer to CPT May 2026 (2025 Work RVU = 1.53)
(f)44960	for ruptured appendix with abscess or generalized peritonitis	090	Refer to CPT May 2026 (2025 Work RVU = 14.50)
Laparoscopy Surgical laparoscopy always includes diagnostic laparoscopy. To report a diagnostic laparoscopy (peritoneoscopy) (separate procedure), use 49320.			
44970	Laparoscopy, surgical, appendectomy	090	Refer to CPT May 2026 (2025 Work RVU = 9.45)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RE: Tab 22, Appendectomy

Dear Dr. Silva,

The Relativity Assessment Workgroup (RAW) flagged CPT code 44970 (laparoscopic appendectomy) as a site-of-service outlier, noting that Medicare data from 2021–2023 showed it was performed less than 50% of the time in the inpatient setting, yet included hospital E/M services within the global period and had 2023 Medicare utilization over 10,000. During the April 2025 RAW review of codes with a site-of-service anomaly, the Excel file [*2021-2023 SOS 2023 Util Data.xlxs*] created by RUC staff added codes for open appendectomy (44950, 44955, 44960) as family codes. All four codes were subsequently included on the RUC LOI form for survey purposes.

Advisors representing the ACS, APSA, ASCRS, and SAGES evaluated the ACS National Surgical Quality Improvement Program (NSQIP®) and NSQIP® Pediatric databases. Our analysis revealed considerable variability in both length of hospital stay and operative time for appendectomy procedures, influenced by multiple factors such as surgical approach, patient age, whether the disease was complicated or uncomplicated, and whether the surgery was performed as an interval appendectomy or for tumor. In light of these findings, it was determined that new and revised codes are needed to more accurately describe and differentiate physician work. An application for coding changes will be submitted by the stakeholder societies for the CPT 2028 update cycle.

We will be available to respond to questions at the September 2025 RUC meeting.

Sincerely,

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: High Volume Growth*

September 2025

Stereotactic Computer-Assisted Volumetric Navigational Procedures – Tab 23

In April 2024, CPT code 61783 *Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)* was identified via the high-volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. In January 2025, the Relativity Assessment Workgroup (RAW) reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010, and utilization is steadily increasing, thus it should be surveyed with the appropriate family of codes for April 2025. In April 2025, the specialty societies surveyed 61782 and 61783 with the standard ZZZ survey template. However, the specialty societies indicated that there is a distinct and separate pre-service time for these services. The RUC agreed and the specialty societies were allowed to resurvey 61781, 61782 and 61783 with the ZZZ survey template that asks whether pre- or post-time is included in these services. The RUC noted that CPT codes 61781, 61782 and 61783 were originally reviewed as a family at the February 2010 RUC meeting for publication in CPT 2011. CPT codes 61781 and 61783 were valued the same at 3.75 work RVUs and 61782 was valued at 3.18 work RVUs.

Based on 2023 Medicare utilization, CPT code 61781 is performed by neurosurgery (97%), CPT code 61782 is performed by otolaryngology (98%), and CPT code 61783 is performed by neurosurgery (67%) and orthopaedic surgery (32%). For September 2025, the specialty societies that primarily perform these services participated in the survey. Neurosurgery surveyed code 61781, otolaryngology surveyed code 61782 and neurosurgery, orthopaedic surgery, and spine surgery surveyed code 61783.

Family of Services
In April 2025, the specialty societies indicated that CPT codes 61781, 61782 and 61783 are not a family of services as they are reported with distinctly different procedures and should not have been placed for convenience together in the Nervous System/ Skull, Meninges, and Brain/Stereotaxis subsection of CPT. The specialty societies believed that it was not correct to maintain all three codes together in the Nervous System section as established. Specifically, there is a Spine and Spinal Column/Stereotaxis subsection under the Nervous System subsection where code 61783 could have been located, or it could also have been placed in the Musculoskeletal System/Spine subsection. The specialty societies also question whether 61782 is correctly placed in the Nervous System section instead of in the Musculoskeletal System/Head subsection, closer to the procedures that 61782 is typically reported.

The RUC noted that these three services were valued together initially and the valuation for codes 61781 and 61783 is the same and is based on the same methodology. The RUC was concerned that a possible rank order anomaly may occur if valued separately. The RUC disagreed with the specialty societies and recommended that 61781 be surveyed with 61782 and 61783 for September 2025.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

ZZZ Survey Template
CPT codes 61781, 61782 and 61783 were all surveyed for pre- and post-service time in 2010, and each included 15 minutes of pre-service time. In April 2025, CPT codes 61782 and 61783 were surveyed this time with the standard ZZZ survey template, which specifies the ZZZ global period as a *code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre-and post-service time)* and only allows entry of intra-service time. In rare circumstances, specialties may provide justification and request that a ZZZ survey with pre- and post-service time be conducted. The specialty societies are requesting to resurvey these services with the pre/post ZZZ survey template.

The specialties indicated that they believe the pre-service time that was captured in the 2010 valuation remains an integral part of this work for these services. Pre-service time is essential and inseparable from these services. The RUC confirmed that this pre-service time does not overlap with the time included in the base procedures these ZZZ global codes are reported with. For CPT code 61782, this work includes critical, physician-performed tasks directly related to the implementation and use of stereotactic computer navigation. These include an in-depth discussion with the patient about the rationale for the navigation system, its role in enhancing surgical precision, and its implications for surgical complexity and duration. This is particularly relevant in cases involving altered anatomy or proximity to critical structures. In addition, the surgeon must initiate, configure, and verify the navigation system, including hardware setup, image review in multiple planes, software validation, and procedural planning based on the individual patient's anatomy and pathology. These are non-delegable, case-specific activities that are essential to the safe and effective use of this advanced technology and therefore justify discrete pre-service time beyond what is included in the base code.

For CPT code 61783, this work includes critical, physician-only tasks that cannot be delegated, such as consulting with the patient about the placement of an additional tracker for spinal navigation, segmenting spinal levels, planning pedicle trajectories, and positioning the navigation system, all of which are fundamental to the success of the procedure and must be completed before sterile draping.

The RUC determined that the specialty societies may survey 61781, 61782 and 61783 with the amended ZZZ survey template that specifically asks the respondent whether pre- and post-service time is associated with these add-on services for the September 2025 meeting.

61781 ***Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 55 neurosurgeons and determined the current work RVU of 3.75, which is below the survey 25th percentile (3.77), accounts for the work required to perform this service. The RUC recommends 17 minutes pre-evaluation time and 30 minutes intra-service, totaling 47 minutes. As it is typical for many neurosurgical procedures to have pre-service time due to the high intensity and complexity of the procedure, the RUC continued to recommend pre-service time for this add-on service. The specialty societies indicated, and the RUC agreed that the pre-service time for the navigation for the intradural cranial, CPT code 61781, requires more pre-service time than the navigation for the extradural cranial, CPT code 61782, because the accuracy of the navigation is dependent on how much time the physician spends on ensuring that the star fixation, registration, and all other elements that allow one to perform navigation with commensurate accuracy are set up. Thus, the time required to perform these activities, not just from the extracranial surface but to the intracranial space, is why the respondents for the intracranial navigation procedure (61781) indicated that they spent 6 more minutes.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT code 61781 is an add-on service that is reported with intracranial procedures. Pre-operative CT and/or MRI images are loaded into an image guidance system, and the patient is then connected via a patient marker and the patient's external anatomy is traced to allow for proper registration. The system then matches the 3D model of the patient obtained by tracing the imaging, allowing the surgeon the ability to use various instruments to point and display on the scan where that instrument is specifically located in the patient.

The RUC compared the surveyed code to the second key reference service 61797 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure)* (work RVU = 3.48, 30 minutes intra-service and total time) and determined that these services both require the same intra-service time. However, the surveyed code requires 17 minutes pre-service evaluation time, thus it is appropriately valued higher than CPT code 61797.

For additional support the RUC referenced MPC code 34812 *Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 4.13 and 40 minutes intra-service and total time) and CPT code 67335 *Placement of adjustable suture(s) during strabismus surgery, including postoperative adjustment(s) of suture(s) (List separately in addition to code for specific strabismus surgery)* (work RVU = 3.23, 30 minutes intra-service time and total time), which requires similar physician work and time, therefore maintains relativity of this service. **The RUC recommends a work RVU of 3.75 for CPT code 61781.**

61782 ***Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 108 otolaryngologists and determined that a work RVU of 2.11 appropriately accounts for the work required to perform this service based on a direct crosswalk to 93587 *Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating at or above the heart (eg, from innominate vein) (List separately in addition to code for primary procedure)* (work RVU = 2.11 and 16 minutes intra-service and total time). The RUC recommends 11 minutes of pre-service time and 16 minutes of intra-service time, totaling 27 minutes for CPT code 61782. The RUC noted that this service currently includes pre-service time due to the high intensity and complexity of the procedure, thus, the RUC continued to recommend pre-service time for this add-on service.

CPT code 61782 is an add-on code that is used with endoscopic sinus surgery codes. Pre-operative CT and/or MRI images are loaded into an image guidance system, and the patient is then connected via a patient marker and the patient's external anatomy is traced to allow for proper registration. The system then matches the 3D model of the patient obtained by tracing the imaging, allowing the surgeon the ability to use various instruments in the nose to point and display on the scan where that instrument is specifically located in the patient. The accuracy is usually within a millimeter. Stereotactic computer-assisted navigation is often used in cases that are distorted by previous surgery such as extensive nasal polyps, tumors, or disease abutting the skull base, internal carotid artery, optic nerve, among other critical structures. In these cases, navigational guidance is critical to aid in the identification of these structures to avoid complications such as blindness, cerebrospinal leaks, other intracranial injuries, and damage to the carotid, resulting in life-threatening bleeding or strokes.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the top key reference code 19294 *Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure)* (work RVU = 3.00, 40 minutes intra-service time and total time) and determined the surveyed code requires less physician work and time and thus is appropriately valued lower. The RUC also compared the surveyed code to the second top reference code 15121 *Split-thickness autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 2.00, 30 minutes intra-service time and total time) and determined the surveyed code is somewhat more intense and complex requiring more psychological stress and mental effort and judgment, thus valued higher.

For additional support, the RUC referenced MPC codes 36227 *Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)* (work RVU = 2.09 and 15 minutes intra-service and total time) and 36476 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)* (work RVU = 2.65 and 30 minutes intra-service and total time). The RUC also referenced CPT code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time and 32 minutes total time), which requires more time, but the surveyed code is somewhat more intense and complex to perform. The RUC determined that a work RVU of 2.11 supported relativity among similar services. **The RUC recommends a work RVU of 2.11 for CPT code 61782.**

61783 ***Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 70 neurosurgeons, orthopaedic surgeons, and spine surgeons, and determined the current work RVU of 3.75, which is between the survey 25th percentile (3.42) and survey median (4.08), appropriately values this service and maintains relativity within the family. The RUC recommends 15 minutes pre-service evaluation time and 30 minutes intra-service, totaling 45 minutes. As it is typical for many neurosurgical procedures to have pre-service time due to the high intensity and complexity of the procedure, the RUC continued to recommend pre-service time for this add-on service.

CPT code 61783 is an add-on service that is reported with arthrodesis and other spinal procedures. Pre-operative CT and/or MRI images are loaded into an image guidance system, and the patient is then connected via a patient marker and the patient's external anatomy is traced to allow for proper registration. The system then matches the 3D model of the patient obtained by tracing the imaging, allowing the surgeon the ability to use various instruments to point and display on the scan where that instrument is specifically located in the patient.

The specialty societies indicated that the current work RVU of 3.75 supports the time and intensity of this service. The typical patient with multi-level deformity involves more than solely hooking up the navigation and synchronizing with a scan. It involves multiple pieces of new technology where the navigation accuracy needs to be precise due to the location of working along the spine. The success of the procedure is dependent on the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

navigation planning, thus, the pre-service evaluation time is more intense than other services. Additionally, the software has improved and is faster, but because the physician must process multiple forms of information for more complicated surgeries with more deformity corrections, it is certainly more intense, even though the time itself has not necessarily changed.

The RUC compared the surveyed code to the top key reference service 61797 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure)* (work RVU = 3.48, 30 minutes intra-service and total time) and determined that these services both require the same intra-service time. However, the surveyed code requires 15 minutes pre-service evaluation time, thus is appropriately valued higher than CPT code 61797.

For additional support, the RUC referenced MPC code 34812 *Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 4.13- and 40-minutes intra-service and total time) and CPT code 67335 *Placement of adjustable suture(s) during strabismus surgery, including postoperative adjustment(s) of suture(s) (List separately in addition to code for specific strabismus surgery)* (work RVU = 3.23, 30 minutes intra-service time and total time), which requires similar physician work and time. The RUC determined that a work RVU of 3.75 supported relativity among similar services. **The RUC recommends a work RVU of 3.75 for CPT code 61783.**

Practice Expense
In April 2025, the Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for CPT code 61782 and made a single modification. Invoices were submitted for three new supplies: *single use instrumentation wire, patient tracker* and *adhesive pad*. The Subcommittee amended the patient tracker inputs to correct the price of the new supply item since it is available in a 5-pack, and the adhesive in a 10-pack, but only one of each is used. The specialty societies also recommended four new equipment items: *navigation system, pointer shell universal mounts, medical cart without monitor* and *registration pointer*. The RUC noted the equipment *service contract standard* was not included because maintenance, such as a service contract, is already included in the calculation of the cost per minute. In September 2025, the PE Subcommittee re-reviewed the direct practice expense inputs for CPT code 61782 and made no modifications. It was acknowledged that non-facility PE inputs are being added for this ZZZ code. This includes the addition of the intra-service staff time to support the physician during the procedure (16 minutes), the supplies needed for the image guidance, and the equipment needed for the image guidance which have the default formula applied to them. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies for CPT code 61782. For CPT codes 61781 and 61783, the RUC recommends no direct practice expense inputs as these are facility-based add-on services.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
(f)61781	Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure) (Do not report 61781 in conjunction with 61720-61791, 61796-61799, 61863-61868, 62201, 77371-77373, 77432)	ZZZ	3.75 (No Change) (2025 Work RVU = 3.75)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:61781 Tracking Number

Original Specialty Recommended RVU: **3.75**
Presented Recommended RVU: **3.75**
RUC Recommended RVU: **3.75**

Global Period: ZZZ Current Work RVU: **3.75**

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 57-year-old male presents with increasing headaches, confusion, and nausea. Examination shows decline in his brief mental status examination and vertical gaze palsy. A magnetic resonance imaging (MRI) scan demonstrates a tumor in the third ventricle with hydrocephalus. A microsurgical resection is planned with image guidance based on preoperative images. [Note: This is an add-on service. Only consider the additional work related to the computer-assisted surgical navigation.]

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Discuss the surgical procedure with the patient. Review the indications and use of stereotactic computer navigation as an adjunct to intracranial tumor surgery. Explain the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, volumetric analysis of the operative site, and that the surgery may be somewhat longer and more complicated. (Note: The system is typically reserved for difficult cases in patients with disease in close proximity to the skull base, orbit, neurovascular structures, eloquent cortex, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes.) Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure, such as implanted bone fiducial markers. Boot up the computer navigation unit and activate the navigation software, loading and verifying patient information and confirming image quality. Check program options and adjust as necessary. Perform a detailed assessment of the image set in all three dimensions on the computer workstation to analyze the pathology in relationship to surrounding anatomy. Formulate the navigational plan for the approach and resection of the disease process. Obtain additional imaging studies (eg, functional MRI data) separately from the navigational CT or MRI image set. Use the workstation to merge the additional image set(s) to the navigation image set to provide additional information for the approach to and resection of the disease process. Once the patient is positioned on the operating table, move the computer navigational unit into place to ensure proper alignment of the camera and intraoperative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor. This includes consideration of position of the computer navigational unit in relation to use of the operating microscope in a tight operative field.

Description of Intra-Service Work: After induction of anesthesia, affix the head frame or other fiducial hardware to the patient's skull, taking care to precisely position the apparatus. Perform surface tracings of the head and facial regions to register and calibrate the device. Verify navigational accuracy by correlating specific surface anatomic sites to the computer-generated images. Registration and calibration may need to be repeated if navigational accuracy is not sufficient. Verification is repeated, after the surgical field has been prepared and draped to confirm accuracy. Use the operating

microscope as a tracking device as needed and repeat the process to register and calibrate the microscope to the fiducial markers and navigational system. Throughout the procedure, visualize the operative field, with frequent confirmation of position and relationship to sur-rounding vital structures provided by placing a tracking device within the operative field and correlating the view with the position indicated by the images on the computer monitor. If used, verify the view through the operating microscope by placing a tracking device within the operative field under microscopic view. Based on this information, make intraoperative decisions to modify the approach and volumetric resection appropriately to help ensure a safe and effective surgical procedure.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	35%	40%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	0%	30%	70%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	25%	75%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	38%	56%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	18%	38%	44%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	12%	50%	38%
Physical effort required	0%	31%	69%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	38%	62%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In April 2024, CPT code 61783 was identified by the Relativity Assessment Workgroup (RAW) via the high-volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. Codes 61781 and 61782 were added as family codes by the RUC. The specialty societies indicated that CPT codes 61781, 61782 and 61783 are not a family of services as they are reported with distinctly different procedures and should

not have been placed for convenience together in the Nervous System/ Skull, Meninges, and Brain/Stereotaxis subsection of CPT when CPT code 61795 was deleted in 2010. The specialty societies believe that it was not correct to maintain all three codes together in the Nervous System section as established. Specifically, there is a Spine and Spinal Column/Stereotaxis subsection under the Nervous System subsection where code 61783 could have been located, or it could also have been placed in the Musculoskeletal System/Spine subsection. The specialty societies also question whether 61782 is correctly placed in the Nervous System section instead of in the Musculoskeletal System/Head subsection, closer to the procedures typically reported with 61782. The RUC countered that these three services were valued together initially and the valuation for codes 61781 and 61783 is the same and is based on the same methodology. The RUC is concerned that a possible rank order anomaly may occur if valued separately and required that all three codes be surveyed at the same time again, even if the work related to the codes and the specialties that would report the codes are different.

Prior Survey of 61781

In the 2009 survey of 61781, the standard ZZZ-global survey was used that correctly defined a ZZZ-global code as: "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)*." The survey included the ability for the survey respondent to indicate "pre-service time (*if applicable*); intra-service time (skin-to-skin); and immediate post-service time (*if applicable*)." The RUC agreed with an additional 15 minutes of pre-service work (survey median was 30 minutes) separate from the work that occurs during the skin-to-skin portion of the index procedure.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, the survey used for the April 2025 survey included only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation. This survey instrument resulted in 30 minutes of intra-service time.

At the April 2025 meeting, the societies noted that an incorrect survey instrument had been used, as code 61781 involves substantial work outside of the typical "skin-to-skin" activities represented by most ZZZ codes. The societies considered the survey to be flawed and requested permission to conduct a new survey of 61781 using an appropriate survey tool. The RUC agreed, allowing 61781 to be resurveyed with the ZZZ survey template that allows the ability to include pre-service and/or post-service time "if applicable."

Recommendation - Time

We recommend the survey median times for pre-service, intra-service, and post-service as 17, 30, and 0 minute(s) respectively. The pre-service median time of 17 minutes is two minutes more than the current 15 minutes that was "set" by the RUC even though the median pre-service survey time in 2009 was 30 minutes. The RUC rationale for setting a 15 minute pre-service time was that this time was typical for many neurosurgical procedures; a statement that cannot be explained. The recommended intra-service and post-service times of 30 and 0 remain consistent with the median times reported in the 2009 survey.

