RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
26770	**Closed treatment of interphalangeal joint dislocation, single, with manipulation; without anesthesia**	Emergent Procedures / Emergency Medicine 010-090 Day Global Periods	September 2026	AAOS, ACEP, and orthopaedic subspecialties	May 2027

Background: In January 2026, during discussion of the action plan for 25605 identified via the Different Performing Specialty from Survey screen, the Relativity Assessment Workgroup questioned why code 25605 is performed by Emergency Medicine physicians more than 50% of the time when it has a 090-day global period and it is questionable if Emergency Medicine physicians would be performing the post-operative visits. The Workgroup requested AMA staff to run the data for 010 and 090-day global period services performed by Emergency Medicine >50% to review at the April 2026 meeting and determine if these services need further discussion and action plans for the September 2026 RAW meeting. AMA staff identified 31 codes that have a 010 or 090-day global period with Emergency Medicine performing more than 50% of the time. Of these 31 codes, all but one service is Harvard valued and has not yet met that screen utilization threshold and only 6 codes have more than 1,000 in Medicare utilization in 2024. The Workgroup reviewed the data and determined that specialty societies should submit action plans for the 6 codes identified (23650, 26770, 27265, 27810, 27818 and 27840) with 2024 Medicare utilization over 1,000. In September 2026, the RUC agreed with the specialty societies and recommended to refer to the CPT Editorial Panel (May 2027) to revise the descriptors to specify that code 26770 which can be performed in an office includes treatment performed with local anesthesia, including a digital block, and reserve the anesthesia-designated code for treatment requiring general anesthesia or moderate sedation.

33361	**Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; percutaneous femoral artery approach**	RAW Flag - Co-surgeon status / New Technlogy-New Services List	September 2025	AATS, ACC, SCAI, STS	February 2027

Background: CPT codes 33361-33366 were on the New Technology/New Services list and noted in the RUC database as “Do not use to validate physician work” because of the unique co-surgery status for 33361-33366 and that CPT code 33364 did not meet the survey threshold of 30 responses. In April 2025, the Relativity Assessment Workgroup (RAW) reviewed three years of available Medicare claims data (2021, 2022 and 2023). The RUC recommended that these services should be surveyed for September 2025. The patient population has changed on who is receiving these services and it is no longer the sickest, most complicated patients, but will be available to more candidates and these services may be used to treat aortic regurgitation. In September 2025, the specialty societies request that these services be referred to CPT to delete or revise the codes to address changes in the approaches utilized for the procedures prior to re-surveying them. As such, the specialty societies did not survey the TAVR codes for the September 2025 RUC meeting and plan to submit a code change application to CPT by the November 3, 2025, deadline for review at the February 2026 CPT meeting. The RUC agreed and recommended CPT codes 33361-33366 be referred to the CPT Editorial Panel for the February 2026 meeting. In February 2026, the specialty societies indicated that they are waiting on some data requested from the TVT Data registry to help provide information on the coding changes and vignettes. In addition, the TAVR NCD has been opened for re-consideration. The specialties plan to meet to discuss the implications and the timeline given the TAVR NCD is now under re-consideration.

37184	**Primary percutaneous transluminal mechanical thrombectomy, noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injection(s); initial vessel**	High Volume Growth12	September 2026	ACC, ACR, OEIS, SCAI, SIR, SVS	May 2027

Background: In April 2026, the Workgroup identified CPT code 37184 code via the high volume growth screen with Medicare utilization of 10,000 or more that has increased by at least 100% from 2019 through 2024. The Workgroup requested that the specialty societies submit an action plan for September 2026. In September 2026, the RUC agreed with the specialty societies to refer to the CPT Editorial Panel (May 2027) for revision. This service has expanded to be a commonly performed endovascular treatment and increased since it is a minimally invasive percutaneous approach. The specialty societies request referral to the CPT Editorial Panel to create separate codes for pulmonary artery and systemic artery thrombectomy. The RAW noted that 36015 is typically reported with 37184 76.9% of the time based on 2024 Medicare data and should be bundled into this service as well. (CPT codes 37185 and 37186 listed as part of the family).

44950	**Appendectomy;**	Site of Service Anomaly - 2025	September 2025	ACS, APSA, ASCRS (colon), SAGES	February 2027

Background: In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 44970 Laparoscopy, surgical, appendectomy as a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. These services were placed directly on the level of interest form to survey for September 2025. The RAW also worked with the specialty societies and identified codes 44950, 44955 and 44960 as part of this family of services. In September 2025, the specialty societies indicated that the ACS National Surgical Quality Improvement Program (NSQIP®) and NSQIP® Pediatric database analysis revealed considerable variability in both length of hospital stay and operative time for appendectomy procedures, influenced by multiple factors such as surgical approach, patient age, whether the disease was complicated or uncomplicated, and whether the surgery was performed as an interval appendectomy or for tumor. In light of these findings, the specialty societies indicated that new and revised codes are needed to more accurately describe and differentiate physician work. The specialty societies indicated they will submit a CPT code change application for the CPT 2028 cycle. The RUC agreed and recommended that codes 44950, 44955, 44960 and 44970 be referred to the CPT Editorial Panel for revision for CPT 2028, preferably by the May 2026 CPT meeting/September 2026 RUC meeting. The specialty societies submitted a CCA for the February 2026 CPT meeting that was not supported. The specialty societies will resubmit for the September 2026 CPT meeting.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
44955	**Appendectomy; when done for indicated purpose at time of other major procedure (not as separate procedure) (List separately in addition to code for primary procedure)**	Site of Service Anomaly - 2025	September 2025	ACS, APSA, ASCRS (colon), SAGES	February 2027

Background: In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 44970 Laparoscopy, surgical, appendectomy as a site of service anomaly where Medicare data from 2021-2023 indicated it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. Background: In April 2026, the Workgroup identified this code via the high volume growth screen with Medicare utilization of 10,000 or more that has increased by at least 100% from 2019 through 2024. The Workgroup requests that the specialty societies submit an action plan for September 2026. In September 2026, the RUC agreed with the specialty societies to refer to CPT Editorial Panel (May 2027). The specialty societies indicated that the technology has changed since 2009. For example, in 2008, the TAVR procedure did not exist, as well as other valve procedures that are standard practice in 2026. In addition, there have also been significant changes in distribution/breadth of types of cases, raising the question of whether there should be more or less granularity with regards to the codes. There has also been significant Software as a Medical Service (SaMS) in this space which might need more appropriate integration into the code set.

90868 **Therapeutic repetitive transcranial magnetic stimulation (TMS) treatment; subsequent delivery and management, per session**

Screen	RUC Meeting	Specialty Society:	CPT Meeting
Contractor Priced High Volume / Contractor Priced High Volume2 / Medicaid High Volume Growth1	September 2026	APA (psychiatry)	May 2027

Background: In October 2018, the RUC noted that these services (90867, 90868 and 90869) were identified on the new technology list for review. The Workgroup agreed with the specialty that technology for these services is still evolving. Two FDA modifications were recently approved and the new coil will significantly reduce the time required to perform these services. The RUC recommended these services be reviewed again in 2 years (Oct 2020). In October 2020, the Workgroup noted that this issue is also under review at this meeting via the new technology/new services screen. The Workgroup agreed that the CMS practice expense methodology issues as the specialty society outlined in their action plan still exist. The coil technology continues to change with treatment for depression and OCD, which involve different equipment. The codes continue to grow exponentially, especially CPT code 90868. The specialty society indicated that the typical course of treatments per patient is 36, therefore the 2019e Medicare utilization of 238,754 represents approximately 6,600 patients. The Workgroup agreed that the physician time, clinical staff time and direct practice expense inputs continue to change for transcranial magnetic stimulation (TMS) and to survey now may be premature. The Workgroup recommended that codes 90867-90869 maintain on the screens in which they were identified (Contractor Priced High Volume and New Technology/New Services) and the Workgroup will review again in 3 years. When these codes are moved from contractor priced to the assignment to RVUs the issues around the direct to indirect practice expense ratio specific to codes 90867-90869 should be addressed. In April 2022, the Workgroup identified this service as Contractor Priced High Volume again. The Workgroup requested that the specialty societies submit an action plan for September 2022. In September 2022, the RUC recommended that this service remain contractor priced. This service is also on New Technology/New Services list and the Workgroup will review again in 3 years (April 2024). When these codes are moved from contractor priced to the assignment to RVUs the issues around the direct to indirect practice expense ratio specific to codes 90867-90869 should be addressed. In April 2024, the Workgroup recommended to review in September 2024 with an update from the specialty society. The specialties indicated that there are changes in protocol for these services and coding changes are necessary. These codes are also contractor priced. The Workgroup questioned what specific coding changes would be included in a CCA. The specialty society will return at the next meeting to elaborate on the coding changes necessary. The specialty societies should also consider any Category III codes that are related to these services when drafting their CCA. In September 2024, the specialty societies submitted an action plan requesting that codes 90867-90869 be referred to CPT Editorial Panel to modify the existing codes as well as develop a technology agnostic code or set of codes for the May 2025 CPT meeting/September 2025 RUC meeting. The RUC recommended that 90867-90869 be referred to CPT May 2025 meeting. In April 2024, AMA staff inquired why a CCA has not been submitted and the specialty society indicated they intend to submit a CCA for the September 2026 CPT meeting. In April 2026, the Workgroup identified this service with Medicaid utilization of 10,000 or more that has increased by at least 100% from 2019 through 2024. The Workgroup requests that the specialty societies submit an action plan for September 2026. In September the RAW recommended to maintain this servie noting that it was previously identified on Contractor Priced High Volume and New Technology/New services screens and is referred to CPT. A CCA was submitted for Sept 2026 CPT meeting, however, it was withdrawn. The specialty societies plan to submit a new CCA for the May 2027 CPT meeting.

92015 **Determination of refractive state**

Screen	RUC Meeting	Specialty Society:	CPT Meeting
RUC Reviewed Greater than 20 years ago and Medicaid Util over 1 million	September 2026	AAO, AOA (optometry)	February 2027

Background: In April 2026, the Workgroup identified CPT code 92015 via the RUC reviewed more than 20 years ago (prior to 2006) with 2024 Medicaid over 1 million in claims screen. The Workgroup requested that the specialty societies submit an action plans for September 2026. In September 2026, the RUC agreed with the specialty societies to refer to the CPT Editorial Panel (Feb 2027) to splite 92015 into two codes specific for cycloplegic refraction and manifest refraction, non-cycloplegic.

92576 **Synthetic sentence identification test**

Screen	RUC Meeting	Specialty Society:	CPT Meeting
QHP Included in Clinical Staff Direct PE Inputs	September 2026	AAA, ASHA	February 2027

Background: In September 2026, the surveying professional organizations and HCPAC agreed to refer CPT code 92576 to the CPT Editorial Panel for deletion. CPT code 92576 was reported by only 11 practitioners across eight unique practices in CY 2024, representing 1,193 fully adjudicated Medicare claims. Further, this specific test is no longer included in training curricula, as other diagnostic tests are now used to obtain comparable diagnostic information. The HCPAC Review Board recommends that CPT Code 92576 be referred to the CPT Editorial Panel for deletion.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
93325	**Doppler echocardiography color flow velocity mapping (List separately in addition to codes for echocardiography)**	CMS Request - Practice Expense Review / CMS-Other - Utilization over 250,000 / CMS-Other - Medicaid Utilization over 20,000 Part1	January 2014	ACC	May 2027

Background: In April 2026, the RAW identified CPT codes 93303 and 93304 via the CMS/Other source and 2024 Medicaid utilization over 20,000 screen. The Workgroup requested an action plan for September 2026. In September 2026, the RUC agreed with the specialty societies to refer to the CPT Editorial Panel (May 2027) to create a bundled coding structure that incorporates the work currently reported with CPT codes 93303, 93320, and 93325. (Code family listed as 93303, 93304, 93320, 93321 and 93325).

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
93355	**Echocardiography, transesophageal (TEE) for guidance of a transcatheter intracardiac or great vessel(s) structural intervention(s) (eg, TAVR, transcatheter pulmonary valve replacement, mitral valve repair, paravalvular regurgitation repair, left atrial appendage occlusion/closure, ventricular septal defect closure) (peri-and intra-procedural), real-time image acquisition and documentation, guidance with quantitative measurements, probe manipulation, interpretation, and report, including diagnostic transesophageal echocardiography and, when performed, administration of ultrasound contrast, Doppler, color flow, and 3D**	High Volume Growth11	January 2026	ACC, ASA, ASE, SCAI	February 2027

Background: In April 2025, the Relativity Assessment Workgroup identified this service via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies should submit action plans for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to survey for January 2026. At the January 2026 meeting, the specialty societies requested that CPT code 93355 be referred to the CPT May 2026 meeting to create a more granular framework to capture physician work and role delineation across practice settings (i.e., interventional imagers, structural heart operators and anesthesiology teams). The specialty societies believe the service has changed and the current code no longer represents how interventional transesophageal echocardiography (TEE) is currently performed. The RUC agreed and recommends that CPT code 93355 be referred to CPT for the May 2026 CPT Editorial Panel meeting. In May 2026, the specialty societies withdrew their application based on reviewer feedback from the CPT Editorial Panel. The specialty societies expect forthcoming peer-reviewed publications to directly address the outstanding issues raised during review—particularly those related to definitional differences. The specialty societies will incorporate emerging evidence into a strengthened resubmission that fully responds to the concerns identified.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
95249	**Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; patient-provided equipment, sensor placement, hook-up, calibration of monitor, patient training, and printout of recording**	High Volume Growth2 / High Volume Growth11 / QHP Included in Clinical Staff Direct PE Inputs	April 2026	AACE, ANA, ES	May 2027

Background: In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 95251 with Medicare utilization of 10,000 or more that has increased by at least 100% from 2018 through 2023. The RAW reviewed the action plan and the RUC recommended that CPT code 95251 along with the family of services be surveyed for the January 2026 RUC meeting. In January 2026, the specialty societies requested that the continuous glucose monitoring codes (95249, 95250 and 95251) be referred to the CPT Editorial Panel to be revised to reflect the advances in diabetes technology. The major change in technology is how the continuous glucose monitoring devices interact and work with insulin pumps. The RUC recommends CPT codes 95249, 95250 and 95251 be referred to the September 2026 CPT Editorial Panel meeting. The tab was postponed until time uncertain.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
95250	**Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; physician or other qualified health care professional (office) provided equipment, sensor placement, hook-up, calibration of monitor, patient training, removal of sensor, and printout of recording**	High Volume Growth2 / Work Neutrality 2018 / High Volume Growth11 / QHP Included in Clinical Staff Direct PE Inputs	April 2026	AACE, ANA, ES	May 2027

Background: In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 95251 with Medicare utilization of 10,000 or more that has increased by at least 100% from 2018 through 2023. The RAW reviewed the action plan and the RUC recommended that CPT code 95251 along with the family of services be surveyed for the January 2026 RUC meeting. 95940	**Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)**	Codes Reported Together 75% or More-Part1 / CMS-Other Utilization over 20,000 Part4	September 2025	AAN, ACNS	May 2027

Background: In April 2025, the Relativity Assessment Workgroup identified G0453 via the CMS Other source with 2023 Medicare utilization over 20,000 screen. The specialty societies should submit action plans for review at the September 2025 RAW meeting to determine how to address this service and if current CPT codes exist to report these services described by the G code, new CPT codes should be created, or the G code should be surveyed. In September 2025, the RUC recommended to refer to CPT May 2026 to revise 95940 to include the services currently reported with G0453. There is not a current Category I CPT code to report intraoperative neurophysiology monitoring services outside the operating room, per patient, per 15 minutes. At the September 2026 CPT meeting, the this issue was withdrawn. The CPT Editorial Panel indicated that the proposed descriptor was not well-defined nor was clearly distinguished from existing procedures and services already in CPT and the structure and content of the proposed code descriptor does not accurately reflects the procedure or service as typically performed. There continues to be difficulty both in clearly defining the work and in presenting it in a way that would support CMS adoption of CPT codes in place of the HCPCS codes currently in use.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
95955	**Electroencephalogram (EEG) during nonintracranial surgery (eg, carotid surgery)**	Harvard Valued - Utilization over 30,000-Part7	September 2026	AAN, AAPM&R, ACNS	May 2027

Background: In April 2026, the Workgroup identified two Harvard-valued services with 2024 Medicare utilization over 30,000. The Workgroup requested action plans for September 2026. In September 2026, the RUC agreed with the specialty societies and recommends to refer to the CPT Editorial Panel (May 2027) for deletion of 95955 and instead instruction to report 95822.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
99291	**Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes**	RUC Reviewed Greater than 20 years ago and Medicare Util over 1 million	January 2026	ACEP, ACS, ASA, ATS, CHEST, SCCM, SHM	September 2027

Background: In September 2025, the Relativity Assessment Workgroup identified CPT code 99291 as not having been reviewed by the RUC in the last 20 years (prior to 2006) with 2023 Medicare utilization over 1 million. The Workgroup requested the specialty societies submit an action plan for review at the January 2026 meeting. In January 2026, the Workgroup reviewed the action plan for 99291 and agreed with the specialty societies that critical care services CPT codes 99291 and 99292 be referred to the CPT Editorial Panel for revision. The specialties typically providing these services have changed and these E/M services were not part of the revisions to E/M services that took place in 2019 and 2021. The Workgroup recommends CPT codes 99291 and 99292 be referred to the CPT Editorial Panel in September 2026 for revision. At the September 2026 CPT Editorial Panel, this issue was withdrawn in order to build consensus in the CCA.

RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
99292	**Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)**	RUC Reviewed Greater than 20 years ago and Medicare Util over 1 million	January 2026	ACEP, ACS, ASA, ATS, CHEST, SCCM, SHM	September 2027

Background: In September 2025, the Relativity Assessment Workgroup identified CPT code 99291 as not having been reviewed by the RUC in the last 20 years (prior to 2006) with 2023 Medicare utilization over 1 million. The Workgroup requested the specialty societies submit an action plan for review at the January 2026 meeting. In January 2026, the Workgroup reviewed the action plan for 99291 and agreed with the specialty societies that critical care services CPT codes 99291 and 99292 be referred to the CPT Editorial Panel for revision. The specialties typically providing these services have changed and these E/M services were not part of the revisions to E/M services that took place in 2019 and 2021. The Workgroup recommends CPT codes 99291 and 99292 be referred to the CPT Editorial Panel in September 2026 for revision. At the September 2026 CPT Editorial Panel, this issue was withdrawn in order to build consensus in the CCA.

Background: In April 2026, the Workgroup identified this code via the high volume growth screen with Medicare utilization of 10,000 or more that has increased by at least 100% from 2019 through 2024. The Workgroup requests that the specialty societies submit an action plan for September 2026. In September 2026, the RUC agreed with the specialty socities to refer to CPT Assistant for the specialty societies to develop an article to reinforce existing CPT guidance on appropriate use of the codes and reporting of the specific drug administered. When 96405/96406 are reported without a corresponding HCPCS drug code, claims data alone cannot determine whether the codes were reported appropriately. Reinforcing existing drug-reporting guidance, together with additional data collection, would allow future utilization to be evaluated in the context of the drugs being administered, providing a clearer understanding of what is driving utilization and whether those changes warrant further review of the codes.

Physician Time from RUC Meeting:
September 2026 (CPT 2028)

Detailed Description of Pre-Service Time Packages (Minutes)

		FACILITY				NON-FAC	
		1	2	3	4	5**	6
	Total Pre-Service Time	**20**	**25**	**51**	**63**	**8**	**23**
	CATEGORY SUBTOTALS						
A	Pre-Service Evaluation (IWPUT =0.0224)	13	18	33	40	7	17
B	Pre-Service Positioning (IWPUT = 0.0224)	1	1	3	3	0	1
C	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	6	15	20	1	5
	DETAILS						
A	History and Exam (Performance and review of appropriate Pre-Tests)	5	10	10	15	4	9
A	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2	2	4	1	1
A	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3	5	5	2	3
A	Communicate with other professionals	0	0	5	5	0	2
A	Check/set-up room, supplies and equipment	1	1	5	5	0	1
A	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1	5	5	0	1
A	Prepare/ review/ confirm procedure	1	1	1	1	0	0
B	Perform/ supervise patient positioning	1	1	3	3	0	1
C	Administer local/topical anesthesia	1	1	0	0	1	5
C	Observe (wait anesthesia care)	0	0	10	15	0	0
C	Dress and scrub for procedure	5	5	5	5	0	0

**If the procedure does not require local anesthesia, 1 minute should be removed from pre-service time

1 Straightforward Patient/Straightforward Procedure (No anesthesia care)
2 Difficult Patient/Straightforward Procedure (No anesthesia care)
3 Straightforward Patient/Difficult Procedure
4 Difficult Patient/Difficult Procedure
5 Procedure with minimal anesthesia care (If no anesthesia care deduct 1 minute)
6 Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect

Additional Positioning Times for Spinal Surgical Procedures

SS1	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
SS2	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
SS3	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
SS4	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
SS5	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

Additional Positioning Times for Spinal Injection Procedures

SI1	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
SI2	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
SI3	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
SI4	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

Additional Positioning Times for Urological Procedures

U1	Dorsal Lithotomy	5 Minutes

Notes:

- Roll-over cells for additional detail where available
- Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice

Detailed Description of Facility Based Post-Service Time Packages (Minutes)						
	7A Local Anesthesia/ Straightforward Procedure	**7B Local Anesthesia/ Complex Procedure**	**8A IV Sedation/ Straightforward Procedure**	**8B IV Sedation/ Complex Procedure**	**9A General Anesthesia or Complex Regional Block/ Straightforward Procedure**	**9B General Anesthesia or Complex Regional Block/Complex Procedure**
Total Post-Service Time	**18**	**21**	**25**	**28**	**30**	**33**
Details:

67516	Suprachoroidal space injection of pharmacologic agent (separate procedure)	Jan 2023	Suprachoroidal Injection	10	CPT 2024	April 2028	There is currently only one FDA-approved medication for this procedure, triamcinolone acetonide, and it is approved for only one indication: macular edema associated with uveitis. The relevant HCPCS code is J-3299. Medicare claims volume for this indication is expected to be low. However, if other drugs for more common indications obtain FDA approval, claims volume may grow substantially. Thus, CPT code 6X000 will be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. The RUC recommended that if there are new drugs that have an associated J-code that these also be considered by the Relativity Assessment Workgroup as part of the New Technology screen.	☐

78071	Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT)	Apr 2012	Parathyroid Imaging	23	CPT 2013	October 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid	☑

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2026

Injection Bone Substitute-Subchondral Defect – Tab 04

American Academy of Orthopaedic Surgeons

At the May 2026 meeting, the CPT Editorial Panel created two new codes to describe injections of bone-substitute material into subchondral bone defects in the knee using imaging guidance and each additional bone. The Panel also revised Category III code 0707T to report injections of bone-substitute material into subchondral bone defects, other than knee.

2XXX1 ***Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; first bone***

The RUC reviewed the survey results from 61 orthopaedic surgeons and determined the survey 25th percentile work RVU of 7.10 appropriately accounts for the work required to perform this service. The RUC recommends 30 minutes pre-evaluation time, 10 minutes pre-positioning time, 10 minutes scrub/dress/wait time, 45 minutes intra-service time, 15 minutes immediate post-service time, 0.5-99238, 2-99213 and 1-99212 post-operative visits as supported by the survey, totaling 191 minutes. Seven minutes have been added to the standard package time of 3 minutes to account for procedure-specific positioning, including supine placement on a radiolucent table, padding and positioning of the nonoperative leg outside the lateral fluoroscopic beam path, tourniquet placement, and operative-leg support or elevation sufficient to obtain unobstructed anteroposterior and true lateral fluoroscopic views. This time is consistent with arthroscopic knee procedures (e.g., CPT codes 29880, 29881).

CPT code 2XXX1 describes injections of bone-substitute material into the first bone. If the physician performs multiple injections on the same bone, this code is still only reported once. CPT code 2XXX2 describes injections of bone-substitute material into another bone. The RUC questioned the frequency with which a physician would perform these injections on two bones. The specialty societies indicated that there are only a few published studies available; therefore, based on expert opinion, it is estimated that only about one-third would be performed in two bones.

The RUC compared the surveyed code to the top key reference service 25606 *Percutaneous skeletal fixation of distal radial fracture or epiphyseal separation* (work RVU = 8.10, 43.88 minutes intra-service time and 258.88 minutes total time) and determined the surveyed code is more intense/complex to perform. CPT code 25606 describes percutaneous fixation of a distal radius fracture, and the surveyed code, which is for knee subchondroplasty, is significantly more intense/complex. It requires MRI-directed localization of a subchondral bone defect, continuous multi-plane fluoroscopic guidance, precise percutaneous cannula placement through cortical bone into cancellous bone, controlled injection of bone substitute material into the defect, and arthroscopic assessment for potential extravasation into the joint space. The procedure combines intraosseous intervention with arthroscopic visualization and ongoing imaging confirmation, creating substantially greater intensity, technical demand, and risk than CPT code 25606.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the second top key reference service 29881 *Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU = 6.85, 39 minutes intra-service time and 193 minutes total time) and determined the services are comparable because both are minimally invasive knee procedures performed with arthroscopic visualization, require specialized operative setup, and involve careful intraoperative decision-making to address the patient's pain-generating pathology. CPT code 29881 requires arthroscopic access, compartment-specific meniscal resection, and management of associated intra-articular pathology, while 2XXX1 requires arthroscopic assessment, fluoroscopic guidance, image-guided access to the subchondral bone, and controlled delivery of bone substitute material into a targeted defect. Although the anatomic target differs, both procedures demand precision, imaging support, and technical coordination in the same operative setting, making the overall intensity comparable. The slight difference in work RVUs between the recommended value for 2XXX1 and the current value for CPT code 29881 accounts for the slight difference in intra-service time.

For additional support, the RUC referenced codes 28120 *Partial excision (craterization, saucerization, sequestrectomy, or diaphysectomy) bone (eg, osteomyelitis or bossing); talus or calcaneus* (work RVU = 7.13, 48.75 minutes intra-service time and 249.75 minutes total time) and code 23120 *Claviculectomy; partial* (work RVU = 7.21, 43.88 minutes intra-service time and 225.88 minutes total time) and noted these services require similar physician work and time and demonstrate the appropriate relativity across the payment schedule. **The RUC recommends a work RVU of 7.10 for CPT code 2XXX1.**

2XXX2 ***Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; each additional bone (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 58 orthopaedic surgeons and a work RVU of 1.46, a direct crosswalk to CPT code 49412 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), open, intra-abdominal, intrapelvic, and/or retroperitoneum, including image guidance, if performed, single or multiple (List separately in addition to code for primary procedure)* (work RVU = 1.46, 19.5 minutes of intra-service and total time) appropriately accounts for the work required to perform this service. The RUC recommends 20.50 minutes intra-service and total time as supported by the survey.

The physician time required to perform CPT code 2XXX2 is much less than 2XXX1 because it is an add-on code. Therefore, the initial arthroscopy, incisions, inspecting the joint, and wound closure are all included in the physician work described by CPT code 2XXX1. CPT code 2XXX2 includes the incremental work of performing the injection and reviewing that area when the physician performs the "second look" arthroscopy.

The RUC compared the surveyed code to the second top key reference service 29826 *Arthroscopy, shoulder, surgical; decompression of subacromial space with partial acromioplasty, with coracoacromial ligament (ie, arch) release, when performed (List separately in addition to code for primary procedure)* (work RVU = 2.93, 39 minutes intra-service time and total time) and determined the surveyed code requires half the physician time and work, thus a work RVU of 1.46 for the surveyed code is appropriate.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC referenced codes 16036 *Escharotomy; each additional incision (List separately in addition to code for primary procedure)* (work RVU = 1.46, 19.5 minutes intra-service time and total time) and code 20700 *Manual preparation and insertion of drug-delivery device(s), deep (eg, subfascial) (List separately in addition to code for primary procedure)* (work RVU = 1.46, 19.5 minutes intra-service time and 26.5 minutes total time) and noted these services require similar physician work and time and demonstrate the appropriate relativity across the payment schedule. **The RUC recommends a work RVU of 1.46 for CPT code 2XXX2.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology
CPT code 2XXX1 and 2XXX2 will be placed on the New Technology/New Services list and be re-reviewed in three years to ensure correct valuation, patient population, and utilization assumptions.

SUMMARY OF RECOMMENDATION

CPT Code:2XXX1 Tracking Number D1 Original Specialty Recommended RVU: **7.10**
Presented Recommended RVU: **7.10**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **7.10**

CPT Descriptor: Descriptor: Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; first bone

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 54-year-old male presents with chronic knee pain associated with bone changes or joint degeneration. Magnetic resonance imaging demonstrates a bone marrow defect in the distal femur.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 25% , In the ASC 75%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prior to the procedure, the surgeon reviews the patient's MRI (T1 and T2 sequences) and radiographs to confirm the subchondral bone defect / bone marrow lesion, determine the treated compartment and lesion quadrant, correlate MRI coronal and sagittal planes with anticipated anatomic AP and true lateral fluoroscopic views, and plan the skin entry point, cannula trajectory, and target depth relative to the tibial plateau joint line. The surgeon interviews and examines the patient, updates and signs the H&P, confirms patient identity, operative site and side, reviews the consent and procedure-specific risks, and verifies availability of the bone-substitute delivery system, arthroscopy equipment, fluoroscopy, and radiolucent table setup. The surgeon assists with procedure-specific positioning, including supine placement on a radiolucent table, padding and positioning of the nonoperative leg outside the lateral fluoroscopic beam path, tourniquet placement if used, and operative-leg support or elevation sufficient to obtain unobstructed AP and true lateral fluoroscopic views. Before prep and draping, the surgeon confirms or adjusts fluoroscopic access as needed to assure accurate subchondral targeting with unobstructed orthogonal imaging and MRI-to-fluoroscopy correlation. The surgeon marks planned portal sites, prepares and drapes the leg, scrubs and gowns, and performs a comprehensive timeout and checklist review with the surgical team.

Description of Intra-Service Work: Incisions are made at the marked entry sites over the knee. Arthroscopy is performed to identify the target defect and assess the extent of the bone injury, then the arthroscope is removed. Using orthogonal fluoroscopic views, the defect is localized and the planned trajectory is confirmed relative to the preoperative MRI findings. A cannula is then drilled through the cortex into the cancellous bone under fluoroscopic guidance, with repeated AP and lateral imaging used to confirm entry point, trajectory, and depth. Fluoroscopy is used throughout cannula advancement to ensure accurate placement into the subchondral defect and to avoid malposition. Once the cannula is positioned appropriately, it is rotated to direct the delivery fenestrations toward the defect. Bone substitute material is mixed and injected through the cannula using steady manual pressure, with fluoroscopic visualization used to monitor distribution of the material within the defect. Additional syringes are used as needed to achieve the desired volume, with cannula depth adjusted to expand the area of injection under continued imaging guidance. The cannula is removed using reverse torque while withdrawing it. Arthroscopy is then repeated to evaluate for any leakage of bone substitute material into the joint space; any extravasated material is removed with suction and lavage. Final fluoroscopic images are obtained to confirm appropriate fill and absence of extravasation, and the portals are closed with sutures.

Description of Post-Service Work: Facility work includes the following activities: Apply sterile dressings and compression wrap; assist in transfer of the patient from the OR table to a stretcher or bed; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff; discuss procedure and outcome with family and answer questions; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the referring physician. When the patient is ready to be discharged, finalize and confirm discharge plans; assess pain control; check neurovascular status; finalize and confirm discharge plans with patient and/or family; counsel patient and/or family regarding therapy protocol and activity limitations after discharge; review postoperative instructions (eg, wound care, pain medications); complete discharge summary and associated forms and documents; write prescriptions for medications and orders for devices (eg, crutches); check narcotic prescription registries; complete medication reconciliation; coordinate postoperative appointment with patient and/or family and office staff; and enter procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP and/or local registry).

Office visit work includes the following activities: review PT notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT; remove/change dressing; examine surgical site; remove sutures; apply wound closure strips; assess standing limb alignment, and limb swelling, strength, and ROM; check neurovascular status; review postoperative radiographs with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications (eg, narcotics, nonsteroidal anti-inflammatory drugs [NSAIDs]); check narcotic prescription registries; complete PT forms, referrals, or prescriptions; complete disability, out of work, and/or other related forms; communicate and coordinate care with other physicians and providers (eg, PCP, PT); and enter postoperative data into longitudinal outcome registries (eg, NSQIP and/or local registry).

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	4%	46%	42%	8%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	46%	54%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	50%	50%
Physical effort required	8%	54%	38%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	65%	23%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	27%	67%	6%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	47%	53%
Physical effort required	7%	60%	33%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	47%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

A company sponsored code change application to convert Category III code 0707T to Category I codes 2XXX1 and 2XXX2 was approved at the May 2026 CPT Editorial Panel meeting. This required a survey of physician work.

Survey Process

A survey was sent to a random selection of 3,000 members of the AAOS.

Work RVU Recommendation

We recommend the survey 25th percentile work RVU of 7.10.

Pre-service time

Pre-time package 3 is selected: Straightforward Patient/Difficult Procedure with the following adjustments.

Evaluation time: Three minutes subtracted from the standard package time to be consistent with the survey median.

Positioning: Seven minutes have been added to the standard package time of 3 minutes to account for procedure-specific positioning, including supine placement on a radiolucent table, padding and positioning of the nonoperative leg outside the lateral fluoroscopic beam path, tourniquet placement if used, and operative-leg support or elevation sufficient to obtain unobstructed AP and true lateral fluoroscopic views. This time is consistent with arthroscopic knee procedures (eg 29880, 29881).

Scrub, dress and wait: Five minutes subtracted from the standard package time to be consistent with the survey median.

Immediate Post-Service Time

Immediate post-time package 9b is selected: general anesthesia or complex regional block / complex procedure with the following adjustment: Subtract 18 minutes to be consistent with the survey median.

Postoperative Office Visits

Office visit 1 (99213): Review PT notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT; remove/change dressing; examine surgical site; remove sutures; apply wound closure strips; assess limb swelling, strength, and ROM; check neurovascular status; review imaging with patient and/or family; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications; check narcotic prescription registries; complete PT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, PT); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office Visit #1:		
Number and complexity of problems addressed • 1 or more chronic illnesses with exacerbation, progression or side effect of treatment		**Moderate**
Amount and complexity of data • Review external notes		**Low**
Risk of complications from testing and/or treatment • Prescription drug management (pain)		**Moderate**
99213 selected to be consistent with survey data	Overall MDM	**Moderate**
	CPT code by MDM	**99214**

Office visit 2 (99213): Review PT notes; interview patient and obtain interval history; assess pain control and response to current medications; assess function, mobility, and progress with PT; assess limb swelling, strength, and ROM; check neurovascular status; counsel patient and/or family regarding wound care, therapy protocol, and activity limitations; counsel patient and/or family regarding next office visit; write or dictate and sign progress note; complete prescriptions for medications; check narcotic prescription registries; complete PT forms, referrals, or prescriptions; complete disability, out of work, and other related forms; communicate and coordinate care with other physicians (eg, PCP, PT); and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry)

Office Visit #2:		
Number and complexity of problems addressed • 1 or more chronic illnesses with exacerbation, progression or side effect of treatment		**Moderate**
Amount and complexity of data • Review external notes		**Low**
Risk of complications from testing and/or treatment • OTC pain medication management		**Low**
99213 selected to be consistent with survey data	Overall MDM	**Low**
	CPT code by MDM	**99213**

Office visit 3 (99212): Review PT notes; interview patient and obtain interval history; assess pain control; assess function, mobility, and progress with PT; examine surgical site; assess strength and ROM; check neurovascular status; counsel patient and/or family regarding therapy protocol, and activity limitations; write or dictate and sign progress note;

complete PT forms; complete disability, back to work, and other related forms; and enter postoperative data into longitudinal outcome registries (eg, NSQIP, AJRR, and/or local registry).

Office Visit #3:		
Number and complexity of problems addressed • 1 stable chronic illness		**Low**
Amount and complexity of data • Review external notes		**Low**
Risk of complications from testing and/or treatment • Minimal risk of morbidity from additional diagnostic testing or treatment		**Straightforward**
99212 selected to be consistent with survey data	Overall MDM	**Low**
	CPT code by MDM	**99213**

Key Reference Code Comparison

Compared with 25606, which describes percutaneous fixation of a distal radius fracture, 2XXX1 for knee subchondroplasty is significantly more complex because it requires MRI-directed localization of a subchondral bone defect, continuous multi-plane fluoroscopic guidance, precise percutaneous cannula placement through cortical bone into cancellous bone, controlled injection of bone substitute material into the defect, and arthroscopic assessment for potential extravasation into the joint space. The procedure combines intraosseous intervention with arthroscopic visualization and ongoing imaging confirmation, creating substantially greater intraoperative intensity, technical demand, and operative risk than 25606. For these reasons, the work involved in 0707T is materially greater and a more complex service.

Code 29881 and 2XXX1 are comparable because both are minimally invasive knee procedures performed with arthroscopic visualization, require specialized operative setup, and involve careful intraoperative decision-making to address the patient's pain-generating pathology. Code 29881 requires arthroscopic access, compartment-specific meniscal resection, and management of associated intra-articular pathology, while 2XXX1 requires arthroscopic assessment, fluoroscopic guidance, image-guided access to the subchondral bone, and controlled delivery of bone substitute material into a targeted defect. Although the anatomic target differs, both procedures demand precision, imaging support, and technical coordination in the same operative setting, making the overall procedural intensity reasonably comparable. The slight difference in work RVUs between the proposed value for 2XXX1 and the current value for 29881 accounts for the slight difference in intraoperative time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0707T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 13,500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimated based on manufacturer internal 2024 sales data

Specialty orthopaedic surgery Frequency 13,500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 150
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare data for 0707T extrapolated in the same fashion as national data

Specialty orthopaedic surgery Frequency 150 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 29883

Presented Recommended RVU: **1.46**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **1.46**

CPT Descriptor: Descriptor: Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; each additional bone (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 54-year-old male presents with chronic knee pain associated with bone changes or joint degeneration. Magnetic resonance imaging demonstrates bone marrow defects in the femur and the tibia. After treatment of the femur (reported separately), treatment of the tibia is performed. [Note: This is an add-on code. Only consider the additional work related to treatment of the additional bone.]

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: After treatment of the femur bone marrow lesion (reported separately), the defect in the tibia is localized using orthogonal fluoroscopic views and the planned trajectory is confirmed relative to the preoperative MRI findings. A cannula is then drilled through the cortex into the cancellous bone under fluoroscopic guidance, with repeated AP and lateral imaging used to confirm entry point, trajectory, and depth. Fluoroscopy is used throughout cannula advancement to ensure accurate placement into the subchondral defect and to avoid malposition. Once the cannula is positioned appropriately, it is rotated to direct the delivery fenestrations toward the defect. Bone substitute material is mixed and injected through the cannula using steady manual pressure, with fluoroscopic visualization used to monitor distribution of the material within the defect. Additional syringes are used as needed to achieve the desired volume, with cannula depth adjusted to expand the area of injection under continued imaging guidance. The cannula is removed using reverse torque while withdrawing it. Arthroscopy is then repeated to evaluate for any leakage of bone substitute material into the joint space; any extravasated material is removed with suction and lavage. Final fluoroscopic images are obtained to confirm appropriate fill and absence of extravasation.

Description of Post-Service Work: n/a

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	10%	66%	21%	3%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	59%	28%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	14%	69%	17%
Physical effort required	3%	72%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	28%	62%	10%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	30%	10%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	10%	30%	60%
Physical effort required	10%	50%	40%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	60%	30%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

A company sponsored code change application to convert Category III code 0707T to Category I codes 2XXX1 and 2XXX2 was approved at the May 2026 CPT Editorial Panel meeting. This required a survey of physician work.

Survey Process

A survey was sent to a random selection of 3,000 members of the AAOS.

Work RVU Recommendation

We are unable to fully explain the significant and unexpected difference in intraoperative time for 2XXX2 relative to 2XXX1, other than the possibility of differences in procedural familiarity or in the interpretation of the work associated with each new code compared with current Category III code 0707T that may be reported.

Nonetheless, based on the survey median time and in consideration of the intraoperative time reported for 2XXX2, **we recommend a work RVU of 1.46 using crosswalk code 49412**, *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), open, intra-abdominal, intrapelvic, and/or retroperitoneum, including image guidance, if performed, single or multiple (List separately in addition to code for primary procedure)*. We recognize that 2XXX2 will be designated as new technology and subject to re-review in three years.

Codes 16036, *Escharotomy; each additional incision (List separately in addition to code for primary procedure)* and code 20700, *Manual preparation and insertion of drug-delivery device(s), deep (eg, subfascial) (List separately in addition to code for primary procedure)* provide additional support for the recommended work RVU of 1.46.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0707T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4,500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimated based on manufacturer internal 2024 sales data

Specialty orthopaedic surgery Frequency 4,500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 45 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare data for 0707T extrapolated in the same fashion as national data

Specialty orthopaedic surgery Frequency 45 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 29883

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S):2XXX1, 2XXX2**
SPECIALTY SOCIETY(IES): AAOS
PRESENTER(S): William Creevy, MD; Hussein Elkousy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2026

CPT Code	Long Descriptor	Global Period
2XXX1	Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; first bone	090
2XXX2	Descriptor: Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; each additional bone (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
2XXX1	A 54-year-old male presents with chronic knee pain associated with bone changes or joint degeneration. Magnetic resonance imaging demonstrates a bone marrow defect in the distal femur.
2XXX2	A 54-year-old male presents with chronic knee pain associated with bone changes or joint degeneration. Magnetic resonance imaging demonstrates bone marrow defects in the femur and the tibia. After treatment of the femur (reported separately), treatment of the tibia is performed. [Note: This is an add-on code. Only consider the additional work related to treatment of the additional bone.]

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Orthopaedic surgeons familiar with the procedure reviewed the PE resources for similar procedures. **Nonfacility inputs are NOT recommended.**

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   See the *Billed Together* tab in the RUC Database.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

b. Service period (includes pre, intra and post):

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

22. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

ADDITIONAL INFORMATION

23. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

26. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

CPT CODE(S):2XXX1, 2XXX2
SPECIALTY SOCIETY(IES): AAOS
PRESENTER(S): William Creevy, MD; Hussein Elkousy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 09/2026

CPT Code	Long Descriptor	Global Period
2XXX1	Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; first bone	090
2XXX2	Descriptor: Injection(s), bone-substitute material (eg, calcium phosphate) into subchondral bone defect (eg, bone marrow lesion, bone bruise, stress injury, microtrabecular fracture), knee (ie, distal femur, proximal tibia, and/or patella), including imaging guidance and diagnostic arthroscopy; each additional bone (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
2XXX1	A 54-year-old male presents with chronic knee pain associated with bone changes or joint degeneration. Magnetic resonance imaging demonstrates a bone marrow defect in the distal femur.
2XXX2	A 54-year-old male presents with chronic knee pain associated with bone changes or joint degeneration. Magnetic resonance imaging demonstrates bone marrow defects in the femur and the tibia. After treatment of the femur (reported separately), treatment of the tibia is performed. [Note: This is an add-on code. Only consider the additional work related to treatment of the additional bone.]

