PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

34	NEW	Locator attachments (set of 4)	426.46	kit	One kit per implant. One kit = $92.49 for locator male processing, $85.99 for locator impression coping, $87.99 for locator female analog, $159.99 for locator abutment. One kit = $426.46 individual implant attachment.													
35	NEW	Ti Bases Attachment	48	item	48.00 each													
36	NEW	Zirconium Framework	97	set	set = $97, 1 set =$69 for bridge +$28 for stain = $97 total for framework (do not use ti bases in invoice, they are listed separately													
39	NEW	Orthognathic splint / stent	1891	item	1=1891.00													
52	NEW	Sealing Kit	18.24	oz	4 oz = 72.95													

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
NEW	*Planmeca Proface Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*spectromatch with color kit*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Measuring skin tone and have to input calculation on computer and will give you the color formula.
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.

24.	NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the file from the Trios to the 3D printer for a dental model.
	NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
	NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
	NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

26. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21079	Impression and custom preparation; interim obturator prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21079	A 65 year old male is referred for custom preparation of an interim obturator, following resection of a benign maxillary.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and lab technicians (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

CPT CODE(S):__21079_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SIX** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 6 FTF visits. **TOTAL 18 minutes for vitals appears on the PE spreadsheet for 21079.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. DAcoordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include procedure consent and consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls H&N nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.
  -

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21079:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21079	6	60	60	50	60	60	55		345	108	20	15	10	10		163	508

Total staff time as appears on PE Spreadsheet for 21079:

Pre time = 35 minutes
Intra time = 549 Dental Assistant total, 163 lab technician total

- **Pre intra time** = 66 minutes (11 minutes x 6 FTF visits)
- **Intra time** = 345 minutes for DA, 163 minutes for LT (corresponds to table above)
- **Post intra time** = 138 minutes (23 minutes x all visits)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)

- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA will mix dental materials for an impression and for a bite registration.
- DA scans the immediate surgical obturator.
- DA hands dentist the shade and mold of tooth selection.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 1 and 2: 108 minutes Lab Tech

The LT pours the impressions, separates the model/cast from the impression and trims the cast. The LT duplicates the model / cast so a record of the postsurgical result is recorded. The LT mounts the models on the articulator (which is a piece of equipment that simulates the maxillary and mandibular relationship with facebow). The LT consults with the MD/DMD. The MD/DMD reviews the prosthetic design with the laboratory technician. On the mounted models, the LT adds the wire clasping, the teeth and reviews the waxup with the MD/DMD. The LT flasks, boils out, and injects the methyl methacrylate into the flask. The flask is placed through a curing cycle. After curing, the LT deflasks the prosthesis

and trims and adjusts and polishes the interim obturator prosthesis. The LT shows the MD/DMD the interim obturator and disinfects the interim obturator for delivery. **The expert panel recommends 108 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA loads the acrylic bur in the handpiece so it is ready for the MD/DMD to use.
- DA mixes dental materials (Trusoft reline material) under the direction of the MD/DMD.
- After each reline, the dental assistant cleans the reline material off of the patient's face.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)

- The DA is cleaning the intraoral wound / open cavity wound during this time.

- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 2 and 3: 20 minutes Lab Tech

The LT logs the patient's models and laboratory materials. **The expert panel recommends 20 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (50 minutes) DA and MD/DMD present

- DA loads the acrylic bur in the handpiece so it is ready for the MD/DMD to use.
- DA mixes dental materials (Trusoft reline material) under the direction of the MD/DMD.
- After each reline, the dental assistant cleans the reline material off of the patient's face
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Upon an order from the MD/DMD, the dental assistant disinfects the prosthesis, removes the soft tissue liner, pumices and polishes the prosthesis and disinfects the prosthesis.
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)

- Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
- PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
- Safety Tracking: Document sterilization logs and maintain strict infection control protocols

- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 15 minutes Lab Tech

The LT puts the patient's models into the archive room. **The expert panel recommends 15 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA loads the acrylic bur in the handpiece so it is ready for the MD/DMD to use.
- Upon an order from the MD/DMD, the dental assistant disinfects the prosthesis, removes the soft tissue liner, pumices and polishes the prosthesis and disinfects the prosthesis.
- DA mixes dental materials (reline material) under the direction of the MD/DMD.
- After each reline, the dental assistant cleans the reline material off of the patient's face
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).

- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 10 minutes Lab Tech

The LT verifies that no additional changes are needed with the patient's dental materials for the prosthesis. **The expert panel recommends 10 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)

- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA loads the acrylic bur in the handpiece so it is ready for the MD/DMD to use.
- Upon an order from the MD/DMD, the dental assistant disinfects the prosthesis, removes the soft tissue liner, pumices and polishes the prosthesis and disinfects the prosthesis.
- DA mixes dental materials (reline material) under the direction of the MD/DMD.
- After each reline, the dental assistant cleans the reline material off of the patient's face
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 10 minutes Lab Tech

The LT verifies that no additional documentation is needed for the patient's prosthesis. **The expert panel recommends 10 minutes for these activities.**

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code.

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

		21079

SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
EP056	articulator (model	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

	96H2 - Hanua)			
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Ivobase*	TIME USED FOR ONE PATIENT - assigned by expert panel	55	Typically, labs use acrylic that takes 55 minutes per manufacturer instructions. You start with a flask and place it in cold water, it has to be heated for curing (45 minutes) and then slowly has to be brought down, and the flask is cooled in cold water (10 additional minutes, totaling 55).
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Sandstorm2 25/50 & 50/100 mic*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The expert panel agreed that the sandblaster is used at least 10 minutes in order to remove stone and plaster from the prosthesis during the deflasking. Used to provide rough surface to enhance bonding for implant prosthesis.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

26. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

27. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21080	Impression and custom preparation; definitive obturator prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21080	A 65 year old male is referred for custom preparation of fabrication of a definitive obturator, following resection of a benign maxillary tumor.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

CPT CODE(S):__21080_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SEVEN** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 7 FTF visits. **TOTAL 21 minutes for vitals appears on the PE spreadsheet for 21080.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. DA coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls H&N nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the LT (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21080:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel								
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21080	7	60	60	60	60	60	45	31	376	70	90	60	120	136	10	486	862

Total staff time as appears on PE Spreadsheet for 21080:

Pre time = 35 minutes
Intra time = 620 Dental Assistant total, 486 LT total

- **Pre intra time** = 77 minutes (11 minutes x 7 FTF visits)
- **Intra time** = 376 minutes for DA, 486 minutes for LT (corresponds to table above)
- **Post intra time** = 167 minutes (26 minutes FTF v 1 and 2, 23 minutes FTF v 3, 4, 5, 6, 7)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes

- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute

Intra (60 minutes) DA and MD/DMD present

- DA will take photos as the MD/DMDs direction.
- DA and MD/DMD obtain cone beam radiograph
- DA will make the scan of the maxillary and mandibular arches and the interim obturator.
- DA will mix dental materials for an impression and for a bite registration.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. Shows patient pictures and examples of an obturator. Assists MD/DMD in oral hygiene instruction.

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes
- CA026 Clean equipment (medium instrument pack), 15 minutes
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute
- CA029 Check dressing, intraoral wounds –1 minute
- CA032 Scan exam into PACS –1 minute
    - Dental Assistant sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to digital file and will have the maxillary and mandibular arches digital files 3D printed with the SprintRay printer.
    - DA scans image into PACs.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.
    - Before the next appointment, the dental assistant verifies that the custom tray is fabricated.

NFTF between Visit 1 and 2: 70 minutes Lab Tech

After the models have been printed, the LT performs post processing of the 3D printed models including washing with isopropyl alcohol (IPA 99%) to remove excess resin from the model, drying of the model, removal of the printed supports (rafts/scaffolding) on the model, post curing of the model, finishing and quality control. The LT pours the preliminary impression upon an order from the MD/DMD. Upon setting of the dental stone, the LT separates the model/cast from the impression, trims the model, and shows it to the MD/DMD. The LT upon order from MD/DMD fabricates the custom tray. After approval of the MD/DMD, the LT disinfects the custom tray and bags it for according to protocol and gives it to the DA. A verification index is made to verify proper orientation of dental implants. **The expert panel recommends 70 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (PE standard)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA takes periapical radiographs of locator attachments for bone level documentation.
- DA will take photos as the MD/DMDs direction.
- DA monitors the Bunsen burner flame during border molding and during the use of the tissue wax for safety.
- DA monitors the water bath so as not to overheat.
- DA will mix dental materials for a final impression and for a bite registration.
- Chairside Assistance: Hand instruments (locator impression posts) and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes – w/ imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)

  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the intraoral wound / open cavity during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA scans images into PACS.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 2 and 3: 90 minutes Lab Tech

The LT with an order from the MD/DMD boxes and pours the final impression. After setting, the LT separates the master cast/model from the impression and trims land area and shows it to MD/DMD. The LT and MD/DMD discuss master cast/model and LT duplicates model. On the original model, the laboratory technician puts in the appropriate housing for the implants and waxes the record base. The LT shows it to the MD/DMD. With an order from the MD/DMD, the LT flasks, boils out the wax pattern and injects or packs the methyl methacrylate material into the mold within the flask. The LT places it within the curing unit. After curing, the LT breaks out the heat processed record base and trims and pumices and polishes the record base. The LT seats the record base on the duplicated master cast/model to verify engagement of the housing with the implants and a passive fit. The LT shows the MD/DMD the heat processed record base with the implant housing and shows the record base on the duplicated model. After approval of the MD/DMD, the LT disinfects the record base of the obturator for patient use. **The expert panel recommends 90 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (PE standard)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)

- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (60 minutes)

- DA assists MD/DMD in having the patient eat yogurt/drink water.
- DA mixes dental materials (reline material) under the direction of the MD/DMD.
- DA will get yogurt/water for patient to eat to determine if there is a leak in the heat processed record base.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 60 minutes Lab Tech

If the record base needs any changes and with an order from the MD/DMD, the LT will make appropriate changes to the record base as dictated by the clinical situation, including converting the deficit area into heat cured methyl methacrylate if needed. With an order from the MD/DMD, the LT places the occlusal rim and disinfects the prosthesis for the next patient visit. **The expert panel recommends 60 minutes for these activities**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (PE standard)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA mixes dental materials (bite materials) under the direction of the MD/DMD.
- DA monitors the Bunsen burner flame during the adjustment of the occlusal rims.
- DA hands dentist the shade guide and tooth mold selection guide.
- DA holds the fox plane in place in the patient's mouth so MD/DMD can evaluate if the occlusal rims are parallel to the interpupillary line and the ala tragus line.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.

- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 120 minutes Lab Tech

The LT will be mounting the models on an articulator, consulting the MD/DMD about occlusal scheme and setting the teeth. After setting, the LT shows them to the MD/DMD for final approval. **The expert panel recommends 120 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (PE standard)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)

    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (PE standard)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and LTs (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21080_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21080_____
SPECIALTY SOCIETY(IES):__ AAMP_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side

				up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Ivobase*	TIME USED FOR ONE PATIENT - assigned by expert panel	55	Typically, labs use acrylic that takes 55 minutes per manufacturer instructions. You start with a flask and place it in cold water, it has to be heated for curing (45 minutes) and then slowly has to be brought down, and the flask is cooled in cold water (10 additional minutes, totaling 55).
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Sandstorm2 25/50 & 50/100 mic*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The expert panel agreed that the sandblaster is used at least 10 minutes in order to remove stone and plaster from the prosthesis during the deflasking. Used to provide rough surface to enhance bonding for implant prosthesis.

24.	NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21081	Impression and custom preparation; mandibular resection prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21081	A 75 year old male is referred for custom preparation of a mandibular resection prosthesis, following resection of a mandibular squamous cell carcinoma.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

CPT CODE(S):__21081_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SEVEN** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 7 FTF visits. **TOTAL 21 minutes for vitals appears on the PE spreadsheet for 21081.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck Service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. Dental assistant coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21081:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel								
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21081	7	60	60	60	60	60	45	30	375	57	75	90	90	136	10	458	833

Total staff time as appears on PE Spreadsheet for 21081:

Pre time = 35 minutes
Intra time = 622 Dental Assistant total, 458 lab technician total

- **Pre intra time** = 77 minutes (11 minutes x 7 FTF visits)
- **Intra time** = 375 minutes for DA, 458 minutes for LT (corresponds to table above)
- **Post intra time** = 170 minutes (26 minutes v 1, 2 and 3, 23 minutes FTF v 4, 5, 6, 7)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21081_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA will take photos as the MD/DMDs direction.
- DA will have models of the resection prosthesis to show the patient.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the intraoral healed surgical site during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 57 minutes Lab Tech

The laboratory LT and orders all of the implant components for the laboratory supplies. The LT verifies that the appropriate screw drivers/screws/impression posts, laboratory analogs are present. **The expert panel recommends 57 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA and MD/DMD obtain cone beam radiograph
- DA will make a scan of the maxillary arch.
- DA will mix final impression dental materials for an impression and for a bite registration.
- DA monitors the Bunsen burner flame during border molding.
- DA monitors the water bath so as not to overheat.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)

- CA028 Review /read post procedure x ray –2 minute (expert panel time)
    - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
    - The DA is cleaning the intraoral healed surgical site during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
    - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.
    - DA verifies OR date with head and neck Scheduler

NFTF between Visit 2 and 3: 75 minutes Lab Tech

After the models have been printed, the LT performs post processing of the 3D printed models including washing with isopropyl alcohol (IPA 99%) to remove excess resin from the model, drying of the model, removal of the printed supports (rafts/scaffolding) on the model, post curing of the model, finishing and quality control. The LT pours the final impression with dental stone per order from MD/DMD. After the stone sets, the LT separates the master model, trims the master model, and shows it to the MD/DMD for final approval. With an order from the MD/DMD, the LT fabricates the triad framework. The purpose of the framework is to verify that the master cast/model is passive. **The expert panel recommends 75 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)

  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 136 minutes Lab Tech

The LT receives order from MD/DMD to take the prosthesis to completion. The LT finishes waxing and festooning the prosthesis. The LT picks the appropriate scan bodies and scans the upper and lower models (casts) and bite into the software. The LT with the MD/DMD prosthetic design virtually plans the resection prosthesis. The LT shows it to the MD/DMD for approval. The LT submits design for the milling machine. The milling machine mills prosthesis in zirconium oxide. The LT places the zirconium framework in the oven for sintering. After removal from the oven, the LT verifies the fit/contour/shade of the zirconium framework. The LT adds porcelain (tooth and gum porcelain) and glazes the zirconium framework. The LT shows it to the MD/DMD. The LT cements the titanium bases to the framework. The LT shows it to the MD/DMD. **The expert panel recommends 136 minutes for these activities.**

Visit #6 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)

- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral healed surgical site during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face anfd non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	**Code**	**Unit**	**Item Qty**
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	**Code**	**Unit**	**Item Qty**
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1

cleaning brush, instruments		item	1
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench		

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.

NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as

CPT CODE(S):__21081_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

				the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	120 (21081 only)	21081 is unique in that the time it takes to design a zirconium prosthesis is 1 to 4 hours. Expert panel agreed that it took 120 minutes to design the resection prosthesis which will be milled, so 120 minutes is our assigned time for this code only (21081) because that is the typical time needed to design the prosthesis.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Milling Machine*	TIME USED FOR ONE PATIENT - assigned by expert panel	60	The actual active milling time for a full-arch zirconium framework ranges from 45 to 90 minutes on a 5-axis CAD/CAM mill. The typical time from the expert panel was 60 minutes.

NEW	*Zirconium speed furnace*	TIME USED FOR ONE PATIENT - assigned by expert panel	480	Typically, the 21081 resection prosthesis is a full arch prosthesis of the mandible. Curing (sintering) a full-arch zirconia framework in a dental furnace typically takes 8 hours using conventional cycles. Because full-arch restorations have high mass, "low and slow" heating and controlled cooling are required to prevent micro-fractures and warping.
NEW	*Milling Machine Supply Kit*	TIME USED FOR ONE PATIENT - assigned by expert panel	60	Corresponds to the time the milling machine is in use. These pieces of equipment go into the mill and do the actual milling.
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21082	Impression and custom preparation; palatal augmentation prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21082	A 72 year old male who had most of his tongue resected for squamous cell carcinoma is referred for custom preparation of a palatal augmentation prosthesis.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21082_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are requesting the standard 090 pre staff times for both the facility and nonfacility

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SIX** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 6 FTF visits. **TOTAL 18 minutes for vitals appears on the PE spreadsheet for 21082.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. DA coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.

- DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21082:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21082	6	58	60	60	60	60	60		358	55	45	60	30	113		303	661

Total staff time as appears on PE Spreadsheet for 21082:

Pre time = 35 minutes
Intra time = 565 Dental Assistant total, 303 lab technician total

- **Pre intra time** = 66 minutes (11 minutes x 6 FTF visits)
- **Intra time** = 358 minutes for DA, 303 minutes for LT (corresponds to table above)
- **Post intra time** = 141 minutes (26 minutes FTF v 1 + 23 minutes FTF v 2, 3, 4, 5, 6)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (58 minutes) DA and MD/DMD are present

- DA and MD / DMD obtain cone beam radiograph
- DA will make the scan of the maxillary and mandibular arches.
- DA will mix dental materials for an impression and for a bite registration.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the intraoral healed surgical wound (hard and soft palate, pharyngeal area, and tongue and mandibular arch) during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

- DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 55 total Lab Tech

After the models have been printed, the LT performs post processing of the 3D printed models including washing with isopropyl alcohol (IPA 99%) to remove excess resin from the model, drying of the model, removal of the printed supports (rafts/scaffolding) on the model, post curing of the model, finishing and quality control. The LT collaborates with the MD/DMD on prosthetic design of the major connector of the prosthesis along with the palatal molding, rests, clasps, and major connector design. The LT fabricates the custom tray of triad material. The LT consults with doctor to verify that the custom tray is acceptable. **The expert panel recommends 55 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA observes Bunsen burner/water bath for safety.
- DA mixes final impression dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). Dental assistant assists MD/DMD as MD/DMD performs rest preps.
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.

- Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the intraoral healed surgical wound (hard and soft palate, pharyngeal area, and tongue and mandibular arch) during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 2 and 3: 45 minutes total Lab Tech

The LT boxes and pours the final impression. The LT trims the master cast/model. Both the MD/DMD and LT evaluate the master cast/model for accuracy. The LT scans the master cast/model into a secure icloud to have a record of the patient's master cast/model. The LT reviews the framework design with MD/DMD. The LT either scans the master cast/model and sends to an outside laboratory for milling of the framework or the LT boxes the master model/cast with work authorization and federal expresses to outside laboratory for milling. When the framework comes back from the outside laboratory, the framework is evaluated with the MD/DMD present. **The expert panel recommends 45 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA observes Bunsen burner/water bath for safety.
- DA mixes dental materials (bite registration) under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.

- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral healed surgical wound (hard and soft palate, pharyngeal area, and tongue and mandibular arch) during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 60 minutes total Lab Tech

The LT will be mounting the models on an articulator, consulting the MD/DMD about occlusal scheme and setting the teeth. After setting, the LT shows them to the MD/DMD for final approval. **The expert panel recommends 60 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA observes Bunsen burner/water bath for safety.

- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands patient a mirror to evaluate the mockup of the prosthesis.
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral healed surgical wound (hard and soft palate, pharyngeal area, and tongue and mandibular arch) during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 30 minutes total Lab Tech

The LT redefines the palatal augmentation. The LT smooths the palatal augmentation without any dents or rough patches. The LT makes the delineation between each speech zone more pronounced. Additions are added per the MD/DMD work authorization. **The expert panel recommends 30 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)

- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA mixes dental materials (reline material) under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral healed surgical wound (hard and soft palate, pharyngeal area, and tongue and mandibular arch) during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 113 minutes total Lab Tech

With an order from the MD/DMD, the LT finalizes wax up on the articulator. With approval from the MD/DMD, the LT flasks the models. The flasks are boiled out. The wax residue is removed with clean hot boiling water. Methyl Methacrylate is injected into the flasks and the flasks are placed in the curing unit. After curing, the LT deflasks the prosthesis. The LT trims the excess methyl methacrylate and does a laboratory remount. After final adjustments, the LT polishes the prosthesis. The LT disinfects the prosthesis. **The expert panel recommends 113 minutes for these activities.**

Visit #6 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands patient the mirror so they see the prosthesis in their mouth.
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral healed surgical wound (hard and soft palate, pharyngeal area, and tongue and mandibular arch) during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21082_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

    See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.

CPT CODE(S):__21082_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

NON-FACILITY DIRECT PE INPUTS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

		21082

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?

a. If yes, please explain how the computer is used for this service(s).
b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side

				up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Sandstorm2 25/50 & 50/100 mic*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The expert panel agreed that the sandblaster is used at least 10 minutes in order to remove stone and plaster from the prosthesis during the deflasking. Used to provide rough surface to enhance bonding for implant prosthesis.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

24.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21083	Impression and custom preparation; palatal lift prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21083	An 80 year old male is referred for custom preparation of a palatal lift prosthesis after a stroke.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and lab technicians (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21083_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are requesting the standard 090 pre staff times for both the facility and nonfacility

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **FIVE** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 5 FTF visits. **TOTAL 15 minutes for vitals appears on the PE spreadsheet for 21083.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - Dental assistant verifies appropriate equipment is operational and supplies are ordered. Dental assistant coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.

- DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21083:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21083	5	60	60	60	60	54			294	60	45	80	15			200	494

Total staff time as appears on PE Spreadsheet for 21083:

Pre time = 35 minutes
Intra time = 467 Dental Assistant total, 200 lab technician total

- **Pre intra time** = 55 minutes (11 minutes x 5 FTF visits)
- **Intra time** = 294 minutes for DA, 200 minutes for LT (corresponds to table above)
- **Post intra time** = 118 minutes (26 minutes FTF v 1 + 23 minutes FTF v 2, 3, 4, 5)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21083_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA and MD/DMD obtain cone beam radiograph
- DA will make the scan of the maxillary and mandibular arches.
- DA assists MD/DMD in oral testing of tongue and soft palate function, speech intelligibility testing, and physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls and posterior pharyngeal wall, and testing of the gag response.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the hard and soft palate and pharyngeal area during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

- DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 60 minutes total Lab Tech

After the models have been printed, the LT performs post processing of the 3D printed models including washing with isopropyl alcohol (IPA 99%) to remove excess resin from the model, drying of the model, removal of the printed supports (rafts/scaffolding) on the model, post curing of the model, finishing and quality control. The LT collaborates with the MD/DMD on prosthetic design of the major connector of the prosthesis along with the lift, rests, clasps, and major connector design. The LT fabricates the custom tray of triad material. The LT consults with doctor to verify that the custom tray is acceptable. **Expert panel recommends 60 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA observes Bunsen burner/water bath for safety.
- DA mixes final impression dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.

- Safety Tracking: Document sterilization logs and maintain strict infection control protocols

- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the hard and soft palate and pharyngeal area during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 2 and 3: 45 minutes total Lab Tech

The LT boxes and pours the final impression. The LT trims the master cast/model. Both the MD/DMD and LT evaluate the master cast/model for accuracy. The LT scans the master cast/model into a secure icloud to have a record of the patient's master cast/model. The LT reviews the framework design with MD/DMD. The LT either scans the master cast/model and sends across internet to an outside laboratory for milling of the framework or the LT boxes the master model/cast with work authorization and federal expresses to outside laboratory for milling.When the framework comes back from the outside laboratory, the framework is evaluated with the MD/DMD present. Adjustments are made per the MD/DMD instruction. **Expert panel recommends 45 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA observes the Bunsen burner/water bath for safety.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the hard and soft palate and pharyngeal area during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 80 minutes Lab Tech

The LT reviews the altered cast and inspects the altered cast with the MD/DMD. The LT boxes and pours the altered cast into dental stone. The new master cast/model is then trimmed and evaluated with the MD/DMD. After the new master cast/model has been approved by the MD/DMD, the LT waxes in the lift portion. The wax up of the lift portion is approved by the MD/DMD. The master cast/model with the waxed lift portion is flasked, boiled out to remove the wax, and the lift portion is then converted into heat cured methyl methacrylate. The flask with the packed methyl methacrylate must be processed with heat so the uncured methyl methacrylate becomes a cured methyl methacrylate. After it is cured, the LT deflasks the prosthesis and trims and polishes the prosthesis. The LT reviews the prosthesis with the MD/DMD to verify no porosity, appropriate finish of methyl methacrylate at finish line. The LT makes any changes as dictated by MD/DMD. The prosthesis is then disinfected prior to the patient's visit. The LT then gives it to the dental assistant to have ready for the patient's visit.
Expert panel recommends 80 minutes for these activities.

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA mixes dental materials under the direction of the MD/DMD.

- Chairside Assistance: Hand instruments and materials (articulating paper) to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands patient the mirror to evaluate prothesis in mouth and evaluate facial appearance.
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the hard and soft palate and pharyngeal area during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 15 minutes total Lab Tech

The LT reviews the effectiveness of the prosthesis with the MD/DMD. The LT boxes up the patient's models and logs them for storage. **Expert panel recommends 15 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the hard and soft palate and pharyngeal area during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above

NON-FACILITY DIRECT PE INPUTS

SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc. This patient has had a stroke, making positioning challenging.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21083_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.	
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.	
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).	
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.	
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.	
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.	
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.	
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.	
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time		

NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Ivobase*	TIME USED FOR ONE PATIENT - assigned by expert panel	55	Typically, labs use acrylic that takes 55 minutes per manufacturer instructions. You start with a flask and place it in cold water, it has to be heated for curing (45 minutes) and then slowly has to be brought down, and the flask is cooled in cold water (10 additional minutes, totaling 55).
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Sandstorm2 25/50 & 50/100 mic*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The expert panel agreed that the sandblaster is used at least 10 minutes in order to remove stone and plaster from the prosthesis during the deflasking. Used to provide rough surface to enhance bonding for implant prosthesis.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register,

maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21084	Impression and custom preparation; speech aid prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21084	A 63 year old male with a repaired cleft palate whose velopharyngeal is insufficient is referred for custom preparation of a speech bulb prosthesis.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21084_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SIX** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 6 FTF visits. **TOTAL 18 minutes for vitals appears on the PE spreadsheet for 21084.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - Dental assistant verifies appropriate equipment is operational and supplies are ordered. Dental assistant coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21084_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21084:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21084	6	60	60	60	50	60	50		340	60	45	90	90	80		365	705

Total staff time as appears on PE Spreadsheet for 21084:

Pre time = 35 minutes
Intra time = 550 Dental Assistant total, 365 lab technician total

- **Pre intra time** = 66 minutes (11 minutes x 6 FTF visits)
- **Intra time** = 340 minutes for DA, 365 minutes for LT (corresponds to table above)
- **Post intra time** = 144 minutes (26 minutes FTF v 1 and 2 + 23 minutes FTF v 3, 4, 5, 6)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA and MD/DMD obtains cone beam radiograph
- DA will make the scan of the maxillary and mandibular arches.
- DA will mix dental materials for an impression and for a bite registration.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the hard and soft palate and pharyngeal during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NFTF between Visit 1 and 2: 60 minutes total Lab Tech

After the models have been printed, the LT performs post processing of the 3D printed models including washing with isopropyl alcohol (IPA 99%) to remove excess resin from the model, drying of the model, removal of the printed supports (rafts/scaffolding) on the model, post curing of the model, finishing and quality control. The LT collaborates with the MD/DMD on prosthetic design of the major connector of the prosthesis along with the lift, rests, clasps, and major connector design. The LT fabricates the custom tray of triad material. The LT consults with doctor to verify that the custom tray is acceptable. **The expert panel recommends 60 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA obtains CBCT image / periapical radiographs of abutment teeth
- DA observes the Bunsen burner and water bath for safety.
- DA will mix final impression dental materials for an impression and for a bite registration.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)

- CA028 Review /read post procedure x ray –2 minute (expert panel time)
    - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
    - The DA is cleaning the hard and soft palate and pharyngeal during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
    - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.
    - DA verifies OR date with head and neck Scheduler

NFTF between Visit 2 and 3: 45 minutes Lab Tech

The LT boxes and pours the final impression. The LT trims the master cast/model. Both the MD/DMD and LT evaluate the master cast/model for accuracy. The LT scans the master cast/model into a secure icloud to have a record of the patient's master cast/model. The LT reviews the framework design with MD/DMD. The LT either scans the master cast/model and sends to an outside laboratory for milling of the framework or the LT boxes the master model/cast with work authorization and federal expresses to outside laboratory for milling. When the framework comes back from the outside laboratory, the framework is evaluated with the MD/DMD present. **The expert panel recommends 45 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD present

- DA observes the Bunsen burner/water bath for safety.
- DA mixes dental materials (reline material) under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.

- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the hard and soft palate and pharyngeal during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 90 minutes Lab Tech

The LT reviews the altered cast and inspects the altered cast with the MD/DMD. The LT boxes and pours the altered cast into dental stone. The new master cast/model is then trimmed and evaluated with the MD/DMD. After the new master cast/model has been approved by the MD/DMD, the LT duplicates the master cast/model. The MD/DMD waxes in the soft palate t portion. The wax up of the soft palate portion is approved by the MD/DMD. The master cast/model with the waxed soft palate portion is flasked, boiled out to remove the wax, and the soft portion is then converted into heat cured methyl methacrylate. The flask with the packed methyl methacrylate must be processed with heat so the uncured methyl methacrylate becomes a cured methyl methacrylate. After it is cured, the LT deflasks the prosthesis and trims and polishes the prosthesis. The LT reviews the prosthesis with the MD/DMD to verify no porosity, appropriate finish of methyl methacrylate at finish line. The LT makes any changes as dictated by MD/DMD. The prosthesis is then disinfected prior to the patient's visit. The LT then gives it to the DA to have ready for the patient's visit. **The expert panel recommends 90 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)

- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (50 minutes) DA and MD/DMD present

- DA mixes dental materials (reline material, bite registration) under the direction of the MD/DMD.
- DA hands the dentist the shade guide and tooth mold selection guide to MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the hard and soft palate and pharyngeal during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 90 minutes Lab Tech

The LT pours the pickup impression and mounts the maxillary and mandibular models with the maxillomandibular relationship or bite recording. The LT consults with MD/DMD about the mounting. With an order from the MD/DMD, the LT sets the teeth in the partial edentulous span of the prosthesis. The setup is reviewed with the MD/DMD and LT. The prosthesis is then disinfected prior to the patient's visit. The LT then gives it to the DA to have ready for the patient's visit. **The expert panel recommends 90 minutes for these activities.**

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	**Code**	**Unit**	**Item Qty**
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	**Code**	**Unit**	**Item Qty**
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1

autoclave bag	item	1
autoclave tape	yd	0.33
enzymatic detergent	oz	1
cleaning brush, instruments	item	1

EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.

NON-FACILITY DIRECT PE INPUTS

SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.

NEW	*SprintRay Pro 2 Bundle 3D System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Ivobase*	TIME USED FOR ONE PATIENT - assigned by expert panel	55	Typically, labs use acrylic that takes 55 minutes per manufacturer instructions. You start with a flask and place it in cold water, it has to be heated for curing (45 minutes) and then slowly has to be brought down, and the flask is cooled in cold water (10 additional minutes, totaling 55).
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Sandstorm2 25/50 & 50/100 mic*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The expert panel agreed that the sandblaster is used at least 10 minutes in order to remove stone and plaster from the prosthesis during the deflasking. Used to provide rough surface to enhance bonding for implant prosthesis.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21085	Impression and custom preparation; oral surgical splint	010

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21085	1) A 65 year old female is referred for custom preparation of oral surgical splints prior to removal of an odontogenic tumor and reconstruction of the right posterior mandible. 2) A 16 year old female with a dental facial deformity is referred for custom preparation of oral surgical splints prior to corrective jaw surgery for a dental facial deformity.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists.

21085 is unique in this family for several reasons:

1) It is the only 010 global code. The rest of the family are 090 globals.
2) It is the only code in the family that was surveyed by both oral maxillofacial surgeons (AAOMS), and maxillofacial prosthodontists (AAMP). The rest of the family was only surveyed by AAMP.
3) Oral maxillofacial surgeons are the dominant provider of this service, thus their typical practice patterns are reflected in our work and PE recommendations for this code.
4) 21085 is the only code that has a SINGLE staff type – a dental assistant. It was determined that having a lab technician was not typical based on the dominant provider type as noted above.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your

reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

No

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery and maxillofacial prosthodontics.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors: 1. **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There is only one staff type involved in 21085. The typical clinical staff for this code is a dental assistant (DA). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

There is no change to the global period for this code.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **TWO** face to face visits with the patient for 21085. During FTF visit **ONE**, the DA takes the full array of five vitals: BP, weight, height, BMI, and heart rate**,** thus we are requesting 5 minutes for FTF patient visit **ONE**. During FTF visit **TWO the DA only takes three vitals,** BP, heart rate, and oxygen saturation as there may be illness that could change those results while other vitals, like weight, height, and BMI are unlikely to change within the 10 day global period. We are requesting 3 minutes for FTF visits TWO. **TOTAL 8 minutes for vitals appears on the PE spreadsheet for 21085.**

NON-FACILITY DIRECT PE INPUTS

Lionel M. Candelaria, DDS, FACS – ADA RUC Advisor
George L Grillon, DMD, FACS – ADA Alternate RUC Advisor

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

We are not requesting any pre-clinical staff time for this code as is standard for 010 globals.

    b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the surgical splint begins and extends throughout the global period (10 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the surgical splint and postoperative care during the global period (10 days).

The clinical staff type performing services during the intra service period is a dental assistant (DA). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

No post service time is requested because when the surgical splint is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" capture the DA time as "post intra time".

Visit summary for 21085:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21085	2	37	30						67	No lab tech for this code only						0	67

Total staff time as appears on PE Spreadsheet for 21085:

Pre time = 0 minutes (see Q10.a)
Intra time = 136 Dental Assistant total
- **Pre intra time** = 24 minutes (13 minutes FTF v 1 + 11 minutes FTF v 2)
- **Intra time** = 67 minutes for DA
- **Post intra time** = 45 minutes (25 minutes FTF v 1 + 20 minutes FTF v 2)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF: 37 minutes total Dental Assistant

Pre Intra (13 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The dental assistant does the initial assessment of the medical history, medications, and allergies. 3 minutes. (PE standard)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- CA010 Obtain vital signs – take vitals BP, weight, height, BMI, and heart rate. 5 minutes. (PE standard)
- CA012 Review requisition, assess for special needs - The staff reviews the type of clinical and laboratory supplies needed for the surgical splint, verifying safety of equipment and having radiographs on computer screen for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verifies appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for surgical splint type matches order of oral and maxillofacial surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, photographic consents, financial). 1 minute (PE standard)

Intra (37 minutes) DA and MD/DMD present

- DA assists MD 100% during the FTF visit.
- DA and MD/DMD take the cone beam image.
- All images are taken with the digital camera.
- DA and MD discuss skeletal measurements and facial measurements and the DA records them.
- DA mixes impression material.
- DA softens wax for wax bite.