Recommendation - RVW

The work (time and intensity/complexity) for 61781 has not changed. We recommend maintaining the current work RVU of 3.75 which is slightly less than the survey 25th percentile.

Code 61783 was identified through a high growth screen and the RUC required that codes **61781** and 61782 be additionally surveyed as these three codes were initially surveyed and relativity was considered in the original valuation. The current survey effort and recommendations confirm the relativity of these stereotactic computer-assisted (navigational) services that are performed by different specialties and that use different supplies and equipment.

SOURCE	CPT	DESC	IWPUT	RVW	Total Time
Current	61781	Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)	0.114	**3.75**	**45**
09/2025 REC	**61781**		**0.112**	**3.75**	**47**
Current	61782	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)	0.114	**3.18**	**40**
Interim (APR25)	61782		0.125	**2.50**	**20**
09/2025 REC	**61782**		**0.135**	**2.40**	**27**
Current	61783	Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)	0.114	**3.75**	**45**
Interim (APR25)	61783		0.117	**3.50**	**30**
09/2025 REC	**61783**		**0.114**	**3.75**	**45**

Comparison of Key Reference Codes
A work RVU of 3.75 for 61781 places the value appropriately between the values of 61797 and 61799.

Comparison to 2025 RUC Reviewed ZZZ Global Codes
The RUC recently submitted recommendations for many ZZZ global codes that CMS approved in the NPRM for CY2026. These codes further support relativity and the recommendation to maintain the work RVU for 61781.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61781

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization data is not available

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 51-year-old male presents with nasal polyposis and chronic sinusitis which has failed medical management. A sinus CT shows significant disease involving multiple sinuses with distortion of normal anatomic landmarks. Endoscopic sinus surgery is planned with computer-assisted image guided navigation.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to the standard preoperative discussion with the patient about the surgical procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to endoscopic sinus surgery. This involves explaining the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, and that the surgery may be somewhat longer and more complicated. The system is typically reserved for difficult cases in patients with extensive disease in close proximity to the skull base, orbit, or neurovascular structures, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes. Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure. The computer navigation unit is booted up and the surgeon activates the navigation software, loading and verifying patient information and confirming image quality. Program options are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the pathology in relationship to surrounding anatomy, formulating plans for both the approach to and resection of the disease process. Once the patient is positioned on the operating table, the computer navigational unit is moved into place to ensure proper alignment of the camera and intra-operative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor.

Description of Intra-Service Work: After induction of anesthesia, the head frame or other hardware is affixed to the patient's head, taking care to precisely position the apparatus. Surface tracings of the head and facial regions are performed to register and calibrate the device. Verification of navigational accuracy is ascertained by correlating specific surface anatomic sites to the computer-generated images. Verification is repeated, after the nose has been topically decongested, by correlating intranasal anatomic sites visualized endoscopically. Throughout the procedure, the operative field is visualized endoscopically, with frequent confirmation of position and relationship to surrounding vital structures provided by placing a tracking device within the operative field, correlating the endoscopic view with the position indicated by the images on the computer monitor. Based on this information, intra-operative decisions are made to appropriately modify the approach and resection to help ensure a safe and effective surgical procedure.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	48%	42%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	37%	52%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	68%	21%
Physical effort required	21%	74%	5%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	42%	47%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	31%	31%	38%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	31%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	44%	31%	25%
Physical effort required	50%	50%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	19%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: In April 2024, CPT code 61783 was identified via the Relativity Assessment Workgroup's high volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. In January 2025, the Workgroup reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010 and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for April 2025. As the dominant provider of one of the codes in this family, 61782, the Academy surveyed this code for the

April RUC meeting. Unfortunately, it was not identified until after the survey was completed, that this ZZZ code had previously been assigned pre-time which is not typical of ZZZ codes. The Academy, along with AANS who are the dominant providers of the other two codes in this family, requested that an interim value be assigned at the April meeting, and the codes be surveyed using a customized ZZZ survey instrument that allowed respondents to indicate pre and post time. That survey is being presented at the September 2025 RUC meeting.

Survey Sample and Process:
A survey request was sent to a targeted, random selection of 3716 members from the AAO-HNS of those with sub-specialty designations of general otolaryngology and rhinology.

Key Reference Codes
The first KRS selected was CPT 19294 Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure) valued at 3.00 RVUs with an intra time of 40. 19 respondents selected this as their primary KRS.

The second KRS selected was CPT 15121 Split-thickness autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure) valued at 2.00 RVUs with an intra time of 30. 16 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):
We are recommending a work RVU **2.40 and 11 minutes of pre time and 16 minutes of intra service time in accordance with our survey's median times**. Our expert panel felt this value which was our survey's 25th percentile, maintains relativity related to other ZZZ otolaryngology codes within the fee schedule.

Pre Service Time: During the 2010 RUC review, the RUC approved pre time for this code, despite it being an add-on service. The RUC justified this, as it is typical for many neurosurgical procedures to have pre-service time due to the high intensity and complexity of the procedure. In addition to the standard preoperative discussion with the patient about the surgical procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to endoscopic sinus surgery. This involves explaining the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, and that the surgery may be somewhat longer and more complicated. The system is typically reserved for difficult cases in patients with extensive disease in close proximity to the skull base, orbit, or neurovascular structures, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes. Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure. The computer navigation unit is booted up and the surgeon activates the navigation software, loading and verifying patient information and confirming image quality. Program options are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the pathology in relationship to surrounding anatomy, formulating plans for both the approach to and resection of the disease process. Once the patient is positioned on the operating table, the computer navigational unit is moved into place to ensure proper alignment of the camera and intra-operative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor. We believe our survey results justify this time and are therefore, recommending the survey median time of 11 minutes for pre service evaluation.

Total Time: Based on the above recommendations, we are requesting a total time of 27 minutes for code 61782.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This add on code may typically be reported with any combination of the following procedure codes: 31253, 31276, 31290, 31291, 31292, 31293, 31294.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61782

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 57000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is approximately three times the 2023 Medicare volume from the RUC database.

Specialty Otolaryngology Frequency 55500 Percentage 97.36 %

Specialty Neurosurgery Frequency 1500 Percentage 2.63 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 19,013 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2023 RUC database utilization for the Medicare population

Specialty Otolaryngology Frequency 18500 Percentage 97.30 %

Specialty Neurosurgery Frequency 500 Percentage 2.62 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 61782

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; spinal (Listseparately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Computer-assisted surgical navigation is utilized when a 57-year-old male undergoes operative stabilization of the C1-C2 segment for rupture of the transverse atlantal ligament. [Note: This is an add-on service. Only consider the additional work related to the computer-assisted surgical navigation.]

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to the standard discussion with the patient about the planned spinal procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to spinal surgery. This involves explaining the rationale for the use of the system, how it helps to confirm surgical position and avoid damage to surrounding vital structures, how it helps visualize instrument and implant position and that the surgery may be somewhat longer and more complicated. The explanation describes the placement of optical or electromagnetic tracking devices on the spine and key instruments and the identification of reference points. Prior to the surgical procedure and positioning, the computer navigation unit is brought into the room and following booting up of the computer, the surgeon activates the navigation software and enters patient specific information such as identifiers, surgeon, site and side of surgery. Radiographic images that will be used for the navigation are either newly obtained or loaded from preexisting studies into the navigation computer. Setup options for the program are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the surgical anatomy/pathology in relationship to surrounding anatomy. The final operative plan for the approach to and resection (if needed) of the disease process is completed. Once the patient has been positioned on the operating table, the navigation unit is moved into place so the intra-operative trackers will be in the field of view of the cameras and the surgeon will be able to see the computer monitor screen.

Description of Intra-Service Work: Once the spine has been exposed (reported separately), the required navigation trackers are secured to the spine and to key instruments. The trackers may be passive devices with reflective balls whose position is determined by infrared light signals sent from the camera system which senses their position. They may also be active devices that emit infrared light or electromagnetic signals that are sensed by a detection system. These trackers are then registered with the stereotactic computer navigation system and specific bony landmarks are identified individually by directed digitization with a pointer device that also has tracker components on it. Multiple reference points are identified and generally include one or more spinous processes, facet joints, and transverse processes. After the anatomy has been registered, an assessment of the accuracy is confirmed with the pointing device. The position and angular alignment are checked at several sites. Changes to the trackers and reference points are made until accuracy within 1-2 millimeters is confirmed. The navigation system is used to identify the starting points for drill holes and the appropriate sagittal and

coronal alignment. Drill bit orientation and depth of penetration is checked frequently as the drill is carefully and slowly advanced. Changes in alignment are made as necessary. Repeat navigation images are then obtained as the hole is tapped and again as the final screw or implant is inserted to ensure correct positioning. This entire sequence is then repeated for each screw or implant placed. At the conclusion of the surgical procedure, the trackers are removed.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	71%	14%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	71%	7%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	71%	29%
Physical effort required	7%	50%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	71%	29%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	58%	17%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	50%	42%
Physical effort required	8%	50%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
In April 2024, CPT code 61783 was identified by the Relativity Assessment Workgroup (RAW) via the high-volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022.

Prior Survey of 61783 – 2010 RUC Review

In the 2010 RUC review of 61783, the standard ZZZ-global survey was used that correctly defined a ZZZ-global code as: "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)*." The survey included the ability for the survey respondent to indicate "pre-service time (*if applicable*); intra-service time (skin-to-skin); and immediate post-service time (*if applicable*)." The RUC agreed with an additional 15 minutes of pre-service work separate from the work that occurs during the skin-to-skin portion of the index procedure.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, the survey used for the April 2025 survey included only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation. This survey instrument resulted in 30 minutes of intra-service time.

Prior Survey of 61783 – April 2025 RUC Review

At the April 2025 meeting, the societies noted that an incorrect survey instrument had been used, as code 61783 involves substantial work outside of the typical "skin-to-skin" activities represented by most ZZZ codes. For some add-on codes, there is additional pre-service and post-service work before/after skin-to-skin work.

The RUC reviewed the April 2025 survey results from 146 neurosurgeons, orthopaedic surgeons, and spine surgeons, and determined the survey 25th percentile work RVU of 3.50 and 30 minutes of intra-service and total time are appropriate based on the current survey. The RUC compared the surveyed code to the second top key reference service 61797 Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure) (work RVU = 3.48, 30 minutes intra-service and total time) and determined that the these services both require the same physician work and time, thus are valued similarly.

The specialty societies did not survey for pre-service time and requested to resurvey with an amended survey instrument, specifically asking if separate pre-service time from the base code occurs for this service. The RUC agreed with this request and submitted the interim recommendation of 3.50 work RVUs and total time of 30 minutes to CMS.

Recommendation - Time

We recommend the survey median times for pre-service, intra-service, and post-service as 15, 30, and 0 minute(s) respectively. The pre-service and intra-service times remain consistent with those reported in the 2009 survey. The median post-service time remains at zero, reflecting that the tracking devices used in stereotactic spinal procedure navigation do not require any additional incisions beyond those made for the primary procedure—meaning no extra post-service dressings or documentation are necessary.

Recommendation - RVW

The work (time and intensity/complexity) for 61783 has not changed. We recommend maintaining the current RVW of 3.75 which falls between the survey 25th percentile and median values.

Code 61783 was identified through a high growth screen and the RUC required that codes 61781 and 61782 be additionally surveyed as these three codes were initially surveyed and relativity was considered in the original valuation. The current survey effort and recommendations confirm the relativity of these stereotactic computer-assisted (navigational) services that are performed by different specialties and that use different supplies and equipment.

SOURCE	CPT	DESC	IWPUT	RVW	Total Time
Current	61781	Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)	0.114	**3.75**	**45**
09/2025 REC	**61781**		**0.112**	**3.75**	**47**
Current	61782	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)	0.114	**3.18**	**40**
Interim (APR25)	61782		0.125	**2.50**	**20**
09/2025 REC	**61782**		**0.135**	**2.40**	**27**
Current	61783	Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)	0.114	**3.75**	**45**
Interim (APR25)	61783		0.117	**3.50**	**30**
09/2025 REC	**61783**		**0.114**	**3.75**	**45**

Comparison of Key Reference Codes

A work RVU of 3.75 for 61783 places the value appropriately between the values of 61797 and 61799.

Comparison to Other Reference Code

Code 49623, *Removal of total or near total non-infected mesh or other prosthesis at the time of initial or recurrent anterior abdominal hernia repair or parastomal hernia repair, any approach (ie, open, laparoscopic, robotic) (List separately in addition to code for primary procedure*), that was recently reviewed can additionally serve as a crosswalk code with the same total time of 45 minutes and the same work RVU of 3.75.

Comparison to 2025 RUC Reviewed ZZZ Global Codes

The RUC recently submitted recommendations for many ZZZ global codes that CMS approved in the NPRM for CY2026. These codes further support relativity and the recommendation to maintain the work RVU for 61783.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61783

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 29281
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 RUC database

Specialty neurosurgery Frequency 20000 Percentage 68.30 %

Specialty orthopaedic surgery Frequency 9281 Percentage 31.69 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 61783

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SPECIALTY SOCIETY(IES):__AAO-HNS_____
PRESENTER(S): R. Peter Manes, MD & Brian Boyce, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: APRIL/SEPT 2025

CPT Code	Long Descriptor	Global Period
61782	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
61782	A 51-year-old male presents with nasal polyposis and chronic sinusitis which has failed medical management. A sinus CT shows significant disease involving multiple sinuses with distortion of normal anatomic landmarks. Endoscopic sinus surgery is planned with computer-assisted image guided navigation.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Our expert panel was comprised of our RUC Advisors and other rhinology experts who have intimate knowledge of this procedure.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   31267 – this is the code reported the most frequently with 61782
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Otolaryngology is the dominant specialty in both sites of service.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The site of service for this code has changed since its initial valuation in 2010 and it is not performed regularly in the non-facility setting, therefore, we are requesting the creation of non-facility PE inputs to be added to the fee schedule.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

This is an add on (ZZZ) code, so there is no pre or post staff time.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

This is an add on code, so there is no pre or post staff time.

    b. Service period (includes pre, intra and post):

The nurse is assisting the physician during the entirety of this procedure. Typically, this entails removing the image guidance mount from instruments and placing it on other instruments. During this procedure, multiple different instruments are used for image guidance, and when in use, each instrument must have a mount that connects to a wire that then connects to the system.

    c. Post-service period:

This is an add on code, so there is no pre or post staff time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Typically, this entails removing the image guidance mount from instruments and placing it on other instruments. During this procedure, multiple different instruments are used for image guidance, and when in use, each instrument must have a mount that connects to a wire that then connects to the system.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

The reusable items that integrate with the navigation system (lines 105-108) required for this procedure are not included in the existing CMS PE input lists for supplies or equipment, so we are providing invoices and proposing to add three new supply items. Adhesive pads - Adheres to the patient and the patient tracker, allowing patient tracker to stick on the patient. Patient tracker utilized as the registration point for the patient. Attaches to the adhesive pad which then adheres to the patient.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Single Use Instrumentation Wires - attaches to the mount, which attaches to instruments that are used to identify anatomic landmarks

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

The image guidance system and parts (rows 116-120) are required for this procedure are not included in the existing CMS PE input lists for supplies or equipment, so we are providing invoices and proposing to add them.

The navigation system is the computerized terminal that provides the image guidance. The mounts attach to instruments such as suctions, curettes and pointers. The wire attaches to the mount, which then connects to the image guidance system. This then allows the mounted instrument to be used in the nose and show exactly where the instrument is on imaging. The medical cart without monitor is where the image guidance system sits.

Registration pointer - Pointer utilized to register the CT scan to the patient's surface anatomy.

Pointer Shell Universal Mounts 1 and 2 - attach to instruments that are then used to identify anatomic landmarks. Typically utilize two per procedure.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typically 7 years for the image guidance system.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The mounts have a useful life of about 1 year.
The registration pointer useful lifespan is 5 years.
The Medical Cart without Monitor useful life is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

Navigation system
Pointer Shell Universal Mounts 1 and 2
Registration pointer
Medical Cart without Monitor

We used the default formula for all of these items.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Adding non-facility PE inputs for a ZZZ add on code. This includes the addition of the intra service staff time to support the physician during the procedure, the supplies needed for the image guidance, and the equipment needed for the image guidance which have the default formula applied to them.

Additionally, during the PE presentation at the April RUC meeting, there was discussion regarding whether it was typical for the adhesives for the patient tracker to be included with the tracker cost, or a separately invoiced item. The AAO-HNS expert panel determined that the submitted invoices are correct and do represent the most typically used equipment/system.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: High Volume Growth*

April 2025

Stereotactic Computer-Assisted Volumetric Navigational Procedures – Tab 11

In April 2024, CPT code 61783 was identified by the Relativity Assessment Workgroup (RAW) via the high-volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. In January 2025, the RAW reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010, and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for April 2025.

In October 2008, CPT code 61795 *Stereotactic computer-assisted volumetric (navigational) procedure, intracranial, extracranial, or spinal* (2008 work RVU = 4.03) was identified for potential misvaluation through the CMS Fastest Growing Screen. The RUC and the specialty societies determined that the work and technology related to intracranial, extracranial and spinal procedures may be different. Thus, the specialty societies submitted a code change application to the CPT Editorial Panel. At the October 2009 CPT Editorial Panel meeting, CPT code 61795 was deleted, and three new codes (61781, 61782 and 61783) were created to separately report cranial intradural, cranial extradural and spinal stereotactic computer-assisted volumetric procedures respectively. CPT codes 61781, 61782 and 61783 were reviewed at the February 2010 RUC meeting for publication in CPT 2011. CPT codes 61781 and 61783 were valued the same at 3.75 work RVUs and 61782 was valued at 3.18 work RVUs.

Based on 2023 Medicare utilization, CPT code 61781 is performed by neurosurgery (97%), CPT code 61783 is performed by neurosurgery (67%) and orthopaedic surgery (32%) and 61782 is performed by otolaryngology (98%). No specialty society interest was submitted to survey code 61781, and there is no recommendation. Otolaryngology surveyed code 61782 and neurosurgery, orthopaedic surgery and spine surgery surveyed code 61783.

Family of Services
The specialty societies indicated that CPT codes 61781, 61782 and 61783 are not a family of services as they are reported with distinctly different procedures and should not have been placed for convenience together in the Nervous System/ Skull, Meninges, and Brain/Stereotaxis subsection of CPT. The specialty societies believe that it was not correct to maintain all three codes together in the Nervous System section as established. Specifically, there is a Spine and Spinal Column/Stereotaxis subsection under the Nervous System subsection where code 61783 could have been located, or it could also have been placed in the Musculoskeletal System/Spine subsection. The specialty societies also question whether 61782 is correctly placed in the Nervous System section instead of in the Musculoskeletal System/Head subsection, closer to the procedures that 61782 is typically reported.

The RUC noted that these three services were valued together initially and the valuation for codes 61781 and 61783 is the same and is based on the same methodology. The RUC is concerned that a possible rank order anomaly may occur if valued separately. **The RUC disagrees with the specialty societies and recommends that 61781 be surveyed with 61782 and 61783 for September 2025.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

ZZZ Survey Template
CPT codes 61781, 61782 and 61783 were all surveyed for pre- and post-service time in 2010, and each included 15 minutes of pre-service time. CPT codes 61782 and 61783 were surveyed this time with the standard ZZZ survey template, which specifies the ZZZ global period as a *code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre-and post-service time)* and only asks for the day of procedure intra-service time. In rare circumstances, specialties may provide justification and request that a ZZZ survey with pre- and post-service time be conducted. The specialty societies are requesting to resurvey these services with the pre/post ZZZ survey template.