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Orthopaedic surgeons familiar with the procedure reviewed the PE resources for similar procedures to develop a recommendation.
   NOTE: No facility inputs are recommended for add-on code 2XXX2.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   Similar arthroscopic KRS 29881 and KRS 29826 were used as references to develop recommendations for the two new codes that include arthroscopy.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   no

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   n/a

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

no

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

n/a

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

This procedure will be performed on an elective basis and all aspects of pre-service clinical staff work that is typical of 90-day global procedures will apply: complete pre-service diagnostic & referral forms, coordinate pre-surgery services, schedule space and equipment in facility, provide pre-service education/obtain consent, and follow-up phone calls & prescriptions.

   b. Service period (includes pre, intra and post):

Clinical staff will assist the surgeon with discharge management, including arrangements for therapy, home care, and responding to patient and family questions.

   c. Post-service period:

The clinical staff work includes the standard activities involved in office E/M visits including ensuring the appropriate supplies are available in the room, ensuring notes from other providers caring for the patient are available, rooming and gowning the patient, updating medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care (eg, suture removal, etc), coordination of care, cleaning of the room, and home instructions.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

n/a

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

n/a

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

n/a

14. Are you recommending a PE supply pack for this recommendation? Yes
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

established package of supplies as defined by CMS

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
pack, minimum multi-specialty visit	**SA048**	**pack**	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

DESCRIPTION	Code	Unit	Item Qty
pack, post-op incision care (suture)	**SA054**	**pack**	
kit, suture removal		kit	1
povidone soln (Betadine)		ml	10
gauze, sterile 4in x 4in		item	2
gloves, sterile		pair	1
steri-strip (6 strip uou)		item	2
swab-pad, alcohol		item	2
tape, surgical paper 1in (Micropore)		inch	12
tincture of benzoin, swab		item	1

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

n/a

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

n/a

18. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

	EQ168	light, exam	Office Visits	
	EF031	table, power	Office Visits	

ADDITIONAL INFORMATION

19. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

n/a

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

n/a

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

n/a

22. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

n/a

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
***** High Volume Growth Screen*****

September 2026

Bronchoscopy with Navigational Assistance – Tab 05

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT code 31627 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure[s])* via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100 percent from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting.

In September 2025, the RUC recommended referral to the CPT Editorial Panel in May 2026 to create a new code that represents the use of robotic assistance, which may be the cause of the increase in reporting for CPT code 31627. The specialty societies submitted a CPT Code Change Application (CCA) to revise CPT code 31627 to include robotic assistance as part of the procedure. The CPT Editorial Panel accepted with modification the request to: revise CPT code 31627 to include robotic assistance for this procedure; revise the inclusionary parenthetical note following CPT code 31627 to include CPT codes 31652-31654; and add an instructional parenthetical note that directs reporting the supply of the device separately from the CPT code 31627 procedure.

The CPT Editorial Panel also modified this procedure by removing the comma between "computer-assisted" and "image-guided" navigation to confirm the complete phrase as a single term/one complete procedure. The Panel approved all these revisions, and they will be effective in the CPT 2028 code set. This entire code family was surveyed for the September 2026 RUC meeting.

Code Family
The specialty societies explained that in the past, many peripheral nodules were unreachable via a bronchoscope. However, today, advancements in computer-assisted, image-guided navigation, and robotic-assistance technology allow physicians to access these previously unreachable areas of the lung. In current practice, the physician now performs critical, highly intensive pre-procedure work that involves the following: (1) importing the patient's thin-sliced CT data into the robotic-assistance software; (2) reconstructing 3D multiplanar images to pinpoint the target peripheral nodule; and (3) generating and mapping a customized virtual airway navigation pathway. Importantly, the workflow that occurs during the intra-service time for these services is entirely different from traditional bronchoscopy. After standard airway inspection, the performing physician introduces the robotic catheter via the endotracheal tube and physically docks it to the robotic system. The physician then performs a complex registration process to align the real-time anatomic position with the pre-operative CT roadmap. Since the lungs change shape when ventilated, the physician must also correct for CT-to-body divergence by acquiring intra-procedural, cross-sectional imaging to re-localize the lesion and confirm tool-in-lesion position before biopsy. Using shape-sensing technology and continuous 3D fluoroscopic or cone beam CT guidance, the physician actively navigates the robotic catheter deep into previously unreachable subsegmental airways to access and biopsy these small peripheral lesions.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

●=New code ▲=Revised code ✚=Add-on code ⃠=Modifier 51 exempt ★=Telemedicine ◀=Audio-only ↗=FDA approval pending #=Resequenced code

31624 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage***
The RUC reviewed survey results from 152 pulmonologists and recommends a work RVU of 2.04 based on a direct crosswalk to CPT code 43235 *Esophagogastroduodenoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)* (work RVU = 2.04, 14.63 minutes of intra-service time, 48.63 minutes of total time), which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 10 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 15 minutes of intra-service time and 15 minutes of immediate post-service time, which equals 60 minutes of total time.

This procedure describes bronchoscopy with bronchial alveolar lavage (BAL) to obtain fluid and cellular samples for a specific area of the lung and is used to evaluate infections, inflammatory diseases, malignancy, and other pulmonary problems. The physician work typically involves instilling sterile fluid through the bronchoscope into a targeted area in the lung and then suctioning it back for lab analysis and pathology analysis. The specialty societies explained that advancements in the technology used to perform BALs have shifted and expanded the typical patient population associated with this service. Previously, this procedure was more commonly performed in a lower-risk, outpatient environment, but now is commonly performed in a higher-risk, inpatient environment on more medically complex patients where a more technically difficult BAL is required.

The specialty societies selected the pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9A General Anes or Complex Reg Blk/Strghtforw Proc*, both of which were adjusted to reflect the survey results. The pre-service evaluation time was reduced by 23 minutes, the pre-service positioning time was increased by 7 minutes, the pre-service scrub/dress/wait time was reduced by 5 minutes, and the immediate post-service time was reduced by 15 minutes. In their supporting rationale, the specialty societies explained that the pre-service positioning required for this service is more complex because multiple pieces of equipment must be aligned to ensure sufficient clearance around the patient. Moreover, additional pre-service positioning time is supported by the survey median and is consistent with RUC-approved colonoscopy positioning times to account for positioning of the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. Given the critical need for advanced positioning of both the patient and the equipment, the RUC determined that additional time is necessary to ensure patient safety.

To support the recommended work RVU of 2.04, the RUC compared the surveyed code to CPT code 69801 *Labyrinthotomy, with perfusion of vestibuloactive drug(s), transcanal* (work RVU = 2.01, 14.63 minutes of intra-service time, 42.63 minutes of total time) and CPT code 31577 *Laryngoscopy, flexible; with removal of foreign body(s)* (work RVU = 2.14, 14.63 minutes of intra-service time, 47.63 minutes of total time). The surveyed code requires nearly identical intra-service time as the two reference codes. While the surveyed code requires significantly more total time than the two reference codes, the RUC acknowledges that the surveyed code is typically a less intense/complex procedure for the physician to perform. Labyrinthotomy is a precise therapeutic intervention performed within a small, sensitive anatomical space; likewise, laryngoscopy involves removing a foreign body as opposed to obtaining a lavage specimen. Together, the work RVUs of the two reference codes bracket the RUC recommended work RVU of 2.04.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the Medicare Physician Payment Schedule (MFS). **The RUC recommends a work RVU of 2.04 for CPT code 31624.**

31627 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation, with robotic-assistance when performed (List separately in addition to code for primary procedure[s])***
The RUC reviewed survey results from 148 pulmonologists and recommends maintaining the current work RVU of 1.95, which is below the survey 25th percentile work RVU and appropriately accounts for the physician work typically required to perform this ZZZ add-on service. The RUC recommends 45 minutes of intra-service and total time.

This add-on service can be reported in conjunction with several other endoscopy procedures, including the other primary bronchoscopy codes in this family. In order to help reach a targeted area in the lung, robotic assistance provides real-time guidance to navigate the bronchoscope and related instruments through the airways to a specific lesion or site. This advancement in technology has transformed physicians' ability to reach small peripheral lung lesions that were previously inaccessible bronchoscopically, improving diagnostic yield while requiring substantially different physician skills and procedural workflow. The specialty societies explained that despite the reduction in intra-service time from the current value to the survey median results, the physician work has not fundamentally gotten easier to perform given the introduction of this advanced technology and, subsequently, the more difficult patient population now likely to undergo this procedure.

To support the recommended work RVU of 1.95, the RUC compared the surveyed code to top key reference service 32667 *Thoracoscopy, surgical; with therapeutic wedge resection (eg, mass or nodule), each additional resection, ipsilateral (List separately in addition to code for primary procedure)* (work RVU = 2.93, 24.38 minutes of intra-service and total time) and second key reference service 31651 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), each additional lobe (List separately in addition to code for primary procedure[s])* (work RVU = 1.54, 29.25 minutes of intra-service and total time). The surveyed code requires more intra-service time to perform than the top two key reference services. Moreover, the RUC recognizes that there is substantially more procedural risk involved with performing the kind of thoracoscopy described in CPT code 32667 than in bronchoscopic work described by the surveyed code or CPT code 31651. Despite the differences in time and based on magnitude estimation, the work RVUs of the two key reference services selected by survey respondents bracket the current work RVU of 1.95 being recommended by the RUC.

For additional support, the RUC referenced CPT code 77293 *Respiratory motion management simulation (List separately in addition to code for primary procedure)* (work RVU = 1.95, intra-service and total time of 43.88), which requires nearly identical physician work, time, and intensity/complexity to perform as the surveyed code. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar add-on services across the MFS. **The RUC recommends a work RVU of 1.95 for CPT code 31627.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

31628 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe***
The RUC reviewed survey results from 150 pulmonologists and recommends the survey 25th percentile work RVU of 3.40, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 15 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 30 minutes of intra-service time and 20 minutes of immediate post-service time, which equals 85 minutes of total time.

This procedure describes bronchoscopy with transbronchial lung biopsy in which tissue samples are obtained from the lung through the bronchoscope. The typical physician work described involves passing biopsy forceps through a bronchoscope in order to penetrate the airway wall to collect lung tissue for diagnostic evaluation. This service is reported for a single lobe.

The specialty societies selected the pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9A General Anes or Complex Reg Blk/Strghtforw Proc*, both of which were adjusted to reflect the survey results. The pre-service evaluation time was reduced by 18 minutes, the pre-service positioning time was increased by 7 minutes, the pre-service scrub/dress/wait time was reduced by 5 minutes, and the immediate post-service time was reduced by 15 minutes. In their supporting rationale, the specialty societies explained that the pre-service positioning required for this service is more complex because multiple pieces of equipment must be aligned to ensure sufficient clearance around the patient. Moreover, additional pre-service positioning time is supported by the survey median and is consistent with RUC-approved colonoscopy positioning times to account for positioning of the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. Given the critical need for advanced positioning of both the patient and the equipment, the RUC determined that additional time is necessary to ensure patient safety.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference service 31625 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites* (work RVU = 3.03, 34.13 minutes of intra-service time, 67.13 minutes of total time) and second key reference service 31626 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple* (work RVU = 3.81, 43.88 minutes of intra-service time, 81.88 minutes of total time). The surveyed code requires less intra-service time but more total time than the top key reference service, and it requires less intra-service time but slightly more total time than the second key reference service. Despite the differences in time, the surveyed code is a more intense/complex bronchoscopic procedure to perform than either of the two key reference services selected by survey respondents. Compared to the physician work described by CPT code 31625, the surveyed code requires that the physician reach farther and deeper into the lung in order to retrieve tissue from inside the lung, not just the airway. Compared to CPT code 31626, the surveyed code involves diagnostic lung tissue removal for biopsy, which involves more physician work and incurs a greater risk of procedural complications.

For additional support, the RUC referenced MPC codes 52332 *Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type)* (work RVU = 2.75, 24.38 minutes of intra-service time, 55.38 minutes of total time) and 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU = 3.90, 39 minutes of intra-service time, 94 minutes of total time). The RUC recognizes that the surveyed code is bracketed by this pair of reference MPC codes in terms of work RVU, intra-service time, and total time. Overall, the RUC work RVU recommendation

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the MFS. **The RUC recommends a work RVU of 3.40 for CPT code 31628.**

31629 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i)***
The RUC reviewed survey results from 142 pulmonologists and recommends the survey 25th percentile work RVU of 3.40, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 15 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 30 minutes of intra-service time and 20 minutes of immediate post-service time, which equals 85 minutes of total time.

This procedure describes bronchoscopy with transbronchial needle aspiration of the trachea, main stem, or lobar bronchus. The typical physician work described involves passing a needle through the bronchoscope and through the airway wall to obtain cells or tissue from a targeted lesion or structure for diagnostic evaluation. The procedure aspiration allows sample areas adjacent to the central airways without requiring a surgical biopsy. The specialty societies noted that even though the description of work differs slightly from that of CPT code 31628, the physician work and time involved with these services is nearly identical.

The specialty societies selected the pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9A General Anes or Complex Reg Blk/Strghtforw Proc*, both of which were adjusted to reflect the survey results. The pre-service evaluation time was reduced by 18 minutes, the pre-service positioning time was increased by 7 minutes, the pre-service scrub/dress/wait time was reduced by 5 minutes, and the immediate post-service time was reduced by 15 minutes. In their supporting rationale, the specialty societies explained that the pre-service positioning required for this service is more complex because multiple pieces of equipment must be aligned to ensure sufficient clearance around the patient. Moreover, additional pre-service positioning time is supported by the survey median and is consistent with RUC-approved colonoscopy positioning times to account for positioning of the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. Given the critical need for advanced positioning of both the patient and the equipment, the RUC determined that additional time is necessary to ensure patient safety.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference service 31625 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites* (work RVU = 3.03, 34.13 minutes of intra-service time, 67.13 minutes of total time) and second key reference service 31626 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple* (work RVU = 3.81, 43.88 minutes of intra-service time, 81.88 minutes of total time). The surveyed code requires less intra-service time but more total time than the top key reference service, and it requires less intra-service time but slightly more total time than the second key reference service. Despite the differences in time, the surveyed code is a more intense/complex bronchoscopic procedure to perform than either of the two key reference services selected by survey respondents. Compared to the physician work described by CPT code 31625, the surveyed code requires that the physician reach farther and deeper into the lung in order to retrieve tissue from inside the lung, not just the airway. Compared to CPT code 31626, the surveyed code involves diagnostic lung tissue removal for biopsy, which involves more physician work and incurs a greater risk of procedural complications.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC referenced MPC codes 52332 *Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type)* (work RVU = 2.75, 24.38 minutes of intra-service time, 55.38 minutes of total time) and 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU = 3.90, 39 minutes of intra-service time, 94 minutes of total time). The RUC recognizes that the surveyed code is bracketed by this pair of reference MPC codes in terms of work RVU, intra-service time, and total time. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the MFS. **The RUC recommends a work RVU of 3.40 for CPT code 31629.**

31652 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structures***

The RUC reviewed survey results from 147 pulmonologists and recommends the survey 25th percentile work RVU of 3.98, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 15 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of scrub/dress/wait time, 37 minutes of intra-service time and 20 minutes of immediate post-service time, which equals 92 minutes of total time.

This procedure describes bronchoscopy with endobronchial ultrasound (EBUS) used to evaluate and sample one or two mediastinal and/or hilar lymph node stations or structures. The physician uses real-time ultrasound guidance to identify the targeted lymph nodes or lesions and performs the transbronchial needle aspiration or biopsy to obtain the tissue. This procedure is commonly used to diagnose and stage lung cancer, as well as to evaluate other conditions involving mediastinal or hilar lymph nodes.

The specialty societies selected the pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9A General Anes or Complex Reg Blk/Strghtforw Proc*, both of which were adjusted to reflect the survey results. The pre-service evaluation time was reduced by 18 minutes, the pre-service positioning time was increased by 7 minutes, the pre-service scrub/dress/wait time was reduced by 5 minutes, and the immediate post-service time was reduced by 15 minutes. In their supporting rationale, the specialty societies explained that the pre-service positioning required for this service is more complex because multiple pieces of equipment must be aligned to ensure sufficient clearance around the patient. Moreover, additional pre-service positioning time is supported by the survey median and is consistent with RUC-approved colonoscopy positioning times to account for positioning of the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. Given the critical need for advanced positioning of both the patient and the equipment, the RUC determined that additional time is necessary to ensure patient safety.

To support the recommended work RVU, the RUC compared the surveyed code to the top key reference service 31625 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites* (work RVU = 3.03, 34.13 minutes of intra-service time, 67.13 minutes of total time) and second key reference service 31647 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

valve(s), initial lobe (work RVU = 4.05, 58.5 minutes of intra-service time, 108.5 minutes of total time). The surveyed code requires slightly more intra-service time, significantly more total time, and is more intense/complex to perform than reference service 31625, which is appropriate given it has a greater work RVU. Moreover, the surveyed code requires less intra-service and total time than reference service 31647 but is considerably more intense/complex to perform. The RUC recognizes that, together, the top two key reference bronchoscopic services selected by survey respondents bracket the surveyed code in terms of work RVU, intra-service time, and total time.

For additional support, the RUC referenced MPC codes 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU = 3.90, 39 minutes of intra-service time, 94 minutes of total time) and 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.35, 29.25 minutes of intra-service time, 72.25 minutes of total time). The surveyed code requires similar physician work and time compared to MPC code 49405, and together, the two MPC codes bracket the surveyed code in terms of intra-service time and work RVU. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the MFS. **The RUC recommends a work RVU of 3.98 for CPT code 31652.**

31653 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node stations or structures***

The RUC reviewed survey results from 146 pulmonologists and recommends the survey 25th percentile work RVU of 4.22, which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 15 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of scrub/dress/wait time, 46 minutes of intra-service time and 20 minutes of immediate post-service time, which equals 101 minutes of total time.

This procedure describes bronchoscopy with EBUS used to evaluate and sample three or more mediastinal and/or hilar lymph node stations or structures. The physician uses real-time ultrasound guidance to identify the targeted lymph nodes or lesions and performs the transbronchial needle aspiration or biopsy to obtain the tissue. This procedure is commonly used to diagnose and stage lung cancer, as well as to evaluate other conditions involving mediastinal or hilar lymph nodes.

The specialty societies selected the pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9A General Anes or Complex Reg Blk/Strghtforw Proc*, both of which were adjusted to reflect the survey results. The pre-service evaluation time was reduced by 18 minutes, the pre-service positioning time was increased by 7 minutes, the pre-service scrub/dress/wait time was reduced by 5 minutes, and the immediate post-service time was reduced by 15 minutes. In their supporting rationale, the specialty societies explained that the pre-service positioning required for this service is more complex because multiple pieces of equipment must be aligned to ensure sufficient clearance around the patient. Moreover, additional pre-service positioning time is supported by the survey median and is consistent with RUC-approved colonoscopy positioning times to account for positioning of the patient, anesthesia lines, and video/scope equipment to allow access for

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

the procedure and sedation monitoring. Given the critical need for advanced positioning of both the patient and the equipment, the RUC determined that additional time is necessary to ensure patient safety.

To support the recommended work RVU, the RUC compared the surveyed code to the top key reference service 31600 *Tracheostomy, planned (separate procedure);* (work RVU = 5.42, 29.25 minutes of intra-service time, 119.25 minutes of total time) and second key reference service 31625 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites* (work RVU = 3.03, 34.13 minutes of intra-service time, 67.13 minutes of total time). The surveyed code requires significantly more intra-service and total time than reference service 31625, which makes it appropriate that it has a greater work RVU even though the measured intensity/complexity for both services is comparable. Compared to the surveyed code, reference service 31600 requires less intra-service time, much more total time, and is far more intense/complex to perform, given the physician work involved with a tracheostomy is more physically and technically demanding. CPT code 31653 requires more physician work than any other code in this family, which makes these comparisons appropriate. The RUC recognizes that, together, the top two key reference services selected by survey respondents bracket the surveyed code in terms of work RVU and total time.

For additional support, the RUC referenced MPC codes 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* (work RVU = 3.90, 39 minutes of intra-service time, 94 minutes of total time) and 37191 *Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed* (work RVU = 4.35, 29.25 minutes of intra-service time, 72.25 minutes of total time). The surveyed code requires more intra-service and total time than MPC code 49405, which makes it appropriate that it has a greater work RVU even though the measured intensity/complexity for both services is comparable. Compared to the surveyed code, MPC code 37191 requires less intra-service and total time than the surveyed code, which makes it appropriate that it has a significantly greater work RVU due to it being much more intense/complex to perform. Together, the pair of MPC codes bracket the surveyed code in terms of work RVU. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the MFS. **The RUC recommends a work RVU of 4.22 for CPT code 31653.**

31654 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transendoscopic endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) for peripheral lesion(s) (List separately in addition to code for primary procedure[s])***

The RUC reviewed survey results from 144 pulmonologists and recommends a work RVU of 1.29 based on a direct crosswalk to CPT code 31633 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), each additional lobe (List separately in addition to code for primary procedure)* (work RVU = 1.29, 19.5 minutes of intra-service and total time), which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 20 minutes of intra-service and total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

This add-on service can be reported in conjunction with several other endoscopy procedures, including some of the other primary bronchoscopy codes in this family. In order to help reach a targeted area in the lung, robotic assistance provides real-time guidance to navigate the bronchoscope and related instruments through the airways to a specific lesion or site. This advancement in technology has transformed physicians' ability to reach small peripheral lung lesions that were previously inaccessible bronchoscopically, improving diagnostic yield while requiring substantially different physician skills and procedural workflow. The specialty societies explained that despite the reduction in intra-service time from the current value to the survey median results, the physician work has not fundamentally gotten easier to perform given the introduction of this advanced technology and, subsequently, the more difficult patient population now likely to undergo this procedure.

Importantly, the RUC recognizes that the chosen crosswalk code, CPT code 31633 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), each additional lobe (List separately in addition to code for primary procedure)*, was the second key reference service selected by survey respondents, which has nearly identical intra-service and total time and requires similar intensity/complexity to perform.

For additional support, the RUC referenced CPT code 64634 *Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional facet joint (List separately in addition to code for primary procedure)* (work RVU = 1.29, 19.5 minutes of intra-service and total time). The surveyed code requires nearly identical physician work, time, and intensity/complexity to perform as the reference code. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar add-on services across the MFS. **The RUC recommends a work RVU of 1.29 for CPT code 31654.**

Practice Expense
Acknowledging the specialties' request that these codes be Facility-only, the Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology
CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654 will be placed on the New Technology/New Services list and will be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

SUMMARY OF RECOMMENDATION

CPT Code:31624 Tracking Number E1 Original Specialty Recommended RVU: **2.52**
Presented Recommended RVU: **2.37**
Global Period: 000 Current Work RVU: **2.56** RUC Recommended RVU: **2.04**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male with fever and an abnormal chest X-ray showing infiltrates undergoes bronchoscopy. A bronchoalveolar lavage is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 90% , In the ASC 10%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 97% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 2.1%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Review the patient's preprocedural work-up and medical records. Complete communication with other professionals, the patient, and the patient's family. Examine the patient to verify that he can undergo the procedure. Verify the identity of the patient and the procedure to be performed. Communicate with the patient (and/or family) to explain the procedural risks and benefits and to obtain informed consent. Assess need for airborne isolation procedures and enact where appropriate. Obtain and review relevant imaging in the bronchoscopy suite. The patient is brought into the bronchoscopy suite and positioned for bronchoscopy for procedural planning. Topical anesthesia is administered to the upper airway when appropriate. Preoperative services include supervising the positioning and preparation of patient; ensuring the necessary instruments and supplies are present and available in the bronchoscopy suite; dressing and waiting to begin the operation; and performing a procedural time-out with the team.

Description of Intra-Service Work: Oxygen is used to maintain normal oxygen saturations. Once the patient has achieved topical anesthesia and appropriate amount of sedation. A videobronchoscope is inserted through the airway. The bronchoscope is introduced and the upper airway and vocal cords are inspected, then advanced into the trachea and bronchi. All of the airways are inspected. Then advance the bronchoscope into the trachea. Inspect the central airway. Advance the video bronchoscope into the tracheobronchial tree. Spray additional lidocaine after the video bronchoscope has entered the trachea and at the carina into the lobar/segmental airways. Visualize/inspect all 18 segments along with their subsegments. Capture images of abnormalities seen in the tracheobronchial tree. Wedge the bronchoscope into the subsegment under study and instill saline through the bronchoscope into the area and aspirate into a sterile syringe or trap. Instill the saline in 20- to 50-ml aliquots. After each aliquot is infused, aspirate it into one or more containers. The total volume usually infused by site is 100 ml to 150 ml. Keep each aliquot separate and document. After obtaining specimens control any bleeding that occurs with the disruption of the endothelium. Once hemostasis achieved, remove the bronchoscope. The physician examines the patient immediately post endoscopy to ascertain that no complications such as desaturation or respiratory failure has occurred.

Description of Post-Service Work: Coordinate care with the post anesthesia care team as appropriate. Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as significant hemoptysis, mucous plugging, or shortness of breath have occurred. Ensure any images taken during the procedure are reviewed, labeled, and stored within the medical record. Generate the bronchoscopy report and forward to the referring physician and

other appropriate parties. Verify the specimen(s) and complete various requisition form(s) including general lab, microbiology, and cytology. Explain the results of the procedure, how the patient did during the procedure, and the patient's current condition to the patient's family. After adequate recovery from sedation/anesthesia, discuss the bronchoscopy findings with the patient. Complete post-procedural instructions on resumption of oral intake for the patient and the patient's family. Provide necessary prescriptions, follow-up test orders, and future appointment dates to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	2%	0%	58%	37%	3%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	48%	50%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	48%	52%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	73%	23%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	2%	4%	57%	29%	8%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	49%	43%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	4%	63%	33%
Physical effort required	14%	70%	16%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	75%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted

with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast"*.

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

Survey Results & ATS/CHEST Recommendations:
CPT 31624

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 152 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, the American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of survey so any potential participant only received one survey request. The survey performance rate median of 100 studies per year among the 152 respondents is a substantial rate given the RUC database volume for 2024 is 100,862 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 95% of respondents found the vignette to be typical.
- 90% of respondents said that this service was typically performed in the Hospital, 10% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 97% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service evaluation time by 23 minutes consistent with the survey median and added 7 minutes to the standard positioning time; we reduced by 5 minutes the pre service scrub, dress and wait time from the package. The addition of the minutes is supported by the survey median and consistent with the RUC approved colonoscopy positioning times to account for positioning the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure adjusting by 15 minutes consistent with our survey median time of 15 minutes.

Positioning is more complex because there are multiple pieces of equipment that must be aligned to allow clearance around the patient. Thus, patient and equipment position are critical to the procedure and patient safety and require additional time.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 15 minutes accurately reflects the time required to perform this service today and is consistent with the current median time. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 15 minutes with (10, 10, 10 total 30) pre and 15 post time for CPT 31624.

Work:

Survey respondents estimated a median work RVU of 2.75, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents, CPT *31622 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure) (*RVW 2.47) to have all higher measures including overall time intensity complexity and CPT 31645 bronchos*copy, rigid or flexible, including fluoroscopic guidance, when performed; with therapeutic aspiration of tracheobronchial tree, initial* (RVW 2.81) to have a lower time work intensity and complexity, skill and psychological stress than 31624.

The expert panel compared 31624 to two MPC codes CPT 31622 Global 000 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure) (*RVW 2.47, times 16-29.25-15, total 60.25 min) and CPT 31500 Global 000 (*Intubation, endotracheal, emergency procedure),* (RVW 2.93, times 12-9.75-10, total 31.75 min). After comments from the reviewers we are recommending a x-walk to CPT 31574.

In summary, we recommend a x-walk to CPT 31574 RVW of 2.37 for 31624 with our median times per the survey adjusted per the preservice packages as noted earlier for a preservice total time 30 minutes, intra service time 15 minutes and post time 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31624

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 302,586
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization times 3

Specialty Pulmonary Medicine Frequency 193,655 Percentage 63.99 %

Specialty Critical Care Frequency 45,388 Percentage 15.00 %

Specialty Internal Medicine Frequency 30,259 Percentage 10.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 100,862 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization

Specialty Pulmonary Medicine Frequency 64,552 Percentage 64.00 %

Specialty Critical Care Frequency 15,129 Percentage 14.99 %

Specialty Internal Medicine Frequency 10,086 Percentage 9.99 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
Bronchoscopy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31624

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31627 Tracking Number E2 Original Specialty Recommended RVU: **1.95**
Presented Recommended RVU: **1.95**
Global Period: ZZZ Current Work RVU: **1.95** RUC Recommended RVU: **1.95**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation, with robotic-assistance when performed (list separately in addition to code for primary procedure[s])

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female who smokes has a single 9.0 mm lung nodule on CT of the chest. The peripheral nodule is not amenable to biopsy by routine bronchoscopy, so the patient is scheduled for bronchoscopy using robotically-assisted or computer-assisted image-guided navigation.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 91% , In the ASC 7%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 96% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Planning Phase: Pre-service part of intra-service physician work for the add-on code Patient’s thin-slice chest CT DICOM data is imported into the robotic planning software for navigation; a 3-dimensional image of the patient's lungs is generated by the planning software; the physician marks the anatomical points and target lesion(s) on the virtual and CT images; additional anatomic landmarks (pleura, fissure, vasculature) are marked as appropriate; the virtual and CT images are used to plan the path that the steerable guide catheter (extended working channel) will follow in the bronchial tree; and the patient's customized virtual airway navigation plan is reviewed, saved and exported to a flash drive. The physician then participates in careful positioning of the patient and equipment as there are multiple interacting pieces of equipment including the procedural table, the robotic dock at the mouth of the patient, the robotic control module, and the real-time imaging equipment. Once the patient has been intubated and anesthetized, the physician must test the movement of imaging equipment to ensure it will not collide with the patient, procedure table, wires, tubing, or robotic equipment during the procedure. Simulated docking of the robot to the endotracheal tube may be required as well. Patient positioning may then require additional optimization as best position may not be supine depending on the location of the lesion and the position of equipment to avoid collision; best positioning may be angled or lateral decubitus in which case additional stabilization of patient on the table is then required. (NOTE: intubation and anesthesia work are NOT included as part of physician work for 31627 as these are typically captured separately in work of anesthesia.)
Navigation Phase - intra-service physician work: The patient's virtual plan is downloaded from the flash drive into the integrated computer.The camera and steerable guide catheter are inserted together (one inside the other) into the endotracheal tube, or the robot is docked and the vision probe/robotic catheter is inserted; CT images and steering directions on the monitor are used by the physician to navigate a registration to match the patient's real-life airway anatomy to the pre-procedural 3D virtual map derived from their CT scan. For example, the carina is “marked” using bronchoscopic view which then can be matched in real time to the computer images for that location that was marked by the physician in the pre-service period. Registration continues using up to 8 locations (carina, right and left mainstem bronchi, and subcarinas at takeoffs to right upper, right middle, right lower, left upper, and left lower lobe bronchi). Although the

procedure may be sampling a single lesion in an isolated lobe, full registration is important as one component of correction for "CT-to-body divergence," meaning that the shape of the lungs and location of lesions change position with breathing, and thus the static computer images may diverge from the real-time bronchoscopic views. Thus, the registration process is very important to match computer and real-time bronchoscopic images for accurate navigation. Once registration is completed/confirmed or adjusted, the physician navigates the guide catheter in real-time to target area(s); the catheter is locked in place and the camera catheter/vision probe is removed; and endobronchial tools are inserted through the catheter with tools used to collect tissue samples that are separately billed (eg. transbronchial biopsy, transbronchial needle aspiration). Shape-sensing technology and continuous 3D fluoroscopic or cone-beam CT guidance is used as the physician actively navigates the robotic catheter into deep subsegmental airways. When at the lesion, it is typical to then acquire additional intraprocedural cross-sectional or 3D fluoroscopic imaging to confirm tool-in-lesion position prior to biopsy or aspiration. Radial probe ultrasound may also be inserted to confirm lesion position. Additional adjustments to the catheter approach to the lesion are made in real time using fluoroscopy, CT, and/or ultrasound guidance. The physician must also coordinate proper ventilation and breath holds with the anesthesiologist to optimize lesion localization and sampling.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create

a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast".*

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

CPT 31627

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 148 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of

survey so any potential participant only received one survey request. The survey performance rate median of 119 studies per year among the 148 respondents is a substantial rate given the RUC database volume for 2024 is 32,472 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 96% of respondents found the vignette to be typical.
- 91% of respondents said that this service was typically performed in the Hospital, 7% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 96% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service and post service packages to 0 time, as this is an add on code. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure however this is an add on code with 0 time.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 45 minutes accurately reflects the time required to perform this service today and is consistent with the current median time. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 45 minutes for CPT 31627.

Work:

Survey respondents estimated a median work RVU of 3.55 and 25th percentile 2.45, based on a comparison to the top two key reference services. As noted in the background, we had brought our RSLs to Research subcommittee for advice as we were challenged and discussed the limited ZZZ choices to add to our survey list. Our experts were not surprised with the survey results that do not compare well with the top two reference service codes chosen by the survey respondents, CPT *32667 Thoracoscopy, surgical; with therapeutic wedge resection (eg, mass or nodule), each additional resection, ipsilateral (List separately in addition to code for primary procedure) (*RVW 2.93) and CPT *31651 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), each additional lobe (List separately in addition to code for primary procedure[s])(*RVW 1.54)

The expert panel compared 31627 to two MPC codes CPT 37253 Global ZZZ *Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)) (*RVW 1.40, times 0-19.5-1, total 20.5 min) and CPT 36227 *Global Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure),* (RVW 2.04, times 0-14.63-0, total 14.63 min). We believe these procedures along with our survey time results support accepting to maintain the current as opposed to accepting the 25th percentile or the median.

In summary, we recommend maintaining the current RVW of 1.95 for 31627 with our median time, intra service time 45 minutes, 0 pre and 0 post as consistent with an add on service.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31627

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 97,416
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization times 3

Specialty Pulmonary Frequency 70,140 Percentage 72.00 %

Specialty Critical Care Frequency 11,690 Percentage 12.00 %

Specialty Internal Medicine Frequency 7,793 Percentage 7.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 32,472 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC databbases utilization

Specialty Pulmonary Frequency 23,380 Percentage 72.00 %

Specialty Critical Care Frequency 3,897 Percentage 12.00 %

Specialty Internal Medicine Frequency 2,598 Percentage 8.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
Bronchoscopy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31627

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31628 Tracking Number E3 Original Specialty Recommended RVU: **3.75**
Presented Recommended RVU: **3.62**
Global Period: 000 Current Work RVU: **3.46** RUC Recommended RVU: **3.40**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old female presents with peripheral alveolar infiltrates in the right lower lobes that have been unchanged for six weeks. Bronchoscopy is performed and no bronchial mucosal lesions are visualized. Under fluoroscopic guidance, a biopsy forceps is inserted into the area of infiltrate in the peripheral right lower lobe. Three to six lung biopsies are obtained, each with the biopsy forceps under fluoroscopic guidance. Specimens are submitted in a container. A postprocedure chest X ray is obtained to evaluate for possible pneumothorax.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 87% , In the ASC 7%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient's preprocedural work-up and medical records. Complete communication with other professionals, the patient, and the patient's family. Examine the patient to verify that he can undergo the procedure. Verify the identity of the patient and the procedure to be performed. Communicate with the patient (and/or family) to explain the procedural risks and benefits and to obtain informed consent. Assess need for airborne isolation procedures and enact where appropriate. Obtain and review relevant imaging in the bronchoscopy suite. The patient is brought into the bronchoscopy suite and positioned for bronchoscopy for procedural planning. Topical anesthesia is administered to the upper airway when appropriate. Preoperative services include supervising the positioning and preparation of patient including preliminary positioning of C-arm for intraprocedural fluoroscopy; ensuring the necessary instruments and supplies are present and available in the bronchoscopy suite; donning lead apron and thyroid shield in anticipation of fluoroscopy, dressing and waiting to begin the operation; and performing a procedural time-out with the team.

Description of Intra-Service Work: Oxygen is used to maintain normal oxygen saturations. Once the patient has achieved topical anesthesia and appropriate amount of sedation, a videobronchoscope is inserted through the airway. The bronchoscope is advanced into the trachea and bronchi. All of the airways are inspected. The site(s) for the transbronchial biopsies are determined. If cryobiopsy is performed, a bronchial blocker (balloon) is placed for isolation of the airway and control of bleeding. The biopsy tool (forceps or cryoprobe) is advanced through the working channel of the bronchoscope into the lobar bronchus leading to the infiltrate. Under fluoroscopic guidance, biopsy forceps /cryoprobe are advanced into the radiographic area of interest. The forceps are opened and advanced, a transbronchial biopsy is obtained on expiration, and the forceps are removed, or the cryoprobe is activated for 2-8 seconds and the cryoprobe is removed via the channel or en bloc with the bronchoscope. Three to six biopsies are obtained in one lobe with fluoroscopic guidance. While the bronchoscope is gradually withdrawn from the airways, the tracheobronchial tree is carefully inspected. Post-biopsy bleeding is addressed as needed. The bronchoscope is then withdrawn from the patient, and the chest is inspected for pneumothorax with the fluoroscope. The biopsy specimens are placed in formalin +/- saline and sent for testing and sent for tissue culture if needed.

Description of Post-Service Work: Coordinate care with the post anesthesia care team as appropriate. Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as significant hemoptysis, mucous plugging, or shortness of breath have occurred. Ensure any images taken during the procedure are reviewed, labeled, and stored within the medical record. A post-procedure chest X-ray is ordered and then reviewed for possible complications including pneumothorax. Generate the bronchoscopy report and forward to the referring physician and other appropriate parties. Verify the specimen(s) and complete various requisition form(s) including general lab, microbiology, and surgical pathology. Explain the results of the procedure, how the patient did during the procedure, and the patient's current condition to the patient's family. After adequate recovery from sedation/anesthesia, discuss the bronchoscopy findings with the patient. Complete post-procedural instructions on resumption of oral intake for the patient and the patient's family. Provide necessary prescriptions, follow-up test orders, and future appointment dates to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

Technical skill required	14%	42%	44%
Physical effort required	3%	44%	53%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	22%	72%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted

with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast"*.

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

CPT 31628

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 150 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, the American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of survey so any potential participant only received one survey request. The survey performance rate median of 120 studies per year among the 150 respondents is a substantial rate given the RUC database volume for 2024 is 43,190 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 87% of respondents found the vignette to be typical.

- 87% of respondents said that this service was typically performed in the Hospital, 7% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 100% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service evaluation time by 18 minutes consistent with the survey median and added 7 minutes to the standard positioning time; we reduced by 5 minutes the pre service scrub, dress and wait time from the package. The addition of the minutes is supported by the survey median and consistent with the RUC approved colonoscopy positioning times to account for positioning the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. Additionally, typically a C-arm is used for localization. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure adjusting by 10 minutes consistent with our survey median time of 20 minutes.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 30 minutes accurately reflects the time required to perform this service today. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 30 minutes with (15, 10, 10 total 35) pre and 20 post time for CPT 31628.

Work:

Survey respondents estimated a median work RVU of 3.75, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents, CPT *31625 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites (*RVW 3.03) to have mostly higher measures including overall time intensity complexity and CPT 31626 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple* (RVW 3.81) to have mostly higher measures including overall time intensity complexity than 31628. More than 50 percent of sites use cryobiopsy for peripheral sampling which adds complexity to the service.

The expert panel compared 31628 to two MPC codes CPT 52332 Global 000 *Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type) (separate procedure) (*RVW 2.75, times 35-25-20, total 80 min) and CPT 49405 Global 000 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous),* (RVW 3.90, times 60-40-20, total 120 min). We believe these procedures along with our survey result, the relativity and the reduced time support accepting the median. After receiving the reviewers comments we are recommending a crosswalk to CPT 52443.

In summary, we recommend a X-walk to CPT 52443 RVW of 3.62 for 31628 with our median times per the survey adjusted per the preservice packages as noted earlier for a preservice total time 35 minutes, intra service time 30 minutes and post time 20 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31628

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 129,570
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization times 3

Specialty Pulmonary Frequency 97,178 Percentage 75.00 %

Specialty Critical Care Frequency 15,548 Percentage 11.99 %

Specialty Internal Medicine Frequency 10,336 Percentage 7.97 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 43,190 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization

Specialty Pulmonary Frequency 32,393 Percentage 75.00 %

Specialty Critical Care Frequency 5,183 Percentage 12.00 %

Specialty Internal Medicine Frequency 3,455 Percentage 7.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
Bronchoscopy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31628

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31629 Tracking Number E4 Original Specialty Recommended RVU: **3.80**
Presented Recommended RVU: **3.62**
Global Period: 000 Current Work RVU: **3.66** RUC Recommended RVU: **3.40**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 70-year-old male presents with a 3.5-cm subcarinal lymph node visible on chest computed tomography (CT) scan. One year previously he underwent surgery for a renal cell carcinoma. Bronchoscopy is performed. A transbronchial biopsy needle (eg, Wang needle) is passed through the carina, and aspiration biopsies are obtained from the subcarinal lymph node. Biopsy specimens are submitted in a container.

Percentage of Survey Respondents who found Vignette to be Typical: 53%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 92% , In the ASC 7%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 99% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient's preprocedural work-up and medical records. Complete communication with other professionals, the patient, and the patient's family. Examine the patient to verify that he can undergo the procedure. Verify the identity of the patient and the procedure to be performed. Communicate with the patient (and/or family) to explain the procedural risks and benefits and to obtain informed consent. Assess need for airborne isolation procedures and enact where appropriate. Obtain and review relevant imaging in the bronchoscopy suite. The patient is brought into the bronchoscopy suite and positioned for bronchoscopy for procedural planning. Topical anesthesia is administered to the upper airway when appropriate. Preoperative services include supervising the positioning and preparation of patient including preliminary positioning of C-arm for intraprocedural fluoroscopy; ensuring the necessary instruments and supplies are present and available in the bronchoscopy suite; donning lead apron and thyroid shield in anticipation of fluoroscopy, dressing and waiting to begin the operation; and performing a procedural time-out with the team.

Description of Intra-Service Work: Oxygen is used to maintain normal oxygen saturations. Once the patient has achieved topical anesthesia and appropriate amount of sedation, a videobronchoscope is inserted through the airway. The bronchoscope is advanced into the trachea and bronchi. All of the airways are inspected. The site(s) for transbronchial aspiration biopsies are determined. A transbronchial aspiration biopsy needle is passed through the bronchoscope into the trachea above the carina, where the bronchoscope has been positioned. The needle is positioned, and the bronchoscope and needle are then pushed through the mucosa into the subcarinal area. Manual suction is applied through a syringe to aspirate the specimen into the needle. as the needle is agitated in the node. The transbronchial biopsy needle is removed, and the specimen is delivered into a preservative solution or culture medium. Several biopsies are obtained at the one site. While the bronchoscope is gradually withdrawn from the airways, they are carefully inspected, and post-biopsy bleeding is cleared. The bronchoscope is then removed from the patient, and the biopsy specimens are sent for testing.