Post Intra (25 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute (expert panel time)
- CA032 Scan exam into PACS –1 minute (PE standard)
    - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to digital file and will have the maxillary and mandibular arches digital files 3D printed with the SprintRay printer.
    - DA scans in image to PACs.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The dental assistant does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the surgical splint, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for surgical splint type matches order of oral and maxillofacial surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (30 minutes) DA and MD/DMD are present

- DA assists MD 100% during the FTF visit.
- During this visit the splint is tried for fit.
- If adjustments are needed, DA gets trimmer ready and assists in making any necessary adjustments.

Post Intra (20 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the surgical splint is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

100%

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Because there is no lab technician for 21085, any equipment used during inter-visit/lab session times is used by the physician.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Because there is no lab technician for 21085, any equipment used during inter-visit/lab session times is used by the physician.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal

				anatomy/function or swelling etc.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP060	dust collecting unit (Handler)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EP066	handpiece, laboratory (Ney)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EP065	grinding and polishing unit (Handler)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the surgical splint. The steam cleans the surgical splint during fabrication process.
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Lab Scanner & 3Shape*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21086	Impression and custom preparation; auricular prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21086	A 67 year old male is referred for custom preparation of an auricular prosthesis after his ear was surgically removed due to squamous cell carcinoma.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

CPT CODE(S):__21086_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SIX** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 6 FTF visits. **TOTAL 18 minutes for vitals appears on the PE spreadsheet for 21086.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. DA coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete pre-procedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21086:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21086	6	63	84	80	90	90	54		461	84	93	80	93	52		402	863

Total staff time as appears on PE Spreadsheet for 21086:

Pre time = 35 minutes
Intra time = 671 Dental Assistant total, 402 lab technician total

- **Pre intra time** = 66 minutes (11 minutes x 6 FTF visits)
- **Intra time** = 461 minutes for DA, 402 minutes for LT (corresponds to table above)
- **Post intra time** = 144 minutes (26 minutes FTF v 1 and 2 + 23 minutes FTF v 3, 4, 5, 6)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)

- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (63 minutes) DA and MD/DMD are present

- DA and MD/DMD obtain cone beam radiograph and Proface imaging
  DA scans the contralateral ear.
- DA will mix dental materials for a final impression.
- Chairside Assistance: Hand instruments and materials (dental implant components) to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 84 minutes Lab Tech

With an order from the MD/DMD, the LT boxes and pours the final impression. After setting the dental stone, the LT separates the model/cast from the impression and trims the master model/stone. The LT fabricates a wax base to outline extent of prosthesis. From the imaging (proface), the 3D contralateral ear is "flipped" and 3D printed. The 3D printed ear is converted into wax. The LT fabricates a wax base which the prosthesis will be built on. With input from the MD/DMD, the wax pattern into position on the master cast with the wax base. The LT consults with MD/DMD about implant verification framework. The LT shows template and wax up to MD/DMD for approval. The LT disinfects the implant verification to be ready for patient's visit. **The expert panel recommends 84 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (84 minutes) DA and MD/DMD are present

- DA assists MD/DMD in verification of implant verification framework.
- DA monitors the Bunsen burner.
- DA takes photographs as directed by MD/DMD.
- DA mixes dental materials as needed under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the wax up prosthesis and disinfects the prosthesis after use.

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.

- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.
    - DA verifies OR date with head and neck Scheduler

NFTF between Visit 2 and 3: 93 minutes total Lab Tech

The LT consults with MD/DMD about wax up and compares it to soft tissue imaging preop and photographs. Both the MD/DMD and LT review photographs and/or soft tissue imaging (Proface) and decide on what areas need to be developed. After reviewing the initial position on the master cast (model) with the MD/DMD, the LT begins waxing and adjusting as directed by MD/DMD with the incorporation of the implant framework within the wax pattern.. After consulting with MD/DMD, it is decided that the wax up is acceptable for the patient's next visit. The LT will disinfect the wax up and make certain that it is ready for the patient's next visit. **The expert panel recommends 93 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (80 minutes) DA and MD/DMD are present

- DA monitors the Bunsen burner for safety.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). DA hands the spectromatch to the MD/DMD for color measurement.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. Dental assistant hands mirror to patient to evaluate waxup.
- DA cleans the wax up prosthesis and disinfects the prosthesis after initial use.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.

- Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the healed wound during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 80 minutes Lab Tech

The LT consults with MD/DMD that the wax up is completed. The LT sculpts in skin texture and finalizes the margins of the prosthesis. The LT reviews imaging/photographs with the MD/DMD. The LT consults with MD/DMD that the wax pattern is ready for investing. With MD/DMD's approval, the LT shows the base flask to MD/DMD for approval. With the approval of the MD/DMD, the LT does the helix portion pour and shows it to the MD/DMD for approval. Then, the LT does the counter pour of the flask. The LT boils out the wax pattern and applies the appropriate materials so it is ready for the intrinsic coloration. The LT shows it to the MD/DMD for approval. **The expert panel recommends 80 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- DA has the intrinsic coloration palate ready for the MD/DMD.
- DA replaces coloration supplies as needed.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the waxup prosthesis and disinfects the wax up prosthesis after initial removal.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)

- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 93 minutes total Lab Tech

The MD/DMD reviews the LT the location of the soft and harder silicones so the prosthesis will be realistic. With the approval of the MD/DMD, the LT injects base shade silicone elastomer into mold with the intrinsic characterization. Injection of silicone for an auricular prosthesis is different than the other extraoral prostheses. The other prosthesis has a 2-piece mold. The auricular prosthesis has a 3-piece mold and requires more time to inject and it's more precise. The LT puts the flasks under pressure and puts a C-clamp on it. The LT puts mold in oven for curing. After curing, breaks out the mold, cleans and trims the prosthesis. Verifies passive fit on model with implants. **The expert panel recommends 93 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- DA has the extrinsic coloration materials ready for extrinsic characterization.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). The dental assistant aids the MD/DMD in cleaning of the implants.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 52 minutes Lab Tech

LT seals prosthesis for appropriate curing and setting of coloration. The LT completes the documentation of dental materials used in the prosthesis to be put into EMR. The shade selection of the base shade is recorded, and the LT keeps small samples of the intrinsic coloration is kept in patient's box. **The expert panel recommends 52 minutes for these activities.**

Visit #6 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (54 minutes) DA and MD/DMD are present

- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands the mirror to the patient to evaluate the prosthesis.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)

- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the healed wound during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet. We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	**Code**	**Unit**	**Item Qty**
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2

gown, patient	item	1
pillow case	item	1
cover, thermometer probe	item	1

DESCRIPTION	**Code**	**Unit**	**Item Qty**
pack, cleaning, surgical instruments	**SA043**	**pack**	**1**
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

		21086

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc..
NEW	*Planmeca Proface Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine,*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

	tips, and cartridge			
NEW	*spectromatch with color kit*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Measuring skin tone and have to input calculation on computer and will give you the color formula.
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.

NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21087	Impression and custom preparation; nasal prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21087	A 62 year old female is referred for custom preparation of a nasal prosthesis after undergoing a total rhinectomy.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

NON-FACILITY DIRECT PE INPUTS

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

CPT CODE(S):__21087_____

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SIX** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 6 FTF visits. **TOTAL 18 minutes for vitals appears on the PE spreadsheet for 21087.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. DA coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21087:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21087	6	60	90	90	75	78	50		443	90	90	90	103	45		418	861

Total staff time as appears on PE Spreadsheet for 21087:

Pre time = 35 minutes
Intra time = 653 Dental Assistant total, 418 lab technician total

- **Pre intra time** = 66 minutes (11 minutes x 6 FTF visits)
- **Intra time** = 443 minutes for DA, 418 minutes for LT (corresponds to table above)
- **Post intra time** = 144 minutes (26 Minutes FTF v 1 and 2 + 23 minutes FTF v 3, 4, 5, 6)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)

- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes) DA and MD/DMD are present

- DA and MD/DMD obtain a cone beam radiograph and Proface imaging.
- DA scans the defect.
- A will mix dental materials for a final impression.
- Chairside Assistance: Hand instruments and materials (implant components) to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 90 minutes Lab Tech

With an order from the MD/DMD, the LT boxes and pours the final impression. After setting the dental stone, the LT separates the model/cast from the impression and trims the master model/stone. The LT fabricates a wax base to outline extent of prosthesis. From the imaging (proface), the preop virtual image is evaluated to determine if the tumor changed the shape of the nose. IF the tumor has changed the shape of the nose, the LT virtually sculpts the nose to try to get it to its

original shape. The LT works with the MD/DMD to finalize the shape. The pattern is 3D printed and converted into wax. The LT fabricates a wax base which the prosthesis will be built on. With input from the MD/DMD, the wax pattern into position on the master cast with the wax base. The LT consults with MD/DMD about implant verification framework template. The LT shows implant verification template and wax up to MD/DMD for approval. The LT disinfects the implant template to be ready for patient's visit. **The expert panel recommends 90 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- DA assists MD/DMD in verification of implant verification framework.
- DA monitors the Bunsen burner.
- DA takes photographs as directed by MD/DMD
- A mixes dental materials as needed under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials (implant components) to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal Management: Use suction hoses, and other instruments to keep the patient's nasal cavity dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)

- The DA reviews imaging with doctor and verifies uploading into chart.

- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

NFTF between Visit 2 and 3: 90 minutes Lab Tech

The LT consults with MD/DMD about the wax up and compares it to soft tissue imaging preop and photographs. Both the MD/DMD and LT reviews photographs or soft tissue imaging (Proface) and decide on what areas need to be develop. The LT incorporates the implant framework within the wax pattern as directed by MD/DMD. The LT smooths the wax pattern and makes changes as directed by the MD/DMD. After consulting with MD/DMD, it is decided that the wax up is acceptable for the patient's next visit. The LT will disinfect the wax up and make certain that it is ready for the patient's next visit. **The expert panel recommends 90 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- DA monitors the Bunsen burner for safety.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). DA hands the spectromatch to the MD/DMD for color measurement.
- Nasal Management: Use suction hoses, and other instruments to keep the patient's nasal cavity dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands the mirror to the patient for evaluation of the wax pattern.

- DA cleans the wax up prosthesis and disinfects after use.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 90 minutes Lab Tech

The LT consults with MD/DMD that the wax up is completed. The LT sculpts in skin texture and finalizes the margins of the prosthesis. The LT consults with MD/DMD that the wax pattern is ready for investing. With MD/DMD's approval, the LT shows the base flask to MD/DMD for approval. With the approval of the MD/DMD, the LT does the helix portion pour and shows it to the MD/DMD for approval. Then, the LT does the counter pour of the flask. The LT boils out the wax pattern and applies the appropriate materials so it is ready for the intrinsic coloration. The LT shows it to the MD/DMD for approval. **The expert panel recommends 90 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (75 minutes) DA and MD/DMD are present

- DA has the intrinsic coloration palate ready for the MD/DMD.

- DA replaces coloration supplies as needed
- A mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal Management: Use suction hoses, and other instruments to keep the patient's nasal cavity dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- A cleans the wax up prosthesis and disinfects the prosthesis after initial removal.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 103 minutes Lab Tech

The MD/DMD reviews the LT the location of the soft and harder silicones so the prosthesis will be realistic. Due to the nasal anatomy, this will require finesse to incorporate the appropriate silicone with the framework. With the approval of the MD/DMD, the LT injects base shade silicone elastomer into mold with the intrinsic characterization. The LT puts the flasks under pressure and puts a C-clamp on it. The LT puts mold in oven for curing. After curing, break out the mold and cleans and trims the prosthesis. Verifies passive fit on model with implants. **The expert panel recommends 103 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)

- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (78 minutes) DA and MD/DMD are present

- DA has extrinsic coloration materials ready for extrinsic characterization.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). The DA aids the MD/DMD in cleaning of the implants.
- Nasal Management: Use suction hoses and other instruments to keep the patient's nasal cavity dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 45 minutes Lab Tech

LT seals prosthesis for appropriate curing and setting of coloration. The LT completes the documentation of dental materials used in the prosthesis to be put into EMR. The shade selection of the base shade is recorded, and the LT keeps small samples of the intrinsic coloration is kept in patient's box. **The expert panel recommends 45 minutes for these activities.**

Visit #6 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)

- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (50 minutes) DA and MD/DMD are present

- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal Management: Use suction hoses, and other instruments to keep the patient's nasal cavity dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. Dental assistant hands patient the mirror to evaluate the prosthesis.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly*

related to physician work time or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.
We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

			21087

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment

used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc..
NEW	*Planmeca Proface Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

	1040 - Adec), with upholstery			
EQ138	instrument pack, medium ($1500 and up)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*spectromatch with color kit*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Measuring skin tone and have to input calculation on computer and will give you the color formula.
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.

EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial

prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

26. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

27. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21088	Impression and custom preparation; facial prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21088	A 68 year old female is referred for custom preparation of a facial prosthesis after undergoing a total rhinectomy and orbital exenteration.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and LTs (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and nonfacility

CPT CODE(S):__21088_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SIX** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 6 FTF visits. **TOTAL 18 minutes for vitals appears on the PE spreadsheet for 21088.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with head and neck service
- CA002 Coordinate presurgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - DA verifies appropriate equipment is operational and supplies are ordered. DA coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete preprocedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21088:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21088	6	65	90	90	110	90	76		521	100	90	120	65	60		435	956

Total staff time as appears on PE Spreadsheet for 21088:

Pre time = 35 minutes
Intra time = 731 Dental Assistant total, 435 lab technician total

- **Pre intra time** = 66 minutes (11 minutes x 6 FTF visits)
- **Intra time** = 521 minutes for DA, 435 minutes for LT (corresponds to table above)
- **Post intra time** = 144 minutes (26 minutes FTF v 1 and 2 + 23 minutes FTF v 3, 4, 5, 6)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF: 65 minutes

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)

- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (65 minutes) DA and MD/DMD are present

- DA and MD/DMD obtain cone beam radiograph and Proface imaging.
- The DA scans the defect.
- A will mix dental materials for a final impression.
- Chairside Assistance: Hand instruments and materials (implant components) to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal/Orbital Management: Use suction hoses and other instruments to keep the patient's nasal/orbital cavity dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 100 minutes Lab Tech

With an order from the MD/DMD, the LT boxes and pours the final impression. After setting the dental stone, the LT separates the model/cast from the impression and trims the master model/stone. The LT fabricates a wax base to outline extent of prosthesis. Customizes stock globe to match the patient's contralateral eye. The LT consults with MD/DMD. Any preoperative scans (from

imaging (proface), a 3d model can be made and a replica of the patient's original facial features can be obtained and converted into a wax pattern. Once a decision is made, the LT makes a wax base which is what the prosthesis will be build-on with incorporation of any presurgical soft tissue features. The LT consults with MD/DMD about implant verification framework. The LT fabricates implant verification framework and shows it to MD/DMD. The LT disinfects the implant framework to be ready for patient's visit. **The expert panel recommends 100 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- DA assists MD/DMD in verification of implant verification framework.
- DA monitors the Bunsen burner.
- DA takes photographs as directed by MD/DMD
- DA mixes dental materials as needed under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials implant components to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal/Orbital Management: Use suction hoses, and other instruments to keep the patient's nasal/orbital cavities dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)

- The DA reviews imaging with doctor and verifies uploading into chart.

- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.
  - DA verifies OR date with head and neck Scheduler

NFTF between Visit 2 and 3: 90 minutes Lab Tech

The LT consults with MD/DMD. After the MD/DMD sets the gaze of the eye, the LT fills in the bulk of wax in the areas that the MD/DMD has put the nose/eye. Both the MD/DMD and LT review photographs or soft tissue imaging (Proface) and decide on what areas need to be develop. The LT incorporates the implant framework within the wax pattern as directed by MD/DMD. The LT smooths the wax pattern and makes changes as directed by the MD/DMD. After consulting with MD/DMD, it is decided that the wax up is acceptable for the patient's next visit. The LT will disinfect the wax up and make certain that it is ready for the patient's next visit. **The expert panel recommends 90 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- A monitors the Bunsen burner for safety.
- DA mixes dental materials as needed under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). DA hands the spectromatch to the MD/DMD for color measurement.
- Nasal/Orbital Management: Use suction hoses, and other instruments to keep the patient's orbital/nasal cavities dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands the mirror to the patient for evaluation of the wax pattern.

- DA cleans the was up prosthesis and disinfects the prosthesis after initial removal.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 120 minutes Lab Tech

The LT consults with MD/DMD that the wax up is complete. Both the MD/DMD and LT review photographs or soft tissue imaging (Proface) and decide on what areas need to be developed. Once the MD/DMD gives go ahead to complete it, the LT sculpts in skin texture and finalizes the margins of the prosthesis. The LT consults with MD/DMD that the wax pattern is ready for investing. With MD/DMD's approval, the LT shows the base flask to MD/DMD for approval. With the approval of the MD/DMD, the LT does the helix portion pour and shows it to the MD/DMD for approval. Then, the LT does the counter pour of the flask. The LT boils out the wax pattern and applies the appropriate materials, so it is ready for the intrinsic coloration. The LT shows it to the MD/DMD for approval. **The expert panel recommends 120 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (110 minutes) DA and MD/DMD are present

- DA has the intrinsic coloration palate ready for the MD/DMD.
- DA replaces coloration supplies as needed

- A mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal/Orbital Management: Use suction hoses, and other instruments to keep the patient's orbital/nasal cavities dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- A cleans the waxup prosthesis and disinfects the prosthesis after initial removal.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 65 minutes Lab Tech

The MD/DMD reviews the LT the location of the soft and harder silicones so the prosthesis will be realistic. Due to the nasal anatomy, this will require finesse to incorporate the appropriate silicone with the framework. With the approval of the MD/DMD, the LT injects base shade silicone elastomer into mold with the intrinsic characterization. The LT puts the flasks under pressure and puts a C-clamp on it. The LT puts mold in oven for curing. After curing, break out the mold and cleans and trims the prosthesis. Verifies passive fit on model with implants. **The expert panel recommends 65 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)

- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (90 minutes) DA and MD/DMD are present

- DA has the extrinsic coloration materials ready for extrinsic characterization.
- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). The DA aids the MD/DMD in cleaning of the implants.
- Nasal/Orbital Management: Use suction hoses and other instruments to keep the patient's orbital/nasal cavities dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- A cleans the prosthesis and disinfects the prosthesis after initial removal.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 60 minutes Lab Tech

LT seals prosthesis for appropriate curing and setting of coloration. The LT completes the documentation of dental materials used in the prosthesis to be put into EMR. The shade selection of the base shade is recorded, and the LT keeps small samples of the intrinsic coloration is kept in patient's box. **The expert panel recommends 60 minutes for these activities.**

Visit #6 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (76 minutes) DA and MD/DMD are present

- DA mixes dental materials under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Nasal/Orbital Management: Use suction hoses and other instruments to keep the patient's orbital/nasal cavities dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. A hands mirror to patient to evaluate the prosthesis.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the healed wound with an open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21088_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

SA048	pack, minimum multi-specialty visit
EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench
SA043	Pack, cleaning, surgical instruments

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, cleaning, surgical instruments	**SA043**	**pack**	1
gloves, non-sterile		pair	2
gown, staff, impervious		item	1
face shield, splash protection		item	1
autoclave bag		item	1
autoclave tape		yd	0.33
enzymatic detergent		oz	1
cleaning brush, instruments		item	1

EQ138	instrument pack, medium ($1500 and up) includes: acrylic burs, buff wheel, artex facebow, clasp adjusting pliers, screwdriver, magnetic torque wrench

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are recommending the addition of several pieces of equipment for this code. The purpose of the new equipment is detailed in the invoice summary spreadsheet in column J.

The table below indicates which visits (FTF or NFTF) equipment is used and for how many minutes per use. The total number of minutes equipment is used across all visits (yellow total column below) is what is reflected in the PE spreadsheet for total equipment time.

All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

		21088

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?

a. If yes, please explain how the computer is used for this service(s).
b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Timer per use Assigned Time by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
ED005	camera, digital system, 12 megapixel (medical grade)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	10 minutes is needed because it's in oral and extra oral photographs and it requires retractors and repositioning in the patient.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
NEW	*Planmeca Proface Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time.

NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Pentamix machine, tips, and cartridge*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*spectromatch with color kit*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Measuring skin tone and have to input calculation on computer and will give you the color formula.
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
	EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
	EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.
	EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
	EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
	NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the digital file from the Trios to the 3D printer for a dental model.
	NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
	NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.
24.	NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty

they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

26. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

27. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

Baltimore, Maryland 21207

Dear Doctor McCann:

Recommendations for maxillofacial prosthetic services (CPT codes 21079-21088) were developed by the American Academy of Maxillofacial Prosthetics and reviewed by Robert Florin, MD and Michael Maves, MD of the AMA/Specialty Society RVS Update Committee on November 21, 1994. These recommendations were also discussed with James Holloway, MD on February 9, 1995 and a consensus was formed that the recommendations represented appropriate relative work values for these services. Although members of the RUC assisted, at HCFA's request, in the development and review of the relative work values for these services, the recommendations should not be considered RUC recommendations as the RUC did not formally review the AAMP proposal.

I have attached a summary of the workgroup discussions and a detailed document prepared by Thomas R. Cowper, DDS for your review. I hope that this information is helpful in developing final work relative values for these services. Please contact me if you have any further questions.

Sincerely,

Sherry L. Smith

Recommendations for Maxillofacial Prosthetics

On November 21, 1994 Robert Florin, MD (American Association of Neurological Surgeons), Michael Maves, MD (American Academy of Otolaryngology - Head and Neck Surgery, Inc.), Thomas R. Cowper, DDS and Jonathan Weins, DDS (American Academy of Maxillofacial Prosthetics) met to review the AAMP recommendations for CPT codes 21079 - 21088. The original AAMP recommendations were felt to be too high as they may have included services performed by technicians. Services provided by technicians should be included in the practice cost component. The meeting participants reviewed detailed time data collected by AAMP (see attached binder) and were able to differentiate DDS time from technician time. The DDS face-to-face time with the patient was assumed to be as intense as a level 4 or 5 office visit (2.00 per hour). The intensity factor of 2.00 per hour appears reasonable when compared with other surgical codes. The DDS lab time intensity factor was assumed to be about 75% of the face-to-face time (1.50 per hour). The final recommendations from this workgroup are listed in column 7 of the table below. The AAMP agreed that the rank order of the revised recommendations appeared appropriate.

On February 9, 1995 Doctors Maves and Cowper met with James Holloway, MD, representing the Health Care Financing Administration, to review the revised recommendations and address potential HCFA concerns. This workgroup confirmed that a global period of 090 would apply for all codes and that the global period begins with the initial consultation with the patient. If an unusual situation occurs (eg, patient does not return for surgery), the maxillofacial prosthodontist should report an appropriate evaluation and management code. Doctor Cowper also confirmed that the relative values assigned for these codes should include reimbursement for the actual prosthesis.

CPT Code	CPT Descriptor	DDS Face-to-Face Time (hours)	DDS Lab Time (hours)	Intensity Factor for Direct DDS Time	Intensity Factor For DDS Lab Time	Computed Value - Recommendation of 11/21/94 Meeting Participants	AAMP Original Recommendation
21079	Impression and custom preparation; interim obturator prosthesis	7.25	4.25	2	1.5	20.88	21.33
21080	definitive obturator prosthesis	7.92	5.08	2	1.5	23.46	31.26

Temporal Profiles for Maxillofacial Prosthetic Services

Background

In November and December of 1993, the American Academy of Maxillofacial Prosthetics (AAMP) conducted a survey of its active members for the purpose of establishing relative work values (RVUwork) for 10 coded and 2 proposed services.

In the process, three service times —Pre, Intra, and Post service— were additionally estimated by the respondents as part of the overall survey methodology. This format conforms with the established method of magnitude estimation used commonly in medicine to determine relative values, however, exhibits some problems when applied to maxillofacial prosthetic services.

Chief among these problems is the realization that while it is technically possible to divide these services into such time categories it is awkward and artificial at best.

Additionally, since providers frequently use extenders (technicians and medical artists) and are themselves involved in laboratory procedures that comprise real work, but of an indirect nature, the quantification of total work provided by the operator for such services is somewhat obscured.

These limitations were duly noted during the RVU Refinement Panel meeting conducted by HCFA in November of 1994. HCFA directed further study of the matter through the auspices of a specially appointed Facilitation subcommittee of the AMA's Relative Value Update Committee (RUC).

Since maxillofacial prosthetic services are extremely time intensive in nature, it was felt appropriate to more closely study the temporal profiles of these procedures.

More specifically, the committee was charged with delineating provider direct, indirect, and technician times for each service. In addition, procedural time, as cited in the literature on the subject, is a strong predictor of RVUwork.[1]

The following monograph, constructed by the RVU Subcommittee of the Insurance Committee of the AAMP, delineates the estimated times of nine coded maxillofacial services and two newly proposed codes.

Contents

The subsequent pages provide temporal profiles for the above described maxillofacial services. The reader will note that only nine of the ten coded services have been enumerated since code 21088— "Facial Prosthesis"— is proposed to be unbundled into the existing and proposed codes. Code 21088 will then be deleted or replaced with the proposed code—"Orbital Prosthesis."

Each service has been divided into three time categories— Provider, Provider Lab/Clerical, and Technician times. A description of these cate-

gories is offered below:

Provider time—

...estimates direct patient time (face to face).

Provider Lab/Clerical time—

...comprises laboratory or clerical time directly related to the service and performed by the provider solely. Such time is characterized as indirect time and reflects clerical and procedural work in which the provider is engaged and precludes any other unrelated activities (e.g. while performing a technical laboratory phase, the provider is expending time at a measurable intensity indirectly but exclusively on the "analog" of the patient.)

Technician Time—

... estimates of the time apportioned to strictly technical phases provided by a laboratory technician, medical artist, or other "extender." Such time is not considered part of the RVUw for the service. Rather, these resources are included as part of practice expense costs.

In addition, the typical average number of visits for each service is broken out and the three categories of time are allocated per visit.

Methods

A consensus panel was appointed by the Chairman of the RVS Subcommittee to determine the typical times for the services in question.

The panel consisted of four individuals actively engaged in the practice of maxillofacial prosthetics and from various parts of the country. Two panel members were in private practice, one was in a university setting, while the final member was in a hospital practice. The services were divided equally among the members and temporal profiles were constructed.

The members also had access to the temporal profile results of two previous open panel workshops conducted on the subject prior to the general survey. Panel agreement was established through open verbal exchange.

The resultant time profiles were then compared to time estimates obtained from the national survey conducted in November-December, 1993. This data was manipulated in the following manner. Frequency distributions for total times based on collected survey raw data were constructed fore each service. Median total times, based on the entire samples, were also calculated. Percentile distribution calculations for responses for each service were additionally constructed.

Data below the 10th percentile and above the 90th percentile were excluded in frequency histogram graphs. Polynomial curve fitting was applied to the histogram data in order to aid in evaluating the sample distributions since a number of these were polymodal in nature.

After reviewing the above data, it was apparent that the median total times in the national survey sample closely reflected the panel temporal profile estimates.

The detailed description of the temporal profiles for these services is presented below. Included after each service time profile, for reference, are national data statistical parameters and frequency histograms.

Time, Intensity, and Work in Maxillofacial Prosthetic Services

Overview

As noted previously, the conventional method of determining RVUwork for medical and surgical procedures, when applied to maxillofacial services, results in confusion and uncertainty as to what is included in the estimations. Pre, Intra, and Post service comparisons— the standard format for most of medicine— are difficult to apply since, unlike operations, maxillofacial procedures aren't readily divided into such categories and often blend into each other with little distinction.

Adding confusion to the situation is the fact that a large variation exists in the use of provider "extenders" (laboratory technicians or medical artists) among practitioners. In some instances such extenders provide a significant portion of the work toward the service while in other cases, the provider alone performs most of the work. While in most instances it is thought that an intermediate contribution is provided by such extenders, it is impossible to verify that the members correctly allocated or discounted, depending on the particular situation, these resources in their determination of work.

Furthermore, since work intensity differs during indirect (laboratory) procedures as compared to direct face-to-face work, the accuracy of the RVUwork estimates is further possibly obscured.

In order to clarify these ambiguities, a more detailed analysis of the time for these services was conducted by a consensus panel of the RVS subcommittee of the Insurance Committee.

The format for this analysis was similar to that used in the Open panel workshops conducted previously by the AAMP.[1] Direct, indirect, and technician/extender times were calculated for each service and these results, which are found appended below, were presented to the specially appointed facilitation subcommittee of the American Medical Association's Relative Value Update Committee (the Ruc) on November 21, 1994 in Alexandria, Virginia. This committee, comprised of an Otolaryngologist familiar with maxillofacial prosthetic services, a Neurosurgeon unfamiliar with maxillofacial services, and two representatives from the AAMP, constructed the subsequent relationship between time and work for maxillofacial prosthetic services and their subsequent valuation.

Traditional Magnitude Estimation and Maxillofacial Prosthetics

Magnitude Estimation, a well established comparative methodology, has been successfully applied to the evaluation of relative value of differing services in medicine and surgery.[2]

This process works best when comparing smaller, discrete procedures or services with established known references, but becomes unwieldy when applied to maxillofacial procedures which are comprised of large blocks of time in which intensity varies frequently.

In such cases it is difficult to arrive at a single estimate of work by comparing it to a established procedure as has been traditionally utilized since components comprising the service may have no counterpart in the referenced procedure or any combination of component reference procedures.

An additional stumbling block in maxillofacial services is the question of indirect (laboratory) time and how to compare it to other established services with known RVUwork values. Since almost all maxillofacial services have varying components of indirect time which comprise some portion of overall work for the service, it is necessary to include this work in the total provider work, but since there are no correlative established services against which to compare this work evaluating this portion of the overall work for the service is problematic.

An alternate approach to this problem is to assign *average* work intensities per unit hour of procedural time to the direct and indirect components of these services. While the work per unit time (intensity) admittedly varies over the course of the service, in large blocks of time as seen in maxillofacial services, average values for direct and indirect work/hour could approach reasonably accurate estimates of overall work and be the fairest means of assigning credible values for these procedures. This "average intensity" method has been applied in several difficult areas in medicine and surgery and therefore has precedent.

Since several medical proportionate work/time ratios are generally accepted as being accurate, it seemed plausible to try to apply these values to maxillofacial service times with

the hope of arriving at reasonable final work values. This relationship could then serve as the "key" linking translator between the maxillofacial relative value scale established in the survey to the rest of medical and surgical work values. The following discussion outlines this methodology.

Establishing the Proportionate RVUwork/Time Linkage

Several proportionate work/time ratios have been established in medicine. More specifically, there is general agreement that a General Practioner expends approximately, on average, 1.0 RVU of work per hour of time, while an Intensive Care Provider may expend as much as 3.68 RVUs of work in the first hour and overall average of 3.0 RVUs/hour.[3]

It seems reasonable to assume that the intensity of most maxillofacial services falls somewhere between these values. This observation is supported by an evaluation of the median work and total time estimates provided by the membership survey.[4]

More precisely, if we divide the median survey RVUwork estimate for each service by its respective median total procedural time we obtain a range of work/time ratios that reflect the respondents' estimation of work

$$GP\ Intensity = 1.0\ \frac{RVU_{work}}{Hour} \leq Maxillofacial\ Services \leq 3.6\ \frac{RVUs_{work}}{Hour} = ICU\ Intensity$$

Fig. 1
Proposed Limits of Work Intensities

intensity (by definition; work = time x intensity or Intensity = Work/Time). From these calculations (Table 1) we see that work/time ratios range from a low of 1.50 RVUs/hour (Interim Obturator) to a high of 2.05 RVUs/hour (Palatal Lift Prosthesis) with an overall average intensity of 1.86 RVUs/hour.

The task then remains to discover the appropriate ratio(s) between these limits that when applied to a well defined maxillofacial service will result in close agreement with the median survey estimate of that procedure's work. Since a majority of the facilitation committee members were confident that the time for the service "Surgical Obturator" was accurate (it's time components were carefully analyzed by the committee) and that this service was widely known among the respondents, trial ratios were applied to this maxillofacial service in the following manner.

We assume that although the intensity of this service varies significantly with time that on overall the direct (face-to-face) intensity of work averages 2.0 RVUs/hour. Since indirect work (Laboratory;Clerical) is intuitively less intense (although skill and technical effort may be greater than found in an hour of GP time), we assume that overall that this work averages 1.6 RVUs/hour.

By applying these ratios to the respective times for direct and indirect work we arrive at the total RVUwork value for the service Surgical Obturator as seen in Fig. 2 of the following page. We then repeat the process for the remaining services which gives us the range of work for the entire set of services.

A comparison of these values to the survey median values

Procedure	Median RVUwork Units	Median Total Time (Hours)	RVUwork Units/Hour
Interim Obturator	17.2	11.5	1.5
Definitive Obturator	24.75	13	1.9
Mand. Resection	24.3	12.09	2.01
Palatal Augment.	19	10.75	1.77
Palatal Lift Prosthesis	20.5	10	2.05
Speech Aid	23.25	11.75	1.98
Surgical Splint	10	5	2
Auricular Prosthesis	22	13	1.69
Nasal Prosthesis	23.7	13	1.82
Surgical Obturator	14.27	7	2.04
Orbital Prosthesis	30.25	17.5	1.73
		Average RVU/Hour	1.86

Table 1

demonstrates some individual discrepancies but, overall, offers a reasonable approximation to the range of work estimated in the survey.

Table 2 summarizes the values for RVUwork when calculated by this method and the corresponding survey medians estimated by the respondents in the November Survey. The difference between the new calculated values and the Survey medians is also presented. Note that the decrease in values in some services is for the most part offset by the increases in the others.

The advantages of using this method for RVUwork calculations are twofold:

One, it allows for the calculation of the work for indirect time procedures— that is, provider laboratory time which was impossible to calculate by the standard methods. It does so by applying a reasonable differential in work intensity against the median time for this portion of the service.