The specialties indicated that they believe the pre-service time that was captured in the 2010 valuation remains an integral part of this work for these services. Pre-service time is essential and inseparable from these services. For CPT code 61782, this work includes critical, physician-performed tasks directly related to the implementation and use of stereotactic computer navigation. These include an in-depth discussion with the patient about the rationale for the navigation system, its role in enhancing surgical precision, and its implications for surgical complexity and duration. This is particularly relevant in cases involving altered anatomy or proximity to critical structures. In addition, the surgeon must initiate, configure, and verify the navigation system, including hardware setup, image review in multiple planes, software validation, and procedural planning based on the individual patient's anatomy and pathology. These are non-delegable, case-specific activities that are essential to the safe and effective use of this advanced technology and therefore justify discrete pre-service time beyond what is included in the base code.

For 61783, this work includes critical, physician-only tasks that cannot be delegated, such as consulting with the patient about the placement of an additional tracker for spinal navigation, segmenting spinal levels, planning pedicle trajectories, and positioning the navigation system, all of which are fundamental to the success of the procedure and must be completed before sterile draping.

The RUC determined that the specialty societies may survey 61781, 61782 and 61783 with the amended ZZZ survey template that specifically asks the respondent whether pre- and post-service time is associated with these add-on services.

61781 ***Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)***
No specialty society interest was submitted to survey code 61781, and there is no recommendation. **No RUC recommendation is submitted for CPT code 61781. The RUC recommends 61781 be surveyed with 61782 and 61783 for September 2025.**

61782 ***Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 141 otolaryngologists and determined that the survey 25th percentile work RVU of 2.50 appropriately accounts for the work required to perform this service based on the current survey. The RUC recommends interim times of 0 minutes pre-service time and 20 minutes intra-service time, totaling 20 minutes. The specialty societies did not survey for pre-service time and have requested to resurvey with an amended survey instrument, specifically asking if separate pre-service time from the base code occurs for this service. The RUC recommends an interim work RVU of 2.50 and resurvey for September 2025.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the top key reference code 19294 *Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure)* (work RVU = 3.00, 40 minutes intra-service time and total time) and determined the surveyed code requires much less physician work and time and thus is appropriately valued lower. The RUC noted that if the surveyed code had pre-time, code 19294 is a comparable service.

For additional support, the RUC referenced code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time and 32 minutes total time), which requires more time, but the surveyed code is somewhat more intense and complex to perform. **The RUC recommends an interim work RVU of 2.50 for CPT code 61782 and resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

61783 ***Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 146 neurosurgeons, orthopaedic surgeons and spine surgeons, and determined the survey 25th percentile work RVU of 3.50 and 30 minutes of intra-service and total time are appropriate based on the current survey. The specialty societies requested to resurvey CPT code 61783, using the specific ZZZ survey template with pre/post-service time.

The RUC compared the surveyed code to the second top key reference service 61797 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple (List separately in addition to code for primary procedure)* (work RVU = 3.48, 30 minutes intra-service and total time) and determined that the these services both require the same physician work and time, thus are valued similarly.

For additional support the RUC referenced code 67335 *Placement of adjustable suture(s) during strabismus surgery, including postoperative adjustment(s) of suture(s) (List separately in addition to code for specific strabismus surgery)* (work RVU = 3.23, 30 minutes intra-service time and total time), which requires similar physician work and time. **The RUC recommends an interim value of 3.50 for CPT code 61783 and resurvey with the pre/post time ZZZ survey template for review at the September 2025 RUC meeting.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for CPT code 61782 and made a single modification. Invoices were submitted for three new supplies: *single use instrumentation wire, patient tracker* and *adhesive pad*. The Subcommittee amended the patient tracker inputs to correct the price of the new supply item since it is available in a 5-pack, and the adhesive in a 10-pack, but only one of each is used. The specialty societies also recommended four new equipment items: *navigation system, pointer shell universal mounts, medical cart without monitor* and *registration pointer*. The RUC noted the equipment *service contract standard* was not included because maintenance such as a service contract is already included in the calculation of the cost per minute. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RE: Tab 11, Stereotactic Computer-Assisted Volumetric Navigational Procedures

Dear Dr. Silva,

The AANS, CNS, NASS, AAOS, and ISASS are requesting to maintain the current work RVU and times for code 61783, and to resurvey for the September 2025 RUC meeting with a ZZZ global survey tool that allows reporting of intraservice time and pre/postservice time if applicable, consistent with the definition of a ZZZ code. Below we provide a detailed rationale for this request.

We also provide below a rationale as to why codes 61781, 61782, and 61783 are not family codes and further why there are not any family codes related to code 61783.

- **Rationale for Resurvey of 61783**

The standard ZZZ-global survey was used in 2009 to survey code 61783. The 2009 survey tool correctly defined a ZZZ-global code as: "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)*." The survey included the ability for the survey respondent to indicate "preservice time (if applicable); intra-service time (skin-to-skin); and immediate post-service time (if applicable)." The 2009 survey of 61783 resulted in a median survey preservice time of 30 minutes. The specialty expert panel indicated the survey respondents overestimated the preservice time, however, the expert panel provided a rationale that there is (conservatively) an additional 15 minutes of preservice work as described in the SOR.

The RUC agreed with an additional 15 minutes of preservice work separate from the work that occurs during the skin-to-skin portion of the index procedure.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)*." However, even though the definition indicates there could be pre- and post-service time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice (skin-to-skin) time of 30 minutes which is consistent with the intraservice time from the prior survey. However, preservice time was not

collected for the significant additional preservice work prior to the skin-to-skin component of the index procedure.

We have provided the survey results from the current survey and are **recommending the current work RVU and times be maintained until we can resurvey code 61783** using a survey instrument that includes the ability to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

In addition, below we provide a rationale for surveying only 61783 and why codes 61781, 61782, and 61783 are not "family" codes.

- **Rationale: Codes 61781, 61782, and 61783 are Not Family Codes**

Background - CPT Coding Changes (1990 and 2000)

Code 61795 was established for CPT 1990. At this time, the Harvard study was coming to a close and CMS needed to predict the time and value for the new code for the 1992 PFS. The code was not reviewed. For CPT 2000, the code was revised to add "extracranial, or spinal" to the code descriptor. The rationale for the change indicated that *add-on code 61795 was revised to update current terminology associated with stereotactic computer assisted volumetric (navigational) technology. Anatomic references were added to clarify the use of this code in addition to other intracranial, extracranial or spinal stereotactic procedures to reflect current clinical practice. Code 61795 describes computer assisted planning for stereotactic surgery. This planning includes determination of the coordinates for the target, measurement of the AC-PC line, and angle calculation. Using a computer, various trajectories are determined to assist the physician in choosing the specific trajectory and calculating the entry point through the skull.*

The revision for CPT 2000 was determined editorial and a RUC survey was not conducted. The value and time for code 61795 remained as predicted values by CMS to gap fill the fee schedule. In addition the code remained in the "Skull, Meninges, and Brain" subsection under the "Nervous System" section of CPT.

+▲61795 Stereotactic computer assisted volumetric (navigational) procedure, intracranial, extracranial, or spinal (List separately in addition to code for primary procedure

Short Descriptor: Brain surgery using computer

Background - CPT Coding Changes (2010)

In the CY 2009 NPRM, CMS provided a list of the 114 fastest growing procedures. Code 61795 was identified on this list. The action plan provided by the AANS, CNS, NASS, and AAOHNS indicated that code 61795 growth was driven by an increase in sinus surgery utilization that involved stereotactic computer assisted navigation. The RUC determined that 61795 should be surveyed since it had never been surveyed by the RUC (or Harvard). During the effort to develop a single typical patient vignette for survey, the specialties decided instead to delete 61795 and establish separate codes to report stereotactic computer-assisted (navigational) services for cranial intradural, cranial extradural, and spinal procedures.

At the October 2009 CPT meeting, AANS and CNS submitted a code change application to establish an add-on code for cranial procedures and AAOHNS submitted a code change application to establish an add-on code for extracranial procedures:

+●61XXX Stereotactic computer assisted (navigational) procedure; cranial (List separately in addition to code for primary procedure)
+●6179X1 Stereotactic computer-assisted volumetric (navigational) procedure, extracranial (List separately in addition to code for primary procedure)

Research indicates that a conference call was conducted after submission of the applications because both applications were subsequently revised and resubmitted. The AANS and CNS revised application added a code for spinal procedures and the AAOHNS revised application included a note about the conference call and placement of codes in CPT:

+●61XXX Stereotactic computer assisted (navigational) procedure; cranial (List separately in addition to code for primary procedure)
+●61XX1 spinal
+●6179X1 Stereotactic computer-assisted volumetric (navigational) procedure, extracranial (List separately in addition to code for primary procedure)

Note: the conference call participants felt the new code (6179X1) would best be kept located close to the code it was replacing rather than moving it to the Head section.

The CPT Panel further modified the codes prior to release of the Panel Action memo:

The Panel accepted with modification of this request to delete stereotactic radiosurgery 61795 and established three separate codes to distinguish the various anatomic regions. The Panel further modified the proposal to include 1) the word “intradural” in 6179X1; 2) the word “extradural” in 6179X2; and 3) an exclusionary parenthetical note following 6179X1 to indicate that it should not be reported in conjunction with 61270-61791, 61796-61799, 61863-61868, 62201, 77371-77373, 77432; 4) an instructional note following 6179X2 to indicate that 6179X1 and 6179X2 cannot be reported by the same provider during the same surgical session; and 5) an

instructional note following 6179X3 to preclude reporting 6179X3 in addition to 63620, 63621. A cross-reference was added directing users to report 6179X1, 6179X2, 6179X3 for deleted code 61795. Finally, the Panel requested the specialties to submit revised vignettes.

Category I
Surgery
Nervous System
Stereotaxis

+●6179X1 Stereotactic computer assisted (navigational) procedure; cranial/,intradural (List separately in addition to code for primary procedure)
(Do not report 6179X1 in conjunction with 61720-61791, 61796-61799, 61863-61868, 62201, 77371-77373, 77432)

+●6179X2 cranial/,extradural (List separately in addition to code for primary procedure)

(Do not report 6179X3 in conjunction with 63620, 63621)

Stereotactic Radiosurgery (Cranial)

~~+61795~~ ~~Stereotactic computer-assisted volumetric (navigational) procedure, intracranial, extracranial, or spinal (List separately in addition to code for primary procedure)~~
(61795 has been deleted. To report, see 6179X1, 6179X2, 6179X3)

We believe that it was not correct to maintain all three codes together in the Nervous System section as established. Specifically, there is a Spine and Spinal Column / Stereotaxis subsection under the Nervous System subsection where code 61783 could have been located, or it could also have been placed in the Musculoskeletal System / Spine subsection.. We also question whether 61782 is correctly placed in the Nervous System section instead of in the Musculoskeletal System / Head subsection, closer to the procedures that 61782 is typically reported with.

The above information supports the fact that codes 61781, 61782, and 61783 are not a "family" as they are reported with distinctly different procedures, by distinctly different physicians, and should not have been placed for convenience together in the Nervous System/ Skull, Meninges, and Brain/ Stereotaxis subsection of CPT. This issue needs to be addressed with a code change application to move the code(s) to appropriate locations in CPT. Moving the codes is ancillary and editorial and should not impact the original or current intent of the services, not should it impact the survey of 61783.

- **Rationale: Code 61783 Does Not Have Index "Family" Codes**

The RUC LOI sent out to societies regarding code 61783 indicated:

- In April 2024, CPT code 61783 was identified via the high volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. **In January 2025, the Workgroup reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010 and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for April 2025.**

- The specialty society should indicate which codes are family codes. Per Medicare Claims Data, the codes commonly reported with add-on code 61783 are: 22614, 22842, 22853, 22612 and 22633.

The first bulleted text accurately reflects the RAW report text that was voted on and approved by the RUC. Regarding this first issue, codes 61781 and 61782 were added to the LOI as family codes instead of allowing the societies to determine what codes were family codes. When societies submitting their LOI indicating a survey of only 61783, information was provided that 61781 and 61782 were family codes and needed to also be surveyed. Code 61781 was not surveyed and the rationale is provided above as to why 61781 is not a family code. Separately, and independently, AAOHNS agreed to survey 61782 even though it is not a family code to 61783, possibly to be able to provide non-facility practice expense recommendations since a significant percentage of claims are now reported in the office setting. Independent of the reason to survey 61782, we still contend it is not a family code with 61783.

The second bulleted text in the LOI did not appear in the RAW report and was not reviewed and voted on by the RUC. This second bullet introduces additional possible "family" codes as some codes that are commonly reported with code 61783 in the Medicare 5% file. There are over 100 global codes that code 61783 may be reported with and an additional group of ZZZ add-on codes that also may be reported with 61783 and an index procedure. Commonly reported in the Medicare-aged population does not equate to a "family" code.

In the AMA collaborative program EncoderPro, there is a Knowledge Base enhanced content entry that provides information about add-on codes that supports the fact that some add-on codes do not have specific primary codes:

> The *CPT® 2024 Code Set* includes 628 codes designated as ‘add-on’ codes. These codes represent additional or supplemental procedures associated with a primary procedure, eg, additional digit(s), lesion(s), vertebral segment(s). Within this group, there are **35 add-on codes** that do not include the specific parenthetical statement, “(Use ##### in conjunction with …)”, which lists the primary code(s) that the add-on code may be used in conjunction with on the same date of service. The list of 35 add-on codes without specific parenthetical instruction as to which specific primary code(s) it may be reported in conjunction with are listed in Table 1 below.
>
> As these add-on codes can have a broader base of primary codes that they can be reported in conjunction with on the same date of service as the add-on code, the parenthetical statement, “(Use ##### in conjunction with …)” has not been included. Instead, they often include a parenthetical statement that reflects the code’s broader applicability “(List separately in addition to code for primary procedure)” or address the type(s) of procedure(s) the add-on code may be reported with. Code 33268 below is an example of this type of parenthetical instruction.
>
> # 33268 *Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)*

(Use 33268 in conjunction with primary procedures performed via sternotomy or thoracotomy approach)

(Do not report 33268 in conjunction with 33254, 33255, 33256, 33257, 33258, 33259, 33265, 33266, 33420, 33422, 33425, 33426, 33427, 33430)

Lastly, some of these add-on codes also may include exclusionary "(Do not report …)" parentheticals as seen in the example above. While it does not directly address which specific codes it can be added to, it does provide specific instructions/directions on codes that should not be reported with the add-on code.

Table 1: [SELECTED] CPT Add-On Codes Without Specific Primary Code Reporting Instruction

2024 CPT® Add-On Code	Effective Date	2024 CPT Code Descriptor
Surgery		
+61781	1/1/2011	Stereotactic computer-assisted (navigational) procedure; cranial, intradural (List separately in addition to code for primary procedure)
+61782	1/1/2011	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)
+61783	1/1/2011	Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)

As indicated in this Knowledge Base information, code 61783 does not have specific primary codes and as such does not have any specific family codes. We therefore did not select any code to be surveyed with code 61783. The service described by 61783 does not replace work in any possible index procedure, but instead enhances precision and safety by providing surgeons with real-time, 3D visualization of the spine and surgical instruments, improving the accuracy of procedure, and potentially reducing surgical complications

Thank you for allowing us to provide this information. We will be available to respond to any RUC member questions.

Sincerely,

RUC Advisors for:

American Association of Neurological Surgeons (AANS)
Congress of Neurological Surgeons (CNS)
North American Spine Society (NASS)
American Academy of Orthopaedic Surgeons (AAOS)
International Society for the Advancement of Spine Surgery (ISASS)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:61782 Tracking Number Original Specialty Recommended RVU: **2.50**
Presented Recommended RVU: **2.50**
Global Period: ZZZ Current Work RVU: **3.18** RUC Recommended RVU: **2.50**

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 51-year-old male presents with nasal polyposis and chronic sinusitis which has failed medical management. A sinus CT shows significant disease involving multiple sinuses with distortion of normal anatomic landmarks. Endoscopic sinus surgery is planned with computer-assisted image guided navigation.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to the standard preoperative discussion with the patient about the surgical procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to endoscopic sinus surgery. This involves explaining the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, and that the surgery may be somewhat longer and more complicated. The system is typically reserved for difficult cases in patients with extensive disease in close proximity to the skull base, orbit, or neurovascular structures, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes. Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure. The computer navigation unit is booted up and the surgeon activates the navigation software, loading and verifying patient information and confirming image quality. Program options are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the pathology in relationship to surrounding anatomy, formulating plans for both the approach to and resection of the disease process. Once the patient is positioned on the operating table, the computer navigational unit is moved into place to ensure proper alignment of the camera and intra-operative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor.

Description of Intra-Service Work: After induction of anesthesia, the head frame or other hardware is affixed to the patient's head, taking care to precisely position the apparatus. Surface tracings of the head and facial regions are performed to register and calibrate the device. Verification of navigational accuracy is ascertained by correlating specific surface anatomic sites to the computer-generated images. Verification is repeated, after the nose has been topically decongested, by correlating intranasal anatomic sites visualized endoscopically. Throughout the procedure, the operative field is visualized endoscopically, with frequent confirmation of position and relationship to surrounding vital structures provided by placing a tracking device within the operative field, correlating the endoscopic view with the position indicated by the images on the computer monitor. Based on this information, intra-operative decisions are made to appropriately modify the approach and resection to help ensure a safe and effective surgical procedure.

CPT Code: 61782

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	18%	41%	35%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	18%	53%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	12%	53%	35%
Physical effort required	18%	65%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	24%	41%	35%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	19%	38%	43%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	38%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	37%	38%	25%
Physical effort required	44%	38%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	19%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: In April 2024, CPT code 61783 was identified via the Relativity Assessment Workgroup's high volume growth screen, with Medicare utilization of 10,000 or more that has increased by at least 100% from 2017 through 2022. In January 2025, the Workgroup reviewed the action plan for CPT code 61783 and determined that this service was last valued in 2010 and utilization is steadily increasing, thus should be surveyed with the appropriate family of codes for

April 2025. As the dominant provider of one of the codes in this family, 61782, the Academy is surveying this code for the April RUC meeting.

Survey Sample and Process:
A survey request was sent to a targeted, random selection of 4197 members from the AAO-HNS of those with sub-specialty designations of general otolaryngology and rhinology.

Key Reference Codes
The first KRS selected was CPT 19294 Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure) valued at 3.00 RVUs with an intra time of 40. 17 respondents selected this as their primary KRS.

The second KRS selected was CPT 15777 Implantation of biologic implant (eg, acellular dermal matrix) for soft tissue reinforcement (ie, breast, trunk) (List separately in addition to code for primary procedure) valued at 3.65 RVUs with a pre time of 5 / intra time of 45, totaling 50 minutes. 16 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):
We are recommending a work RVU **2.50 and 20 minutes of intra service time**. Our expert panel felt this value which was our survey's 25th percentile, maintains relativity related to other ZZZ otolaryngology codes within the fee schedule.