Description of Post-Service Work: Coordinate care with the post anesthesia care team as appropriate. Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as significant hemoptysis, mucous plugging, or shortness of breath have occurred. Ensure any images taken during the procedure are reviewed,

labeled, and stored within the medical record. A post-procedure chest X-ray is ordered and then reviewed for possible complications including pneumothorax. Generate the bronchoscopy report and forward to the referring physician and other appropriate parties. Verify the specimen(s) and complete various requisition form(s) including general lab, microbiology, cytology, and surgical pathology. Explain the results of the procedure, how the patient did during the procedure, and the patient's current condition to the patient's family. After adequate recovery from sedation/anesthesia, discuss the bronchoscopy findings with the patient. Complete post-procedural instructions on resumption of oral intake for the patient and the patient's family. Provide necessary prescriptions, follow-up test orders, and future appointment dates to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Same**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	31%	38%	31%

Mental Effort and Judgment	**Less**	**Same**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	36%	62%

Technical Skill/Physical Effort	**Less**	**Same**	**More**
Technical skill required	2%	22%	76%
Physical effort required	2%	38%	60%

Psychological Stress	**Less**	**Same**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	36%	57%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	5%	24%	54%	17%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	51%	49%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	7%	41%	52%
Physical effort required	7%	39%	54%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	29%	66%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted

with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast"*.

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

CPT 31629

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 142 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, the American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of survey so any potential participant only received one survey request. The survey performance rate median of 100 studies per year among the 142 respondents is a substantial rate given the RUC database volume for 2024 is 30,991 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 53% of respondents found the vignette to be typical. This now depends on if the physician is an interventional vs general pulmonologist. Nodes are typically sampled with EBUS and rarely performed as an isolated subcarinal blind biopsy.

- 92% of respondents said that this service was typically performed in the Hospital, 7% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 99% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service evaluation time by 18 minutes consistent with the survey median and added 7 minutes to the standard positioning time; we reduced by 5 minutes the pre service scrub, dress and wait time from the package. The addition of the minutes is supported by the survey median and consistent with the RUC approved colonoscopy positioning times to account for positioning the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure adjusting by 10 minutes consistent with our survey median time of 20 minutes.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 30 minutes accurately reflects the time required to perform this service today. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 30 minutes with (15, 10, 10 total 35) pre and 20 post time for CPT 31629.

Work:

Survey respondents estimated a median work RVU of 3.80, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents, CPT *31625 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites (*RVW 3.03) to have mostly higher measures including overall time intensity complexity and CPT 31626 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of fiducial markers, single or multiple* (RVW 3.81to have mostly higher measures including overall time intensity complexity than 31629. Previously inaccessible nodules and patients with more advanced underlying lung disease and comorbidities.

The expert panel compared 31629 to two MPC codes CPT 52332 Global 000 *Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type) (separate procedure) (*RVW 2.75, times 35-25-20, total 80 min) and CPT 49405 Global 000 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous),* (RVW 3.90, times 60-40-20, total 120 min). We believe these procedures along with our survey result, the relativity and the reduced time support accepting the median. After receiving the reviewers comments we are recommending a crosswalk to CPT 52443.

In summary, we recommend a X-walk to CPT 52443 RVW of 3.62 for 31629 with our median times per the survey adjusted per the preservice packages as noted earlier for a preservice total time 35 minutes, intra service time 30 minutes and post time 20 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31629

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 92,973
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization times 3

Specialty Pulmonary Frequency 66,941 Percentage 72.00 %

Specialty Critical Care Frequency 12,086 Percentage 12.99 %

Specialty Internal Medicine Frequency 8,368 Percentage 9.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 30,991 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization

Specialty Pulmonary Frequency 22,314 Percentage 72.00 %

Specialty Critical Care Frequency 4,029 Percentage 13.00 %

Specialty Internal Medicine Frequency 2,789 Percentage 8.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
Bronchoscopy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31629

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31652 Tracking Number E5 Original Specialty Recommended RVU: **3.98**
Presented Recommended RVU: **3.98**
Global Period: 000 Current Work RVU: **4.35** RUC Recommended RVU: **3.98**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (ebus) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structures

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: In a patient with known or suspected lung cancer, endobronchial ultrasound is used to identify and aspirate/biopsy one mediastinal and one hilar lymph node station.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 92% , In the ASC 7%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 99% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient's preprocedural work-up and medical records. Complete communication with other professionals, the patient, and the patient's family. Examine the patient to verify that he can undergo the procedure. Verify the identity of the patient and the procedure to be performed. Communicate with the patient (and/or family) to explain the procedural risks and benefits and to obtain informed consent. Assess need for airborne isolation procedures and enact where appropriate. Obtain and review relevant imaging in the bronchoscopy suite. The patient is brought into the bronchoscopy suite and positioned for bronchoscopy for procedural planning. Topical anesthesia is administered to the upper airway when appropriate. Preoperative services include supervising the positioning and preparation of patient; ensuring the necessary instruments and supplies are present and available in the bronchoscopy suite; dressing and waiting to begin the operation; and performing a procedural time-out with the team.

Description of Intra-Service Work: Oxygen is used to maintain normal oxygen saturations. Once the patient has achieved topical anesthesia and appropriate amount of sedation, a videobronchoscope is inserted through the airway. The bronchoscope is advanced into the trachea and bronchi. All of the airways are inspected. After removal of the standard video bronchoscope, the dedicated endobronchial ultrasound bronchoscope is introduced into the airway. The angled view of the guiding image requires increased attention to airway structures. The trachea is entered and a systematic evaluation under ultrasound guidance is done in the bilateral paratracheal, subcarinal, and bilateral hilar locations. The balloon may be inflated to assist in imaging as needed. Vascular structures, masses, and lymph nodes are identified and measured to determine targets for sampling. Doppler flow determinations are made as required. Careful determination of the initial and subsequent locations for sampling or access is made to ensure adequate sampling is achieved. Once the target is identified, the scope position is relaxed and a needle in a catheter is passed via the working channel of the bronchoscope. The catheter is adjusted into position, and the scope is positioned to best access the target lesion and avoid vascular structures. Ultrasound imaging is then used to reacquire the target, the needle is passed under observation into the target, and a specimen is obtained via agitation of the needle +/- suction. The process is repeated multiple times to obtain adequate specimen for analysis and samples are placed onto slides, into formalin, or saline as appropriate. Once completed, the process is repeated if a second target location is identified for access.

Description of Post-Service Work: Coordinate care with the post anesthesia care team as appropriate. Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as significant hemoptysis, mucous plugging, or shortness of breath have occurred. Ensure any images taken during the procedure are reviewed, labeled, and stored within the medical record. Generate the bronchoscopy report and forward to the referring physician and other appropriate parties. Verify the specimen(s) and complete various requisition form(s) including general lab, microbiology, cytology, and surgical pathology. Explain the results of the procedure, how the patient did during the procedure, and the patient's current condition to the patient's family. After adequate recovery from sedation/anesthesia, discuss the bronchoscopy findings with the patient. Complete post-procedural instructions on resumption of oral intake for the patient and the patient's family. Provide necessary prescriptions, follow-up test orders, and future appointment dates to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	7%	43%	50%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	21%	79%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	4%	11%	85%
Physical effort required	4%	21%	79%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	7%	18%	75%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	39%	44%	17%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	52%	39%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	44%	66%
Physical effort required	4%	52%	44%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	43%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast*

creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast".

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

CPT 31652

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 147 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, the American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of survey so any potential participant only received one survey request. The survey performance rate median of 100 studies per year among the 147 respondents is a substantial rate given the RUC database volume for 2024 is 27,841 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 94% of respondents found the vignette to be typical.
- 92% of respondents said that this service was typically performed in the Hospital, 7% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 99% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service evaluation time by 18 minutes consistent with the survey median and added 7 minutes to the standard positioning time; we reduced by 5 minutes the pre service scrub, dress and wait time from the package. The addition of the minutes is supported by the survey median and consistent with the RUC approved colonoscopy positioning times to account for positioning the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure adjusting by 10 minutes consistent with our survey median time of 20 minutes.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 37 minutes accurately reflects the time required to perform this service today. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 37 minutes with (15, 10, 10 total 35) pre and 20 post time for CPT 31652.

Work:

Survey respondents estimated a median work RVU of 4.46, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents, CPT *31625 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites (*RVW 3.03) to have mostly same or higher measures including overall time intensity complexity and CPT 31647 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), initial lobe* (RVW 4.05) to have mostly same or higher measures including overall time intensity complexity than 31652. Patient staging is more complex given the increased number of passes needed for genetic testing.

The expert panel compared 31652 to two MPC codes CPT 49405 Global 000 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous),* (RVW 3.90, times 60-40-20, total 120 min) and CPT 37191 Global 000 (*Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed),* (RVW 4.35, times 28-29.25-15, total 72.25 min). We believe these procedures along with our survey result, the relativity and the reduced time support accepting the 25th percentile.

In summary, we recommend accepting the survey 25th percentile RVW of 3.98 for 31652 with our median times per the survey adjusted per the preservice packages as noted earlier for a preservice total time 35 minutes, intra service time 37 minutes and post time 20 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31652

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 83,523
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization times 3

Specialty Pulmonary Frequency 60,137 Percentage 72.00 %

Specialty Critical Care Frequency 9,188 Percentage 11.00 %

Specialty Internal Medicine Frequency 7,517 Percentage 8.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 27,841 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization

Specialty Pulmonary Frequency 20,046 Percentage 72.00 %

Specialty Critical Care Frequency 3,063 Percentage 11.00 %

Specialty Internal Medicine Frequency 2,506 Percentage 9.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
Bronchoscopy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31652

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31653 Tracking Number E6 Original Specialty Recommended RVU: **4.22**
Presented Recommended RVU: **4.22**
Global Period: 000 Current Work RVU: **4.84** RUC Recommended RVU: **4.22**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node stations or structures

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: In a patient with known or suspected lung cancer, endobronchial ultrasound is used to identify and aspirate/biopsy two mediastinal and one hilar lymph node stations.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 100% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 99% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the patient's preprocedural work-up and medical records. Complete communication with other professionals, the patient, and the patient's family. Examine the patient to verify that he can undergo the procedure. Verify the identity of the patient and the procedure to be performed. Communicate with the patient (and/or family) to explain the procedural risks and benefits and to obtain informed consent. Assess need for airborne isolation procedures and enact where appropriate. Obtain and review relevant imaging in the bronchoscopy suite. The patient is brought into the bronchoscopy suite and positioned for bronchoscopy for procedural planning. Topical anesthesia is administered to the upper airway when appropriate. Preoperative services include supervising the positioning and preparation of patient; ensuring the necessary instruments and supplies are present and available in the bronchoscopy suite; dressing and waiting to begin the operation; and performing a procedural time-out with the team.

Description of Intra-Service Work: Oxygen is used to maintain normal oxygen saturations. Once the patient has achieved topical anesthesia and appropriate amount of sedation, a videobronchoscope is inserted through the airway. The bronchoscope is advanced into the trachea and bronchi. All of the airways are inspected. After removal of the standard video bronchoscope, the dedicated endobronchial ultrasound bronchoscope is introduced into the airway. The angled view of the guiding image requires increased attention to airway structures. The trachea is entered and a systematic evaluation under ultrasound guidance is done in the bilateral paratracheal, subcarinal, and bilateral hilar locations. The balloon may be inflated to assist imaging as needed. Vascular structures, masses, and lymph nodes are identified and measured to determine targets for sampling. Doppler flow determinations are made as required. Careful determination of the initial and subsequent locations for sampling is made so that proper staging is achieved as this is crucial to both treatment and prognosis determinations. A sequential approach is taken to target both enlarged and non-enlarged nodes based on ultrasound and PET findings. Once the initial target is identified, the scope position is relaxed, and a needle in a catheter is passed via the working channel of the bronchoscope. The catheter is adjusted into position, and the scope is positioned to best access the target lesion and avoid vascular structures. Ultrasound imaging is used to reacquire the target, and the needle is passed under observation into the target, and a specimen is obtained via agitation of the needle in the target. The process is repeated multiple times to obtain adequate specimen for analysis and samples are placed onto slides, into formalin, or saline as appropriate. Once completed, the process is repeated for a total of three or more target locations identified for access.

Description of Post-Service Work: Coordinate care with the post anesthesia care team as appropriate. Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as significant hemoptysis, mucous plugging, or shortness of breath have occurred. Ensure any images taken during the procedure are reviewed, labeled, and stored within the medical record. Generate the bronchoscopy report and forward to the referring physician and other appropriate parties. Verify the specimen(s) and complete various requisition form(s) including general lab, microbiology, cytology, and surgical pathology. Explain the results of the procedure, how the patient did during the procedure, and the patient's current condition to the patient's family. After adequate recovery from sedation/anesthesia, discuss the bronchoscopy findings with the patient. Complete post-procedural instructions on resumption of oral intake for the patient and the patient's family. Provide necessary prescriptions, follow-up test orders, and future appointment dates to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	4%	17%	50%	29%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	38%	49%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	4%	33%	63%
Physical effort required	0%	29%	71%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	38%	42%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	9%	18%	73%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	5%	9%	86%
Physical effort required	5%	18%	77%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	18%	73%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the

procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast"*.

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

CPT 31653

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 146 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, the American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of survey so any potential participant only received one survey request. The survey performance rate median of 90 studies per year among the 146 respondents is a substantial rate given the RUC database volume for 2024 is 20,894 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 94% of respondents found the vignette to be typical.

- 100% of respondents said that this service was typically performed in the Hospital, 0% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 99% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service evaluation time by 18 minutes consistent with the survey median and added 7 minutes to the standard positioning time; we reduced by 5 minutes the pre service scrub, dress and wait time from the package. The addition of the minutes is supported by the survey median and consistent with the RUC approved colonoscopy positioning times to account for positioning the patient, anesthesia lines, and video/scope equipment to allow access for the procedure and sedation monitoring. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure adjusting by 10 minutes consistent with our survey median time of 20 minutes.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 46 minutes accurately reflects the time required to perform this service today. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 46 minutes with (15, 10, 10 total 35) pre and 20 post time for CPT 31653.

Work:

Survey respondents estimated a median work RVU of 4.46, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents, CPT 31600 *Tracheostomy, planned (separate procedure);* (RVW 5.42) to have mostly same or more intense measures including overall time intensity complexity than 31653 and CPT *31625 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial or endobronchial biopsy(s), single or multiple sites (*RVW 3.03) to have mostly same or more intensity, mental effort and judgement measures including overall time intensity complexity. Patient staging is more complex given the increased number of passes needed for genetic testing. Additionally, there is a need for strategic sampling of N2 and N3 nodes.

The expert panel compared 31652 to two MPC codes CPT 49405 Global 000 (*Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous),* (RVW 3.90, times 60-40-20, total 120 min) and CPT 37191 Global 000 (*Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed),* (RVW 4.35, times 28-29.25-15, total 72.25 min). We believe these procedures along with our survey result, the relativity and the reduced time support accepting the 25th percentile.

In summary, we recommend accepting the survey 25th percentile RVW of 4.22 for 31653 with our median times per the survey adjusted per the preservice packages as noted earlier for a preservice total time 35 minutes, intra service time 46 minutes and post time 20 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31653

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 62,682
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization times 3

Specialty Pulmonary Frequency 45,758 Percentage 73.00 %

Specialty Critical Care Frequency 6,895 Percentage 10.99 %

Specialty Internal Medicine Frequency 5,015 Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 20,894 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database utilization

Specialty Pulmonary Frequency 15,253 Percentage 73.00 %

Specialty Critical Care Frequency 2,298 Percentage 10.99 %

Specialty Internal Medicine Frequency 672 Percentage 3.21 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Endoscopy

BETOS Sub-classification Level II:
Bronchoscopy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31653

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31654 Tracking Number E7 Original Specialty Recommended RVU: **1.29**
Presented Recommended RVU: **1.29**
Global Period: ZZZ Current Work RVU: **1.37** RUC Recommended RVU: **1.29**

CPT Descriptor: Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transendoscopic endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) for peripheral lesion(s) (List separately in addition to code for primary procedure[s])

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient presents with a 1.5-cm peripheral lung lesion. The lesion is identified with transendoscopic ultrasound probe guidance.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 91% , In the ASC 9%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 95%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: An imaging catheter is introduced via the working channel of the bronchoscope. The catheter is directed via airway segments until the desired subsegment is identified, to reach and image the lesion to confirm its characteristics, presence of nearby vascular structures, and location (relative to the airway). The lesion, which is out of the visible field of the bronchoscope, is located and described. Imaging may be used as a reference for the location of the probe and target lesion. The imaging catheter is removed and the target accessed. The catheter is reintroduced to reconfirm position and access to the target as needed. The process is repeated for each additional target lesion.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	17%	43%	31%	9%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	51%	29%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	26%	40%	34%
Physical effort required	20%	57%	23%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	20%	49%	31%

• Estimated risk of malpractice suit with poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	15%	26%	15%	44%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	41%	48%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	4%	30%	66%
Physical effort required	7%	44%	49%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	37%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

BACKGROUND

In April 2025, the Relativity Assessment Workgroup identified CPT code [31627] via the high volume growth screen, with Medicare utilization over 10,000 that has increased by at least 100% from 2018 through 2023. The specialty societies submitted an action plan for review at the September 2025 RAW meeting. In September 2025, the RUC recommended to refer to CPT Editorial Panel May 2026 to create a new code that represents the use of robotics which may be the cause of the increase in reporting of CPT code [31627].

Refer to CPT May 2026

The specialty societies brought forward a code change application presented at the May 2026 CPT meeting. The application requested to revise code [31627] to include robotic assistance as part of the procedure. This action was approved and will be effective in the CPT 2028 code set. The Panel accepted with modification the request to: (1) revise code 31627 to include robotic assistance for this procedure; (2) revise the inclusionary parenthetical note following 31627 to include codes 31652-31654; and (3) add an instructional parenthetical note that directs reporting supply of the device separately from the 31627 procedure. The Panel modified this procedure by removing the comma between "computer-assisted" and "image-guided navigation" to confirm the complete phrase as a single term/one complete procedure.

Research Committee Review
Bronchoscopy with Navigation Assistance (31624, 31627, 31628, 31629, 31652, 31653, 31654): Review Request for Code Family, Two RSLs and Custom Survey Question
American College of Chest Physicians
American Thoracic Society

The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) had three requests for the Research subcommittee; The societies requested and the subcommittee approved keeping the code family to the 7 codes included on the CMS/RAW level of interest form, CPT codes 31624, 31627, 31628, 31629, 31652, 31653 and 31654. The societies noted that the proposed code family was identified through review of the RUC database, analysis of services commonly billed together with navigation code 31627 and consultation with subject matter experts. "Bronchoscopy" is a broad nomenclature term encompassing a wide variety of procedures and code families, as has been done in prior RUC surveys.

The second request the societies received input from the committee for suggested changes to the ZZZ and 000 RSL. Specifics can be found in the minutes for that meeting.

Third, the societies requested Research Subcommittee approval of the addition of two custom survey questions related to practice expense.

"Is your computer-assisted navigation typically performed with robotic bronchoscopy?" Response options Yes or No
"Would you be willing to provide equipment invoices for future Practice Expense review purposes?" Response options: Yes / No / Maybe
If yes, please provide a contact name and email address for future follow-up.

The presenters noted that these questions are intended to help identify whether the typical service is performed with or without robotic navigation to inform the typical work and direct PE equipment associated with revised code 31627. The Subcommittee approved the questions as proposed, though also said the societies could remove the word "future" from the second question if they thought necessary to improve clarity which we did.

Notice to the Research Subcommittee

Email: "*The American College of Chest Physicians (CHEST) and the American Thoracic Society (ATS) alerted AMA staff that there was a podcast discussing the RUC process concerning the Bronchoscopy with Navigational Assistance tab which was released during their survey process. As soon as CHEST and ATS became aware of the podcast, they contacted AMA staff and also reached out to the podcast*

creators and were successful in getting the podcast taken offline. The podcast is presented by the Society of Advanced Bronchoscopy and named "This is the Way Podcast".

The podcast was online from 6-5-2026 11 PM CT to 6-7-2026 8:30 AM CT or 33.5 hours and was previously at this link: https://thisistheway2023.podbean.com/e/cpt-31627-what-is-the-ruckus-about/

49 survey respondents completed varying codes in the code family prior to the release of the podcast, though one of the codes needs at least a minimum of 50 responses due to its volume. We have instructed the societies to present their summary survey data both separately and together (before and after the release of the podcast) and to provide a detailed account of what occurred with their RUC submission. This follows how the RUC has handled similar situations in the past.

The joint societies have provided the breakout data in the RUC summary excel for those who took the survey ***prior*** to the pod cast airing and those who took it after ***post***. The experts reviewed the split-out data and it is our expert's opinion that this podcast was most likely not seen by survey takers or did not influence the survey results in any meaningful way. We did not see a spike up in time or RVW rather we see lower times and RVWs from per pod cast to post pod cast. RUC members can draw their own conclusions however our expert panel is basing our recommendations on the total surveys and not a subset of the surveys.

Compelling Evidence for Family

The specialty societies believe that compelling evidence has been met as there is a change in technology which changes the physician's work and PE as will be discussed during the PE presentation.

The physician work has changed in the following ways:

1) As evidenced by the overwhelming majority of survey takers (96%) stated they use robotics for navigation as the typical technique. This is a change from the prior typical which used ultrasound and fluoroscopy.
2) The technique for using robotics requires the acquisition of new skills to operate the robot. Such as planning the approach to the lesion in creating virtual pathways, registering the driving the catheter to the desired location. Maintaining adequate lung inflation while sampling using various modalities such as needle aspiration, forceps biopsy and cryobiopsy. Real time adjustment of your target location based on interoperative CT and or cloud biopsy This is a change from the prior technique which was with two dimensional fluoroscopy and limited preprocedural planning and minimal adjustment during the procedure.

CPT 31654

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for multiple calls and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 144 responses to this 7-code family survey request. The survey pool was a standard random sample from both societies including a sister society, American Association for Bronchology and Interventional Pulmonology (AABIP), of note, as this often occurs where members are also members or one, two or all three societies, de-duplicating was necessary prior to distribution of survey so any potential participant only received one survey request. The survey performance rate median of 100 studies per year among the 144 respondents is a substantial rate given the RUC database volume for 2024 is 27,333 for this procedure. The expert panel discussed this rate as it may indicate the highest level of experience and may have affected the time which will be discussed later.

- 95% of respondents found the vignette to be typical.
- 91% of respondents said that this service was typically performed in the Hospital, 9% in an ASC and 0% in the office setting.
- Of the patients that typically were inpatient 95% stated the patient is discharged same day.

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 3-FAC straightforward patient procedure with sedation/anesthesia. We reduced the pre-service and post service packages to 0 time, as this is an add on code. The ATS/CHEST panel chose post service package 9A General Anes or Complex Reg Blk/straightforward procedure however this is an add on code with 0 time.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 20 minutes accurately reflects the time required to perform this service today and is consistent with the current median time. After reviewing the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 20 minutes for CPT 31654.

Work:

Survey respondents estimated a median work RVU of 2.00 and 25th percentile 1.55, based on a comparison to the top two key reference services. As noted in the background, we had brought our RSLs to Research subcommittee for advice as we were challenged and discussed the limited ZZZ choices to add to our survey list. Our experts were not surprised with the survey results by the survey respondents, CPT *31651 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), each additional lobe (List separately in addition to code for primary procedure[s])(*RVW 1.54) and CPT *31633 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), each additional lobe (List separately in addition to code for primary procedure) (*RVW 1.29). More knowledge of anatomy is required with sampling of smaller lesions, closer to fissure, close to periphery and important vascular structures. Higher risk sampling hence increased intensity and possibly complications.

The expert panel compared 31654 to two MPC codes CPT 64480 Global ZZZ *Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), cervical or thoracic, each additional level (List separately in addition to code for primary procedure)) (*RVW 1.17, times 0-14.63-0, total 14.63 min) and CPT 37253 Global ZZZ *Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)) (*RVW 1.40, times 0-19.5-1, total 20.5 min). We believe these procedures along with our survey time results support crosswalking to the CPT 31633 which was our second KRC chosen by the survey respondents.

In summary, we recommend a x-walk to KRS number 2, CPT 31633 with a RVW of 1.29 for 31654 with our median time, intra service time 20 minutes, 0 pre and 0 post as consistent with an add on service.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31654

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Sometimes

Specialty Critical Care How often? Sometimes

Specialty Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 81,999
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database utiliation time 3

Specialty Pulmonary Frequency 60,679 Percentage 73.99 %

Specialty Critical Care Frequency 9,840 Percentage 12.00 %

Specialty Internal Medicine Frequency 6,560 Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 27,333 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC Database utilization

Specialty Pulmonary Frequency 20,226 Percentage 73.99 %

Specialty Critical Care Frequency 3,289 Percentage 12.03 %

Specialty Internal Medicine Frequency 2,187 Percentage 8.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

To: AMA RUC September 15, 2026

FROM: ATS and CHEST RUC advisors

RE: PE Inputs for Tab 5 September 2026 RUC Meeting (Bronchoscopy with Navigational Assistance

On September 9, 2026, AMA Staff Rebecca and David shared the following with our team,

"The claims data in the RUC database show that essentially none of these procedures are performed in the non-facility physician office setting. For example, CPT code 31624 shows 0.3% Medicare claims in 2024 in the physician office. Subsequently, we obtained the table below:

CPT code	Medicare Place of Service SITE % PHYSICIAN OFFICE	2024 Medicare Claims Data	Number of Claims
31624	0.3%	100,862	303
31627	0.2%	32,472	65
31628	0.2%	43,190	86
31629	0.2%	30,991	62
31652	0.3%	27,841	84
31653	0.3%	20,894	63
31654	0.2%	27,333	55

Additionally, the Medicare data indicate that only 9 physician practices in the US are reporting these as office based services.

Our RUC team with experts met and discussed this data, the experts confirmed that performing these services in the physician office setting is rare. They also confirmed that this is one of the reasons we are having difficulty obtaining invoices for supplies and equipment for these services in the Non-Facility setting.

Given the issues with obtaining paid invoices from physician offices, our specialties will update our PE materials and request that these codes be Facility-only.

Specialty Societies: The American Thoracic Society (ATS) and The American College of Chest Physicians (CHEST)
PRESENTER(S): Amy Ahasic, Katina Niccolacakis, Robert DeMarco, Omar Hussain

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2026
(version 9-15-2026)

CPT Code	Long Descriptor	Global Period
31624	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage	000
▲31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation, with robotic-assistance when performed (List separately in addition to code for primary procedure[s])	ZZZ
31628	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe	000
31629	A 70-year-old male presents with a 3.5-cm subcarinal lymph node visible on chest computed tomography (CT) scan. One year previously he underwent surgery for a renal cell carcinoma. Bronchoscopy is performed. A transbronchial biopsy needle (eg, Wang needle) is passed through the carina, and aspiration biopsies are obtained from the subcarinal lymph node. Biopsy specimens are submitted in a container.	000
31652	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structures	000
31653	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node stations or structures	000
31654	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transendoscopic endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) for peripheral lesion(s) (List separately in addition to code for primary procedure[s])	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
31624	A 66-year-old male with fever and an abnormal chest X-ray showing infiltrates undergoes bronchoscopy. A bronchoalveolar lavage is performed.
31627	A 65-year-old female who smokes has a single 9.0 mm lung nodule on CT of the chest. The peripheral nodule is not amenable to biopsy by routine bronchoscopy, so the patient is scheduled for bronchoscopy using robotically-assisted or computer-assisted image-guided navigation.
31628	A 68-year-old female presents with peripheral alveolar infiltrates in the right lower lobes that have been unchanged for six weeks. Bronchoscopy is performed and no bronchial mucosal lesions are visualized. Under fluoroscopic guidance, a biopsy forceps is inserted into the area of infiltrate in the peripheral right lower lobe. Three to six lung biopsies are obtained, each with the biopsy forceps under fluoroscopic guidance. Specimens are submitted in a container. A post procedure chest X-ray is obtained to evaluate for possible pneumothorax.

Specialty Societies: The American Thoracic Society (ATS) and The American College of Chest Physicians (CHEST)
PRESENTER(S): Amy Ahasic, Katina Niccolacakis, Robert DeMarco, Omar Hussain

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

31629	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i)
31652	In a patient with known or suspected lung cancer, endobronchial ultrasound is used to identify and aspirate/biopsy one mediastinal and one hilar lymph node station.
31653	In a patient with known or suspected lung cancer, endobronchial ultrasound is used to identify and aspirate/biopsy two mediastinal and one hilar lymph node stations.
31654	A patient presents with a 1.5-cm peripheral lung lesion. The lesion is identified with transendoscopic ultrasound probe guidance.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The ATS and CHEST convened a consensus panel via telephone, Zoom, and email to develop the inputs for these codes. See letter included with this submission requesting facility-only inputs for these codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The surveying societies supplied the existing codes and values as references.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   No, per the AMA RUC database, reviewing both Facility and Non-Facility billed together data for all the codes surveyed none of them are typically reported with an E/M service on the same day.

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If

the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

The global periods for bronchoscopy with navigational assistance are not transitioning.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre-service Period
Standard for 000-day global periods 0 minutes
The societies are requesting 16 minutes of pre time for their facility clinical staff as these are all standard of care for bronchoscopy studies including 31622 which is the base bronchoscopy code. We are requesting the same as approved by the PE Subcommittee on for 31622 and 31624 in 2017. Below are the descriptions provided by a clinically trained individual (RN/LPN/MA)
(Line 15) CA001 Complete pre-service diagnostic and referral forms: 5 minutes
Review and complete all referral forms for the various insurance entities and ensure that the indication has met medical necessity for the planned procedure.
(Line 16) CA002 Coordinate pre-surgery services (including test results: 5 minutes
Clinical staff members ensure that all appropriate pre-procedure tests and labs are drawn and results are within acceptable standards.
(Line 17) CA003 Schedule space and equipment in the facility (3 minutes) Clinical staff members contact the facility and patient to coordinate.
(Line 19) CA005 Complete pre-procedure phone calls and prescriptions: 3 minutes
Clinical staff will contact the patient prior to the procedure to ensure that they will be NPO, answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies and call the pharmacy with any prescription if needed

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Pre-Service Clinical Labor Activities (CPT 31624, 31628, 31629, 31652, 31653) (further details described above in #7)

- Complete pre-service diagnostic and referral forms – CA001- 5 minutes
- Coordinate pre-surgery services (including test results) – CA002-5 minutes
- Schedule room and equipment – CA003-3 minutes
- Complete pre-procedure phone calls and prescription – CA005-3 minutes

b. Service period (includes pre, intra and post):

N/A

c. Post-service period:

N/A

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

Specialty Societies: The American Thoracic Society (ATS) and The American College of Chest Physicians (CHEST)
PRESENTER(S): Amy Ahasic, Katina Niccolacakis, Robert DeMarco, Omar Hussain

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

18. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

N/A

ADDITIONAL INFORMATION

19. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The research committee approved adding a question on our survey as follows with the response. *"Is your computer-assisted navigation typically performed with robotic bronchoscopy?"*

RSP	%YES
148	**96%**

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

22. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

Specialty Societies: The American Thoracic Society (ATS) and The American College of Chest Physicians (CHEST)
PRESENTER(S): Amy Ahasic, Katina Niccolacakis, Robert DeMarco, Omar Hussain

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Codes Reported Together 75% or More

September 2026

Peri-prostatic Implantation Biodegradable Material – Tab 06

In April 2025, the Relativity Assessment Workgroup (RAW) identified CPT codes 55874 and 55876 as a code pair that was performed by the same physician on the same date of service 75 percent of the time or more. The RAW recommended referral of these codes to the CPT Editorial Panel to create a bundling solution. At the May 2026 CPT Editorial Panel meeting, a new combination Category I CPT code 55XX0 was created to report transperineal placement of biodegradable material with placement of interstitial devices for radiation therapy. CPT codes 55874 and 55876 remain active CPT codes as well, and all three codes were surveyed for the September 2026 RUC meeting.

55874 ***Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed***
The RUC reviewed survey results from 99 radiation oncologists and urologists and recommends a work RVU of 2.21 based on a direct crosswalk to CPT code 32555 *Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance* (work RVU = 2.21, 19.5 minutes intra-service time, 56.5 minutes total time), which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 13 minutes of pre-service evaluation time, 6 minutes of pre-service positioning time, 6 minutes of pre-service scrub/dress/wait time, 20 minutes of intra-service time and 12 minutes of immediate post-service time, which equals 57 minutes of total time. The work RVU recommendation is below the survey 25th percentile.

This service involves hydrodissection of the potential space between the prostate and the rectum, with subsequent injection of a biodegradable implant into this space to help protect the rectum from radiation damage during subsequent radiation therapy for prostate cancer treatment. Careful needle placement is imperative, as needle puncture of the rectal wall during placement risks contamination of the implantable material. The specialty societies selected the pre-service time package *1-FAC Straightforw Pat/Procedure(no sedate/anesth)* and post-service time package *7A Local/Simple Procedure*, both of which were adjusted to reflect the survey results. The pre-service positioning time was increased by 5 minutes to position the patient in the dorsal lithotomy position per RUC standard practice.

To support the recommended work RVU, the RUC compared the surveyed code to MPC codes 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.76, 14.63 minutes of intra-service time, 44.63 minutes of total time) and 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.47, 29.25 minutes of intra-service time, 60.25 minutes of total time). The RUC recognizes that, together, the two reference MPC codes bracket the surveyed code in terms of work RVU, intra-service time, total time, and relative measured intensity/complexity.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the Medicare Physician Payment Schedule (MFS). **The RUC recommends a work RVU of 2.21 for CPT code 55874.**

55876 ***Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple***

The RUC reviewed survey results from 105 radiation oncologists and urologists and recommends a work RVU of 1.46 based on a direct crosswalk to CPT code 44386 *Endoscopic evaluation of small intestinal pouch (eg, Kock pouch, ileal reservoir [S or J]); with biopsy, single or multiple* (work RVU = 1.46, 16.58 minutes intra-service time, 48.58 minutes total time), which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 13 minutes of pre-service evaluation time, 6 minutes of pre-service positioning time, 6 minutes of pre-service scrub/dress/wait time, 16 minutes of intra-service time and 10 minutes of immediate post-service time, which equals 51 minutes of total time.

This service involves the placement of bilateral fiducial markers at the base and apex of the prostate to facilitate radiation therapy for prostate cancer treatment. Careful and precise placement of these fiducial markers is imperative to improve the precision of the forthcoming radiation therapy. The specialty societies selected the pre-service time package *1-FAC Straightforw Pat/Procedure(no sedate/anesth)* and post-service time package *7A Local/Simple Procedure*, both of which were adjusted to reflect the survey results. The pre-service positioning time was increased by 5 minutes to position the patient in the dorsal lithotomy position.

To support the recommended work RVU, the RUC compared the surveyed code to MPC codes 43450 *Dilation of esophagus, by unguided sound or bougie, single or multiple passes* (work RVU = 1.25, 14.63 minutes of intra-service time, 50.63 minutes of total time) and 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* (work RVU = 1.76, 14.63 minutes of intra-service time, 44.63 minutes of total time). The RUC recognizes that the surveyed code requires nearly identical total time as reference MPC code 43450 but requires slightly more intra-service time and is more intense/complex, which makes it appropriate that it has a greater work RVU. Compared to reference MPC code 62323, the surveyed code requires slightly more intra-service and total time but a lesser work RVU, which is appropriate given it is a less intense/complex procedure to perform. Together, this pair of reference MPC codes bracket the surveyed code in terms of work RVU and relative measured intensity/complexity.

For additional support, the RUC referenced CPT code 51703 *Insertion of temporary indwelling bladder catheter; complicated (eg, altered anatomy, fractured catheter/balloon)* (work RVU = 1.43, 14.63 minutes of intra-service time, 44.63 minutes of total time), which requires similar physician work and time as the surveyed code. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the MFS. **The RUC recommends a work RVU of 1.46 for CPT code 55876.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

55XX0 ***Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed, with placement of interstitial device(s) for radiation therapy guidance, prostate***
The RUC reviewed survey results from 98 radiation oncologists and urologists and recommends a work RVU of 3.21 based on a direct crosswalk to CPT code 19081 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance* (work RVU = 3.21, 29.25 minutes intra-service time, 66.25 minutes total time), which appropriately accounts for the physician work typically required to perform this service. The RUC recommends 15 minutes of pre-service evaluation time, 6 minutes of pre-service positioning time, 6 minutes of pre-service scrub/dress/wait time, 30 minutes of intra-service time and 15 minutes of immediate post-service time, which equals 72 minutes of total time.

This is a bundled code when both CPT codes 55874 and 55876 are performed together, where the physician places both fiducials and peri-prostatic biodegradable implants in the same operative setting. The specialty societies selected the pre-service time package *1-FAC Straightforw Pat/Procedure(no sedate/anesth)* and post-service time package *7A Local/Simple Procedure*, both of which were adjusted to reflect the survey results. The pre-service positioning time was increased by 5 minutes to position the patient in the dorsal lithotomy position. Due to this being a bundled service, the pre-service evaluation time was increased by 2 minutes to determine an appropriate operative plan to allow for placement of both the fiducials and the biodegradable implant at the same time in both a safe and accurate way.

To support the recommended work RVU, the RUC compared the surveyed code to MPC codes 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.47, 29.25 minutes of intra-service time, 60.25 minutes of total time) and 52441 *Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant* (work RVU = 3.90, 24.38 minutes of intra-service time, 80.38 minutes of total time). The RUC recognizes that the surveyed code requires nearly identical intra-service time as reference MPC code 31622 but requires more total time and is more intense/complex, which makes it appropriate that it has a greater work RVU. Compared to reference MPC code 52441, the surveyed code requires more intra-service time but less total time and is significantly less intense/complex to perform, which makes it appropriate that it requires less physician work and a smaller work RVU. Together, this pair of reference MPC codes bracket the surveyed code in terms of work RVU and relative measured intensity/complexity.

For additional support, the RUC referenced CPT code 52334 *Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde* (work RVU = 3.29, 29.25 minutes of intra-service time, 74.25 minutes of total time), which involves nearly identical physician work and requires similar intra-service time, total time, and relative measured intensity/complexity. Overall, the RUC work RVU recommendation appropriately reflects the physician work and time required to perform this service and maintains relativity within this code family and between similar services across the MFS. **The RUC recommends a work RVU of 3.21 for CPT code 55XX0.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. Use of existing high-cost supply item SA126 *Biodegradable Material Kit – PeriProstatic* ($4036.22) was noted in CPT codes 55874 and 55XX0. The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies priced at more than $500 using appropriate HCPCS codes. The pricing of

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

these supplies should be based on a transparent process whereby items are reviewed and updated on an annual basis. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55874 Tracking Number F1 Original Specialty Recommended RVU: **2.21**
Presented Recommended RVU: **2.21**
Global Period: 000 Current Work RVU: **2.95** RUC Recommended RVU: **2.21**

CPT Descriptor: Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male is discovered on digital rectal examination to have a prostate nodule that occupies more than one half of the right lobe; there is no involvement of the left side. Diagnostic workup confirms the presence of prostate cancer. To reduce rectal toxicity that results from radiation therapy, an ultrasound-guided transperineal implantation of a biodegradable material is performed to create a space between the prostate and the rectum.

Percentage of Survey Respondents who found Vignette to be Typical: 99%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 39% , In the ASC 25%, In the office 35%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's chart is reviewed, and the plan for treatment is confirmed. The physician ensure that bowel preparation was performed and prophylactic antibiotics were taken. The physician confirms that the patient is not taking anticoagulants. The patient is brought to the procedure suite and positioned in the dorsal lithotomy position. The perineal skin is prepared with alcohol/povidone-iodine per standard practice. Patient is draped. The skin is numbed with lidocaine.

Description of Intra-Service Work: The physician advances the needle to the mid-perineum region, and an adequate dose of anesthetic (eg, lidocaine) is injected. Once the area is anesthetized, the needle is advanced until it is proximal to the pudendal nerve, and an additional dose of anesthetic is injected. Once anesthesia is achieved, the physician turns his or her attention to the hydrogel implant. The physician confirms materials and supplies are adequately prepared and ready for use. Lidocaine jelly is instilled and a rectal exam is performed. The ultrasound probe is positioned in the rectum, and the space between the prostate (mid gland) and rectum is identified and measured. The ultrasound probe will be repositioned to find the minimal probe pressure to maximize the visualization of the prostate without collapsing the periprostatic fat. The probe will be angled to prevent the rectum from being displaced superiorly, which would prevent the needle from being introduced without fecal contamination. Appropriate positioning is confirmed. Additional local anesthetic is injected into the periprostatic tissues/perineum. The saline syringe needle (15-cm 18-G needle) is inserted through the perineal skin under direct ultrasound guidance, through the rectourethralis muscle, and past the prostate apex to the perirectal fat between Denonvilliers fascia at prostate mid-gland and the rectal wall. Care must be taken during needle advancement not to penetrate the rectal lumen with the needle tip to avoid potential introduction of infectious material or injury to the rectal wall. Care must also be taken not to transect the prostate. The needle position is confirmed in both the sagittal and axial ultrasound planes, and saline is injected to dissect the space between the Denonvilliers fascia and anterior rectal wall (hydrodissection). Hydrodissection confirms proper needle location and creates space for the injection of the hydrogel material. Additional axial and sagittal imaging is required to optimize needle position and bilateral saline distribution. While maintaining the desired position, aspiration is performed to ensure that the needle is not in an intravascular space. The saline syringe is removed. The hydrogel syringe assembly is attached to an 18-G needle. The needle location is confirmed. Under ultrasound guidance (sagittal plane), the hydrogel material is injected to expand the periprostatic space

between the prostate and rectum. Optimal visualization of the needle during hydrogel administration is maintained at all times. Following injection, the needle is removed, and the spent applicator and needle are discarded. An axial measurement of the space between the prostate (mid gland) and rectum is performed. The TRUS probe is removed from the patient.

Description of Post-Service Work: The patient is observed to ensure that there is no onset of any complications. Review recovery area care and medications with staff. A procedure note is dictated. Meet with patient and/or family. Discuss procedure, expected outcome, and planned postoperative care. Dictate operative report. Call and/or dictate note to ordering physician regarding procedure outcome.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	14%	50%	29%	7%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	64%	25%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	11%	46%	43%
Physical effort required	11%	61%	29%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	11%	54%	36%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	4%	40%	44%	12%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	48%	40%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	4%	28%	68%
Physical effort required	8%	76%	16%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	36%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Relativity Assessment Workgroup (RAW) identified CPT codes 55874 and 55876 as services performed by the same physician on the same date of service 75% of the time or more. At the May 2026 CPT Editorial Panel meeting, a new combination code was created (55XX0) to report transperineal placement of biodegradable material with placement of interstitial devices for radiation therapy. CPT codes 55874 and 55876 remain active CPT codes as well.