Two, it permits calculation of work over extremely long time blocks without the need for numerous complex comparisons to multiple smaller established reference procedures. While the actual intensity during a given phase of the service may be higher or lower than this estimate, the extremely long times characteristic of maxillofacial services serve to correct for these shorterm errors.

$$Work = (Time)(Intensity)$$

or

$$Work_{Surgical\ Obt.} = [(Time_{Direct})(Intensity_{Direct})] + [(Time_{Indirect})(Intensity_{Indirect})]$$

$$\therefore$$

$$Work_{Surgical\ Obt.} = (4.08\ hrs.)\left(\frac{2.0\ RVUs}{hr.}\right) + (2.92\ hrs.)\left(\frac{1.6\ RVUs}{hr.}\right)$$

$$\therefore$$

$$Work_{Surgical\ Obt.} = (8.16\ RVUs) + (4.672\ RVUs)$$

$$\therefore$$

$$Work_{Surgical\ Obt.} = 12.83\ RVUs$$

it is specific to the pediatric population; and, as such, is always performed with general anesthesia. We agreed with the specialty society that this procedure is incorrectly valued for the nonfacility setting and proposed to accept its recommendation to remove the nonfacility direct PE inputs, revising the PE database accordingly.

Comment: The specialty society thanked us for accepting its recommendation to remove the nonfacility PE for this procedure. However, the society indicated that a review of the PE database on our Web site indicated that these inputs were still included and suggested that they be deleted.

Response: We appreciate the commenter's attention to detail and have removed the PE inputs from the PE database.

(viii) Maxillofacial Prosthetics

We have been working with the society representing maxillofacial prosthetists since 2005 to establish nonfacility direct inputs for the prosthetic services represented by the CPT code series, 21076 through 21087. The current PE database reflects the labor, supplies, and equipment needed to perform each procedure. However, we do not have pricing information and documentation for many supply items. The society provided information and documentation for equipment prices, but because specific time-in-use information was not provided, we developed time in use in 2006 for each equipment item in each procedure. For CY 2007, these equipment inputs were utilized under the new PE methodology to calculate the nonfacility PE RVUs for these procedures. Although we have asked the specialty society to provide the supply pricing information and time in use data for each equipment item for each procedure, we have not received the requested information to date. Consequently, unless such information is provided, the PE database will continue to have no prices associated with these supplies. Therefore, in the CY 2008 PFS proposed rule, we proposed to cap the time in use for each equipment item at 25 minutes until specific information is received regarding the actual time in use. Tables listing the needed information for were included in the proposed rule.

Comment: The specialty society representing the maxillofacial prosthetists supplied us with some of the requested information. The society provided us with the time-in-use data for every piece of equipment for each of the procedures in the CPT code series 21076 through 21087. The specialty also provided prices for the supply items used in this code series; however, it did not provide any documentation to support these prices.

Response: We appreciate the information provided by the specialty, especially that in relation to the equipment time-in-use. The recommended equipment times were compared with the total clinical labor time for each procedure and times that were greater were reduced to equal the labor time, in accordance with our usual allocation policy. Capping the equipment time-in-use to match the labor time affected 4 pieces of equipment in every procedure including: the dental chair, ceiling light, air compressor, and delivery unit. For 3 of these codes, the time-in-use for a 5th piece of equipment, the washout and curing unit, was also capped. We will accept the specialty's equipment time-in-use information, with the aforementioned variances, and have changed the PE database accordingly.

We regret that documentation for the supply prices was not forwarded. We did, however, receive a catalog documented pricing for articulating paper/ribbon that was submitted by a different specialty in reference to another CPT code, and have entered this price in the PE database for 8 of the 10 codes in this family, as appropriate. The specialty is reminded that our policy for accepting prices for supplies or equipment in the PE database requires the submission of acceptable documentation, the definition of which is specified below the table that appeared in the proposed rule listing the outstanding prices for supply items needing documentation. We will continue to work with the specialty as it collects and forwards this important information.

(ix) Requests for Increases in Supply Prices

We received a request from the specialty society for obstetrics and gynecology to increase the price of supply item (kit, hysteroscopic tubal implant for sterilization) for CPT code 58565, *Hysteroscopy, surgical; with bilateral fallopian tube cannulation to induce occlusion by placement of permanent implants* for this code which was created for CY 2005. This hysteroscopic implant kit is priced at $980 and the specialty is now requesting a price of $1,245, providing an invoice for documentation. The specialty reports that the higher price is attributed to a manufacturer change in design and materials, and submitted the manufacturer's documents supporting these changes that were used to secure FDA approval. Therefore, we proposed to accept the new price of $1,245 for the hysteroscopic implant kit due to the changes made in the modified model.

Comment: We did not receive comments on this proposal.

Response: We will finalize our proposed price of $1,245 for the hysteroscopic implant kit and will amend our PE database, as appropriate.

(x) Supply and Equipment Items Needing Specialty Input

We have identified certain supply and equipment items for which we were unable to verify the pricing information (see Table 2: Supply Items Needing Specialty Input for Pricing and Table 3: Equipment Items Needing Specialty Input for Pricing). In our CY 2008 PFS proposed rule, we listed both supply and equipment items for which pricing documentation was needed from the medical specialty societies and, for many of these items, we received sufficient documentation containing specific descriptors and pricing information in the form of catalog listings, vendor Web pages, invoices, and manufacturer quotes. We have accepted the documented prices for many of these items and these prices are reflected in the PE RVUs in Addendum B of this final rule with comment period. For the items listed in Tables 2 and 3, we are requesting that commenters provide pricing information on items in these tables along with acceptable documentation, as noted in the footnote to each table, to support recommended prices. For supplies or equipment that have previously appeared on this list, and for which we received no or inadequate documentation, we proposed to delete these items unless we receive adequate information to support current pricing by the conclusion of the comment period for this proposed rule.

In Tables 4 and 5, we have listed new supplies and equipment from the new CPT codes for CY 2008 that are discussed elsewhere in this final rule with comment period. These items have been added to the PE database and, where priced, are reflected in the PE RVUs in Addendum B.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: New Technology/New Services

September 2026

Exclusion of Left Atrial Appendage – Tab 09

CPT codes 33267, 33268 and 33269 were placed on the New Technology/New Services list. In April 2026, the Relativity Assessment Workgroup (RAW) reviewed three years of available Medicare claims data (2022, 2023 and 2024). The RUC recommended that these services should be surveyed for September 2026.

33267 ***Exclusion of left atrial appendage, open, any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip)***
The RUC reviewed the survey results from 51 thoracic surgeons and determined the current work RVU of 18.04 appropriately accounts for the work required to perform this service. The RUC recommends 43 minutes pre-evaluation time, 11 minutes positioning time, 15 minutes scrub/dress/wait time, 80 minutes intra-service time, 30 minutes immediate post-service time, 1-99291, 1-99233, 1-99232, 1-99239 and 2-99213 post-operative visits as supported by the survey, totaling 445 minutes. The specialty societies indicated that the level of hospital visits has changed due to the increased acuity/complexity and comorbidities of the patients.

While there was a slight decrease in the intra-service time for CPT code 33267, the total time for the procedure increased by 46.25 minutes. This is due to the change in the post-hospital visit pattern shifting from 1-99291 and 2-99232 level visits to a 1-99291, 1-99233 and 1-99232 level visit pattern. The survey also indicated a change in the discharge day visit with 1-99239 level discharge day visit instead of 1-99238 discharge day visit. Finally, the survey supported a change in the number of office visits with 2-99213 visits instead of 1-99213 visit. The specialty societies indicated that the intra-service time change is because the majority of the patients undergoing the exclusion of the left atrial appendage (LAA) repair are now performed using a clip whereas when the procedure was originally valued, some of the other methods (e.g., oversewing, ligation) were more commonly used. The increase in the total time is due to the increased complexity of the patient receiving this procedure. With advancements in transcatheter technologies, the majority of patients with atrial fibrillation are now typically treated with medication or a transcatheter device. If the patient cannot be treated with these methods, they would be treated using a thoracoscopic LAA exclusion. Only patients where that treatment fails or those that have comorbidities such as peripheral artery disease, previous thoracic surgery, previous stroke, advanced renal disease and cannot be treated using a transcatheter technique or thoracoscopically will undergo open LAA exclusion. This has resulted in sicker, more complex patients, typically with more comorbidities, who receive this procedure. As such, post-operative care for the typical patient has also increased, as it takes longer for these higher acuity patients to stabilize during the post-operative period.

The RUC agreed that the slight decrease in intra-service time reflects the increased use of a clip rather than the historically more time-consuming cut-and-sew or ligation techniques. Although the clip can be applied more quickly now, the procedure retains the same level of complexity and intensity because the left atrial appendage is located posteriorly near critical cardiac structures, requiring the same degree of surgical judgment, precision, and care.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty societies explored the availability of extant data for this service. For each code under review, the specialty societies evaluate: the amount of time available to obtain the data; whether the STS National Database™ collects data on the procedure; whether the procedure can be unequivocally mapped to a CPT code; the volume of the procedure; whether Database reporting for the procedure is mandatory; and whether the code or codes meet the agreed-upon criteria.

The RUC noted that the approved criteria for when the STS will provide STS National Database™ data for surveyed codes are as follows: For codes whose values are being revised, the STS will utilize the STS National Database™ when accurate and sufficient data are available for specific use. The STS proposed a 95th percentile confidence interval with a +-5% variability as criteria to include STS data. Additionally, in April 2017, the RUC confirmed that specialty societies should provide both median and mean for extant data sources as these summary data would provide the RUC with a more complete picture of central tendency. The RUC determined that providing both the median and mean data would provide information as to whether the dataset is negatively or positively skewed and to what degree.

The specialty societies were able to provide four years (2022-2025) of data from the RUC approved extant database - Society of Thoracic Surgeons (STS) Adult Cardiac Surgery Database (ACSD) for low volume CPT code 33267. The RUC determined that the STS Database mean "skin-to-skin" time of 112.5 minutes and median "skin-to-skin" time of 88 minutes supports the surveyed intra-service time of 80 minutes. The STS ACSD data confirmed that acuity of the typical patient has increased form 2022-2025: the mean age of the patient increased by two years, the median age increased by a year; the total time in the ICU went up from 37.2 hours to 59.3 hours; the total time in the operating room went up by 5 minutes; the total time on the ventilator went up from 4.6 hours to 7.3 hours; the length of stay went up from 4.5 to 5.7 days; and most significantly is that patients with cerebrovascular disease and prior stroke increased from 69% to 85%.

The RUC agreed that the acuity of the typical patient has increased, thus to support maintaining the current value, the RUC compared the surveyed code to the top key reference service 33254 *Operative tissue ablation and reconstruction of atria, limited (eg, modified maze procedure)* (work RVU = 23.12, 117 minutes intra-service time and 413 minutes total time) and the second top key reference service 33020 *Pericardiotomy for removal of clot or foreign body (primary procedure)* (work RVU = 13.95 and 58.50 minutes intra-service time and 319.50 minutes total time), noting that they bracket the surveyed service regarding the physician work and intra-service time required to perform these services. Of the respondents who chose the second key reference service, 33020, 86% indicated that the surveyed code is overall somewhat more intense and complex to perform, thus is valued higher.

For additional support, the RUC referenced MPC code 37215 *Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protection* (work RVU = 17.31, 100.43 minutes intra-service time and 334.43 minutes total time) and CPT code 32651 *Thoracoscopy, surgical; with partial pulmonary decortication* (work RVU = 18.31, 68.25 minutes intra-service time and 500.25 minutes total time) and noted these services bracket the surveyed code related to the physician work and time required to perform these services. **The RUC recommends a work RVU of 18.04 for CPT code 33267.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

33268 ***Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 75 thoracic surgeons and determined a work RVU of 1.17, a direct crosswalk to CPT code 93584 *Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)* (work RVU = 1.17, 9.75 minutes of intra-service and total time), accurately reflects the physician work necessary to perform this service. The RUC recommends 10 minutes of intra-service and total time for CPT code 33268.

The specialty societies explored the availability of extant data for this service. For each code under review, the specialty society evaluates: the amount of time available to obtain the data; whether the STS National Database™ collects data on the procedure; whether the procedure can be unequivocally mapped to a CPT code; the volume of the procedure; whether Database reporting for the procedure is mandatory; and whether the code or codes meet the agreed-upon criteria. The specialty societies were unable to obtain extant data for add-on code 33268 based on a lack of the aforementioned criteria.

For additional support, the RUC referenced MPC codes 64480 *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), cervical or thoracic, each additional level (List separately in addition to code for primary procedure)* (work RVU = 1.17, 14.63 minutes intra-service and total time) and noted this service require similar physician work and time and demonstrate the appropriate relativity across the payment schedule. **The RUC recommends a work RVU of 1.17 for CPT code 33268.**

33269 ***Exclusion of left atrial appendage, thoracoscopic, any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip)***
The RUC reviewed the survey results from 52 thoracic surgeons and determined the current work RVU of 13.95 appropriately accounts for the work required to perform this service. The RUC recommends 44 minutes pre-evaluation time, 13 minutes pre-positioning time, 15 minutes scrub/dress/wait time, 60 minutes intra-service time, 30 minutes immediate post-service time, 1-99233, 1-99232, 1-99238 and 1-99213 post-operative visit as supported by the survey, totaling 318 minutes.

The RUC noted there was a slight decrease of 3.38 minutes in the intra-service time. The specialty societies indicated that as with the open code, 33267, the slight decrease in intra-service time is again due to the predominate use of a clip for exclusion of the LAA as opposed to other techniques (oversewing, ligation). Although the clip can be applied more quickly now, the procedure retains the same level of complexity and intensity because the left atrial appendage is located posteriorly near critical cardiac structures, requiring the same degree of surgical judgment, precision, and care.

The specialty societies explored the availability of extant data for this service. For each code under review, the specialty societies evaluate: the amount of time available to obtain the data; whether the STS National Database™ collects data on the procedure; whether the procedure can be unequivocally mapped to a CPT code; the volume of the procedure; whether Database reporting for the procedure is mandatory; and whether the code or codes meet the agreed-upon criteria.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC noted that the approved criteria for when the STS will provide STS National Database™ data for surveyed codes are as follows: For codes whose values are being revised, the STS will utilize the STS National Database™ when accurate and sufficient data are available for specific use. The STS proposed a 95th percentile confidence interval with a +-5% variability as criteria to include STS data. Additionally, in April 2017, the RUC confirmed that specialty societies should provide both median and mean for extant data sources, as these summary data would provide the RUC with a more complete picture of central tendency. The RUC determined that providing both the median and mean data would provide information as to whether the dataset is negatively or positively skewed and to what degree.

The specialty societies were able to provide four years (2022-2025) of data from the RUC approved extant database - Society of Thoracic Surgeons (STS) Adult Cardiac Surgery Database (ACSD) for low volume CPT code 33269. The RUC determined that the STS Database mean "skin-to-skin" time of 62.3 minutes and median "skin-to-skin" time of 51 minutes supports the surveyed intra-service time of 60 minutes. The STS ACSD data confirmed that acuity of the typical patient has increased form 2022-2025: while patients with diabetes decreased 32.3% to 27.8%, the number of patients taking insulin increased from 18.6% to 27.5%; chronic lung disease of mild to moderate went from 14.3% to 20.9%; patients with liver disease went from 3.4% to 4.8% and patients with liver cirrhosis went from 1.8% to 3.2%; immunocompromised patients went from 8.3% to 8.5%; patients with cerebrovascular disease went from 37.8% to 39.1%; and those patients with prior stroke increased from 72.0% to 78.4%.

The RUC compared the surveyed code to the top key reference service 32654 *Thoracoscopy, surgical; with control of traumatic hemorrhage* (work RVU = 20.01, 69.23 minutes intra-service time and 513.23 minutes total time) and the second top key reference service 32651 *Thoracoscopy, surgical; with partial pulmonary decortication* (work RVU = 18.31, 68.25 minutes intra-service time and 500.25 minutes total time), and determined that the survey code required less physician work and much less total time, thus appropriately valued lower than both key reference services.

The RUC agreed that the acuity of the typical patient has increased and thus, to support maintaining the current value, the RUC referenced code 33020 *Pericardiotomy for removal of clot or foreign body (primary procedure)* (work RVU = 13.95, 58.5 minutes intra-service time and 319.5 minutes total time), which requires nearly the same intra-service time and total time as the surveyed code, thus are both valued the same.

For additional support the RUC referenced MPC codes 19303 *Mastectomy, simple, complete* (work RVU = 14.63, 87.75 minutes intra-service time and 280.75 minutes total time) and 67036 *Vitrectomy, mechanical, pars plana approach;* (work RVU = 11.83, 48.75 minutes intra-service time and 248.75 minutes total time) and noted these services require similar physician work and time, bracket the surveyed code in terms of intra-service time and work RVU and demonstrate the appropriate relativity across the payment schedule. **The RUC recommends a work RVU of 13.95 for CPT code 33269.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:33267 Tracking Number Original Specialty Recommended RVU: **18.04**
Presented Recommended RVU: **18.04**
Global Period: 090 Current Work RVU: **18.04** RUC Recommended RVU: **18.04**

CPT Descriptor: Exclusion of left atrial appendage, open, any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male, who is status post left-lung resection, presents with persistent atrial fibrillation and a CHADS2 (stroke risk) score of 4. Recurrent, significant gastrointestinal bleeding episodes preclude anticoagulation therapy. He is deemed a poor candidate for a left atrial appendage (LAA) endovascular occlusion device. Because of anticipated dense adhesions within the left chest cavity, a thoracoscopic approach is contraindicated and an open approach to LAA exclusion (eg, ligation, plication, clip) is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 4% , Overnight stay-less than 24 hours 4% , Overnight stay-more than 24 hours 92%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 96%

Description of Pre-Service Work: Perform a complete or interval history and comprehensive physical examination. Write preoperative orders and review the work-up and notes from the referring and primary physicians, if available. Review preoperative imaging and laboratory studies. Obtain a cardiology assessment and pulmonary assessment, as indicated. Review the indications, the surgical procedure, including the expected surgical approach and method of LAA exclusion and possible alternatives, the expected recovery, and the expected outcomes including potential complications, with the patient and the patient's family. Answer the family's questions and obtain informed consent. Confirm the operating room (OR) start time and notify the patient and the patient's family. Confirm the availability of the surgical assistant. Identify the patient, mark the surgical site per hospital policy, and answer any questions from the patient's family. Ensure the availability of blood and/or a crossmatch and any special instruments or medical devices. Review the planned incision and procedure. Review the length and type of anesthesia with the anesthesiologist. Ensure the anesthesiologist and the perfusionist are prepared for circulatory arrest if needed. Plan invasive monitoring, including use of an arterial line (right radial only) and a pulmonary artery catheter. Ensure the patient is properly positioned with the patient's left side slightly elevated. Position appropriate padding to prevent untoward peripheral neurologic injury during the operation. The surgeon scrubs and puts on a gown and gloves. Prepare and drape the skin of the patient's chest and abdomen.

Description of Intra-Service Work: Under general anesthesia, make a thoracotomy incision and carefully enter the chest over the top of the sixth rib using electrocautery. If necessary, remove a segment of rib to prevent trauma when spreading of the ribs for exposure. Collapse the left lung and institute single-lung ventilation of the right lung to facilitate exposure. Separate adhesions between the lung and the pericardium to avoid lung parenchymal injury, as well as injury to the phrenic nerve. Open the pericardium posterior to the phrenic nerve. Carefully dissect any adhesions off the LAA and expose and measure the base. Under transesophageal echocardiography (TEE) guidance, staple, clip, or ligate the base of the LAA. Use TEE to confirm there is no flow into the LAA. This can be done either off (most commonly) or on cardiopulmonary bypass (femoral cannulation) (reported separately). Leave the pericardium open. Perform an intercostal nerve block for postoperative analgesia. Place a left chest tube or drain. Expand the left lung. Conduct a careful check for hemostasis

and/or lung parenchymal air leaks. Close the thoracotomy incision in layers by approximating the muscles, subcutaneous tissue, and skin. Extubate the patient and transport the patient to the recovery area.

Description of Post-Service Work: Perform a post procedure debriefing. Apply sterile dressings. Monitor the patient during reversal of anesthesia. Assist in transferring the patient from the operating table to the cart. Monitor the transport of the patient from the OR to the recovery room. Review the patient's chart notes from the nursing and other staff. Answer questions from the patient and the patient's family. Answer questions from the nursing and other staff. Write orders for the following days' laboratory tests, films, medications, diet, and patient activity. Discuss the outcome of the procedure with the patient's family. Review the postoperative chest X ray, arterial blood gas, mixed venous saturation blood gas, cardiac output and index and pulmonary pressure parameters, and postoperative laboratory studies, including a complete blood count (CBC) and comprehensive metabolic panel (CMP). Discuss the outcome of the procedure with the referring physician. Coordinate care with other physicians. Dictate a full operative note for the patient's chart. Dictate the procedure outcome and expected recovery letter for the patient's referring physician and/or insurance company. Same-day Postoperative Critical Care: Assess the patient's neurological state. Orders sedatives, paralyzing agents, and analgesics as needed. Assess the patient's hemodynamic condition, including pulmonary artery-catheter readings and parameters and mixed venous saturation, rate, and conduction abnormalities and arrhythmias. Initiate and adjust temporary pacing as needed. Monitor blood pressure, central venous pressure, pulmonary artery pressures, cardiac output and index, mixed venous saturation, and lactic acid. Administer inotropic and vasoactive agents to minimize adverse end-organ effects. Monitor chest tube output and data to determine if blood and/or blood products are needed and if other adjunctive pharmacologic therapies should be considered for coagulopathy. Assess the respiratory system, urine output, renal and brain function. Assess the chest X ray. Discuss interval plans with the nursing staff and set parameters for interval adjustments in patient treatment. Postoperative Hospital Work Beginning On Postoperative Day 1 Until Discharge Day: Review the patient's chart notes with the nursing and other staff. Examine the patient daily. Inspect the wound, review chest tube output volume and consistency, and patient progress. Assess and manage patient’s renal function. Assess and manage patient’s cognitive function. Assess postoperative pain and use of analgesics. Assess respiration, character of pulmonary secretions, and the patient's ability to clear the airway. Review the patient's vital signs, intake and output, and laboratory results. Review the chest radiograph and echocardiogram, and evaluate the cardiac monitor for rate, rhythm, and presence or absence of arrhythmia. Encourage ambulation and pulmonary physiotherapy. Monitor the patient's postoperative nutritional status. Remove pacing wires and chest tube when appropriate (usually 24 to 48 hours postoperatively). Review and manage patient’s medications. Obtain and review chest X rays after tube removal. Answer questions from the patient, the patient's family, and nursing or other staff (oral and written). Discuss the patient's progress (orally and in writing) with the referring physician. Coordinate care with other physicians. Document evaluation, patient progress, and the care plan in the medical record. Discharge Day Work: Check the final pathology, laboratory, or film reports and discuss with the patient's family or caregiver. Check wounds. Review and update prescriptions. Coordinate home oxygen and dialysis. Coordinate transfer to rehab facility or SNF if patient isn’t going home. Explain wound care, dietary management, activities permitted, bathing, handling of wound, and the return appointment to the office. Outline expectations for recovery and describe potential complications. Coordinate care with other physicians. Answer questions from the patient, the patient's family, and nursing and other staff. Write post discharge orders for laboratory tests, films, and medications. Explain new medications, home medications, and homeopathic agents to ensure that additional agents are compatible or will not be used. Dictate a discharge summary. Communicate with the patient's primary care physician(s). Postoperative Office Work: Review medications and determine compliance. Review interval encounters with other care providers. Check wounds and patient progress. Remove sutures if necessary. Review post discharge laboratory tests or films. Write orders for medications. Answer questions from the patient and the patient's family. Discuss the patient's progress (orally and in writing) with the referring physician. Coordinate the patient's care with other physicians. Discuss progress with the patient and the patient's family. Dictate a patient progress note for the medical chart and send letters to referring physicians.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
33254	090	23.12	**RUC Time**

CPT Descriptor Operative tissue ablation and reconstruction of atria, limited (eg, modified maze procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
33020	090	13.95	**RUC Time**

CPT Descriptor Pericardiotomy for removal of clot or foreign body (primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
37215	090	17.31	**RUC Time**	15,650

CPT Descriptor 1 Transcatheter placement of intravascular stent(s), cervical carotid artery, open or percutaneous, including angioplasty, when performed, and radiological supervision and interpretation; with distal embolic protectione

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
35301	090	20.63	**RUC Time**	20,549

CPT Descriptor 2 Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision

Other Reference CPT Code	Global	Work RVU	Time Source
32651	090	18.31	**RUC Time**

CPT Descriptor Thoracoscopy, surgical; with partial pulmonary decortication

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 14 **% of respondents:** 27.4 **%**

Number of respondents who choose 2nd Key Reference Code: 7 **% of respondents:** 13.7 **%**

TIME ESTIMATES (Median)

	CPT Code: 33267	Top Key Reference CPT Code: 33254	2nd Key Reference CPT Code: **33020**

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The left atrial appendage (LAA) exclusion procedures (codes 33267, 33268 and 33269) were identified under the new services/new technology screen. In April 2026, the Relativity Assessment Workgroup reviewed three years of available Medicare claims data (2022, 2023 and 2024). Based on utilization changes, changes to the typical patient, and recent guidelines changes for the add-on code, the societies recommended resurveying the codes for September 2026 and the RUC agreed.

Utilization Data

	2022	2023	2024
33267	351	248	247
33268	7,436	8,848	10,398
33269	398	352	368

The left atrial appendage (LAA) exclusion procedures include two 90-day global codes and one add-on code. The two 90-day global codes include code 33697 which is for stand-alone LAA exclusion though an open chest (median sternotomy or

thoracotomy) and code 33269 is for LAA exclusion via thoracoscopy. The add-on code 33268 is for LAA exclusion performed in conjunction with primary procedures performed via sternotomy or thoracotomy other than Maze or mitral valve procedures.

Per the utilization table above, codes 33267 and 33269 are extremely low volume procedures that will likely remain that way. Only patients that cannot be treated medically or with transcatheter LAA exclusion procedures such as the Watchman and those with comorbidities such liver disease, renal failure and previous stroke will undergo one of these procedures. As such, we expect the utilization for these two procedures to remain low. The add-on code has seen a consistent increase in utilization between 2022 and 2024 and it is expected that utilization for that procedure will continue to increase as the guidelines and indications for LAA exclusion in other open cardiac or thoracic procedures continues to evolve.

Survey Methodology
The Society of Thoracic Surgeons (STS) and the American Association for Thoracic Surgery (AATS) conducted a RUC survey of U.S. members who self-identify as adult cardiac or general thoracic surgeons and received 51 responses for 33267, 52 responses for 33269 and 75 responses for 33268. They convened an Expert Panel of adult and general thoracic surgeons to review the results.

The STS National Database™

The STS National Database™ has data on nearly 10 million procedures from more than 4,300 surgeons, including 95% of adult cardiac surgery procedures. The STS Adult Cardiac Surgery Database (ACSD) contains nearly 8.5 million adult cardiac surgical procedure records and currently has more than 3,500 participating physicians, including surgeons and anesthesiologists. At the February 2011 RUC meeting, the Research Subcommittee reviewed the STS National Database™ and determined that it met the Inclusionary/Exclusionary Criteria for extant databases. The Research Subcommittee recommended that the specialty society develop specific criteria, such as thresholds for data volume and distribution, to determine when the specialty society would be required to display extant data for a surveyed service with its RUC recommendations.

At the January 2012 RUC meeting the Research Subcommittee reviewed STS ACSD data for 850,895 individual patients undergoing procedures from 2006 through 2010. A comparison of the STS ACSD with Medicare utilization data for 2010 indicated that more than 90% of surgical procedures were captured by the Database. This finding is consistent with participation by more than 1,100 sites in the United States and the estimate that approximately 94% of sites performing cardiac surgery submit data. Each site employs a third-party administrator who manually enters 200 to 300 fields of clinical data. In addition, the Database is audited. Thus, the Database is considered a comprehensive and representative resource.

The agreed-upon criteria for when the STS will provide STS National Database™ data for surveyed codes are as follows: **For codes whose values are being revised, the STS will utilize the STS National Database™ when accurate and sufficient data are available for specific use. The STS proposed a 95th percentile confidence interval with a +-5% variability as criteria to include STS data.**

The STS ACSD does not specifically map procedures to CPT codes. Although most procedures can be unequivocally mapped to a single CPT code, the society cannot isolate data for some procedures at the specific CPT-code level. Although all procedures in the Database require reporting of "skin-to-skin" time, reporting is not mandatory for every procedure entered into the STS ACSD, particularly lower-volume procedures. Additionally, it is not always possible to isolate intra-service time for add-on procedures. For codes for which data are available, the specialty society will determine whether the data meet the agreed-upon criteria for use

The society also considers the timeframe for reviewing the codes. Because data retrieval may require substantial time and may be affected by other requests, it may not always be possible to obtain STS National Database™ data within the revaluation timeframe. For each code under review, the society evaluates: the amount of time available to obtain the data; whether the STS National Database™ collects data on the procedure; whether the procedure can be unequivocally mapped to a CPT code; the volume of the procedure; whether Database reporting for the procedure is mandatory; and whether the code or codes meet the agreed-upon criteria.

Based on the above criteria, the STS was able to obtain STS ACSD data for the two stand-alone 90-day global procedures (33267, 33269), but we were unable to isolate the data for the add-on LAA procedures (33268). As such, we are including the STS ACSD data for the two stand-alone codes and this data has been provided within the revised summary spreadsheet. The society has provided the mean and median "Skin to Skin Time (min)" which is the intra-service time for the procedures. We also provided STS ACSD data for the LOS which was capped at 90 days and for code 33267, the initial ICU hours. The LOS data supports the surveyed LOS and the initial ICUS hours can be used as a proxy supporting the critical care visit the day of the procedure.

Rationale 33267
Code 33267 is for stand-alone LAA exclusion via median sternotomy or thoracotomy exposure, which is uncommon. This procedure is only used for patients in whom treatment for atrial fibrillation using medications, transcatheter techniques such as the Watchmen, or thoracoscopic LAA exclusion cannot be used or have failed. These patients tend to be sicker and more complex to treat with multiple comorbidities necessitating an open approach. They tend to have a more complicated post-operative recovery due to multiple comorbidities such as peripheral artery disease, previous thoracic surgery, previous stroke and advanced renal disease.

The survey respondents indicated a pre-service evaluation time of 43 minutes, positioning time of 11 minutes and scrub, dress and wait time of 15 minutes, a median intra-service time of 80 minutes and an immediate post-service time of 30 minutes.

Pre-service Time
The specialty societies selected pre-service time package 4 facility for a difficult patient and difficult procedure. Patients undergoing the procedure are typically complicated patients with heart failure and other comorbidities. Adjustments to the pre-service time package include an increase of 3 minutes of pre-evaluation time per the survey. For positioning, 8 minutes were added for a total of 11 minutes to account for padding and positioning. This is consistent with other cardiac procedures, most of which have 15 minutes of positioning time. The society cannot explain why the survey respondents indicated 11 instead of 15 minutes of positioning time typical of other cardiac surgery procedures. The scrub dress and wait time was decreased by 5 minutes based on the survey.

Immediate Post-Service Time
The societies selected post-service time package 9B for general anesthesia and complex procedure. Per the survey respondents, the immediate post-service time was decreased by 3 minutes for a total of 30 minutes immediate post-service time.

Post Operative Hospital Care
The survey respondents confirmed that there was still a 99291 critical care visit after the procedure and the survey still supported an additional two hospital visits. However, the level of one of those visits change from 99232 to 99233 resulting in a 99291, 99233 and 99232 level visit pattern instead of the previous 99291, 99232, 99232 level visit pattern. Additionally, the survey respondents indicated a 99239 level discharge day management visit instead of the previous 99238 discharged day visit. We believe that the increased level of visit for the second in-hospital visit and the increased discharge day visits are due to the increased complexity of the patient.
Critical Care Visits: 100% of the survey respondents replied that the procedure was performed in the hospital, and 92% of the respondents indicated that the patients stayed overnight for more than 24 hours. 96% of the respondents indicated that they provided an E&M Visit on the same day of surgery. The survey respondents indicated that they spent over 40 minutes providing critical care services to the patient once the patient arrives in the ICU on the day of the procedure for a total of one critical care visit for the procedure. The critical care visit covers the time that the physician spends with the patient directly related to the procedure providing critical care services. The survey supported one critical care visit for the procedure and the Expert Panel agreed.
Post-hospital visits: We believe that level of hospital visits changed due to the increased complexity and comorbidities of the patients. Most patients that need an LAA exclusion procedure would be treated medically or with a transcatheter technique. For those patients that can't be treated using one of those techniques and they can't be treated thoracoscopically, they will undergo the open LAA exclusion. Our experience indicates that these patients have a more complicated post-surgery recovery and this has changed over the past three-years. Examples of the increased complexity include renal dysfunction and previous stroke. The increased level of discharge day management reflects the increased complexity of care such as increased medication management, increased coordination of care including coordination of home oxygen, dialysis and many of these patients can't go home and are discharged to a rehab facility or a skilled nursing facility.

The STS did not change the vignette for this code because the overall patient population for the procedure didn't change. The patient's that undergo this procedure are the same encompassing those patients that are the most complicated because they can't be treated via transcatheter techniques or thoracoscopically. However, with the changes in technology, the patients that now present for the procedure compared to when they were originally valued tend to be those on the higher end of the complexity spectrum from that pool of patients. On review STS ASCD data for the years 2022 to 2025, for the cpt code 33267, we have the following data. The mean (median) age went from 70.8 (73) years to 72.3 (74) years. In 2022, 63.8% of patients required an ICU stay. In 2025 that went up to 67.3%. The total time in the ICU went from 37.2 (22) hours to 59.3 (27) hours. The total time in the OR went from a mean of 188 (median 165) min to 192 (176) minutes. Intra procedure (skin to skin) time went from a mean of 108 (87) to 115 (90) minutes. Total time on the ventilator went from 4.6 hours to 7.3 hours. The mean length of stay went from 4.5 days to 5.7 days. The patients with diabetes went from 28.1% to 31.7% of

whom the patients taking insulin went from 21.4% to 27%. Patients who were on dialysis preop went from 0.5% to 3.5%, chronic lung disease of moderate to severe went from 6% to 8% and patients with cerebrovascular disease and prior stroke increased from 69% to 84.9%.

Post Operative Office Visits

For code 33267, the survey respondents also indicated that the post-hospital care for these patients has changed indicating that 2 - 99213 office visits was typical in the post-operative period instead of just 1 -99213 visit. Again, we believe that this is related to the increased complexity of these patients. The first post-operative visit typically occurs within the first 7 days after the patient is discharged from the hospital and the second visit occurs within 30 days of the discharge.