Pre Service Time: During the 2010 RUC review, the RUC approved pre time for this code, despite it being an add-on service. The RUC justified this, as it is typical for many neurosurgical procedures to have pre-service time due to the high intensity and complexity of the procedure. In addition to the standard preoperative discussion with the patient about the surgical procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to endoscopic sinus surgery. This involves explaining the rationale for the use of the system, how it helps confirm surgical position and avoid damage to surrounding vital structures, and that the surgery may be somewhat longer and more complicated. The system is typically reserved for difficult cases in patients with extensive disease in close proximity to the skull base, orbit, or neurovascular structures, or those with alteration of anatomic landmarks due to previous surgery, trauma, congenital, or neoplastic processes. Depending on the specific system and application, the explanation includes the use of a head frame or other hardware affixed to the patient's head during the procedure. The computer navigation unit is booted up and the surgeon activates the navigation software, loading and verifying patient information and confirming image quality. Program options are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the pathology in relationship to surrounding anatomy, formulating plans for both the approach to and resection of the disease process. Once the patient is positioned on the operating table, the computer navigational unit is moved into place to ensure proper alignment of the camera and intra-operative tracking devices in an unobstructed field of view while allowing the surgeon to see the computer monitor. Because a customized survey instrument was not used for this survey to inquire about pretime, we are not recommending pre time for this code during the April 2025 review.

Post Service Time: We are not requesting any post time for this code, as it is an add-on service.

Total Time: Based on the above recommendations, we are requesting a total time of 35 minutes for code 61782.

REQUEST FOR AN INTERIM VALUE AND TO RESURVEY FOR SEPTEMBER 2025: We understand from prefacilitation that any add on code with pre or post time should utilize a customized add on code survey instrument which was not used for this survey. This code has historically had 15 minutes of pre time that we believe is essential to the service, and is carefully described in our description of work above. Therefore, we request the opportunity to resurvey this code for the September 2025 RUC meeting. In the interim, we are requesting the times and work RVU outlined above and are adding a crosswalk to support this recommendation of *20702 Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* which was surveyed in 2018 and has an identical work RVU of 2.50 and pre time of 5 minutes, intra time of 25 minutes, and post time of 2 minutes, totaling 32 minutes. It also has a similar IWPUT of 0.094.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This add on code may typically be reported with any combination of the following procedure codes: 31253, 31276, 31290, 31291, 31292, 31293, 31294.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61782

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 57000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. This is approximately three times the 2023 Medicare volume from the RUC database.

Specialty Otolaryngology Frequency 55500 Percentage 97.36 %

Specialty Neurosurgery Frequency 1500 Percentage 2.63 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 19,013 If this is a recommendation from multiple specialties please estimate frequency <u>and percentage</u> for each specialty. Please explain the rationale for this estimate. This is the 2023 RUC database utilization for the Medicare population

Specialty Otolaryngology Frequency 18500 Percentage 97.30 %

Specialty Neurosurgery Frequency 500 Percentage 2.62 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 61782

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:61783 Tracking Number Original Specialty Recommended RVU: **3.75**
Presented Recommended RVU: **3.75**
Global Period: ZZZ Current Work RVU: **3.75** RUC Recommended RVU: **3.50**

CPT Descriptor: Stereotactic computer-assisted (navigational) procedure; spinal (Listseparately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Computer-assisted surgical navigation is utilized when a 57-year-old male undergoes operative stabilization of the C1-C2 segment forrupture of the transverse atlantal ligament. [Note: This is an add-on service.Only consider the additional work related to the computer-assisted surgical navigation.]

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: In addition to the standard discussion with the patient about the planned spinal procedure, the surgeon spends additional time discussing the use of stereotactic computer navigation as an adjunct to spinal surgery. This involves explaining the rationale for the use of the system, how it helps to confirm surgical position and avoid damage to surrounding vital structures, how it helps visualize instrument and implant position and that the surgery may be somewhat longer and more complicated. The explanation describes the placement of optical or electromagnetic tracking devices on the spine and key instruments and the identification of reference points. Prior to the surgical procedure and positioning, the computer navigation unit is brought into the room and following booting up of the computer, the surgeon activates the navigation software and enters patient specific information such as identifiers, surgeon, site and side of surgery. Radiographic images that will be used for the navigation are either newly obtained or loaded from preexisting studies into the navigation computer. Setup options for the program are checked and adjusted as necessary. A detailed assessment of the image set in all three dimensions is performed by the surgeon on the computer workstation to analyze the surgical anatomy/pathology in relationship to surrounding anatomy. The final operative plan for the approach to and resection (if needed) of the disease process is completed. Once the patient has been positioned on the operating table, the navigation unit is moved into place so the intra-operative trackers will be in the field of view of the cameras and the surgeon will be able to see the computer monitor screen.

Description of Intra-Service Work: Once the spine has been exposed (reported separately), the required navigation trackers are secured to the spine and to key instruments. The trackers may be passive devices with reflective balls whose position is determined by infrared light signals sent from the camera system which senses their position. They may also be active devices that emit infrared light or electromagnetic signals that are sensed by a detection system. These trackers are then registered with the stereotactic computer navigation system and specific bony landmarks are identified individually by directed digitization with a pointer device that also has tracker components on it. Multiple reference points are identified and generally include one or more spinous processes, facet joints, and transverse processes. After the anatomy has been registered, an assessment of the accuracy is confirmed with the pointing device. The position and angular alignment are checked at several sites. Changes to the trackers and reference points are made until accuracy within 1-2 millimeters is confirmed. The navigation system is used to identify the starting points for drill holes and the appropriate sagittal and

coronal alignment. Drill bit orientation and depth of penetration is checked frequently as the drill is carefully and slowly advanced. Changes in alignment are made as necessary. Repeat navigation images are then obtained as the hole is tapped and again as the final screw or implant is inserted to ensure correct positioning. This entire sequence is then repeated for each screw or implant placed. At the conclusion of the surgical procedure, the trackers are removed.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	27%	46%	27%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	42%	46%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	38%	62%
Physical effort required	0%	27%	62%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	4%	31%	65%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	54%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	67%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	33%	58%
Physical effort required	8%	25%	67%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	29%	58%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Rationale to Maintain Work RVU and Time for Code 61783 as Interim and to Resurvey

The standard ZZZ-global survey was used in 2009 to survey code 61783. The 2009 survey tool correctly defined a ZZZ-global code as: "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time)*." The survey included the ability for the survey respondent to indicate "preservice time (if applicable); intra-service time (skin-to-skin); and immediate post-service time (if applicable)." The 2009 survey of 61783 resulted in a median survey preservice time of 30 minutes. The specialty expert panel indicated the survey respondents overestimated the preservice time, however, the expert panel provided a

rationale that there is (conservatively) an additional 15 minutes of preservice work as described in the description of work section of the SOR.

The RUC agreed with an additional 15 minutes of preservice work separate from the work that occurs during the skin-to-skin portion of the index procedure.

The current standard ZZZ-global code survey still defines the global as "*Code related to another service and is always included in the global period of the other service (Note: Physician work is associated with intra-service time and in some instances the pre- and post-service time).*" However, even though the definition indicates there could be pre- and post-service time related to the add-on service, and the survey respondent is instructed to review the global period definition, there is only a single place to enter time shown as "intra-service time" which can be confusing with respect to time estimation.

The current 2025 survey resulted in an intraservice time of 30 minutes which is consistent with the intraservice time from the prior survey. However, preservice time was not collected for the significant additional preservice work prior to the skin-to-skin component of the index procedure.

We have provided the survey results from the current survey and are **recommending the current work RVU and times be maintained until we can resurvey code 61783** using a survey instrument that includes the ability to report additional pre- and post-service time, if applicable, as described in the definition of a ZZZ-global code. The results of this resurvey will be presented at the September 2025 RUC meeting, which is within the same RUC cycle related to the 2027 Physician Fee Schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 61783

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National utilization is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
29,281 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 information from the RUC database

Specialty Neurosurgery Frequency 20000 Percentage 68.30 %

Specialty Orthopaedic surgery Frequency 9281 Percentage 31.69 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 61783

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: APRIL 2025

CPT Code	Long Descriptor	Global Period
61782	Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
61782	A 51-year-old male presents with nasal polyposis and chronic sinusitis which has failed medical management. A sinus CT shows significant disease involving multiple sinuses with distortion of normal anatomic landmarks. Endoscopic sinus surgery is planned with computer-assisted image guided navigation.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Our expert panel was comprised of our RUC Advisors and other rhinology experts who have intimate knowledge of this procedure.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   31267 – this is the code reported the most frequently with 61782
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Otolaryngology is the dominant specialty in both sites of service.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The site of service for this code has changed since it's initial valuation in 2010 and it is not performed regularly in the non-facility setting, therefore, we are requesting the creation of non-facility PE inputs to be added to the fee schedule.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   This is an add on (ZZZ) code, so there is no pre or post staff time.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    This is an add on code, so there is no pre or post staff time.

    b. Service period (includes pre, intra and post):

    The nurse is assisting the physician during the entirety of this procedure. Typically, this entails removing the image guidance mount from instruments and placing it on other instruments. During this procedure, multiple different instruments are used for image guidance, and when in use, each instrument must have a mount that connects to a wire that then connects to the system.

    c. Post-service period:

    This is an add on code, so there is no pre or post staff time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Typically, this entails removing the image guidance mount from instruments and placing it on other instruments. During this procedure, multiple different instruments are used for image guidance, and when in use, each instrument must have a mount that connects to a wire that then connects to the system.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

The reusable items that integrate with the navigation system (lines 105-108) required for this procedure are not included in the existing CMS PE input lists for supplies or equipment, so we are providing invoices and proposing to add three new supply items. Adhesive pads - Adheres to the patient and the patient tracker, allowing patient tracker to stick on the patient. Patient tracker utilized as the registration point for the patient. Attaches to the adhesive pad which then adheres to the patient.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Single Use Instrumentation Wires - attaches to the mount, which attaches to instruments that are used to identify anatomic landmarks

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

The image guidance system and parts (rows 116-120) are required for this procedure are not included in the existing CMS PE input lists for supplies or equipment, so we are providing invoices and proposing to add them.

The navigation system is the computerized terminal that provides the image guidance. The mounts attach to instruments such as suctions, curettes and pointers. The wire attaches to the mount, which then connects to the image guidance system. This then allows the mounted instrument to be used in the nose and show exactly where the instrument is on imaging. The medical cart without monitor is where the image guidance system sits.

Registration pointer - Pointer utilized to register the CT scan to the patient's surface anatomy.

Pointer Shell Universal Mounts 1 and 2 - attach to instruments that are then used to identify anatomic landmarks. Typically utilize two per procedure.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typically 7 years for the image guidance system.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The mounts have a useful life of about 1 year.
The registration pointer useful lifespan is 5 years.
The Medical Cart without Monitor useful life is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

Navigation system
Pointer Shell Universal Mounts 1 and 2
Registration pointer
Medical Cart without Monitor

We used the default formula for all of these items.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Adding non-facility PE inputs for a ZZZ add on code. This includes the addition of the intra service staff time to support the physician during the procedure, the supplies needed for the image guidance, and the equipment needed for the image guidance which have the default formula applied to them.

Additionally, during the PE presentation at the April RUC meeting, there was discussion regarding whether it was typical for the adhesives for the patient tracker to be included with the tracker cost, or a separately invoiced item. Upon further review, the AAO-HNS expert panel determined that the submitted invoices are correct and do represent the most typically used equipment/system. In a nutshell, the presenter was confused. When one of the reviewers mentioned TruD as the system, the presenter did not recognize that TruD is the name of the system. He was thinking of the name of the company that is typically used, hence his confusion. The invoices submitted do represent the most commonly used equipment/system.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

March 30, 2025

To: Scott Manaker, MD
Chair, AMA/RUC PE Subcommittee

From the RUC Advisors for:
American Association of Neurological Surgeons (AANS)
Congress of Neurological Surgeons (CNS)
North American Spine Society (NASS)
American Academy of Orthopaedic Surgeons (AAOS)
International Society for the Advancement of Spine Surgery (ISASS)

Subject: CPT Code 61783

CPT code 61783 is a facility-only add-on code and will have no related direct practice expense input.

Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Site of Service Anomaly

September 2025

Laminectomy – Tab 24

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 63047 *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar* as a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. These services included in the level of interest form to survey for September 2025. The RAW also worked with the specialty societies and identified codes 63045, 63046 and 63048 as part of this family of services. In the Final Rule for 2014, CMS also determined that codes 63045 and 63046 were part of the same family. When 63047 and 63048 were surveyed alone, CMS valued them as interim and requested the whole family be surveyed together (63045, 63046, 63047 and 63048) and reviewed by the RUC. These services were surveyed for September 2025.

63045 ***Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; cervical***
The RUC reviewed the survey results from 94 physicians for CPT code 63045 and determined that a work RVU of 17.69, slightly below the survey 25th percentile work RVU of 18.00, appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to key reference service CPT code 22554 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2* (work RVU = 17.69, 90 minutes intra-service time and 362 minutes total time). The RUC recommends 40 minutes pre-service evaluation time, 25 minutes positioning time, 15 minutes scrub/dress/wait time, 90 minutes intra-service time, 30 minutes immediate post-service time, 1-99232, 1-99231, 1-99238, 1-99214 and 2-99213 post-operative visits, totaling 384 minutes. CPT code 63045 is primarily performed in the inpatient hospital setting (84% based on 2023 Medicare claims data).

The specialty society indicated that the additional pre-service positioning time is necessary to place serial compressive devices. As well as leads for intraoperative neuromonitoring, when used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. After ventilatory and vascular access is accomplished, the patient's head is secured with the three-point head holder and the patient is carefully rolled off of the hospital bed and onto the operating room table, maintaining neutral lordosis or slight flexion. The head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. The table is positioned on an incline. The shoulders may be taped down caudally, to help with intraoperative imaging of the cervical levels, with care taken to avoid pressure on the brachial plexi. Neuromonitoring recording, when used, is repeated to verify that there is no change in recordings after patient positioning. Additional skin taping may be undertaken to manage excess skin folds as common in the posterior neck.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty societies noted that the median intra-service time required to perform this service has decreased, however, the intensity and complexity have increased. The procedure described by code 63045 has seen changes over time regarding patient complexity, technology, and surgical practice, though the core surgical goals remain similar. There has been a trend toward performing CPT code 63045 on more complex patients. Patients undergoing cervical laminectomy increasingly have more complex degenerative cervical disease and may present with advanced age and comorbidities. A retrospective database analysis demonstrated that the procedure is often performed on older patients, who may have multiple cervical levels affected and less ideal cervical sagittal balance, making surgery and recovery more challenging. This is evidenced by the increasing rate of conversion to fusion following cervical laminectomy versus laminoplasty.[1] Laminoplasty and minimally invasive approaches have evolved as alternatives, aiming to preserve cervical motion, reduce structural instability, and lower the risk of revision and fusion. However, cervical laminectomy remains important for multilevel decompression and in challenging cases, especially when other anatomical or disease factors preclude less invasive methods.[2] Surgery may be more technically challenging due to patient factors (older, sicker, more anatomical variation) and increasing expectations for preserving motion and alignment. Therefore, this service is performed faster than when it was last surveyed. However, it is more intense and complex due to the increased complexity of the patient.

The RUC compared CPT code 63045 to the top key reference service 63075 *Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace* (work RVU = 19.60, 90 minutes intra-service time and 355 minutes total time) and the second top key reference code and crosswalk code, 22554 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2* (work RVU = 17.69, 90 minutes intra-service time and 362 minutes total time). The surveyed code and the key reference services require the same intra-service time and similar total time. The intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity of the procedures. The surveyed code is technically challenging due to narrow spaces, and the need for precision to avoid nerve/spinal cord injury, but there is less risk to visceral/vascular neck structures than the anterior approach associated with codes 63075 and 22554.

For additional support the RUC referenced CPT code 34001 *Embolectomy or thrombectomy, with or without catheter; carotid, subclavian or innominate artery, by neck incision* (work RVU = 17.88, 90 minutes intra-service time and 384 minutes total time) and CPT code 50040 *Nephrostomy, nephrotomy with drainage* (work RVU = 16.68, 90 minutes intra-service time and 405 minutes total time) and determined that maintaining the current work RVU supported relativity among similar services. **The RUC recommends a work RVU of 17.69 for CPT code 63045.**

63046 ***Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; thoracic***
The RUC reviewed the survey results from 94 physicians for CPT code 63046 and determined that a work RVU of 17.14, which is below the survey 25th percentile work RVU of 18.00, appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to CPT code 46710 *Repair of ileoanal pouch fistula/sinus (eg, perineal or vaginal), pouch advancement; transperineal approach* (work RVU = 17.14, 90 minutes intra-service time and 370 minutes total time). The RUC recommends 40 minutes pre-service evaluation time, 25 minutes positioning time, 15 minutes scrub/dress/wait time, 90 minutes intra-service time, 30 minutes immediate post-service time, 1-99232, 1-99231, 1-99238, 1-99214 and 2-99213 post-operative visits for CPT code 63046. CPT code 63046 is primarily performed in the inpatient hospital setting (80% based on 2023 Medicare claims data).

The specialty society indicated that the additional pre-service positioning time is necessary to place serial compressive devices. Leads for intraoperative neuromonitoring, when used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. After ventilatory and vascular access is accomplished, the patient's head is secured with the three-point head holder and the patient is carefully rolled off of the hospital bed and onto the operating room table, maintaining neutral lordosis or slight flexion. The head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. The table is positioned on an incline. The shoulders may be taped down caudally, to help with intraoperative imaging of the thoracic levels, with care taken to avoid pressure on the brachial plexi. Neuromonitoring recording, when used, is repeated to verify that there is no change in recordings after patient positioning. Additional skin taping may be undertaken to manage excess skin folds as needed.

The specialty societies noted that the median intra-service time required to perform this service has decreased, however, the intensity and complexity have increased. The procedure described by code 63046 has experienced some evolution over time, similar to cervical and lumbar decompression procedures. Patients undergoing thoracic decompression procedures like CPT code 63046 tend to be more complex now than a decade ago due to an aging population with more severe degenerative spinal conditions, multilevel disease, and sometimes prior spine surgeries requiring more extensive decompression. Indications have broadened, including cases with increased spinal instability, fractures, and severe degenerative disc disease, which can complicate surgery relative to earlier years. Newer surgical technologies such as spinal navigation, minimally invasive retractors, ultrasonic bone scalpels, and intraoperative imaging systems have been increasingly incorporated into thoracic spine surgery and laminectomies, adding technical complexity. Therefore, this service is performed faster than when it was last surveyed. However, it is more intense and complex due to the increased complexity of the patient.

The RUC questioned why the thoracic laminectomy, CPT code 63046, is less work than the cervical laminectomy, CPT code 63045, even though the survey respondents indicated the exact same time. The specialty societies indicated that the cervical laminectomy requires more physician work intensity due to the risk of ischemia and deformity associated with performing that service.

The RUC compared CPT code 63046 to the top key reference service 63075 *Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace* (work RVU = 19.60, 90 minutes intra-service time and 355 minutes total time) and CPT code 22554 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression);*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

cervical below C2 (work RVU = 17.69, 90 minutes intra-service time and 362 minutes total time). The surveyed code and key reference services require the same intra-service time and similar total time. The intensity and complexity measures for the surveyed code compared with the key reference services support the relativity of the procedures. The thoracic spinal cord is less forgiving than cervical or lumbar regions, as there is much less space before neurological injury can occur. Access is technically more challenging due to the rib cage, narrower spinal canal, and regional vascular structures. There is also an increased risk of spinal cord injury with small surgical errors resulting in CPT code 63046 less commonly performed than cervical or lumbar decompression.