Survey Methodology

A multi-specialty society survey was conducted by ACRO, ASTRO and AUA. The 000-day survey without visits template was used.

Pre-Service Time

Pre-time package 1 "*Straightforward Patient/Straightforward Procedure (No anesthesia care)"* was selected, with the following modifications.

Positioning: Addition of 5 minutes for dorsal lithotomy

Immediate Post-Service Time

Immediate post-time package 7A "Local Anesthesia/ Straightforward Procedure" was selected, with the following modifications.

Subtraction of 6 minutes to be consistent with the post time survey median

Relativity

	CPT Code		wRVU	IWPUT	Total Time	Pre Time	Intra Time	Post Time
MPC	43450		1.25	0.035	51	22	14.63	14
Surveyed	55876		1.46	0.048	51	25	16	10
MPC	62323		1.76	0.079	45	25	14.63	10
Surveyed	55874		2.21	0.073	57	25	20	12
MPC	31622		2.47	0.063	60	16	29.25	15
Surveyed	55XX0		3.21	0.079	72	27	30	15
Reference	49411		3.48	0.071	74	15	39	20
MPC	52441		3.90	0.114	80	41	24.38	15
Reference	20555		5.85	0.063	148	50	68.25	30

Comparison with Key Reference Services

The recommendations for CPT Code 55874 *Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed* align appropriately with reference codes 49411 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple* and 20555 *Placement of needles or catheters into muscle and/or soft tissue for subsequent interstitial radioelement application (at the time of or subsequent to the procedure).* Reference code 49411 is a very similar service to 55874 in that it includes placing of an interstitial device for RT in a non-prostate area. The intensities are comparable. The variation in wRVU relates directly to time. Reference code 20555 is also a very similar service to 55874. Code 55874 carries the slightly higher IWPUT, reflecting the added intensity of hydrodissection and molding/contouring the hydrogel at the prostate rectum interface to promote optimal beam dosimetry. The substantially higher wRVU of 20555 can be attributed to its greater intra-service and total time.

Comparison to MPC codes

The recommendations for CPT Code 55874 align nicely with MPC 62323 *Injection(s), of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, lumbar or sacral (caudal); with imaging guidance (ie, fluoroscopy or CT)* and MPC 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure).* MPC code 62323 is a similarly intense service to 55874. "MPC code 62323 is noted to be a similarly intense service to 55874; it is injecting into the interlaminar epidural space. Its lower wRVU relative to 55874 reflects its shorter service time. Therefore, 62323 and 31622 follow appropriate rank order 55874 from below and above.

Recommendation

The specialty societies recommend CPT Code 55874 be crosswalked to CPT Code 32555 *Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance.* CPT Code 32555 was selected as it is a similarly intense service with comparable times. CPT Code 32555 is RUC reviewed and has robust Medicare utilization. The specialties recommend the crosswalk work RVU of 2.21, the survey time medians of 13 pre eval, 6 pre-positioning, 6 pre scrub, dress, wait, 20 intra and 12 immediate post. The resulting IWPUT is 0.073. These recommendations maintain relativity in the surveyed family, with the specialties and within overall 000-day RUC valued services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55874

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology How often? Commonly

Specialty Urology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,679
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Most recent Medicare utilization from the current RUC database. Total Medicare utilization 22,488 - 16,809 (74.7%) = 5,679 (25.3%)

Specialty Urology Frequency 3,509 Percentage 60.01 %

Specialty Radiation Oncology Frequency 1,988 Percentage 34.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Oncology

BETOS Sub-classification Level II:
Radiation Therapy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 55874

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55876 Tracking Number F2 Original Specialty Recommended RVU: **1.46**
Presented Recommended RVU: **1.46**
Global Period: 000 Current Work RVU: **1.69** RUC Recommended RVU: **1.46**

CPT Descriptor: Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male was referred to his urologist for a PSA of 6.8. He underwent transrectal ultrasound and biopsy of his prostate, which revealed one core of Gleason score 6 adenocarcinoma of the prostate. His urologist discussed all the alternatives of definitive treatment and the patient elected to receive intensity modulated radiation therapy (IMRT). After a consultation with the radiation oncologist, the patient elects to have fiducial seeds placed to facilitate localization of the prostate during treatment and avoid contiguous organ injury.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 36% , In the ASC 25%, In the office 39%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's chart is reviewed, and the plan for treatment is confirmed. The physician ensure that bowel preparation was performed and prophylactic antibiotics were taken. The physician confirms that the patient is not taking anticoagulants. The patient is brought to the procedure suite and positioned in the dorsal lithotomy position. The perineal skin is prepared with alcohol/povidone-iodine per standard practice. Patient is draped. The skin is numbed with lidocaine.

Description of Intra-Service Work: The physician advances the needle to the mid-perineum region, and an adequate dose of anesthetic (eg, lidocaine) is injected. Once the area is anesthetized, the needle is advanced until it is proximal to the pudendal nerve, and an additional dose of anesthetic is injected. Once anesthesia is achieved, the physician turns his or her attention to the interstitial device(s) placement. The physician confirms materials and supplies are adequately prepared and ready for use. Lidocaine jelly is instilled and a rectal exam is performed. Additional local anesthetic is injected into the periprostatic tissues/perineum. The physician introduces preloaded fiducial markers and implants them bilaterally at the base and apex of the prostate. The physician confirm the position of the base seeds to be within 3 mm of the base and the position of the apex seeds within 2 mm of the apex.

Description of Post-Service Work: The patient is observed to ensure that there is no onset of any complications. Review recovery area care and medications with staff. A procedure note is dictated. Meet with patient and/or family. Discuss procedure, expected outcome, and planned postoperative care. Dictate operative report. Call and/or dictate note to ordering physician regarding procedure outcome.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	3%	18%	66%	13%	2%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	23%	64%	13%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	18%	66%	16%
Physical effort required	15%	79%	7%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	23%	64%	13%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	10%	60%	30%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	70%	30%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	10%	70%	20%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	30%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Relativity Assessment Workgroup (RAW) identified CPT codes 55874 and 55876 as services performed by the same physician on the same date of service 75% of the time or more. At the May 2026 CPT Editorial Panel meeting, a new combination code was created (55XX0) to report transperineal placement of biodegradable material with placement of interstitial devices for radiation therapy. CPT codes 55874 and 55876 remain active CPT codes as well.

Survey Methodology

A multi-specialty society survey was conducted by ACRO, ASTRO and AUA. The 000-day survey without visits template was used.

Pre-Service Time

Pre-time package 1 "*Straightforward Patient/Straightforward Procedure (No anesthesia care)"* was selected, with the following modifications.

Positioning: Addition of 5 minutes for dorsal lithotomy

Immediate Post-Service Time

Immediate post-time package 7A "Local Anesthesia/ Straightforward Procedure" was selected, with the following modifications.

Subtraction of 8 minutes to be consistent with the post time survey median

Relativity

	CPT Code	wRVU	IWPUT	Total Time	Pre Time	Intra Time	Post Time
MPC	43450	1.25	0.035	51	22	14.63	14
Surveyed	55876	1.46	0.048	51	25	16	10
MPC	62323	1.76	0.079	45	25	14.63	10
Surveyed	55874	2.21	0.073	57	25	20	12
MPC	31622	2.47	0.063	60	16	29.25	15
Surveyed	55XX0	3.21	0.079	72	27	30	15
Reference	49411	3.48	0.071	74	15	39	20
MPC	52441	3.90	0.114	80	41	24.38	15
Reference	20555	5.85	0.063	148	50	68.25	30

Comparison with Key Reference Services

The recommendations for CPT Code 55876 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple* align appropriately with reference codes 49411 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple* and 20555 *Placement of needles or catheters into muscle and/or soft tissue for subsequent interstitial radioelement application (at the time of or subsequent to the procedure).* Both KRS codes are more intense services than 55876 and involve greater service time. The lower wRVU of 55876 reflects this combination of these two factors. Code 55876 it is a shorter, lower-intensity fiducial placement relative to the interstitial device and needle/catheter placements described by 49411 and 20555." (proposed valulations thus fall in appropriate rank order with KRS services).

Comparison to MPC codes

The recommendations for CPT Code 55876 align nicely with MPC 43450 and MPC 62323. Code 55876 is a more intense service than 43450. The two share identical total service time, the higher wRVU of 55876 is attributable entirely to its greater intensity. Given that fiducial marker placement requires real-time, image-guided, millimeter-precise deposition of markers at the prostate, adjacent to the rectum, urethra, and neurovascular bundles, whereas esophageal dilation involves non-targeted pass through a natural lumen, the valuations follow appropriate rank order. Conversely, MPC 62323 is a more intense service than 55876. It involves advancing a needle into the interlaminar epidural space under imaging guidance, immediately adjacent to the dura, spinal cord, and nerve roots, where inadvertent dural puncture or intrathecal/intravascular injection carries risk of serious neurologic injury. This proximity to the sensitive structures demands greater precision and carries higher consequence-of-error per minute than periprostatic fiducial placement. Its higher wRVU reflects that greater intensity despite comparable time. Taken together, 43450 and 62323 establish an appropriate rank order with 55876.

Recommendation

The specialty societies recommend CPT Code 55876 be crosswalked to CPT Code 44386 *Endoscopic evaluation of small intestinal pouch (eg, Kock pouch, ileal reservoir [S or J]); with biopsy, single or multiple.* CPT Code 44386 was selected as it is a similarly intense service with comparable times. CPT Code 44386 is RUC reviewed and has Medicare utilization. The specialties recommend the crosswalk work RVU of 1.46, the survey time medians of 13 pre eval, 6 pre-positioning, 6 pre scrub, dress, wait, 16 intra and 10 immediate post. The resulting IWPUT is 0.048. These recommendations maintain relativity in the surveyed family, with the specialties and within overall 000-day RUC valued services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55876

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology How often? Commonly

Specialty Urology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National estimate not known.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,541
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Most recent Medicare utilization from the current RUC database. Total Medicare utilization (24,325) minus CPT Code 55876 billed with 55874 (69% - 16,784).

Specialty Urology Frequency 4,525 Percentage 60.00 %

Specialty Radiation Oncology Frequency 2,489 Percentage 33.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Oncology

BETOS Sub-classification Level II:
Radiation Therapy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 55876

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55XX0 Tracking Number F3 Original Specialty Recommended RVU: **3.21**
Presented Recommended RVU: **3.21**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **3.21**

CPT Descriptor: Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed, with placement of interstitial device(s) for radiation therapy guidance, prostate

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male with localized prostate cancer chose treatment with radiation therapy and presents for transperineal placement of periprostatic biodegradable material with placement of prostatic interstitial devices for radiation therapy guidance.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 37% , In the ASC 28%, In the office 36%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 97% , Overnight stay-less than 24 hours 3% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's chart is reviewed, and the plan for treatment is confirmed. The physician ensure that bowel preparation was performed and prophylactic antibiotics were taken. The physician confirms that the patient is not taking anticoagulants. The patient is brought to the procedure suite and positioned in the dorsal lithotomy position. The perineal skin is prepared with alcohol/povidone-iodine per standard practice. Patient is draped. The skin is numbed with lidocaine.

Description of Intra-Service Work: The physician advances the needle to the mid-perineum region, and an adequate dose of anesthetic (eg, lidocaine) is injected. Once the area is anesthetized, the needle is advanced until it is proximal to the pudendal nerve, and an additional dose of anesthetic is injected. Once anesthesia is achieved, the physician turns his or her attention to the hydrogel implant. The physician confirms materials and supplies are adequately prepared and ready for use. Lidocaine jelly is instilled and a rectal exam is performed. The physician introduces preloaded fiducial markers and implants them bilaterally at the base and apex of the prostate. The physician confirm the position of the base seeds to be within 3 mm of the base and the position of the apex seeds within 2 mm of the apex. The ultrasound probe is positioned in the rectum, and the space between the prostate (mid gland) and rectum is identified and measured. The ultrasound probe will be repositioned to find the minimal probe pressure to maximize the visualization of the prostate without collapsing the periprostatic fat. The probe will be angled to prevent the rectum from being displaced superiorly, which would prevent the needle from being introduced without fecal contamination. Appropriate positioning is confirmed. Additional local anesthetic is injected into the periprostatic tissues/perineum. The saline syringe needle (15-cm 18-G needle) is inserted through the perineal skin under direct ultrasound guidance, through the rectourethralis muscle, and past the prostate apex to the perirectal fat between Denonvilliers fascia at prostate mid-gland and the rectal wall. Care must be taken during needle advancement not to penetrate the rectal lumen with the needle tip to avoid potential introduction of infectious material or injury to the rectal wall. Care must also be taken not to transect the prostate. The needle position is confirmed in both the sagittal and axial ultrasound planes, and saline is injected to dissect the space between the Denonvilliers fascia and anterior rectal wall (hydrodissection). Hydrodissection confirms proper needle location and creates space for the injection of the hydrogel material. Additional axial and sagittal imaging is required to optimize needle position and bilateral saline distribution. While maintaining the desired position, aspiration is performed to ensure that the needle is not in an intravascular space. The saline syringe is removed. The hydrogel syringe assembly is attached to an 18-G needle. The

needle location is confirmed. Under ultrasound guidance (sagittal plane), the hydrogel material is injected to expand the periprostatic space between the prostate and rectum. Optimal visualization of the needle during hydrogel administration is maintained at all times. Following injection, the needle is removed, and the spent applicator and needle are discarded. An axial measurement of the space between the prostate (mid gland) and rectum is performed. The TRUS probe is removed from the patient.

Description of Post-Service Work: The patient is observed to ensure that there is no onset of any complications. Review recovery area care and medications with staff. A procedure note is dictated. Meet with patient and/or family. Discuss procedure, expected outcome, and planned postoperative care. Dictate operative report. Call and/or dictate note to ordering physician regarding procedure outcome.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Relativity Assessment Workgroup (RAW) identified CPT codes 55874 and 55876 as services performed by the same physician on the same date of service 75% of the time or more. At the May 2026 CPT Editorial Panel meeting, a new combination code was created (55XX0) to report transperineal placement of biodegradable material with placement of interstitial devices for radiation therapy. CPT codes 55874 and 55876 remain active CPT codes as well.

Survey Methodology

A multi-specialty society survey was conducted by ACRO, ASTRO and AUA. The 000-day survey without visits template was used.

Pre-Service Time

Pre-time package 1 "*Straightforward Patient/Straightforward Procedure (No anesthesia care)"* was selected, with the following modifications.

Pre-Eval: Addition of 2 minutes to plan for doing both fiducials and hydrogel during the same session. The physician must prepare for the interplay of placing the fiducials and then the hydrogel during the same session.

Positioning: Addition of 5 minutes for dorsal lithotomy

Immediate Post-Service Time

Immediate post-time package 7A "Local Anesthesia/ Straightforward Procedure" was selected, with the following modifications.

Subtraction of 3 minutes to be consistent with the post time survey median

Relativity

	CPT Code	wRVU	IWPUT	Total Time	Pre Time	Intra Time	Post Time
MPC	43450	1.25	0.035	51	22	14.63	14
Surveyed	55876	1.46	0.048	51	25	16	10
MPC	62323	1.76	0.079	45	25	14.63	10
Surveyed	55874	2.21	0.073	57	25	20	12
MPC	31622	2.47	0.063	60	16	29.25	15
Surveyed	55XX0	3.21	0.079	72	27	30	15
Reference	49411	3.48	0.071	74	15	39	20
MPC	52441	3.90	0.114	80	41	24.38	15
Reference	20555	5.85	0.063	148	50	68.25	30

Comparison with Key Reference Services

The recommendations for CPT Code 55XX0 align appropriately with reference codes 49411 and 20555. Reference code 49411 is a very similar service to 55XX0 in that it involves placement of an interstitial device for radiation therapy guidance in a non-prostate area. The intensities are comparable, and the variation in wRVU is driven primarily to differences in time. This follows clinically, as both require image-guided placement of radiation-guidance devices with comparable precision, differing mainly in anatomic site. Reference code 20555 is also a similar interstitial service to 55XX0. Code 55XX0 carries the higher IWPUT, reflecting the added intensity of hydrodissection and molding/contouring the hydrogel within the confined periprostatic space adjacent to the rectal wall. The substantially higher wRVU of 20555 is attributable to its much greater intra-service and total time. Taken together, 49411 and 20555 establish an appropriate rank order with 55XX0.

Comparison to MPC codes

The recommendations for CPT Code 55XX0 also align nicely with MPC 31622 and MPC 52441. MPC code 31622 is a less intense service than 55XX0. Code 31622 is an intracavitary procedure performed within a natural airway, whereas 55XX0 is an interstitial procedure requiring percutaneous needle placement into the confined periprostatic space, with the added intensity of hydrodissection and contouring the hydrogel adjacent to the rectal wall. This greater precision and consequence of error account for the higher intensity of 55XX0, so the valuations follow an appropriate rank order. Conversely, MPC 52441 is a more intense service than 55XX0. It involves cystourethroscopic insertion of a permanent adjustable transprostatic implant through the bladder, where the irreversible mechanical deployment and proximity to the bladder neck, ureteral orifices, and urinary sphincter carry greater potential for injury than periprostatic spacer and fiducial placement. Its higher wRVU reflects that greater intensity. Taken together, 31622 and 52441 establish an appropriate rank with 55XX0.

Recommendation

The specialty societies recommend CPT Code 55XX0 be crosswalked to CPT Code 19081 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including stereotactic guidance.* CPT Code 19081 was selected as it is a similarly intense service with comparable times. CPT Code 19081 is RUC reviewed and has robust Medicare utilization. The specialties recommend the crosswalk work RVU of 3.21, the survey time medians of 15 pre eval, 6 pre-positioning, 6 pre scrub, dress, wait, 30 intra and 15 immediate post. The resulting IWPUT is 0.079. These

recommendations maintain relativity in the surveyed family, with the specialties and within overall 000-day RUC valued services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55874 and 55876

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiation Oncology How often? Commonly

Specialty Urology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National number not known

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 16,809 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Most recent Medicare utilization from the current RUC database. Source utilization using both 55874 reported together with 55876 = 16,809

Specialty Urology Frequency 20,055 Percentage 60.00 %

Specialty Radiation Oncology Frequency 13,370 Percentage 40.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Oncology

BETOS Sub-classification Level II:
Radiation Therapy

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 55874

CPT CODE(S):55874, 55876, 55XX0
SPECIALTY SOCIETY(IES): ACRO, ASTRO, AUA
PRESENTER(S): Varun Chowdhry, MD, MBA, Seth Cohen, MD, Alec Harris, MD, Christopher Jahraus, MD, Jonathan Kiechle, MD and Sabin Motwani, MD

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
55874	Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed (Do not report 55874 in conjunction with 55XX0, 55876, 76942)	000
55876	Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple (Do not report 55876 in conjunction with 55XX0, 55874) (Report supply of device separately) (For imaging guidance, see 76942, 77002, 77012, 77021)	000
55XX0	Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed, with placement of interstitial device(s) for radiation therapy guidance, prostate (Report supply of interstitial device separately) (Do not report 55XX0 in conjunction with 55874, 55875, 55876, 76942)	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55874	A 67-year-old male is discovered on digital rectal examination to have a prostate nodule that occupies more than one half of the right lobe; there is no involvement of the left side. Diagnostic workup confirms the presence of prostate cancer. To reduce rectal toxicity that results from radiation therapy, an ultrasound-guided transperineal implantation of a biodegradable material is performed to create a space between the prostate and the rectum.
55876	A 68-year-old male was referred to his urologist for a PSA of 6.8. He underwent transrectal ultrasound and biopsy of his prostate, which revealed one core of Gleason score 6 adenocarcinoma of the prostate. His urologist discussed all the alternatives of definitive treatment and the patient elected to receive intensity modulated radiation therapy (IMRT). After a consultation with the radiation oncologist, the patient elects to have fiducial seeds placed to facilitate localization of the prostate during treatment and avoid contiguous organ injury.

FACILITY DIRECT PE INPUTS

55XX0	A 66-year-old male with localized prostate cancer chose treatment with radiation therapy and presents for transperineal placement of periprostatic biodegradable material with placement of prostatic interstitial devices for radiation therapy guidance.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty societies convened a multispecialty consensus panel including RUC advisors and peri-prostate implantation biodegradable material providers. The panel developed the direct practice expense recommendations for the peri-prostate implantation biodegradable material codes based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The multispecialty group included the current direct practice expense inputs for the existing CPT codes 55874 and 55876.
   The specialty societies included CPT Code 49411 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple,* as a reference code for new combined code 55XX0. CPT Code 49411 was RUC reviewed in 2009, is performed in the NF setting and is the work reference service code.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   The peri-prostate implantation biodegradable material codes are not typically reported with E/M services.

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

FACILITY DIRECT PE INPUTS

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

The global periods for the peri-prostate implantation biodegradable material codes are not transitioning.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

The PE Subcommittee standard for the pre-service period is zero minutes. The specialty societies are recommending 6 minutes of pre time for CPT Codes 55874, 55876 and 55XX0. The specialties are requesting 3 minutes for scheduling in the facility setting and 3 minutes for completing pre-procedure phone calls/prescriptions. *CA003 Schedule space and equipment in facility: 3 minutes* Clinical staff will confirm the facility has scheduled the procedure, has all the necessary equipment and supplies. *CA005 Completing pre-procedure phone calls/prescriptions: 3 minutes* Clinical staff will contact the patient prior to the procedure to ensure that they will be NPO, completed bowel prep, medication instructions, answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies and call the pharmacy with prescription order. The PE Subcommittee standard for the post service period is zero minutes. The specialty societies are recommending 3 minutes of post time for CPT Codes 55874, 55876 and 55XX0. The specialties are requesting 3 minutes for conducting patient communications. Clinical staff will call the patient to check on their recovery status and pain control.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Clinical staff will confirm the facility has scheduled the procedure, has all the necessary equipment and supplies. Clinical staff will also contact the patient prior to the procedure to ensure that they will be NPO, completed bowel prep, medication instructions, answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies and call the pharmacy with prescription order.

   b. Service period (includes pre, intra and post):

N/A

   c. Post-service period:

Clinical staff will call the patient to check on their recovery status and pain control.

FACILITY DIRECT PE INPUTS

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

FACILITY DIRECT PE INPUTS

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

N/A

ADDITIONAL INFORMATION

19. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

22. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

FACILITY DIRECT PE INPUTS

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The specialty societies convened a multispecialty consensus panel including RUC advisors and peri-prostate implantation biodegradable material providers. The panel developed the direct practice expense recommendations for the peri-prostate implantation biodegradable material codes based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The multispecialty group included the current direct practice expense inputs for the existing CPT codes 55874 and 55876.
The specialty societies included CPT Code 49411 *Placement of interstitial device(s) for radiation therapy guidance (eg, fiducial markers, dosimeter), percutaneous, intra-abdominal, intra-pelvic (except prostate), and/or retroperitoneum, single or multiple,* as a reference code for new combined code 55XX0. CPT Code 49411 was RUC reviewed in 2009, is performed in the NF setting and is the work reference service code.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the non-facility?

The peri-prostate implantation biodegradable material codes are not typically reported with E/M services.

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

	Dominant Specialty in the NF		**Dominant Specialty Global**	
55874	Urology	58%	Urology	60%
55876	Urology	68%	Urology	61%
55XX0				

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

The global periods for the peri-prostate implantation biodegradable material codes are not transitioning.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

The PE Subcommittee standard for the pre -service period is zero minutes. The specialty societies are recommending 6 minutes of pre time for CPT Codes 55874, 55876 and 55XX0. The specialties are requesting 3 minutes for completing diagnostic and referral forms and 3 minutes for completing pre-procedure phone calls/prescriptions. *CA001 Complete pre-service diagnostic and referral forms: 3 minutes* Clinical staff will review and complete all referral forms and ensure that the indication has met medical necessity for the planned procedure. *CA005 Completing pre-procedure phone calls/prescriptions: 3 minutes* Clinical staff will contact the patient prior to the procedure to ensure that they will be NPO, completed bowel prep, medication instructions, answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies and call the pharmacy with prescription order. The PE Subcommittee standard for the post service period is zero minutes. The specialty societies are recommending 3 minutes of post time for CPT Codes 55874, 55876 and 55XX0. The specialties are requesting 3 minutes for conducting patient communications. Clinical staff will call the patient to check on their recovery status and pain control.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs

remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

CPT code 55874
3 minutes were allocated for CA010 *obtain vital signs* in 2017 prior to CMS increasing the vital signs time to 5 minutes

CPT code 55876
3 minutes were allocated for CA010 *obtain vital signs* in 2006 prior to CMS increasing the vital signs time to 5 minutes

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

A clinically trained individual (RN,/LPN/MA) will review and complete all referral forms for the various insurance entities and ensure that the indication has met medical necessity for the planned procedure and forward the approved forms to the appropriate personnel. The clinical staff member ensures that all appropriate labs are drawn and results are acceptable. The clinical staff will contact the patient prior to the procedure to ensure they adhere to preprocedural guidelines (eg, fill antibiotics, enema), answer any questions the patient may have regarding the scheduled procedure, confirm their arrival time, review allergies. Send in antibiotic prescription. The clinical staff prior to the patient's arrival, will retrieve any prior exams and procedural reports, provide these exams for the physician to review, verify orders, review the chart to incorporate any relative clinical information.

    b. Service period (includes pre, intra and post):

Prepare room, including moving equipment into place and setting up supplies
Prepare discharge papers
Greet patient, provide gowning
Ask patient about enema, antibiotic, blood thinners, hip replacements, allergies, pacemakers
Go over and sign consent
Take antibiotic
Briefly explain procedure
Help patient onto table
Assist with positioning

Assist physician with procedure
Assist with preparing fiducials and/or hydrogel

Help patient move from procedure table to recovery chair
Monitor the patient
Check dressing/injection site(s)
Go over discharge instructions

Clean equipment
Clean up trash/used items
Scan marker labels/hydrogel labels, consent with patient labels

Additional steps for CPT Codes 55874 and 55XX0
Turn on U/S machine
Hit "Start exam" on ultrasound
Perform U/S during procedure
Print U/S pictures

c. Post-service period:

The clinical staff calls the patient the day after the procedure to make sure that there are no complications, answers any questions, ensures that pain control is adequate, and calls in additional prescriptions if needed.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See 10b

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The specialty societies are recommending intra-service work time equal to 100% of physician intra time.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

The recommendations include one established pack:

- SA048 pack, minimum multi-specialty visit

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

pack, minimum multi-specialty visit	***SA048***	***pack***	***Qty***
paper, exam table		*foot*	*7*
gloves, non-sterile		*pair*	*2*
gown, patient		*item*	*1*
pillow case		*item*	*1*
cover, thermometer probe		*item*	*1*

Biodegradable Material Kit – PeriProstatic	**SA126**	**Qty**	**Pack**
Accelerator syringe			
Diluent syringe, with label			
Y-connector			
Powder vial, with label			
Vial Adapter			
Plunger Cap			
Syringe Holder			
18G x 15cm Needle, with marked hub			

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

ER062	Stirrups (for brachytherapy table)	Other Formula (default + monitoring)
ER061	Stepper, stabilizer, template (for brachytherapy)	Other Formula (default + monitoring)
EQ386	Endocavitary US probe	Other Formula (default + monitoring)
EQ250	Ultrasound unit, portable	Other Formula (default + monitoring)
EF031	Table, power	Other Formula (default + monitoring)

ADDITIONAL INFORMATION

23. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

	Qty	**55874**	**55876**	**55XX0**

Procedure						
SA126	Biodegradable Material Kit - PeriProstatic		1	X		X
SH066	Sodium chloride 0.9% inj (10ml uou)	To put into the vials with the product	1	X		X
~~SD325~~	~~Endocavity Balloon~~					
SH048	Lidocaine 2% jelly, topical (xylocaine)		10ml	X	X	X
SC056	Syringe 50-60ml	(1) To put lidocaine in rectum (1) Inflate the balloon with water to get air out	2	X	X (1)	X
SB005	Cover-condom, transducer or ultrasound probe		2	X		X
SJ089	Ultrasound transmission gel, sterile (single use)		1	X		X
Sh069	Sodium chloride 0.9% irrigation (500-1000ml uou)	To inflate the balloon to get air out	1	X		X

SG037	Dressing, 4in x 4.75in (Tegaderm)	Secure scrotum	1	X		X
Clean Up						
SM013	Disinfectant, surface (Envirocide, Sanizide)	Mayo stand, stirrups, table	2oz	X	X	X
SM022	Sanitizing cloth-wipe (surface, instruments, equipment)	Use with Envirocide	2	X	X	X
SM018	Glutaraldehyde 3.4% (Cidex, Maxicide, Wavicide)	Cidex for U/S probe	10oz	X		X
SM021	Sanitizing cloth-wipe (patient)		2	X	X (1)	X

CPT Code 55876 Device
Office setting: When submitting a claim for CPT® code 55876, the markers should be reported separately, according to CPT instructions. When billed on a physician claim, HCPCS code A4648 is separately billable and payable as a supply when used in conjunction with CPT code 55876.

Imaging
55874 – includes imaging
55876 – imaging separately reportable

Why does imaging show up in the RUC database with 55874?
Imaging shows up in the RUC database with CPT Codes 55874 and 55876 because they are often reported together (why we are here today, got caught in a screen, and had to make a combined code). So the imaging that shows up with 55874 is actually related to 55876.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

26. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2026

Augmentative Algorithmic Analysis-Coronary FFR Angiogram Data – Tab 07

In May 2026, the CPT Editorial Panel approved the addition of an add-on code to report an intraprocedural estimate of coronary fractional flow derived by augmentative algorithmic analysis of data from real-time coronary angiography, with creation of a functional map of coronary circulation with review and interpretation. The existing Category III code 0523T for intraprocedural coronary fractional flow reserve (FFR) was deleted. The establishment of CPT code 93XXX is approved for the CPT 2028 code set while the establishment of Category III codes X668T, X669T are approved for the CPT 2027 code set. Category III code X668T will sunset January 1, 2028, to coincide with the effective date of CPT code 93XXX.

93XXX ***Intraprocedural estimate of coronary fractional flow derived by augmentative algorithmic analysis of data from real-time coronary angiography, with creation of functional map of the coronary circulation, when performed, with review and interpretation (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 128 interventional cardiologists and determined that a direct work RVU crosswalk to CPT code 76979 *Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)* (work RVU = 0.83, 14.63 minutes intra-service and total time) accurately reflects the physician work necessary for this add-on service. The RUC recommends 15 minutes of intra-service and total time as supported by the survey.

CPT code 93XXX is an add-on code to that is reported in conjunction with a coronary angiogram. This service utilizes augmented algorithmic analysis during a coronary angiogram on an intermediate lesion to inform physician decision making on whether to proceed with a coronary intervention, primarily, stenting. Intermediate coronary lesions are blockages that show 50-70 percent narrowing on an angiogram making it difficult for the human eye to assess whether the blockage restricts blood flow enough to require a stent. The RUC concurred that this is a subset of the angiography patients, representing approximately one-third and not the typical patient undergoing diagnostic angiography to determine if a stent or coronary artery bypass procedure is required. They also noted that fractional flow reserve measurement is particularly useful in a subset of patients that have indeterminant and diffuse disease with multiple lesions. They also explained that additional angiographic images are not commonly required, but that the results from the analysis may require this in some cases.

The RUC questioned the physician work associated with the service being provided and whether medical decision-making should be attributed to CPT code 93XXX, separate from the base code. The point being that this procedure is intended to simplify medical decision-making regarding the next steps after an angiography. The specialties emphasized that this code is used when the images that have just been received from an angiogram are inconclusive, thus making a consequential decision is an essential part of the add-on service. Fundamentally, this service offers an innovative advancement utilizing augmentative algorithmic analysis to support physician decision making when it is difficult for the human eye to assess the need for a stent. It is not a matter of simplification but is a matter of better diagnostic accuracy. The treating physician must process the additional information from the coronary fractional flow reserve (FFR) values while accounting for the patient's medical history. The physician must

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

evaluate the available clinical and procedural information in real time and make an immediate judgment as the patient remains sedated on the catheterization table, with the catheter in situ and vascular access maintained. The specialties further emphasized that the service requires clinical interpretation of the data when the angiographic run is done not merely image interpretation or receipt of a number. This clinical interpretation informs the immediate procedural course: concluding the diagnostic assessment, undertaking further evaluation, proceeding toward percutaneous coronary intervention (PCI), or considering surgical revascularization. In some cases, the result may be contradictory to the unaided lesion evaluation which increases stress. The output requires physician interpretation and evaluation to establish its clinical significance. The RUC agreed and determined that there is additional medical decision-making that occurs beyond the base code in the subset of patients who receive FFR. Moreover, it was acknowledged that increased intensity and stress occur when there is discordance when the course of action changes as a result of the technology.

The specialties initially proposed an intensity similar to the angiography and interventional services. The RUC compared the service to an intraprocedural manipulation, add-on code 93572 *Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress, when performed; each additional vessel (List separately in addition to code for primary procedure)* (work RVU = 1.40, 15.6 minutes intra-service and total time) and the longer time code 93571 *Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress, when performed; initial vessel (List separately in addition to code for primary procedure)* (work RVU = 1.76, 19.5 minutes intra-service and total time). These comparator codes represent the methodologies to determine FFR prior to the augmented analysis of images, whether real time angiography or stored CT. The RUC concluded that the 93XXX augmented analysis consisted of time for data entry and awaiting software processing and was not as intense as the intravascular Doppler velocity and/or pressure derived FFR measurements.

The RUC considered image interpretation codes and their typical intensity and attempted to distinguish image interpretation services from the medical decision making inherent in this new service. The RUC also sought to evaluate these new augmented analysis services relative to each other. In doing so the RUC concluded the nature of an augmented analysis still requires consideration of the unique nature of each service. In the case of 93XXX the work of real-time use of the data for medical decision-making that is not part of another service is a key differentiating factor.

The RUC therefore compared CPT code 93XXX to CPT code 75580 *Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional* (work RVU = 0.73, 10.73 minutes intra-service time and 21.73 minutes total time). The RUC noted that the FFRCT code is non-invasive, has less intra-service time, and is not performed in real-time; therefore, it is less intense/complex to perform and is appropriately valued lower than the surveyed code. The FFRCT is vastly different because it is sent off to a service for analysis, and the interpretative work is typically performed on a subsequent date. The individual making the interpretation is not also utilizing the data and clinical interpretation for real time decision making. Whereas, with the surveyed code, the decision must be rendered in real time to avoid unnecessary delays in care, additional procedural risk, and the potential need for a subsequent invasive intervention.

For additional comparison, the RUC referenced CPT code 75577 *Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography,*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

with interpretation and report by a physician or other qualified health care professional (work RVU = 0.85, 15 minutes intra-service time and 27 minutes total time). The RUC noted that both services use augmentative software analysis; however, CPT code 75577, like 75580 does not involve the same urgency. Despite 75577 being an XXX code and requiring more total time to perform, CPT code 75577 made for a useful clinical comparison of another augmented analysis. It is less intense/complex than the surveyed code because clinical decision-making is not required in real time and typically involves intensification of statin therapy rather than proceeding (or not) with a cardiac intervention.

The RUC further referenced CPT code 93896 *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)* (work RVU = 0.79, 14.63 minutes intra-service and total time), noting that the intra-service times are nearly identical, yet CPT code 93896 is appropriately valued lower than the surveyed code because this vasoreactivity study is a non-invasive ultrasound test where the patient is not sedated nor undergoing catheterization.

The RUC recommends a work RVU of 0.83 for CPT code 93XXX.

Practice Expense
The RUC recommends no direct practice expense inputs for CPT code 93XXX as it is a facility-based add-on service.

New Technology
CPT code 93XXX will be placed on the New Technology/New Services list and will be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93XXX Tracking Number G1 Original Specialty Recommended RVU: **1.29**
Presented Recommended RVU: **1.13**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.83**

CPT Descriptor: Intraprocedural estimate of coronary fractional flow derived by augmentative algorithmic analysis of data from real-time coronary angiography, with creation of functional map of the coronary circulation, when performed, with review and interpretation (list separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with an abnormal electrocardiogram and chest pain presents for cardiac angiography. The physician notes intermediate visual narrowing of one or more of the coronary arteries, and an algorithmic analysis to measure fractional flow is performed. [note: this is an add-on service. only consider the additional work related to intraprocedural estimate of coronary fractional flow derived by augmentative algorithmic analysis, of data from real-time coronary angiography, with creation of functional map of the coronary circulation.]

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Following an invasive coronary angiography procedure (reported separately), the patient remains sedated on the catheterization table, with the catheter in situ and vascular access maintained. On a cardiac catheterization laboratory computer that is linked to the fluoroscopy system, the physician selects clinically appropriate angiographic views and imports the image files into the angiography-based FFR software. Mean arterial pressure is also entered into the software. The software algorithm processes the angiographic data, and the computed angiography-based FFR values are displayed on a monitor in a color-coded model of the coronary system.

The physician evaluates the clinical plausibility and limitations of the analysis, particularly when physiological findings are borderline or discordant with the anatomical appearance. This requires determining whether the findings provide a reliable physiological explanation, whether the imaging inputs require reassessment, and whether additional angiographic views or further physiological evaluation are necessary. When additional images are obtained, the physician reassesses the resulting analysis before completing the interpretation.

The physician reviews and interprets the coronary FFR values in real time. This interpretation informs the immediate procedural course: concluding the diagnostic assessment, undertaking further evaluation, proceeding toward PCI, or considering surgical revascularization. The output requires physician interpretation to establish its clinical significance. Findings are included in the report of the procedure.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)	09/2026					
Presenter(s):	Dr. Richard Wright, Dr. Ed Tuohy, Dr. Afnan Tariq					
Specialty Society(ies):	ACC, SCAI

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	12%	55%	28%	5%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	56%	35%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	18%	44%	39%
Physical effort required	28%	56%	16%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	61%	25%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	21%	67%	8%	4%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	67%	12%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	37%	46%	17%
Physical effort required	42%	46%	13%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	75%	8%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

93XXX, intraprocedural estimate of coronary fractional flow derived by augmentative algorithmic analysis of data from real-time coronary angiography, with creation of functional map of the coronary circulation, when performed, with review and interpretation, was converted from CPT Cat III code 0523T to a Cat I code at the May 2026 CPT Panel meeting. Besides elevation from Cat III to Cat I status, the revisions sought to make the code more device-agnostic and hence applicable to several similar technologies performing similar functions.

93XXX was surveyed by the ACC and SCAI for the September 2026 RUC meeting. The survey pool was comprised of 3,206 interventional cardiologists randomly selected from the ACC and SCAI memberships.

ACC and SCAI convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with the service.

The survey 1st key reference service (KRS) is 37252, non-coronary intravascular ultrasound initial vessel. This 1st KRS was chosen by a wide margin of respondents at 44.5% versus just 18.7% for the 2nd KRS. Four of the five intensity/complexity questions for KRS 1 had "same" as the majority response with the fifth (technical skill required) giving "same" a plurality at 44%. As such, this robust survey of 128 respondents clearly indicates 93XXX is a very similar procedure to 1st KRS 37252 in terms of intensity and complexity. While 37252 does have a notably greater intra-service time, when the survey 25th percentile of 1.29 wRVUs is assigned to 93XXX with the median survey intra-service time of 15 minutes the IWPUT is 0.086. This is just 0.002 difference from the 1st KRS IWPUT of 0.088.

The societies recommend the survey 25th percentile wRVU of 1.29 with times of 0/15/0.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0523T

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Cardiology How often? Commonly

Specialty Cardiology How often? Commonly

Specialty Advanced Heart Failure and Transplant Cardiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 598,833

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Data provided in the Code Change Application showed increases in utilization of just over 300% per year from 2022 to 2024 with the 2024 data showing 7,393 total services performed. While we would assume the rate of increase would slow, we must also account for the fact that the 0523T code was device specific and the Cat I code is device agnostic allowing at least four other similar devices to be billed using 93XXX. As such we applied the approximately 300% increase from 2024 utilization and extrapolated it out to the anticipated year the Cat I code will be active (2028). This calculation yields an expected utilization of 598,833.

Specialty Interventional Cardiology Frequency 313,788 Percentage 52.39 %

Specialty Cardiology Frequency 268,876 Percentage 44.89 %

Specialty Advanced Heart Failure and Transplant Cardiology Frequency 7,785 Percentage 1.30 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 164,349 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Data provided in the Code Change Application showed increases in utilization of just over 300% per year from 2022 to 2024 with the 2024 data showing 2,029 Medicare services performed. While we would assume the rate of increase would slow, we must also account for the fact that the 0523T code was device specific and the Cat I code is device agnostic allowing at least four other similar devices to be billed using 93XXX. As such we applied the approximately 300% increase from 2024 utilization and extrapolated it out to the anticipated year the Cat I code will be active (2028). This calculation yields an expected utilization of 164,349.

Specialty Interventional Cardiology Frequency 86,119 Percentage 52.40 %

Specialty Cardiology Frequency 73,793 Percentage 44.90 %

Specialty Advanced Heart Failure and Transplant Cardiology Frequency 2,137 Percentage 1.30 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

Chicago, IL 60611

Re: Tab 7 Augmentative Algorithmic Analysis-Coronary FFR Angiogram Data (93XXX)

Dear Dr. Manaker:

Tab 7 CPT code 93XXX is a facility-only add-on service that will have no related direct practice expense inputs.

Thank you for your consideration of this information as you prepare for the upcoming meeting. Please contact Matt Minnella at mminnella@acc.org if you have any questions.

Sincerely,

Afnan Tariq, MD
SCAI RUC Advisor

Richard Wright, MD
ACC RUC Advisor

Maxillofacial Prosthetic Services – Tab 08

In November 1994, the American Association of Neurological Surgeons (AANS), American Academy of Otolaryngology-Head and Neck Surgery, Inc. (AAO-HNS), and the American Academy of Maxillofacial Prosthetics (AAMP) met to review the AAMP recommendations for CPT codes 21079 - 21088. The original AAMP recommendations were understood to need additional refinement as they may have included services performed by technicians. Services provided by technicians should only be included in the practice cost component. The 1994 meeting participants reviewed detailed time data collected by AAMP and were able to differentiate Doctor of Dental Surgery (DDS) time from technician time. The DDS face-to-face time with the patient was assumed to be as intense as an office visit. The AAMP agreed that the rank order of the revised recommendations appeared appropriate.