Comparison With Key Reference Codes

For 33267 the 2 Key Reference Codes for comparison were: CPT 33254 Operative tissue ablation and reconstruction of atria, limited (eg, modified maze procedure). This was chosen by 27.4% of the respondents making it the top key reference. The second key reference was CPT 33020 Pericardiotomy for removal of clot or foreign body (primary procedure). 13.7% chose this. When looking at the overall intensity/complexity measures, 36% of the respondents found the survey code to be the same as KRS 1 and 35% of the respondents found the survey code to be somewhat more to much more complex/intense than KRS 1. The survey respondents found that the mental effort and judgement for the survey code was more (43%) intense/complex or the same (36%) as KRS 1. For the technical skill required 50% of the respondents found that the intensity for the survey code was the same as KRS 1 and 36% found that it was more intense/complex than KRS 1. For the physical effort required, the survey respondents indicated that the intensity/complexity for the survey code was the same (36%) or more (36%) than KRS 1. Finally, the survey respondents indicated that the intensity/complexity for the psychological stress for the survey code was the same (57%) or less (29%) than KRS 1. For the second KRS, 86% of the survey respondents indicated that the overall intensity/complexity of the survey code was somewhat more complex than KRS 2. For the mental effort and judgement, the survey respondents found the intensity/complexity of the survey code to be the more (57%) or the same (43%) as KRS 2. For the technical skills, the survey respondents found the survey code to be the same (57%) or more (43%) complex than KRS 2. For the physical effort required, 57% of survey respondents indicated that the intensity/complexity for the survey code was the same as KRS 2 and 43% indicated the intensity/complexity was more than KRS 2. For the psychological stress, 71% of the survey respondents found the survey code to be the more complex/intense than KRS 2.

Recommended wRVU

The expert panel is recommending that the current wRVU of 18.04 be maintained for code 33267. While there was a slight decrease (7.75 minutes) in the intraservice time for 33267, the total time for the procedure increased by 46.25 minutes. This was due to the change in the post-hospital visit pattern from a 99291 and 2-99232 level visits to a 99291, 99233, 99232 level visit pattern. The survey also indicated a change in the discharge day visit with a 99239 level discharge day visit instead of a 99238 discharge day visit. And finally, the survey supported a change in the number of office visits with 2-99213 visits instead of 1-99213 visit. The expert panel believes that the intra-service time change is because the exclusion of the LAA for the majority of the patients undergoing this repair are now performed using a clip whereas when the procedure was originally valued, some of the other methods (e.g., oversewing, ligation) were more commonly used. As demonstrated by the STS ACSD data, the increase in the total time is due to the increased complexity of the patient receiving this procedure. With advancements in transcatheter technologies, the majority of patients with atrial fibrillation will now typically be treated with medication or a transcatheter device such as the Watchman or if they can't be treated with these, they would be treated using a thoracoscopic LAA exclusion. Only patients where that treatment fails or those that have comorbidities such as peripheral artery disease, previous thoracic surgery, previous stroke, advanced renal disease and cannot be treated using a transcatheter technique or thoracoscopically will undergo open LAA exclusion. This has resulted in sicker, more complex patients, typically with more comorbidities receiving this procedure and as such, the post-operative care for them has also increased with them taking longer to stabilize during the post-operative period. While the survey showed a median wRVU of 19.20, the expert panel felt that value was to high but that the 25th percentile wRVU of 15.00 was too low. Based on the reasons provided, the expert panel is recommending that the current value of 18.04 be maintained for 33267.

The following table provides codes that bracket the recommended value for 33267:

	CPT Code	Long Desc	Glob	MPC	IWPUT	Work RVU	Intra Time	Total Time	Pre Eval Time	Pre Posit Time	Pre SDW Time	Immd Post Time	Hosp Post-op Visit Count	Office Post-op Visit Count	Time Source	Most Recent RUC Review	2024 Medicare Utilization

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33267

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiac Surgery How often? Sometimes

Specialty General Thoracic Surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 272
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. It is estimated that 90% of the patients that receive this procedure are Medicare patients and the remaining 10% will be non-Medicare.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 247
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 utilization from the RUC database

Specialty Thoarcic Surgery Frequency 145 Percentage 59.18 %

Specialty Cardiac Surgery Frequency 85 Percentage 34.69 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male presents with multivessel coronary artery disease with a history of paroxysmal atrial fibrillation. He undergoes a coronary artery bypass graft procedure (CABG) (separately reportable) with left atrial appendage exclusion (eg, ligation, plication, clip). [Note: This is an add-on code. Only include the additional work related to performing the left atrial appendage exclusion.]

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: In addition to performing a procedure via a sternotomy or thoracotomy approach (reported separately), expose the LAA by mobilizing the left ventricle toward the right side. This can be facilitated by dividing the pericardium on the right side to avoid right ventricular compression and decreasing venous return. Use extreme care to avoid injury to the right phrenic nerve. Carefully monitor the hemodynamic stability of the patient. Expose and carefully measure the base of the LAA. Under TEE guidance, staple, clip, or ligate the base of the LAA. Use TEE to confirm there is no flow into the LAA. Once completed, return attention to the final procedural elements of the primary operation.

Description of Post-Service Work:

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
32506	ZZZ	2.93	**RUC Time**

CPT Descriptor Thoracotomy; with therapeutic wedge resection (eg, mass or nodule), each additional resection, ipsilateral (List separately in addition to code for primary procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
34812	ZZZ	4.03	**RUC Time**

CPT Descriptor Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64480	ZZZ	1.17	**RUC Time**	12,465

CPT Descriptor 1 Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), cervical or thoracic, each additional level (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36227	ZZZ	2.04	**RUC Time**	20,715

CPT Descriptor 2 Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
93584	ZZZ	1.17	**RUC Time**

CPT Descriptor Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 20 **% of respondents:** 26.6 **%**

Number of respondents who choose 2nd Key Reference Code: 19 **% of respondents:** 25.3 **%**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	10%	50%	20%	20%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	50%	45%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	20%	45%	35%
Physical effort required	25%	50%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	45%	30%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	47%	37%	16%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	53%	37%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	21%	37%	42%
Physical effort required	42%	32%	26%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	32%	63%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The left atrial appendage (LAA) exclusion procedures (codes 33267, 33268 and 33269) were identified under the new services/new technology screen. In April 2026, the Relativity Assessment Workgroup reviewed three years of available Medicare claims data (2022, 2023 and 2024) and based on utilization changes, changes to the typical patient, and recent

guidelines changes for the add-on code, the societies recommended resurveying the codes for September 2026 and the RUC agreed.

Utilization Data

	2022	2023	2024
33267	351	248	247
33268	7,436	8,848	10,398
33269	398	352	368

The left atrial appendage (LAA) exclusion procedures include two 90-day global codes and one add-on code. The two 90-day global codes include code 33697 which is for stand-alone LAA exclusion though an open chest (median sternotomy or thoracotomy) and code 33269 is for LAA exclusion via thoracoscopy. The add-on code 33268 is for LAA exclusion performed in conjunction with primary procedures performed via sternotomy or thoracotomy other than Maze or mitral valve procedures.

Per the utilization table above, codes 33267 and 33269 are extremely low volume procedures that will likely remain that way. Only patients that cannot be treated medically or with transcatheter LAA exclusion procedures such as the Watchman or those with comorbidities such as will undergo one of these procedures. As such, we expect the utilization for these two procedures to remain low. The add-on code have seen a consistent increase in utilization between 2022 and 2024 and it is expected that utilization for that procedure will continue to increase as the guidelines and indications for LAA exclusion in other open cardiac or thoracic procedures continues to evolve.

Survey Methodology

The Society of Thoracic Surgeons (STS) and the American Association for Thoracic Surgery (AATS) conducted a RUC survey of U.S. members who self-identify as adult cardiac or general thoracic surgeons and received 51 responses for 33267, 52 responses for 33269 and 75 responses for 33268. They convened an Expert Panel of adult and general thoracic surgeons to review the results.

Rationale 33268

Code 33268 is for LAA exclusion performed in conjunction with another open median sternotomy or thoracotomy code other than Maze or mitral valve procedures. This is by far the most common of the three procedures surveyed with increased utilization over the past several years.

A total of 75 survey respondents indicated an intra-service time of 10 minutes and total time of 10 minutes, which is a decrease of 10 minutes intra/total time for the service.

Comparison With Key Reference Codes

For 33268 the 2 Key Reference Codes for comparison were: CPT 32506 Thoracotomy; with therapeutic wedge resection (eg, mass or nodule), each additional resection, ipsilateral (List separately in addition to code for primary procedure). This was chosen by 26.6% of the respondents making it the top key reference. The second key reference was CPT 34812 Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure). 25.3% chose this. When looking at the overall intensity/complexity measures, 50% of the respondents found the survey code to be the same as KRS 1 and 40% of the respondents found the survey code to be somewhat more or much more complex/intense than KRS 1. The survey respondents found that the mental effort and judgement for the survey code was the same as (50%) or more intense/complex (45%) than KRS 1. For the technical skill required 45% of the respondents found that the intensity for the survey code was the same as KRS 1 and 35% found that it was more complex/intense than KRS 1. For the physical effort required, 50% of the survey respondents indicated that the intensity/complexity for the survey code was the same as KRS 1 and 25% of the respondents indicated it was less intense/complex and 25% of the respondents indicated it was more intense/complex than KRS 1. Finally, the survey respondents indicated that the psychological stress for the survey code was the same as (45%) or more intense/complex (30%) than KRS 1. For the second KRS, 53% of the survey respondents indicated that the overall intensity/complexity of the survey code was somewhat more to much more complex than KRS 2 and 47% of the respondents found that it was the same. For the mental effort and judgement, the survey respondents found the intensity/complexity of the survey code to be the same (53%) or more intense/complex (37%) than KRS 2. For the technical skills, the survey respondents found the survey code to be the more complex (42%) or the same (37%) as KRS 2. 42% of the survey respondents indicated that the physician effort required for the survey code was less complex/intense than the KRS 2 and 32% indicated that it was the same. For the psychological stress, 63% of the survey respondents found the survey code to be the more complex/intense than KRS 2.

Recommended wRVU

The expert panel is recommending a wRVU of 1.17 based on a crosswalk to code 93584. While there are other lower wRVU codes with the same amount of intraservice time as the crosswalk code chosen, the expert panel felt that the IWPUT of the recommended crosswalk code (0.120) was more in line with this cardiac service than the other crosswalk options. This recommendation results in slightly more than a 50% reduction in the wRVU from the current wRVU (2.44) which the expert panel feels appropriately accounts for the 50% reduction in time for the procedure.

The following table provides the crosswalk code as well as other codes that bracket the recommended value for 33268:

	CPT Code	Long Desc	Glob	MPC	IWPUT	Work RVU	Adj Intra Time	Adj Total Time	Pre Eval Time	Pre Posit Time	Pre SDW Time	Immd Post Time	Hosp Post-op Visit Count	Office Post-op Visit Count	Time Source	Most Recent RUC Review	2024 Medicare Allowed Charges
	93585	Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; azygos/hemiazygos venous system (List separately in addition to code for primary procedure)	ZZZ		0.1128	1.10	9.75	9.75					0	0	RUC	2023-01	4

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33268

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiac Surgery How often? Sometimes

Specialty General Thoracic Surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 11,438
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. It is estimated that 90% of the patients that receive this procedure are Medicare patients and the remaining 10% will be non-Medicare.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,398 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 utilization from the RUC database

Specialty Thoracic Surgery Frequency 6,384 Percentage 61.39 %

Specialty Cardiac Surgery Frequency 3,327 Percentage 31.99 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 33268

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:33269 Tracking Number Original Specialty Recommended RVU: **13.95**
Presented Recommended RVU: **13.95**
Global Period: 090 Current Work RVU: **13.95** RUC Recommended RVU: **13.95**

CPT Descriptor: Exclusion of left atrial appendage, thoracoscopic, any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 85-year-old female with persistent atrial fibrillation has undergone numerous electrophysiologic procedures in the past and was deemed a poor candidate for an endovascular LAA occlusion device. Thoracoscopic LAA exclusion (eg, ligation, plication, clip) is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 4% , Overnight stay-less than 24 hours 12% , Overnight stay-more than 24 hours 85%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 96%

Description of Pre-Service Work: Perform a complete or interval history and physical examination (comprehensive). Write preoperative orders and review the work-up and notes from the referring and primary physicians if available. Review preoperative imaging and laboratory studies. Obtain a cardiology assessment and a pulmonary assessment, as indicated. Review the indications, the surgical procedure including the expected surgical approach and method of LAA exclusion and possible alternatives, the expected recovery, and the expected outcomes including potential complications, with the patient and the patient's family. Answer the family's questions and obtain informed consent. Confirm the OR start time and notify the patient and the patient's family. Confirm the availability of the surgical assistant. Identify the patient, mark the surgical site per hospital policy, and answer any questions from the patient's family. Ensure the availability of blood and/or a crossmatch and any special instruments or medical devices. Review the planned incision and procedure. Review the length and type of anesthesia with the anesthesiologist. Ensure the anesthesiologist and the perfusionist are prepared for circulatory arrest if needed. Plan invasive monitoring, including use of arterial line (right radial only) and pulmonary artery catheter. The surgeon dresses and waits for the institution of appropriate monitoring, vascular access, and induction of anesthesia. Then the surgeon positions and prepares the patient, after which the surgeon scrubs, gowns, and drapes the patient. The surgeon then assures that: (1) all equipment necessary for thoracoscopy (thoracoscope, fiberoptic light cord, video camera, cautery cord, etc, is placed in the field, assembled and fixed to the drapes; (2) the ends of the camera, light, and cautery cords are passed off in sterile fashion to the circulating nurse for attachment of light and video and cautery equipment; and (3) the equipment is activated and the settings adjusted appropriately (focus, light settings, cautery settings). Complete the surgical pause. Instruct the anesthesiologist to institute single-lung ventilation.

Description of Intra-Service Work: Under general anesthesia, identify and anesthetize the site for the initial trocar site with local anesthetic. Make an incision, and using a combination of sharp, cautery, and blunt dissection, carefully enter the pleural cavity. Palpate the parietal pleura, insert a trocar under direct vision, and advance the thoracoscope into the pleural cavity. Perform an initial visual exploration. Identify the sites for all additional trocar incisions (1 or 2) if necessary and anesthetize them with local anesthetic. Make additional trocar incisions in a similar fashion. Place access ports as necessary at each incision site for the passage of instruments. Deflate the left lung. Free adhesions between the lung and chest wall. Take care to avoid decreasing venous return by careful monitoring CO2 flow and pressure (usually kept +/< 6 mmHg) and the patient's blood pressure. Carefully open the pericardium posterior to the phrenic nerve and expose the left atrial

appendage. Expose and measure the left atrial appendage base. Clip, staple, or ligate the appendage with TEE guidance to make sure there is no flow into the LAA. Leave the pericardium open. Perform an intercostal nerve block with local anesthetic for postoperative analgesia. Expand the left lung. Insert a chest tube(s) through a separate interspace incision(s) to provide evacuation of air and fluid from the chest. Assess all trocar incisions for hemostasis. Conduct a surgical pause while an instrumentation, needle, and sponge count is completed and confirmed by the surgeon. Close each incision with multiple layers of suture for the muscle, and reapproximate the skin with a subcuticular stitch. Extubate the patient.

Description of Post-Service Work: Perform a postprocedure debriefing. Apply sterile dressings. Monitor the patient during reversal of anesthesia. Assist in transferring the patient from the operating table to the cart. Monitor the transport of the patient from the OR to the recovery room. Review the patient's chart notes from the nursing and other staff. Answer questions from the patient and the patient's family. Answer questions from the nursing and other staff. Write orders for the following days' laboratory tests, films, medications, diet, and patient activity. Discuss the outcome of the procedure with the patient's family. Review the postoperative chest X ray, arterial blood gas, mixed venous saturation blood gas, cardiac output and index and pulmonary pressure parameters, and postoperative laboratory studies, including a CBC and CMP. Discuss the outcome of the procedure with the referring physician. Coordinate care with other physicians. Dictate a full operative note for the patient's chart. Dictate the procedure outcome and expected recovery letter for the patient's referring physician and/or insurance company. Postoperative Hospital Work Until Discharge Day: Assess the patient's neurological state and hemodynamics. Review the patient's chart notes with the nursing and other staff. Examine the patient daily. Inspect the wound, review chest tube output volume and consistency, and patient progress. Assess postoperative pain and use of analgesics. Assess respiration, character of pulmonary secretions, and the patient's ability to clear the airway. Review the patient's vital signs, intake and output, and laboratory results. Review the chest radiograph and echocardiogram, and evaluate the cardiac monitor for rate, rhythm, and presence or absence of arrhythmia. Encourage ambulation and pulmonary physiotherapy. Monitor the patient's postoperative nutritional status. Remove pacing wires and chest tube when appropriate (usually 24 to 48 hours postoperatively). Obtain and review chest X rays after tube removal. Answer questions from the patient, the patient's family, and nursing or other staff (oral and written). Discuss the patient's progress (orally and in writing) with the referring physician. Coordinate care with other physicians. Document evaluation, patient progress, and the care plan in the medical record. Discharge Day Work: Check the final pathology, laboratory, or film reports and discuss with the patient's family or caregiver. Check wounds. Explain wound care, dietary management, activities permitted, bathing, handling of wound, and the return appointment to the office. Outline expectations for recovery and describe potential complications. Coordinate care with other physicians. Answer questions from the patient, the patient's family, and nursing and other staff. Write postdischarge orders for laboratory tests, films, and medications. Explain new medications, home medications, and homeopathic agents to ensure that additional agents are compatible or will not be used. Dictate a discharge summary. Communicate with patient's primary care physician(s). Postoperative Office Work: Review medications and determine compliance. Review interval encounters with other care providers. Check wounds and patient progress. Remove sutures if necessary. Review postdischarge laboratory tests or films. Write orders for medications. Answer questions from the patient and the patient's family. Discuss the patient's progress (orally and in writing) with the referring physician. Coordinate the patient's care with other physicians. Discuss progress with the patient and the patient's family. Dictate a patient progress note for the medical chart and send letters to referring physicians.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Same**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	19%	56%	25%

Mental Effort and Judgment	**Less**	**Same**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	38%	56%

Technical Skill/Physical Effort	**Less**	**Same**	**More**
Technical skill required	0%	13%	88%
Physical effort required	6%	38%	56%

Psychological Stress	**Less**	**Same**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	31%	56%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Same**	**Somewhat More**	**Much More**

Overall intensity/complexity	0%	11%	33%	22%	33%

Mental Effort and Judgment	**Less**	**Same**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	56%	33%

Technical Skill/Physical Effort	**Less**	**Same**	**More**
Technical skill required	0%	11%	89%
Physical effort required	11%	22%	67%

Psychological Stress	**Less**	**Same**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	11%	78%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The left atrial appendage (LAA) exclusion procedures (codes 33267, 33268 and 33269) were identified under the new services/new technology screen. In April 2026, the Relativity Assessment Workgroup reviewed three years of available Medicare claims data (2022, 2023 and 2024). Based on utilization changes, changes to the typical patient, and recent guidelines changes for the add-on code, the societies recommended resurveying the codes for September 2026 and the RUC agreed.

Utilization Data

	2022	**2023**	**2024**
33267	351	248	247
33268	7,436	8,848	10,398
33269	398	352	368

The left atrial appendage (LAA) exclusion procedures include two 90-day global codes and one add-on code. The two 90-day global codes include code 33697 which is for stand-alone LAA exclusion though an open chest (median sternotomy or thoracotomy) and code 33269 is for LAA exclusion via thoracoscopy. The add-on code 33268 is for LAA exclusion performed in conjunction with primary procedures performed via sternotomy or thoracotomy other than Maze or mitral valve procedures.

Per the utilization table above, codes 33267 and 33269 are extremely low volume procedures that will likely remain that way. Only patients that cannot be treated medically or with transcatheter LAA exclusion procedures such as the Watchman and those with comorbidities such liver disease, renal failure and previous stroke will undergo one of these procedures. As such, we expect the utilization for these two procedures to remain low. The add-on code has seen a consistent increase in utilization between 2022 and 2024 and it is expected that utilization for that procedure will continue to increase as the guidelines and indications for LAA exclusion in other open cardiac or thoracic procedures continues to evolve.

Survey Methodology

The Society of Thoracic Surgeons (STS) and the American Association for Thoracic Surgery (AATS) conducted a RUC survey of U.S. members who self-identify as adult cardiac or general thoracic surgeons and received 51 responses for 33267, 52 responses for 33269 and 75 responses for 33268. They convened an Expert Panel of adult and general thoracic surgeons to review the results.

The STS National Database™

The STS National Database™ has data on nearly 10 million procedures from more than 4,300 surgeons, including 95% of adult cardiac surgery procedures. The STS Adult Cardiac Surgery Database (ACSD) contains nearly 8.5 million adult cardiac surgical procedure records and currently has more than 3,500 participating physicians, including surgeons and anesthesiologists. At the February 2011 RUC meeting, the Research Subcommittee reviewed the STS National Database™ and determined that it met the Inclusionary/Exclusionary Criteria for extant databases. The Research Subcommittee recommended that the specialty society develop specific criteria, such as thresholds for data volume and distribution, to determine when the specialty society would be required to display extant data for a surveyed service with its RUC recommendations.

At the January 2012 RUC meeting the Research Subcommittee reviewed STS ACSD data for 850,895 individual patients undergoing procedures from 2006 through 2010. A comparison of the STS ACSD with Medicare utilization data for 2010 indicated that more than 90% of surgical procedures were captured by the Database. This finding is consistent with participation by more than 1,100 sites in the United States and the estimate that approximately 94% of sites performing cardiac surgery submit data. Each site employs a third-party administrator who manually enters 200 to 300 fields of clinical data. In addition, the Database is audited. Thus, the Database is considered a comprehensive and representative resource.

The agreed-upon criteria for when the STS will provide STS National Database™ data for surveyed codes are as follows: **For codes whose values are being revised, the STS will utilize the STS National Database™ when accurate and sufficient data are available for specific use. The STS proposed a 95th percentile confidence interval with a +-5% variability as criteria to include STS data.**

The STS ACSD does not specifically map procedures to CPT codes. Although most procedures can be unequivocally mapped to a single CPT code, the society cannot isolate data for some procedures at the specific CPT-code level. Although all procedures in the Database require reporting of "skin-to-skin" time, reporting is not mandatory for every procedure entered into the STS ACSD, particularly lower-volume procedures. Additionally, it is not always possible to isolate intra-service time for add-on procedures. For codes for which data are available, the specialty society will determine whether the data meet the agreed-upon criteria for use

The society also considers the timeframe for reviewing the codes. Because data retrieval may require substantial time and may be affected by other requests, it may not always be possible to obtain STS National Database™ data within the revaluation timeframe. For each code under review, the society evaluates: the amount of time available to obtain the data; whether the STS National Database™ collects data on the procedure; whether the procedure can be unequivocally mapped to a CPT code; the volume of the procedure; whether Database reporting for the procedure is mandatory; and whether the code or codes meet the agreed-upon criteria.

Based on the above criteria, the STS was able to obtain STS ACSD data for the two stand-alone 90-day global procedures (33267, 33269), but we were unable to isolate the data for the add-on LAA procedures (33268). As such, we are including the STS ACSD data for the two stand-alone codes and this data has been provided within the revised summary spreadsheet. The society has provided the mean and median "Skin to Skin Time (min)" which is the intra-service time for the procedures. We also provided STS ACSD data for the LOS which was capped at 90 days and supports the surveyed LOS.

Rationale 33269

Code 33269 is for stand-alone LAA exclusion via thoracoscopy, which is also uncommon. This procedure is only used for patients in whom treatment for atrial fibrillation using medications or transcatheter techniques such as the Watchmen cannot be used or have failed.

The survey respondents indicated a pre-service evaluation time of 44 minutes, positioning time of 13 minutes and scrub, dress and wait time of 15 minutes, a median intra-service time of 60 minutes and an immediate post-service time of 30 minutes.

Pre-service Time
The specialty societies selected pre-service time package 4 facility for a difficult patient and difficult procedure. Patients undergoing the procedure are typically complicated patients with heart failure and other comorbidities. Adjustments to the pre-service time package include an increase of 4 minutes of pre-evaluation time per the survey. For positioning, 10 minutes were added for a total of 13 minutes to account for padding and positioning. This is consistent with other cardiac procedures, most of which have 15 minutes of positioning time. The society cannot explain why the survey respondents indicated 13 instead of 15 minutes of positioning time typical of other cardiac surgery procedures or why there was a difference in positioning time of 2 minutes between 33267 and 33269. The scrub dress and wait time was decreased by 5 minutes based on the survey.

Immediate Post-Service Time
The societies selected post-service time package 9B for general anesthesia and complex procedure. Per the survey respondents, the immediate post-service time was decreased by 3 minutes for a total of 30 minutes immediate post-service time.

Post Operative Hospital Care
The survey supported the same in-hospital visit pattern as that of the current code with one 99233 and one 99232 level visit as well as a 99238 discharge day management visit.

Post Operative Office Visits
The post hospital office visits for the procedure also remained the same as the current code with 1-92213 outpatient follow-up visit.

Comparison With Key Reference Codes
For 33269 the 2 Key Reference Codes for comparison were: CPT 32654 Thoracoscopy, surgical; with control of traumatic hemorrhage. This was chosen by 30.7% of the respondents making it the top key reference. The second key reference was CPT 32651 Thoracoscopy, surgical; with partial pulmonary decortication. 17.3% chose this. When looking at the overall intensity/complexity measures, 56% of the respondents found the survey code to be the more intense/complex than KRS 1 and 25% of the respondents found the survey code to be much more complex/intense than KRS 1. The survey respondents found that the mental effort and judgement for the survey code was more (56%) intense/complex or the same (38%) as KRS 1. For the technical skill required 88% of the respondents found that the intensity for the survey code more intense/complex than KRS 1. For the physical effort required, the survey respondents indicated that the intensity/complexity for the survey code was the more (56%) or the same (38%) as KRS 1. Finally, the survey respondents indicated that the psychological stress for the survey code was more (56%) intense/complex or the same (31%) as KRS 1. For the second KRS, 55% of the survey respondents indicated that the overall intensity/complexity of the survey code was somewhat more to much more complex than KRS 2 and 33% of the respondents found that it was the same. For the mental effort and judgement, the survey respondents found the intensity/complexity of the survey code to be the same as (56%) or more complex (33%) than KRS 2. For the technical skills, the survey respondents found the survey code to be more complex (89%) than KRS 2. 67% of the survey respondents indicated that the physician effort required for the survey code was more complex/intense than KRS 2 and 22% indicated that it was the same. For the psychological stress, 78% of the survey respondents found the survey code to be the more complex/intense than KRS 2.

While the visit pattern has remained the same for these patients, the survey data points to a somewhat more complex patient per the intensity/complexity measures which the survey respondents found to be predominately more complex than KRS1 and KRS 2, both of which have higher wRVUs (20.1 and 18.31 respectively), intraservice (69.23 and 68.25 respectively) and total times (513.2 and 500.3 respectively) than the survey code. Where 33267 (the open code) is be considered the 4th line treatment, the thoracoscopic LAA would be considered the 3rd tier line of treatment for patients contraindicated for medical treatment and transcatheter techniques.

This increased complexity of the patient is also supported by the STS ACSD when comparing the 2022 to 2025 data for the following comorbidities: While patients with diabetes decreased 32.3% to 27.8%, the number of patients taking insulin increased from 18.6% to 27.5%. Chronic lung disease of mild to moderate went from 14.3% to 20.9%. Patients with liver disease went from 3.4% to 4.8% and patients with liver cirrhosis went from 1.8% to 3.2%. Immunocompromised patients went from 8.3% to 8.5%. Patients with cerebrovascular disease went from 37.8% to 39.1% and those with prior stroke increased from 72.0% to 78.4%.

Recommended wRVU

The expert panel is recommending a wRVU of 13.95 based on a crosswalk to code 33020 which maintains the current value. There was a slight decrease (3.38 minutes) in the intraservice as well as the total time. As with the open code, the expert panel felt that the slight decrease in intra-service time is again due to the predominate use of a clip for exclusion of the LAA as opposed to other techniques (oversewing, ligation). The expert panel did not agree with the median wRVU of 18.88 or the 25th percentile of 15.24 wRVUs from the surveys for the code since both of those are higher than the current value. The intraservice time for the crosswalk code is 58.5 mins 1.5 mins less than the survey code with a total time of 319.5 minutes, which is 1.5 minutes more than the survey code. With the minimal decrease in intra and total time for the survey code, the expert panel felt that using 33020 as a crosswalk to value the code was reasonable. As such, we are recommending a crosswalk value of 13.95 for code 33269.

The following table provides the crosswalk code as well as other codes that bracket the recommended value for 33269:

	CPT Code	Long Desc	Glob	MPC	IWPUT	Work RVU	Adj Intra Time	Adj Total Time	Pre Eval Time	Pre Posit Time	Pre SDW Time	Immd Post Time	Hosp Post-op Visit Count	Office Post-op Visit Count	Time Source	Most Recent RUC Review	2024 Medicare Allowed Charges

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33269

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Cardiac Surgery How often? Sometimes

Specialty General Thoracic Surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 405
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. It is estimated that 90% of the patients that receive this procedure are Medicare patients and the remaining 10% will be non-Medicare.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 368
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 utilization from the RUC database

Specialty Thoracic Surgery Frequency 225 Percentage 61.14 %

Specialty Cardiac Surgery Frequency 120 Percentage 32.60 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:
Cardiovascular-Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 33269

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT CODE(S): 33267, 33269, 33268
SPECIALTY SOCIETY(IES): STS/AATS
PRESENTER(S): Joesph Turek, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 10/2026

CPT Code	Long Descriptor	Global Period
33267	Exclusion of left atrial appendage, open, any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip)	90
33269	Exclusion of left atrial appendage, thoracoscopic, any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip)	90
33268	Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (eg, excision, isolation via stapling, oversewing, ligation, plication, clip) (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
33267	A 75-year-old male, who is status post left-lung resection, presents with persistent atrial fibrillation and a CHADS2 (stroke risk) score of 4. Recurrent, significant gastrointestinal bleeding episodes preclude anticoagulation therapy. He is deemed a poor candidate for a left atrial appendage (LAA) endovascular occlusion device. Because of anticipated dense adhesions within the left chest cavity, a thoracoscopic approach is contraindicated and an open approach to LAA exclusion (eg, ligation, plication, clip) is recommended.
33269	An 85-year-old female with persistent atrial fibrillation has undergone numerous electrophysiologic procedures in the past and was deemed a poor candidate for an endovascular LAA occlusion device. Thoracoscopic LAA exclusion (eg, ligation, plication, clip) is recommended.
33268	A 75-year-old male presents with multivessel coronary artery disease with a history of paroxysmal atrial fibrillation. They undergo a coronary artery bypass graft procedure (CABG) (separately reportable) with left atrial appendage exclusion (eg, ligation, plication, clip). [Note: This is an add-on code. Only include the additional work related to performing the left atrial appendage exclusion.]

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Expert Panel comprised of RUC Advisors and clinical experts representing settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   Current CPT Codes were used for comparisons

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

3. Is this code(s) typically reported with an E/M service?

No, these codes (33267, 33269) are not typically billed with an E/M Service

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The increase in PE for 33267 can be entirely accounted for because of an increase in physician time related to the increased staff and equipment time as well as one additional minimum multi-specialty visit pack (SA048) associated with a 99239 discharge day visit and an additional 99213 post op visit if approved by the RUC for the work values. The recommended PE for 33269 remain the same. We are not recommending any PE for the add-on code 33268.

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, the global periods for these codes remain the same 90-days for codes 33267 and 33269 and ZZZ for 33268.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

The clinical staff pre-service work includes completion of pre-service diagnostic and referral forms, for the procedure. Coordination of pre-surgery services and diagnostic tests, which may include chest x-rays, CT Scan, MRI, aortogram and TEE and any laboratory studies if avaiable. The clinical staff must also coordinate with the other specialists that will be needed to diagnose and perform the

procedure, this will include, at a minimum coordination with neurology, anesthesia, assistant surgeon, the ICU, cardiology for the TEE, and perfusion. The clinical staff will schedule the operating room and ensure that all necessary equipment, including for cardiopulmonary bypass is available. Clinical staff will also provide education to the patient on the procedure, including the possibility of using cardiopulmonary bypass, the planned surgical approach or alternative approaches based on findings once the procedure is initiated, the planned method of left atrial appendage (LAA) exclusion the expected post-operative course and obtain consent from the patient. The clinical staff will also complete any pre-procedure phone calls to patient verifying time, pre-op instruction and all pre-operative prescription/medications to take/not take.

b. Service period (includes pre, intra and post):

Code 33267 includes a 99239 discharge day visit with 15 minutes of clinical staff time allocated to standards for assisting in discharge day management, which may include coordination of post-operative prescriptions, appointments, coordination with other physicians.
Code 33268 includes a 99238 discharge day management service with 12 minutes of clinical staff time allocated to standards for assisting in discharge day management, which may include coordination of post-operative prescriptions, appointments, coordination with other physicians.

c. Post-service period:

Code 33267 has two level three E/M visits in the post-service period and code 33269 has one post-operative E/M visit in the post-service period. The clinical staff work includes the standard activities involved in any post-operative E/M visit including ensuring the appropriate supplies are available in the room, rooming the patient, gowning, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with wound care, coordination of care, and cleaning of the room.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**4.01**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture & staple)	**SA053**	**pack**		**7.49**
kit, staple removal		kit	1	
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EF023 – Table, exam – office visits
EF014 – Light, surgical – office visits

ADDITIONAL INFORMATION

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

19. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The majority of offices of our specialty utilize RN's or advance practice providers (PA's or NP's) because of the complexity of triaging outpatient care for cardiac surgery patients. Since CMS does not recognize PAs or NPs as clinical staff, the RN level has been traditionally accepted. This is a long-standing standard and is consistent in the family of cardiothoracic surgery codes that are not typically performed by multiple specialties. Codes 33267, 33268 and 33269 are all performed by cardiothoracic surgeons and would not be considered multi-specialty procedures.

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

22. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
New Technology/New Services

September 2026

Per-Oral Endoscopic Myotomy (POEM) – Tab 10

CPT code 43497 was flagged on the New Technology/New Services list. In April 2026, the Relativity Assessment Workgroup (RAW) reviewed three years of available Medicare claims data (2022, 2023 and 2024) and the RUC recommended that this service be surveyed for September 2026.

43497 ***Lower esophageal myotomy, transoral (ie, peroral endoscopic myotomy [POEM])***
The RUC reviewed the survey results from 61 gastroenterologists and gastrointestinal surgeons and determined the current work RVU of 12.96, accounts for the work required to perform this service. The RUC recommends 33 minutes pre-evaluation time, 3 minutes pre-positioning time, 10 minutes scrub/dress/wait time, 90 minutes intra-service time, 50 minutes immediate post-service time, 0.5-99238 and 2-99213 post-operative visits as supported by the survey, totaling 251 minutes. The RUC discussed the addition of 20 minutes of immediate post-service time to the initial value of 30 minutes of immediate post-service time, for a final recommendation of 50 minutes of immediate post-service time. The societies explained that it is typical for the performing physician to check in on the patient following the procedure. To be consistent with CMS's 23-hour rule policy for hospital stays of less than 24 hours, this observation time is included in the immediate post-service time.