For additional support the RUC referenced CPT code 50040 *Nephrostomy, nephrotomy with drainage* (work RVU = 16.68, 90 minutes intra-service time and 405 minutes total time) and CPT code 34001 *Embolectomy or thrombectomy, with or without catheter; carotid, subclavian or innominate artery, by neck incision* (work RVU = 17.88, 90 minutes intra-service time and 384 minutes total time) and determined that maintaining the current work RVU supported relativity among similar services. **The RUC recommends a work RVU of 17.14 for CPT code 63046.**

63047 ***Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar***

The RUC reviewed the survey results from 94 physicians for CPT code 63047 and determined that the current work RVU of 15.37, which is below the survey 25th percentile work RVU of 17.00, appropriately accounts for the work required to perform this service. The RUC recommends 40 minutes pre-service evaluation, 20 minutes positioning, 15 minutes scrub/dress/wait, 90 minutes intra-service time, 50 minutes immediate post-service time, 0.5-99238, 1-99214 and 2-99213 post-operative visits. CPT code 63047 is no longer primarily performed in the inpatient hospital setting (46% based on 2023 Medicare claims data). Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit is typical. The 23-hour policy was applied to capture this visit as an additional 20 minutes of same data post-operative time.

The specialty society indicated that the additional pre-service positioning time is necessary to place serial compressive devices. Leads for intraoperative neuromonitoring, if used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. (Intraoperative monitoring, when performed, is not reported by the operating surgeon.) Once anesthesia is satisfied with the ventilatory and vascular access, the patient is carefully rolled off of the hospital bed and onto the operating room table; the neck is protected and secured, the head is affixed to the bed frame using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports.

The specialty societies provided detailed information on the level of post-operative visits (1-99314 and 2-99213) in the summary of recommendation rationale. The first post-operative visit is a level 99214 with moderate medical decision making to address symptom review and detailed neurological examination. At this visit, evaluation of the nerve and spinal cord recovery are assessed after the lumbar laminectomy to track progressive restoration of neurological function consistent with spinal cord and nerve healing. The second and third post-operative visits are level 99213 with low medical decision making to address pain management, physical therapy management, suture/staple/drain (when applicable) removal, neurological examination, and care plan changes.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

In January 2013, when this service was last surveyed and reviewed by the RUC, the specialty societies indicated that they considered that the work of these procedures had increased due to the changing patient characteristics. With the growing frequency of non-surgical spine intervention, patients are increasingly presenting for surgery having had prior procedures and studies are beginning to show an increase in the work and length of stay for these patients. Many Medicare and private payors are beginning to require longer waiting periods before spine surgery and during this time patients often receive other interventions, making the patients who do receive surgery more difficult. At that time, the specialty societies decided to recommend the current value rather than the survey 25th percentile, although monitoring the trend in patient characteristics was considered warranted as the work involved in this procedure has already changed since 2005 and is likely to continue to evolve as the patients become more complex.

Additionally in 2013, several reviewers noted that there was considerable evidence that the recommended work RVU (15.37) may have been too low and that an increase may have been warranted. The specialty societies agreed with the commenters but noted the current literature did not support a request for compelling evidence. However, the societies expected that there may be compelling evidence in the near future of a change in work and, therefore, may nominate the codes for re-review at that time.

In 2025, the specialty societies noted that the procedure described by CPT code 63047 experienced some evolution over time, similar to the cervical and thoracic decompression procedures. Patients undergoing lumbar decompression procedures, such as CPT code 63047, tend to be more complex now than a decade ago due to an aging population with more severe degenerative spinal conditions, multilevel disease, and sometimes prior spine surgeries requiring more extensive decompression. Indications have broadened, including cases with increased spinal instability, fractures, and severe degenerative disc disease, which can complicate surgery relative to earlier years. Newer surgical technologies such as spinal navigation, minimally invasive retractors, ultrasonic bone scalpels, and intraoperative imaging systems have been increasingly incorporated into lumbar spine surgery and laminectomies, adding technical complexity.

The RUC compared CPT code 63046 to the top key reference service 63075 *Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace* (work RVU = 19.60, 90 minutes intra-service time and 355 minutes total time) and CPT code 22554 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2* (work RVU = 17.69, 90 minutes intra-service time and 362 minutes total time). The surveyed code and key reference services require the same intra-service time of 90 minutes. The surveyed code is less intense and complex than the anterior approach for cervical discectomy or cervical fusion. The lumbar spine is generally more accessible with a larger spinal canal space than the thoracic or cervical regions, although obesity, scar tissue from prior surgery, or severe stenosis can increase complexity. The lumbar region requires microsurgical precision to avoid nerve root or dural injury but is less complex than anterior approach fusion or tumor resections. Therefore, the intensity and work RVU of the survey code is appropriately less than the key reference services.

For additional support the RUC referenced CPT code 63620 *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 spinal lesion* (work RVU = 15.60 and 90 minutes intra-service time) and determined that maintaining the current work RVU supported relativity among similar services.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC determined that maintaining the current work RVU of 15.37 for CPT code 63047 is appropriate given the increased intensity and complexity due to the change in patient population and new technology incorporated in lumbar spine surgery and laminectomies, and the perceived undervaluation noted during the 2013 valuation. **The RUC recommends a work RVU of 15.37 for CPT code 63047.**

63048 ***Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional vertebral segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 94 physicians who perform this service and determined that the current work RVU of 3.47 and 45 minutes of intra-service time appropriately accounts for the work required to perform this service. The current value is below the survey 25th percentile work RVU of 5.27. The RUC noted that the lumbar laminectomy/facetectomy, foraminotomy CPT code 63047 is typically reported with this add-on service.

The RUC compared the surveyed code to top key reference service 63052 *Laminectomy, facetectomy, or foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s] [eg, spinal or lateral recess stenosis]), during posterior interbody arthrodesis, lumbar; single vertebral segment (List separately in addition to code for primary procedure)* (work RVU = 4.25 and 45 minutes intra-service time) and determined that the surveyed service requires slightly less work to perform since it does not occur during posterior interbody arthrodesis.

For further support, the RUC compared the surveyed service to MPC codes 34812 *Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 4.13 and 40 minutes intra-service time) and 36476 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)* (work RVU = 2.65 and 30 minutes of intra-service time) and determined that maintaining the current work RVU supported relativity among similar services. **The RUC recommends a work RVU of 3.47 for CPT code 63048.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

Work Neutrality
The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
(f)63045	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; cervical	090	17.69 (2025 Work RVU = 17.95)
(f)63046	thoracic	090	17.14 (2025 Work RVU = 17.25)
63047	lumbar	090	15.37 (No Change) (2025 Work RVU = 15.37)
(f)63048	each additional vertebral segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure) (Use 63048 in conjunction with 63045-63047) (Do not report 63047, 63048 in conjunction with 22630, 22632, 22633, 22634, for laminectomy performed to prepare the interspace for fusion on the same interspace[s] and vertebral segment[s]) (For decompression performed on the same interspace[s] and vertebral segment[s] as posterior interbody fusion that includes laminectomy, removal of facets, and/or opening/widening of the foramen for decompression of nerves or spinal components, such as spinal cord, cauda equina, or nerve roots, see 63052, 63053)	ZZZ	3.47 (No Change) (2025 Work RVU = 3.47)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:63045 Tracking Number Original Specialty Recommended RVU: **17.95**
Presented Recommended RVU: **17.69**
Global Period: 090 Current Work RVU: **17.95** RUC Recommended RVU: **17.69**

CPT Descriptor: Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; cervical

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old male presents with right arm pain associated with bilateral upper extremity numbness and paresthesia, upper and lower extremity weakness, and gait imbalance. Imaging studies reveal C5-C6 spinal canal stenosis with cord compression. The patient undergoes C5-C6 decompressive laminectomy with medial facetectomies and bilateral foraminotomies.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 97% , In the ASC 3%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 5% , Overnight stay-less than 24 hours 31% , Overnight stay-more than 24 hours 64%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 98%

Description of Pre-Service Work: Preoperative laboratory work-up is reviewed, and preoperative orders for perioperative medications are written. MRI and/or other spinal imaging studies are reviewed. The planned incisions and procedure are reviewed. The patient is greeted in the holding area, and the surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) are reviewed with the patient and the patient's family. A focused physical exam is performed. The availability of all necessary surgical instruments, supplies, and devices in the operative suite is verified. The length and type of anesthesia are reviewed with the anesthesiologist, including any concerns for spinal cord protection during intubation, depending on the severity of stenosis and preoperative tolerance of flexion and extension. Blood pressure parameters and medications to be used or avoided are also reviewed. The initial patient positioning for induction of anesthesia is monitored. Once the patient is under anesthesia, serial compressive devices are placed. Leads for intraoperative neuromonitoring, when used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. Once anesthesia is satisfied with the ventilatory and vascular access, the patient's head is secured with the three-point head holder and the patient is carefully rolled off of the hospital bed and onto the operating room table, maintaining neutral lordosis or slight flexion. The head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. The table is positioned on an incline. The shoulders may be taped down caudally, to help with intraoperative imaging of the cervical levels, with care taken to avoid pressure on the brachial plexi. Neuromonitoring recording, when used, is repeated to verify that there is no change in recordings after patient positioning. Additional skin taping may be undertaken to manage excess skin folds as common in the posterior neck. Skin cleansing is performed prior to final prep. The midline is marked. Fluoroscopy is used to verify the planned incision. Antibiotics are administered. A surgical time out is completed, and the patient and procedure factors are confirmed with the surgical team. The surgeon scrubs and gowns for the procedure. Final skin prep and draping is performed. Local anesthesia is administered.

Description of Intra-Service Work: A midline posterior cervical incision is made and taken down through the fatty tissues in the midline. The paraspinous muscles are reflected out to the facet joints, exposing the laminae, spinous processes, and facet joints from C5-C6. The levels are marked and confirmed with fluoroscopy. A high-speed drill and rongeurs are used to resect the laminae and medial facet joints of C5 and C6. Bone edges are waxed. The ligamentum flavum is removed,

exposing the dura overlying the spinal cord. Foraminotomy is performed for the compressed nerve roots. The region is examined to ensure no spinal instability after the decompression. Neuromonitoring, when used, may provide feedback during the procedure, prompting pauses. Ultrasound may be used to verify spinal cord decompression. Irrigation is performed. A drain, when required, is tunneled and secured beyond the incision. Hemostasis is achieved, and the incision is closed in layers. Longer lasting analgesic may be injected into the wound at closure for perioperative comfort

Description of Post-Service Work: Apply sterile dressings and remove drapes. Turn patient into the supine position with care taken to maintain the cervical spine in neutral lordosis while turning. Remove the three-pin head holder. Inspect the pin sites and use direct pressure, staple, or suture as appropriate for hemostasis. Remove neuromonitoring needles and pads, when used, prior to the patient awakening, and confirm hemostasis at puncture sites. Monitor transport of patient from OR to recovery room and stabilization in the recovery room. Write a brief operative note immediately postop for the medical record. Monitor the patient for abnormal neurological findings as they emerge from anesthesia. Review and sign operating room forms that include pre- and postoperative diagnosis and operations performed. Complete sign outs with the intraoperative team and the post-anesthesia recovery room team. Discuss the procedure and outcome with family and answer questions. Enter a full operative report in the medical record and send a copy to the referring physician and/or insurance company. Imaging studies are ordered as appropriate and reviewed to check the alignment of the spine. After initial recovery, the patient is examined again for neurologic and cardiovascular stability. Write comprehensive orders for floor care and complete medication reconciliation.

Later the same day, review nursing notes and discuss status and progress with nursing staff. Review vital signs, I/O, and other related data. Examine the surgical site. Assess neurovascular status. Counsel the patient regarding activity/ambulation and answer questions. Assess pain control and response to current medications and modify orders accordingly. Communicate and coordinate pain control with anesthesia and nursing staff. Write progress note.

On each subsequent postop day, review nursing notes and discuss status and progress with nursing staff. Review vital signs, I/O, and other related data. Examine the surgical site. Order and review imaging when required. Assess neurovascular status. Write orders for activity and physical therapy and answer patient, family, and nursing staff questions. Assess pain control and response to current medications and modify orders accordingly. Write progress note.

Discharge day management includes discussion of status and progress with case manager. Discharge plans are finalized and confirmed with patient. Would care and activity limitations (eg, bathing, proper fit of a collar when used) are reviewed with the patient. Orders are written for post-discharge physical therapy and discussed with the patient. Orders are written for post-discharge imaging studies as appropriate. The patient is examined. The wounds are examined and redressed. Neurovascular status is assessed. Hospital medications are reconciled, and in consultation with other treating providers, confirmation is obtained that all orders are in place for medications needed post-discharge, including timing and need for resumption of preoperative medications. Patient discharge notes are written. A discharge summary is completed for the medical record.

Office visit work includes the following activities: review physical therapy notes; order and review results of imaging when appropriate; interview patient and obtain interval history; answer patient questions; assess function, mobility, and progress with PT; remove/change dressing; examine surgical site; remove drain, sutures, and/or staples; apply wound closure strips; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations, including driving; counsel patient regarding next office visit; write or dictate and sign progress note; assess pain control and response to current medications and adjust as required; check narcotic prescription registries; counsel patient on tapering from narcotic medication; complete forms for home care services if needed; update physical therapy orders; complete disability, out of work, and/or other related insurance forms; communicate and coordinate care with other physicians and providers; and enter patient progress note into medical record with copy to primary care and/or other physicians as appropriate.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	50%	33%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	67%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	62%	33%
Physical effort required	8%	44%	48%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	56%	42%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	8%	0%	50%	42%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	50%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	50%	42%
Physical effort required	8%	75%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	50%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 63047 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. Codes **63045**, 63046, and 63048 were added as family codes.

Survey Process
A custom survey was developed by the AMA staff to include all three 90-day global codes and the single add-on code. The AANS, CNS, AAOS, NASS, and ISASS expressed a level of interest to review these codes and each sent survey requests to randomly selected members of their respective organizations. A note was added to the survey to only complete it once if a request was received from more than one society. Names and IP addresses were checked to be certain there was only one response per person.

Compelling Evidence for Change in Intensity / Complexity

- ***Changes in patient and technology***

The procedure described by code 63045 has seen changes over time regarding patient complexity, technology, and surgical practice, though the core surgical goals remain similar. There has been a trend toward performing 63045 on more complex patients. Patients undergoing cervical laminectomy increasingly have more complex degenerative cervical disease and may present with advanced age and comorbidities. Large database analyses show that the procedure is often performed on older patients, who may have multiple cervical levels affected and less ideal cervical sagittal balance, making surgery and recovery more challenging. This is evidenced by increasing rate of conversion to fusion following cervical laminectomy versus laminoplasty.[1] Laminoplasty and minimally invasive approaches have evolved as alternatives, aiming to preserve cervical motion, reduce structural instability, and lower the risk of revision and fusion. However, cervical laminectomy remains important for multilevel decompression and in challenging cases, especially when other anatomical or disease factors preclude less invasive methods.[2] Surgery may be more technically challenging due to patient factors (older, sicker, more anatomical variation) and increasing expectations for preserving motion and alignment. ***Based on this evidence, we believe advances in technology and technique has changed the typical patient.***

Recommendation – 63045

We recommend maintaining the work RVU of 17.95. Although the intraservice time decreased, the postoperative work has increased. The procedure is more intense and complex as the level of patient acuity has increased.

Pre-service time
Pre-time package 4 is selected, with the following modifications:

Evaluation time: No change to package time of 40 minutes.

Positioning: Add 22 minutes to the standard package time of 3 minutes (total time = 25 minutes). Once the patient is under anesthesia, serial compressive devices are placed. Leads for intraoperative neuromonitoring, when used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. After ventilatory and vascular access is accomplished, the patient's head is secured with the three-point head holder and the patient is carefully rolled off of the hospital bed and onto the operating room table, maintaining neutral lordosis or slight flexion. The head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. The table is positioned on an incline. The shoulders may be taped down caudally, to help with intraoperative imaging of the cervical levels, with care taken to avoid pressure on the brachial plexi. Neuromonitoring recording, when used, is repeated to verify that there is no change in recordings after patient positioning. Additional skin taping may be undertaken to manage excess skin folds as common in the posterior neck.

Scrub, dress and wait: Subtract 5 minutes from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time
Immediate post-time package 9b is selected. Subtract 3 minutes to be consistent with the survey median.

---

Discussion of Postoperative Office Visits

POV1 (99214). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery, where the patient is not at the treatment goal of complete pain relief. (moderate). (2) Discussion of patient management with the PT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, in addition to wound management, a significant amount of time will be spent performing and documenting a detailed neurological assessment of changes in sensation, muscle strength, pain level, coordination, and any difficulties with bladder or bowel control. Assessment is made of numbness, tingling, or shooting pain, as well as resolution or persistence of preoperative deficits. Motor testing will assess changes in muscle strength in the arms, hands, and legs. Sensory testing will be performed to examine the patient for restored sensation, persistent numbness, or abnormal sensations in the affected dermatomes. Deep tendon reflexes are tested to identify ongoing or new deficits. Assessment of improvement in walking or fine motor skills is performed. Evaluation is performed for changes in balance, coordination, and hand function which would indicate spinal cord involvement. In summary, the visit uses symptom review and detailed neurological examination, to evaluate nerve and spinal cord recovery after cervical laminectomy to track progressive restoration of neurological function consistent with spinal cord and nerve healing.

POV2-POV3 (99213): The patient still has a chronic condition from surgery and not at treatment goal of pain free ambulation; there is continued discussion with external PT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered/tapered as required. Sutures, staples, and drain(s) (when placed) will be removed when appropriate. Continued detailed neurological examination will occur to assess progress and change the care plan as needed. Although these visits may meet the MDM and/or time requirement for 99214, the recommendation is 99213 based on the survey visit level median.

Key Reference Code Comparison

The intensity and complexity scores for the survey code compared with the reference codes support the relativity of the procedures. The survey code is technically challenging due to narrow spaces, and need for precision to avoid nerve/spinal cord injury, but there is less risk to visceral/vascular neck structures than the anterior approach (63075, 22554).

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	Hosp	Office
63075	Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace	19.60	0.132	355	95	90	30	78	62

22554	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2	17.69	0.106	362	95	90	30	78	69

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Typically reported with add-on code 63048 and arthrodesis codes 22600 and 22614. 22600 Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment, 71% of the time based on 2023 Medicare data and 22614 Arthrodesis, posterior or posterolateral technique, single interspace; each additional interspace (List separately in addition to code for primary procedure), 68% of the time based on 2023 Medicare data.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 63045

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
10,499 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare data from RUC database

Specialty neurosurgery Frequency 7250 Percentage 69.05 %

Specialty orthopaedic surgery Frequency 3200 Percentage 30.47 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 96% , In the ASC 4%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 7% , Overnight stay-less than 24 hours 28% , Overnight stay-more than 24 hours 66%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 95%

Description of Pre-Service Work: Preoperative laboratory work-up is reviewed, and preoperative orders for perioperative medications are written. MRI and/or other spinal imaging studies are reviewed. The planned incisions and procedure are reviewed. The patient is greeted in the holding area, and the surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) are reviewed with the patient and the patient's family. A focused physical exam is performed. The availability of all necessary surgical instruments, supplies, and devices in the operative suite is verified. The length and type of anesthesia are reviewed with the anesthesiologist, including any concerns for spinal cord protection during intubation, depending on the severity of stenosis and preoperative tolerance of flexion and extension. Blood pressure parameters and medications to be used or avoided are also reviewed. The initial patient positioning for induction of anesthesia is monitored. Once the patient is under anesthesia, serial compressive devices are placed. Leads for intraoperative neuromonitoring, when used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. Once anesthesia is satisfied with the ventilatory and vascular access, the patient's head is secured with the three-point head holder and the patient is carefully rolled off of the hospital bed and onto the operating room table, maintaining neutral lordosis or slight flexion. The head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. The table is positioned on an incline. The shoulders may be taped down caudally, to help with intraoperative imaging of the thoracic levels, with care taken to avoid pressure on the brachial plexi. Neuromonitoring recording, when used, is repeated to verify that there is no change in recordings after patient positioning. Additional skin taping may be undertaken to manage excess skin folds as needed. Skin cleansing is performed prior to final prep. The midline is marked. Fluoroscopy is used to verify the planned incision. Antibiotics are administered. A surgical time out is completed, and the patient and procedure factors are confirmed with the surgical team. The surgeon scrubs and gowns for the procedure. Final skin prep and draping is performed. Local anesthesia is administered.