On February 9, 1995, AAO-HNS and AAMP representative physicians met with CMS (formerly, the Health Care Financing Administration (HFCA)) to review the revised recommendations and address potential HCFA concerns. This workgroup confirmed that a global period of 090 would apply for all codes and that the global period begins with the initial consultation with the patient. If an unusual situation occurs (eg, patient does not return for surgery), the maxillofacial prosthodontist should report an appropriate evaluation and management code. The RUC reviewed the submission to CMS from this time period, however the physician time in the RUC database does not reconcile to those records. Therefore, the source of the current CMS time for these services is unclear and these time data should not be utilized in this review.

CMS published its December 8, 1995, Final Rule for 1996 that the work RVUs developed by the AAMP appropriately represent the work involved in these procedures. Also, since they had little or no charge data on which to base practice expense and malpractice expense RVUs in accordance with section 1848(c)(2)(C) of the Act, CMS imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares of total resources provided by the American Association of Oral and Maxillofacial Surgeons. Those shares were 54.7 percent for practice expense and 4.4 percent for malpractice expense. CMS also indicated it was "working on a resource-based practice expense study and, as part of this effort, hopes to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs."

Since 2005, CMS has requested detailed data on costs (clinical labor, supplies, equipment) required for these procedures. While the necessary labor, supply, and equipment needs are reflected in the database, there has often been a lack of supporting documentation for the pricing of many supply items, and initial information for equipment use durations was also lacking. CMS developed its own estimates for equipment use time as of 2006 and used these to calculate PE RVUs. In the November 27, 2007, Final Rule for 2008, due to uncertainty, CMS proposed to cap equipment usage time at 25 minutes unless specific data was submitted. The specialty society later provided use time data for each piece of equipment and pricing for supplies, though the latter lacked supporting documentation. In response, CMS indicated they appreciated the equipment time data, compared it to clinical labor times (limiting equipment time to labor time if higher), and updated the database accordingly.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Supply pricing was only accepted where documented (one item, articulating paper/ribbon, from another specialty's submission). The agency reminded the society that documented proof is needed before any supply prices are accepted, as specified in the rule. The agency noted it would continue working with the society until all necessary data with appropriate documentation is provided.

In the Proposed Rule for 2026, an interested party nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care. Additionally, several of the direct practice supplies do not have Medicare payment values assigned to them.

CMS indicated that although the nomination stated that the work RVUs are relatively accurate as currently valued, because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few institutions in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC also commented that it would be willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, CMS reiterated that the RUC expressed willingness to review the work valuation and direct PE inputs for maxillofacial prosthetic services and looks forward to reviewing the RUC's recommendations in the future.

The RUC placed the maxillofacial prosthetic services (CPT codes 21076-21088) on the Level of Interest (LOI) to review these services at the April 2026 meeting.

April 2026 RUC Review

CPT codes 21076-21088 represent highly specialized, low-volume services that are performed by a small number of specially trained health care professionals in the U.S. The prostheses that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, stroke or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist to create the model prosthesis, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created. The survey defined pre, intra, and post time as follows:

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

- **PRE:** includes the maxillofacial prosthodontist/oral surgeon/oral and maxillofacial surgeon services provided *before* the start of the prosthesis fabrication. The following services **are not included**:
    - Any consultation visits with the maxillofacial prosthodontist/oral surgeon/oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Clinical staff time (e.g., dental assistants or lab technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist/oral surgeon/oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period, **including all "visits" (face-to-face and non-face-to-face sessions that the MD/DMD is present)** related to the fabrication of the prosthesis and care by the maxillofacial prosthodontist/oral surgeon/oral and maxillofacial surgeon during the global period. *The survey instrument specified "Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)."*

- **POST:** Post work includes any activities by the maxillofacial prosthodontist/oral surgeon/oral and maxillofacial surgeon after prosthesis is complete and delivered to the patient, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.

  The survey instrument specified "Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)."

The pre-time occurs before the making of the prosthesis begins. The maxillofacial prosthodontist reviews the pre- and post-surgical imaging and assesses the implant placement and type. The intra-time represents the time from when the making of the prosthesis begins until it is delivered. This includes all face-to-face visits and non-face-to-face services that are required during those 90 or 10 days. Post-time after the prosthesis is delivered, typically includes phone calls made to the patient to determine how they are functioning with their new prosthesis, communication with the multidisciplinary physicians to inform the outcome of the prosthetic restoration, ordering appropriate post-delivery functional outcome tests, verification of appropriate documentation in the EHR, appropriate storage of the physical models of the patient, and comparing pre-surgical photographs and scans with post-delivery pictures of the prosthesis to evaluate the success of the processes.

The survey respondents were asked to indicate the number of face-to-face visits and the time in lab prosthetic fabrication sessions (non-face-to face visits) which was reported as the work time in the interval between the face-to-face visits. The lab time includes any non-face-to-face time fabricating the prosthesis, overseeing the technician and performing coordination or patient contacts. The intra-service period accounts for the total minutes of the face-to-face and non-face-to-face visits combined. The intra-service time does not include the pre- or post- service time as collected by the survey, that time is separate. The RUC noted that it is not atypical to examine services that include non-face-to-face time in the intra-service period. There are many services that include non-face-to-face time in the intra-service period, such as Evaluation and Management services, radiology services, pathology services, and care coordination services. When the RUC elected to use crosswalks, the RUC used total times, while considering the intensity as well, noting that the intraservice intensity should relate to E/M given the inter-visit intraservice time component.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The services of the maxillofacial prosthodontist do not overlap with any surgical services such as tumor resection, burn or trauma care. The maxillofacial prosthodontist does not typically perform these services. For code 21085, *Impression and custom preparation; oral surgical splint,* a 010 global period service, the surgeon does typically proceed to performing a surgery and any potential overlap was removed.

The maxillofacial prosthetic services are grouped into four categories: extraoral (21088, 21077, 21087, 21086), speech procedures (21082, 21084, 21083), obturator/jaw (20181, 21080, 21079, 21076) and the 010-day global period oral surgical splint (21085). The codes are grouped by similarity in work, time, and intensity. Please note that the summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of MD/DMD face-to-face and non-face-to-face intervals for each code, based on the responses to the survey (Table1); and second, a relativity table which reflects that the recommendations are intended to maintain appropriate rank order within the family.

Table 1. Face-to-Face (FTF) Visits and Non-Face-to-Face (NFTF) Intervals and Times

	CPT Code	# FTF Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time btwn V1 & 2	NFTF Median Time btwn V2 &3	NFTF Median Time btwn V3 & 4	NFTF Median Time btwnn V4 & 5	NFTF Median Time btwn V5 & 6	NFTF Median Time btwn V6 & 7	Total NFTF Time	Total Intra Time of all Visits
Extraoral Codes	**21088**	6	65	90	90	110	90	76		**520**	100	90	120	77	60		**447**	**967**

EXTRAORAL

The extraoral maxillofacial prosthetic services describe physician work performed outside the mouth, on the head or face, and involve recreating a portion of the face (eye, nose, ear, or section of face). These highly specialized services are the most intense and require the most physician work for this family of services. The prosthesis is always visible, and patients have the highest expectations of outcomes for these procedures. The maxillofacial prosthodontist is replacing facial features with complex anatomical constructs, and patients expect to look just as they did before their surgery for head and neck cancer or other deformities. These services also require the most time to perform among the four groupings of maxillofacial prosthetic services. The surveyed total times range from 938 to 1,059 minutes, with 6 to 7 face-to-face patient visits to create, fit, and finalize the prostheses.

21088 ***Impression and custom preparation; facial prosthesis***
The RUC reviewed the survey results from 31 maxillofacial prosthodontists and determined that the survey median work RVU of 35.00 appropriately accounts for the work required to perform this service. The RUC recommends 60 minutes pre-service evaluation time, 6 face-to-face visits (520 minutes) and 5 non-face-to-face intervals (447 minutes), which totals 967 minutes intra-service time, and 32 minutes post-service time, totaling 1,059 minutes total time. The face-to-face visits include final impressions, sculpting and verification of implant framework, finalization of sculpting, intrinsic and extrinsic coloration, and finally, delivery of the facial prosthesis.

CPT code 21088 is the most difficult procedure in this family of all maxillofacial prosthetic services. The maxillofacial prosthodontist must replace an entire section of the face, which required a neurosurgical approach with a free flap constructed by the surgeon.

The RUC compared the surveyed code to the top key reference service 69554 *Excision aural glomus tumor; extended (extratemporal)* (work RVU = 35.07 and 1,012 minutes total time) and noted that the surveyed code requires a similar amount of physician work and more total time. Of the respondents who chose CPT code 69554 as the top key reference service, 54% indicated that the surveyed code overall is more intense and complex to perform. The RUC compared the surveyed code to the second top key reference service 21182 *Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm* (work RVU = 31.77 and 792 minutes total time) and noted that the surveyed code requires more physician work and time to perform, thus is valued higher. The intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity between these procedures. **The RUC recommends a work RVU of 35.00 for CPT code 21088.**

21077 ***Impression and custom preparation; orbital prosthesis***
The RUC reviewed the survey results from 33 maxillofacial prosthodontists and determined that the survey median work RVU of 33.33 appropriately accounts for the work required to perform this service. The RUC recommends 45 minutes pre-service evaluation time, 7 face-to-face visits (495 minutes) and 6 non-face-to-face intervals (368 minutes), which totals 863 minutes intra-service time, and 30 minutes post-service time, totaling 938 minutes total time. The face-to-face visits include final impressions, sculpting and verification of implant framework, sculpting, finalization of sculpting, intrinsic and extrinsic coloration, and finally, delivery of the orbital prosthesis.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For CPT code 21077, the maxillofacial prosthodontist works with very large cavities (orbital) and sets the gaze of the eye to look natural. The maxillofacial prosthodontist is replacing the entire orbital contents, including the eyelid, eye, lower eyelid, and adjacent surrounding tissue.

The RUC compared the surveyed code to the top key reference service 69554 *Excision aural glomus tumor; extended (extratemporal)* (work RVU = 35.07 and 1,012 minutes total time) and the second top key reference service 21182 *Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm* (work RVU = 31.77 and 792 minutes total time). The surveyed code is appropriately bracketed by these two services based on the physician work and the total time required to perform these services. The intensity and complexity measures for the surveyed code, compared with the key reference services, also support the relativity between these procedures. **The RUC recommends a work RVU of 33.33 for CPT code 21077.**

21087 ***Impression and custom preparation; nasal prosthesis***
The RUC reviewed the survey results from 31 maxillofacial prosthodontists and determined that the survey median work RVU of 30.57 appropriately accounts for the work required to perform this service. The RUC recommends 45 minutes pre-service evaluation time, 6 face-to-face visits (443 minutes) and 5 non-face-to-face intervals (430 minutes), which totals 873 minutes intra-service time, and 30 minutes post-service time, totaling 948 minutes total time. The face-to-face visits include final impressions, sculpting and verification of implant framework, finalization of sculpting, intrinsic and extrinsic coloration, and finally, delivery of the nasal prosthesis.

To perform the nasal prosthesis service, the maxillofacial prosthodontist works within the open cavity as they restore the appearance and function of a nose. The prosthesis protects the nasal cavity and improves breathing for the patient. The RUC noted that CPT code 21087 requires slightly more physician work than CPT code 21086, because the sinuses are exposed to the nasal cavity, and when the maxillofacial prosthodontist makes an impression, it requires more risk and effort to ensure that the impression material does not go down into that open cavity and obstruct the patient's airway.

The RUC compared the surveyed code to the top key reference service 31255 *Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior)* (work RVU = 26.03 and 603.5 minutes total time) and noted that the surveyed code requires more physician work and time to perform, thus is valued higher. The RUC compared the surveyed code to the second top key reference code 21182 *Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm* (work RVU = 31.77 and 792 minutes total time) and determined the surveyed code requires similar work but more physician time. Of the respondents who chose CPT code 21182 as the top key reference service, 75% indicated that the surveyed code overall requires the same intensity and complexity to perform. The RUC determined that these key reference services support the relativity of the procedure.

For additional support, the RUC referenced CPT code 42894 *Resection of pharyngeal wall requiring closure with myocutaneous or fasciocutaneous flap or free muscle, skin, or fascial flap with microvascular anastomosis* (work RVU = 33.07 and 830 minutes total time) and determined that a work RVU of 30.57 supported relativity among similar services. **The RUC recommends a work RVU of 30.57 for CPT code 21087.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

21086 ***Impression and custom preparation; auricular prosthesis***
The RUC reviewed the survey results from 32 maxillofacial prosthodontists and determined that the survey median work RVU of 30.03 appropriately accounts for the work required to perform this service. The RUC recommends 51 minutes pre-service evaluation time, 6 face-to-face visits (461 minutes) and 5 non-face-to-face intervals (413 minutes), which totals 874 minutes intra-service time, and 30 minutes post-service time, totaling 955 minutes total time. The face-to-face visits include final impressions, sculpting and verification of implant framework, finalization of sculpting, intrinsic and extrinsic coloration, and finally, delivery of the auricular prosthesis.

For CPT code 21086, the maxillofacial prosthodontist is replacing a missing or damaged external ear, which must match the contralateral ear. This prosthesis must serve as a realistic cosmetic, psychological and functional replacement.

The RUC compared the surveyed code to the top key reference service 42892 *Resection of lateral pharyngeal wall or pyriform sinus, direct closure by advancement of lateral and posterior pharyngeal walls* (work RVU = 25.38 and 638.75 minutes total time and the second top key reference code 69155 *Radical excision external auditory canal lesion; with neck dissection* (work RVU = 22.77 and 737.88 minutes total time). The surveyed code requires more physician work and total time than the key reference services, thus is valued higher. Additionally, the intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity between these procedures.

For additional support, the RUC referenced CPT code 42894 *Resection of pharyngeal wall requiring closure with myocutaneous or fasciocutaneous flap or free muscle, skin, or fascial flap with microvascular anastomosis* (work RVU = 33.07 and 830 minutes total time) and determined that a work RVU of 30.03 supported relativity among similar services. **The RUC recommends a work RVU of 30.03 for CPT code 21086.**

SPEECH PROCEDURES

The maxillofacial prosthetic speech procedure services in this code family include CPT codes 21082, palatal augmentation; 21084, speech aid; and 21083, palatal lift. This grouping reflects the next level of highest intensity for this family of services. The physician work has increased for these services due to the greater precision allowed to create the prosthesis framework and increased interaction with speech language pathologists (SLPs). The SLP is present and reports their time separately, as there is no overlap in work between the maxillofacial prosthodontist and the SLP. The maxillofacial prosthodontist uses the information the SLP provides to determine how to adjust and reline the prosthesis, to ensure the patient can successfully speak and swallow. The surveyed total times range from 515 to 618 minutes, with 5 to 6 face-to-face patient visits to create, fit, and finalize the prostheses.

21082 ***Impression and custom preparation; palatal augmentation prosthesis***
The RUC reviewed the survey results from 37 maxillofacial prosthodontists and determined that a work RVU of 25.38 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to CPT code 42892 *Resection of lateral pharyngeal wall or pyriform sinus, direct closure by advancement of lateral and posterior pharyngeal walls* (work RVU = 25.38 and 638.75 minutes total time). The RUC recommends 40 minutes pre-service evaluation time, 6 face-to-face visits (358 minutes) and 5 non-face-to-face

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intervals (180 minutes), which totals 538 minutes intra-service time, and 40 minutes post-service time, totaling 618 minutes total time. The face-to-face visits include preliminary impressions, final impressions, framework fitting and jaw relationship record, esthetic fitting and palatal molding, finalization of palatal molding, and finally delivery of the palatal augmentation prosthesis.

CPT code 21082, palatal augmentation, is the most difficult service in this subfamily of codes, as the majority of the tongue is absent, and patients are at risk of aspiration during the molding. It is complex to generate speech without a tongue, and these prostheses allow for the function of speech and enhance swallowing capabilities by lowering the roof of the mouth to compensate for impaired tongue mobility or volume.

The RUC compared the surveyed code to the top key reference service 41153 *Glossectomy; composite procedure with resection floor of mouth, with suprahyoid neck dissection* (work RVU = 32.75 and 819.25 minutes total time) and second top key reference code 31230 *Maxillectomy; with orbital exenteration (en bloc)* (work RVU = 30.05 and 682.38 minutes total time). The surveyed code requires less physician work and total time than the key reference services, thus is valued lower. Of the survey respondents who chose CPT code 31230 as the key reference service, 66% indicated that the surveyed service is overall somewhat less intense and complex to perform. The intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity between these procedures.

For additional support, the RUC referenced CPT code 21150 *Reconstruction midface, LeFort II; anterior intrusion (eg, Treacher-Collins Syndrome)* (work RVU = 25.31 and 617 minutes total time) and determined that a work RVU of 25.38 supported relativity among similar services. **The RUC recommends a work RVU of 25.38 for CPT code 21082.**

21084 *Impression and custom preparation; speech aid prosthesis*
The RUC reviewed the survey results from 36 maxillofacial prosthodontists and determined that a work RVU of 22.43 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to CPT code 15734 *Muscle, myocutaneous, or fasciocutaneous flap; trunk* (work RVU = 22.43 and 591.5 minutes total time). The RUC recommends 40 minutes pre-service evaluation time, 6 face-to-face visits (340 minutes) and 5 non-face-to-face intervals (178 minutes), which totals 518 minutes intra-service time, and 36 minutes post-service time, totaling 594 minutes total time. The face-to-face visits include preliminary impressions, final impressions, framework fitting, esthetic fitting and molding, finalization of molding, and finally delivery of the speech aid prosthesis.

CPT code 21084, speech aid this prosthesis, is used for patients who are velopharyngeally insufficient. This refers to the anatomical area at the back of the oral cavity where the soft palate (velum) meets the throat (pharynx). This region functions as a valve or sphincter that regulates airflow and sound between the nose and mouth, which is essential for normal speech and swallowing. The speech aide prosthesis restores the function of the velopharyngeal complex to restore speech functionality and prevent nasal regurgitation.

The RUC compared the surveyed code to the top key reference service 42120 *Resection of palate or extensive resection of lesion* (work RVU = 11.56 and 304 minutes total time) and the second top key reference code 42892 *Resection of lateral pharyngeal wall or pyriform sinus, direct closure by advancement of lateral and posterior pharyngeal walls* (work RVU = 25.38 and 638.75 minutes total time). The surveyed code is

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

appropriately bracketed by these two services based on the physician work and total time required to perform these services. The intensity and complexity measures for the surveyed code, compared with the key reference services, also support the relativity between these procedures. **The RUC recommends a work RVU of 22.43 for CPT code 21084.**

21083 ***Impression and custom preparation; palatal lift prosthesis***
The RUC reviewed the survey results from 37 maxillofacial prosthodontists and determined that a work RVU of 20.01 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to CPT code 32654 *Thoracoscopy, surgical; with control of traumatic hemorrhage* (work RVU = 20.01 and 513.23 minutes total time). The RUC recommends 39 minutes pre-service evaluation time, 5 face-to-face visits (294 minutes) and 4 non-face-to-face intervals (135 minutes), which totals 429 minutes intra-service time, and 47 minutes post-service time, totaling 515 minutes total time. The face-to-face visits include preliminary impressions, final impressions, framework fitting, fitting/molding/adjusting, and finally delivery of the palatal lift prosthesis.

For CPT code 21083, palatal lift prosthesis, the maxillofacial prosthodontist must elevate the soft palate in patients with impaired muscle function. The anatomy of this prosthesis is intact, and the soft palate is not moving. The palatal lift prosthesis allows for repositioning of the weak palatal musculature, which lifts the soft palate into its correct anatomic position to prevent regurgitation and air escape.

The RUC compared the surveyed code to the second top key reference code 31230 *Maxillectomy; with orbital exenteration (en bloc)* (work RVU = 30.05 and 682.38 minutes total time) and noted that the surveyed code requires less physician work and time, thus is valued lower.

For additional support, the RUC referenced CPT code 31552 *Laryngoplasty; for laryngeal stenosis, with graft, without indwelling stent placement, age 12 years or older* (work RVU = 19.99 and 500.5 minutes total time) and determined that a work RVU of 20.01 supported relativity among similar services. **The RUC recommends a work RVU of 20.01 for CPT code 21083.**

OBTURATOR/JAW

The maxillofacial prosthetic obturator/jaw services include CPT codes 21076 surgical obturator, 21079 interim obturator, 21080 definitive obturator, and 21081 mandibular resection prosthesis. These services require more work than the speech prosthesis codes but less than the extraoral prosthesis codes. CPT codes 21080 and 21081 describe very demanding procedures, as 21080 has open communication from the oral cavity to the maxillary sinus/ethmoid sinus, and CPT code 21081 involves working with a fibula free flap reconstruction with implants. For both services, airway control is imperative. These two services require extensive clinical time and demand specialized expertise to restore vital functions like speech, deglutition, and mastication because these services enhance the function and chewing ability for the patient. These prostheses replace hard and soft tissues of the jawbone. Therefore, these procedures require more work, and should be valued higher than the speech procedures, but lower than the extraoral codes, to maintain relativity in the family. The surveyed total times range from 302 to 677 minutes, with 3 to 7 face-to-face patient visits to create, fit, and finalize the prostheses.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

21081 ***Impression and custom preparation; mandibular resection prosthesis***
The RUC reviewed the survey results from 37 maxillofacial prosthodontists and determined that a work RVU of 25.42 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to CPT code 31375 *Partial laryngectomy (hemilaryngectomy); laterovertical* (work RVU = 25.42 and 694.25 minutes total time). The RUC recommends 42 minutes pre-service evaluation time, 7 face-to-face visits (375 minutes) and 6 non-face-to-face intervals (215 minutes), which totals 590 minutes intra-service time, and 45 minutes post-service time, totaling 677 minutes total time. The face-to-face visits include virtual surgical planning, final impressions, resin framework, jaw relationship record, esthetic fitting, delivery of mandibular resection prosthesis, and final adjustments.

The RUC compared the surveyed code to the top key reference service 21047 *Excision of benign tumor or cyst of mandible; requiring extra-oral osteotomy and partial mandibulectomy (eg, locally aggressive or destructive lesion[s])* (work RVU = 19.57 and 559 minutes total time) and the second top key reference code 38724 *Cervical lymphadenectomy (modified radical neck dissection)* (work RVU = 23.35 and 507.5 minutes total time). The surveyed code requires more physician work and total time than the key reference services, thus is valued higher. Additionally, the intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity between these procedures.

For additional support, the RUC referenced CPT code 31225 *Maxillectomy; without orbital exenteration* (work RVU = 26.03 and 603.5 minutes total time) and determined that a work RVU of 25.42 supported relativity among similar services. **The RUC recommends a work RVU of 25.42 for CPT code 21081.**

21080 ***Impression and custom preparation; definitive obturator prosthesis***
The RUC reviewed the survey results from 38 maxillofacial prosthodontists and determined that a work RVU of 25.42 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to CPT code 31375 *Partial laryngectomy (hemilaryngectomy); laterovertical* (work RVU = 25.42 and 694.25 minutes total time). The RUC recommends 45 minutes pre-service evaluation time, 7 face-to-face visits (376 minutes) and 6 non-face-to-face intervals (208 minutes), which totals 584 minutes intra-service time, and 43 minutes post-service time, totaling 672 minutes total time. The face-to-face visits include preliminary impressions, final impressions, heat processed record base fitting, jaw relationship record, esthetic fitting, delivery of definitive obturator prosthesis, and final adjustments.

The specialty society noted that 76% of survey respondents found the vignette typical, which is still a majority, but lower than the rest of the surveys for these services. The specialty society indicated that the vignette included that the typical patient had a resection of a benign maxillary tumor. However, the survey respondents indicated that their experience in providing an obturator prosthesis was for patients after resection of a malignant maxillary tumor.

The RUC compared the surveyed code to the top key reference service 31255 *Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior)* (work RVU = 26.03 and 603.5 minutes total time). The RUC determined that the surveyed code requires similar time and work as the top key reference service 31255, thus it is valued similarly. Due to almost identical time and work required for codes 21081 and 21080, the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC agreed with the specialty society that they should be valued the same. Additionally, the intensity and complexity measures for the surveyed code, compared with the key reference service, support the relativity between these procedure. **The RUC recommends a work RVU of 25.42 for CPT code 21080.**

21079 ***Impression and custom preparation; interim obturator prosthesis***
The RUC reviewed the survey results from 37 maxillofacial prosthodontists and determined that the survey median work RVU of 20.00 appropriately accounts for the work required to perform this service. The RUC recommends 40 minutes pre-service evaluation time, 6 face-to-face visits (345 minutes) and 5 non-face-to-face intervals (100 minutes), which totals 445 minutes intra-service time, and 30 minutes post-service time, totaling 515 minutes total time. The face-to-face visits include impressions, speech and swallowing assessment and evaluation and adjustments of the obturator.

CPT code 21079 is a temporary prosthesis that will be modified numerous times during the course of treatment because of mucositis and subsequent tissue changes.

The specialty society noted that 78% of survey respondents found the vignette typical, which is still a majority, but lower than the rest of the surveys for these services. The specialty society indicated that the vignette included that the typical patient had a resection of a benign maxillary tumor. However, the survey respondents indicated that their experience in providing an obturator prosthesis was for patients after resection of a malignant maxillary tumor.

The RUC compared the surveyed code to the top key reference service 31225 *Maxillectomy; without orbital exenteration* (work RVU = 26.03 and 603.5 minutes total time) and the second top key reference service 69155 *Radical excision external auditory canal lesion; with neck dissection* (work RVU = 22.77 and 737.88 minutes total time). The surveyed code requires less physician work and total time than the key reference services, thus is valued lower.

For additional support, the RUC referenced CPT code 21558 *Radical resection of tumor (eg, sarcoma), soft tissue of neck or anterior thorax; 5 cm or greater* (work RVU = 21.04, 498 minutes total time) and determined that the median work RVU of 20.00 supported relativity among similar services. **The RUC recommends a work RVU of 20.00 for CPT code 21079.**

21076 ***Impression and custom preparation; surgical obturator prosthesis***
The RUC reviewed the survey results from 38 maxillofacial prosthodontists and determined that a work RVU of 11.56 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to key reference service CPT code 42120 *Resection of palate or extensive resection of lesion* (work RVU = 11.56 and 304 minutes total time). The RUC recommends 41 minutes pre-service evaluation time, 3 face-to-face visits (162 minutes) and 2 non-face-to-face intervals (69 minutes), which totals 231 minutes intra-service time, and 30 minutes post-service time, totaling 302 minutes total time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT code 21076 is a dental prosthesis inserted immediately after surgery. It seals a defect in the palate and allows the patient to speak and swallow after surgery. The main purpose of this prosthesis is for speech, nutrition, wound care and psychological support. This code was previously assigned a 010-day global period and has been changed to a 090-day global period. The typical number of visits required, as indicated in the survey responses, supports this global period change.

The RUC compared the surveyed code to the top key reference service 21048 *Excision of benign tumor or cyst of maxilla; requiring intra-oral osteotomy (eg, locally aggressive or destructive lesion[s])* (work RVU = 14.34 and 397 minutes total time) and determined that the surveyed code requires less physician time and work, thus is valued lower. The RUC compared the surveyed code to the second top key reference code and crosswalk code, 42120 *Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2* (work RVU = 11.56 and 304 minutes total time) and determined require similar total time, 302 and 304 minutes, and similar amount of physician work to complete, thus are valued the same. The intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity between these procedures. **The RUC recommends a work RVU of 11.56 for CPT code 21076.**

ORAL SURGICAL SPLINT (010-DAY)

CPT code 21085 is a 010-day global period service that describes a splint that is used as a guide to establish occlusion and skeletal repositioning during corrective jaw surgery. This service requires the least amount of time and work to perform than other services in this family.

21085 ***Impression and custom preparation; oral surgical splint***
The RUC reviewed the survey results from 76 maxillofacial prosthodontists and determined that a work RVU of 5.90 appropriately accounts for the work required to perform this service. The recommended work RVU is based on a direct crosswalk to MPC code 62350 *Implantation, revision or repositioning of tunneled intrathecal or epidural catheter, for long-term medication administration via an external pump or implantable reservoir/infusion pump; without laminectomy* (work RVU = 5.90 and 168.5 minutes total time). The RUC recommends 30 minutes pre-service evaluation time, 2 face-to-face visits (67 minutes) and 1 non-face-to-face intervals (45 minutes), which totals 112 minutes intra-service time, and 30 minutes post-service time, totaling 172 minutes total time.

CPT code 21085 was surveyed by both the American Association of Oral and Maxillofacial Surgeons (AAOMS) and the American Academy of Maxillofacial Prosthetics (AAMP). The number of face-to-face and subsequently non-face-to-face intervals differed between the specialty societies, 3 versus 2 face-to-face visits. During the discussion at the Practice Expense Subcommittee, it was noted that the third visit would occur outside the 10-day global period window, therefore, only two visits would occur during the global period. The RUC noted that the third visit outside the 10-day global is separately reportable. Therefore, the specialty societies reduced the recommendations for physician work and practice expense to remove the last visit face-to-face and non-face-to-face visit and times from the survey, totaling 2 face-to-face visits and 1 non-face-to-face visit.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the surveyed code to the top key reference service 41830 *Alveolectomy, including curettage of osteitis or sequestrectomy* (work RVU = 3.36 and 152.5 minutes total time) and determined that the surveyed code requires more physician work and time, thus is valued higher. The RUC compared the surveyed code to the second top key reference code 31292 *Nasal/sinus endoscopy, surgical, with orbital decompression; medial or inferior wall* (work RVU = 15.50 and 449.5 minutes total time), noting that the surveyed code requires much less physician work and time to perform. The intensity and complexity measures for the surveyed code, compared with the key reference services, support the relativity between these procedures.

For additional support, the RUC referenced CPT code 64553 *Percutaneous implantation of neurostimulator electrode array; cranial nerve* (work RVU = 5.98, 158.13 minutes total time) and determined that a work RVU of 5.90 supported relativity among similar services. **The RUC recommends a work RVU of 5.90 for CPT code 21085.**

Practice Expense

The Practice Expense (PE) Subcommittee agreed that there is compelling evidence to support an increase over the aggregate current cost for clinical staff time, supplies and equipment for the code family based on change in technology. The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995, there has been a complete change in technology, including the use of Cone beam CT, 3D printing and the use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

The PE Subcommittee reviewed the direct practice expense inputs submitted by the specialty society and made extensive modifications. Due to the breadth of clinical staff, supplies, and equipment required to perform these complex services, the PE Subcommittee continued its review of the direct practice expense inputs with a special session held immediately after the PE meeting in April, followed by virtual meetings in May and June 2026, culminating with approval of the inputs at the September 2026 meeting. At the April PE special session, clinical labor was completed except for code (21076). The Subcommittee worked through all the supplies, including correcting quantities, for one complete 090-day code (21077), so the specialty society could revise the remaining codes' inputs as necessary. The equipment inputs were the remaining component of the PE Subcommittee's review, and the Subcommittee requested a separate table identifying which equipment items were used at each physician office setting so that the equipment-time formulas could be calculated correctly. Accordingly, the PE spreadsheet was revised to include additional worksheet tabs that provide extraordinary detail as follows:

- **MD Work Visits table**
  - Times from the survey for the physician visits per code. The table breaks out the times for each prosthetist or oral surgeon visit/service and indicates whether face-to-face (FTF) or non-face-to-face (NFTF).
  - Final column shows the total INTRA service MD/DMD time, which is comprised of the time the survey respondents indicated for MD/DMD FTF and NFTF visits.
  - Visit time for all MD/DMD visits was generated based on the responses of the surveyees.
  - This table also breaks out for code 21085 by specialty (as both AAMP and AAOMS surveyed this code).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

- **Staff Visits table**
  - This table reflects clinical staff time for the dental assistant (DA) and lab technician (LT) per code.
  - Times from work survey for FTF Visits are used for the Dental Assistant time who is with the MD/DMD at all times.
  - Times from expert panel for NFTF lab time for Lab Technician.
  - The visits are again broken out by whether they are FTF (where the dental assistant is present 100% with the MD/DMD) or NFTF (reflecting lab technician time and noting the lab tech is NOT with the MD/DMD all the time) Lab tech times were generated by the expert panel).
  - Final column shows the total intra-service clinical staff time of both clinical staff types. The dental assistant's intra time is captured in the FTF visits and is based on the survey time provided by respondents. The lab technician's intra time is captured in the NFTF visits. The time for the NFTF lab technician visits comes from recommendations by the expert panel and relies on feedback generated by interviews conducted by the expert panel of lab technicians from practices around the country. It does not match the MD/DMD non-face-to-face time.

- **Supply tables**
  - The third table reflects the supplies used and quantity per code; this includes supplies broken out by each visit (FTF and NFTF) including the location between four workspaces (the exam room, the imaging room, the lab, and the sterilization room) they are used and quantities needed for each visit.
  - The total column indicates how many of each supply are needed for the code, and that is then entered into the PE spreadsheet.
  - The last column for each code indicates the math used to calculate the price shown in column D on this table, and in the price column on the PE spreadsheet.
  - The "unit" assignments for all supplies were reviewed and modified where necessary for accuracy to the product being described.

- **Equipment tables**
  - The fourth table reflects the equipment formulas that calculate the total equipment time on the PE spreadsheet across all codes for the DA and LT; this includes equipment broken out by the location it is housed/used between four workspaces (the exam room, the imaging room, the lab, and the sterilization room).
  - The table also indicates which visits (FTF and NFTF) equipment is used and then sums the minutes for all visits to get the resulting total minutes assigned to the piece of equipment (formulas are indicated in the second to last column for each code).
  - The total time that is entered for each equipment item on the PE spreadsheet corresponds to the "total" column input on these tables. "Other formula" is indicated for everything on the PE spreadsheet.

In the Spring/Summer, two multi-hour meetings were held virtually for the PE Subcommittee, specialty, and all interested RUC participants. The first was devoted again to the clinical staff and the subsequent call to the supplies and equipment. The PE SORs underwent extensive revisions and separate, detailed Clinical Staff Descriptions of Work (DOWs) for each code have been submitted to provide a thorough understanding of who is performing which activities and for how many minutes for each of the codes. The Subcommittee noted that the PE SORs contain thorough descriptions of the clinical activities comprised in each visit and detail out the total staff time as it appears on the PE spreadsheet.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The PE Subcommittee reviewed the revised PE spreadsheet and PE SORs again prior to the September 2026 meeting and lingering supply or equipment issues from the reviewers were addressed in the Supply and Equipment tables. The PE Subcommittee recommends 45 new disposable supplies and 11 new equipment inputs as submitted by the specialty with invoices. In addition, invoices are included for several existing inputs that currently have $0 listed on the CMS Supply listing. The Subcommittee noted that the Invoice Summary provides an explanatory purpose for each new input.

At the September meeting, a question was raised regarding the clinical staff who are involved in the procedures and how their time was determined. There are two staff types: the dental assistant and the laboratory technician. With respect to staff times, the dental assistant is with the physician 100% of the intra-service time, while the laboratory technician is separate from the MD/DMD. The laboratory times were developed through an expert panel, and the dental assistant times were from the survey. Below is further explanation on how the clinical staff times were derived for the codes in this tab:

Clinical staff times for Practice Expense:

- **Dental Assistant:**
  - **Pre-time** spent by clinical staff is indicated and represents any activities done by the dental assistant (using PE Subcommittee standards for 090 globals) BEFORE the prosthesis fabrication begins.
  - **Intra time** spent by the dental assistant ties directly to intra time from the physician work intra times of the **survey,** as the dental assistant is with the MD 100% of the time during patient FTF visits. As is standard, it also includes time not with the MD/DMD for activities such as vital signs and equipment cleaning.
  - No **post time** was requested for clinical staff for these codes.

- **Lab Technician:**
  - No **pre-time** is requested for the lab technician.
  - **Intra time:** The MD/DMD is not always present when the lab technician is conducting their activities, so the lab technician time is captured under the "not related to the MD category" for PE. The lab technician's time is based on the recommendations of the **expert clinical panel,** which was derived from AAMP interviews with lab technicians at practices around the country to determine the typical amount of time the lab technician activities described in the PE SORs require for each NFTF visit included per CPT code.
  - No **post-time** was requested for clinical staff for these codes.

It is critical to review the tabs within the PE spreadsheet and detailed PE SORs to fully understand all the underlying data for this issue. The clinical staff time was calculated and practice expense for all the visits is laid out in the PE spreadsheet, specifically in the "Staff Visits table" worksheet, and the detailed PE SORs. The RUC reviewed the direct practice expense inputs and made no further modifications. **The RUC recommends the direct practice expense inputs CPT codes 21076-21088.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Indirect PE Crosswalk
The specialty society noted that during the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why the specialty society disagrees with this crosswalk. The specialty society requests that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

Work Neutrality
The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Musculoskeletal System** **Head** **Head Prosthesis** Codes 21076-21089 describe professional services for the rehabilitation of patients with oral, facial, or other anatomical deficiencies by means of prostheses such as an artificial eye, ear, or nose or intraoral obturator to close a cleft. Codes 21076-21089 should only be used when the physician or other qualified health care professional actually designs and prepares the prosthesis (ie, not prepared by an outside laboratory). (For application or removal of caliper or tongs, see 20660, 20665)			
21076	Impression and custom preparation; surgical obturator prosthesis	~~010~~ 090	11.56 (2026 Work RVU = 13.07)

CPT Descriptor: Impression and custom preparation; facial prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old female is referred for custom preparation of a facial prosthesis after undergoing a total rhinectomy and orbital exenteration.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to review types of implants placed and size of attachments. MD/DMD reviews preop photographs to post surgical photographs. MD/DMD reviews soft tissue imaging (pro-face) to determine which key anatomical sites were lost and its effect on support, stability, and retention of the prosthesis. MD/DMD verifies appropriate implant components are ordered for both laboratory and clinical components. The MD/DMD designs the preliminary plan for prosthesis and suprastructure. MD/DMD reviews prosthetic plan with head and neck surgeon, neurosurgeon, and oculoplastic surgeon (if orbit is to be replaced). MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 FTF: 65 minutes. Final Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of facial defect and cleans the craniofacial implants. The MD/DMD discusses the fabrication process with the patient. The MD/DMD shows them an example of a facial prosthesis and answers all the patient's questions. Imaging of implants is reviewed with patient. The MD/DMD verifies that all possible cavities are blocked out with gauze which can be retrieved. MD/DMD verifies that suction is available. The impression magnet is placed on the three implants and a passive seat is verified by the MD/DMD. If there is a dehiscence (hole) in the defect, it is blocked out with gauze secured by dental floss so no impression material goes into the cavity. The MD/DMD makes a final impression with the pick-up magnet impression posts with a polyvinylsiloxane impression material. The MD/DMD evaluates iris and sclera color of native eye and picks a stock globe. If one does not match, the MD/DMD makes decision on customized globe. The MD/DMD reviews photographs taken today to verify that they are acceptable.

NFTF between Visit 1 and 2: 100 minutes
The MD/DMD reviews the final impression with the laboratory technician. The MD/DMD places the laboratory analogues into the magnet impression post and verifies a passive fit under magnification. The MD/DMD gives order for laboratory technician to box and pour the final impression. The MD/DMD examines the master model/cast. The MD/DMD outlines the preliminary extent of the prosthesis and gives order for laboratory technician to make a wax base and implant framework (verification jig). The MD/DMD verifies the jig which will be converted into the suprastructure is passive and to verify that the impression is accurate and to verify that implant position in the master cast is accurate. The MD/DMD compares stock globe to customizable globe. The MD/DMD reviews any preoperative scans. The original facial feature

scan is obtained digitally and the MD/DMD reviews it. The MD/DMD performs the initial wax up. Before the patient comes in, the MD/DMD verifies passive fit of implant framework (jig).

Visit #2 FTF: minutes: 90 minutes Sculpting and Verification of Implant framework

MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of orbital and nasal defects and cleans the three craniofacial implants. The MD/DMD tries in the verification jig on the three implants to verify that the verification jig is passive. The MD/DMD tries in the wax base and begins to set the globe. The gaze is evaluated a dozen times from different angles to verify appropriate position. The MD/DMD measures the distance from the middle of the face to the center of the pupil of the native eye. That distance is compared to the distance from the middle of the face to the center of the globe to verify symmetry. It is critical for the prosthesis to look natural. The MD/DMD begins to wax up the nose and cheek of the face. Nasal midline is obtained and the bridge and alas of the nose are developed in the wax pattern. The MD/DMD compares Da Vinci's facial measurement scale to the prosthesis.

NFTF between Visit 2 and 3: 90 minutes
The MD/DMD reviews the photographs and the gaze of the globe. Soft tissue imaging (Proface) is reviewed and the MD/DMD directs the laboratory technician in what areas need to be developed. The MD/DMD does a portion of the waxing and reviews it. The MD/DMD gives order for the laboratory technician to disinfect the prosthesis

Visit #3 FTF: 90 minutes Finalization of Sculpting
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital and nasal defects and cleans the three craniofacial implants. The MD/DMD tries in the wax up. The gaze is evaluated a again from different angles to verify appropriate position. The MD/DMD measures the distance from the middle of the face to the center of the pupil of the native eye. That distance is compared to the distance from the middle of the face to the center of the globe to verify symmetry. It is critical for prosthesis to look natural. The inner and lateral canthus are evaluated by the MD/DMD and the MD/DMD takes measurements to verify that the wax up is symmetrical to the native eye. Other facial features such as the nose are waxed in. The MD/DMD continues to sculpt the wax pattern. The MD/DMD gets the patient input. The MD/DMD finalizes the margins of the prosthesis and gets patient approval. Facial measurements are made and compared to Da Vinci's facial proportion. The MD/DMD makes initial skin color measurement with spectromatch

NFTF between Visit 3 and 4: 120 minutes
The MD/DMD reviews photographs or soft tissue imaging (Proface) and decides on what areas need to be developed. The MD/DMD does the waxing. Skin texture and finalization of margins are reviewed by MD/DMD. The MD/DMD evaluates the final wax up and gives order to proceed with investing. The MD/DMD evaluates the color of the base shade from the spectromatch measurement and makes adjustments.

Visit #4 FTF: 110 minutes Intrinsic coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of orbital and nasal defects and cleans the three craniofacial implants. The MD/DMD evaluates the base shade of silicone from the spectromatch measurement and customizes it to the patient's skin tone. The MD/DMD begins mixing various colors and does a color map of the orbital, nasal, and cheek region so the prosthesis will blend into the skin tone. Eight different silicone colors are mixed to match the patient's landmarks. The MD/DMD places the intrinsic coloration in layers per anatomical site per the patient's color landmarks to match the native orbital, cheek, and nasal region and to blend into the face. The MD/DMD adds in the veining and arteries so the prosthesis will look realistic. The MD/DMD evaluates the mold with the intrinsic coloration and verifies it to the patient's facial coloration. The MD/DMD evaluates the mold with the intrinsic coloration to the patient and to the preop imaging. The superior region of the face is verified to have an underlying ochre color, the midface to having a reddish coloration, and the lower face with having a bluish gray hue. The MD/DMD adds in translucent regions so the prosthesis will look vital.