Peroral endoscopic myotomy (POEM) is an endosurgical treatment for achalasia, which is a very rare disorder in which incomplete lower esophageal sphincter relaxation and loss of normal peristalsis lead to difficulty swallowing. POEM allows the gastroenterologist to cut the lower esophageal sphincter through a flexible endoscope, whereas previously this would have required open and now more commonly laparoscopic surgery. POEM is one of, if not the most, technically demanding and complex procedures performed by gastroenterologists. It is a third space procedure, in that it is neither within the lumen nor outside the lumen but involves creating a submucosal tunnel within the thin wall of the esophagus itself. Creation of the tunnel requires precise submucosal dissection using specialized hybrid electrosurgical knives, meticulous hemostatic techniques and continuous assessment of tissue planes that are adjacent to critical mediastinal structures. Once the submucosal tunnel has been created, the physician then dissects and cuts the underlying muscle while being vigilant to preserve the overlying mucosa, which is then closed. Unlike laparoscopic surgery, which benefits from multiple ports and traction devices, POEM is performed through a single forward-facing endoscope. Movements at the control wheel reach the endoscope tip, about a meter away, with a lag, while vascular motion, respiratory motion, and esophageal spasm displace the operative field and instruments and bleeding obscure the area in which the physician must dissect and cut. This makes for a technically demanding and stressful procedure that can result in serious complications due to extravasation of CO2 into the mediastinal and peritoneal spaces and direct damage to the mediastinal structures.

The specialty societies explained in detail why the intra-service time has decreased and intensity has increased for this service. While refinements of pre-procedural fasting protocols have decreased the time that clinicians spend clearing the esophagus of retained food and debris, the greatest low-intensity time savings have come from advances in hybrid electrosurgical instruments. In the past, the tunneling and dissection portion of the POEM procedure had to be paused every few minutes to exchange the electrosurgical knife with an injection needle used to expand the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

submucosal plane. This cycle of withdrawing the knife, inserting the needle, performing the injection, withdrawing the needle, and reinserting the surgical knife would happen dozens of times per case. Now, hybrid electrosurgical instruments capable of performing submucosal injection and delivering energy for tissue dissection have minimized these low-intensity but time-consuming device exchanges. A similar advancement in electrosurgical equipment and imaging technology has also allowed for fewer device exchanges for hemostasis. In the past, similar to the injection needle, the electrosurgical knife would have to be exchanged for hemostatic forceps to treat bleeding from submucosal vessels. Now physicians can identify vessels in the upcoming submucosa, strip or skeletonize the vessels to allow for precise coagulation, modulate the energy settings, and apply low-intensity current through the electrosurgical knife to prophylactically coagulate these vessels prior to transection. That work of prophylactic coagulation adds additional high-intensity work and also decreases these low-intensity device exchanges. Overall, these and other advances have disproportionately reduced time spent on lower intensity activities. The demanding dissection, hemostasis, myotomy, and closure remain, and now occupy a greater proportion of the shorter procedure, which explains how the average intra-service intensity has increased while time has decreased, and together with the survey and relativity evidence, supports maintaining the work RVU. The RUC agreed that the intensity and complexity to perform CPT code 43497 has increased.

To support maintaining the current value, the RUC compared the surveyed code to the top key reference service 43889 *Gastric restrictive procedure, transoral, endoscopic sleeve gastroplasty (ESG), including argon plasma coagulation, when performed* (work RVU = 12.56, 90 minutes intra-service time and 274 minutes total time). CPT code 43889 requires more standardized suturing maneuvers within the larger stomach lumen, whereas POEM, CPT code 43497, is a substantially more technically demanding, highly variable procedure with little margin for error. At the current work value of 12.96, the intensity of CPT code 43497 appropriately exceeds that of CPT code 43889, acknowledging this relationship. Of the respondents who chose CPT code 43889 as the key reference service, 83% indicated that the surveyed code is somewhat more to much more intense and complex to perform on all measures examined: mental effort and judgment, technical skill/physical effort and psychological stress. Therefore, the surveyed code is appropriately valued higher.

For additional support, the RUC referenced MPC code 15730 *Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)* (work RVU = 13.16, 87.75 minutes intra-service time and 253.25 minutes total time), and CPT code 57260 *Combined anteroposterior colporrhaphy, including cystourethroscopy, when performed;* (work RVU = 12.92, 87.75 minutes intra-service time and 238.75 minutes total time) and noted these services require similar physician work and time and demonstrate the appropriate relativity across the payment schedule. **The RUC recommends a work RVU of 12.96 for CPT code 43497.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Descriptor: Lower esophageal myotomy, transoral (ie, peroral endoscopic myotomy [POEM])

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old male presents with progressive dysphagia for solids and liquids. Testing has confirmed achalasia. The patient is referred for peroral endoscopic myotomy (POEM).

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 13% , Overnight stay-less than 24 hours 64% , Overnight stay-more than 24 hours 23%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Review symptoms, history, and preadmission work-up, paying particular attention as to the use of a systematic symptoms inventory and any available imaging reports (esophagram, CT), relevant diagnostic tests (ECG, esophageal manometry, prior endoscopy) and laboratory studies, especially as they relate to coagulation status, CBC, and basic metabolic panel. Review the patient's allergies and medications noting use of antiplatelets or anticoagulants. Determine the need for timing of preprocedure antibiotics, steroids, or contrast allergy prophylaxis. Perform a preprocedural examination, including vitals, body mass index (BMI), airway assessment, cardiopulmonary assessment, and abdominal examination. Review achalasia type, prior interventions history, and likely benefit from POEM based on evidence. Counsel the patient accordingly to set realistic expectations, including the need for secondary interventions. Document preprocedural history and physical. Review the risks, benefits alternatives, and potential complications of the procedure with the patient and the patient's family. Review the logistics of the planned procedure and the postoperative management. Document informed consent. Review the length and type of anesthesia with the anesthesiologist and discuss the need for aspiration precaution measures. Plan the technical aspects of the procedure. Determine the length of myotomy based on preprocedural work-up. Verify that all required instruments and supplies are available, including endoscopic tools. Position the patient on the procedure table. Position the endoscopic, imaging, electrocautery, and monitoring equipment to provide access for the procedure. Apply appropriate protective attire and shielding to all in the suite, including the patient. Perform a preprocedure time out.

Description of Intra-Service Work: Place a bite-block in the patient's mouth. Confirm with anesthesiology that an adequate level of anesthesia is in place to begin intubation of the esophagus. Insert a flexible upper endoscope with a clear cap attached through the mouth into the oropharynx and into the esophagus. Suction secretions and remove retained food and debris as needed to permit adequate visualization. Assess esophageal anatomy including degree of esophageal dilation and tortuosity. Advance the endoscope through the lower esophageal sphincter into the proximal stomach. Insufflate the stomach with CO2. Perform an examination of the entire stomach in the forward and retroflexed position. Advance the endoscope through the pylorus into the duodenal bulb. Perform circumferential inspection of the duodenum after insufflation. Once initial examination confirms that there are no contraindications to proceeding, it is optional to lavage the esophagus with antibiotics and/or place an esophageal overtube. Record careful measurements of critical landmarks (teeth and overtube, squamocolumnar junction, proximal gastric folds). Identify anterior and posterior wall to determine approach. Observe esophageal motility and mucosa and make final adjustments to planned endpoints and length of myotomy as appropriate. Position the endoscope in the esophageal lumen at the anticipated proximal end of the myotomy

and perform a submucosal injection with appropriate lifting solution using an injection needle. After an adequate fluid cushion is achieved, create a mucosal incision using the electrocautery dissection knife selected at the appropriate energy settings to create a submucosal entry tunnel for the endoscope. Incision should be several centimeters proximal to the planned myotomy. Once the esophageal submucosal space has been entered, carefully dissect the layers of submucosal tissue to further expand the submucosal tunnel and expose the esophageal muscle below it. It is essential to prophylactically coagulate and ensure meticulous hemostasis of submucosal vessels encountered during creation of the tunnel. Extend the tunnel distally until the tunnel reaches 1.5 to 3 cm onto the gastric cardia below the gastroesophageal (GE) junction. Perform continuous monitoring of the patient's vital signs and physical examination of the chest and abdomen to assess and manage any perforations or complications due to extraluminal CO2 extravasation. Once the submucosal tunnel creation is complete and its adequacy documented, incise and divide the intended muscle fibers, extending the full length of the myotomy. Once the myotomy is complete, repeat the endoscopy to evaluate the adequacy of the myotomy and patency of the GE junction. Carefully examine the esophageal mucosa for any mucosal injury. Close the mucosal defect at the entry point of the submucosal tunnel. Perform careful inspection of the incision site to ensure adequate closure and hemostasis. After suctioning to deflate the stomach and esophagus, withdraw the endoscope.

Description of Post-Service Work: Hospital: Monitor the patient during reversal of anesthesia, paying particular attention to hypercapnia issues and aspiration risk. Reassess for crepitus and pneumoperitoneum. Monitor the transport of the patient from the operating area to the recovery room. Complete postprocedure orders. Discuss the patient's postoperative recovery with the anesthesia and nursing staff. Discuss the procedure and outcome with the patient's family. Write or dictate an operative note and complete final operative documentation. Forward the procedure report to referring physicians. Write orders for transferring the patient to the hospital inpatient floor and discuss ongoing care with the floor team, including physicians and nurses. Discuss the plan for monitoring, barium esophagram, antibiotics, postmyotomy diet, monitoring, and discharge criteria. Examine the patient daily while admitted, including taking vitals and performing a cardiopulmonary examination and abdominal examination. Review the patient's pain and treat appropriately. Answer questions from the patient, the patient's family, and nursing staff. Once the patient is taking adequate nutrition, has adequate pain control with oral analgesics, and has a normal esophagram or no physical contraindications, consider discharge. Discuss orders for follow-up visits, laboratory studies, medications, and studies prior to discharge. Complete all appropriate medical records, including day-of-discharge progress notes, a discharge summary, and discharge instructions.

Clinic: Examine and obtain a history from the patient. Pay specific attention to pain, swallowing function, and symptoms of acid reflux. Discuss postoperative testing, which may include esophagram, esophageal manometry, pH testing, and/or endoscopy with impedance planimetry. Arrange for return visits to monitor progress and review follow-up testing. Educate patients regarding the long-term, natural history of achalasia and the need for long term follow-up.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	09/2026		
Presenter(s):	R. Bruce Cameron, MD, Patricia Garcia, MD, Shelby Sullivan, MD, Ketan Sheth, MD		
Specialty Society(ies):	ACG, AGA, ASGE, SAGES		
CPT Code:	43497		
Sample Size:	3426	**Resp N:**	61
Description of Sample:	The ACG, AGA, ASGE and SAGES conducted a survey for the September 2026 RUC meeting including a 2,500 random sample of subsets of ACG, AGA, and ASGE society members plus a 1,000 random sample of SAGES members totaling 3,500 physicians. The ACG, AGA and ASGE obtained random sample of each society's advanced endoscopy special interest group: ACG performed a random sample of 500, AGA of 1,000, and ASGE of 1,000. A total of 3,426 physicians received the survey after accounting for failed deliveries, resulting in 61 completed surveys. The surveying societies convened an expert panel that evaluated survey results and developed the following recommendations.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: Peroral endoscopic myotomy (POEM) remains one of the most technically demanding and complex procedures performed by gastroenterologists. POEM is an endosurgical procedure that requires creation of a tunnel inside the thin wall of the esophagus followed by a full-thickness incision through the muscle layers, at a location adjacent to critical structures in the mediastinum. This technique requires precise dissection within a confined field (made more difficult by a limited forward-only view), meticulous hemostasis, preservation of mucosal integrity, and

monitoring/management of serious complications including bleeding, pneumoperitoneum and pneumomediastinum. These demands distinguish POEM from conventional luminal endoscopic procedures in both time and intensity.
We recommend maintaining 12.96 work RVUs for CPT 43497. This recommendation is supported by the current survey, the intensity of the physician work, clinical relativity to endoscopic sleeve gastroplasty (ESG), and consistency with comparison services.

Survey support: The current survey is robust and includes 61 experienced respondents. The data supports maintaining 12.96 work RVUs, a value below the survey's 25th percentile of 15.00 work RVUs.

Appropriate intraservice intensity: At the recommended work value and time, POEM's calculated IWPUT is approximately 0.093. Efficiency gains have reduced time spent on lower-intensity activities such as esophageal clearance, repeated orientation maneuvers, and instrument exchanges (see Supporting Rationale section for greater detail), consolidating the demanding endosurgical work into a shorter duration higher intensity service.

Clinical relativity to ESG: ESG (CPT 43889) was the most frequently selected key reference service. Among respondents selecting ESG, 83% rated POEM as more intense or complex. At 12.96 work RVUs, POEM's IWPUT of 0.093 appropriately exceeds ESG's 0.078. This relationship reflects the additional demands of creating and operating within a confined submucosal tunnel adjacent to mediastinal structures.

Consistency with comparison services: The wRVU recommendation is also supported by contemporary comparison codes. These relationships support the reasonableness of 12.96 work RVUs and an IWPUT of 0.093 for POEM. (See table below)

CPT Code	Long Desc	Glob	Work RVU	Intra Time	Adj Intra-Svc Time	Adj Total Time	Effic Adj	Time Source	Most Recent RUC Review	IWPUT	MPC	2024 Medicare Util

Survey Process: The ACG, AGA, ASGE and SAGES conducted a survey for the September 2026 RUC meeting including a 2,500 random sample of subsets of ACG, AGA, and ASGE society members plus a 1,000 random sample of SAGES members totaling 3,500 physicians. The ACG, AGA and ASGE obtained random sample of each society's advanced endoscopy special interest group: ACG performed a random sample of 500, AGA of 1,000, and ASGE of 1,000.

A total of 3,426 physicians received the survey after accounting for failed deliveries, resulting in 61 completed surveys. The surveying societies convened an expert panel that evaluated survey results and developed the following recommendations.

Recommendations

We recommend the current value wRVU of 12.96.

Pre- time package 3: We recommend a total of 46 minutes of pre-service evaluation time
Pre-service evaluation = 33 minutes, reflecting the package time.
Pre-service positioning = 3 minutes, reflecting the package time.

Pre-service scrub, dress, wait time = 10 minutes, reflecting the survey median which is less than the package time.

Post-time package 9A: We recommend 50 minutes of immediate post-service time, 0.5-99238 discharge visit, and 2-99213 office visits. During the October 2020 meeting, the RUC discussed the addition of 20 minutes of immediate post-service time to the initial value of 30 minutes of immediate post-service time, for a final recommendation of 50 minutes of immediate post-service time. Our societies explained that it is typical for the performing physician to assess the patient following the procedure; however, given CMS rules prohibiting an observation visit during hospital stays of less than 24 hours (as would be the case for CPT code 43497), listing such a visit would be improper. Therefore, we included this observation time in the immediate post-service time, which was accepted by the RUC.

Intra-service time: 90 minutes of intra-service time, reflecting the survey median.

Key reference services
Two reference services were selected more often than others, 43889 and 43775.

1. 43889– *Gastric restrictive procedure, transoral, endoscopic sleeve gastroplasty (ESG), including argon plasma coagulation, when performed)* (23/61)
2. 43775– *Laparoscopy, surgical, gastric restrictive procedure; longitudinal gastrectomy (ie, sleeve gastrectomy)* (21/61)

Supporting Rationale: Clinical expert review of the *Description of Intra-Service Work* from 2020 identified efficiencies that selectively reduce time spent on relatively lower-intensity activities, concentrating the remaining time on demanding endosurgical work. This change in the composition of the procedure explains why POEM is now a shorter-duration, higher-intensity service. Relevant excerpts from the 2020 intraservice work description appear in italics below along with explanations of the efficiencies gained in those areas. The intraservice work descriptions in this SOR have been updated to reflect current practice.

Esophageal clearance and initial examination
"Pay meticulous attention to suctioning and removing solid and liquid debris and secretions from the esophagus to allow complete visualization of the esophageal mucosa and anatomy."

Refined fasting and preparation protocols have reduced the frequency and volume of retained food in the esophagus at the time of POEM. Previously, time-consuming suction and extraction techniques were required to clear the esophagus before the endosurgical portion could begin. Assessment of anatomy and confirmation that the esophagus is adequately cleared remains necessary but is now performed more quickly due to less retained solid and liquid debris.

Orientation and identification of the entry site
Observe esophageal motility and mucosa and make final adjustments to planned endpoints and length of myotomy as appropriate. Instill water into the esophageal lumen to determine anterior vs posterior wall, because approach may differ in each case."

Physicians are now more adept at identifying esophageal landmarks by pattern recognition, allowing selection of the entry site without time-consuming maneuvers like water instillation. Judgment about the approach, trajectory, and endpoints remains essential, but obtaining the information needed for those decisions has become more efficient.

Cap placement and repeated scope insertion
"Once initial examination and landmarks are noted, and anterior vs posterior approach determined, remove the endoscope, and fit and securely fix the endoscope with a clear cap. Reinsert the cap-fitted endoscope into the esophagus…"

In the past, physicians often performed an initial endoscopic examination without a clear cap attached and then withdrew the endoscope to attach a clear cap before proceeding with the endosurgical portion. The examination without a cap was done to facilitate clearing retained food debris and for better visualization of the underlying anatomy. With more robust pre-procedure protocols, large amounts of retained food are less common. Enhanced preprocedure imaging techniques and pattern recognition have also improved intraprocedural anatomic assessment. Physicians now frequently perform the initial endoscopic examination with the cap in place and then proceed with the endosurgical portions directly, reducing the need for withdrawal and reinsertion of the endoscope.

Repeated device exchanges for injection and dissection

"…perform a submucosal injection with appropriate lifting solution using an injection needle. After an adequate fluid cushion is achieved, create a mucosal incision using the electrocautery dissection knife selected at the appropriate energy settings to create a submucosal entry tunnel for the endoscope."

The original technique required pausing dissection every few minutes to alternate between an injection needle and an electrosurgical knife. In each cycle, the knife was withdrawn, the needle advanced, injection performed to expand the submucosal tissue planes, and the knife reintroduced to continue dissection. Use of hybrid electrosurgical instruments capable of performing submucosal injection and delivering energy for cutting has decreased these low-intensity device exchanges concentrating the work required to maintain a safe dissection plane.

Repeated device exchanges for hemostasis

"It is essential to ensure meticulous hemostasis of submucosal vessels as encountered during creation of the tunnel, and, as needed, use alternative instruments, settings, and interventions."

Control of bleeding previously required frequent exchanges of the dissection knife for hemostatic forceps and then reinsertion of the dissection knife once it was safe to proceed. Recent advancements in electrosurgical instruments and endoscope optics, like narrow wavelength imaging, now permit earlier identification and prophylactic coagulation of submucosal vessels using the electrosurgical knife itself. Meticulous prophylactic hemostatic maneuvers are high-intensity but decrease the overall time spent by reducing low-intensity time-consuming device exchanges.

Persistent demands of submucosal tunneling, myotomy and closure

Reductions in time spent on relatively lower-intensity activities — clearing retained contents, performing repeated orientation maneuvers, withdrawing and reinserting the endoscope, and exchanging instruments — have improved procedural efficiency. The demanding work of submucosal dissection, hemostasis, preservation of mucosal integrity, myotomy, recognition and management of complications, and secure closure of the mucosal entry site remains. These demanding tasks now occupy a greater proportion of the remaining procedure time, supporting a higher average intraservice intensity (IWPUT). Together with the survey results and comparison-code relationships, this change in the composition of intraservice work supports maintaining the current value of 12.96 work RVUs.

See the table on the following page for a complete comparison list of 90-day global codes.

Comparison Table

90-day global; RVU 9-20; IS 90; RUC Review 2008-current

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 43497

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty GASTROENTEROLOGY How often? Commonly

Specialty GENERAL SURGERY How often? Sometimes

Specialty THORACIC SURGERY How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 4,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is the expected proportion of total eligible patients undergoing POEM over a one-year period, providing a realistic projection of utilization during recent adoption.

Specialty GASTROENTEROLOGY Frequency 3,000 Percentage 75.00 %

Specialty GENERAL SURGERY Frequency 600 Percentage 15.00 %

Specialty THORACIC SURGERY Frequency 160 Percentage 4.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,230
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate is based on reported utilization in RUC data base.

Specialty GASTROENTEROLOGY Frequency 959 Percentage 77.96 %

Specialty GENERAL SURGERY Frequency 172 Percentage 13.98 %

Specialty THORACIC SURGERY Frequency 49 Percentage 3.98 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 43497

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. n/a

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
43497	Lower esophageal myotomy, transoral (ie, peroral endoscopic myotomy [POEM])	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
43497	A 48-year-old male presents with progressive dysphagia for solids and liquids. Testing has confirmed achalasia. The patient is referred for per-oral endoscopic myotomy.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The ACG, AGA, ASGE, and SAGES convened an RVS expert panel of the surveying specialty societies to review practice expense data for code 43497. The panel included both sub-specialists and generalists from within the specialties of a variety of settings across the United States. They also received input from practice managers and clinical staff familiar with the direct expense inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   43279, Laparoscopy, surgical, esophagomyotomy (Heller type), with fundoplasty, when performed

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   We are not recommending more minutes than the PE Subcommittee standards

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

NA

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

NA

8. Please provide a brief description of the clinical staff work for the following:
   1. Pre-Service period:

Complete pre-service diagnostic and referral forms = 5 minutes Coordinate pre-surgery services (including test results) = 20 minutes Schedule space and equipment in facility = 8 minutes Provide pre-service education/obtain consent = 20 minutes Complete pre-procedure phone calls and prescription = 7 minutes

   2. Service period (includes pre, intra and post):

NA

   3. Post-service period:

Discharge day management = 6 minutes

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

NA

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

NA

MEDICAL SUPPLIES / INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

NA

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Pack, minimum multi-specialty visit - SA048; unit price = $2.11 paper, exam table = 7 feet gloves, non-sterile = 2 pair gown, patient = 1 item pillowcase = 1 item cover, thermometer probe = 1 item

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

NA

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

NA

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

NA

18. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

NA

ADDITIONAL INFORMATION

19. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

NA

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

NA

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NA

22. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

NA

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: QHP Inappropriately Included in Direct PE Inputs

September 2026

Vertical Electrodes (PE Only) – Tab 11

At the September 2025 RUC meeting, a RUC member requested review of CPT codes that have L052A *Audiologist* as clinical staff in the direct practice expense. Audiology has been able to independently bill Medicare since 2008; therefore, it should no longer be accounted for in the direct practice expense inputs as clinical staff. The direct practice expense should be examined to identify any other qualified health care professionals captured in the clinical labor staff to ensure that time is appropriately counted in the work component. In April 2026, the specialty societies indicated that these services would be reviewed for PE for the September 2026 meeting.

CPT code 92547 describes the recording and interpretation of eye movements using vertical electrodes as part of a comprehensive vestibular function evaluation. This procedure is performed in conjunction with other vestibular diagnostic tests, including video nystagmography (VNG), electronystagmography (ENG), caloric testing, rotational chair testing, or positional testing, when clinically indicated. The physician or other qualified health care professional reviews the recorded tracings in the context of the patient's history, symptoms, and findings from the comprehensive vestibular evaluation to establish or refine the diagnosis and guide subsequent patient management.

Since CPT code 92547 has a ZZZ global period, the Practice Expense (PE) Subcommittee referenced the base-code family with which it is typically reported (CPT codes 92537, 92540 and 92546) to determine whether the recommended inputs exceed those already included in the base codes. The add-on and base codes were reviewed at different meetings because they were identified through separate RAW screens. Code 92547 was flagged for review because its PE inputs include audiologist time, while base codes 92537 *Caloric vestibular test with recording, bilateral; bithermal (ie, one warm and one cool irrigation in each ear for a total of four irrigations)* and 92540 *Basic vestibular evaluation, includes spontaneous nystagmus test with eccentric gaze fixation nystagmus, with recording, positional nystagmus test, minimum of 4 positions, with recording, optokinetic nystagmus test, bidirectional foveal and peripheral stimulation, with recording, and oscillating tracking test, with recording* were identified in April 2026 through the "Codes Reported Together 75% or More" screen. Accordingly, they are undergoing a separate review, with action plans presented at the September 2026 meeting. Base code 92546 *Sinusoidal vertical axis rotational testing* will be deleted for CPT 2027 and replaced by two new codes, therefore was not included in the spreadsheet.

The PE Subcommittee reviewed the direct practice expense inputs for add-on code 92547 and acknowledged the removal of L052A *Audiologist* time from the PE inputs. There are no additional clinical activities recommended and no medical equipment inputs. The Subcommittee discussed the updated supplies and confirmed that no sanitizing wipes are necessary for the add-on service since they are present in the base code. The specialty societies explained the type of electrodes that are used and clarified that the addition of two SJ019 *electrode adhesive disk* supply inputs are typical, as self-adhesive electrode disks are applied to place the electrodes and tape is no longer used.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies for CPT code 92547.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Special Otorhinolaryngologic Services** **Vestibular Function Tests, With Recording (eg, ENG)**			
+92547	Use of vertical electrodes (List separately in addition to code for primary procedure) (Use 92547 in conjunction with 92540-92546) (For unlisted vestibular tests, use 92700) (Do not report 92547 in conjunction with 92270)	ZZZ	PE Only (2026 Work RVU = 0.00)

PRESENTER(S): Erin L. Miller, AuD., Deb Carlson, PhD., Marianna Spanaki, M.D.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
92547	Use of vertical electrodes (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92547	During vestibular testing (reported separately), a 67-year-old female with dizziness of uncertain etiology undergoes recording of vertical eye movement in addition to standard horizontal eye movement recording (reported separately). [Note: This is an add-on code. Only include the additional work of recording of vertical eye movement.]

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The AAA, ASHA and AAN convened an RVS expert panel of the surveying of specialty societies and clinical experts to review practice expense data for code 92547.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   Comparison was made to existing CPT code 92547. CPT codes 92537 and 92540 are included for reference as they are base codes to which this ZZZ code will be applied.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   N/A

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   There is a mixture of providers in the non-facility setting for CPT code 92547 – Neurology – 34.9%; Audiology – 27.1% and Otolaryngology – 25.2%.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    N/A

    b. Service period (includes pre, intra and post):

    N/A

    c. Post-service period:

    N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly*

related to physician work time or *Perform procedure/service---NOT directly related to physician work time:*

N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

    No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Equipment:
Note that equipment has been removed as this service will utilize the base service recording and related equipment.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

We estimate this service to be performed approximately 50,000 nationally We estimate this service to be performed approximately 20,000 times in the Medicare population in a one-year period.

26. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

Neurology / Audiology – CPT code 92652

27. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

CPT code 92547 describes the recording and interpretation of eye movements using vertical electrodes as part of a comprehensive vestibular function evaluation. The service measures vertical ocular responses generated by the vestibulo-ocular reflex (VOR) to assess the integrity of the peripheral and central vestibular pathways responsible for maintaining visual fixation and postural stability. Surface electrodes are placed above and below the eye to detect vertical corneo-retinal potentials while the patient performs standardized positional, gaze, or vestibular stimulation maneuvers. The recorded eye movements are analyzed to identify abnormalities such as vertical nystagmus or other ocular motor findings that may indicate vestibular or neurologic dysfunction. This procedure is performed in conjunction with other vestibular diagnostic tests, including video nystagmography (VNG), electronystagmography (ENG), caloric testing, rotational chair testing, or positional testing, when clinically indicated. The physician or other qualified health care professional reviews the recorded tracings in the context of the patient's history, symptoms, and findings from the comprehensive vestibular evaluation to establish or refine the diagnosis and guide subsequent patient management.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

Other Relativity Assessment Workgroup (RAW) Related Recommendations – October 2026

Open Neuroplasty -Arm or Leg and Internal Neurolysis (64708 and 64727)

In September 2026, the RAW reviewed action plans for CPT codes 64708 N*europlasty, major peripheral nerve, arm or leg, open; other than specified*, and 64727 I*nternal neurolysis, requiring use of operating microscope (List separately in addition to code for neuroplasty) (Neuroplasty includes external neurolysis)*, identified as codes with Medicare utilization of 10,000 or more that has increased by at least 100% from 2019 through 2024. CPT 64708 was last reviewed by the RUC in 2008, and CPT 64727 was Harvard-valued. Utilization of 64708 and 64727 have increased by 249% and 1,054% between 2019 and 2024, respectively.

The RUC Database shows that the majority of these services are being performed by ophthalmologists, and a large percentage are being performed in the physician office, despite having an "NA" in the Non-Facility NA Indicator field on the National Physician Fee Schedule Relative Value File, which indicates that this procedure is rarely or never performed in the non-facility setting. The significant increase in utilization by ophthalmologists is due to a commercial entity promoting the reporting of office-based cataract surgery using a code-set methodology, which happens to be built with these codes. AAO has no documentation of a payer approving this approach. The tables below contain data from the CMS Medicare Physician & Other Practitioners – by Provider and Service dataset and demonstrate the increase in ophthalmologists billing these codes.

	64708 Billing by Year					
	2019	**2020**	**2021**	**2022**	**2023**	**2024**
Ophthalmologists billing 64708	0	9	23	48	61	101
Total services billed	0	462	2,078	4,074	6,138	9,956

	64727 Billing by Year					
	2019	**2020**	**2021**	**2022**	**2023**	**2024**
Ophthalmologists billing 64727	1	9	25	50	63	102
Total services billed	37	495	1,956	4,297	6,393	10,313

AAO is in the process of educating members on how to appropriately bill cataract surgery using the appropriate CPT codes, not including these codes unless directed by a payer. Such instructions have been placed on the AAO website, and the specialty society has shared their concerns with the commercial entity promoting the codes. They have also made outreach to CMS flagging this reporting trend.

The RUC would like to notify CMS's program integrity office about possible misreporting of these services. Ophthalmologists should not be reporting CPT codes 64708 and 64727 and NCCI edits should be created to indicate that these services should not be reported with cataract surgery.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: QHP Inappropriately Included in Direct PE Inputs

September 2026

Laryngeal Function Studies – Tab 14A

At the September 2025 RUC meeting, a RUC member requested review of CPT codes that have L052A *Audiologist* as clinical staff in the direct practice expense. Audiology has been able to independently bill Medicare since 2008 and therefore should no longer be accounted for in the direct practice expense inputs as clinical staff. At the same time as this review, the direct practice expense should be examined to identify any other qualified health care professionals captured in the clinical labor staff to ensure that time is appropriately counted in the work component. The Relativity Assessment Workgroup identified CPT code 92520 as including QHP L055A *Speech Pathologist* as clinical labor staff in the direct practice expense inputs. At the April 2026 meeting, the specialty societies indicated that these services would be surveyed for the September 2026 meeting.

Compelling Evidence
The specialty societies presented compelling evidence based on incorrect assumptions made in the previous valuation of the service by either the RUC or CMS. According to Medicare utilization data, the majority of claims for this service are billed by speech-language pathologists (SLPs), who account for 69.8 percent of utilization, followed by otolaryngologists at 23.2 percent. The current intra-service time of 10.73 minutes reflects only the physician's time spent interpreting the results when the procedure is performed by an SLP and does not include the professional work performed by the SLP. Historically, SLP time associated with furnishing this service has been captured as clinical labor within the Practice Expense (PE) methodology.

However, because speech-language pathologists are authorized to bill Medicare independently for these services, their time and professional work should no longer be accounted for as clinical labor under PE. Instead, the professional work performed by SLPs in furnishing this service should be appropriately captured and incorporated into the professional work component and removed from the practice expense component. Currently, SLPs perform not only the procedure itself but also the interpretation of findings, preparation of the report, and coordination of appropriate referrals. Historically, these professional activities were attributed to the physician work component and did not recognize or account for the work performed by SLPs. The valuation should appropriately acknowledge the full scope of professional services now provided by SLPs. **The RUC HCPAC Review Board accepted compelling evidence based on incorrect assumptions for CPT code 92520.**

92520 ***Laryngeal function studies (ie, aerodynamic testing and acoustic testing)***
The RUC HCPAC reviewed the survey results from 40 speech-language pathologists and recommends a work RVU of 1.25 based on the survey 25th percentile, which maintains relativity within the MFS. The RUC HCPAC recommends 7 minutes of pre-service evaluation time, 40 minutes intra-service time, and 10 minutes immediate post-service time, totaling 57 minutes. The HCPAC Review Board adjusted the pre-time to reflect multiple procedures performed on the same day by the same SLP. The 7 minutes of pre-time that is specific to this service, does not overlap with other services, and is only for device calibration.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Laryngeal function assessment plays an important role in comprehensive evaluation and treatment of patients with voice and upper airway disorders. This procedure consists of both aerodynamic and acoustic testing. Aerodynamic assessment analysis measures average glottal airflow rate, air pressures, and vocal sound pressure levels, etc. Acoustic testing is performed through a series of core tasks and measurements for acoustic analysis such as cepstral peak prominence (CPP), mean vocal frequency, and sound pressure levels, etc.

To support the recommended work RVU, the RUC HCPAC compared the surveyed code to the top key reference service codes 92611 *Motion fluoroscopic evaluation of swallowing function by cine or video recording* (work RVU = 1.31, 29.25 minutes intra-service, and 46.25 minutes total time). The surveyed code work RVU is appropriately lower than the key reference service given the lower intensity/completely to perform, albeit the higher intra-service and total time.

For additional support, the RUC HCPAC referenced HCPAC MPC code 92604 *Diagnostic analysis of cochlear implant, age 7 years or older; subsequent reprogramming* (work RVU = 1.25, 50 minutes intra-service, and 65 minutes total time). The surveyed code has similar total time when compared to the MPC code and therefore should be valued similarly. **The RUC HCPAC recommends a work RVU of 1.25 for CPT code 92520.**

Practice Expense
The Practice Expense (PE) Subcommittee concurred that there is compelling evidence to support an increase over the aggregate current cost for supplies and equipment based on changes in technique/technology. The increase over current cost reflects significant changes in clinical practice and the resources required to perform laryngeal function studies since the practice expense inputs for CPT code 92520 were last reviewed more than 20 years ago in 2005.

The Practice Expense Subcommittee reviewed the direct practice expense inputs and acknowledged the removal of L055A *Speech Pathologist* from the PE inputs. The Subcommittee discussed the updated supplies and equipment and confirmed that SD182 *mask, CPR (RespAide)* is the most accurate input as this is what is typically used for phonatory aerodynamic testing which requires connecting a sealed CPR mask to the cardboard tube to the equipment. The CPR mask is used to create a hermetic seal to prevent any air leaks from the nose or mouth. The Subcommittee also accepted a new equipment item, *System, acoustic assessment (Visipitch)* and clarified that this is not a mobile piece of equipment rather akin to the ophthalmology screening lane.