Description of Intra-Service Work: A midline posterior thoracic incision is made and taken down through the fatty tissues in the midline. The fascia is divided midline and the paraspinous muscles are reflected out to the facet joints, exposing the laminae, spinous processes, and facet joints from T9-T10. The levels are marked and confirmed with fluoroscopy. A high-speed drill and rongeurs are used to resect the laminae and medial facet joints of T9 and T10. Bone edges are waxed. The ligamentum flavum is removed, exposing the dura overlying the spinal cord. Foraminotomy is performed for the

compressed nerve roots. The region is examined to ensure no spinal instability after the decompression. Neuromonitoring, when used, may provide feedback during the procedure, prompting pauses. Ultrasound may be used to verify spinal cord decompression. Irrigation is performed. A drain, when required, is tunneled and secured beyond the incision. Hemostasis is achieved, and the incision is closed in layers. Longer lasting analgesic may be injected into the wound at closure for perioperative comfort.

Description of Post-Service Work: Apply sterile dressings and remove drapes. Turn patient into the supine position with care taken to maintain the cervical spine in neutral lordosis while turning. Remove the three-pin head holder. Inspect the pin sites and use direct pressure, staple, or suture as appropriate for hemostasis. Remove neuromonitoring needles and pads, when used, prior to the patient awakening, and confirm hemostasis at puncture sites. Monitor transport of patient from OR to recovery room and stabilization in the recovery room. Write a brief operative note immediately postop for the medical record. Monitor the patient for abnormal neurological findings as they emerge from anesthesia. Review and sign operating room forms that include pre- and postoperative diagnosis and operations performed. Complete sign outs with the intraoperative team and the post-anesthesia recovery room team. Discuss the procedure and outcome with family and answer questions. Enter a full operative report in the medical record and send a copy to the referring physician and/or insurance company. Imaging studies are ordered as appropriate and reviewed to check the alignment of the spine. After initial recovery, the patient is examined again for neurologic and cardiovascular stability. Write comprehensive orders for floor care and complete medication reconciliation.

Later the same day, review nursing notes and discuss status and progress with nursing staff. Review vital signs, I/O, and other related data. Examine the surgical site. Assess neurovascular and cardiovascular stability. Counsel the patient regarding activity/ambulation and answer questions. Assess pain control and response to current medications and modify orders accordingly. Communicate and coordinate pain control with anesthesia and nursing staff. Write progress note.

On each subsequent postop day, review nursing notes and discuss status and progress with nursing staff. Review vital signs, I/O, and other related data. Examine the surgical site. Order and review imaging when required. Assess neurovascular status. Write orders for activity and physical therapy and answer patient, family, and nursing staff questions. Assess pain control and response to current medications and modify orders accordingly. Write progress note.

Discharge day management includes discussion of status and progress with case manager. Discharge plans are finalized and confirmed with patient. Would care and activity limitations (eg, bathing, proper fit of a brace when used) are reviewed with the patient. Orders are written for post-discharge physical therapy and discussed with the patient. Orders are written for post-discharge imaging studies as appropriate. The patient is examined. The wounds are examined and redressed. Neurovascular status is assessed. Hospital medications are reconciled, and in consultation with other treating providers, confirmation is obtained that all orders are in place for medications needed post-discharge, including timing and need for resumption of preoperative medications. Patient discharge notes are written. A discharge summary is completed for the medical record.

Office visit work includes the following activities: review physical therapy notes; order and review results of imaging when appropriate; interview patient and obtain interval history; answer patient questions; assess function, mobility, and progress with PT; remove/change dressing; examine surgical site; remove drain, sutures, and/or staples; apply wound closure strips; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations, including driving; counsel patient regarding next office visit; write or dictate and sign progress note; assess pain control and response to current medications and adjust as required; check narcotic prescription registries; counsel patient on tapering from narcotic medication; complete forms for home care services if needed; update physical therapy orders; complete disability, out of work, and/or other related insurance forms; communicate and coordinate care with other physicians and providers; and enter patient progress note into medical record with copy to primary care and/or other physicians as appropriate.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	2%	46%	33%	19%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	58%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	50%	48%
Physical effort required	2%	48%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	48%	48%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	9%	0%	45%	45%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	18%	55%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	9%	45%	45%
Physical effort required	9%	73%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	45%	45%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 63047 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. Codes 63045, **63046**, and 63048 were added as family codes.

Survey Process
A custom survey was developed by the AMA staff to include all three 90-day global codes and the single add-on code. The AANS, CNS, AAOS, NASS, and ISASS expressed a level of interest to review these codes and each sent survey requests to randomly selected members of their respective organizations. A note was added to the survey to only complete it once if a request was received from more than one society. Names and IP addresses were checked to be certain there was only one response per person.

Compelling Evidence for Change in Intensity / Complexity

- ***Changes in patient and technology***

The procedure described by code 63046 has experienced some evolution over time similar to cervical and lumbar decompression procedures. Patients undergoing thoracic decompression procedures like 63046 tend to be more complex now than a decade ago due to an aging population with more severe degenerative spinal conditions, multilevel disease, and sometimes prior spine surgeries requiring more extensive decompression. Indications have broadened, including cases with increased spinal instability, fractures, and severe degenerative disc disease, which can complicate surgery relative to earlier years. Newer surgical technologies such as spinal navigation, minimally invasive retractors, ultrasonic bone scalpels, and intraoperative imaging systems have been increasingly incorporated into thoracic spine surgery and laminectomies, adding technical complexity.

Recommendation – 63046

We recommend maintaining the work RVU of 17.25. Although the intraservice time decreased, the postoperative work has increased. The procedure is more intense and complex as the level of patient acuity has increased.

Pre-service time
Pre-time package 4 is selected, with the following modifications:

Evaluation time: No change to package time of 40 minutes.

Positioning: Add 22 minutes to the standard package time of 3 minutes (total time = 25 minutes). Once the patient is under anesthesia, serial compressive devices are placed. Leads for intraoperative neuromonitoring, when used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. After ventilatory and vascular access is accomplished, the patient's head is secured with the three-point head holder and the patient is carefully rolled off of the hospital bed and onto the operating room table, maintaining neutral lordosis or slight flexion. The head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. The table is positioned on an incline. The shoulders may be taped down caudally, to help with intraoperative imaging of the thoracic levels, with care taken to avoid pressure on the brachial plexi. Neuromonitoring recording, when used, is repeated to verify that there is no change in recordings after patient positioning. Additional skin taping may be undertaken to manage excess skin folds as needed.

Scrub, dress and wait: Subtract 5 minutes from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time
Immediate post-time package 9b is selected. Subtract 3 minutes to be consistent with the survey median.

Discussion of Postoperative Office Visits

POV1 (99214). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery, where the patient is not at the treatment goal of complete pain relief. (moderate). (2) Discussion of patient management with the PT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, in addition to wound management, a significant amount of time will be spent performing and documenting a detailed neurological assessment of changes in sensation, muscle strength, pain level, coordination, and any difficulties with bladder or bowel control. Assessment is made of numbness, tingling, or shooting

pain, as well as resolution or persistence of preoperative deficits. Motor testing will assess changes in muscle strength in the arms, hands, and legs. Sensory testing will be performed to examine the patient for restored sensation, persistent numbness, or abnormal sensations in the affected dermatomes. Deep tendon reflexes are tested to identify ongoing or new deficits. Assessment of improvement in walking or fine motor skills is performed. Evaluation is performed for changes in balance, coordination, and hand function which would indicate spinal cord involvement. In summary, the visit uses symptom review and detailed neurological examination, to evaluate nerve and spinal cord recovery after thoracic laminectomy to track progressive restoration of neurological function consistent with spinal cord and nerve healing.

POV2-POV3 (99213): The patient still has a chronic condition from surgery and not at treatment goal of pain free ambulation; there is continued discussion with external PT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered/tapered as required. Sutures, staples, and drain(s) (when placed) will be removed when appropriate. Continued detailed neurological examination will occur to assess progress and change the care plan as needed. Although these visits may meet the MDM and/or time requirement for 99214, the recommendation is 99213 based on the survey visit level median.

Key Reference Code Comparison

The intensity and complexity scores for the survey code compared with the reference codes support the relativity of the procedures. The thoracic spinal cord is less forgiving than cervical or lumbar regions as there is much less space before neurological injury can occur. Access is technically more challenging due to the rib cage, narrower spinal canal, and regional vascular structures, with an increased risk of spinal cord injury with small surgical errors resulting in 63046 less commonly performed than cervical or lumbar decompression.

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	Hosp	Office
63075	Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace	19.60	0.132	355	95	90	30	78	62
63046	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single thoracic segment; cervical	17.25	0.090	384	80	90	30	98	86
22554	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2	17.69	0.106	362	95	90	30	78	69

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Typically reported with add-on code 63048 and arthrodesis codes 22614 and 22610.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 63046

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,210
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare data from RUC database

Specialty neurosurgery Frequency 2400 Percentage 57.00 %

Specialty orthopaedic surgery Frequency 1700 Percentage 40.38 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:

CPT Descriptor: Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female presents with five months of neurogenic claudication unresponsive to physical therapy or epidural cortisone injections. Imaging studies reveal L4-L5 spinal stenosis. She undergoes L4-L5 decompressive laminectomy with medial facetectomies and bilateral L5 foraminotomies.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 81% , In the ASC 19%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 26% , Overnight stay-less than 24 hours 26% , Overnight stay-more than 24 hours 47%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 98%

Description of Pre-Service Work: Preoperative laboratory work-up is reviewed, and preoperative orders for perioperative medications are written. MRI and/or other spinal imaging studies are located, reviewed, and placed on the view box in the operating room. The planned incisions and procedure are reviewed. The patient is greeted in the holding area, and the surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) are reviewed with the patient and the patient's family. The operative site is signed and marked. Informed consent is obtained. The patient is examined for any neurologic change, and also for positioning tolerance of neck flexion/extension, and shoulder mobility. The availability of all necessary surgical instruments, supplies, and devices in the operative suite is verified. The length and type of anesthesia are reviewed with the anesthesiologist, as are blood pressure parameters and intraoperative medications (antibiotic choice, steroids, tranexamic acid, NSAIDs, others). The initial patient positioning for induction of anesthesia is monitored. Once the patient is under anesthesia, serial compressive devices are placed. Leads for intraoperative neuromonitoring, if used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. (Intraoperative monitoring, when performed, is not reported by the operating surgeon.) Once anesthesia is satisfied with the ventilatory and vascular access, the patient is carefully rolled off of the hospital bed and onto the operating room table; the neck is protected and secured, the head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. Neuromonitoring recording, if used, is repeated to vrify that there is no change in recordings after patient positioning. Skin cleansing is undertaken (prior to formal preparation). The midline is marked. Fluoroscopy is used to verify the planned incision. Antibiotics are administered. A surgical time out is completed, and the patient and procedure factors are confirmed with the surgical team. The surgeon scrubs and gowns for the procedure. Final skin prep and drape is performed. Local anesthesia is administered.

Description of Intra-Service Work: A midline posterior lumbar incision is made and taken down through the fatty tissues in the midline. The fascia is divided midline and the paraspinous muscles are reflected out to the facet joints, exposing the laminae, spinous processes, and facet joints from L4-L5. The levels are marked and confirmed with fluoroscopy. A high-speed drill and rongeurs are used to resect the laminae and medial facet joints of L4 and L5. Bone edges are waxed. The ligamentum flavum is removed, exposing the dura overlying the cauda equina and exiting nerve roots. Foraminotomy is

performed for the compressed nerve roots. A discectomy is performed, when necessary to complete the foraminotomy. Neuromonitoring, when used, may provide feedback during the procedure, prompting pauses. Ultrasound may be used to verify spinal cord decompression. Irrigation is performed. A drain, when required, is tunneled and secured beyond the incision. Hemostasis is achieved, and the incision is closed in layers. Longer lasting analgesic may be injected into the wound at closure for perioperative comfort.

Description of Post-Service Work: Apply sterile dressings and remove drapes. Turn patient into the supine position with care taken to maintain the cervical spine in neutral lordosis while turning. Remove the three-pin head holder. Inspect the pin sites and use direct pressure, staple, or suture as appropriate for hemostasis. Remove neuromonitoring needles and pads, when used, prior to the patient awakening, and confirm hemostasis at puncture sites. Monitor transport of patient from OR to recovery room and stabilization in the recovery room. Write a brief operative note immediately postop for the medical record. Monitor the patient for abnormal neurological findings as they emerge from anesthesia. Review and sign operating room forms that include pre- and postoperative diagnosis and operations performed. Complete sign outs with the intraoperative team and the post-anesthesia recovery room team. Discuss the procedure and outcome with family and answer questions. Enter a full operative report in the medical record and send a copy to the referring physician and/or insurance company. Imaging studies are ordered as appropriate and reviewed to check the alignment of the spine. After initial recovery, the patient is examined again for neurologic and cardiovascular stability. Write comprehensive orders for floor care and complete medication reconciliation.

Later the same day, review nursing notes and discuss status and progress with nursing staff. Review vital signs, I/O, and other related data. Examine the surgical site. Assess neurovascular and cardiovascular stability. Counsel the patient regarding activity/ambulation and answer questions. Assess pain control and response to current medications and modify orders accordingly. Communicate and coordinate pain control with anesthesia and nursing staff. Write progress note.

Discharge day management includes discussion of status and progress with case manager. Discharge plans are finalized and confirmed with patient. Would care and activity limitations (eg, bathing, proper fit of a brace when used) are reviewed with the patient. Orders are written for post-discharge physical therapy and discussed with the patient. Orders are written for post-discharge imaging studies as appropriate. The patient is examined. The wounds are examined and redressed. Neurovascular status is assessed. Hospital medications are reconciled, and in consultation with other treating providers, confirmation is obtained that all orders are in place for medications needed post-discharge, including timing and need for resumption of preoperative medications. Patient discharge notes are written. A discharge summary is completed for the medical record.

Office visit work includes the following activities: review physical therapy notes; order and review results of imaging when appropriate; interview patient and obtain interval history; answer patient questions; assess function, mobility, and progress with PT; remove/change dressing; examine surgical site; remove drain, sutures, and/or staples; apply wound closure strips; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations, including driving; counsel patient regarding next office visit; write or dictate and sign progress note; assess pain control and response to current medications and adjust as required; check narcotic prescription registries; counsel patient on tapering from narcotic medication; complete forms for home care services if needed; update physical therapy orders; complete disability, out of work, and/or other related insurance forms; communicate and coordinate care with other physicians and providers; and enter patient progress note into medical record with copy to primary care and/or other physicians as appropriate.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	53%	33%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	16%	58%	26%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	63%	33%
Physical effort required	2%	51%	47%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	56%	30%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	58%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	67%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	67%	25%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	58%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT code 63047 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. Codes 63045, 63046, and 63048 were added as family codes.

Survey Process
A custom survey was developed by the AMA staff to include all three 90-day global codes and the single add-on code. The AANS, CNS, AAOS, NASS, and ISASS expressed a level of interest to review these codes and each sent survey requests to randomly selected members of their respective organizations. A note was added to the survey to only complete it once if a request was received from more than one society. Names and IP addresses were checked to be certain there was only one response per person.

Compelling Evidence for Change in Intensity / Complexity

- ***Changes in patient and technology***

The procedure described by code 63047 has experienced some evolution over time similar to cervical and thoracic decompression procedures. Patients undergoing lumbar decompression procedures like 63047 tend to be more complex now than a decade ago due to an aging population with more severe degenerative spinal conditions, multilevel disease, and sometimes prior spine surgeries requiring more extensive decompression. Indications have broadened, including cases with increased spinal instability, fractures, and severe degenerative disc disease, which can complicate surgery relative to earlier years. Newer surgical technologies such as spinal navigation, minimally invasive retractors, ultrasonic bone scalpels, and intraoperative imaging systems have been increasingly incorporated into lumbar spine surgery and laminectomies, adding technical complexity.

Recommendation – 63047

We recommend maintaining the work RVU of 15.37 which is less than the survey median and 25th percentile.

Pre-service time
Pre-time package 4 is selected, with the following modifications:

Evaluation time: No change to package time of 40 minutes.

Positioning: Add 17 minutes to the standard package time of 3 minutes (total time = 20 minutes, survey median). Once the patient is under anesthesia, serial compressive devices are placed. Leads for intraoperative neuromonitoring, if used, are positioned and secured, and baseline neuromonitoring values are obtained prior to positioning. (Intraoperative monitoring, when performed, is not reported by the operating surgeon.) Once anesthesia is satisfied with the ventilatory and vascular access, the patient is carefully rolled off of the hospital bed and onto the operating room table; the neck is protected and secured, the head is affixed to the bedframe using the head holder. The patient is secured in the prone position with pressure points padded. Arms are positioned such that they are secured yet anesthesia can access vascular ports. Neuromonitoring recording, if used, is repeated to verify that there is no change in recordings after patient positioning. Skin cleansing is undertaken (prior to formal preparation).The midline is marked. Fluoroscopy is used to verify the planned incision.

Scrub, dress and wait: Subtract 5 minutes from the standard package of 20 minutes (total time = 15 minutes) to be consistent with the survey median.

Immediate Post-Service Time
Immediate post-time package 9b is selected. Add 20 minutes to the survey median time per the CMS 23 hour inpatient policy (total time = 50 minutes) to account for the second visit and re-evaluation separate from the discharge management services.

Discussion of Postoperative Office Visits

POV1 (99214). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery, where the patient is not at the treatment goal of complete pain relief. (moderate). (2) Discussion of patient management with the PT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, in addition to wound management, a significant amount of time will be spent performing and documenting a detailed neurological assessment of changes in sensation, muscle strength, pain level,

coordination, and any difficulties with bladder or bowel control. Assessment is made of numbness, tingling, or shooting pain, as well as resolution or persistence of preoperative deficits. Motor testing will assess changes in muscle strength in the arms, hands, and legs. Sensory testing will be performed to examine the patient for restored sensation, persistent numbness, or abnormal sensations in the affected dermatomes. Deep tendon reflexes are tested to identify ongoing or new deficits. Assessment of improvement in walking or fine motor skills is performed. Evaluation is performed for changes in balance, coordination, and hand function which would indicate spinal cord involvement. In summary, the visit uses symptom review and detailed neurological examination, to evaluate nerve and spinal cord recovery after lumbar laminectomy to track progressive restoration of neurological function consistent with spinal cord and nerve healing.

POV2 and POV3 (99213): The patient still has a chronic condition from surgery and not at treatment goal of pain free ambulation; there is continued discussion with external PT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered/tapered as required. Sutures, staples, and drain(s) (when placed) will be removed when appropriate. Continued detailed neurological examination will occur to assess progress and change the care plan as needed. Although these visits may meet the MDM and/or time requirement for 99214, the recommendation is 99213 based on the survey visit level median.

Key Reference Code Comparison

The survey code is less intense and complex than the anterior approach for cervical discectomy or cervical fusion. The lumbar spine is generally more accessible with larger spinal canal space than the thoracic or cervical regions although obesity, scar tissue from prior surgery, or severe stenosis can increase complexity. The lumbar region requires microsurgical precision to avoid nerve root or dural injury but is less complex than anterior approach fusion or tumor resections. For these reasons, the intensity and work RVU of the survey code is appropriately less than the key reference codes.