NFTF between Visit 4 and 5: 77 minutes
The MD/DMD reviews the coloration map with the laboratory technician. The MD/DMD prepares the mold for the addition of silicone. The laboratory technician places the silicone on the internal surface which allows the prosthesis to have strength. The MD/DMD reviews the area of the soft silicone and areas of the harder silicone. The MD/DMD places the soft silicone in the undercut areas of the orbit, the alas of the nose and in the cheek section. The MD/DMD places the mold in the oven for initial setting. The MD/DMD then adds in the stronger silicone for the bridge of the nose and the orbital region. The MD/DMD directs laboratory technician to proceed with adding in the rest of the harder silicone base

shade and to proceed with curing of prosthesis. After it is broken out, the MD/DMD verifies a passive fit of the prosthesis on the implants.

Visit #5 FTF: 90 minutes Extrinsic coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of facial defect and cleans the three craniofacial implants. The MD/DMD washes the prosthesis. The MD/DMD tries on the prosthesis and trims the prosthesis and begins margination of the prosthesis. The MD/DMD finalizes margination and begins the extrinsic coloration. Finalizing the coloration to match the patient's natural skin color takes time and the paints must set, with each addition, in the oven. The orbital region is painted first around the margins, followed by painting the margins of the nose. Evaluation of initial extrinsic characterization is reviewed with the patient by the MD/DMD. During the procedure, the MD/DMD reviews at all times that the open cavities of the face are protected. The middle portion of the prosthesis is then painted. The extrinsic characterization is done by regions of the face and in layers by the MD/DMD. The MD/DMD shows the patient the prosthesis and patient gives approval.

NFTF between Visit 5 and 6: 60 minutes.
The MD/DMD reviews the prosthesis with lab technician. The MD/DMD reviews the different types of sealers with laboratory technician. The MD/DMD decides on which sealer to use. MD/DMD directs and monitors the laboratory technician as he seals the prosthesis. The sealer is added three times. The MD/DMD checks that base shade is recorded and intrinsic coloration samples are saved in patient's box.

Visit #6: 76 minutes Delivery
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital and nasal defects and cleans the three craniofacial implants. The MD/DMD reviews the hygiene of the orbital and nasal defects and hygiene of the prosthesis. The MD/DMD reviews the initial insertion and removal of the prosthesis with the patient. The MD/DMD discusses the option of adhesive around the margin and discusses the various types of adhesive. The MD/DMD delivers the prosthesis. Final external characterization of the prosthesis is done by the MD/DMD. The MD/DMD reviews the photographs. All the patient's questions are answered.

Description of Post-Service Work: The MD/DMD informs the resection surgeon, neurosurgeon, oculoplastic surgeon that the patient has the prosthesis. The MD/DMD calls the patient multiple times. The MD/DMD verify that the dental materials used for the patient are properly documented in the chart and verifies appropriate storage of physical models for the patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2026					
Presenter(s):	Betsy Davis, DDM, MS; Mark Chambers, DDM, MS

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
69554	090	35.07	**RUC Time**

CPT Descriptor Excision aural glomus tumor; extended (extratemporal)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
21182	090	31.77	**RUC Time**

CPT Descriptor Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
33426	090	42.20	**RUC Time**	1,808

CPT Descriptor 1 Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
50360	090	38.88	**RUC Time**	8,953

CPT Descriptor 2 Renal allotransplantation, implantation of graft; without recipient nephrectomy

Other Reference CPT Code	Global	Work RVU	Time Source
20955	090	39.25	**RUC Time**

CPT Descriptor Bone graft with microvascular anastomosis; fibula

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 11 **% of respondents:** 35.4 **%**

Number of respondents who choose 2nd Key Reference Code: 4 **% of respondents:** 12.9 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	45%	36%	18%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	45%	45%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	64%	36%
Physical effort required	0%	73%	27%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	45%	27%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	25%	25%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	75%	25%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	75%	25%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	75%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.

- Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *69554 Excision aural glomus tumor; extended (extratemporal)* valued at 35.07 RVUs with an intra time of 468 and a total time of 1012. 11 respondents selected this as their primary KRS.

The second KRS selected was CPT 21182 *Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm* valued at 31.77 RVUs with an intra time of 351 and a total time of 792. 4 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **39.76 and a total time of 1059 minutes based on a crosswalk to code 61597Transcondylar (far lateral) approach to posterior cranial fossa, jugular foramen or midline skull base, including occipital condylectomy, mastoidectomy, resection of C1-C3 vertebral body(s), decompression of vertebral artery, with or without mobilization and survey respondents indicating an increase of 1059 minutes for this formerly carrier priced code.**

We are requesting 60 minutes of pre time, 967 minutes of intra time (representing 6 face-to-face visits with the patient and 447 minutes of non-face-to-face lab time), and 32 minutes of post time in accordance with our survey median times, for a total of 1059 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21088

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Maxillofacial surgery How often? Rarely

Specialty Oral surgery How often? Rarely

Specialty plastic and reconstructive surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 69
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization from the RUC database.

Specialty Maxillofacial surgery Frequency 36 Percentage 52.17 %

Specialty Oral surgery Frequency 30 Percentage 43.47 %

Specialty Plastic and reconstructive surgery Frequency 4 Percentage 5.79 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 23 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database.

Specialty Maxillofacial surgery Frequency 12 Percentage 52.17 %

Specialty Oral surgery Frequency 10 Percentage 43.47 %

Specialty Plastic and reconstructive surgery Frequency 1 Percentage 4.34 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21088

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:21077 Tracking Number Original Specialty Recommended RVU: **34.34**
Presented Recommended RVU: **33.33**
Global Period: 090 Current Work RVU: **32.86** RUC Recommended RVU: **33.33**

CPT Descriptor: Impression and custom preparation; orbital prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female is referred for custom preparation of an orbital prosthesis following orbital exenteration due to a squamous cell carcinoma.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to review types of implants placed and size of attachments. MD/DMD reviews preop photographs to post surgical photographs. MD/DMD discusses implant size and type with laboratory technician to verify appropriate implant components are ordered for both laboratory and clinical components. The MD/DMD designs the preliminary plan for prosthesis and suprastructure. MD/DMD reviews prosthetic plan with head and neck surgeon and oculoplastic surgeon. MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 FTF: 60 minutes. Final Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defects and cleans the craniofacial implants. The MD/DMD discusses the fabrication process with the patient. The MD/DMD shows them an example of an orbital prosthesis and answers all the patient's questions. Imaging of implants is reviewed with patient. The impression magnet is placed on each implant (three implants) and a passive seat is verified by the MD/DMD. If there is a dehiscence (hole) in the socket portion of the defect, it is blocked out with gauze secured by dental floss so no impression material goes into the cavity. The MD/DMD verifies that all possible cavities are blocked out with gauze which can be retrieved. The MD/DMD border molds the orbital socket to capture the superior, inferior, lateral and medial walls of the socket. The MD/DMD makes a final impression with the pick-up magnet impression posts with a polyvinylsiloxane impression material. The MD/DMD evaluates iris and sclera color of native eye and picks a stock globe. If one does not match, the MD/DMD makes decision on customized globe. MD/DMD evaluates photographs of native eye for characterization of sclera and iris of native eye.

NFTF between Visit 1 and 2: 60 minutes
The MD/DMD reviews the final impression with the laboratory technician. The MD/DMD places the laboratory analogues into the magnet impression post and verifies a passive fit under magnification. The MD/DMD gives order for laboratory technician to box and pour the final impression. The MD/DMD examines the master model/cast. The MD/DMD outlines the preliminary extent of the prosthesis and gives order for laboratory technician to make a wax base. The MD/DMD gives order to laboratory technician to make the implant framework or verification jig. The MD/DMD verifies the jig which will be converted into the suprastructure to verify that the impression is accurate and to verify that implant position in the master cast is accurate. The MD/DMD compares stock globe to customizable globe.

Visit #2 FTF: 60 minutes: Sculpting and Verification of Implant framework
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defect and cleans the craniofacial implants. The MD/DMD tries in the verification jig to verify that the verification jig is passive. The MD/DMD tries in the wax base and begins to set the globe. The gaze is evaluated a dozen times from different angles to verify the appropriate position. The MD/DMD measures the distance from the middle of the face to the center of the pupil of the native eye. That distance is compared to the distance from the middle of the face to the center of the globe to verify symmetry. The MD/DMD accomplishes the initial wax up of the upper and lower eyelids. The MD/DMD reviews photographs taken at today's visit.

NFTF between Visit 2 and 3: 60 minutes
The MD/DMD reviews the photographs and discusses the gaze of the globe along with upper and lower eyelid placement in the prosthesis. Soft tissue imaging (Proface) is reviewed and the MD/DMD directs the laboratory technician regarding which areas need to be developed. The MD/DMD does the waxing. The MD/DMD reviews the initial waxing and gives order for the laboratory technician to disinfect the prosthesis.

Visit #3 FTF: 85 minutes Sculpting
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defect and cleans the craniofacial implants. The MD/DMD tries in the wax base with the globe. The gaze is evaluated a dozen times from different angles to verify the appropriate position. The MD/DMD measures the distance from the middle of the face to the center of the pupil of the native eye. That distance is compared to the distance from the middle of the face to the center of the globe of prosthesis to verify symmetry. The MD/DMD finalizes the gaze of the eye. The MD/DMD begins to develop the position of the upper and lower eyelid and the inner and lateral canthus. The MD/DMD continues to sculpt the wax pattern. The MD/DMD gets the patient input. The MD/DMD reviews presurgical photographs to photographs taken at today's visit.

NFTF between Visit 3 and 4: 68 minutes
The MD/DMD reviews the photograph and wax up. The MD/DMD does the waxing. At this stage, the eyelids, inner canthus, and lateral canthus of the eye are pretty much set. The MD/DMD verifies that the center portion is pretty much acceptable. The MD/DMD verifies that wax up is acceptable and proceeds to direct laboratory technician to disinfect the prosthesis.

Visit #4 FTF: 85 minutes Finalization of sculpting
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defects and cleans the craniofacial implants. The MD/DMD tries in the wax up. The gaze is evaluated a again from different angles to verify appropriate position. The MD/DMD measures the distance from the middle of the face to the center of the pupil of the native eye. That distance is compared to the distance from the middle of the face to the center of the globe to verify symmetry. The inner and lateral canthus are evaluated by the MD/DMD and the MD/DMD takes measurements to verify that the wax up is symmetrical to the native eye. The MD/DMD continues to sculpt the wax pattern. The MD/DMD gets the patient input. The MD/DMD finalizes the margins of the prosthesis and gets patient approval. The MD/DMD takes measurements on the photograph to verify that the prosthesis is in line with da Vinci's facial proportion. The MD/DMD makes initial skin color measurement with spectromatch.

NFTF between Visit 4 and 5: 60 minutes
The MD/DMD works with the laboratory technician and gives order to add in skin texture and to finalize the margins of the prosthesis and final wax up. The MD/DMD evaluates the final wax up and gives order to proceed with investing. The MD/DMD evaluates the color of the base shade from the spectromatch measurement.

Visit #5 FTF: 70 minutes intrinsic coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defects and cleans the craniofacial implants. The MD/DMD evaluates the base shade of silicone from the spectromatch measurement and customizes it to the patient's skin tone. The MD/DMD begins mixing the various colors for intrinsic coloration and does a color map of the orbital region so the prosthesis will blend into the skin tone. The MD/DMD places the intrinsic coloration per the patient's color landmarks to match the native orbital region and to blend into the face into the mold.

NFTF between Visit 5 and 6: 60 minutes
The MD/DMD reviews the coloration map and directs laboratory technician to proceed with adding in the base shade of silicone and to proceed with curing of prosthesis. After it is broken out, the MD/DMD verifies a passive fit of the prosthesis on the implants.

Visit #6: 65 minutes Extrinsic Coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defects and cleans the craniofacial implants. The MD/DMD tries on the prosthesis and trims the prosthesis around the borders of the prosthesis. The MD/DMD begins extrinsic coloration. The coloration to match the patient's natural skin color takes time and the paints must set, with each addition of color, in the oven. The MD/DMD shows the patient the prosthesis and patient gives approval.

NTFT between Visit 6 and 7: 60 minutes
The MD/DMD reviews the prosthesis and watches the laboratory technician as he seals the prosthesis. The MD/DMD instructs laboratory technician and checks that base shade is recorded and intrinsic coloration samples are saved in patient's box.

Visit #7 70 minutes Delivery
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of orbital defects and cleans the craniofacial implants. The MD/DMD delivers the prosthesis and reviews insertion and removal. The MD/DMD reviews the different types of adhesives available if needed around the margins. All the patient's questions are answered. The MD/DMD directs the dental assistant to take final photographs.

Description of Post-Service Work: The MD/DMD calls the resection surgeon and/or oculoplastic surgeon that the patient has the prosthesis. The MD/DMD calls the patient multiple times to determine how the patient is doing with the prosthesis. The MD/DMD verify that the dental materials used for the patient are properly documented in the chart and verify appropriate storage of physical models for the patient. The MD/DMD reviews presurgical photographs with post-delivery pictures of the prosthesis.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
69554	090	35.07	**RUC Time**

CPT Descriptor Excision aural glomus tumor; extended (extratemporal)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
21182	090	31.77	**RUC Time**

CPT Descriptor Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
34705	090	28.84	**RUC Time**	9,166

CPT Descriptor 1 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
50360	090	38.88	**RUC Time**	8,953

CPT Descriptor 2 Renal allotransplantation, implantation of graft; without recipient nephrectomy

Other Reference CPT Code	Global	Work RVU	Time Source
46735	090	35.24	**RUC Time**

CPT Descriptor Repair of high imperforate anus without fistula; combined transabdominal and sacroperineal approaches

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 8 **% of respondents:** 24.2 **%**

Number of respondents who choose 2nd Key Reference Code: 6 **% of respondents:** 18.1 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	25%	25%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	13%	63%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	75%	25%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	38%	38%	25%

- Estimated risk of malpractice suit with poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	33%	17%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	67%	17%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	33%	67%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	50%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial

surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *69554 Excision aural glomus tumor; extended (extratemporal)* valued at 35.07 RVUs with an intra time of 468 and a total time of 1012. 8 respondents selected this as their primary KRS.

The second KRS selected was CPT *21182 Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm* valued at 31.77 RVUs with an intra time of 351 and a total time of 792. 8 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **34.34 and a total time of 938 minutes** based on **crosswalk to 21155 Reconstruction midface, LeFort III (extracranial), any type, requiring bone grafts (includes obtaining autografts); with LeFort I (valued at 34.34 RVUs and a total of 928.5 minutes) and our survey respondents indicating an increase of 257 minutes (27% increase) for this code.**

We are requesting 45 minutes of pre time, 863 minutes of intra time (representing 7 face-to-face visits with the patient and 368 minutes of non-face-to-face lab time), and 30 minutes of post time in accordance with our survey median times, for a total of 938 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
21155	Reconstruction midface, LeFort III (extracranial), any type, requiring bone grafts (includes obtaining autografts); with LeFort I	090	34.34	90			409.50	87	928.50	0.035
61615	Resection or excision of neoplastic, vascular or infectious lesion of base of posterior cranial fossa, jugular foramen, foramen magnum, or C1-C3 vertebral bodies; extradural	090	34.88	195.3			336.28	65	1083.58	0.0285
69554	Excision aural glomus tumor; extended (extratemporal)	090	35.07	120			468	60	1012	0.0373
46735	Repair of high imperforate anus without fistula; combined transabdominal and sacroperineal approaches	090	35.24	115			224.25	30	844.25	0.0653
47400	Hepaticotomy or hepaticostomy with exploration, drainage, or removal of calculus	090	35.45	75			175.5	45	805.5	0.0591
37180	Venous anastomosis, open; splenorenal, proximal	090	35.59	40	3.0	20.0	234	60	799	0.055
61598	Transpetrosal approach to posterior cranial fossa, clivus or foramen magnum, including ligation of superior petrosal sinus and/or sigmoid sinus	090	35.62	153.4			368.26	62	1038.66	0.0291
22207	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); lumbar	090	35.76	80	30.0	20.0	292.5	45	750.5	0.0744
44158	Colectomy, total, abdominal, with proctectomy; with ileoanal anastomosis, creation of ileal reservoir (S or J), includes loop ileostomy, and rectal mucosectomy, when performed	090	35.78	30	15.0	15.0	253.5	45	718.5	0.0808
35820	Exploration for postoperative hemorrhage, thrombosis or infection; chest	090	35.97	30	10.0	5.0	132.6	40	795.6	0.0854
15758	Free fascial flap with microvascular anastomosis	090	35.98	90			351	60	800	0.0622
15756	Free muscle or myocutaneous flap with microvascular anastomosis	090	36.02	90			351	60	800	0.0619

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21077

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 33
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 12 Percentage 36.36 %

Specialty Maxillofacial surgery Frequency 12 Percentage 36.36 %

Specialty Dentists Frequency 6 Percentage 18.18 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 4 Percentage 36.36 %

Specialty Maxillofacial surgery Frequency 4 Percentage 36.36 %

Specialty Dentists Frequency 2 Percentage 18.18 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21077

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:21087 Tracking Number Original Specialty Recommended RVU: **34.00**
Presented Recommended RVU: **30.57**
Global Period: 090 Current Work RVU: **24.26** RUC Recommended RVU: **30.57**

CPT Descriptor: Impression and custom preparation; nasal prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old female is referred for custom preparation of a nasal prosthesis after undergoing a total rhinectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality and reviews types of implants that were placed and size of attachments. MD/DMD reviews preop photographs to post surgical photographs. MD/DMD discusses implant size and type with laboratory technician to verify appropriate implant components are ordered for both laboratory and clinical components. The MD/DMD designs the preliminary plan for prosthesis and suprastructure MD/DMD reviews prosthetic plan with head and neck surgeon. MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 FTF: 60 minutes. Final Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies with patient. MD/DMD performs clinical examination of nasal defects and cleans the three craniofacial implants. The MD/DMD discusses the fabrication process with the patient. The MD/DMD shows them an example of a nasal prosthesis and answers all the patient's questions. Imaging of implants is reviewed with patient. MD/DMD blocks out nasal cavities with gauze secured by dental floss so no impression material goes into the cavity and gauze is retrievable. The impression magnet is placed on the implant and a passive seat is verified by the MD/DMD. The MD/DMD makes a final impression with the pick-up magnet impression posts with a polyvinylsiloxane impression material. MD/DMD evaluates final impression for adequate capture of anatomy for nasal floor, right and left nasal cavities and superior, inferior and lateral walls of the nose. The MD/DMD evaluates the nasal philtrum of lip to determine movement which serves as a guide as to margin of nasal prosthesis.

NFTF between Visit 1 and 2: 90 minutes
The MD/DMD reviews the final impression with the laboratory technician. The MD/DMD places the laboratory analogues into the magnet impression post and verifies a passive fit under magnification and that there is engagement of undercuts on the lateral walls of the nose. The MD/DMD gives order for laboratory technician to box and pour the final impression. The MD/DMD examines the master model/cast. The MD/DMD outlines the preliminary extent of the prosthesis and gives order for laboratory technician to make a wax base and a verification jig. The MD/DMD verifies the jig which will be converted into the suprastructure to verify that the impression is accurate and to verify that implant position in the master cast is accurate. From the medical grade CT scan or from the soft tissue software imaging (proface), the preop virtual image is evaluated by MD/DMD with laboratory technician present to determine if the tumor changed the shape of the nose. Typically, the tumor has changed the shape of the nose so the MD/DMD virtually sculpts the nose to try to get it to its original shape. The MD/DMD directs the laboratory technician to 3D print the shape and convert into wax. The wax

pattern is put into position on the master cast with the wax base by the MD/DMD. The MD/DMD verifies the implant template. The MD/DMD evaluates template (verification jig) and wax up to and directs laboratory technician to proceed with disinfection of prosthesis.
.

Visit #2 FTF: 90 minutes: Sculpting and Verification of Implant template
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of the nasal defect and cleans the three craniofacial implants. The MD/DMD tries in the verification jig to verify that the verification jig is passive. The MD/DMD tries in the wax pattern of the nose. The MD/DMD directs the patient in facial movement to determine the margins of the prosthesis. Movement of face can upset the prosthesis, so verification of movement by the MD/DMD is critical to having the prosthesis stay in place. The MD/DMD begins waxing the nasal prosthesis according to the patient's landmarks. The midline of the nose is verified by the MD/DMD. MD/DMD evaluates midline from several angles. The alas of the nose are evaluated. The MD/DMD makes measurements to verify that the position of the nasal prosthesis is consistent with Da Vinci's facial proportion measurement. The MD/DMD evaluates the photographs of the wax pattern in place and makes appropriate changes and works with the patient to integrate the patient's wishes into the prosthesis.

NFTF between Visit 2 and 3: 90 minutes
The MD/DMD reviews the photographs and discusses the shape of the nose. The MD/DMD reviews photographs or soft tissue imaging (Proface) and decides on what areas need to be developed. The MD/DMD waxes the nasal pattern into more detail verifying the midline on the model/cast. Key nasal features including the bridge of the nose, alas, apex, nostrils are waxed in by the MD/DMD. The MD/DMD compares wax up to virtual image of nose shape and makes changes accordingly. After verifying that the wax pattern is ready, the MD/DMD directs the lab tech to hollow out the internal surface so the prosthesis will not be heavy (and come off).

Visit #3 FTF: 90 minutes Finalization of Sculpting
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of nasal defect and cleans the three craniofacial implants. The MD/DMD tries in the wax up of the nose and makes changes so the nose is according to Da Vinci's rules of facial proportion. The margins of the nose are fine tuned. The MD/DMD continues to sculpt the wax pattern. The MD/DMD gets the patient's input. The MD/DMD finalizes the margins of the prosthesis and gets patient approval. The MD/DMD makes initial skin color measurement with spectromatch. The MD/DMD characterizes the base shade of the silicone as dictated by spectromatch so it is of the proper vitality for the patient.

NFTF between Visit 3 and 4: 90 minutes
The MD/DMD finalizes the shape in the wax pattern and key landmarks. The MD/DMD works with the laboratory technician to add in skin texture and to finalize the margins of the prosthesis and final wax up. Comparisons are made to preop images and soft tissue imaging with software. The MD/DMD evaluates the final wax up and gives order to lab tech to hollow the undersurface of the prosthesis and to pour the altered cast. The MD/DMD checks this step and instructs the lab tech to proceed with investing. The MD/DMD evaluates the base of the flask to verify that the stone is smoothed and reviews orientation dipple placement. The MD/DMD sands the plaster around the master model so it is smooth so the excess silicone has a path to escape during the silicone injection. The MD/DMD instructs the lab tech to pour the counter pour of the flask and to boil out the prosthesis. The MD/DMD evaluates the mold after the wax pattern is boiled out. The MD/DMD instructs the lab tech to proceed with placing the separation materials on the mold so the mold can accept the silicone. The MD/DMD evaluates the color of the base shade from the spectromatch measurement again and compares it to the photographs and tweaks the color to more closely match the patient.

Visit #4 FTF: 75 minutes Intrinsic Coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of nasal defect and cleans the three craniofacial implants. The MD/DMD evaluates the base shade of silicone from the spectromatch measurement and customizes it to the patient's skin tone. The MD/DMD begins mixing the various colors and does a color map of the nasal region so the prosthesis will blend into the skin tone. Six different silicone colors are mixed to match the patient's landmarks. The MD/DMD places the intrinsic coloration in layers per anatomical site per the patient's color landmarks to match the native borders of the skin and to blend into the face. The MD/DMD adds in the veining and arteries so the prosthesis will look realistic. The MD/DMD evaluates the mold with the intrinsic coloration and verifies it to the patient's facial coloration. The MD/DMD evaluates the mold with the intrinsic coloration to the patient and to the preop imaging. The MD/DMD adds in translucent regions so the prosthesis will look vital.

NFTF between Visit 4 and 5: 115 minutes
The MD/DMD reviews the coloration map with the laboratory technician. The MD/DMD reviews with laboratory technician on which portions of nose will require the softer silicone (ala) and the portions that will require the harder type of silicone (bridge of nose). The MD/DMD places the soft silicone first in the ala. The MD/DMD then adds in the stronger 2186 to the bridge of the nose. he MD/DMD verifies that the appropriate portions of the prosthesis have the right silicone. The MD/DMD directs laboratory technician to proceed with adding in the rest of the base shade of silicone and to proceed with curing of prosthesis. After it is broken out, the MD/DMD verifies a passive fit of the prosthesis on the implants.

Visit #5 FTF: 78 minutes Extrinsic Coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of nasal defect and cleans the three craniofacial implants. The MD/DMD tries on the prosthesis and trims the prosthesis and begins extrinsic coloration. Achieving coloration to match the patient's natural skin color takes time and the paints must set, with each addition, in the oven. The MD/DMD starts painting the superior border, the inferior border, and the lateral borders of the prosthesis so the prosthesis blends in at the margins with the native skin. Then, the MD/DMD paints the middle of the prosthesis in stages with having each section cure in oven before proceeding to next section. The MD/DMD shows the patient the prosthesis and patient gives final approval.

NFTF between Visit 5 and 6: 45 minutes
The MD/DMD reviews the prosthesis with technician. The MD/DMD reviews the different types of sealers with laboratory technician. The MD/DMD makes a decision on which sealer to use based on discussion with the lab tech. MD/DMD directs and watches the laboratory technician as he seals the prosthesis. The sealer is added three times. The MD/DMD checks that base shade is recorded and intrinsic coloration samples are saved in patient's box.

Visit #6: 50 minutes Delivery
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of nasal defect and cleans the three craniofacial implants. The MD/DMD reviews the hygiene of the nasal defect and hygiene of the prosthesis. The MD/DMD reviews the initial insertion and removal of the prosthesis with the patient. The MD/DMD discusses the option of adhesive around the margin and discusses the various types of adhesive. The MD/DMD delivers the prosthesis. Final external characterization of the prosthesis is done by the MD/DMD. The MD/DMD reviews the photographs. All the patient's questions are answered.

Description of Post-Service Work: The MD/DMD informs the resection surgeon and sinus surgeon that the patient has the prosthesis. The MD/DMD calls the patient multiple times. The MD/DMD verify that the dental materials used for the patient are properly documented in the chart and verifies appropriate storage of physical models for the patient.

SURVEY DATA

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31225	090	26.03	**RUC Time**

CPT Descriptor Maxillectomy; without orbital exenteration

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
21182	090	31.77	**RUC Time**

CPT Descriptor Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
34705	090	28.84	**RUC Time**	9,166

CPT Descriptor 1 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
33534	090	38.88	**RUC Time**	4,389

CPT Descriptor 2 Coronary artery bypass, using arterial graft(s); 2 coronary arterial grafts

Other Reference CPT Code	Global	Work RVU	Time Source
61615	090	34.88	**RUC Time**

CPT Descriptor Resection or excision of neoplastic, vascular or infectious lesion of base of posterior cranial fossa, jugular foramen, foramen magnum, or C1-C3 vertebral bodies; extradural

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 5 **% of respondents:** 16.1 **%**

Number of respondents who choose 2nd Key Reference Code: 4 **% of respondents:** 12.9 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Same**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	20%	60%	0%

Mental Effort and Judgment	**Less**	**Same**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	60%	20%

Technical Skill/Physical Effort	**Less**	**Same**	**More**
Technical skill required	0%	40%	60%
Physical effort required	20%	60%	20%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	60%	20%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	75%	25%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	50%	25%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	50%	50%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	25%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *31225 Maxillectomy; without orbital exenteration* valued at 26.03 RVUs with an intra time of 175.5 and a total time of 603.5. 5 respondents selected this as their primary KRS.

The second KRS selected was CPT 21182 *Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm* valued at 31.77 RVUs with an intra time of 351 and a total time of 792. 4 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **34.34 and a total time of 948 minutes based on a crosswalk to code 21155 Reconstruction midface, LeFort III (extracranial), any type, requiring bone grafts (includes obtaining autografts); with LeFort I and survey respondents indicating an increase of 428 minutes (45% increase) for this code.**

We are requesting 45 minutes of pre time, 873 minutes of intra time (representing 6 face-to-face visits with the patient and 430 minutes of non-face-to-face lab time), and 30 minutes of post time in accordance with our survey median times, for a total of 948 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
61323	Craniectomy or craniotomy, decompressive, with or without duraplasty, for treatment of intracranial hypertension, without evacuation of associated intraparenchymal hematoma; with lobectomy	090	34.18	90			175.5	50	860.5	0.0632
61582	Craniofacial approach to anterior cranial fossa; extradural, including unilateral or bifrontal craniotomy, elevation of frontal lobe(s), osteotomy of base of anterior cranial fossa	090	34.26	153.3			290.55	95	1002.85	0.0339
21155	Reconstruction midface, LeFort III (extracranial), any type, requiring bone grafts (includes obtaining autografts); with LeFort I	090	34.34	90			409.5	87	928.5	0.0346
35091	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, abdominal aorta involving visceral vessels (mesenteric, celiac, renal)	090	34.47	93			242.78	50	783.78	0.052
21183	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting greater than 40 sq cm but less than 80 sq cm	090	34.81	90			380.25	84	881.25	0.0409
61615	Resection or excision of neoplastic, vascular or infectious lesion of base of posterior cranial fossa, jugular foramen, foramen magnum, or C1-C3 vertebral bodies; extradural	090	34.88	195.3			336.28	65	1083.58	0.0285
33675	Closure of multiple ventricular septal defects;	090	35.05	70	15.0	15.0	175.5	60	623.5	0.1102

15757	Free skin flap with microvascular anastomosis	090	36.22	90			351	60	820	0.0607

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21087

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Maxillofacial surgery How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 192
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Maxillofacial surgery Frequency 192 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 64 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Maxillofacial surgery Frequency 64 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21087

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Impression and custom preparation; auricular prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male is referred for custom preparation of an auricular prosthesis after his ear was surgically removed due to squamous cell carcinoma.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to review types of implants that were placed and size of attachments. MD/DMD reviews preop photographs to post surgical photographs and reviews projection of the ear from behind and straight ahead. MD/DMD determines the implant size and verifies the appropriate implant components are ordered for both laboratory and clinical components. The MD/DMD designs the preliminary plan for prosthesis and suprastructure. MD/DMD reviews prosthetic plan with head and neck surgeon and otologist. MD/DMD develops a preliminary prosthetic.

Description of Intra-Service Work: Visit #1 FTF: 63 minutes. Final Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies with patient. MD/DMD performs clinical examination of auricular defect and cleans the three craniofacial implants. The MD/DMD discusses the fabrication process to the patient. The MD/DMD shows them an example of an auricular prosthesis and answers all of the patient's questions as well as the family's questions. Imaging of implants is reviewed with patient. The impression magnet is placed on each of the three implant and a passive seat is verified by the MD/DMD. The MD/DMD marks the moveable tissue so the markings of the extent of the moveable tissue is transferred to the impression. The MD/DMD makes a final impression with the pick-up magnet impression posts with a polyvinylsiloxane impression material.

NFTF between Visit 1 and 2: 84 minutes
The MD/DMD reviews the final impression with the laboratory technician. The MD/DMD places the laboratory analogues into the magnet impression post and verifies a passive fit under magnification. The MD/DMD gives order for laboratory technician to box and pour the final impression. The MD/DMD examines the master model/cast.

The MD/DMD outlines the preliminary extent of the prosthesis and gives order for laboratory technician to make a wax base. The MD/DMD verifies the jig which will be converted into the suprastructure to verify that the impression is accurate and to verify that implant position in the master cast is accurate. From the medical grade CT scan or from the soft tissue software imaging (proface), the preop virtual image is evaluated by MD/DMD to determine if the tumor changed the shape of the ear. Typically, the tumor has changed the shape of the ea
r, so the MD/DMD takes the contralateral ear shape and converts it to the defect side. The MD/DMD directs the laboratory technician to 3D print the shape and convert into wax. The wax pattern is put into position on the master cast

with the wax base by the MD/DMD. The MD/DMD verifies the implant verification template. The MD/DMD evaluates template (verification jig) and wax up to and directs laboratory technician to proceed with disinfection of prosthesis.

Visit #2 FTF: 84 minutes: Sculpting and Verification of Implant template
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of auricular defect and cleans the three craniofacial implants. The MD/DMD tries in the verification jig to verify that the verification jig is passive. The MD/DMD tries in the wax pattern of the ear. The pattern is evaluated for projection, symmetry, and position to be at the same height as the contralateral native ear. The MD/DMD begins waxing the ear prosthesis according to the patient's landmarks. The MD/DMD makes measurements to verify that the position of the auricular prosthesis is consistent with Da Vinci's facial proportion measurement. The MD/DMD evaluates the photographs of wax pattern in place and makes appropriate changes and works with the patient to develop the patient's wishes into the prosthesis. The projection of the auricular wax pattern is evaluated by MD/DMD from all angles and verified, especially the helix.

NFTF between Visit 2 and 3: 93 minutes
The MD/DMD reviews photographs of the shape of the ear. The MD/DMD reviews photographs or soft tissue imaging (Proface) and decides what areas need to be developed. The MD/DMD proceeds with waxing the ear. Key anatomical landmarks of helix, anti-helix, triangular fossa, scapha, antitragus, lobule, intertragal notch, helical crus and cymba concha are waxed. The MD/DMD reviews photographs of the wax pattern. The MD/DMD decides that the wax up is acceptable and directs laboratory technician to disinfect prosthesis for patient use.

Visit #3 FTF: 80 minutes Finalization of Sculpting
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of auricular defect and cleans the three craniofacial implants. The MD/DMD tries in the wax up of the ear and makes changes so the ear is according to Da Vinci's rules of facial proportion. The margins of the nose are finalized. The MD/DMD uses photographs to make comparisons on accuracy of the ear shape. The MD/DMD continues to sculpt the wax pattern. The MD/DMD gets the patient input. The MD/DMD finalizes the margins of the prosthesis and gets patient approval. The MD/DMD makes initial skin color measurement with spectromatch.

NFTF between Visit 3 and 4: 80 minutes
The MD/DMD continues to wax to finalize key anatomical landmarks. The MD/DMD works with the laboratory technician to add in skin texture and to finalize the margins of the prosthesis and final wax up. Comparisons are made to preop images and soft tissue imaging with software. The MD/DMD evaluates the final wax up and gives order to proceed with investing.
The MD/DMD evaluates the final wax up and instructs the lab technician to proceed with investing. The MD/DMD evaluates the base of the flask to verify that the stone is smoothed and reviews orientation dipple placement. The MD/DMD sands the plaster around the master model so it is smooth so the excess silicone has a path to escape during the silicone injection. The MD/DMD instructs the lab tech to pour the counter pour for the helix. The MD/DMD evaluates the portion of the support for the helix. The MD/DMD directs the lab tech to do the counter pour of the flask and to boil out the prosthesis. The MD/DMD evaluates the mold after the wax pattern is boiled out. The MD/DMD instructs the lab tech to proceed with placing the separation materials on the mold so the mold can accept the silicone. The MD/DMD evaluates the color of the base shade from the spectromatch measurement again and compares it to the photographs and tweaks the color to more closely match the patient.

Visit #4 FTF: 90 minutes Intrinsic Coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of auricular l defect and cleans the three craniofacial implants. The MD/DMD evaluates the base shade of silicone from the spectromatch measurement and customizes it to the patient's skin tone. The MD/DMD begins mixingi the various colors and does a color map of the auricular region so the prosthesis will blend into the skin tone. The MD/DMD places the intrinsic coloration per the patient's color landmarks to match the native auricular region and to blend into the face. Intrinsic coloration is done for the helix, antihelix, triangular fossa, scapha, antitragus, lobule, intertragal notch, helical crus and cymba concha.

NFTF between Visit 4 and 5: 105 minutes
The MD/DMD reviews the coloration map with the laboratory technician. The MD/DMD reviews with laboratory technician on which portions of auricle will require the softer silicone (lobe) and the portions that will require the harder type of silicone (cartlidge). The MD/DMD verifies that the appropriate portion of the prosthesis has the right silicone. The MD/DMD places the soft silicone and puts it in the oven to set. The MD/DMD places the harder silicone and puts it in the

oven to set. The MD/DMD directs laboratory technician to proceed with adding in the rest of the base shade of silicone and to proceed with curing of prosthesis. After it is broken out, the MD/DMD verifies a passive fit of the prosthesis on the implants.

Visit #5 FTF: 90 minutes Extrinsic Coloration
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs a clinical examination of ear defect and cleans the three craniofacial implants. The MD/DMD tries on the prosthesis and trims the prosthesis and begins extrinsic coloration. The coloration to match the patient's natural skin color takes time and the paints have to set with each addition in the oven. The MD/DMD paints the prosthesis in stages. The margins are characterized by MD/DMD first. Then the MD/DMD paints the scapha next along with the antihelix. The inter tragal notch is done next. The external coloration is done by the MD/DMD and takes time. The MD/DMD shows the patient the prosthesis and patient gives approval.

NFTF between Visit 5 and 6: 52 minutes
The MD/DMD reviews the prosthesis with technician . The MD/DMD reviews the different types of sealers with laboratory technician. The MD/DMD makes a decision on which sealer to use based on discussion with the lab tech. MD/DMD directs and watches the laboratory technician as he seals the prosthesis. The sealer is added three times. The MD/DMD checks that base shade is recorded and intrinsic coloration samples are saved in patient's box

Visit #6: 55 minutes Delivery
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies with patient. MD/DMD performs clinical examination of ear defect and cleans the three craniofacial implants. The MD/DMD reviews the hygiene of the auricular defect and hygiene of the prosthesis. The MD/DMD reviews the initial insertion and removal of the prosthesis with the patient. The MD/DMD discusses the option of adhesive around the margin and discusses the various types of adhesive. The MD/DMD delivers the prosthesis. Final external characterization of the prosthesis is done by the MD/DMD. The MD/DMD reviews the photographs. All the patient's questions are answered.

Description of Post-Service Work: The MD/DMD calls the resection surgeon and/or otologist that the prosthesis has been delivered. The MD/DMD calls the patient multiple times. The MD/DMD verify that the dental materials used for the patient is properly documented in the chart and verifies appropriate storage of physical models for the patient. The MD/DMD verifies appropriate documentation of dental materials used for this patient has been accomplished.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	67%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	67%	33%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	17%	83%	0%

- Estimated risk of malpractice suit with poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	67%	0%	33%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	67%	33%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	67%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial

surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *42892 Resection of lateral pharyngeal wall or pyriform sinus, direct closure by advancement of lateral and posterior pharyngeal walls* valued at 25.36 RVUs with an intra time of 165.75 and a total time of 638.75. 6 respondents selected this as their primary KRS.

The second KRS selected was CPT 69155 *Radical excision external auditory canal lesion; with neck dissection* valued at 22.77 RVUs with an intra time of 277.88 and a total time of 737.88. 6 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the compelling evidence arguments below.

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **34.00 and a total time of 955 minutes** based on a **crosswalk to 21155 Reconstruction midface, LeFort III (extracranial), any type, requiring bone grafts (includes obtaining autografts); with LeFort I (valued at 34.34 RVUs and a total of 928.5 minutes) We further believe this recommendation is supported by our survey respondents indicating an increase of 434 minutes (45% increase) for this code.**

We are requesting 51 minutes of pre time, 874 minutes of intra time (representing 6 face-to-face visits with the patient and 413 minutes of non-face-to-face lab time), and 30 minutes of post time in accordance with our survey median times, for a total of 955 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
61323	Craniectomy or craniotomy, decompressive, with or without duraplasty, for treatment of intracranial hypertension, without evacuation of associated intraparenchymal hematoma; with lobectomy	090	34.18	90			175.5	50	860.5	0.0632
61582	Craniofacial approach to anterior cranial fossa; extradural, including unilateral or bifrontal craniotomy, elevation of frontal lobe(s), osteotomy of base of anterior cranial fossa	090	34.26	153.3			290.55	95	1002.85	0.0339
21155	Reconstruction midface, LeFort III (extracranial), any type, requiring bone grafts (includes obtaining autografts); with LeFort I	090	34.34	90			409.5	87	928.5	0.0346
35091	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, abdominal aorta involving visceral vessels (mesenteric, celiac, renal)	090	34.47	93			242.78	50	783.78	0.052
21183	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting greater than 40 sq cm but less than 80 sq cm	090	34.81	90			380.25	84	881.25	0.0409
61615	Resection or excision of neoplastic, vascular or infectious lesion of base of posterior cranial fossa, jugular foramen, foramen magnum, or C1-C3 vertebral bodies; extradural	090	34.88	195.3			336.28	65	1083.58	0.0285
33675	Closure of multiple ventricular septal defects;	090	35.05	70	15.0	15.0	175.5	60	623.5	0.1102
46735	Repair of high imperforate anus without fistula; combined transabdominal and sacroperineal approaches	090	35.24	115			224.25	30	844.25	0.0653
61598	Transpetrosal approach to posterior cranial fossa, clivus or foramen magnum, including ligation of superior petrosal sinus and/or sigmoid sinus	090	35.62	153.4			368.26	62	1038.66	0.0291
15757	Free skin flap with microvascular anastomosis	090	36.22	90			351	60	820	0.0607

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21086

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Maxillofacial surgery How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 72
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 36 Percentage 50.00 %

Specialty Maxillofacial surgery Frequency 36 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 24 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Maxillofacial surgery Frequency 12 Percentage 50.00 %

Specialty Oral surgery Frequency 12 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21086

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Impression and custom preparation; palatal augmentation prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old male who had most of his tongue resected for squamous cell carcinoma is referred for custom preparation of a palatal augmentation prosthesis.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to determine location of rest preps and clasps for prosthesis. MD/DMD reviews patient's restorative and periodontal assessment to begin the design process. MD/DMD reviews the speech and language pathologist assessment about patient's soft palate and pharyngeal walls' function and reviews results of Modified Barium Swallow and views the video fluoroscopy (Assessment of swallowing and speech preoperatively by clinical analysis). MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 58 minutes Preliminary Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs a clinical examination of oral cavity to evaluate tongue and soft palate function. A speech intelligibility test (patients have certain sentences to speak) is recorded by MD/DMD. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD does physical assessment of tongue function – both motor and sensory function. The MD/DMD makes a tongue map of the deficits and also takes a picture of tongue at rest and in movements. MD/DMD lifts soft palate with instrument to determine if patient has a gag response. The MD/DMD assesses the scan of the maxillary and mandibular arches which is evaluated for accuracy along with the capture of the bite. The MD/DMD discusses the fabrication process with the patient.

NFTF between Visit 1 and 2: 57 minutes
The MD/DMD evaluates the accuracy of models/casts. The MD/DMD reviews the preliminary design of prosthesis. The MD/DMD surveys the model to determine path of placement and path of withdrawal. The MD/DMD reviews the surveyed model/cast with the lab technician to review undercuts for clasps and the parallelism of the guideplanes. The MD/DMD discusses with laboratory technician the prosthetic design of the major connector of the prosthesis. The MD/DMD designs the framework with input from the laboratory technician with respect to the augmentation, the rests, clasps, and major connector design. The custom tray design is reviewed with laboratory technician. The MD/DMD evaluates the custom tray for accuracy. The MD/DMD reviews recording of speech intelligibility. The MD/DMD discusses the treatment plan with the Speech Language Pathologist and referring MD for achieving desired outcome.