The Subcommittee made modifications to the equipment time, adding 10 minutes to reflect the 7 minutes of pre-service time required for calibration of equipment which includes turning on and allowing manufacturer recommended warm-up time for pneumotach, calibration of the phonatory aerodynamic system, and directly inputting data acquisition parameters for acoustic and/or speech data signals; and 3 minutes of post-service time required for cleaning, disinfecting the equipment, and report printing. Thus, the Other Formula to calculate minute equipment is in use, encompasses the duration of QHP time of 50 minutes: total intra service time of 40 minutes, plus 7 minutes for pre-service activities and 3 minutes post-service time for cleaning. **The RUC HCPAC recommends the direct practice expense inputs as modified by the PE Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Special Otorhinolaryngologic Services** *Diagnostic or treatment procedures that are reported as evaluation and management services (eg, otoscopy, anterior rhinoscopy, tuning fork test, removal of non-impacted cerumen) are not reported separately.* *Special otorhinolaryngologic services are those diagnostic and treatment services not included in an evaluation and management service, including office or other outpatient services (99202-99215) or office or other outpatient consultations (99242, 99243, 99244, 99245).* *Codes 92507, 92508, 92520, 92521, 92522, 92523, 92524, and 92526 are used to report evaluation and treatment of speech sound production, receptive language, and expressive language abilities, voice and resonance production, speech fluency, and swallowing. Evaluations may include examination of speech sound production, articulatory movements of oral musculature, oral-pharyngeal swallowing function, qualitative analysis of voice and resonance, and measures of frequency, type, and duration of stuttering. Evaluations may also include the patient's ability to understand the meaning and intent of written and verbal expressions, as well as the appropriate formulation and utterance of expressive thought.*			
92520	Laryngeal function studies (ie, aerodynamic testing and acoustic testing) (For performance of a single test, use modifier 52) (To report flexible fiberoptic laryngeal evaluation of swallowing and laryngeal sensory testing, see 92611-92617) (To report other testing of laryngeal function (eg, electroglottography), use 92700)	XXX	1.25 (2026 Work RVU = 0.73)

CPT Descriptor: Laryngeal function studies (ie, aerodynamic testing and acoustic testing)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old female with persistent dysphonia and bilateral vocal fold lesions undergoes aerodynamic and acoustic evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The qualified health care professional (QHP) reviews the patient's referral information, medical records, results of physical imaging, vocal habits, environmental and behavioral changes, and previous vocal function assessment and treatment records. The QHP configures the software and associated hardware for both procedures. The QHP assembles the hardware for the aerodynamic testing including, pneumotachograph, and intraoral tube for aerodynamic analysis. Following Phonatory Aerodynamic System (PAS) assembly, the internal heating element is activated to prevent condensation build up during the procedure. Once the desired temperature is achieved, zero-flow and dynamic volume calibration is performed and verified for volume and flow rate by the QHP. Next, the QHP prepares the acoustic analysis equipment with microphone set-up for specified distance and angle then obtains and records ambient noise via sound pressure level. The QHP prepares the remaining testing materials and supplies to be utilized during the evaluation..

Description of Intra-Service Work: The patient is taken to an acoustically appropriate room where the patient is placed in an optimal position for testing and data collection. The QHP outlines the tasks the patient is expected to perform during the procedure, provides clear instructions, and ensures that the patient can carry out these tasks appropriately throughout the evaluation.

The QHP calibrates the aerodynamic equipment specifically for the patient, with calibration performed immediately prior to the procedure while the patient is present, to obtain accurate, patient-specific measurements. The QHP proceeds with aerodynamic assessment, securely positioning a face mask over the nose and mouth (ensuring no leakage) and intraoral tube placed between the lips without obstruction connected to the manometry system and computer hardware . The patient is provided with instructions and completes a series of standardized aerodynamic assessments to measure airflow and pressure during breathing and vocal tasks. Objective aerodynamic testing modules are performed with maximum inhalation and exhalation, sustained phonation and syllable repetition, and phonation pressure levels to measure vital capacity, average glottal airflow rate, peak airflow, vocal efficiency, phonation threshold pressure, and average subglottal air pressure. The QHP then instructs the patient to remove the intraoral tube and repositions the mask to reestablish the airtight seal. The patient completes multiple trials of standardized stimuli to measure aerodynamic power, efficiency, and glottal/subglottal resistance. Stimulability testing with variations in pitch, effort, and/or loudness are performed based on preliminary analysis.

The QHP then proceeds with the acoustic assessment by repositioning the patient for optimal voice output. The microphone is placed at a precisely measured distance and angle from the mouth, and the sound pressure level of the

acoustic analysis equipment is configured and verified. The patient produces multiple trials of both maximum and comfortable sustained phonation followed by connected speech with standardized/validated series of sentences, reading passages, and spontaneous speech sample recordings. Speech sound analysis including resonance is further obtained using spectrograms. The QHP completes the acoustic and resonance assessment and obtains data related to fundamental frequency, intensity, cepstral peak prominence, jitter/shimmer, formants, and harmonic frequency distribution. Further stimulability testing is conducted to assess appropriateness for intervention and to refine a plan of care.

Real-time analysis of acoustic and aerodynamic signals is performed concurrently throughout the examination to ensure that each trial represents an accurate and reliable sample, thereby minimizing the risk of skewed or invalid results.
The QHP analyzes the data, compares findings to normative data, and documents the findings. Preliminary data and findings are reviewed with the patient. Interpretation and report of the examination is completed.

Description of Post-Service Work: Interpretation and integration of findings with results of behavioral assessment and imaging is performed. Information regarding findings, treatment recommendations, and prognosis is provided to the patient and/or caregiver and the report is signed off. Equipment and material used for procedure were cleaned and disinfected. Referrals are made for additional assessments and/or treatments as appropriate. Final findings and recommendations are communicated to referral source and care team members.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	7%	7%	40%	33%	13%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	53%	27%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	20%	33%	47%
Physical effort required	20%	47%	33%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	26%	27%	47%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	43%	28%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	43%	43%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	14%	86%
Physical effort required	14%	57%	29%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	28%	14%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
In February 2026, the Relativity Assessment Workgroup (RAW) identified 92520 as a part of 26 services with QHP included in the clinical staff direct practice expense (PE) inputs. It was noted that provider types that can independently bill Medicare cannot be included under direct practice expense. CPT code 92520 includes speech-language pathology time under clinical staff direct PE input. However, speech-language pathologists (SLPs) can now independently bill for Medicare services. After carefully reviewing the clinical practice patterns, ASHA presented the action plan to survey the code. This action plan was approved during the April 2026 AMA RUC Meeting.

CPT code 92520 describes laryngeal function studies including aerodynamic testing and acoustic testing. Laryngeal function assessment plays an important role in comprehensive evaluation and treatment of patients with voice and upper airway disorders. This procedure consists of both aerodynamic and acoustic testing. Aerodynamic assessment analysis measures average glottal airflow rate, air pressures, and vocal sound pressure levels etc. Acoustic testing is performed through a series of core tasks and measurements for acoustic analysis such as cepstral peak prominence (CPP), mean vocal frequency, and sound pressure levels, etc.

Expert Panel Recommendations
An expert panel of speech-language pathologists was convened to review the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

The specialty recommends the median work RVUs of 1.37, pre-service time of 10 minutes, intra-service time of 40 minutes, and post-service time of 10 minutes for 60 minutes of total time.

Survey Sample
The survey data and recommendations are based upon a random sample of ASHA membership. A total of 7933 surveys were sent to a random sample of ASHA's speech-language pathology members to survey laryngeal function studies. A total of **40** completed responses were received for this specific code.

Compelling Evidence
After comprehensive review of current practice patterns, the expert panel believes there is compelling evidence for an increase in the current **work RVU from 0.73 to 1.37 and intra-service time from 10 minutes to 40 minutes** for the following reasons:

1. ***Evidence that incorrect assumptions were made in the previous valuation of the service by either the RUC or CMS.***

According to Medicare utilization data, the majority of claims for this service are billed by speech-language pathologists (SLPs), who account for 69.8% of utilization, followed by otolaryngologists at 23.2%.

The current intra-service time of 11 minutes (adjusted to 10.73 minutes) reflects only the physician's time spent interpreting the results when the procedure is performed by an SLP and does not include the professional work performed by the SLP. Historically, SLP time associated with furnishing this service has been captured as clinical labor within the Practice Expense (PE) methodology.

However, because speech-language pathologists are now authorized to bill Medicare independently for these services, their time and professional work should no longer be accounted for as clinical labor under Practice Expense. Instead, the professional work performed by SLPs in furnishing this service should be appropriately captured and incorporated into the professional work component. Currently, SLPs perform not only the procedure itself but also the interpretation of findings, preparation of the report, and coordination of appropriate referrals. Historically, these professional activities were attributed to the physician work component and did not recognize or account for the work performed by SLPs. The proposed valuation appropriately acknowledges the full scope of professional services now provided by SLPs.

Additionally, the CPT code 92520, which is currently used to capture the services mentioned above, needs an updated clinical vignette and a detailed description of the procedure. The historic description of procedure likely skewed perceptions of provider involvement and failed to convey the actual cognitive complexity, clinical judgment, and interpretive workload required.

2. ***Changes in physician work due to advancement in technique, knowledge/technology, and physician time***

There are changes to clinical practice patterns and how laryngeal function studies have been performed. Advances in voice research and clinical practice have shifted standard assessment from isolated sustained phonation toward analysis of connected speech. Sustained phonation provides a controlled, steady-state signal that reflects underlying vocal fold biology; however, it does not engage the complex neural and muscular coordination required for functional spoken communication. Incorporating connected speech analysis extends beyond vocal fold physiology to capture the true functional impact of voice disorders. It reflects motor speech coordination, higher-order cortical planning, rapid modulation of airflow, and the ability to differentiate organic lesions from functional or neurologic disorders.
While sustained phonation yields a uniform acoustic signal, connected speech introduces substantial acoustic, phonetic, and linguistic variability. These complexities require additional manual and computational processing to segment, filter, and evaluate the signal, resulting in increased work intensity, cognitive load, and analysis time.

Additionally, the current physician time accounts only for interpretation and report writing and does not include the time required to perform the procedure, as described above. The time SLPs spend performing the procedure is currently captured as clinical labor within the practice expense component. Therefore, the proposed changes also reflect a shift in how the work associated with performing the procedure is recognized and captured as physician/QHP work.

Time

The expert panel agreed with the **median intra-service time of 40 minutes**, **pre-service time of 10 minutes and post-service times of 10 minutes**.

Pre- and Post- Service Times: These times are adequate to complete pre- and post-service activities and align with the existing pre- and post-service times for this service. Even though the survey indicated 16 minutes of post service time, the expert panel believes 10 minutes is adequate to complete the post-service-related work. This is particularly appropriate when considering that a portion of the SLPs (L055A) work is currently recognized within the Practice Expense (PE) component of the valuation. 10 minutes of pre-service time is required for the QHP to review medical and vocal history, imaging and assessment records, and prepare and calibrate the necessary equipment, materials, and software for the evaluation. 10 minutes of post-service time is required for the QHP to further analyze the data, communicate findings, recommendations, prognosis, and any necessary referrals to the patient, caregiver, and referral source(s), clean and disinfect the equipment.

The current valuation includes 10 minutes of pre- and post- service times within the work component, which reflects the physician work time related primarily to interpretation and report writing. In addition, 3 minutes of Qualified Health Professional (QHP) pre- and post- service time performed by the SLP are captured under the Practice Expense (PE) component. Therefore, the total pre- and post- service time associated with this service are reflective of both the work-related pre-service activities and the QHP pre-service activities recognized within PE.

Intra-Service Time: Similarly, the recommended intra-service time of 40 minutes is adequate to complete the intra-Service work of this procedure. The current valuation includes 11 (adjusted 10.73) minutes of intra-service time within the work component. In addition, 29 minutes of QHP intra-service time performed by the SLP is captured under the PE component. Therefore, currently, the total intra-service time associated with this service is 40 minutes, reflecting both the work-related intra-service activities and the QHP intra-service activities recognized within PE. Therefore, the survey-reported median intra-service time is consistent with the current valuation and supports the recommended intra-service time recommendation. 40-minutes of intra-service time is required to re-calibrate the equipment for the individual patient after initial equipment calibration (e.g., mouth-to-microphone calibration after procedure begins), complete the procedure to capture both objective aerodynamic measures testing to collect vital capacity, average glottal airflow rate, peak airflow, vocal efficiency, phonation threshold pressure, and average subglottal air pressure; and then to repositioned the patient to be seated with the microphone to gather acoustic measures to gather data related to fundamental frequency, intensity, cepstral peak prominence, jitter/shimmer and harmonic frequency distribution. The QHP needs to be actively and constantly engaged during this continuous and dynamic assessment providing directions to the patient, adjusting highly specialized equipment for the individual patient and based on the results, performing the assessment, and gathering data.

Work RVU

The expert panel recommends the **median work RVU of 1.37** and affirmed that it is appropriate, accurately capturing the clinical intensity and professional effort involved in laryngeal function studies, especially given that the SLP work which was historically captured under PE will now be captured under the work component. This valuation also supports appropriate rank order within similar codes with similar intra-service times.

In addition, the recommended median work RVU is supported by clinical complexity, cognitive workload, and high level of professional skill, use of highly specialized equipment, and engagement required to perform laryngeal function studies. Laryngeal function studies require continuous assessment and adjustment based on the acoustic and aerodynamic data received, and adjust the equipment as needed.

The current work RVU of 0.73 reflects only the physician work associated with interpretation of the test results and report preparation; and does not capture the work required to actively perform the procedure. It does not recognize or account for the professional work performed by speech-language pathologists (SLPs), who now perform not only the procedure itself but also the interpretation of findings, report writing, patient counseling, and coordination of appropriate referrals. As a result, the current valuation understates the full scope of professional work required to furnish this service.

Additionally, the limited number of respondents is reflective of the highly specialized nature of this area of practice. Only 0.2% of ASHA's over 200,000 speech language pathologists are able to secure a job in this area of practice. A complex understanding of equipment, calibration, test administration, and results interpretation significantly exceeds the typical standard training of speech pathologists. Specifically, qualified providers who administer this procedure must directly provide hands on calibration immediately prior to the procedure, they must constantly monitor the patient, and data acquisition throughout the entire procedure. The industry specific requirements to meet standards for this procedure require the QHP to constantly and directly monitor appropriate placement of the equipment (ensuring mask seal, intraoral pressure monitor, pneumotach, microphone to mouth distance consistency, task elicitation, task production, task

consistency) for the duration of the testing procedure to ensure valid data acquisition for interpretation. The QHP must provide direct and constant prompts to the patient using verbal, visual, and tactile means to ensure adequate acoustic and aerodynamic samples are obtained. This procedure requires real-time clinician monitoring and immediate interpretation of results to ensure the data collected is valid and reliable for each patient tested. Therefore, we believe, recommended work RVU of 1.37 appropriately and accurately capture the clinical intensity and professional effort involved in laryngeal function studies.

The expert panel also reviewed the 25th percentile work RVU of 1.25 and believes that this undervalues a procedure with 40 minutes of intra-service work and would create rank order anomaly, not only within the speech-language pathology family of codes, but also within the entire CPT code set. The work RVUs of the key reference service (KRS) codes further support this conclusion- the first KRS, with 30 (adjusted 29.25) minutes of intra-service time is valued at 1.31 RVUs and second KRS, with 25 minutes of intra-service time is valued at 1.60 RVUs.

Comparison to Other Codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for CPT code 92520.

CPT Code	Descriptor	RVW	IWPUT	Total Time	Adjus Total Time	Pre	Intra	Adjus Intra	Post	Note
92549	Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (ie, eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report; with motor control test (MCT) and adaptation test (ADT)	0.85	0.0195	42	41.33	5	27	26.33	10

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. We anticipate that CPT code 92520 will typically be billed in conjunction with 92524 (Behavioral and qualitative analysis of voice and resonance), 31579 (Laryngoscopy, flexible or rigid telescopic, with stroboscopy), and 92507 (Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual), which is expected to be replaced by new codes 92X8X and 92X9X in 2027. The specific combination of services will depend on the patient's clinical presentation and the complexity of the disorder.

   For patients presenting with voice, resonance, and upper airway disorders, the initial assessment typically includes a behavioral and qualitative analysis of voice and resonance, reported under 92524. Findings from this assessment help guide the clinician in determining whether additional evaluation is warranted. When indicated, further assessment may include laryngoscopy with stroboscopy, reported under 31579, as well as laryngeal function studies, reported under 92520. Together, these diagnostic procedures provide complementary information regarding the patient's voice, resonance, laryngeal function, and upper airway function. Following completion of the appropriate evaluations, the clinician may proceed with treatment of the identified voice and/or upper airway disorder, currently reported under 92507 and anticipated to be reported under new codes 92X8X and 92X9X beginning in 2027. Collectively, this group of services enables the clinician to comprehensively characterize the disorder, establish an appropriate diagnosis, and develop an individualized treatment plan.

   Please see the CPT code information below (Code, Global Period, RVW, Pre, Intra, Post times, Billed together data):

CPT Code	Global Period	WRVU	Pre	Intra	Post
92524	XXX	1.92	5	60	10 min
31579	XXX	1.83	14	9.75	10 min
92507 (92X8X/92X9X)	XXX	1.30	5	50	5 min

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92520

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-Language Pathology How often? Commonly

Specialty Otolaryngology How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 24,063
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by three.

Specialty Speech-Language Pathology Frequency 16,795 Percentage 69.79 %

Specialty Otolaryngology Frequency 5,535 Percentage 23.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8021
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. These estimates are based on 2024 Medicare utilization data for CPT codes 92520 from the AMA RUC database.

Specialty Speech-Language Pathology Frequency 5,614 Percentage 69.99 %

Specialty Otolaryngology Frequency 1,845 Percentage 23.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
Hearing and speech services

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 92520

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 92520
SPECIALTY SOCIETY(IES): American Speech-Language-Hearing Association
PRESENTER(S): Luis F. Riquelme, PhD, Duane Trahan, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 24-26, 2026

CPT Code	Long Descriptor	Global Period
92520	Laryngeal function studies (ie, aerodynamic testing and acoustic testing)	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92520	A 48-year-old female with persistent dysphonia and bilateral vocal fold lesions undergoes aerodynamic and acoustic evaluation.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American Speech-Language-Hearing Association (ASHA) convened an expert panel of speech-language pathologists (SLPs) who deliver services described under the CPT code being reviewed from different settings (e.g., private practice, hospital outpatient clinics), across different age groups, and geographic regions. This expert panel of clinicians provided the direct practice inputs related to laryngeal function studies.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The code 92520 being reviewed is an existing code. Therefore, the reference code is the existing code 92520 used for PE input recommendations.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   This service is not typically reported with E/M services.

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   Speech-language pathologists provide this service 69.8% of the time in the non-facility setting.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

CPT CODE(S): 92520
SPECIALTY SOCIETY(IES): American Speech-Language-Hearing Association
PRESENTER(S): Luis F. Riquelme, PhD, Duane Trahan, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Compelling Evidence:
The increase over the aggregated current cost reflects significant changes in clinical practice and the resources required to perform laryngeal function studies since the practice expense inputs for CPT code 92520 were last reviewed more than 20 years ago, in 2005. The current aggregated cost is based on outdated practice expense inputs that no longer adequately reflect the equipment, supplies, and technology necessary to provide these services under contemporary clinical practice.

Since 2005, advances in research and technology have resulted in more sophisticated and specialized equipment for aerodynamic and acoustic testing, allowing clinicians to perform more precise and comprehensive assessments of laryngeal function. These advancements have increased the resources necessary to appropriately furnish the service compared with those reflected in the existing practice expense inputs.

In addition, infection prevention and control standards have evolved substantially, particularly since the COVID-19 pandemic. Laryngeal function studies involve close contact with the patient's airway and potential exposure to respiratory secretions, requiring enhanced infection control measures and greater use of disposable and infection prevention supplies. These resources were not fully reflected in the practice expense inputs established in 2005.

Please see the table listed below under question 26 (additional information) for further details and rationale for requested supplies and equipment.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

N/A

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

New Supply: Cardboard Tube– The set-up and supplies for phonatory aerodynamic testing requires connecting a sealed CPR mask to the cardboard tube to the equipment. The cardboard tube is to allow for hub hookup from the coupler and airflow head (both sterilized equipment) to the 1.0-liter calibration syringe as well as standardization of distance for flow rate to the equipment. A paid invoice is attached.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

New Equipment – Acoustic Assessment System (Visipitch) **Formula**- Other Formula for the duration of QHP time of 50 minutes. This equipment is required for the duration of QHP time: total intra service time of 40 minutes, plus 7 minutes for all pre-time activities, including first calibration, and 3 minutes post-service time for cleaning. Visipitch is an acoustic and biofeedback station. Acoustic assessment equipment is utilized to analyze various components to objectively measure vocal stability, range, and quality including: real-time pitch tracking (fundamental frequency, intensity, amplitude), vocal perturbation analysis (cycle-to-cycle variability in the vocal signal to quantify hoarseness, roughness); noise and spectral metrics (harmonics-to-noise ratio providing an objective metric for breathiness). A paid invoice is submitted as a part of this SOR.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Useful Life Estimate of the new equipment (Acoustic assessment system (Visipitch) is **5 years**.

22. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

CPT Code 92520

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Formula- **Other formula** (The formula used is for **QHP total intra-service time of 40 minutes, plus 7 minutes for all pre-time activities and 3 minutes post-service time** for cleaning. Equipment is not available for other use for the duration of this time)

EQ287- System, speech analysis 50 minutes
EQ286- System, phonatory function testing–50 minutes
ED032- Printer, laser, paper–8 minutes
EF027 table, instrument, mobile–50 minutes
New System, acoustic assessment (Visipitch) –50 minutes

ADDITIONAL INFORMATION

23. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Please see the tables below for detailed rationale of requested supplies and equipment.

ROW	CODE	92520	Current	REC	Rationale
CLINICAL ACTIVITIES					
22	**CA008**	Perform regulatory mandated quality assurance activity (pre-service)	3	0	**REMOVE:** The speech-language pathologist (SLP) time will be removed from direct PE as SLPs can now bill Medicare independently. The work of SLP will now move under professional work.
52	**CA021**	Perform procedure/service--NOT directly related to physician work time	29	0	**REMOVE:** The SLP time will be removed from direct PE as SLPs can now bill Medicare independently. The work of SLP will now move under professional work.
85	**CA038**	Coordinate post-procedure services	3	0	**REMOVE:** The SLP time will be removed from direct PE as SLPs can now bill Medicare independently. The work of SLP will now move under professional work.
MEDICAL SUPPLIES					
102	**SB022**	gloves, non-sterile	1	2	**INCREASE**: Required when QHP is physically touching the patient's face and oral cavity during treatment to maintain hygiene around oral cavity and for equipment cleaning. One set of gloves required for equipment cleaning prior to patient use, one set of gloves required with patient use.
103	**SD099**	mouthpiece, respiratory	1	1	**RETAIN:** One mouthpiece is used per patient. The mouthpiece is inserted into their oral cavity for measurement purposes.

104	**SD130**	tubing, latex	1	1	**RETAIN:** One intraoral tube is placed between the patient's lips in the oral cavity. Due to the patient inserting the intraoral tube into their oral cavity, these are single-use, disposable pieces of tubing.
105	**SG051**	gauze, non-sterile 4in x 4in	1	1	**RETAIN:** Used for lingual manipulation during assessment and clean any secretions.
106	**SJ053**	swab-pad, alcohol	2	2	**RETAIN:** Used to disinfect the microphone, mask, and/or the mic-to-mouth measuring device (which sits on the patient's chin during the procedure)
107	**SK059**	paper, recording (per sheet)	8	8	**RETAIN:** Used to print results and provide visual prompts for the elicitation of the acoustic task protocol.
108	**SM012**	disinfectant spray (Transeptic)	30ml	0	**REMOVE:** This product is no longer required. Sanitized cloth wipes (listed below) will be used for disinfecting purposes.
109	**SD182**	CPR Mask (Respaide)	0	1	**ADD**: The set-up and supplies for phonatory aerodynamic testing requires connecting a sealed CPR mask to the cardboard tube to the equipment. CPR mask is used to create a hermetic seal to prevent any air leaks from the nose or mouth.
110	**SM022**	sanitizing cloth-wipe (surface, instruments, equipment)	0	2	**ADD**: required to sanitize and clean hard surfaces and equipment before and after treatment services. Multiple wipes are needed as disinfecting phonatory aerodynamic testing equipment requires strict infection control because multiple components directly contact the patient's mucous membranes, saliva, and breath as there are both disposable/single-use (High-risk) items and reusable hardware and the workstation (Low-risk).
111	**SK018**	Cup, drinking	0	1	**ADD**: required to serve/drink water to prevent spasmodic episodes during sustained phonation tasks.
112	**New**	Cardboard Tube	0	1	**ADD**: The set-up and supplies for phonatory aerodynamic testing requires connecting a sealed CPR mask to the cardboard tube to the equipment. The cardboard tube is to allow for hub hookup from the coupler and airflow head (both sterilized equipment) to the 1.0-liter calibration syringe as well as standardization of distance for flow rate to the equipment.
EQUIPMENT					

120	**EQ287**	system, speech analysis	29 min	50 min	**RETAIN:** Equipment needed for the duration of QHP total intra-service time to complete connected speech sound and voice analysis. Additionally, pre-service time is required for calibration of equipment which includes directly inputting data acquisition parameters for acoustic and/or speech data signals; post-service time required for cleaning, disinfecting the equipment, and report printing.
121	**EQ286**	system, phonatory function testing	29 min	50 min	**RETAIN:** Equipment needed for the duration of QHP total intra-service time to assess the voice quality, pitch, and by analyzing patient speech during conversation and reading tasks. Equipment is used to identify acoustic and aerodynamic parameters of voice/phonation including fundamental frequency, voice quality, and voice stability. Patient specific recalibration is completed during intra-service time. Additionally, pre-service time is required for calibration of equipment which includes turning on and allowing manufacturer recommended 15 minute warm-up time for pneumotach, calibration of the phonatory aerodynamic system; post-service time required for cleaning, disinfecting the equipment, and report printing.
122	**ED032**	printer, laser, paper	8 min	8 min	**RETAIN:** equipment is needed for 8 minutes to print the test results.
123	**ED021**	computer, desktop, w-monitor	29 min	0	**Remove:** Standalone computer is no longer required. A dedicated computer system with software systems is available with testing equipment.
124	**EF027**	Table, instrument, mobile	0	50 mins	**ADD**: equipment is needed for the duration of QHP total intra-service time. This equipment will be used to place assessment material and serve as a surface to complete therapeutic exercises to assess stimulability.
125	**New**	System, acoustic assessment (Visipitch)	0	50 min	**ADD**: equipment is needed for the duration of QHP total intra-service time. Visipitch is an acoustic and biofeedback station. Acoustic Assessment equipment is utilized to analyze various components to objectively measure vocal stability, range, and quality including: real-time pitch tracking (fundamental frequency, intensity, amplitude), vocal perturbation analysis (cycle-to-cycle variability in the vocal signal to quantify hoarseness, roughness); noise and spectral metrics (harmonics-to-noise ratio providing an objective metric for breathiness). Additionally, pre-service time is required for calibration of equipment which includes turning on and allowing manufacturer

					recommended warm-up for pneumotach, calibration of the phonatory aerodynamic system; post-service time required for cleaning, disinfecting the equipment, and report printing.

PE-ONLY CODES ADDITIONAL INFORMATION

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

10 minutes added to equipment time- 7 minutes of pre-service time is required for calibration of equipment which includes turning on and allowing manufacturer recommended warm-up time for pneumotach, calibration of the phonatory aerodynamic system, and directly inputting data acquisition parameters for acoustic and/or speech data signals; 3 minutes of post-service time required for cleaning, disinfecting the equipment, and report printing.

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: QHP Inappropriately Included in Direct PE Inputs

September 2026

Stenger Tests – Tab 14B

At the September 2025 RUC meeting, a RUC member requested review of CPT codes that have L052A Audiologist as clinical staff in the direct practice expense. Audiology has been able to independently bill Medicare since 2008, therefore, should no longer be accounted for in the direct practice expense inputs as clinical staff. At the same time as this review, the direct practice expense should be examined to identify any other qualified health care professionals captured in the clinical labor staff to ensure that time is appropriately counted in the work component. At the April 2026 meeting, the specialty societies indicated that these services be surveyed for the September 2026 meeting.

Compelling Evidence
The specialty societies presented compelling evidence based on incorrect assumptions made in the previous valuation of the service by either the RUC or CMS. According to Medicare utilization data, the majority of claims for this service are reported by audiologists, who account for majority of utilization, followed by otolaryngologists. Historically, audiologist time associated with furnishing this service was captured as clinical labor within the Practice Expense (PE) methodology.

However, because audiologists are authorized to bill Medicare independently for these services, their time and professional work should no longer be accounted for as clinical labor under PE. Instead, the professional work performed by audiologists in furnishing this service should be appropriately captured and incorporated into the professional work component and removed from the practice expense component. Currently, audiologists perform not only the procedure itself but also the interpretation of findings, preparation of the report, and coordination of appropriate referrals. Historically, these professional activities were attributed to the physician work component and did not recognize or account for the work performed by audiologists. The valuation should appropriately acknowledge the full scope of professional services now provided by audiologists. **The RUC HCPAC Review Board accepted compelling evidence based on incorrect assumptions for CPT codes 92565 and 92577.**

92565 ***Stenger test, pure tone***
The RUC HCPAC reviewed the survey results from 74 audiologists and recommends a work RVU of 0.29 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC HCPAC recommends 3 minutes of pre-service evaluation time, 6 minutes intra-service time, and 3 minutes immediate post-service time, totaling 12 minutes. The professional organizations had adjusted the post-service time to reflect multiple procedures performed on the same day, by the same provider to the same patient.

This service describes the pure tone Stenger test, a behavioral assessment used to identify whether a unilateral or significantly asymmetric hearing loss includes a non-organic component. It is commonly performed when the reliability of pure tone threshold testing is in doubt. The Stenger test operates on the principle that when two tones of the same frequency are simultaneously presented to both ears, only the louder tone is perceived.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

During the procedure, the intensity of the tone presented to the better hearing ear is increased at least 10 dB HL louder than the patient's stated threshold, while the tone delivered to the poorer ear is decreased by at least 10 dB HL quieter than the patient's volunteered threshold. According to the Stenger principle, if the patient's pure tone thresholds are valid, they will continue to respond because the signal in the better ear remains louder than their threshold. This produces a negative Stenger, supporting the accuracy of the original volunteered threshold.

If the patient stops responding, despite the tone in the better ear being audible, the test yields a positive Stenger, indicating that the pure tone thresholds, in at least the poorer responding ear, may not be reliable and that additional objective measures may be needed to more accurately determine hearing sensitivity. Pure-tone Stenger testing is typically presented at any frequency with a significant asymmetry (typically 20 dB or greater difference) between ears to establish the consistency of the patient's responses.

To support the recommended work RVU, the RUC HCPAC compared the surveyed code to the top key reference service codes 92587 *Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3-6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report* (work RVU = 0.35, 12 minutes intra-service, and 18 minutes total time) and 92568 *Acoustic reflex testing, threshold* (work RVU = 0.29, 8 minutes intra-service, and 10 minutes total time). The surveyed code work RVU is appropriately supported by the key reference services given the lower intra-service and total time compared to CPT code 92587 and the similarity in physician work to CPT code 92568. **The RUC HCPAC recommends a work RVU of 0.29 for CPT code 92565.**

92577 ***Stenger test, speech***
The RUC HCPAC reviewed the survey results from 63 audiologists and recommends a work RVU of 0.25 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC HCPAC recommends 2 minutes of pre-service evaluation time, 5 minutes intra-service time, and 3 minutes immediate post-service time, totaling 10 minutes. The professional organizations had adjusted the pre- and post-service times to reflect multiple procedures performed on the same day, by the same provider to the same patient.

This behavior speech threshold assessment is used to determine whether a unilateral or significantly asymmetric hearing loss has a non-organic component. It is commonly performed when the reliability of the speech reception threshold result is in doubt. The Stenger test operates on the principle that when a speech signal is simultaneously presented to both ears, only the louder speech signal is perceived.

During the procedure, the intensity of the spondaic word presented to the better hearing ear is increased by at least 10 dB HL louder than the patient's stated speech threshold, while the speech signal delivered to the poorer ear is decreased 10 dB HL, quieter than the patient's stated speech threshold. According to the Stenger principle, if the patient's speech reception threshold is valid in the poorer ear, they will continue to respond because the signal in the better ear remains louder than their threshold. This produces a negative speech Stenger, supporting the accuracy of the original results.

If the patient stops responding, despite the speech signal in the better ear being audible, the test yields a positive Stenger, indicating that the speech reception threshold may not be reliable and that additional objective measures may be needed to more accurately determine hearing sensitivity. The process is typically repeated to establish consistency of the patient's responses.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To support the recommended work RVU, the RUC HCPAC compared the surveyed code to the top key reference service codes 92568 *Acoustic reflex testing, threshold* (work RVU = 0.29, 8 minutes intra-service, and 10 minutes total time) and 92587 *Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3-6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report* (work RVU = 0.35, 12 minutes intra-service, and 18 minutes total time). The surveyed code recommended work RVU is appropriately below both key reference services.

For additional support, the RUC HCPAC referenced MPC code 92567 *Tympanometry (impedance testing)* (work RVU = 0.20, 4 minutes intra-service, and 6 minutes total time). The surveyed code has slightly more intra-service, total time, is more complex, and is therefore valued appropriately higher. **The RUC HCPAC recommends a work RVU of 0.25 for CPT code 92577.**

Practice Expense
Acknowledging the removal of L052A *Audiologist* from the PE inputs, the Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC HCPAC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Special Otorhinolaryngologic Services** **Audiologic Function Tests** *The audiometric tests listed below require the use of calibrated electronic equipment, recording of results, and a report with interpretation. Hearing tests (such as whispered voice, tuning fork) that are otorhinolaryngologic evaluation and management services are not reported separately. All services include testing of both ears. Use modifier 52 if a test is applied to one ear instead of two ears.*			
92565	Stenger test, pure tone	XXX	0.29 (2026 Work RVU = 0.00)
92577	Stenger test, speech	XXX	0.25 (2026 Work RVU = 0.00)

SUMMARY OF RECOMMENDATION

CPT Code:92565 Tracking Number

Original Specialty Recommended RVU: **0.29**
Presented Recommended RVU: **0.29**
RUC Recommended RVU: **0.29**

Global Period: XXX Current Work RVU: **0.00**

CPT Descriptor: Stenger test, pure tone

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Following a recent motor vehicle accident, a 34-year-old male with asymmetry in hearing sensitivity identified by pure-tone audiometry (reported separately), undergoes a pure-tone Stenger test.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Patient response patterns during pure-tone threshold evaluation,observed test behaviors, overall response reliability, and reported history are reviewed to determine whether Stenger testing is indicated. When non-organic or exaggerated threshold responses are suspected, the QHP reviews patient's reported audiometric thresholds and inter-aural threshold differences to identify the frequencies appropriate for Stenger testing. The degree of pure-tone response asymmetry is assessed, and the initial Stenger presentation levels are calculated for each frequency.