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	Hosp	Office
63047	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar	15.37	0.097	320	80	90	50	38	86
22554	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2	17.69	0.106	362	95	90	30	78	69
63075	Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace	19.60	0.132	355	95	90	30	78	62

Summary

The valuation of CPT 63047 should capture the complete scope of physician work performed. Based on current evidence, we recommend maintaining the work RVU of 15.37 for 63047, which remains below both the survey median and 25th percentile.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Typically reported with add-on code 63048 for each additional segment.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 63047

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Commonly

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national data is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
77,826 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.
Please explain the rationale for this estimate. 2023 Medicare data from RUC database

Specialty neurosurgery Frequency 40000 Percentage 51.39 %

Specialty orthopaedic surgery Frequency 37000 Percentage 47.54 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 63047

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:63048 Tracking Number Original Specialty Recommended RVU: **3.47**
Presented Recommended RVU: **3.47**
Global Period: ZZZ Current Work RVU: **3.47** RUC Recommended RVU: **3.47**

CPT Descriptor: Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional vertebral segment, cervical, thoracic, or lumbar

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female presents with five months of neurogenic claudication unresponsive to physical therapy or epidural cortisone injections. Imaging studies reveal L3-L4 and L4-L5 spinal stenosis. After an L3-L4 decompressive laminectomy with medial facetectomies and bilateral L4 foraminotomies are completed (reported separately), she undergoes the additional work of a L4-L5 decompressive laminectomy with medial facetectomies and bilateral L5 foraminotomies. [Note: This is an add-on code. Only consider the additional work related to the additional L4-L5 decompressive laminectomy with medial facetectomies and bilateral L5 foraminotomies.]

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: After completion of an L3-L4 decompressive laminectomy with medial facetectomies and bilateral L4 foraminotomies are completed (reported separately), proceed to the L4-L5 level. Carry the midline incision and subperiosteal dissection caudally, exposing the L5 spinous process and lamina. Remove the spinous process and lamina of L5 with a drill or bone-biting instruments, exposing the dura and ligamentum flavum of the L4-L5 interspace. Remove the ligamentum flavum, exposing the lateral recess of the spinal canal. Perform a medial facetectomy (unilateral or bilateral) with a drill, osteotome, or bone-biting instruments. Expose and decompress the L5 nerve root via foraminotomy and discectomy, as required. Ultrasound may be used to verify spinal cord decompression. Irrigation is performed. Hemostasis is achieved, and the additional incision is closed in layers.

Description of Post-Service Work: N/A

Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	79%	9%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	70%	15%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	79%	18%
Physical effort required	6%	73%	21%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	73%	15%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	38%	38%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	44%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	31%	56%
Physical effort required	13%	19%	69%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	38%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT code 63047 was identified with a Medicare utilization over 10,000 and site of service anomaly where Medicare data from 2021-2023 indicated the service was performed less than 50% of the time as inpatient (ie, 2 or more midnights), but included more than 2 hospital E/M codes within the global period. A survey of physician work was requested. Codes 63045, 63046, and **63048** were added as family codes.

Survey Process
A custom survey was developed by the AMA staff to include all three 90-day global codes and the single add-on code. The AANS, CNS, AAOS, NASS, and ISASS expressed a level of interest to review these codes and each sent survey requests to randomly selected members of their respective organizations. A note was added to the survey to only complete it once if a request was received from more than one society. Names and IP addresses were checked to be certain there was only one response per person.

Recommendation – 63048

We recommend maintaining the work RVU of 3.47, which results in a similar intensity to code 63047, with which code 63048 is most commonly reported.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (Use 63048 in conjunction with 63045-63047)

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 63048

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Commonly

Specialty orthopaedic surgery How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. national data is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 99,663 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2023 Medicare data from RUC database

Specialty neurosurgery Frequency 53000 Percentage 53.17 %

Specialty orthopaedic surgery Frequency 46000 Percentage 46.15 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 63048

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

ISSUE: Laminectomy

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
63045	A 72-year-old male presents with right arm pain associated with bilateral upper extremity numbness and paresthesia, upper and lower extremity weakness, and gait imbalance. Imaging studies reveal C5-C6 spinal canal stenosis with cord compression. The patient undergoes C5-C6 decompressive laminectomy with medial facetectomies and bilateral foraminotomies.
63046	A 72-year-old male presents with bilateral intercostal radicular pain, bilateral lower extremity paresthesia and weakness, and gait imbalance. Imaging studies reveal T9-T10 spinal canal stenosis with cord compression. The patient undergoes T9-T10 decompressive laminectomy with medial facetectomies and bilateral foraminotomies.
63047	A 72-year-old female presents with five months of neurogenic claudication unresponsive to physical therapy or epidural cortisone injections. Imaging studies reveal L4-L5 spinal stenosis. She undergoes L4-L5 decompressive laminectomy with medial facetectomies and bilateral L5 foraminotomies.
63048	A 72-year-old female presents with five months of neurogenic claudication unresponsive to physical therapy or epidural cortisone injections. Imaging studies reveal L3-L4 and L4-L5 spinal stenosis. After an L3-L4 decompressive laminectomy with medial facetectomies and bilateral L4 foraminotomies are completed (reported separately), she undergoes the additional work of a L4-L5 decompressive laminectomy with medial facetectomies and bilateral L5 foraminotomies. [Note: This is an add-on code. Only consider the additional work related to the additional L4-L5 decompressive laminectomy with medial facetectomies and bilateral L5 foraminotomies.]

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Surgeons familiar with these procedures reviewed the current PE direct inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   Current codes are used as references

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

no

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Clinical staff: Increased clinical staff time is due to change in level of postop office E/M Supplies: SM022, sanitizing cloth-wipe (surface, instruments, equipment), is needed to clean hard surfaces at each postoperative visit. This is consistent with the addition of SM022 to E/M office visit codes as this was not included in the E/M multispecialty office visit pack. Equipment: Increased equipment time is due to change in level of postop office E/M

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

NO

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.

Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of preservice imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including presurgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists. Confirms that implants will be available.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status, and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions and outpatient follow-up. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

c. Post-service period:

The clinical staff work includes the standard activities involved in office E/M visits including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instructions.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
☐ Yes or ☒ No.
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: RUC Flag*

September 2025

Injection Anesthetic Agent – Tab 25

In April 2025, the RUC reviewed 64400 as identified via the "Do not use to validate physician work" flag. In 2018 for CPT 2020, the RUC flagged 64400 because the RUC recommended work RVU of 1.00 was based on the 25th percentile work RVU of the top performing specialty, neurology. For 2020, CMS did not accept the RUC recommendation and valued 64400 lower at 0.75. The RUC recommended to survey 64400 and its family of services for September 2025.

64400 ***Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)***
The RUC reviewed the survey results from 48 neurologists and nurse practitioners and determined the current work RVU of 0.75, which is slightly below the survey 25th percentile (0.80), appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes pre-evaluation time, 1 minute scrub/dress/wait time, 6 minutes intra-service time and 5 minutes immediate post time, totaling 19 minutes. The RUC noted that this service has a median of 2 units of service typically reported, however the multiple procedures payment reduction (MPPR) applies and reductions for each second and subsequent service will occur.

The RUC compared the surveyed code to the top key reference service 20553 *Injection(s); single or multiple trigger point(s), 3 or more muscles* (work RVU = 0.75, 10 minutes intra-service and 27 minutes total time) and determined that while CPT code 64400 requires less intra-service time to perform, it is more intense and complex than CPT code 20553. The longer pre-service and intra-service time for CPT code 20553 may be necessary for performing the multiple injections (3 or more as described by the descriptor for code 20553), but the anatomical locations of the injections, in soft tissues, make it less intense than CPT code 64400. Further, CPT code 64400 requires localizing specific nerves, whereas trigger point injections involve areas of muscle, therefore, identifying the injection sites is more intense for CPT code 64400. The relative intensity of the surveyed code to the reference code is reflected in the responses to the intensity questions in the survey, where 79% of the respondents indicated that the surveyed code is somewhat to much more intense and complex to perform.

For additional support the RUC referenced MPC codes 20552 *Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)* (work RVU = 0.66 and 5 minutes intra-service and 21 minutes total time) and 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84, 10 minutes intra-service time and 22 minutes total time) and 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.00, 7 minutes intra-service and 17 minutes total time) and determined that maintaining the current work RVU supported relativity among similar services. **The RUC recommends a work RVU of 0.75 for CPT code 64400.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

64405 ***Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve***
The RUC reviewed the survey results from 59 neurologists and nurse practitioners and determined that the survey 25th percentile work RVU of 0.84 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes pre-evaluation time, 1 minute scrub/dress/wait time, 6 minutes intra-service time and 5 minutes immediate post time, totaling 19 minutes. The RUC noted that this service has a median of 2 units of service typically reported, however the multiple procedures payment reduction (MPPR) applies and reductions for each second and subsequent service will occur.

The specialty societies noted, and the RUC agreed that an injection in the greater occipital nerve (CPT code 64405) compared to an injection in the trigeminal nerve (CPT code 64400) requires slightly higher complexity to perform. The location of the injections for the greater occipital nerve for CPT code 64405 requires specific anatomic landmarks to identify the nerve, as the injection can be in proximity to the occipital artery, explaining the higher intensity of CPT code 64405 compared to 64400.

The RUC compared the surveyed code to the top key reference service 20553 *Injection(s); single or multiple trigger point(s), 3 or more muscles* (work RVU = 0.75, 10 minutes intra-service and 27 minutes total time) and determined that while CPT code 64405 requires less intra-service time to perform, it is more intense and complex than CPT code 20553. The longer pre-service and intra-service time for CPT code 20553 may be necessary for performing the multiple injections (3 or more as described by the descriptor for code 20553), but the anatomical locations of the injections, in soft tissues, make it less intense than CPT code 64405. Further, CPT code 64405 targets a single nerve with proximity to an artery requiring aspiration and potential adjustment of the needle, therefore the intensity is higher than multiple injections into muscle and/or soft tissue. The relative intensity of the surveyed code to the key reference service is reflected in the responses to the intensity questions in the survey, where 58% of the respondents indicated that the surveyed code is somewhat to much more intense and complex to perform.

For additional support the RUC referenced MPC codes 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84, 10 minutes intra-service time and 22 minutes total time) and 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.00, 7 minutes intra-service and 17 minutes total time) and determined that maintaining the current work RVU supported relativity among similar services. **The RUC recommends a work RVU of 0.84 for CPT code 64405.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications. The Subcommittee noted that the Multiple Procedure Payment Reduction (MPPR) rule applies and would address any duplication, thus they maintained the inputs as submitted. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
	Introduction/Injection of Anesthetic Agent (Nerve Block), Diagnostic or Therapeutic		
	(For destruction by neurolytic agent or chemodenervation, see 62280-62282, 64600-64681)		
	(For epidural or subarachnoid injection, see 62320, 62321, 62322, 62323, 62324, 62325, 62326, 62327)		
	(64400-64455, 64461, 64462, 64463, 64479, 64480, 64483, 64484, 64490-64495 are unilateral procedures. For bilateral procedures, report 64400, 64405, 64408, 64415, 64416, 64417, 64418, 64420, 64425-64455, 64461, 64463, 64479, 64483, 64490, 64493 with modifier 50. Report add-on codes 64421, 64462, 64480, 64484, 64491, 64492, 64494, 64495 twice, when performed bilaterally. Do not report modifier 50 in conjunction with 64421, 64462, 64480, 64484, 64491, 64492, 64494, 64495)		
	Somatic Nerves		
	Codes 64400-64489 describe the introduction/injection of an anesthetic agent and/or steroid into the somatic nervous system for diagnostic or therapeutic purposes. For injection or destruction of genicular nerve branches, see 64454, 64624, respectively.		
	Codes 64400-64450, 64454 describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch. These codes are reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code.		
	Imaging guidance and localization may be reported separately for 64400, 64405, 64408, 64420, 64421, 64425, 64430, 64435, 64449, 64450. Imaging guidance and any injection of contrast are inclusive components of 64415, 64416, 64417, 64445, 64446, 64447, 64448, 64451, 64454.		
	Codes 64455, 64479, 64480, 64483, 64484 are reported for single or multiple injections on the same site. For 64479, 64480, 64483, 64484, imaging guidance (fluoroscopy or CT) and any injection of contrast are inclusive components and are not reported separately. For 64455, imaging guidance (ultrasound, fluoroscopy, CT) and localization may be reported separately.		
	Codes 64461, 64462, 64463 describe injection of a paravertebral block (PVB). Codes 64486, 64487, 64488, 64489 describe injection of an abdominal fascial plane block. Imaging guidance and any injection of contrast are inclusive components of 64461, 64462, 64463, 64486, 64487, 64488, 64489 and are not reported separately.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64400 Tracking Number Original Specialty Recommended RVU: **0.75**
Presented Recommended RVU: **0.75**
Global Period: 000 Current Work RVU: **0.75** RUC Recommended RVU: **0.75**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female with a normal neurologic examination reports headaches that include pain in one branch of the trigeminal nerve (ophthalmic, maxillary, or mandibular).

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 2% , In the ASC 4%, In the office 94%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review pertinent imaging or lab results. Review the patient's history to ensure they are appropriate for the procedure (e.g., verify if taking anticoagulants or history of allergic reaction to agents being used). Discuss the procedure with the patient, including risks, side effects, benefits and obtain consent. Examine the area closely for any breaks in skin, rash or infection at the injection site. Clean the skin overlying the proposed injection area with antiseptic solution and apply drape. Prepare a syringe with a local anesthetic agent. Perform a pre-procedural time out with care team, confirming two patient identifiers, correct procedure and injection site (right, left or bilateral.) Palpate the auriculotemporal / supraorbital / supratrochlear region to identify the exact needle entry site. Don gloves.

Description of Intra-Service Work: Penetrate the skin with the needle at the identified entry site and inject the contents of the syringe along the course of the supraorbital nerve near the medial border of the eyebrow around the supraorbital notch. Remove the needle, apply pressure to injection site with gauze to stop any bleeding after injection. Clean the injection area and apply a bandage as necessary, observing the site for continued bleeding. Wait for local anesthetic to work, observing for evidence of a successful block: inquire if the patient has numbness in the distribution of the trigeminal nerve and if they have relief of their pain. Monitor the patient for any potential complications from the injection, including syncopal episode, intravascular injection, or evidence of distal particulate steroid injection.

Description of Post-Service Work: Discuss follow-up recommendations with the patient. Dictate or write a procedure note and make medical record entries.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	21%	58%	21%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	26%	74%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	11%	84%
Physical effort required	5%	52%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	21%	74%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	25%	42%	16%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	58%	34%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	42%	41%
Physical effort required	8%	50%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	50%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT code 64400 *(Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular))* was placed on the agenda for the September 2025 RUC meeting based on a referral by the Relativity Assessment Workgroup (RAW). In April 2025, as part of a larger effort to review all codes in the RUC database with the "Do not use to validate physician work" flag, the RAW recommended and the RUC approved code 64400 for a RUC work survey and practice expense recommendations.

Code History and Background

Code 64400 was surveyed in 2018 for the 2020 CPT cycle by the American Academy of Neurology (AAN) and the American Society of Anesthesiologists. Code 64400 is a 0-day global code.

- In 2018, the RUC recommended a work RVU of 1.00, which was based on the 25th percentile work RVU of the top-performing specialty, Neurology.
- The 2018 RUC recommendation represented a reduction from the then-current work RVU value of 1.11.
- CMS did not accept the RUC recommendation and further reduced the value of 64400 to 0.75 work RVUs.

September 2025 RUC Survey

AAN and the American Nurses Association (ANA) conducted a work survey for 64400 for the September 2025 RUC meeting. Neurology and Nurse Practitioners represent the top two specialties reporting the service for Medicare in 2023.

Specialty	2023 Utilization %
Neurology	46.3%
Nurse Practitioner	15.1%

Source: RUC Database, 2025 v2

Survey Results and Recommendations

AAN and ANA conducted a random survey with a total sample of 2,448. The 2025 survey was a robust survey with 48 responses, exceeding the required response minimum of 30; 83% found the vignette to be typical, and the survey was completed by individuals with experience performing the service (median experience with the service in the last 12 months was 40).

Source	RVW					Time	Pre-Time			Intra-Time					Post-Time
	Min	25th	Med	75th	Max	Total Time	Eval	Pos.	SDW	Min	25th	Med	75th	Max	
Current			**0.75**			**20**	**7**	**1**	**1**			**6**			**5**
Survey	0.65	0.80	1.20	1.50	5.00	25	10	2	2	1	5	6	10	20	5
Sept. 2025 Rec.			**0.75**			**19**	**7**		**1**			**6**			**5**

The specialties are recommending the current work RVU and time for code 64400. The recommended work RVU recommendation is less than the survey 25th percentile.

- Work RVU recommendation = 0.75
- Time recommendation (minutes) = *Pre-time* (7/0/1) (Pre-Service Package 5NF Procedure w/ minimal anes (if no deduct 1 min)); *Intra-time* (6); *Post-time* (5); Total time of 20 minutes.

Rationale for Maintaining Value

The specialties agreed that recommending the current work RVU and time was appropriate.

- No Change in Patient Population and Process of Care: The specialties agreed that since the 2018 survey, there had not been a change in the patient population or how the service was performed.

- Steady Utilization: High utilization growth is used by the RUC as a potential indicator that a code could be potentially misvalued. The specialties noted that the utilization of code 64400 has been exceptionally steady since 2020, when the work RVU was decreased from 1.11 to 0.75.

64400 Utilization: CY 2020-CY 2023

2020	2021	2022	2023
34,519	37,721	37,413	37,602

Source: RUC Database, 2025 v2

Recognizing the robustness of the survey and standard RUC process to recommend a value at the survey 25th percentile, the societies did not believe there was compelling evidence to request an increase in value. We therefore recommend maintaining the existing value of 0.75, which is below the 25th percentile of the survey.

Relativity within the Fee Schedule

The specialties also considered the relativity of the recommendation within the larger fee schedule. When comparing the recommendation to the reference codes and other similar codes in the fee schedule, they concluded that the recommendation of 0.75 work RVUs maintained relativity.

Reference Codes

Specialty advisors found that the recommendation was well aligned with the top two key reference codes: 20553 (*Injection(s); single or multiple trigger point(s), 3 or more muscles*) and 62322 (*Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance*).

Code	Work RVU	Pre-Time	Intra-Time	Post-Time	Total-Time
64400	0.75	9	6	5	20
20553	0.75	12	10	5	27
62322	1.55	18	11	10	39

The work RVU for code 20553 is the same as the surveyed code 64400, but it has higher pre-time and intra-time. After considering the clinical work involved and the survey data, the specialty advisors felt that this was appropriate.

- While 64400 had a slightly lower intra-time, the time is more intense than the intra-time for the reference code, 20553. The longer pre- and intra-time for 20553 may be needed for performing the multiple injections (3 or more as described by the descriptor for code 20553), but the anatomical locations of the injections, in soft tissues, make it less intense than 64400. Further, 64400 requires localizing specific nerves, whereas trigger point injections involve areas of muscle, so identifying the injection sites is more intense for 64400 than for 20553. The relative intensity of the survey code to the reference code is reflected in the responses to the intensity questions in the survey. 58% of the respondents found the surveyed code to have somewhat more intensity, and 21% found the surveyed code to have much more intensity.