Visit #2 FTF: 60 Final Impression
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD explains to the patient the preparation process. The MD/DMD evaluates swallowing

function, since the handpiece uses water. This puts the patient at risk of aspiration depending upon swallowing ability. The MD/DMD verifies suction is in place. The MD/DMD places rest preps on the abutment teeth with a handpiece. The MD/DMD border molds the custom tray to capture the hard and soft palate. It requires three moldings to capture the whole soft palate by the MD/DMD. The MD/DMD makes the final impression in the custom border molded custom tray with polyvinylsiloxane impression material. While the impression material is setting, the MD/DMD assesses the patient's airway to verify that impression material did not go down the throat and the patient did not swallow or aspirate it. The MD/DMD captures the maxillomandibular relationship. This relationship enables the MD/DMD to know how the dentition comes together so the dentition does not hit the framework of the prosthesis. The MD/DMD reviews the final impression with laboratory technician and gives an order to box and pour the final impression. The MD/DMD evaluates the final impression under microscope and magnification to verify that there are no bubbles or voids.

NFTF between Visit 2 and 3: 48 minutes
The MD/DMD evaluates the master cast and model for accuracy. The MD/DMD surveys the master cast/model to determine the path of placement/removal for the prosthesis. Undercuts are identified for clasps and the guiding planes are evaluated for parallelism. The MD/DMD designs the framework on the master model/cast. The MD/DMD reviews the design with the laboratory technician to verify that the palatal portion has adequate retention for the bulk of material to be added. The MD/DMD draws the framework design on the master model/cast. The MD/DMD completes a work authorization for fabrication of the framework including metal selection. When the framework returns, the MD/DMD reviews it with the laboratory technician to examine the fit, the quality of metal finishing and the finish lines, and verification of seating of rests and engagement of undercut with clasp. The MD/DMD gives order to LT to disinfect the framework and to have ready for patient's visit.

Visit #3 FTF: 60 minutes Framework tryin and Jaw Relationship Record
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD tries in the framework. The MD/DMD performs a physiologic relief of the framework. The MD/DMD evaluates the occlusion for verification that the dentition is not hitting the framework and that the framework is completely seated. The initial molding of the palatal molding to lower the palatal floor begins. According to the patient's speech, the MD/DMD adds the material to the framework to create contact and seal for articulation; based on tongue strength and agility. The MD/DMD decides if any pearls which can be circular or oblong or needed. The MD/DMD decides if a sluiceway used to direct airflow is needed. According to the patient's speech, the MD/DMD may add in a funnel to redirect airflow as it enters or exits the oral cavity based on lingual, labial, or oropharyngeal function. A rolling slope which is a ramp-like feature which aids in shape, agility, and speed performance required of tongue to create connected speech sounds. The MD/DMD assesses speech nasality and the speech intelligibility test is performed. The MD/DMD captures the bite or the relationship between the maxilla and mandible.

NFTF between Visit 3 and 4: 30 minutes
The MD/DMD reviews the effectiveness of the prosthesis with the laboratory technician. The MD/DMD gives an order to laboratory technician to mount the models. The MD/DMD reviews the mounting with the laboratory technician. The MD/DMD gives an order to set the teeth in the partial edentulous span to the laboratory technician. The MD/DMD evaluates the set up prior to the patient visit with the laboratory technician. The MD/DMD gives order to disinfect the prosthesis prior to the patient's visit.

Visit #4 FTF: 60 minutes Esthetic tryin and Palatal Molding
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies are reviewed and verifies any changes with the patient. The MD/DMD tries in the prosthesis. The MD/DMD evaluates the prosthesis for support, stability and retention. The MD/DMD verifies complete seating of the prosthesis. The MD/DMD verifies that occlusion or bite to verify that the teeth are not hitting the framework. The MD/DMD verifies that the vertical dimension of occlusion and centric relation (bite) are correct. The MD/DMD verifies that the patient is happy with the esthetics of the prosthesis. The MD/DMD evaluates the prosthesis for speech intelligibility first. Additions are made to the palatal surface so the prosthesis has adequate contact with the tongue. The MD/DMD will use pressure indicating paste to verify appropriate contact of the tongue with the palate surface. At the direction of the MD/DMD, the patient performs the speech intelligibility test. The MD/DMD evaluates for swallowing function as well. The MD/DMD makes appropriate adjustments/additions/deletions. Speech intelligibility is evaluated again. The MD/DMD evaluates that there is contact and seal during articulation, assesses airflow, and connected speech. Additions/deletions/adjustments are accomplished by the MD/DMD.

NFTF between Visit 4 and 5: 30 minutes

The MD/DMD reviews speech recordings and reviews the patient's speech for articulation, anterior sounds and posterior sounds.
The MD/DMD writes an order for the laboratory technician to redefine the palatal augmentation and to remove the pressure indicating paste. The MD/DMD makes the final additions according to the patient's speech recordings. The MD/DMD verifies complete seating of the prosthesis on the model. The MD/DMD directs the lab technician to disinfect the prosthesis.

Visit #5 FTF: 60 minutes Finalization of Palatal Molding
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies are reviewed and verifies any changes with the patient. The MD/DMD tries in the prosthesis. The MD/DMD evaluates the prosthesis for support, stability and retention. The MD/DMD verifies complete seating of the prosthesis. The MD/DMD evaluates the prosthesis for speech intelligibility first. Additions are made to the palatal floor so the prosthesis has adequate contact with the tongue. The MD/DMD will use pressure indicating paste to verify appropriate contact of the tongue with the palatal floor. At the direction of the MD/DMD the patient performs the speech intelligibility test. The patient is recorded for the speech intelligibility test. The MD/DMD listens to initial recordings and current recordings of the speech intelligibility test to determine if additions are needed for contact and seal for articulation; based on tongue strength and agility, if any pearls, sluiceways are needed. According to the patient's speech, the MD/DMD may add in a funnel to redirect airflow as it enters or exits the oral cavity based on lingual, labial, or oropharyngeal function. A rolling slope which is a ramp-like feature which aids in shape, agility, and speed performance required of tongue to create connected speech sounds. The resonance and nasality of speech are evaluated. The MD/DMD evaluates for swallowing function as well. The MD/DMD makes appropriate adjustments/additions/deletions. Speech intelligibility is evaluated again. Finalization of the palatal augmentation portion is completed.

NFTF between Visit 5 and 6: 15 minutes
The MD/DMD writes an order for the laboratory technician to convert the wax up into heat cured methyl methacrylate. After the conversion, the MD/DMD evaluates the final prosthesis with the laboratory technician. The MD/DMD directs the lab technician to disinfect the prosthesis.

Visit #6 FTF: 60 minutes Delivery
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD delivers the prosthesis and verifies support, stability, and retention of the prosthesis. The MD/DMD verifies complete seating of the prosthesis. The occlusion is evaluated by the MD/DMD. Speech and swallowing functions are evaluated by the MD/DMD. Additions/deletions/adjustments are made by the MD/DMD as dictated by patient comfort and speech and swallowing function. The MD/DMD polishes the prosthesis. Final speech recording is conducted.

Description of Post-Service Work: The MD/DMD reviews the patient's speech intelligibility recordings and MBS (qualitative and quantitative results). The MD/DMD makes recommendations to the SLP about the need for reevaluation by MD/DMD and the patient's speech therapy plan of care is finalized. The MD/DMD calls the patient multiple times to see how the patient is doing with the prosthesis. The MD/DMD verifies appropriate storage of models and patient materials with the dental assistant. The MD/DMD verifies appropriate documentation of dental materials used for the patient with the dental assistant.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
41153	090	32.75	**RUC Time**

CPT Descriptor Glossectomy; composite procedure with resection floor of mouth, with suprahyoid neck dissection

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31230	090	30.05	**RUC Time**

CPT Descriptor Maxillectomy; with orbital exenteration (en bloc)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
34705	090	28.84	**RUC Time**	9,166

CPT Descriptor 1 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
22633	090	26.13	**RUC Time**	34,799

CPT Descriptor 2 Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar;

Other Reference CPT Code	Global	Work RVU	Time Source
21151	090	28.29	**RUC Time**

CPT Descriptor Reconstruction midface, LeFort II; any direction, requiring bone grafts (includes obtaining autografts)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 7 **% of respondents:** 18.9 **%**

Number of respondents who choose 2nd Key Reference Code: 3 **% of respondents:** 8.1 **%**

TIME ESTIMATES (Median)

	CPT Code: 21082	Top Key Reference CPT Code: 41153	2nd Key Reference CPT Code: **31230**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	14%	29%	43%	14%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	57%	43%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	14%	43%	43%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	0%	71%	14%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	66%	33%	0%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	66%	33%	0%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	100%	0%
Physical effort required	33%	66%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	66%	33%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial

surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *41153 Glossectomy; composite procedure with resection floor of mouth, with suprahyoid neck dissection* valued at 32.75 RVUs with an intra time of 263.25 and a total time of 819.25. 7 respondents selected this as their primary KRS.

The second KRS selected was CPT *31230 Maxillectomy; with orbital exenteration (en bloc)* valued at 30.05 RVUs with an intra time of 219.38 and a total time of 682.38. 3 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **28.29 and a total time of 618 minutes** based on **a crosswalk to code 21151 Reconstruction midface, LeFort II; any direction, requiring bone grafts (includes obtaining autografts) and our survey respondents indicating an increase of 572 minutes (93% increase) for this code.**

We are requesting 40 minutes of pre time, 538 minutes of intra time (representing 6 face-to-face visits with the patient and 180 minutes of non-face-to-face lab time), and 40 minutes of post time in accordance with our survey median times, for a total of 618 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
33140	Transmyocardial laser revascularization, by thoracotomy; (separate procedure)	090	27.63	60	15.0	20.0	110.18	40	618.18	0.0859

61563	Excision, intra and extracranial, benign tumor of cranial bone (eg, fibrous dysplasia); without optic nerve decompression	090	27.73	100			275.93	34	648.93	0.059
44145	Colectomy, partial; with coloproctostomy (low pelvic anastomosis)	090	27.87	60	20.0	15.0	175.5	45	610.5	0.0808
27713	Osteotomy(ies), tibia, including fibula when performed, unilateral, with insertion of an externally controlled intramedullary lengthening device, including imaging, alignment assessments, computations of adjustment schedules, and management of the intramedullary lengthening device	090	28.00	50	15.0	15.0	200	30	641	0.0645
33732	Repair of cor triatriatum or supravalvular mitral ring by resection of left atrial membrane	090	28.24	120			204.75	30	572.75	0.0821
21151	Reconstruction midface, LeFort II; any direction, requiring bone grafts (includes obtaining autografts)	090	28.29	90			273	76	679	0.0513
43865	Revision of gastrojejunal anastomosis (gastrojejunostomy) with reconstruction, with or without partial gastrectomy or intestine resection; with vagotomy	090	28.32	75			175.5	30	610.5	0.0796
32652	Thoracoscopy, surgical; with total pulmonary decortication, including intrapleural pneumonolysis	090	28.40	60	15.0	20.0	156	40	641	0.0835
35570	Bypass graft, with vein; tibial-tibial, peroneal-tibial, or tibial/peroneal trunk-tibial	090	28.42	40	15.0	20.0	234	30	661	0.0619
58958	Resection (tumor debulking) of recurrent ovarian, tubal, primary peritoneal, uterine malignancy (intra-abdominal, retroperitoneal tumors), with omentectomy, if performed, with pelvic lymphadenectomy and limited para-aortic lymphadenectomy	090	28.49	65	10.0	15.0	204.75	45	576.75	0.0838
27228	Open treatment of acetabular fracture(s) involving anterior and posterior (two) columns, includes T-fracture and both column fracture with complete articular detachment, or single column or transverse fracture with associated acetabular wall fracture, with internal fixation	090	28.60	80			292.5	30	672.5	0.054
33602	Closure of semilunar valve (aortic or pulmonary) by suture or patch	090	28.61	120			234	30	622	0.0701
27059	Radical resection of tumor (eg, sarcoma), soft tissue of pelvis and hip area; 5 cm or greater	090	28.62	40	3.0	20.0	214.5	45	602.5	0.0756
69960	Decompression internal auditory canal	090	28.68	100			234	45	669	0.0618
44206	Laparoscopy, surgical; colectomy, partial, with end colostomy and closure of distal segment (Hartmann type procedure)	090	29.05	70			175.5	35	642.5	0.0773

44141	Colectomy, partial; with skin level cecostomy or colostomy	090	29.16	45	20.0	15.0	156	45	668	0.0803
35533	Bypass graft, with vein; axillary-femoral-femoral	090	29.17	90			234	30	609	0.0737
57531	Radical trachelectomy, with bilateral total pelvic lymphadenectomy and para-aortic lymph node sampling biopsy, with or without removal of tube(s), with or without removal of ovary(s)	090	29.20	70			234	30	598	0.0729
33620	Application of right and left pulmonary artery bands (eg, hybrid approach stage 1)	090	29.25	40	3.0	20.0	117	60	606	0.0979

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21082

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 618
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 494 Percentage 79.93 %

Specialty Dentists Frequency 75 Percentage 12.13 %

Specialty Maxillofacial surgery Frequency 43 Percentage 6.95 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 206
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 165 Percentage 80.09 %

Specialty Dentists Frequency 27 Percentage 13.10 %

Specialty maxillofacial surgery Frequency 14 Percentage 6.79 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21082

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Impression and custom preparation; speech aid prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 63-year-old male with a repaired cleft palate whose velopharyngeal is insufficient is referred for custom preparation of a speech bulb prosthesis.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to determine location of rest preps and clasps for prosthesis. MD/DMD reviews patient's restorative and periodontal assessment to begin the design process. MD/DMD reviews with speech and swallowing pathologist the patient's soft palate and pharyngeal walls' function. MD/DMD reviews the results of the modified barium swallow and views the video fluoroscopy and determines type of velopharyngeal closure pattern the patient exhibits. MD/DMD makes a call to the referring otolaryngologist. MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 FTF: 60 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies . MD/DMD performs a clinical examination of oral cavity to evaluate tongue, palatal and velopharyngeal function concerning Passavant's Pad and the superior constrictor movement. A speech intelligibility test (patient have certain sentences to speak) is accomplished and recorded by MD/DMD. Articulation of speech with tongue, nasality of speech and tone of speech is evaluated by MD/DMD. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD evaluates swallowing function. The MD/DMD evaluates leakage of liquid during swallowing function with patient (via MBS). The MD/DMD cleans the defect and verifies cleanliness of defect. The MD/DMD reviews oral hygiene with the patient. The MD/DMD evaluates the scan of the maxillary and mandibular arches for accuracy along with the capture of the bite. The MD/DMD discusses the fabrication process with the patient.

NFTF between Visit 1 and 2: 47 minutes
The MD/DMD surveys the model to determine the path of placement and path of withdrawal. The MD/DMD reviews with laboratory technician prosthetic design of the major connector of the prosthesis. Indirect retention of the framework is discussed with the laboratory technician to reduce the effect of the cantilever of the framework. The MD/DMD designs the framework with input from the laboratory technician with respect to the soft palate retention, the rests, clasps, and major connector design. The custom tray design is reviewed with the laboratory technician. The MD/DMD evaluates the custom tray for accuracy. The MD/DMD reviews the recording of speech intelligibility and documentation of swallowing function.

Visit #2 FTF: 60 minutes

The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD explains to the patient the preparation process. The MD/DMD evaluates swallowing function. The MD/DMD places rest preps on the abutment teeth with a handpiece. The MD/DMD border molds the custom tray to capture the soft palate. It requires three moldings to capture the whole soft palate by the MD/DMD. The MD/DMD makes the final impression in the custom border molded custom tray with polyvinylsiloxane. While the impression material is setting, the MD/DMD assesses the patient's airway to verify that impression material did not go down the throat and the patient did not swallow or aspirate it. The MD/DMD captures the maxillomandibular relationship. This relationship is needed to know how the dentition comes together so the dentition does not hit the framework of the prosthesis. The MD/DMD reviews the final impression with laboratory technician and gives an order to box and pour the final impression. The MD/DMD evaluates the final impression under microscope and magnification to verify that there are no bubbles or voids.

NFTF between Visit 2 and 3: 47 minutes
The MD/DMD evaluates the master cast and model for accuracy. The MD/DMD surveys the master cast/model to determine the path of placement/removal for the prosthesis. Undercuts are identified for clasps and the guiding planes are evaluated for parallelism. Indirect retention is designed to prevent movement of the prosthesis due to the long cantilever arm of the prosthesis. The MD/DMD designs the framework on the master model/cast. The MD/DMD reviews the design with the laboratory technician. The MD/DMD draws the framework design on the master model/cast. The MD/DMD completes a work authorization for fabrication of the framework including metal selection. When the framework returns, the MD/DMD reviews it to examine the fit, the quality of metal finishing and the finish lines, and verification of seating of rests and engagement of the undercut with clasp. The MD/DMD gives order to lab technician to disinfect the framework and to have it ready for patient's visit.

Visit #3 FTF: 60 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD tries in the framework. The MD/DMD performs a physiologic relief of the framework. The MD/DMD evaluates the occlusion for verification that the dentition is not hitting the framework and that the framework is completely seated. The MD/DMD performs the initial molding of the velopharyngeal complex. This border molding is performed three times to capture the velopharyngeal complex. A Speech Intelligibility Test is done. The MD/DMD determines proposed changes to the bulb portion of the prosthesis. Additional palatal molding of the velopharyngeal complex is accomplished by the MD/DMD. The Speech Intelligibility Test is done again. Swallowing function is evaluated by the MD/DMD. Oral and Pharyngeal transit times are compared with and without prosthesis. Additions are added to the bulb portion so that there isn't any liquid/food coming out of the nose. The MD/DMD captures the bite or the relationship between the maxilla and mandible. Shade and mold are accomplished by the MD/DMD.

NFTF between Visit 3 and 4: 27 minutes
The MD/DMD reviews the altered cast with the laboratory technician with respect to boxing and pouring of the altered cast. The MD/DMD writes a work authorization to pour the altered cast which incorporates the soft palate. The MD/DMD inspects the boxing of the master cast/model with the altered cast. The MD/DMD evaluates the new master cast/model. The MD/DMD gives a work authorization to do final waxing of the soft palate portion. The wax up is evaluated by the MD/DMD and MD/DMD gives order to flask and convert the soft palate portion into methyl methacrylate. After processing, the MD/DMD evaluates the speech aid prosthesis. The prosthesis is evaluated for no porosity in the methyl methacrylate in the soft palate portion.

Visit #4 FTF: 50 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, and allergies with the patient. The MD/DMD tries in the prosthesis. The MD/DMD evaluates the prosthesis for support, stability and retention. The MD/DMD verifies complete seating of the prosthesis with the soft palate. The MD/DMD verifies that occlusion or bite to verify that the teeth are not hitting the framework. The MD/DMD evaluates the prosthesis for speech intelligibility first followed by evaluation for swallowing function as well. Additions are added to the soft palate portion so speech is not hypernasal, tonality of speech is correct and articulation is correct. The MD/DMD directs dental assistant to polish the prosthesis.

A final speech recording is accomplished. The MD/DMD performs a pickup impression so the partial edentulous span can be fitted for teeth. The MD/DMD picks out the shade and mold of the teeth. The MD/DMD captures a new maxillomandibular recording so the maxillary and mandibular models can be mounted by the laboratory technician.

NFTF between Visit 4 and 5: 45minutes
The MD/DMD reviews the mounting and determines the occlusal scheme. The MD/DMD gives an order to set the teeth in the partial edentulous span to the laboratory technician. The MD/DMD evaluates the set up prior to the patient visit. The MD/DMD gives order to the lab technician disinfect the prosthesis prior to the patient's visit.

Visit #5 FTF: 60 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD tries in the prosthesis, and the partial edentulous span is evaluated with respect to occlusion, phonetics, and esthetics. The MD/DMD evaluates speaking and swallowing function with the speech intelligibility test and having the patient drink and eat yogurt to verify that liquid/food is not coming out of the nose. The MD/DMD evaluates overall fit of the prosthesis with respect to support, stability, and retention. The MD/DMD discusses with the patient what to expect at the next visit. The MD/DMD answers all the patient's questions.

NFTF between Visit 5 and 6: 13 minutes
The MD/DMD writes an order for the laboratory technician to convert the wax up of the partial edentulous span into heat cured methyl methacrylate. After the conversion, the MD/DMD evaluates the final prosthesis. The MD/DMD gives order to the lab technician to disinfect the prosthesis prior to the patient's visit.

Visit #6 FTF: 50 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD delivers the prosthesis and verifies support, stability, and retention of the prosthesis. The MD/DMD verifies complete seating of the prosthesis. The occlusion is evaluated by the MD/DMD. Speech and swallowing functions are evaluated with the MD/DMD. Additions are made so speech is not hypernasal. Sore spots or pressure points are adjusted by MD/DMD. The MD/DMD verifies patient comfort and speech and swallowing function. The MD/DMD gives order for dental assistant to polish the prosthesis. A final speech recording is accomplished.

Description of Post-Service Work: The MD/DMD documents in the EMR. The MD/DMD consults with the speech and swallowing pathologist on the recordings and MBS (qualitative and quantitative results). The MD/DMD makes recommendations to the SLP about the need for reevaluation by MD/DMD and the patient's speech therapy plan of care is finalized. The MD/DMD calls the patient multiple times to see how the patient is doing with the prosthesis. The MD/DMD verifies appropriate storage of models and patient materials with the dental assistant. The MD/DMD verifies appropriate documentation of dental materials used for the patient.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2026					
Presenter(s):	Betsy Davis, DDM, MS; Mark Chambers, DDM, MS

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
42120	090	11.56	**RUC Time**

CPT Descriptor Resection of palate or extensive resection of lesion

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
42892	090	25.38	**RUC Time**

CPT Descriptor Resection of lateral pharyngeal wall or pyriform sinus, direct closure by advancement of lateral and posterior pharyngeal walls

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
32669	090	22.94	**RUC Time**	2,975

CPT Descriptor 1 Thoracoscopy, surgical; with removal of a single lung segment (segmentectomy)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
22633	090	26.13	**RUC Time**	34,799

CPT Descriptor 2 Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar;

Other Reference CPT Code	Global	Work RVU	Time Source
31225	090	26.03	**RUC Time**

CPT Descriptor Maxillectomy; without orbital exenteration

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 7 **% of respondents:** 21.8 **%**

Number of respondents who choose 2nd Key Reference Code: 6 **% of respondents:** 18.7 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	14%	71%	0%	14%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	57%	14%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	86%	14%
Physical effort required	0%	86%	14%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	71%	14%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	50%	17%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	33%	50%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	17%	33%	50%
Physical effort required	0%	33%	67%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	17%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in

fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
  - Any final patient communication or phone calls.
  - Any final documentation, reports, or summaries required.
  - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *42120 Resection of palate or extensive resection of lesion* valued at 11.56 RVUs with an intra time of 78 and a total time of 304. 7 respondents selected this as their primary KRS.

The second KRS selected was CPT *42892 Resection of lateral pharyngeal wall or pyriform sinus, direct closure by advancement of lateral and posterior pharyngeal walls* valued at 25.36 RVUs with an intra time of 165.75 and a total time of 638.75. 6 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **25.00 and a total time of 594 minutes** based on **our survey's median value and our survey respondents indicating an increase of 110 minutes (19% increase) for this code.**

We are requesting 40 minutes of pre time, 518 minutes of intra time (representing 6 face-to-face visits with the patient and 178 minutes of non-face-to-face lab time), and 36 minutes of post time in accordance with our survey median times, for a total of 594 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
44055	Correction of malrotation by lysis of duodenal bands and/or reduction of midgut volvulus (eg, Ladd procedure)	090	24.99	84			87.75	30	660.75	0.0314

47800	Reconstruction, plastic, of extrahepatic biliary ducts with end-to-end anastomosis	090	25.52	75			158.44	45	648.44	0.0596

35587	In-situ vein bypass; popliteal-tibial, peroneal	090	25.55	93			175.5	30	518.5	0.0836
27156	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy and with open reduction of hip	090	25.57	83			219.38	40	532.38	0.0701
35111	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, splenic artery	090	25.62	90			146.25	30	479.25	0.1054
35654	Bypass graft, with other than vein; axillary-femoral-femoral	090	25.62	90			175.5	30	508.5	0.0879
50547	Laparoscopy, surgical; donor nephrectomy (including cold preservation), from living donor	090	25.68	92.5			234	45	495.5	0.0763
45563	Exploration, repair, and presacral drainage for rectal injury; with colostomy	090	25.72	90			126.75	30	632.75	0.0723
35131	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, iliac artery (common, hypogastric, external)	090	25.74	105			146.25	40	524.25	0.0972
61558	Extensive craniectomy for multiple cranial suture craniosynostosis (eg, cloverleaf skull); not requiring bone grafts	090	25.84	120			292.5	34	653.5	0.0492
45402	Laparoscopy, surgical; proctopexy (for prolapse), with sigmoid resection	090	25.85	45	35.0	10.0	146.25	30	466.25	0.1098
34151	Embolectomy or thrombectomy, with or without catheter; renal, celiac, mesentery, aortoiliac artery, by abdominal incision	090	25.86	75			146.25	30	504.25	0.099
34401	Thrombectomy, direct or with catheter; vena cava, iliac vein, by abdominal incision	090	25.86	70			146.25	30	499.25	0.0998
34703	Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-uni-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)	090	25.86	110	20.0	20.0	146.25	35	503.25	0.1086

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21084

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 93
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 38 Percentage 40.86 %

Specialty Dentists Frequency 36 Percentage 38.70 %

Specialty Maxillofacial surgery Frequency 15 Percentage 16.12 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 31 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 13 Percentage 41.93 %

Specialty Dentists Frequency 12 Percentage 38.70 %

Specialty maxillofacial surgery Frequency 5 Percentage 16.12 %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21084

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:21083 Tracking Number Original Specialty Recommended RVU: **22.77**
Presented Recommended RVU: **22.77**
Global Period: 090 Current Work RVU: **18.79** RUC Recommended RVU: **20.01**

CPT Descriptor: Impression and custom preparation; palatal lift prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 80-year-old male is referred for custom preparation of a palatal lift prosthesis after a stroke.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to determine location of rest preps and clasps for prosthesis. MD/DMD reviews patient's restorative and periodontal assessment to begin the design process. MD/DMD reviews the patient's soft palate and pharyngeal walls' function and reviews results of Modified Barium Swallow (MBS) and views the video fluoroscopy and assesses the patient's nasopharyngeal reflux and pharyngeal residue. The MD/DMD reviews the neurologist's notes. MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 FTF: 60 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. Clinical examination of oral cavity to evaluate tongue and soft palate function is performed. Oral motor tests are performed to determine if there are any tongue deficits. Speech intelligibility test (patient has certain sentences to speak) is accomplished and recorded. Physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. Soft palate is lifted with instrument to determine if patient has a gag response and to determine amount of movement for the lift. The scan of the maxillary and mandibular arches is evaluated for accuracy along with the capture of the bite. The MD/DMD discusses the fabrication process with the patient.

NFTF between Visit 1 and 2: 45 minutes
The MD/DMD evaluates the accuracy of models/casts. If acceptable, the MD/DMD will review the preliminary design of prosthesis. The MD/DMD will survey the model to determine path of placement and path of withdrawal. The MD/DMD reviews with laboratory technician the prosthetic design of the major connector of the prosthesis. The MD/DMD designs the framework with respect to the lift, the rests, clasps, and major connector design. The custom tray design is reviewed with laboratory technician. The MD/DMD evaluates the custom tray for accuracy and instructs laboratory technician to disinfect the tray. The MD/DMD reviews the recording of speech intelligibility.

Visit #2 FTF: 60 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD explains the preparation process to the patient. The MD/DMD evaluates swallowing function as these patients are at risk of choking depending upon swallowing ability. The MD/DMD places rest preps on the abutment teeth with a handpiece. The MD/DMD border molds the custom tray to capture the soft palate. It requires three moldings to capture the whole soft palate by the MD/DMD. The MD/DMD makes the final impression in the custom

border molded custom tray with polyvinylsiloxane. While the impression material is setting, the MD/DMD assesses the patient's airway to verify that impression material did not go down the throat, and the patient did not swallow or aspirate it. The MD/DMD captures the maxillomandibular relationship. This recording is needed to know how the dentition comes together. The MD/DMD reviews the final impression with laboratory technician and gives an order to box and pour the final impression. The MD/DMD evaluates the final impression under microscope and magnification to verify that there are no bubbles or voids.

NFTF between Visit 2 and 3: 45 minutes
The MD/DMD evaluates the master cast and model for accuracy. The MD/DMD surveys the master cast/model to determine the path of placement/removal for the prosthesis. Undercuts are identified for clasps and the guiding planes are evaluated for parallelism. The MD/DMD designs the framework on the master model/cast. The MD/DMD reviews the design with the laboratory technician. The MD/DMD draws the framework design on the master model/cast. The MD/DMD completes a work authorization for fabrication of the framework including metal selection. When the framework returns, the MD/DMD reviews it with the laboratory technician to examine the fit, the quality of metal finishing and the finish lines, and verification of seating of rest and engagement of undercut with clasp.

Visit #3 FTF: 60 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient. The MD/DMD tries in the framework. The MD/DMD performs a physiologic relief of the framework. The MD/DMD evaluates the occlusion for verification that the dentition is not hitting the framework and that the framework is completely seated. The MD/DMD performs the initial molding of the lift portion. A speech intelligibility test (patients have certain sentences to speak) is recorded by MD/DMD. The MD/DMD considers changes to the lift based on the results of the Speech Intelligibility Test. Additional palatal molding of the lift portion is accomplished by the MD/DMD. The Speech Intelligibility Test is done again with the patient. Swallowing function is also evaluated by the MD/DMD.

NFTF between Visit 3 and 4: 30 minutes
The MD/DMD reviews the altered cast with the laboratory technician with respect to boxing and pouring of the altered cast. The MD/DMD writes a work authorization for the laboratory technician to pour the altered cast which incorporates the lift. The MD/DMD inspects the boxing of the master cast/model with the altered cast. The MD/DMD evaluates the new master cast/model with the laboratory technician. The MD/DMD gives an order to do final waxing of the lift portion. The wax up is evaluated by the MD/DMD and the MD/DMD gives the order to flask and convert the lift portion into methyl methacrylate. The palatal lift prosthesis is evaluated with the laboratory technician. The prosthesis is evaluated for no porosity in the methyl methacrylate in the lift portion.

Visit #4 FTF: 60 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies are reviewed and verifies any changes with the patient. The MD/DMD tries in the prosthesis. The MD/DMD evaluates the prosthesis for support, stability and retention. The MD/DMD verifies complete seating of the prosthesis with the lift. The MD/DMD verifies that occlusion or bite to verify that the teeth are not hitting the framework. The MD/DMD evaluates the prosthesis for speech intelligibility first. The MD/DMD evaluates for swallowing function as well. The MD/DMD makes appropriate adjustments. Speech intelligibility is evaluated again. Additions/deletions/adjustments are made by the MD/DMD to improve the fit of the prosthesis. The MD/DMD instructs the dental assistant to polish the prosthesis. A final speech recording is conducted.

NFTF between Visit 4 and 5: 15 minutes
The MD/DMD reviews the effectiveness of the lift with the laboratory technician.
The MD/DMD calls the patient after the appointment to determine how the patient is doing with the prosthesis. The MD/DMD reviews with the speech and language pathologist the patient status with prosthesis and reviews the sounds which are acceptable and which sounds need improvement. The MD/DMD review recordings to determine if any adjustments/deletions/ additions to the prosthesis are needed at next visit.

Visit #5 FTF: 54 minutes
The MD/DMD reviews the dental assistant's assessment of medical history, medications, allergies and verifies any changes with the patient The MD/DMD discusses how the patient did with the prosthesis at home. Sore spots or pressure spots are adjusted by the MD/DMD. This is done three times with the patient. The MD/DMD verifies the speech intelligibility test.

Additions/deletions/adjustments are made to the prosthesis by the MD/DMD. The MD/DMD instructs the dental assistant to polish the prosthesis. The MD/DMD adjusts the prosthesis to improve speech intelligibility.

Description of Post-Service Work: The MD/DMD documents in the EMR. The MD/DMD calls the neurologist to inform the neurologist that the prosthesis has been delivered. The MD/DMD reviews the recordings of the speech intelligibility test with the speech and swallowing pathologist. The MD/DMD makes recommendations to the SLP about the need for reevaluation by MD/DMD and the patient's speech therapy plan of care is finalized. The MD/DMD calls the patient multiple times to see how the patient is doing with the prosthesis. The MD/DMD verifies appropriate storage of models and patient materials and documentation of dental materials used for the patient with the dental assistant.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
42120	090	11.56	**RUC Time**

CPT Descriptor Resection of palate or extensive resection of lesion

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31230	090	30.05	**RUC Time**

CPT Descriptor Maxillectomy; with orbital exenteration (en bloc)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
32669	090	22.94	**RUC Time**	2,975

CPT Descriptor 1 Thoracoscopy, surgical; with removal of a single lung segment (segmentectomy)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
22633	090	26.13	**RUC Time**	34,799

CPT Descriptor 2 Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar;

Other Reference CPT Code	Global	Work RVU	Time Source
69155	090	22.77	**RUC Time**

CPT Descriptor Radical excision external auditory canal lesion; with neck dissection

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 5 **% of respondents:** 13.5 **%**

Number of respondents who choose 2nd Key Reference Code: 4 **% of respondents:** 10.8 **%**

TIME ESTIMATES (Median)

	CPT Code: 21083	Top Key Reference CPT Code: 42120	2nd Key Reference CPT Code: **31230**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Same**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	80%	20%	0%

Mental Effort and Judgment	**Less**	**Same**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	80%	0%

Technical Skill/Physical Effort	**Less**	**Same**	**More**
Technical skill required	0%	100%	0%
Physical effort required	20%	80%	0%

Psychological Stress	**Less**	**Same**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	50%	50%	0%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	75%	0%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	100%	0%
Physical effort required	25%	75%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	75%	25%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.

- Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *42120 Resection of palate or extensive resection of lesion* valued at 11.56 RVUs with an intra time of 78 and a total time of 304. 5 respondents selected this as their primary KRS.

The second KRS selected was CPT *31230 Maxillectomy; with orbital exenteration (en bloc)* valued at 30.05 RVUs with an intra time of 219.38 and a total time of 682.38. 4 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **22.77 and a total time of 515 minutes** based on **our survey's median value and our survey respondents indicating an increase of 80 minutes (16% increase) for this code.**

We are requesting 39 minutes of pre time, 429 minutes of intra time (representing 5 face-to-face visits with the patient and 135 minutes of non-face-to-face lab time), and 47 minutes of post time in accordance with our survey median times, for a total of 515 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
35558	Bypass graft, with vein; femoral-femoral	090	22.55	70			175.5	25	525.5	0.0637
21188	Reconstruction midface, osteotomies (other than LeFort type) and bone grafts (includes obtaining autografts)	090	22.57	90			234	92	566	0.0556
35522	Bypass graft, with vein; axillary-brachial	090	22.57	65	10.0	28.0	175.5	30	492.5	0.0754

35013	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for ruptured aneurysm, axillary-brachial artery, by arm incision	090	22.65	90			129.68	30	429.68	0.103
62165	Neuroendoscopy, intracranial; with excision of pituitary tumor, transnasal or trans-sphenoidal approach	090	22.65	85			175.5	45	485.5	0.0748
27259	Open treatment of spontaneous hip dislocation (developmental, including congenital or pathological), replacement of femoral head in acetabulum (including tenotomy, etc); with femoral shaft shortening	090	22.68	90			204.75	30	531.75	0.0587
61557	Craniotomy for craniosynostosis; bifrontal bone flap	090	22.73	110			195	33	505	0.067
19361	Breast reconstruction; with latissimus dorsi flap	090	22.78	35	20.0	15.0	234	30	546	0.0563
58285	Vaginal hysterectomy, radical (Schauta type operation)	090	22.80	87.5			199.88	30	494.38	0.0695
44202	Laparoscopy, surgical; enterectomy, resection of small intestine, single resection and anastomosis	090	22.81	75			195	30	500	0.0671
53448	Removal and replacement of inflatable urethral/bladder neck sphincter including pump, reservoir, and cuff through an infected field at the same operative session including irrigation and debridement of infected tissue	090	22.85	60			165.75	30	559.75	0.0575
24150	Radical resection of tumor, shaft or distal humerus	090	22.87	40	12.0	20.0	175.5	30	497.5	0.0727
60522	Thymectomy, partial or total; sternal split or transthoracic approach, with radical mediastinal dissection (separate procedure)	090	22.89	60			204.75	30	527.75	0.0603
22558	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); lumbar	090	22.94	80			175.5	25	520.5	0.0536
22612	Arthrodesis, posterior or posterolateral technique, single interspace; lumbar (with lateral transverse technique, when performed)	090	22.94	60	20.0	15.0	146.25	30	478.25	0.0863
32669	Thoracoscopy, surgical; with removal of a single lung segment (segmentectomy)	090	22.94	40	15.0	20.0	146.25	30	498.25	0.082
24370	Revision of total elbow arthroplasty, including allograft when performed; humeral or ulnar component	090	22.96	40	12.0	20.0	170.63	20	465.63	0.0797
33243	Removal of single or dual chamber implantable defibrillator electrode(s); by thoracotomy	090	22.98	90			204.75	30	531.75	0.0601
44316	Continent ileostomy (Kock procedure) (separate procedure)	090	23.00	75			146.25	30	586.25	0.0581

35666	Bypass graft, with other than vein; femoral-anterior tibial, posterior tibial, or peroneal artery	090	23.07	90			146.25	30	486.25	0.0838
27138	Revision of total hip arthroplasty; femoral component only, with or without allograft	090	23.11	75			175.5	30	487.5	0.0728
37617	Ligation, major artery (eg, post-traumatic, rupture); abdomen	090	23.20	58			117	45	472	0.1014
50948	Laparoscopy, surgical; ureteroneocystostomy without cystoscopy and ureteral stent placement	090	23.22	60			234	30	500	0.0628

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21083

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 90
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 63 Percentage 70.00 %

Specialty Dentists Frequency 12 Percentage 13.33 %

Specialty Maxillofacial surgery Frequency 6 Percentage 6.66 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 30 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 22 Percentage 73.33 %

Specialty Dentists Frequency 4 Percentage 13.33 %

Specialty maxillofacial surgery Frequency 2 Percentage 6.66 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21083

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:21081 Tracking Number Original Specialty Recommended RVU: **29.11**
Presented Recommended RVU: **27.73**
Global Period: 090 Current Work RVU: **22.28** RUC Recommended RVU: **25.42**

CPT Descriptor: Impression and custom preparation; mandibular resection prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male is referred for custom preparation of a mandibular resection prosthesis, following resection of a mandibular squamous cell carcinoma.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review existing work profile from the head and neck surgeon to determine if mandibular continuity will be maintained and confirm that residual anatomy permits there to be either native or sufficient bone for support or placement of dental implants. Review the head and neck assessment of the blood supply of fibula to verify that it can be used for reconstruction. MD/DMD reviews imaging to assess bone quantity and quality to reviews types of implants placed and size of attachments. MD/DMD reviews information from the Speech Language Pathologist (SLP) to determine status of speech and swallowing (velopharyngeal complex) and tongue involvement (sensory and motor).

MD/DMD develops a preliminary prosthetic design.
The MD/DMD is on the Virtual Surgical Planning with the resection surgeon and the reconstructive surgeon. Based on the osteotomy cuts for the fibula determined by the resection surgeon, the MD/DMD decides on number, type, and size of implants. The occlusal scheme is evaluated and projection of implants is evaluated. MD/DMD discusses key anatomic landmarks with both resection surgeon and reconstructive surgeon. MD/DMD instructs engineer to make measurements from osteotomy site to implants and between implants. The MD/DMD makes preliminary prosthetic design on whether it is fixed/removable prosthesis. MD/DMD consults with resection and reconstructive surgeon on placement of screws for guide in relation to implant placement.

Description of Intra-Service Work:
Visit #1: 60 minutes Virtual Surgical Planning (VSP)
The MD/DMD reviews the results of the virtual surgical plan with the patient present. The MD/DMD reviews the preliminary prosthetic design on whether it is fixed/removable prosthesis. The MD/DMD shows them models of the different type of prosthesis and reviews the advantages/disadvantages of each. The MD/DMD reviews the maintenance of the prosthesis. The MD/DMD shows them the planned location of the implants and potential complications that could occur in surgery. All of the patient's and the patient's family questions are answered. The MD/DMD reviews the time frame of the fabrication process. The MD/DMD reviews the difference in chewing efficiency with the patient and the patient's family.

NFTF between Visit 1 and 2: 57 minutes
The MD/DMD discusses plan with the lab technician and makes his notes for the plan in the EMR. The MD/DMD instructs lab technician on type and size of implants to verify appropriate implant parts needed for laboratory side to

fabricate the prosthesis are ordered. They also coordinate regarding the implant components to order for the chairside procedure. The MD/DMD reviews the OR notes to verify which implants were used.

Visit #2 FTF: 60 Final Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD does physical assessment of tongue and floor of mouth movement and sensory involvement. The MD/DMD discusses the fabrication process with the patient. The MD/DMD shows them an example of a resection prosthesis and answers all of the patient's questions. Imaging of implants is reviewed with patient and family. The MD/DMD discusses with patient realistic expectations about diet and foods that they can expect to eat. The MD/DMD discusses fork and knife eating, bolus (food) size when eating, and need for additional gravies, sauces if the patient is xerostomic with radiation therapy. The MD/DMD places pickup impression posts on implants. The MD/DMD orders the dental assistant to make radiograph to verify that implants are completely seated. The implants are joined together for stability with GC resin. The MD/DMD directs dental assistant to mix the impression material and a final impression is made with a polyvinylsiloxane impression material. The MD/DMD removes the impression and places the temporary abutments back onto the implants.

NFTF between Visit 2 and 3: 53 minutes
The MD/DMD views the final impression under magnification. The DMD/MD inspects the 3D printed maxillary model. The MD/DMD screws in the laboratory analogues. The MD/DMD directs the lab technician to pour the final impression in dental stone. The MD/DMD inspects the master model/cast. The MD/DMD gives order for lab technician to fabricate the GC resin framework which serves as a verification jig to verify that the model/cast is accurate so the prosthesis will be passive.

Visit #3 FTF: 60 minutes GC resin framework
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs a clinical examination of oral cavity to evaluate tongue function, healing, and to verify no recurrence of tumor. The MD/DMD removes the temporary abutments and places the GC resin framework and places one screw into the implant. Radiographs are made to verify that the other implants are seated. The screw is moved to another implant and radiographs are made to verify that the framework is passive. After it is verified radiographically that it is passive, the MD/DMD removes the framework and places the abutment screws back onto the implants. The MD/DMD directs the dental assistant to disinfect the GC resin framework/jig and take it to the laboratory.