Description of Intra-Service Work: QHP instructs the patient to respond to all tones that he hears in each ear regardless of perceived loudness. At each frequency being evaluated, a repeat threshold measurement is obtained in the poorer ear to confirm reliability. After repeating the threshold measurement, the QHP configures a two-channel audiometer to deliver simultaneous pure tone signals to both ears. Using the volunteered pure tone responses, the QHP sets one channel 10-20 dB HL quieter than the volunteered threshold of the poorer ear and the other channel 10-20 dB HL louder than the volunteered threshold of the better ear. The QHP presents pure tone stimuli simultaneously to each ear. QHP records a Positive Stenger if the patient does not respond/ stops responding when simultaneous presentation is initiated. The procedure is repeated to confirm the results. Testing continues at additional pure-tone frequencies where asymmetries exist. The QHP determines if additional objective tests are warranted. The findings are interpreted in the context of other audiometric results and incorporated into a formal diagnostic report to inform clinical management.

Description of Post-Service Work: Test results and relevant clinical observations are communicated to the patient/family/caregiver and referral source. When indicated, recommendations for objective assessment (e.g., Evoked Auditory Potentials, Otoacoustic Emissions, Acoustic Threshold testing) are discussed with patient/family/caregiver and referral source. Recommendations for consultation or referral to other qualified health professionals are also discussed with the referral source to facilitate appropriate interdisciplinary follow-up. Relevant clinical observations, agreed on care plan and recommendations are documented in the patient's medical record. The final report is reviewed and signed.

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	20%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Relativity Assessment Workgroup (RAW) identified CPT code 92565 as a part of the 26 services with QHP time included in the clinical staff direct PE inputs. Upon review of the history of these codes, AAA and ASHA noted that none of them have associated vignettes, procedural descriptions or have been surveyed for QHP time or work RVU. In addition, the audiologist's time is currently included within the clinical staff time for direct practice expense inputs rather than in work RVU for these codes.

CPT code 92565 describes the pure tone Stenger test, a behavioral assessment used to identify whether a unilateral or significantly asymmetric hearing loss includes a non-organic component. It is commonly performed when the reliability of pure tone threshold testing is in doubt. The Stenger test operates on the principle that when two tones of the same frequency are simultaneously presented to both ears, only the louder tone is perceived.

During the procedure, the intensity of the tone presented to the better hearing ear is increased at least 10 dB HL louder than the patient's stated threshold, while the tone delivered to the poorer ear is decreased at least 10 dB HL quieter than the patient's volunteered threshold. According to the Stenger principle, if the patient's pure tone thresholds are valid, they will continue to respond because the signal in the better ear remains louder than their threshold. This produces a negative Stenger, supporting the accuracy of the original volunteered threshold.

If the patient stops responding, despite the tone in the better ear being audible, the test yields a positive Stenger, indicating that the pure-tone thresholds, in at least the poorer responding ear, may not be reliable and that additional objective measures may be needed to more accurately determine hearing sensitivity. Pure-tone Stenger testing is typically presented at any frequency with a significant asymmetry (typically 20 dB or greater difference) between ears to establish the consistency of the patient's responses.

Compelling Evidence

The expert panel believes there is compelling evidence for an increase in the current **work RVU from 0.00 to 0.29** for the following reasons:

1. ***Evidence that incorrect assumptions were made in the previous valuation of the service by either the RUC or CMS, as documented, such as: a misleading vignette, survey and/or flawed crosswalk assumptions in a previous valuation, and***
2. ***Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to changes in physician time, as described below:***

- According to Medicare utilization data, the majority of the billing is from audiology (93.7%) followed by otolaryngology (6.1%). QHP time is only captured as clinical labor in practice expense inputs. However, audiologists now bill Medicare independently, and audiology time should not be captured under practice expense. As such, audiology time should be accounted for in professional work.
- CPT code 92565, which is currently used to capture these services, has never been surveyed for QHP time or Work RVU, and does not have a clinical vignette or a detailed description of the procedure. This lack of surveyed time, work RVU, vignette and description does not reflect the actual cognitive complexity, clinical judgment, and interpretive workload required to accurately complete the test or interpret findings.

Expert Panel Recommendations

An expert panel of audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

The expert panel recommends the 25th percentile work RVU of 0.29, pre-service time of 3 minutes, intra service time of 6 minutes and post-service time of 3 minutes for a total time of 12 minutes.

Survey Sample

The survey data and recommendations are based upon a random sample of AAA and ASHA membership. A total of 3948 surveys were sent to a random sample of AAA and ASHA's audiology members to survey Stenger, pure-tone test. A total of **74** completed responses were received for this specific code.

Time

The expert panel validated the median survey times of ***3 minutes*** *(****pre-service time), 6 minutes (intra-service time), and 3 minutes (post-service time), for a total time of 12 minutes,*** *concluding that these values accurately reflect the clinical intensity and workflow associated with the puretone Stenger test.* Currently, 13 minutes of audiology time (L052A) is captured in the intra-service time under clinical labor time of the PE input. These recommended times align well with the audiology time captured in the PE inputs.

Pre- and Post-service Times: The expert panel believes the recommended 3-minutes of pre-service will provide the QHP with sufficient time to review the patient's volunteered pure-tone thresholds, evaluate interaural threshold differences across frequencies, and use this information to determine whether the pure-tone Stenger test should be performed. The 3-minutes of postservice time is adequate to complete discussion of test results, clinical implications, prognosis and any needed follow-up with the patient/family/caregivers and to share results with the referring provider. Even though the survey post-service time is 5 minutes, the expert panel believes 3-minutes is sufficient to complete these post-service-related activities.

Intra-Service Time: Similarly, the recommended median intra-service time of 6 minutes is adequate to complete the intra-Service work of this procedure. The QHP must assess patient responses and make continuous clinical judgments to determine if additional presentations should be provided to ensure accuracy of the results. Currently, 13 minutes of audiology time is captured under intra-Service time in the PE input. The recommended intra-service time is less than the currently allocated intra-service time for clinical labor in the PE inputs, but the expert panel believes 6-minutes is adequate time to complete the intra-service portion of this procedure.

Work RVU

The expert panel recommends the **25th percentile work RVU of 0.29** and affirmed that it is appropriate, accurately capturing the clinical intensity and professional effort involved in Stenger, pure-tone testing, especially given that the

audiologist's work was historically captured under clinical staff in practice expense and will now be captured under the work component. This valuation also supports appropriate rank-order within the broader family of audiometry codes and with similar codes with similar intra-service times.

In addition, the recommended work RVU is supported by clinical complexity, cognitive workload, high level of professional skill, use of highly specialized equipment, and QHP engagement required to perform Stenger, pure-tone testing.

Comparison to Key Reference Services Codes

The work RVUs of the key reference service (KRS) codes further support this recommendation. The first KRS code 92587, with 12 minutes of intra-service time is valued at 0.35 RVUs and second KRS code, with 8 minutes of intra-service time is valued at 0.29 RVUs. In addition, the survey results demonstrate that the overall intensity and complexity of the Stenger pure-tone service are identical or greater than those of both reference services, supporting a valuation of 0.29 RVUs. Notably, a detailed review of the intensity and complexity data shows that more than 90% of respondents rated the service as equal to or greater than KRS 1 with respect to overall mental effort and judgment, as well as technical skill, further validating the proposed work RVU.

Comparison to Other Codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for CPT code 92565.

CPT Code	Descriptor	RVW	IWPUT	Total Time	Adjusted Total Time	Pre	Intra	Adjusted intra Time	Post	Note
92558	Evoked otoacoustic emissions, screening (qualitative measurement of distortion product or transient evoked otoacoustic emissions), automated analysis	0.17	0.0250	7	7		5	5	2	
92650	Auditory evoked potentials; screening of auditory potential with broadband stimuli, automated analysis	0.24	0.0011	25	24.63	5	15	14.63	5	
92568	Acoustic reflex testing, threshold	0.29	0.018	10	8	1	8	8	1	KRS 2 MPC
92565	Stenger test, puretone	0.29	0.026	12	-	3	6	-	3	Survey code
92587	Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3-6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report	0.35	0.031	18	18	3	12	12	3	KRS 1
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.0234	19	19	2	15	15	2	MPC
92588	Distortion product evoked otoacoustic emissions; comprehensive diagnostic evaluation (quantitative analysis of outer hair cell function by cochlear mapping, minimum of 12 frequencies), with interpretation and report	0.55	0.0252	22.5	22.5	3	16.5	16.5	3	

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
   CPT code 92565 is expected to be reported in conjunction with 92557 and 92567 when clinically indicated, as it represents one component of a comprehensive audiologic test battery. These services were structured as a continuum of diagnostic assessments, typically beginning with a comprehensive hearing evaluation (92557), followed by additional testing when warranted based on the patient's presentation and initial findings.

   Although performed during the same encounter, these are distinct diagnostic services requiring separate clinical judgment, test administration, interpretation, and documentation. Prior AMA CPT Assistant guidance (March 2005 and August 2014) supports the appropriate reporting of individual audiologic testing services when performed as part of a comprehensive evaluation.

   The pre- and post-service work associated with each service—including equipment preparation and calibration, patient set-up, test performance, interpretation of results, and documentation—has been considered and accounted for in the prior and proposed valuation process and should not be viewed as duplicative when multiple tests are appropriately performed. Each code reflects the unique professional work required to obtain and interpret clinically meaningful information that contributes to diagnosis and management decisions. Note: see references - AMA CPT Assistant. March 2005, AMA CPT Assistant. August 2014.

   Typical clinical scenario: A 35-year-old male was referred by his attorney for a hearing evaluation following a motor vehicle accident. The patient reported hearing loss in his right ear after the accident. Initial volunteered pure-tone thresholds revealed a significant asymmetry between the two ears. The Stenger test was administered to verify the accuracy of the initial volunteered thresholds and to determine whether the reported hearing loss reflected true auditory function or whether the thresholds had been exaggerated or feigned.
   Please see the CPT code information below (Code, Global Period, Work RVU, Pre, Intra, Post times,

CPT Code	Global Period	Work	Pre	Intra	Post
92557	XXX	0.60	3 min	20 min	5 min
92567	XXX	0.20	1 min	4 min	1 min
92550	XXX	0.3	3 min	10 mi	3 min

CPT Code:92577 Tracking Number

Original Specialty Recommended RVU: **0.25**
Presented Recommended RVU: **0.25**
RUC Recommended RVU: **0.25**

Global Period: XXX Current Work RVU: **0.00**

CPT Descriptor: Stenger test, speech

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 12-year-old female with asymmetry identified by speech threshold testing (reported separately) undergoes a speech Stenger test.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Patient response patterns during speech threshold evaluation, observed test behaviors, response reliability, and reported history are reviewed to determine whether Stenger testing is indicated. When non-organic or exaggerated threshold responses are suspected, the QHP reviews patient's reported speech threshold responses and inter-aural threshold differences to identify the appropriateness for Stenger testing. The degree of response asymmetry is assessed, and initial Stenger presentation levels are calculated.

Description of Intra-Service Work: QHP instructs the patient to repeat the word she hears regardless of perceived loudness. A repeat speech reception threshold measurement is obtained in the poorer ear to confirm reliability. After repeating the SRT measurement, the QHP configures a two-channel audiometer to deliver simultaneous speech signals to both ears. Using the volunteered SRT responses, the QHP sets one channel to 10-20 dB HL quieter than the volunteered threshold of the poorer ear and the other channel to 10-20 dB HL louder than the volunteered threshold of the better ear. The QHP presents speech stimuli simultaneously to each ear. QHP records a Positive Stenger if the patient does not respond or stops responding when simultaneous presentation is initiated. The procedure is repeated to confirm the result. The QHP determines if additional objective tests are warranted. The findings are interpreted in the context of other audiometric results and incorporated into a formal diagnostic report to inform clinical management.

Description of Post-Service Work: Test results and relevant clinical observations are communicated to the patient/family/caregiver and referral source. Behavioral, family, and school-related factors are discussed to support the development of appropriate recommendations for the referral source and facilitate timely interdisciplinary follow-up. When indicated, recommendations for objective assessment (e.g., Evoked Auditory Potentials, Otoacoustic Emissions, Acoustic Reflex Threshold testing) are discussed with patient/family/caregiver and referral source. Relevant clinical observations, agreed on care plan and recommendations are documented in the patient's medical record. The final report is reviewed and signed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	4%	12%	28%	56%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	36%	52%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	16%	24%	60%
Physical effort required	28%	60%	12%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	32%	68%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	14%	43%	29%	14%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	36%	43%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	14%	14%	71%
Physical effort required	29%	57%	14%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	36%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
The Relativity Assessment Workgroup (RAW) identified CPT code 92577 as a part of the 26 services with QHP time included in the clinical staff direct PE inputs. Upon review of the history of these codes, AAA and ASHA noted that none of them have associated vignettes, procedural descriptions, or have been surveyed. In addition, the audiologist's time is currently included within the clinical staff time for direct practice expense inputs rather than in work RVU for these codes.

CPT code 92577 describes the speech Stenger Test. This behavioral speech threshold assessment is used to determine whether a unilateral or significantly asymmetric hearing loss has a non-organic component. It is commonly performed when the reliability of the speech reception threshold result is in doubt. The Stenger test operates on the principle that when a speech signal is simultaneously presented to both ears, only the louder speech signal is perceived. During the procedure, the intensity of the spondaic word presented to the better hearing ear is increased at least 10 dB HL louder than the patient's stated speech threshold, while the speech signal delivered to the poorer ear is decreased 10 dB HL quieter than the patient's stated speech threshold. According to the Stenger principle, if the patient's speech reception threshold is valid in the poorer ear, they will continue to respond because the signal in the better

ear remains louder than their threshold. This produces a negative speech Stenger, supporting the accuracy of the original results.

If the patient stops responding, despite the speech signal in the better ear being audible, the test yields a positive Stenger, indicating that the speech reception threshold may not be reliable and that additional objective measures may be needed to more accurately determine hearing sensitivity. The process is typically repeated to establish consistency of the patient's responses.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in the current **work RVU from 0.00 to 0.25** for the following reasons:

1. ***Evidence that incorrect assumptions were made in the previous valuation of the service by either the RUC or CMS, as documented, such as: a misleading vignette, survey and/or flawed crosswalk assumptions in a previous valuation, and***
2. ***Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to changes in physician time, as described below:***

- According to Medicare utilization data, most of the billing is from audiology (86.3%) followed by otolaryngology (11.6%). QHP time is only captured as clinical labor in practice expense inputs. However, audiologists now bill Medicare independently, and audiology time should not be captured under practice expense. As such, audiology time should be accounted for in professional work.
- CPT code 92577, which is currently used to capture these services, has never been surveyed for QHP time or work RVU, and does not have a clinical vignette or a detailed description of the procedure. This omission fails to convey the actual cognitive complexity, clinical judgment, and interpretive workload required.

Expert Panel Recommendations
An expert panel of audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

The expert panel recommends the 25th percentile work RVU of 0.25, pre-service time of 2 minutes, intra-service time of 5 minutes and post-service time of 3 minutes for a total time of 10 minutes.

Survey Sample
The survey data and recommendations are based upon a random sample of AAA and ASHA membership. A total of 3948 surveys were sent to a random sample of AAA and ASHA's audiology members to survey Stenger, speech test. A total of **64** completed responses were received for this specific code.

Time
The expert panel recommends ***pre-service time of 2 minutes, intra-service time of 5 minutes and post-service time of 3 minutes for a total of 10 minutes.*** Currently, 13 minutes of audiology time (L052A) is captured in Intra-Service time under clinical labor time of the PE input. These recommended times align well with the audiology time captured in the PE inputs.

Pre- and Post-service Times: Even though the survey pre-service time is 4 minutes and post service time is 5 minutes, the expert panel believes that 2 minutes of pre-service time and 3 minutes of post-service times are adequate to complete pre- and post-service-related activities.

Intra-Service Time: The expert panel recommends 5 minutes of intra-service time which is the median survey value. The expert panel believes that this is adequate time to complete intra-service portion of the procedure. Even though 13 minutes of audiology time is currently captured under PE clinical staff intra-service time, expert panel believes 5 minutes is adequate to complete the intra-service portion of this procedure.

Work RVU
The expert panel recommends the **25th percentile work RVU of 0.25** and affirmed that it is appropriate, accurately capturing the clinical intensity and professional effort involved in Stenger speech testing, especially given that the audiologist's work was historically captured under PE will now be captured under the work component. This valuation also supports appropriate rank-order within similar codes with similar intra-service times.

In addition, the recommended work RVU is supported by clinical complexity, cognitive workload, and high level of professional skill, use of highly specialized equipment, and engagement required to perform Stenger, speech testing.

Stenger, speech testing requires the audiologist to independently administer the test, monitor response reliability, recognize inconsistent behavioral responses, and interpret findings to differentiate functional from organic hearing loss.

Comparison to Key Reference Services Codes

The work RVUs of the key reference service (KRS) codes further support this recommendation. The first KRS code 92568, with 8 minutes of intra-service time is valued at 0.29 RVUs and second KRS code 92587, with 12 minutes of intra-service time is valued at 0.35 RVUs. In addition, the survey results demonstrate that the overall intensity and complexity of the Stenger speech test are identical or greater than those of both reference services, supporting a valuation of 0.25 RVUs. Notably, a detailed review of the intensity and complexity data shows that more than 80% of respondents rated the service as equal to or greater than KRS 1 and KRS 2 with respect to overall mental effort and judgment, as well as technical skill, further validating the proposed work RVU.

Comparison Other codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for CPT code 92577.

CPT Code	Descriptor	RVW	IWPUT	Total Time	Adjusted Total Time	Pre	Intra	Adjusted Intra Time	Post	Note
92558	Evoked otoacoustic emissions, screening (qualitative measurement of distortion product or transient evoked otoacoustic emissions), automated analysis	0.17	0.0250	7	7		5	5	2	
92650	Auditory evoked potentials; screening of auditory potential with broadband stimuli, automated analysis	0.24	0.0011	25	24.63	5	15	14.63	5	
92577	Stenger Test, Speech	0.25	0.028	10	--	2	5	-	3	Survey code
92568	Acoustic reflex testing, threshold	0.29	0.031	10		1	8	8	1	KRS 1 MPC
92587	Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3-6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report	0.35	0.018	18		3	12	12	3	KRS 2
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.0234	19	19	2	15	15	2	MPC
92588	Distortion product	0.55	0.0252	22.5	22.5	3	16.5	16.5	3	

	evoked otoacoustic emissions; comprehensive diagnostic evaluation (quantitative analysis of outer hair cell function by cochlear mapping, minimum of 12 frequencies), with interpretation and report									

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☒ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
   We anticipate CPT code 92577 will typically be billed together with 92557 and/or 92555 based on the patient presentation and complexity. CPT code 92577 is expected to be reported in conjunction with 92557 and 92555 when clinically indicated, as it represents one component of a comprehensive audiologic test battery. These services were structured as a continuum of diagnostic assessments, typically beginning with a comprehensive hearing evaluation (92557) or speech threshold testing (92555),followed by additional testing when warranted based on the patient's presentation and initial findings.

   Although performed during the same encounter, these are distinct diagnostic services requiring separate clinical judgment, test administration, interpretation, and documentation. Prior AMA CPT Assistant guidance (March 2005 and August 2014) supports the appropriate reporting of individual audiologic testing services when performed as part of a comprehensive evaluation.

   The pre- and post-service work associated with each service—including equipment preparation and calibration, patient set-up, test performance, interpretation of results, and documentation—has been considered and accounted for in the prior and proposed valuation process and should not be viewed as duplicative when multiple tests are appropriately performed. Each code reflects the unique professional work required to obtain and interpret clinically meaningful information that contributes to diagnosis and management decisions. Note: see references - AMA CPT Assistant. March 2005, AMA CPT Assistant. August 2014.

   Typical clinical scenario: A 12-year-old female was referred by her pediatrician following a self-reported unilateral hearing loss in the left ear and a failed hearing screening. Initial volunteered speech reception thresholds demonstrated significant interaural asymmetry. During SRT testing, the patient consistently repeated only half of the spondaic word correctly at softer presentation levels, raising concern for nonorganic hearing loss. The Stenger speech test was administered to evaluate the validity of the volunteered speech reception

threshold (SRT).
Please see the CPT code information below (Code, Global Period, WRVU, Pre, Intra, Post times, Billed together data). Please note: CPT Code 92555 will also be undergoing survey and re-valuation in the current CPT cycle. It currently has only clinical staff time captured in PE, similar to 92577.

CPT Code	Global Period	Work RVU	Pre	Intra	Post
92557	XXX	0.60	3	20	5
92555	XXX	0.00	0	0	0
92577	XXX	0.25	2	5	3

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92577

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Audiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 438
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by three.

Specialty Audiology Frequency 378 Percentage 86.30 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 146
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. These estimates are based on 2024 Medicare utilization data from the AMA RUC database.

Specialty Audiology Frequency 126 Percentage 86.30 %

Specialty Otolaryngology Frequency 16 Percentage 11.64 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S): 92565, 92577**
SPECIALTY SOCIETY(IES): American Academy of Audiology and American Speech-Language-Hearing Association
PRESENTER(S): Erin L. Miller, AuD., Deb Carlson, PhD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
92565	Stenger Test, Pure Tone	XXX
92577	Stenger Test, Speech	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92565	Following a recent motor vehicle accident, a 34-year-old male with asymmetry in hearing sensitivity identified by pure-tone audiometry (reported separately), undergoes a pure-tone Stenger test.
92577	A 12-year-old female with asymmetry identified by speech threshold testing (reported separately) undergoes a speech Stenger test.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AAA and ASHA convened an RVS expert panel of the surveying specialty societies and clinical experts to review practice expense data for codes 92565 and 92577.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   It was determined to utilize the current direct PE inputs as our reference code.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   N/A
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Dominant provider for each code is Audiology –

   92565 – Audiology 93.7%
   92577 – Audiology 86.3%

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

    c. Post-service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

    N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Please note that we are including an updated invoice for equipment items EQ053 and EQ054. Equipment items have not changed, just updated, paid invoice pricing.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life for EQ053 should remain 10 years; the useful life for EQ054 should remain 15 years

22. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

Equipment Code	Equipment Description	Cost Per Minute Formula	Rationale
EQ054	audiometric soundproof booth (exam and control rooms)	Other	Updated existing formula with current invoice. Note equipment time reflects Audiologist time to perform test which is now captured in work not PE.
EQ053	audiometer, clinical-diagnostic	Other	Updated existing formula with current invoice. Note equipment time reflects Audiologist time to perform test which is now captured in work not PE.

ADDITIONAL INFORMATION

23. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Supply Code	Supply	Cost Per Item	92565 Now	92565 Proposed	92577 Now	92577 Proposed	Rationale
SK008	audiology scoring forms	0.12	1	1	1	1	Maintain necessary forms for scoring
SD044	ear tip, earphone	0.62	0	2	0	2	Add 1 per ear to deliver of sound during diagnostic service

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

26. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: QHP Inappropriately Included in Direct PE Inputs

September 2026

Complex Listening Tests – Tab 14C

At the September 2025 RUC meeting, a RUC member requested review of CPT codes that have L052A Audiologist as clinical staff in the direct practice expense. Audiology has been able to independently bill Medicare since 2008 and therefore should no longer be accounted for in the direct practice expense inputs as clinical staff. At the same time as this review, the direct practice expense should be examined to identify any other qualified health care professionals captured in the clinical labor staff to ensure that time is appropriately counted in the work component. At the April 2026 meeting, the specialty societies indicated that these services be surveyed for the September 2026 meeting.

Compelling Evidence
The specialty societies presented compelling evidence based on incorrect assumptions made in the previous valuation of the service by either the RUC or CMS. According to Medicare utilization data, the majority of claims for this service are reported by audiologists, who account for the majority of utilization. Historically, audiologist time associated with furnishing this service has been captured as clinical labor within the Practice Expense (PE) methodology.

However, because audiologists are authorized to bill Medicare independently for these services, their time and professional work should no longer be accounted for as clinical labor under PE. Instead, the professional work performed by audiologists in furnishing this service should be appropriately captured and incorporated into the professional work component and removed from the practice expense component. Currently, audiologists perform not only the procedure itself but also the interpretation of findings, preparation of the report, and coordination of appropriate referrals. Historically, these professional activities were attributed to the physician work component and did not recognize or account for the work performed by audiologists. The valuation should appropriately acknowledge the full scope of professional services now provided by audiologists. **The RUC HCPAC Review Board accepted compelling evidence based on incorrect assumptions for CPT codes 92571 and 92572.**

92571 ***Filtered speech test***
The RUC HCPAC reviewed the survey results from 33 audiologists and recommends a work RVU of 0.37 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC HCPAC recommends 5 minutes of pre-service evaluation time, 15 minutes intra-service time, and 5 minutes immediate post-service time, totaling 25 minutes. The professional organizations adjusted the pre- and post-service times to reflect multiple procedures performed on the same day, by the same provider to the same patient.

This procedure assesses an individual's auditory closure skills and helps determine a component of their overall auditory processing abilities. The test words are processed through a low pass filter, which removes critical higher-frequency speech sounds. These high frequencies contain many of the essential consonant cues that help listeners differentiate words (e.g., bit and sit) and improve clarity, especially in noisy environments.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Because of the applied acoustic filtering, the words sound muffled to the listener and require higher-level auditory processing to fill in the missing information and understand the intended message.

To support the recommended work RVU, the RUC HCPAC compared the surveyed code to the second key reference service 92587 *Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3-6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report* (work RVU = 0.35, 12 minutes intra-service, and 18 minutes total time). The surveyed code has similar intra-service time and higher total time, maintaining that a slightly higher work RVU is appropriate. **The RUC HCPAC recommends a work RVU of 0.37 for CPT code 92571.**

92572 ***Staggered spondaic word test***
The RUC HCPAC reviewed the survey results from 35 audiologists and recommends a work RVU of 0.78 based on the survey median, which maintains relativity within the family for this code. The RUC HCPAC recommends 5 minutes of pre-service evaluation time, 20 minutes of intra-service time, and 10 minutes of immediate post-service time, totaling 35 minutes. The professional organizations adjusted the pre- and post-service times to reflect multiple procedures performed on the same day, by the same provider to the same patient.

This procedure assesses an individual's binaural integration skills and helps determine a component of their overall auditory processing abilities. This dichotic speech test utilizes spondaic words, two-syllable words with equal stress, with the words partially overlapping in presentation between the ears. For example, “hotdog” would be heard in the right ear and baseball in the left ear, with dog and base overlapping.

To support the recommended work RVU, the RUC HCPAC compared the surveyed code to the top key reference service codes 92620 *Evaluation of central auditory function, with report; initial 60 minutes* (work RVU = 1.50, 60 minutes intra-service, and 77 minutes total time) and 92588 *Distortion product evoked otoacoustic emissions; comprehensive diagnostic evaluation (quantitative analysis of outer hair cell function by cochlear mapping, minimum of 12 frequencies), with interpretation and report* (work RVU = 0.55, 16.5 minutes intra-service, and 22.5 minutes total time). The surveyed code recommended work RVU, intra-service time, and total time are appropriately bracketed by the key reference services.

For additional support, the RUC HCPAC referenced MPC code 92517 *Vestibular evoked myogenic potential (VEMP) testing, with interpretation and report; cervical (cVEMP)* (work RVU = 0.78, 19.5 minutes intra-service, and 31.5 minutes total time). The surveyed code and MPC code require similar physician work and have nearly intra-service time and total time and therefore should be valued similarly. **The RUC HCPAC recommends a work RVU of 0.78 for CPT code 92572.**

Practice Expense
Acknowledging the removal of L052A *Audiologist* from the PE inputs, the Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC HCPAC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Referral to CPT Editorial Panel
The surveying professional organizations and HCPAC agreed to refer CPT code 92576 to the CPT Editorial Panel for deletion. CPT code 92576 was reported by only 11 practitioners across eight unique practices in CY 2024, representing 1,193 fully adjudicated Medicare claims. Further, this specific test is no longer included in training curricula, as other diagnostic tests are now used to obtain comparable diagnostic information. **The HCPAC Review Board recommends that CPT Code 92576 be referred to the CPT Editorial Panel for deletion.**

Chair, AMA Specialty Society RVS Update Committee
American Medical Association
330 N Wabash Avenue, Suite 39300
Chicago, IL 60611

Re: CPT code 92576 - Synthetic sentence identification test

Dear Dr. Silva:

On behalf of the American Academy of Audiology (AAA) and the American Speech-Language-Hearing Association (ASHA), we respectfully request that the RUC refer CPT code 92576 (Synthetic sentence identification) to the CPT Editorial Panel with a recommendation that the code be deleted.

At the April 2026 RUC Relativity Assessment Workgroup (RAW) meeting, the specialty societies were asked to perform a review of 16 audiology CPT codes on an accelerated timeline. These 16 audiology CPT codes currently include audiologist time in the direct practice expense (PE) inputs. The RAW recommended that audiologist time be removed from direct PE inputs, and the codes be surveyed for updated work RVU and PE.

From the outset of this effort, AAA and ASHA expressed concern that CPT code 92576 is a low-volume service, and that obtaining the minimum survey response threshold could be challenging. Despite extensive outreach and multiple reminders to potential respondents, as well as extending the survey closing date by an additional week, the survey failed to reach the minimum required response threshold of 30 completed surveys and did not produce reportable median performance data.

A review of CY2024 Medicare practitioner utilization further reinforces this conclusion. In calendar year 2024, CPT code 92576 was reported by only 11 practitioners across eight unique practices, representing 1,193 fully adjudicated Medicare claims. Following consultation with our CPT and RUC Advisors, AAA and ASHA have concluded that neither extending the survey further nor relaunching it would be expected to materially improve participation or produce a representative dataset. Additionally, we spoke with colleagues across a range of practice settings who shared that this service is no longer performed, as more current diagnostic tests are being used in place of 92576. Colleagues from academic

institutions, confirmed that this specific test is no longer included in training curricula, as other diagnostic tests are now used to obtain comparable diagnostic information.

Given the extremely limited practitioner base, the highly concentrated utilization found on utilization review, the inability to obtain sufficient survey data despite exhaustive efforts, and the change in training curricula, AAA and ASHA believe there is no practical pathway to establishing updated valuation for this service through the RUC survey process. Accordingly, we believe the continued maintenance of a distinct CPT code for this service is no longer warranted and respectfully request that the RUC refer CPT code 92576 to the CPT Editorial Panel with a recommendation that it be deleted.

Thank you for your consideration of this request. We appreciate the RUC's guidance and look forward to working collaboratively on the appropriate next steps.

SUMMARY OF RECOMMENDATION

CPT Code:92571 Tracking Number

Original Specialty Recommended RVU: **0.37**
Presented Recommended RVU: **0.37**
RUC Recommended RVU: **0.37**

Global Period: XXX Current Work RVU: **0.00**

CPT Descriptor: Filtered speech test

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 12-year-old male with suspected auditory processing disorder and normal hearing sensitivity undergoes a Filtered Speech Test (FST).

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The QHP reviews the patient's medical record, including any communications from the referring QHP, previous diagnostic testing, and relevant comorbidities. The QHP confirms patient medical and developmental history with patient/family/caregiver and reviews relevant standardized questionnaires. Prior to testing, the QHP prepares the equipment and FST score form. This includes appproriately adjusting and calibrating the audiometer to present the licensed test stimuli, ensuring that all audiometer settings are appropriate for the FST assessment.

Description of Intra-Service Work: Otoscopic evaluation is completed, if indicated, to ensure canals are clear and testing can proceed. The patient is instructed on what is required before the test begins. The patient is informed that he will hear a sequence of words that will sound muffled, simulating real-world listening conditions that might affect speech comprehension. The patient is instructed to repeat all the words he hears, even if he is unsure. The QHP confirms understanding of test instructions before proceeding and will reinstruct during testing, when indicated. The patient is seated in the audiometric test booth, and inserts, or supra-aural earphones are selected and placed in or over the patient's ears. The audiometer is set to an appropriate and comfortable intensity level for the patient, and low-pass filtered words are delivered to each ear separately. For each presentation, correct/incorrect responses are recorded. Following the final presentation, the QHP scores the test results and interprets the data to assess the patient's auditory closure ability for each ear. Age-appropriate normative data are used to aid in interpretation. The QHP evaluates how severe the patient's auditory closure difficulties are and determines whether an ear advantage exists. The QHP reviews the test results and determines whether additional central auditory testing is needed. The findings are interpreted alongside other available audiometric results and integrated into the formal diagnostic report to inform clinical management.

Description of Post-Service Work: Test results and their clinical implications are communicated to the patient/family/caregiver. When indicated, additional diagnostic testing is recommended, with the rationale discussed with the patient/family/caregiver and referral source to support appropriate patient management and follow-up. Relevant clinical observations, agreed on care plan and recommendations are documented in the patient medical record. The final report is reviewed and signed.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	29%	36%	36%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	50%	29%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	36%	43%	21%
Physical effort required	29%	71%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	43%	38%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	50%	50%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	75%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
The Relativity Assessment Workgroup (RAW) identified CPT code 92571 as a part of the 26 services with QHP time included in the clinical staff direct PE inputs. Upon review of the history of these codes, AAA and ASHA noted that none of them have associated vignettes, procedural descriptions, or have been surveyed. In addition, the audiologist's time is currently included within the clinical staff time for direct practice expense inputs rather than in work RVU for these codes.

CPT code 92571 describes the filtered speech test. This procedure assesses an individual's auditory closure skills and helps determine a component of their overall auditory processing abilities. The test words are processed through a low-pass filter, which removes **critical** higher-frequency speech sounds. These high frequencies contain many of the essential consonant cues that help listeners differentiate words (e.g., bit and sit) and improve clarity, especially in noisy environments. Because of the applied acoustic filtering, the words sound muffled to the listener and require higher-level auditory processing to fill in the missing information and understand the intended message.