Specialty advisors also considered the relativity between the surveyed code 64400 and the second most selected reference code 62322. It seemed generally appropriate. The code work value of 62322 is a little more than double in comparison to the surveyed code, 64400 (1.55 work RVUs vs 0.75 work RVUs); and the total time of the reference code is a little less than double in comparison to the surveyed code (39 minutes to 20 minutes). CPT 62322 requires more pre-service, intra-service, and post-service time due to the setup and location of the injections near the spine as opposed to the injections in the trigeminal nerves of the face.

Crosswalks

To buttress their recommendation, specialty advisors would also like to present direct crosswalks for the RUC's consideration. The direct crosswalks are valued at 0.75 and closely match the intra-time and total time recommended for code 64400.

Code	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total-Time
64400	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)	0.75	8	6	5	19
64408	Injection(s), anesthetic agent(s) and/or steroid; vagus nerve	0.75	10	5	5	20
64435	Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve	0.75	10	5	5	20

The specialty advisors believe the direct crosswalks provide further evidence of the appropriateness of their recommendations.

Other 0-Day Global Codes

The specialty advisors also compared the recommendations for 64400 to other RUC-surveyed 0-day global codes and found that relativity was maintained.

Code	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total-Time
17250	Chemical cauterization of granulation tissue (ie, proud flesh)	0.50	7	5	5	17
20552	Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)	0.66	11	5	5	21
64400	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)	0.75	8	6	5	19
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	0.84	7	10	5	22
20604	Arthrocentesis, aspiration and/or injection, small joint or bursa (eg, fingers, toes); with ultrasound guidance, with permanent recording and reporting	0.89	12	10	5	27

In conclusion, the specialty societies recommend maintaining the current **work RVU value of 0.75** for code 64400. For time, the specialties recommend: **Pre-time (7/0/1), Intra-time (6), Post-time (5) for a Total-time of 19 minutes**.

Additional support for this value is two crosswalks 64408 and 64435.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Injections are performed on different anatomical locations.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	WorkRVU	Pre	Intra	Post
3.	64400	0	0.75	9	6	5
4.	64405	0	0.94	6	5	5

5. Subject to multiple procedure reduction. Total work RVU estimated at 1.32 when billed together. Note 2025 work RVU and time listed.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64400

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Nurse Practitioner How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 112806
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The total national utilization estimate is 3X Medicare utilization from the RUC database.

Specialty Neurology Frequency 52229 Percentage 46.29 %

Specialty Nurse Practitioner Frequency 17034 Percentage 15.10 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 37,602 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database, 2025, Version 2

Specialty Neurology Frequency 17410 Percentage 46.30 %

Specialty Nurse Practitioner Frequency 5678 Percentage 15.10 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64400

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:64405 Tracking Number Original Specialty Recommended RVU: **0.94**
Presented Recommended RVU: **0.84**
Global Period: 000 Current Work RVU: **0.94** RUC Recommended RVU: **0.84**

CPT Descriptor: Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female with headaches and a normal neurologic examination with tenderness triggered by palpation over the left occipital notch.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 2% , In the ASC 2%, In the office 96%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review pertinent imaging or lab results. Review the patient's history to ensure they are appropriate for the procedure (e.g., verify if taking anticoagulants or history of allergic reaction to agents being used). Discuss the procedure with the patient, including risks, side effects, benefits and obtain consent. Examine the area of the scalp closely for any breaks in skin, rash or infection at the injection site. Clean the skin overlying the proposed injection area with antiseptic solution and apply drape. Prepare a syringe with a local anesthetic agent. Perform a pre-procedural time out with care team, confirming two patient identifiers, correct procedure and injection site (right, left or bilateral.). Palpate the upper cervical region near the lower extent of the skull dorsal to the mastoid process along the course of the greater occipital nerve to identify the exact needle entry site. Don gloves.

Description of Intra-Service Work: Penetrate the skin with needle at the identified entry site and inject the contents of the syringe along the course of the nerve following negative aspiration. Because of the significant vascularity of the scalp, make the injection with aspirations as the needle is repositioned along the course of the nerve. Remove the needle, apply pressure to injection site with gauze to stop any bleeding after injection. Clean the injection area and apply a bandage as necessary, observing the site for continued bleeding. Wait for the local anesthetic to work, observing for evidence of a successful block; inquire if the patient has numbness in the distribution of the occipital nerve and if they have relief of their pain. Monitor the patient for any potential complications from the injection, including syncopal episode, intravascular injection, or evidence of distal particulate steroid injection.

Description of Post-Service Work: Discuss follow-up recommendations with the patient. Dictate or write a procedure note and make medical record entries.

Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Median Total Time	**19.00**	**27.00**	**39.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	42%	42%	16%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	42%	58%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	42%	53%
Physical effort required	5%	68%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	47%	48%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	50%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	67%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	75%	17%
Physical effort required	8%	75%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	67%	16%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT code 64405 (*Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve)* was placed on the agenda for a work survey and practice expense (PE) recommendations for the September 2025 RUC. It was identified as part of the family for CPT code 64400. Code 64400 was placed on the agenda based on a referral by the Relativity Assessment Workgroup (RAW).

Code History and Background

Code 64405 was surveyed in 2017. In the Final Rule for 2017, CMS identified 64405 on the list of 0-day global services reported with an E/M 50% of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years and with Medicare utilization greater than 20,000. CMS accepted the RUC recommendation of 0.94 work RVUs for code 64405.

Based on 2023 billed together data, code 64405 is no longer billed with an E/M 50% of the time or more.

September 2025 RUC Survey

AAN and the American Nurses Association (ANA) conducted a work survey for 64405 for the September 2025 RUC meeting. Neurology and Nurse Practitioners represent the top two specialties reporting the service for Medicare in 2023.

Specialty	2023 Utilization %
Neurology	38.9%
Nurse Practitioner	12.4%

Source: RUC Database, 2025 v2

Survey Results and Recommendations

AAN and ANA conducted a random survey with a total sample of 2,448. It was a robust survey with 59 responses; 92% found the vignette to be typical, and the survey was completed by individuals with experience performing the service (median experience with the service in the last 12 months was 50).

Source	RVW					Time	Pre-Time			Intra-Time					Post-Time
	Min	25th	Med	75th	Max	Total Time	Eval	Pos.	SDW	Min	25th	Med	75th	Max	
Current			**0.94**			**16**	**5**	**1**				**5**			**5**
Survey	0.66	0.84	1.00	1.41	5.00	25	10	2	2	1	5	6	10	20	5
Sept. 2025 Rec.			**0.84**			**19**	**7**	**0**	**1**			**6**			**5**

The specialties are recommending the 25th percentile work RVU of 0.84 for code 64405. The specialty is recommending matching the pre-time with 64400, using the survey median for intra-time, and the survey median for post-time.

- Work RVU recommendation = 0.84
- Time recommendation (minutes) = *Pre-time* (7/0/1) (5NF Proc w/ minimal anes (if no deduct 1 min); *Intra-time* (6); *Post-time* (5); *Total time* of 19 minutes.

Rationale for Work RVU Value

The specialties agreed on recommending the survey 25th percentile work RVU.

- Taking the robust survey response, the societies concluded following the RUC standard of recommending the 25th work RVU was most appropriate based on respondent complexity and intensity ratings.

- Comparison to Code 64400: The specialties are recommending maintaining the slightly higher work RVU value for 64405 in comparison to 64400 (0.84 versus 0.75), which was also surveyed for the September 2025 RUC meeting. The slightly higher complexity of an injection in the greater occipital nerve (64405) versus an injection in the trigeminal nerve (64400) makes this increment appropriate. The location of the injections for the greater occipital nerve for 64405 requires specific anatomic landmarks to identify the nerve, as the injection can be in proximity to the occipital artery, explaining the higher intensity of 64405 compared to 64400.

Rationale for Time Recommendation

For pre-service, the specialties are recommending 7/0/1 in comparison to the current pre-service time of 5/1/0.

- Since 64405 is no longer typically billed with an E/M service, the specialty advisors agreed that "1" minute for scrub/dress/wait was appropriate.
- The specialty advisors also agreed that the work associated with pre-time for both 64400 and 64405 was the same. Making them both 7/0/1 ensures consistency within the family. Since these codes were not surveyed together previously, this discrepancy may not have been clear. Pre-time for code 64400 is based on Pre-Service Package 5NF with a slight modification as outlined above.

Relativity within the Fee Schedule

The specialties also reviewed the recommendation, considering how well it fits within the fee schedule. When reviewing the reference codes and other similar codes in the fee schedule, they concluded that relativity was maintained.

Reference Codes

Specialty advisors found that the recommendation was well aligned with the top two key reference codes: 20553 (*Injection(s); single or multiple trigger point(s), 3 or more muscles*) and 62322 (*Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); without imaging guidance*).

Code	Work RVU	Pre-Time	Intra-Time	Post-Time	Total-Time
20553	0.75	12	10	5	27
64405	0.84	8	6	5	19
62322	1.55	18	11	10	39

The work RVU for code 64405 falls between the two reference codes, but it has slightly less total time than either of the reference codes. After considering the clinical work involved and the survey data, the specialty advisors felt that this was appropriate.

- While 64400 had a slightly lower intra-time, the time is more intense than the intra-time for the reference code, 20553. The longer pre- and intra-time for 20553 may be needed for performing the multiple injections (3 or more as described by the descriptor for code 20553), but the anatomical locations of the injections, in soft tissues, make it a less intensive procedure than 64405.
- The relative intensity of the survey code to the reference code is reflected in the responses to the intensity questions in the survey. 42% of the respondents found the surveyed code to have somewhat more intensity, and 16% found the surveyed code to have much more intensity. Because the greater occipital nerve block targets a single nerve with proximity to an artery requiring aspiration and potential adjustment of the needle, the intensity is higher than multiple injections into muscle and/or soft tissue.

Specialty advisors also considered the relativity between the surveyed code 64405 and the second most selected reference code 62322. This was also felt to be appropriate. The nerve block into the epidural region will be more time-intensive and higher risk than the nerve block into the greater occipital nerve region in the head.

Other 0-Day Global Codes

The specialty advisors also compared the recommendations for 64405 to other RUC-surveyed 0-day global codes and found that relativity was maintained. The specialty advisors noted that 64405 and 12001 had the same value, but 64405 had a lower intra-time. They felt that this was appropriate because 64405 was a more intense procedure. CPT code 12001 describes a simple repair of a superficial wound, while 64405 describes an injection in an anatomically complex area. The occipital nerve is near the occipital artery, so the injection requires one to pull back the syringe to make sure the needle is not in the occipital artery and prevent injection of the anesthetic into the occipital artery.

Code	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total-Time
64555	Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch	0.75	9	5	5	19
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	0.84	7	10	5	22
64405	Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve	0.84	8	6	5	19

20604	Arthrocentesis, aspiration and/or injection, small joint or bursa (eg, fingers, toes); with ultrasound guidance, with permanent recording and reporting	0.89	12	10	5	27
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	1.14	7	15	5	27
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	1.20	17	10	5	32

In conclusion, the specialty societies recommend the survey 25th percentile of 0.84 work RVU for code 64405. For the time, the specialties recommend: Pre-time (7/0/1), Intra-time (6), Post-time (5) for a total of 19 minutes.

Further support of the work RVU recommendation is provided by reference codes, which bracket the recommended value with a work RVU of 0.75 for code 20553 and a work RVU of 1.55 for code 62322.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64405

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Nurse Practitioner How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 365025
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The total national utilization estimate is 3X Medicare utilization from the RUC database.

Specialty Neurology Frequency 141995 Percentage 38.90 %

Specialty Nurse Practitioner Frequency 45263 Percentage 12.39 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 121,675 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database, 2025, Version 2

Specialty Neurology Frequency 47332 Percentage 38.90 %

Specialty Nurse Practitioner Frequency 15088 Percentage 12.40 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 64400,64405
SPECIALTY SOCIETY(IES): AAN, ANA
PRESENTER(S): Meghan Ward, MD, FAAN,

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September, 2025

CPT Code	Long Descriptor	Global Period
64400	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)	000
64405	Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
64400	A 45-year-old female with a normal neurologic examination reports headaches that include pain in one branch of the trigeminal nerve (ophthalmic, maxillary, or mandibular).
64405	A 45-year-old female with headaches and a normal neurologic examination with tenderness triggered by palpation over the left occipital notch.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The American Academy of Neurology and the American Nurses Association convened a panel that included experts familiar with these services to evaluate the direct practice expense inputs for anesthetic agent injection codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   The societies are providing the current code as the reference code for 64400 and 64405.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   According to the RUC database in the non-facility (Global & 26) the dominant provider of:
   64400 is Neurology at 52.2%. The dominant provider is the same for the global.
   64405 is Neurology at 42.5%. The dominant provider is the same for the global.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

64400 previously had 5 minutes allocated to CA010 64405 previously had 0 minutes allocated to CA010 The specialties are requesting 5 minutes for CA010 for both 64400 and 64405 for obtaining vitals. Heart rate, blood pressure, height and weight are taken to ensure the patient is in a clinically stable condition to receive the injection.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

No clinical labor activities are included in the pre-service period

b. Service period (includes pre, intra and post):

Service period inputs for both 64400 and 64405 are as follows:

Pre-service Clinical Labor Activities (12 minutes total)

- CA009 (greet patient/provide gowning/ensure appropriate medical records are available) Greet patient and escort to room. Ensure pertinent imaging or lab results are available. **3 minutes**
- CA010 (obtain vital signs) - Heart rate, blood pressure, height and weight are taken to ensure the patient is in a clinically stable condition to receive the injection. **5 minutes**
- CA013 (prepare room, equipment and supplies) - Set up Mayo stand with gauze, alcohol swab, syringe, needle, and medication to be drawn up. **2 minutes**
- CA016 (prepare, set-up and initial positioning and monitoring of patient) Instruct patient on importance of correct positioning and assist patient in an appropriate position for the injection. **2 minutes**

Service period Clinical Labor Activities (0 minutes)

- Perform procedure/service-- directly related to physician work time-100% (CA018)

Post-service period Clinical Labor Activities (5 minutes total)

- CA024 (clean room/equipment) Properly dispose of sharps in sharps container. Clean Mayo stand tray, chair and other surfaces used during the visit. **3 minutes**
- CA035 (review home care instructions, coordinate visits/prescriptions) Confirm patient is not experiencing any side effects such as dizziness or lightheadedness from the procedure and is stable to go home. Provide after care instructions including the appropriate use of Tylenol or ice packs for injection site discomfort. **2 minutes**

c. Post-service period:

No clinical labor activities are included in the post-service period

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

No clinical labor activities are included in the intra-service (of service period) as clinical staff is not typically in the room.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).

b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EF023 table, exam - default formula
EF015 mayo stand - default formula

(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee

Other Relativity Assessment Workgroup Related Recommendations – October 2025

1. Laryngoscopy (31525)

In September 2024, the RAW reviewed *31525 Laryngoscopy direct, with or without tracheoscopy; diagnostic, except newborn* via the Reported Together 75 Percent or More screen. The 2023 Medicare utilization showed that CPT code 31525 was reported with CPT code 31231 80 percent of the time, and CPT code 31325 was reported with CPT code 69210 75 percent of the time. Therefore, these codes appeared on the screen the RAW reviewed to determine if a code bundling solution was necessary. The specialty societies indicated that although the Medicare utilization shows that these services are billed together, the publicly available CMS 2022 and 2023 Medicare Physician & Other Practitioners - by Provider and Service showed that one Otolaryngology practice located in California is the top physician for all three of these codes.

Therefore, the specialty society indicated to the RUC that, based on the lack of clinical justification to report these services together frequently, they believe it is appropriate to maintain these codes as currently described. There is no clinical justification for combining these codes, and it seems the billed together data is likely being driven by a single practice in the country.

The specialty societies notified CMS of possible misreporting of these services prior to the RUC review of these services under this screen. On October 15, 2024, the RUC submitted recommendations and notified CMS of the possible misreporting of CPT code 31525 based on the 2022 data**.**

In the NPRM for 2026, CMS did not acknowledge that they received the RUC notification of possible misreporting of CPT code 31525. Therefore, in its August 21, 2025, comment letter on the Proposed Rule for 2026, the RUC requested that CMS address the possible misreporting of 31525 in the Final Rule for 2026.

In September 2025, CPT code 31525 also appeared on the Harvard valued with Medicare utilization over 30,000 screen and the high volume growth screen. **The RUC would again like to notify CMS of the possible misreporting of CPT code 31525, as it is being reported by one physician performing 82 percent of these services based on 2023 Medicare Physician & Other Practitioners by Provider and Service data.**

2. *Image-guided robotic linear accelerator-based stereotactic radiosurgery* (G0339 and G0340)

In April 2025, the Relativity Assessment Workgroup identified one code with 2023 Medicare utilization over 10,000 and Medicare status of "C" contractor priced. The Workgroup requested an action plan for G0340 for September 2025. **In September 2025, the Workgroup reviewed the action plan and recommended that the RUC request that CMS delete G0339** ***Image-guided robotic linear accelerator-based stereotactic radiosurgery, complete course of therapy in one session or first session of fractionated treatment*** **and G0340** ***Image-guided robotic linear accelerator-based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesions, per session, second through fifth sessions, maximum five sessions per course of treatment.***

Currently only 17 centers in 11 states offer robotic radiosurgery. Reviewing the 234 physicians reporting these codes in 2023, the specialty notes that 68 physicians no longer offer robotic radiosurgery and 20 physicians retired. Additionally, CPT code 77373 *Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions* is available to report in lieu of G0339 and G0340. The Workgroup will review in September 2026 if CMS did not propose to delete for CPT 2027. **The RUC requests that CMS delete G0339 and G0340.**

3. Gastrostomy Tube Replacement (43762 & 43763)

In 2017, CMS identified CPT codes 43762 *Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; not requiring revision of gastrostomy tract* and 43763 *Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; requiring revision of gastrostomy tract* via the 000-Day Global Typically Reported with an E/M screen. In January 2018, the RUC recommended that these codes be reviewed by the Relativity Assessment Workgroup in two years to examine utilization data to determine if 90% of 43760 are directed toward 43762 and 10% to 43763, as predicted. These data should also indicate if these codes are typically reported with E/M services and if the global period assignment should remain 000. In January 2022, the Workgroup reviewed these services and determined that the utilization split is as was projected. Additionally, these services are not typically reported with office visits, hospital visits or emergency department visits and the 000-day global period assignment is appropriate. The specialty society voiced concern with the utilization by providers that are not expected to perform this surgical procedure. It is possible that, because 2019 was the first year for this new low volume code, that there may be a misunderstanding of this procedure resulting in misreporting. Therefore, the specialty societies indicated they would develop a CPT Assistant article that describes correct reporting of 43763 and contrasts this procedure with 43762 and other codes for g-tube placement (eg, 43246, 49440). The Workgroup recommended that CPT codes 43762 and 43763 be maintained/removed from this screen and referred to CPT Assistant to describe scenarios when each of these services should be reported.

A CPT Assistant article was published in June 2022, to clarify the appropriate reporting of 43763 by surgeons. Code 43763 is typically performed under general anesthesia. However, 43763 is still being reported by nurse practitioners in the nursing facility and office, 42.5% (2023 Medicare utilization data). Data from the Medicare Physician & Other Practitioners shows one nurse practitioner in Florida as the dominant provider of 43763, performing 816 of 1,282 services in 2022 and 844 of 1,262 services in 2023.

The specialty societies submitted an action plan to discuss what action, if any, should occur for these services. In September 2025, the specialty societies indicated that CPT code 43763 is being reported by two providers and that these services should be maintained and CMS notified of possible misreporting. **The RUC would like to notify CMS of the possible misreporting of CPT code 43763.**