Compelling Evidence

The expert panel believes there is compelling evidence for an increase in the current **work RVU from 0.00 to 0.37** for the following reasons:

1. ***Evidence that incorrect assumptions were made in the previous valuation of the service by either the RUC or CMS, as documented, such as: a misleading vignette, survey and/or flawed crosswalk assumptions in a previous valuation, and***
2. ***Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to changes in physician time, as described below:***

- According to Medicare utilization data, the plurality of the billing is from audiology (89.7%) followed by otolaryngology (10.3%). Audiology time is currently captured as clinical labor in practice expense inputs. However, audiologists now bill Medicare independently, and audiology time should not be captured under practice expense. As such, audiology time should be accounted for in professional work.
- CPT code 92571, which is currently used to capture these services, has never been surveyed, and does not have a clinical vignette or a detailed description of the procedure. This omission likely skewed perceptions of provider involvement and failed to convey the actual cognitive complexity, clinical judgment, and interpretive workload required.

Expert Panel Recommendations

An expert panel of audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

We recommend the 25th percentile work RVU of 0.37 and the pre-service time of 5 minutes, median intra-service time of 15 minutes, and post-service time of 5 minutes.

Survey Sample

The survey data and recommendations are based upon a random sample of AAA and ASHA membership. A total of 4030 surveys were sent to a random sample of AAA and ASHA's audiology members to survey the filtered speech test. A total of **33** completed responses were received for this specific code.

Time

The expert panel recommends ***pre-service time of 5 minutes, intra service time of 15 minutes and post-service time of 5 minutes for a total of 25 minutes.*** The recommended time aligns well with the 18 minutes of audiologist clinical labor time (L052A) currently captured as intra-service time in the PE inputs. The existing PE inputs account only for intra-service activities and do not recognize the pre-service and post-service work routinely performed by audiologists.

Pre- and Post-service Times: The expert panel believes that pre-service time of 5 minutes is adequate to perform pre-service related activities. Even though the survey post-service time is 9 minutes, the expert panel believes that 5 minutes of post-service time is adequate to complete post-service-related activities.

Intra-Service Time: The expert panel recommends 15 minutes of intra-service time which is the median survey value. The expert panel believes that this is adequate time to complete the intra-service portion of the procedure. Currently, audiologist's time (L052A) of 18 minutes is captured under the intra-service time in clinical labor activities in PE inputs. The recommended intra-service time of 15 minutes reflects the transition of audiologist time previously captured as a PE input to physician/QHP work. While this represents a modest reduction from the audiologist time historically included in PE, it remains well aligned and appropriately recognizes the audiologist's professional work.

Work RVU

The expert panel recommends the **25th percentile work RVU of 0.37** and affirmed that it is appropriate, accurately capturing the clinical intensity and professional effort involved in filtered speech tests, especially given that the audiologist's work historically captured under PE will now be captured under the work component. This valuation also supports appropriate rank order within similar codes with similar intra-service times.

In addition, the recommended work RVU is supported by clinical complexity, cognitive workload, high level of professional skill, use of highly specialized equipment, and engagement required to perform filtered speech testing. Filtered speech testing requires specialized administration of acoustically degraded speech stimuli and interpretation of patient performance to assess central auditory processing and speech recognition under adverse listening conditions.

Comparison to Key Reference Services Codes

The work RVUs of the key reference service (KRS) codes further support this recommendation. The first KRS code 92620, with 60 minutes of intra-service time is valued at 1.50 RVUs and second KRS code 92587, with 12 minutes of intra-service time is valued at 0.35 RVUs. In addition, the survey results demonstrate that the overall intensity and

complexity of the filtered speech test are identical or greater than those of both reference services, supporting a valuation of 0.57 RVUs. Notably, a detailed review of the intensity and complexity data shows that 100% of respondents rated the service as equal to or greater than KRS 2 with respect to overall mental effort and judgment, technical skill, and overall psychological stress, further validating the proposed work RVU.

Comparison to Other codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for CPT code 92571.

CPT Code	Descriptor	RVW	IWPUT	Total Time	Adjusted Total Time	Pre	Intra	Adjusted Intra Time	Post	Note
92568	Acoustic reflex testing, threshold	0.29	0.031	10	10	1	8	8	1	MPC
92587	Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3-6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report	0.35	0.0180	18	18	3	12	12	3	KRS 2
92571	Filtered speech test	0.37	0.010	25	-	5	15	-	5	Survey Code
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.0234	19	19	2	15	15	2	MPC
92517	Vestibular evoked myogenic potential (VEMP) testing, with interpretation and report; cervical (cVEMP)	0.78	0.0262	32	31.5	7	20	19.5	5	MPC
92620	Evaluation of central auditory function, with report; initial 60 minutes	1.50	0.0187	77	7	60	60	60	10	KRS 1

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 92571 is expected to be reported in conjunction with 92557 when clinically indicated, as it represents one component of a comprehensive audiologic test battery. These services were structured as a continuum of diagnostic assessments, typically beginning with a comprehensive hearing evaluation (92557), followed by additional testing when warranted based on the patient's presentation and initial findings.

   Although performed during the same encounter, these are distinct diagnostic services requiring separate clinical judgment, test administration, interpretation, and documentation. Prior AMA CPT Assistant guidance (March 2005 and August 2014) supports the appropriate reporting of individual audiologic testing services when performed as part of a comprehensive evaluation.

   The pre- and post-service work associated with each service—including equipment preparation and calibration, patient set-up, test performance, interpretation of results, and documentation—has been considered and accounted for in the prior and proposed valuation process and should not be viewed as duplicative when multiple tests are appropriately performed. Each code reflects the unique professional work required to obtain and interpret clinically meaningful information that contributes to diagnosis and management decisions. Note: see references - AMA CPT Assistant. March 2005, AMA CPT Assistant. August 2014.

   Typical clinical scenario: A 12-year-old child with normal peripheral hearing sensitivity, presents with complaints of frequent misperception of spoken words and difficulty following verbal directions. The patient's parents report that the child regularly requests repetition and often misinterprets spoken instructions in everyday listening situations. Similar concerns are documented by the classroom teacher. Given the presence of listening difficulties despite normal audiometric findings, a filtered speech test was administered to assess auditory closure abilities.

   Please see the CPT code information below (Code, Global Period, sWRVU, Pre, Intra, Post times, Billed together data):

CPT Code	Global Period	Work RVU	Pre	Intra	Post
92557	XXX	0.60	3	20	5
92571	XXX	0.37	5	15	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92571

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Audiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 18660
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by three.

Specialty Audiology Frequency 16,738 Percentage 89.69 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,220
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. These estimates are based on 2024 Medicare utilization data for CPT codes 92571 from the AMA RUC database.

Specialty Audiology Frequency 5,580 Percentage 89.71 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

CPT Descriptor: Staggered spondaic word test

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 12-year-old male with suspected auditory processing disorder and normal hearing sensitivity undergoes the Staggered Spondaic Word (SSW) test.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The QHP reviews the patient's medical record, including communications from the referring QHP, previous diagnostic testing, and relevant comorbidities. The QHP confirms patient medical and developmental history with patient/family/caregiver and reviews relevant standardized questionnaires. Prior to testing, the QHP prepares the equipment and SSW score form. Equipment preparation includes adjusting and calibrating the audiometer to present the licensed test stimuli, ensuring that both channels of the audiometer are appropriately configured for the patient's hearing levels and the dichotic listening assessment, and verifying that channel routing is correctly configured for the designated test ears.

Description of Intra-Service Work: Otoscopic evaluation, if indicated, is completed to ensure canals are clear, and testing can proceed. The patient is instructed that during this procedure, he will hear a set of two compound words (e.g., racehorse in the right ear and streetcar in the left ear) and that these words will partially overlap between the ears. The patient is instructed that when the two compound word sequence is completed that he should repeat all the words heard, with the first set of words beginning in the right ear and the second set in the left ear. The QHP confirms with the patient that he understands the test instructions before proceeding and will reinstruct during testing, when indicated. The patient is seated in the audiometric test booth and insert, or supra-aural earphones are selected and placed in or over the patient's ears. The audiometer is set to an appropriate and comfortable intensity level for the patient.
The SSW test is initiated using practice items to confirm understanding of the task. During the practice portion, the QHP may pause the recording and reinstruct if the patient is having difficulty. The SSW test is administered; the patient is presented with standardized sets of compound word combinations. The test consists of 40 pairs of compound words, making a total of 80-word presentations. The QHP records patient responses on the SSW score form. For each presentation, the responses are categorized as correct/incorrect. Word reversals and patterns of responses (e.g., delayed, quick, perseverations, etc.) are also documented on the SSW score form as response qualifiers. The QHP calculates the quantitative scores (correct/incorrect responses), and each of the qualifiers separately. Careful recording of the patient's verbal response is critical as these detailed error patterns inform the diagnostic interpretation. The QHP determines which of the three scoring methods available is appropriate for the patient (e.g., 1) original method, used to determine site of lesion of the disorder; 2) the number of errors, a quantitative approach; and, 3) corrected scoring, method which tolerates some amount of mild hearing loss and asymmetries in word recognition). The collected results are compared with age-appropriate normative data to identify any areas of performance that fall outside expected age-based ranges. Based on the findings, the QHP determines the patient's abilities to integrate information between ears, any ear advantages (e.g., right or

left ear performing significantly better than the opposite ear, short-term memory effects, etc.). The QHP reviews the test results and determines whether additional central auditory testing is needed. The findings are interpreted alongside other audiometric results and integrated into the formal diagnostic report to inform clinical management.

Description of Post-Service Work: Assessment findings, patient response patterns, and clinical implications are communicated to the patient/family/caregiver. When indicated, additional diagnostic testing or referrals to other specialties is recommended. The rationale for recommendations is discussed with the patient/family/caregiver and communicated in detail with the referral source, if indicated, to support appropriate diagnostic categorization, patient management, and follow-up. Relevant clinical observations, agreed on care plan and all recommendations are thoroughly documented in the patient's medical record. The final report is prepared, reviewed for accuracy and completeness, and signed by the QHP.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	09/2026					
Presenter(s):	Erin Miller, AuD, Debra Carlson, PhD

Physical effort required	0%	100%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Relativity Assessment Workgroup (RAW) identified CPT code 92572 as a part of the 26 services with QHP time included in the clinical staff direct PE inputs. Upon review of the history of these codes, AAA and ASHA noted that none of them have associated vignettes, procedural descriptions, or have been surveyed. In addition, the audiologist's time is currently included within the clinical staff time for direct practice expense inputs rather than in work RVU for these codes. CPT code 92572 describes the Staggered Spondaic Work Test. This procedure assesses an individual's binaural integration skills and helps determine a component of their overall auditory processing abilities. This dichotic speech test utilizes spondaic words, two syllable words with equal stress, with the words partially overlapping in presentation between the ears. For example, hotdog would be heard in the right ear and baseball in the left ear, with dog and base overlapping.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in the current **work RVU from 0.00 to 0.78** for the following reasons:

1. ***Evidence that incorrect assumptions were made in the previous valuation of the service by either the RUC or CMS, as documented, such as: a misleading vignette, survey and/or flawed crosswalk assumptions in a previous valuation, and***
2. ***Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to changes in physician time, as described below:***

- According to Medicare utilization data, the plurality of the billing is from audiology (89.7%) followed by otolaryngology (10.3%). Audiology time is currently captured as clinical labor in practice expense inputs. However, audiologists now bill Medicare independently, and audiology time should not be captured under practice expense. As such, audiology time should be accounted for in professional work.
- CPT code 92572, which is currently used to capture these services, has never been surveyed, and does not have a clinical vignette or a detailed description of the procedure. This omission likely skewed perceptions of provider involvement and failed to convey the actual cognitive complexity, clinical judgment, and interpretive workload required.

Expert Panel Recommendations
An expert panel of audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

We recommend the median work RVU of 0.78 and the pre-service time of 5 minutes, median intra-service time of 20 minutes, and post-service time of 10 minutes, for a total of 40 minutes.

Survey Sample
The survey data and recommendations are based upon a random sample of AAA and ASHA membership. A total of 4030 surveys were sent to a random sample of AAA and ASHA's audiology members to survey filtered speech test. A total of **35** completed responses were received for this specific code.

Time
The expert panel recommends **the pre-service time of 5 minutes, median intra-service time of 20 minutes, and post-service time of 10 minutes, for a total of 35 minutes.** The recommended time is well aligned with the 33 minutes of audiologist clinical labor time (L052A) currently captured as intra-service time in the PE inputs. The existing PE inputs account only for intra-service activities and do not recognize the pre-service and post-service work routinely performed by audiologists. The recommended total time of 35 minutes appropriately reflects pre-, intra-, and post-service activities.

Pre- and Post-service Times: The expert panel believes that pre-service time of 5 minutes and post- service time of 10 minutes is adequate for performing pre- and post- service-related activities.

Intra-Service Time: The expert panel recommends 20 minutes of intra-service time which is the median survey value. The expert panel believes that this is adequate time to complete intra-service portion of the procedure. Currently, 33 minutes audiologist's time (L052A) is captured under the intra-service time in clinical labor activities in PE inputs. The current recommended intra-service time is a reduction from the audiologist's time captured for intra-service time under PE inputs as stated above.

Work RVU
The expert panel recommends the **median work RVU of 0.78** and affirmed that it is appropriate, accurately capturing the clinical intensity and professional effort involved in Staggered Spondaic Word tests, especially given that the audiologist's work was historically captured under PE will now be captured under the work component. This valuation also supports appropriate rank order within similar codes with similar intra-service times. As shown below on the table, CPT code 92517 (Vestibular Evoked Myogenic Potential [VEMP] testing, with interpretation and report; cervical [cVEMP]) with comparable audiologist work and 20 minutes of intra-service time is valued at 0.78 work RVUs providing a strong comparison for this recommended valuation. In addition, the recommended work RVU is supported by clinical complexity, cognitive workload, and high level of professional skill, use of highly specialized equipment, and engagement required to perform the Staggered Spondaic Word test.

The expert panel also considered the 25th percentile for work RVUs of 0.53 and believes that this undervalues a procedure with 20 minutes of intra-service work and would create a rank order anomaly, not only with the audiology family of codes, but also within the entire CPT code set.

Staggered Spondaic Word testing requires specialized administration of dichotic speech stimuli, monitoring response accuracy, and interpretation of results to evaluate central auditory processing and binaural integration.

Comparison to Key Reference Services Codes

The work RVUs of the key reference service (KRS) codes further support this recommendation. The first KRS code 92620, with 60 minutes of intra-service time is valued at 1.50 RVUs and second KRS code 92588, with 17 minutes of intra-service time is valued at 0.55 RVUs. It is likely that CPT code 92620 was selected by those completing the survey because the SSW is often included as a key component test within a 60-minute auditory processing evaluation. Respondents would likely be most familiar with this code, and therefore, CPT code 92620 provides a clinically relevant benchmark for assessing the relative work of CPT 92572. In addition, the survey results demonstrate that the overall intensity and complexity of the Staggered Spondaic Word test are identical or greater than those of both key reference services, supporting a valuation of 0.78 RVUs. A detailed review of the intensity and complexity data shows that 100% of respondents rated the service as equal to or greater than KRS 2 with respect to overall mental effort and judgment, technical skill, and overall psychological stress further validating the proposed work RVU.

Comparison to Other codes

The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for CPT code 92572.

CPT Code	Descriptor	RVW	IWPUT	Total Time	Adjusted Total Time	Pre	Intra	Adj intra time	Post	Note
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.0234	19	19	2	15	15	2	MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☒ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. We anticipate CPT code 92572 will typically be billed together with 92557, 92588, and 92571 as this represents one component of a comprehensive audiologic test battery. These services were structured as a continuum of diagnostic assessments, typically beginning with a comprehensive hearing evaluation (92557), followed by additional testing when warranted based on the patient's presentation and initial findings.

   Although performed during the same encounter, these are distinct diagnostic services requiring separate clinical judgment, test administration, interpretation, and documentation. Prior AMA CPT Assistant guidance (March 2005 and August 2014) supports the appropriate reporting of individual audiologic testing services when performed as part of a comprehensive evaluation.

   The pre- and post-service work associated with each service—including equipment preparation and calibration, patient set-up, test performance, interpretation of results, and documentation—has been considered and accounted for in the prior and proposed valuation process and should not be viewed as duplicative when multiple tests are appropriately performed. Each code reflects the unique professional work required to obtain and interpret clinically meaningful information that contributes to diagnosis and management decisions. Note: see: references - AMA CPT Assistant. March 2005, AMA CPT Assistant. August 2014.

   Typical clinical scenario - A 12-year-old child with normal peripheral hearing sensitivity, as confirmed by a comprehensive audiometric evaluation, presented with complaints of difficulty understanding speech in the presence of background noise and frequent confusion of phonetically similar words. The patient's parents report that background noise must be minimized for the child to consistently understand spoken communication and indicate that similar listening difficulties had been reported by the child's classroom teacher. Despite normal peripheral auditory function, the reported symptoms were suggestive of a central auditory processing deficit. Therefore, the Staggered Spondaic Word (SSW) test was administered to assess binaural integration and dichotic listening abilities.

   Please see the CPT code information below (Code, Global Period, sWRVU, Pre, Intra, Post times, Billed together data):

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92572

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Audiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2,505
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by three.

Specialty Audiology Frequency 2,505 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 835
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. These estimates are based on 2024 Medicare utilization data for CPT codes 92572 from the AMA RUC database.

Specialty Audiology Frequency 835 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
Hearing and speech services

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 92572

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 92571, 92572

SPECIALTY SOCIETY(IES): American Academy of Audiology and American Speech-Language-Hearing Association

PRESENTER(S): Erin L. Miller, AuD., Deb Carlson, PhD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
92571	Filtered Speech Test	XXX
92572	Staggered Spondaic Word Test	XXX
92576	Synthetic sentence identification test	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92571	A 12-year-old male with suspected auditory processing disorder and normal hearing sensitivity undergoes a Filtered Speech Test (FST).
92572	A 12-year-old male with suspected auditory processing disorder and normal hearing sensitivity undergoes the Staggered Spondaic Word (SSW) test.
92576	N/A

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AAA and ASHA convened an RVS expert panel of the surveying of specialty societies and clinical experts to review practice expense data for codes 92571, 92572 and 92576.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   It was determined to utilize the current direct PE inputs as our reference code. 92576 is proposed for deletion.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   N/A
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Audiology is the dominant provider in the non-facility setting – 92571 – 89.7%; 92572 – 100%. 92576 is being proposed for deletion.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

b. Service period (includes pre, intra and post):

N/A

c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 92571, 92572

SPECIALTY SOCIETY(IES): American Academy of Audiology and American Speech-Language-Hearing Association

PRESENTER(S): Erin L. Miller, AuD., Deb Carlson, PhD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Please note that we are including an updated invoice for equipment items EQ053 and EQ054. Equipment items have not changed, just updated, paid invoice pricing.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life for EQ053 should remain 10 years; the useful life for EQ054 should remain 15 years

22. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

Equipment Code	Equipment Description	Cost Per Minute Formula	Rationale
EQ054	audiometric soundproof booth (exam and control rooms)	Default	Updated existing formula with current invoice. Note equipment time reflects Audiologist time to perform test which is now captured in work not PE.
EQ053	audiometer, clinical-diagnostic	Default	Updated existing formula with current invoice. Note equipment time reflects Audiologist time to perform test which is now captured in work not PE.

ADDITIONAL INFORMATION

23. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Supply Code	Supply	Cost Per Item	92571 Now	92571 Proposed	92572 Now	92572 Proposed	92576 Now	92576 Proposed Deletion	Rationale
SK008	audiology scoring forms	0.12	1	1	1	1	1	0	Maintain necessary forms for scoring
SD044	ear tip, earphone	0.62	0	2	0	2	0	0	Add 1 per ear to deliver of sound during diagnostic service

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 92571, 92572

SPECIALTY SOCIETY(IES): American Academy of Audiology and American Speech-Language-Hearing Association

PRESENTER(S): Erin L. Miller, AuD., Deb Carlson, PhD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

26. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: QHP Inappropriately Included in Direct PE Inputs

September 2026

Ear Protector Attenuation Measurements – Tab 14D

At the September 2025 RUC meeting, a RUC member requested review of CPT codes that have L052A *Audiologist* as clinical staff in the direct practice expense. Audiology has been able to independently bill Medicare since 2008 and therefore should no longer be accounted for in the direct practice expense inputs as clinical staff. At the same time as this review, the direct practice expense should be examined to identify any other qualified health care professionals captured in the clinical labor staff to ensure that time is appropriately counted in the work component. At the April 2026 meeting, the specialty societies indicated that these services would be surveyed for the September 2026 meeting.

Compelling Evidence
The specialty societies presented compelling evidence based on incorrect assumptions made in the previous valuation of the service by either the RUC or CMS. According to Medicare utilization data, the majority of claims for this service are reported by audiologists, who account for the majority of utilization, followed by otolaryngologists. Historically, audiologist time associated with furnishing this service has been captured as clinical labor within the Practice Expense (PE) methodology.

However, because audiologists are authorized to bill Medicare independently for these services, their time and professional work should no longer be accounted for as clinical labor under PE. Instead, the professional work performed by audiologists in furnishing this service should be appropriately captured and incorporated into the professional work component and removed from the practice expense component. Currently, audiologists perform not only the procedure itself but also the interpretation of findings, preparation of the report, and coordination of appropriate referrals. Historically, these professional activities were attributed to the physician work component and did not recognize or account for the work performed by audiologists. The valuation should appropriately acknowledge the full scope of professional services now provided by audiologists. **The RUC HCPAC Review Board accepted compelling evidence based on incorrect assumptions for CPT code 92596.**

92596 ***Ear protector attenuation measurements***
The RUC HCPAC reviewed the survey results from 48 audiologists and recommends a work RVU of 0.57 based on the survey median, which maintains relativity within the MFS. The RUC HCPAC recommends 5 minutes of pre-service evaluation time, 15 minutes intra-service time, and 5 minutes immediate post-service time, totaling 25 minutes. The professional organizations adjusted the pre- and post-service times to reflect multiple procedures performed by the same provider, on the same patient, on the same day.

This procedure is rarely performed by audiologists in the Medicare population. It evaluates how effectively ear protection reduces noise/sound levels when worn by an individual. The measurement, known as the personal attenuation rating (PAR), represents the difference in sound intensity measured with the hearing protector in place compared to the level measured without it.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

To support the recommended work RVU, the RUC HCPAC compared the surveyed code to the top key reference service codes 92588 *Distortion product evoked otoacoustic emissions; comprehensive diagnostic evaluation (quantitative analysis of outer hair cell function by cochlear mapping, minimum of 12 frequencies), with interpretation and report* (work RVU = 0.55, 16.5 minutes intra-service, and 22.5 minutes total time). The surveyed code and key reference code require similar intra-service and total time and should therefore be valued similarly.

For additional support, the RUC HCPAC referenced MPC code 29580 *Strapping; Unna boot* (work RVU = 0.54, 10.73 minutes intra-service, and 22.73 minutes total time). The surveyed code involves more intra-service time and total time, which makes it appropriate that the recommended work RVU for the surveyed code is higher. **The RUC HCPAC recommends a work RVU of 0.57 for CPT code 92596.**

Practice Expense
Acknowledging the removal of L052A *Audiologist* from the PE inputs, the Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC HCPAC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Special Otorhinolaryngologic Services** **Audiologic Function Tests** *The audiometric tests listed below require the use of calibrated electronic equipment, recording of results, and a report with interpretation. Hearing tests (such as whispered voice, tuning fork) that are otorhinolaryngologic evaluation and management services are not reported separately. All services include testing of both ears. Use modifier 52 if a test is applied to one ear instead of two ears.*			
92596	Ear protector attenuation measurements	XXX	0.57 (2026 Work RVU = 0.00)

CPT Descriptor: Ear protector attenuation measurements

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 22-year-old male with ongoing exposure to hazardous noise levels requiring hearing protection is referred for objective ear protector attenuation measurements.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: eview previous history, including noise exposure, test results and referral information. Enter and verify the patient's information in the electronic health record (EHR) system. Greet the patient and escort them to the sound booth for testing. Confirm any recent noise exposure within the preceding 24 hours and document use and type hearing protection.

Description of Intra-Service Work: Otoscopic exam is completed. The QHP verifies the physical fit of the hearing protection devices (HPD), instructs the patient on proper insertion, and confirms that the patient can correctly insert the devices independently, for optimal hearing protection. Baseline sound field hearing threshold responses are completed in the audiologic test booth without noise protection in place. Sound field threshold measurements are repeated with noise protection devices inserted by the QHP, in passive reduction mode. When indicated, responses are measured again with active (electronic) reduction turned on. The QHP removes the HPD and instructs the patient to insert the devices. Sound field threshold measurements are repeated in passive reduction mode. When indicated, responses are measured again with active (electronic) reduction turned on. Response levels for all test conditions are recorded and compared to manufacturer's specifications for the specific HPD. Any differences between the QHP's insertion and the patient's insertion of the device are reviewed to determine if further instruction may result in improved attenuation. Test results are discussed with the patient and adequacy of the patient inserted HPD is determined. When indicated (e.g., HPD does not provide optimal noise reduction), new impressions are taken for custom devices, or alternative non-custom hearing protection products are discussed with the patient. Review appropriate device cleaning, maintenance, and care procedures with the patient. The findings are interpreted and integrated into the formal diagnostic report to inform clinical decision-making and management.

Description of Post-Service Work: Evaluation results are reviewed with the referral source to support appropriate clinical management and patient care decisions. New HPD devices are ordered when indicated. The report is reviewed, signed, and entered into the patient medical record.

SURVEY DATA

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	88%	12%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
The Relativity Assessment Workgroup (RAW) identified CPT code 92596 as a part of the 26 services with QHP time included in the clinical staff direct PE inputs. Upon review of the history of these codes, AAA and ASHA noted that none of them have associated vignettes, procedural descriptions, nor have been surveyed. In addition, the audiologist's time is currently included within the clinical staff time for direct practice expense inputs rather than in work RVU for these codes.

CPT code 92596 describes ear protection attenuation measures. This procedure evaluates how effectively ear protection reduces noise/sound levels when worn by an individual. The measurement, known as the Personal Attenuation Rating (PAR), represents the difference in sound intensity measured with the hearing protector in place compared to the level measured without it.
Research shows that individuals can achieve widely varying levels of attenuation with the same model of hearing protectors in real-world settings. The PAR often differs significantly from the Noise Reduction Rating (NRR), which is the attenuation rating provided by the manufacturers of the hearing protection devices. A major contributor to this variability is the difference in how well individuals are trained and how proficient they are at correctly inserting their

hearing protectors. Another significant source of variation comes from anatomical differences, such as ear canal size and curvature, which may require individuals to switch to a different hearing protector model to obtain a proper fit. Without measuring the attenuation provided by their hearing protection, an individual cannot determine whether their exposure puts them at risk for noise/sound induced hearing loss.

Compelling Evidence
The expert panel believes there is compelling evidence for an increase in the current **work RVU from 0.00 to 0.57** for the following reasons:

1. ***Evidence that incorrect assumptions were made in the previous valuation of the service by either the RUC or CMS, as documented, such as: a misleading vignette, survey and/or flawed crosswalk assumptions in a previous valuation, and***
2. ***Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to changes in physician time, as described below:***

- According to Medicare utilization data, the plurality of the billing is from audiology (95.9%) followed by otolaryngology (3.1%). Audiology time is currently captured as clinical labor in practice expense inputs. However, audiologists now bill Medicare independently, and audiology time should not be captured under practice expense. As such, audiology time should be accounted for in professional work.
- CPT code 92596, which is currently used to capture these services, has never been surveyed, and does not have a clinical vignette or a detailed description of the procedure. This omission likely skewed perceptions of provider involvement and failed to convey the actual cognitive complexity, clinical judgment, and interpretive workload required.

Expert Panel Recommendations
An expert panel of audiologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

The expert panel recommends the median work RVU of 0.57 and the pre-service time of 5 minutes, median intra-service time of 15 minutes, and post-service time of 5 minutes.

Survey Sample
The survey data and recommendations are based upon a random sample of AAA and ASHA membership. A total of 3948 surveys were sent to a random sample of AAA and ASHA's audiology members to survey ear protection attenuation measurement test. A total of **48** completed responses were received for this specific code.

Time
The expert panel recommends ***pre-service time of 5 minutes, intra-service time of 15 minutes and post-service time of 5 minutes for a total of 25 minutes.*** This recommendation is well supported, as the current practice expense inputs already capture 43 minutes of audiology clinical labor time (L052A) within intra-service time. By comparison, the recommended professional work time represents a reduction from the time currently reflected in the PE inputs and remains lower even when the audiology time is appropriately accounted for under professional work.

Pre- and Post-service Times: The expert panel believes that pre-service time of 5 minutes is adequate to perform pre-service related activities. Even though the survey post-service time is 9 minutes, the expert panel believes that 5 minutes of post-service time is adequate to complete post-service-related activities.

Intra-Service Time: The expert panel recommends 15 minutes of intra-service time which is the median survey value. The expert panel believes that this is adequate time to complete the intra-service portion of the procedure. This is a reduction from the audiologist's time captured for intra-service time under PE inputs as stated above.

Work RVU
The expert panel recommends the **median work RVU of 0.57** and affirmed that it is appropriate, accurately capturing the clinical intensity and professional effort involved in ear protection attenuation measures, especially given that the audiologist's work was historically captured under PE will now be captured under the work component. This valuation also supports appropriate rank order within similar codes with similar intra-service times.

During Personal Attenuation Rating (PAR) testing, the patient initially inserts the hearing protection device (HPD) without training. If preliminary tonal presentations indicate that the expected level of attenuation is not being achieved, the QHP pauses the procedure to provide additional instruction on proper HPD insertion and PAR testing is repeated. If

proper attenuation is still not achieved, the QHP will insert the device and repeat PAR testing once again. Comparing the results from the patient-inserted and QHP-inserted measurements helps determine whether reduced attenuation is due to inadequate insertion technique or limitations of the HPD itself. If attenuation values remain poorer than expected, the QHP reevaluates the patient's ear canal anatomy and device fit. This assessment determines whether a different type of HPD is recommended or whether the current device requires remanufacturing to achieve the proper insertion depth within the ear canal to provide adequate attenuation.

In addition, the recommended work RVU is supported by clinical complexity, cognitive workload, high level of professional skill, use of highly specialized equipment, and engagement required to perform ear protection attenuation measurement testing.

The expert panel also considered the 25th percentile for work RVUs of 0.43 and believes that this undervalues this procedure and would create a rank order anomaly, not only with the audiology family of codes, but also within the entire CPT code set, given the complexity and intensity of the work required to complete this procedure.
Ear protection attenuation measurement testing requires specialized equipment to measure real-ear attenuation, verify the effectiveness of hearing protection devices, and interpret results to ensure appropriate noise exposure reduction

Comparison to Key Reference Services Codes
The work RVUs of the key reference service (KRS) codes further support this recommendation. The first KRS code 92588, with 17 minutes of intra-service time is valued at 0.55 RVUs and second KRS code 97530, with 15 minutes of intra-service time is valued at 0.44 RVUs. In addition, the survey results demonstrate that the overall intensity and complexity of the ear protection attenuation measurement test are identical or greater than those of both reference services, supporting a valuation of 0.57 RVUs. Notably, a detailed review of the intensity and complexity data shows that 100% of respondents rated the service as equal to or greater than KRS 1 and KRS 2 with respect to overall mental effort and judgment, technical skill, and overall psychological stress, further validating the proposed work RVU.

Comparison to Other codes
The following table outlines the key reference service, MPC, and other comparison codes to illustrate relativity and support the requested values for time and professional work for CPT code 92596.

CPT Code	Descriptor	RVW	IWPUT	Total Time	Adjusted Total Time	Pre	Intra	Adjusted Intra Time	Post	Note
97610	Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day	0.39	0.0098	26	25.63	6	15	14.63	5	
97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes	0.44	0.0234	19	19	2	15	15	2	KRS 2 MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. CPT code 92596 is expected to be reported as a stand-alone service. Based on current clinical practice and utilization patterns, we do not anticipate that this service will be routinely furnished or reported in conjunction with other audiologic procedures during the same patient encounter. Accordingly, no typical companion codes have been identified for this service.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92596

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Audiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 294
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by three.

Specialty Audiology Frequency 282 Percentage 95.91 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 98 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. These estimates are based on 2024 Medicare utilization data for CPT codes 92596 from the AMA RUC database.

Specialty Audiology Frequency 94 Percentage 95.91 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
Hearing and speech services

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 92596

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S): 92596**
SPECIALTY SOCIETY(IES): American Academy of Audiology and American Speech-Language-Hearing Association
PRESENTER(S): Erin L. Miller, AuD., Deb Carlson, PhD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
92596	Ear Protector Attenuation Measurements	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92596	A 22-year-old male with ongoing exposure to hazardous noise levels requiring hearing protection is referred for objective ear protector attenuation measurements.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AAA and ASHA convened an RVS expert panel of the surveying specialty societies and clinical experts to review practice expense data for codes 92596.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   It was determined to utilize the current direct PE inputs as our reference code.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   N/A
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Dominant provider for each code is Audiology –

   92596 – Audiology 95.9%
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.
   N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:
   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:
   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:
   N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:
    b. Service period (includes pre, intra and post):
    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly*

related to physician work time or *Perform procedure/service---NOT directly related to physician work time:*

N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

Please note that we are including an updated invoice for equipment items EQ053 and EQ054. Equipment items have not changed, just updated, paid invoice pricing.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life for EQ053 should remain 10 years; the useful life for EQ054 should remain 15 years

22. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

Equipment Code	Equipment Description	Cost Per Minute Formula	Rationale
EQ054	audiometric soundproof booth (exam and control rooms)	Other	Updated existing formula with current invoice. Note equipment time reflects Audiologist time to perform test which is now captured in work not PE.
EQ053	audiometer, clinical-diagnostic	Other	Updated existing formula with current invoice. Note equipment time reflects Audiologist time to perform test which is now captured in work not PE.

ADDITIONAL INFORMATION

23. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Supply Code	Supply	Cost Per Item	92596 Now	92596 Proposed	Rationale
SK008	audiology scoring forms	0.12	1	1	Maintain necessary forms for scoring
SD044	ear tip, earphone	0.62	0	2	Add 1 per ear to deliver of sound during diagnostic service

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

26. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

Subject: HCPAC Review Board Recommendations

Dear Administrator Oz:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendation to the Centers for Medicare and Medicaid Services (CMS). At the September 24, 2026, meeting, the following issues were reviewed by the HCPAC:

- Laryngeal Function Studies (92520)
- Stenger Tests (92565, 92577)
- Complex Listening Tests (92571, 92572, 92576)
- Ear Protector Attenuation Measurements (92596)

The above issues were identified via the Relativity Assessment Workgroup (RAW) as potentially misvalued. The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2028 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Katlyn Palmer (ph: 312-464-5576; email: Katlyn.Palmer@ama-assn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

Peter Hollmann, MD
HCPAC Chair

Leisha Eiten, AuD
HCPAC Co-Chair