NFTF between Visit 3 and 4: 45 minutes
The MD/DMD discusses the passivity of the GC resin framework/jig with lab technician and directs the lab technician to make a fixed retained record base with an occlusal rim. The MD/DMD will inspect it at various steps to verify that the record base is passive and does not have any movement in it. This is critical for a passive prosthesis. The MD/DMD checks every step of the process. After it is completed, the MD/DMD gives lab technician approval to disinfect it so it will be ready for patient's visit.

Visit #4 FTF: 60 minutes Jaw Relationship Record
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs a clinical examination of oral cavity to evaluate tongue function, healing, and to verify no recurrence of tumor. The MD/DMD removes the temporary abutments and places the record base and adjusts the occlusal rim to be at the proper vertical dimension of occlusion. This takes three tries to get it at the proper vertical dimension of occlusion and parallel to the maxillary occlusal plane. After it is at the proper vertical dimension of occlusion, centric relation or the bite is captured. The MD/DMD removes the fixed record base and places the healing abutments back onto the fixtures. The MD/DMD discusses tooth mold and shade with patient. The MD/DMD reviews pictures and discusses realistic expectations. The MD/DMD gives dental assistant an order to disinfect prosthesis and take it to laboratory.

NFTF between Visit 4 and 5: 30 minutes
The MD/DMD gives order to lab technician to mount the models. The MD/DMD evaluates the models and gives order to lab technician to set up teeth according to occlusal scheme MD/DMD deems most appropriate. The MD/DMD evaluate mockup (wax up) and recommends changes. After MD/DMD approves mockup, MD/DMD directs lab technician to disinfect prosthesis.

Visit #5 FTF: 60 minutes Esthetic tryin

MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs a clinical examination of oral cavity to evaluate tongue function, healing, and to verify no recurrence of tumor. The MD/DMD removes the temporary abutments and places the mockup on the implants. The vertical dimension of occlusion, phonetics, and centric relation (bite) are verified. This procedure requires the MD/DMD to make certain adjustments. The MD/DMD evaluates speech and swallowing functions with the mockup in place. The MD/DMD reviews pictures taken by dental assistant of mockup in mouth and discusses realistic expectations with the patient. The MD/DMD removes mockup and places the healing abutments back onto the implants. The MD/DMD gives dental assistant an order to disinfect prosthesis and take it to laboratory.

NFTF between Visit 5 and 6: 20 minutes
The MD/DMD reviews the mockup (wax up)with the lab technician and gives the order to complete. The MD/DMD does review final waxing and festooning and the virtual plan of the resection prosthesis. After completion, the MD/DMD evaluates completed prosthesis and gives approval for the lab technician to disinfect the prosthesis.

Visit #6 FTF: 45 minutes Delivery
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs a clinical examination of oral cavity to evaluate tongue function, healing, and to verify no recurrence of tumor. The MD/DMD removes the temporary abutments and places the definitive prosthesis on the implants. The vertical dimension of occlusion, phonetics, and centric relation (bite) are verified. This procedure requires the MD/DMD to adjust occlusion if there is an interference. The MD/DMD verifies that there is adequate space underneath the prosthesis for oral hygiene. The MD/DMD evaluate speech and swallowing function. After MD/DMD decides that prosthesis is acceptable, the MD/DMD torques the implant to appropriate newtons depending upon implant type. The MD/DMD with assistance from the DA, fills the access hold with Teflon tape and restorative material. The MD/DMD directs DA to make final photographs. The MD/DMD reviews initial patient expectation and directs DA to review home care instructions.

NFTF between Visit 6 and 7: 10 minutes
MD/DMD verifies appropriate storage of patient materials with lab technician and documentation of implant size and shape used for patient. The MD/DMD reviews the virtual plan to determine its accuracy in the final surgical plan and reviews with lab technician.

Visit #7 FTF: 30 minutes Adjustment
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs a clinical examination of the oral cavity to evaluate tongue function, healing, and to verify no recurrence of tumor. The MD/DMD discusses with patient their concerns concerning prosthesis. MD/DMD discusses speaking, swallowing, and eating functions with the patient. MD/DMD evaluates oral hygiene to verify that the patient is keeping the prosthesis clean. The MD/DMD reviews occlusion in centric relation, protrusive and lateral movements.

Description of Post-Service Work: The MD/DMD calls the head and neck surgeon and SLP that the prosthesis has been delivered. The MD/DMD discusses the recordings of the speech intelligibility test with the SLP. The MD/DMD makes recommendations to the SLP about the need for reevaluation by MD/DMD and the patient's speech therapy plan of care is finalized. The MD/DMD calls the patient multiple times to see how the patient is doing with the prosthesis. The MD/DMD verifies appropriate storage of models and patient materials with the dental assistant and documentation of dental materials used for patient.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	13%	25%	50%	13%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	50%	38%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	12%	25%	63%
Physical effort required	12%	50%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	75%	25%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	100%	0%
Physical effort required	0%	80%	20%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	40%	60%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *21047 Excision of benign tumor or cyst of mandible; requiring extra-oral osteotomy and partial mandibulectomy (eg, locally aggressive or destructive lesion[s])* valued at 19.57 RVUs with an intra time of 234 and a total time of 559. 8 respondents selected this as their primary KRS.

The second KRS selected was CPT *38724 Cervical lymphadenectomy (modified radical neck dissection)* valued at 23.35 RVUs with an intra time of 175.50 and a total time of 507.5. 5 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **29.39 and a total time of 677 minutes** based on **a crosswalk to code 41135 Glossectomy; partial, with unilateral radical neck dissection and our survey respondents indicating an increase of 184 minutes (27% increase) for this code.**

We are requesting 42 minutes of pre time, 590 minutes of intra time (representing 7 face-to-face visits with the patient and 215 minutes of non-face-to-face lab time), and 45 minutes of post time in accordance with our survey median times, for a total of 677 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT

						Time				
44206	Laparoscopy, surgical; colectomy, partial, with end colostomy and closure of distal segment (Hartmann type procedure)	090	29.05	70			175.5	35	642.5	0.0773
44141	Colectomy, partial; with skin level cecostomy or colostomy	090	29.16	45	20.0	15.0	156	45	668	0.0803
44144	Colectomy, partial; with resection, with colostomy or ileostomy and creation of mucofistula	090	29.16	45	20.0	15.0	160.88	45	672.88	0.0779
37619	Ligation of inferior vena cava	090	29.25	40	3.0	15.0	146.25	60	679.25	0.0535
44210	Laparoscopy, surgical; colectomy, total, abdominal, without proctectomy, with ileostomy or ileoproctostomy	090	29.34	75			234	35	624	0.071
41135	Glossectomy; partial, with unilateral radical neck dissection	090	29.39	60	15.0	20.0	204.75	30	690.75	0.0656

58210	Radical abdominal hysterectomy, with bilateral total pelvic lymphadenectomy and para-aortic lymph node sampling (biopsy), with or without removal of tube(s), with or without removal of ovary(s)	090	30.14	75			234	45	621	0.0745

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21081

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 1,014
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 679 Percentage 66.96 %

Specialty Dentists Frequency 183 Percentage 18.04 %

Specialty Maxillofacial surgery Frequency 132 Percentage 13.01 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 338
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 226 Percentage 66.86 %

Specialty Dentists Frequency 61 Percentage 18.04 %

Specialty maxillofacial surgery Frequency 44 Percentage 13.01 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21081

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:21080 Tracking Number Original Specialty Recommended RVU: **29.79**

CPT Descriptor: Impression and custom preparation; definitive obturator prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male is referred for custom preparation of fabrication of a definitive obturator, following resection of a benign maxillary tumor.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews imaging to assess bone quantity and quality to assess types of implants to be placed and the size of any attachments. MD/DMD reviews Speech Language Pathologist's assessment to determine speech and swallowing function. MD/DMD connects with head and neck surgeon, radiation oncologist, and oncologist about status of disease process. Reviews imaging from the head and neck surgeon or nurse practitioner. MD/DMD reviews radiation oncologist's summary report to determine sites that received greater than 60 Gy. The MD/DMD reviews the OR report to identify key anatomical landmarks that were removed that affect the prosthetic design. MD/DMD develops a preliminary prosthetic design.

Description of Intra-Service Work: Visit #1 FTF: 60 minutes Preliminary Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue and soft palate function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. MD/DMD lifts soft palate with instrument to determine if patient has a gag response. The MD/DMD evaluates oral function of tongue with respect to motor and sensory involvement. The MD/DMD discusses the fabrication process with the patient. The MD/DMD shows an example of the definitive obturator and answers all the patient's questions. Imaging of implants is reviewed with patient and family. The MD/DMD discusses with patient and family realistic expectations about diet and foods that patient can expect to eat. The MD/DMD discusses fork and knife eating, bolus (food) size when eating, and need of additional gravies, sauces if the patient is xerostomic with radiation therapy. The MD/DMD places impression posts on locator abutments and a preliminary impression is made of the maxillary arch by the MD/DMD.

NFTF between Visit 1 and 2: 45 minutes
The MD/DMD puts on the laboratory analogues for the implants impression posts and the MD/DMD gives an order for the laboratory technician to pour the preliminary impression. The MD/DMD evaluates the preliminary model for accuracy with the laboratory technician and gives the order for custom tray fabrication. The MD/DMD evaluates the implant type and size in EMR. The MD/DMD confirms with lab technician that appropriate documentation and regulatory material for implant documentation in EMR has been completed. The MD/DMD evaluates the custom tray with laboratory technician. The MD/DMD gives order to laboratory technician to disinfect the custom tray.

Visit #2 FTF: 60 minutes Final Impression
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue and soft palate function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD evaluates oral function of tongue with respect to motor and sensory involvement. The MD/DMD discusses the fabrication process with the patient. The MD/DMD places the custom tray in the patient's mouth and evaluates for accuracy and borders. The defect area is custom border molded by the MD/DMD. The custom border molding is done several times by the MD/DMD since the defect is so large and there is only so much impression compound that can be added at one time. All of the custom border molding is done by the MD/DMD. The MD/DMD evaluates the border molding for accurate lateral wall extension vertically for retention and stability, vertical extension posteriorly and medical portion of defect to minimize leakage, engagement of the lateral third of the orbital floor for support, posterior support of soft palate to prevent leakage, and capture of the imprint of the medial wall of the ramus. The MD/DMD evaluates the patient in protrusive movement to verify that the movement of the coronoid process of the mandible is captured. After the MD/DMD verifies accurate capture of the defect, the MD/DMD places a tissue (korrectal) wax which adapts to the patient's soft tissues to capture the defect. This is done multiple times due to size of defect. Then, the MD/DMD places impression posts on locator abutments and a final impression is made of the maxillary arch of the alveolar arch with the implants. Tissue wax is used to capture the defect and polyvinylsiloxane is used to capture the alveolar arch/implant portion. The MD/DMD verifies airway is clear and the sinus cavity is clear. The MD/DMD reviews the final impression with the dental assistant and gives order to disinfect final impression and to take it to the laboratory.

NFTF between Visit 2 and 3: 48 minutes

The MD/DMD evaluates the final impression under magnification. The MD/DMD places the laboratory analogues into the implants. The MD/DMD gives the order to lab technician to box and pour the final impression. The MD/DMD evaluates master cast/model with laboratory technician and gives order to duplicate master cast/model and to do wax up for the heat processed record base. After evaluating the wax record base, the MD/DMD gives order to convert the wax pattern into a heat cured methyl methacrylate. The MD/DMD evaluates the heat processed record base on the duplicated master cast/model and evaluates engagement of the implants and a passive fit. The MD/DMD evaluates the passivity of the heat processed record base, since this is the foundation for the definitive prosthesis. The MD/DMD verifies the heat processed record base is passive. The MD/DMD gives order to laboratory technician to disinfect heat processed record base.

Visit #3 FTF: 60 minutes Heat Processed Record base Tryin
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue and soft palate function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD evaluates oral function of tongue with respect to motor and sensory involvement. Trismus is evaluated and the MD/DMD makes assessment if border molding superiorly can be obtained and how much engagement can be achieved. The MD/DMD massages the scar band for release to allow the patient to open more. The MD/DMD cleans the defect. The MD/DMD seats the record base in the patient's mouth. The record base is inspected for a passive fit to the implants and the record base has adequate support, stability, and retention. During processing, the undercut areas of the record base can be filled with methyl methacrylate which interferes with seating of the prosthesis. This has to be adjusted to seat the record base. The MD/DMD verifies that all implants are engaged. The housing in the record base is removed and added individually to verify complete seating of the record base. After the MD/DMD approves the record base for adequate fit, the MD/DMD has the patient go through speaking and swallowing functions. The MD/DMD has the patient eat yogurt. After the patient eats yogurt, the MD/DMD removes the prosthesis to determine if any yogurt is on the record base. Typically, there is yogurt on the record base and the MD/DMD adds additional impression material or tissue conditioning material to the record base to capture the deficiency. The MD/DMD evaluates the patient's speaking and swallowing function. The patient drinks water and yogurt to determine if there is a leak. The nasal cavity is inspected through the alas of the nose and through the sinus cavity to verify that there is not any yogurt in the cavities. The MD/DMD has the patient perform the speech intelligibility test for speaking and MD/DMD records it. The MD/DMD makes the patient perform protrusive, lateral movements to verify that the coronoid process of the mandible does not unseat the prosthesis and that the record base has support, stability, and retention. After testing, the MD/DMD discusses realistic expectations with the patient on speaking and swallowing function.

NFTF between Visit 3 and 4: 60 minutes

The MD/DMD evaluates the heat processed record base with the laboratory technician. If there are additions, the MD/DMD instructs the lab tech how to convert the addition into methyl methacrylate. The MD/DMD shows the lab tech the area that caused the interference and what to do when the obturator is converted with teeth into methyl methacrylate. The MD/DMD calls the SLP and discusses if an appointment with the SLP is necessary for the patient to be scoped. The MD/DMD reviews the patient's speech recordings with the SLP and swallowing function. The MD/DMD discusses if trismus is causing the patient not to have complete engagement of the defect portion. The MD/DMD gives order for the laboratory technician to make any changes to the record base as dictated by the prior patient visit. The MD/DMD gives order to laboratory technician to place an occlusal rim on record base and to disinfect the prosthesis for the next patient's visit.

Visit #4 FTF: 60 minutes Jaw Relationship Record
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue and soft palate function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD evaluate motor and sensory innervation of the tongue and measures mouth opening. The MD/DMD cleans the defect. The MD/DMD verifies that there is not a recurrence of the tumor. The obturator is placed and the occlusal rim is evaluated by MD/DMD to evaluate parallelism to the interpupillary line and the ala-tragus line. Additions/subtractions are made to occlusal rim by MD/DMD to obtain parallelism to the interpupillary line and ala-tragus line. The MD/DMD evaluates the occlusal plane, vertical dimension of occlusion, phonetics, and centric relation (bite). After adjustments, the MD/DMD captures centric relation or the bite with vanilla recording medium. The MD/DMD discusses tooth selection/mold selection with the patient and a decision is made. The MD/DMD reviews pictures of the patient when she had teeth and the shape and color of the teeth. Education is given on realistic expectations of tooth color and resulting appearance. Education is also given on realistic expectation of eating.

NFTF between Visit 4 and 5: 30 minutes
The MD/DMD gives order to lab technician to mount and set the teeth with the appropriate occlusal scheme. The MD/DMD reviews the mounting and selection of teeth and occlusal scheme. The MD/DMD evaluates the mounting, occlusal scheme. The MD/DMD evaluates mounting on articulator in lateral movements, and protrusive movements. The MD/DMD gives final approval for the lab technician to disinfect the prosthesis.

Visit #5 FTF: 60 minutes Esthetic Tryin
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue and soft palate function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. Oral tongue function is assessed and trismus as well. MD/DMD massages the scar band with coconut oil. The MD/DMD cleans the defect. The MD/DMD verifies that there is not a recurrence of the tumor. The obturator prosthesis is placed and MD/DMD evaluates support, stability, and retention. The MD/DMD directs the patient in speech intelligibility test. The MD/DMD evaluates the bite and occlusal scheme. The MD/DMD shows it to patient and informs them that this is the final time any changes can be made to tryin. After this visit, the prosthesis will be in hard material and the teeth color and mold cannot be changed. The MD/DMD verifies dental assistant has had patient signed acceptance form. The MD/DMD directs dental assistant to disinfect prosthesis and takes it to the laboratory.

NFTF between Visit 5 and 6: 15 minutes
The MD/DMD gives order for lab technician to proceed with taking the obturator prosthesis to completion (i.e. flask, boil out, break out, laboratory remount, and finish obturator prosthesis). After completion, the MD/DMD evaluates it and gives order for lab technician to disinfect the prosthesis.
Visit #6 FTF: 45 minutes Delivery
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. MD/DMD performs clinical examination of oral cavity to evaluate tongue and soft palate function. MD/DMD does physical assessment of velopharyngeal complex to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD evaluates tongue function and trismus. The MD/DMD cleans the defect. The MD/DMD verifies that there is not a recurrence of the tumor. The MD/DMD places the obturator and evaluates it for support, stability, and retention. The MD/DMD places pressure indicating paste to identify any pressure points and MD/DMD adjusts those areas. This is done three times. The MD/DMD evaluates the occlusion and phonetics. The MD/DMD directs the patient in speech intelligibility test and yogurt test/water test. The MD/DMD verifies if there is no leakage through the nose. The MD/DMD has the patient eat and drink with the obturator. IF there is a deficient, additional material is added in the defect portion. If

there is a pressure point, the MD/DMD adjusts the site. MD/DMD evaluates opening, closing, protrusive, and lateral movements to determine if the coronoid process of mandible is unseating the prosthesis. If it is, the MD/DMD adjusts the interference so the patient can open and close without pain. The MD/DMD gives order for dental assistant to polish the prosthesis. The MD/DMD reviews preliminary patient education. The MD/DMD verifies patient can insert and remove prosthesis. The MD/DMD answers all the patient's questions.

NFTF between Visit 6 and 7: 10 minutes
The MD/DMD discusses prosthesis with the lab technician informing him of patient's issues (i.e. fit of prosthesis for support, stability, and retention). The MD/DMD reviews the parts that the laboratory technician did well in the converting the prosthesis into methyl methacrylate and the parts that need improvement. Block out of prosthesis during the flasking and boil out processed is discussed, since this is very difficult to achieve so that the prosthesis will seat without adjustment.

Visit #7 FTF: 31 minutes Adjustment
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, allergies. The MD/DMD cleans the defect. The MD/DMD verifies that there is not a recurrence of the tumor. The MD/DMD discusses with patient their assessment of the obturator prosthesis. The MD/DMD places pressure indicating paste to identify the sore spots and MD/DMD adjusts the sore spots and reevaluates speech and swallowing function. If there is leakage, the MD/DMD directs the patient in the yogurt test. The MD/DMD adds tissue conditioning material to the deficit site. After the MD/DMD makes all the adjustments, the MD/DMD gives order for dental assistant to polish the prosthesis.

Description of Post-Service Work: The MD/DMD calls the head and neck surgeon and SLP that the prosthesis has been delivered. The MD/DMD reviews with the SLP the recordings of the speech intelligibility test, without obturator and with obturator. The MD/DMD makes recommendations to the SLP about the need for reevaluation by MD/DMD and the patient's speech therapy plan of care is finalized. The MD/DMD calls the patient multiple times to see how the patient is doing with the prosthesis. The MD/DMD verifies appropriate storage of models and patient materials with the dental assistant. The MD/DMD verifies appropriate documentation of dental materials used for patient.

SURVEY DATA

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31225	090	26.03	**RUC Time**

CPT Descriptor Maxillectomy; without orbital exenteration

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
69554	090	35.07	**RUC Time**

CPT Descriptor Excision aural glomus tumor; extended (extratemporal)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
34705	090	28.84	**RUC Time**	9,166

CPT Descriptor 1 Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
22633	090	26.13	**RUC Time**	34,799

CPT Descriptor 2 Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar;

Other Reference CPT Code	Global	Work RVU	Time Source
31230	090	30.05	**RUC Time**

CPT Descriptor Maxillectomy; with orbital exenteration (en bloc)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 12 **% of respondents:** 31.5 **%**

Number of respondents who choose 2nd Key Reference Code: 6 **% of respondents:** 15.7 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	42%	50%	8%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	58%	36%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	50%	50%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	8%	67%	25%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	33%	17%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	17%	67%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	67%	33%
Physical effort required	0%	67%	33%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	67%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial

surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *31225 Maxillectomy; without orbital exenteration* valued at 26.03 RVUs with an intra time of 175.5 and a total time of 603.5. 12 respondents selected this as their primary KRS.

The second KRS selected was CPT *69554 Excision aural glomus tumor; extended (extratemporal)* valued at 35.07 RVUs with an intra time of 468 and a total time of 1012. 6 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **29.39 and a total time of 672 minutes** based on **a crosswalk to code 41135 Glossectomy; partial, with unilateral radical neck dissection and our survey respondents indicating an increase of 148 minutes (22% increase) for this code.**

We are requesting 45 minutes of pre time, 584 minutes of intra time (representing 7 face-to-face visits with the patient and 208 minutes of non-face-to-face lab time), and 43 minutes of post time in accordance with our survey median times, for a total of 672 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
44206	Laparoscopy, surgical; colectomy, partial, with end colostomy and closure of distal segment (Hartmann type procedure)	090	29.05	70			175.5	35	642.5	0.0773

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21080

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 1,569
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 1,240 Percentage 79.03 %

Specialty Maxillofacial surgery Frequency 204 Percentage 13.00 %

Specialty Dentists Frequency 188 Percentage 11.98 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 523
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 382 Percentage 73.04 %

Specialty Maxillofacial surgery Frequency 68 Percentage 13.00 %

Specialty Dentists Frequency 63 Percentage 12.04 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

CPT Descriptor: Impression and custom preparation; interim obturator prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male is referred for custom preparation of an interim obturator, following resection of a benign maxillary tumor.

Percentage of Survey Respondents who found Vignette to be Typical: 78%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The MD/DMD prints a3D preoperative model and surveys the model for path of placement and removal and location of undercuts for clasps. The MD/DMD reviews the OR report to verify that no additional teeth were removed and to review which key anatomical structs used for support, stability, and retention of the obturator were removed in surgery. The MD/DMD discusses the prosthetic plan for the interim obturator with the laboratory technician. The MD/DMD develops the preliminary prosthetic plan. The MD/DMD reviews with the speech and swallowing pathologist on the patient's speaking and swallowing function. The MD/DMD calls the head and neck surgeon about the need for radiation and chemotherapy.

Description of Intra-Service Work: Visit #1 FTF: 60 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD performs clinical examination of oral cavity to evaluate the defect. The MD/DMD evaluates tongue, palatal movement, and velopharyngeal complex movement. The MD/DMD evaluate motor and sensory tongue function. The MD/DMD discusses with patient the patient's perception of speaking and swallowing function. The MD/DMD discusses diet and which foods are difficult for the patient to eat. The MD/DMD evaluates the defect for cleanliness and discusses with patient the need for hygiene of the defect. The MD/DMD makes an impression of the maxillary arch and captures the relationship of the maxilla and mandible. The immediate surgical obturator is scanned to serve as a guide for the interim obturator. Shade and mold position are verified. The MD/DMD discusses the surgical obturator and what the patient would like to see change.

NFTF between Visit 1 and 2: 45 minutes
The MD/DMD compares the post-surgical model with the presurgical model. The MD/DMD evaluates the mounting The MD/DMD designs the prosthetic design for the interim obturator. The MD/DMD reviews the prosthetic design with the laboratory technician. The MD/DMD reviews the wax up and gives the order to the lab technician to convert into a heat cured methyl methacrylate material. The MD/DMD reviews the laboratory remount for occlusion. The MD/DMD evaluates the completed prosthesis and gives order for disinfection for delivery of the prosthesis.

Visit #2 FTF: 60 minutes
MD/DMD verifies the accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD performs clinical examination of oral cavity to evaluate the defect. The MD/DMD evaluates tongue, palatal movement, and

velopharyngeal complex movement. The MD/DMD evaluates the defect for cleanliness and discusses with patient the hygiene of defect. The MD/DMD cleans the defect. The MD/DMD delivers the interim obturator and evaluates the interim obturator for stability and support. The MD/DMD evaluates the occlusion. The obturator is evaluated by MD/DMD for retention, stability, and support. A reline of the obturator with tissue conditioning material is accomplished by the MD/DMD. Airway assessment with the reline material in the oral cavity is assessed by the MD/DMD to verify that no reline material went down the patient's throat. The MD/DMD evaluates the obturator for accurate lateral wall extension vertically for retention and stability, vertical extension posteriorly and medical portion of defect to minimize leakage, engagement of the lateral third of the orbital floor for support, posterior support of soft palate to prevent leakage, and capture of the imprint of the medial wall of the ramus. The MD/DMD evaluates the patient in protrusive movement to verify that the movement of the coronoid process of the mandible is not impinging the obturator causing it to unseat. Appropriate obturation of the defect with respect to speaking and swallowing is accomplished by the MD/DMD. The reline with the tissue conditioning materials is three times.

NFTF between Visit 2 and 3: 20 minutes
The MD/DMD calls the patient multiple times to verify that the patient is not having an issue with speaking and swallowing. The MD/DMD reviews with head and neck surgeon and speech and swallowing pathologist concerning the patient's speaking and swallowing status. The MD/DMD calls the radiation oncologist and oncologist concerning the patient's speaking and swallowing status. The MD/DMD reviews with the nutritionist the patient's swallowing status to verify that the patient does not need additional supplementation to diet (i.e. liquid protein shakes).

Visit #3 FTF: 50 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD performs clinical examination of the oral cavity to evaluate the defect. The MD/DMD evaluates tongue, palatal and velopharyngeal movement. The MD/DMD evaluates the defect for cleanliness and discusses with patient hygiene of defect. The MD/DMD cleans the defect. The MD/DMD does examination to verify no tumor recurrence. The MD/DMD discusses with patient the effectiveness of the obturator with respect to speech and swallowing. The MD/DMD gives an order for the dental assistant to remove the soft tissue lining. The MD/DMD performs the reline of the defect with soft tissue conditioning materials. The MD/DMD evaluates the obturator for accurate lateral wall extension vertically for retention and stability, vertical extension posteriorly and medical portion of defect to minimize leakage, engagement of the lateral third of the orbital floor for support, posterior support of soft palate to prevent leakage, and capture of the imprint of the medial wall of the ramus. The MD/DMD evaluates the patient in protrusive movement to verify that the movement of the coronoid process of the mandible is not impinging the obturator causing it to unseat. The MD/DMD evaluates speech and swallowing function. The MD/DMD performs the three relines. After each reline, the MD/DMD evaluates speech and swallowing function. The MD/DMD reviews with patient the effect of radiation therapy concerning xerostomia and its effect on swallowing.

NFTF between Visit 3 and 4: 15 minutes
The MD/DMD calls the patient multiple times to verify that the patient is not having an issue with speaking and swallowing. The MD/DMD reviews with head and neck surgeon, radiation oncologist, and speech and swallowing pathologist concerning the patient's speaking and swallowing status.

Visit #4 FTF: 60 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD performs clinical examination of oral cavity to evaluate the defect. The MD/DMD evaluates tongue, palatal and velopharyngeal movement. The MD/DMD evaluates the defect for cleanliness and discusses with patient hygiene of defect. The MD/DMD cleans the defect. The MD/DMD verifies no recurrence of tumor. The MD/DMD discusses with patient the effectiveness of the obturator with respect to speech and swallowing. The MD/DMD gives an order for the dental assistant to remove the soft tissue lining. The MD/DMD performs the reline of the defect with soft tissue conditioning materials. The MD/DMD evaluates the obturator for accurate lateral wall extension vertically for retention and stability, vertical extension posteriorly and medical portion of defect to minimize leakage, engagement of the lateral third of the orbital floor for support, posterior support of soft palate to prevent leakage, and capture of the imprint of the medial wall of the ramus. The MD/DMD evaluates the patient in protrusive movement to verify that the movement of the coronoid process of the mandible is not impinging the obturator causing it to unseat. The MD/DMD evaluates speech and swallowing function. The MD/DMD performs three relines. After each reline, the MD/DMD evaluates speech and swallowing function. The MD/DMD reviews with patient the effect of radiation therapy concerning xerostomia and its effect on swallowing.

NFTF between Visit 4 and 5: 10 minutes
The MD/DMD calls the patient multiple times to verify that the patient is not having an issue with speaking and swallowing with the obturator. The MD/DMD reviews with the head and neck surgeon, radiation oncologist, oncologist and speech and swallowing pathologist concerning the patient's speaking and swallowing status.

Visit #5 FTF: 60 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD performs clinical examination of oral cavity to evaluate the defect. The MD/DMD evaluates tongue, palatal and velopharyngeal movement. The MD/DMD evaluates the defect for cleanliness and discusses with patient hygiene of defect. The MD/DMD cleans the defect. The MD/DMD verifies no recurrence of tumor. The MD/DMD discusses with patient the effectiveness of the obturator with respect to speech and swallowing. The MD/DMD gives an order for the dental assistant to remove the soft tissue lining. The MD/DMD performs the reline of the defect with soft tissue conditioning materials. The MD/DMD evaluates the obturator for accurate lateral wall extension vertically for retention and stability, vertical extension posteriorly and medical portion of defect to minimize leakage, engagement of the lateral third of the orbital floor for support, posterior support of soft palate to prevent leakage, and capture of the imprint of the medial wall of the ramus. The MD/DMD evaluates the patient in protrusive movement to verify that the movement of the coronoid process of the mandible is not impinging the obturator causing it to unseat. The MD/DMD evaluates speech and swallowing function. The MD/DMD performs three relines. After each reline, the MD/DMD evaluates speech and swallowing function.

NFTF between Visit 5 and 6: 10 minutes
The MD/DMD calls the patient multiple times to verify that the patient is not having an issue with speaking and swallowing.

Visit #6: 55 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD performs clinical examination of oral cavity to evaluate the defect. The MD/DMD evaluates tongue, palatal and velopharyngeal movement. The MD/DMD evaluates the defect for cleanliness and discusses with patient hygiene of defect. The MD/DMD cleans the defect. The MD/DMD verifies no recurrence of tumor. The MD/DMD discusses with patient the effectiveness of the obturator with respect to speech and swallowing. The MD/DMD gives an order for the dental assistant to remove the soft tissue lining. The MD/DMD performs the reline of the defect with soft tissue conditioning materials. The MD/DMD evaluates the obturator for accurate lateral wall extension vertically for retention and stability, vertical extension posteriorly and medical portion of defect to minimize leakage, engagement of the lateral third of the orbital floor for support, posterior support of soft palate to prevent leakage, and capture of the imprint of the medial wall of the ramus. The MD/DMD evaluates the patient in protrusive movement to verify that the movement of the coronoid process of the mandible is not impinging the obturator causing it to unseat. The MD/DMD evaluates speech and swallowing function. The MD/DMD performs two relines. After each reline, the MD/DMD evaluates speech and swallowing function The MD/DMD reviews with patient the effect of radiation therapy concerning xerostomia and its effect on swallowing.

Description of Post-Service Work: The MD/DMD documents in the EMR. The MD/DMD calls the patient multiple times to verify that the patient is not having an issue with speaking and swallowing. The MD/DMD reviews with head and neck surgeon, radiation oncologist, oncologist and speech and swallowing pathologist concerning the patient's speaking and swallowing status. The MD/DMD calls the nutritionist to inform them of patient's speaking and swallowing ability. The MD/DMD verifies appropriate storage of models and patient materials with the dental assistant. The MD/DMD consults with dental assistant to verify that appropriate documentation in EMR with respect to dental materials that were used for patient care. The MD/DMD compares the surgical obturator design with the interim obturator design for effectiveness with respect to stability, support, and retention.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31225	090	26.03	**RUC Time**

CPT Descriptor Maxillectomy; without orbital exenteration

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
69155	090	22.77	**RUC Time**

CPT Descriptor Radical excision external auditory canal lesion; with neck dissection

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
22630	090	21.54	**RUC Time**	3,789

CPT Descriptor 1 Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace, lumbar;

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
32669	090	22.94	**RUC Time**	2,975

CPT Descriptor 2 Thoracoscopy, surgical; with removal of a single lung segment (segmentectomy)

Other Reference CPT Code	Global	Work RVU	Time Source
21558	090	21.04	**RUC Time**

CPT Descriptor Radical resection of tumor (eg, sarcoma), soft tissue of neck or anterior thorax; 5 cm or greater

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 13 **% of respondents:** 35.1 **%**

Number of respondents who choose 2nd Key Reference Code: 5 **% of respondents:** 13.5 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	15%	31%	8%	46%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	54%	31%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	8%	46%	46%
Physical effort required	15%	46%	38%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	23%	46%	31%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	0%	40%	40%	20%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	100%	0%
Physical effort required	0%	80%	20%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	40%	60%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.

- Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *31225 Maxillectomy; without orbital exenteration* valued at 26.03 RVUs with an intra time of 175.5 and a total time of 603.5. 13 respondents selected this as their primary KRS.

The second KRS selected was CPT *69155 Radical excision external auditory canal lesion; with neck dissection* valued at 22.77 RVUs with an intra time of 277.88 and a total time of 737.88. 5 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending **maintenance of the existing** work RVU of **21.75 and a total time of 515 minutes despite our survey respondents indicating an increase of 29 minutes (6% increase) for this code.**

We are requesting 40 minutes of pre time, 445 minutes of intra time (representing 6 face-to-face visits with the patient and 100 minutes of non-face-to-face lab time), and 30 minutes of post time in accordance with our survey median times, for a total of 515 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
44605	Suture of large intestine (colorrhaphy) for perforated ulcer, diverticulum, wound, injury or rupture (single or multiple perforations); with colostomy	090	21.53	60			121.88	30	558.88	0.0582
61619	Secondary repair of dura for cerebrospinal fluid leak, anterior, middle or posterior cranial fossa following surgery of the skull base; by local or regionalized vascularized pedicle flap or myocutaneous flap (including galea, temporalis, frontalis or	090	21.55	121.3			173.84	47	583.14	0.0548

	occipitalis muscle)									
44130	Enteroenterostomy, anastomosis of intestine, with or without cutaneous enterostomy (separate procedure)	090	21.56	30	15.0	15.0	127.73	30	512.73	0.0694
43334	Repair, paraesophageal hiatal hernia (including fundoplication), via thoracotomy, except neonatal; without implantation of mesh or other prosthesis	090	21.57	40	20.0	20.0	175.5	30	544.5	0.0563
43330	Esophagomyotomy (Heller type); abdominal approach	090	21.64	90			117	30	547	0.0659
50250	Ablation, open, 1 or more renal mass lesion(s), cryosurgical, including intraoperative ultrasound guidance and monitoring, if performed	090	21.66	17.5	20.0	17.5	141.38	30	537.38	0.062
61760	Stereotactic implantation of depth electrodes into the cerebrum for long-term seizure monitoring	090	21.83	128			195	30	500	0.0645
50320	Donor nephrectomy (including cold preservation); open, from living donor	090	21.87	120			175.5	26	519.5	0.0677
47900	Suture of extrahepatic biliary duct for pre-existing injury (separate procedure)	090	21.88	75			117	45	567	0.0615
47350	Management of liver hemorrhage; simple suture of liver wound or injury	090	21.93	75			87.75	30	572.75	0.0437
33881	Endovascular repair of thoracic aorta, including pre-procedure sizing and device selection, nonselective catheterization(s), all associated radiological supervision and interpretation; by deployment of an aorto-aortic tube endograft not involving coverage of the left subclavian artery origin and all endograft extension(s) placed from the level of the left subclavian carotid artery to the celiac artery	090	21.97	85	15.0	15.0	107.25	30	503.25	0.0737
43820	Gastrojejunostomy; without vagotomy	090	21.97	30	15.0	15.0	117	30	542	0.0685
21936	Radical resection of tumor (eg, sarcoma), soft tissue of back or flank; 5 cm or greater	090	21.99	40	20.0	20.0	156	30	506	0.071
62180	Ventriculocisternostomy (Torkildsen type operation)	090	22.02	125			160.88	53	559.88	0.0612
43501	Gastrotomy; with suture repair of bleeding ulcer	090	22.04	60			117	30	552	0.0472
23200	Radical resection of tumor; clavicle	090	22.14	40	12.0	20.0	151.13	30	493.13	0.0754
58956	Bilateral salpingo-oophorectomy with total omentectomy, total abdominal hysterectomy for malignancy	090	22.23	77.5	15.0	20.0	146.25	30	530.75	0.0699

43840	Gastrorrhaphy, suture of perforated duodenal or gastric ulcer, wound, or injury	090	22.26	30	15.0	15.0	87.75	30	562.75	0.0506

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21079

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 1,482
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 1,126 Percentage 75.97 %

Specialty Dentist Frequency 148 Percentage 9.98 %

Specialty Maxillofacial surgery Frequency 147 Percentage 9.91 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 494
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 375 Percentage 75.91 %

Specialty Dentist Frequency 50 Percentage 10.12 %

Specialty Maxillofacial surgery Frequency 49 Percentage 9.91 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21079

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Impression and custom preparation; surgical obturator prosthesis

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female is referred for custom preparation of a surgical obturator prosthesis prior to removal of a squamous cell carcinomaof the hard palate.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: MD/DMD reviews the surgical cuts, the preliminary surgical plan, and preparation of the defect with the head and neck surgeon to enhance the prosthetic prognosis. The MD/DMD reviews imaging and evaluates bony support for the prosthesis and the restorative and periodontal assessment of the health of the dentition. The MD/DMD reviews proposed surgical plan and preliminary prosthetic design with dental assistant and laboratory technician.

Description of Intra-Service Work: Visit #1 FTF: 56 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. MD/DMD reevaluates the oral cavity to evaluate tongue and palate function. The MD/DMD reviews the surgical plan with the patient. All the patient's questions are answered by the MD/DMD. The patient's preoperative speech is recorded with the speech intelligibility test. The MD/DMD performs a speech and swallowing evaluation. MD/DMD does physical assessment of velopharyngeal complexes to determine movement of soft palate, lateral pharyngeal walls, and posterior pharyngeal wall. The MD/DMD discusses in depth with the patient what to expect after surgery, during the unpacking visit, and living with a defect (hole) in her palate for the rest of her life. The MD/DMD discusses the change in the patient's diet and fork and knife eating. The MD/DMD assesses the scan of the maxillary and mandibular arches for accuracy along with the capture of the bite. Shade and mold selection is accomplished.

NFTF between Visit 1 and 2: 44 minutes
The MD/DMD completes the work authorization for the laboratory technician to mount the maxillary and mandibular models. The MD/DMD evaluates the mounting and reviews the surgical plan from the head and neck surgeon. The MD/DMD evaluates the clasp design and obturator design. The MD/DMD authorizes the laboratory technician to begin the immediate surgical obturator fabrication. The MD/DMD evaluates the mounting and wax up of the immediate surgical obturator. The MD/DMD evaluates the completed immediate surgical obturator. The MD/DMD gives order to the lab technician to proceed for disinfection and verification of operation date.

Visit #2 FTF: 51 minutes
The MD/DMD is called into the OR to insert the obturator. Adjustments are accomplished and fit is assessed. Verification is done by MD/DMD so the coronoid process does not impede the obturator on translation of the mandible. The MD/DMD verifies the obturator fit and secures the obturator. If there is a change in the surgical plan (tumor was bigger than

expected and had to take more), the MD/DMD makes any adjustments needed to the prosthesis and discusses the number of screws needed and angle of screws with the head and neck surgeon. Angulation of screw removal with the screwdriver is emphasized since the patient cannot open their mouth very wide after surgery.

NFTF between Visit 2 and 3: 25 minutes
The MD/DMD evaluates the fit bedside of the obturator and educates the family about the unpacking visit. The MD/DMD reviews with the speech-language pathologist concerning patient's speaking and swallowing function. The MD/DMD checks on the patient daily while in the hospital and calls the patient multiple times after discharge

Visit #3 FTF: 55 minutes
MD/DMD verifies accuracy of dental assistant's review of medical history, medications, and allergies. The MD/DMD discusses with the patient the unpacking process. The MD/DMD places the throat pack. With suction available, the MD/DMD removes the screw. Appropriate airway control is done by MD/DMD. If sutures are present around the posterior border, the DMD/MS cuts the sutures. The MD/DMD removes the prosthesis. The MD/DMD removes the packing material. The oral cavity and defect are suctioned. The MD/DMD cleans the defect. The MD/DMD evaluates the immediate surgical obturator for any changes. The MD/DMD gives an order for the dental assistant to polish the prosthesis. After polishing, the MD/DMD begins the reline process. Tissue conditioning material such as trusoft is added in stages to obturate or close the defect (hole). This will take four times of additions of trusoft. Once the MD/DMD feels that the defect is properly obturated, speech and swallowing ability are assessed. The MD/DMD has the patient perform the speech intelligibility test and it is recorded. The MD/DMD has the patient begin with liquids (verifying no choking) and then proceed with yogurt. If there is leakage, another reline with Trusoft is accomplished by the MD/DMD. The MD/DMD shows the patient how to speak and swallow with the prosthesis and reviews their functioning. Additional instructions are given for insertion, removal and cleaning of the defect and prosthesis. The MD/DMD verifies that the patient can insert and remove the prosthesis. The MD/DMD works with the patient, if the patient is ready, and have the patient look at them with the prosthesis and without the prosthesis. The MD/DMD reminds the patient that psychological help is available with the head and neck team.

Description of Post-Service Work: The MD/DMD reviews with the head and neck team the patient's status. If the MD/DMD feels that the patient would benefit from psychological counseling, the MD/DMD puts in an order, but, also informs the nurse navigator of the head and neck team. The MD/DMD reviews with the speech and swallowing pathologist their findings for speech and swallowing function. If the MD/DMD thinks that the patient needs to be scoped, the MD/DMD informs the speech and swallowing pathologist. The MD/DMD calls the patient multiple times to check on the patient. The MD/DMD verifies that the laboratory materials/models of the patient are logged and stored appropriately. The MD/DMD reviews with dental assistant appropriate documentation of dental materials used for patient.

SURVEY DATA

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
21048	090	14.34	**RUC Time**

CPT Descriptor Excision of benign tumor or cyst of maxilla; requiring intra-oral osteotomy (eg, locally aggressive or destructive lesion[s])

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
42120	090	11.56	**RUC Time**

CPT Descriptor Resection of palate or extensive resection of lesion

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
15730	090	13.16	**RUC Time**	1,764

CPT Descriptor 1 Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
19303	090	14.63	**RUC Time**	23,001

CPT Descriptor 2 Mastectomy, simple, complete

Other Reference CPT Code	Global	Work RVU	Time Source
21046	090	13.85	**RUC Time**

CPT Descriptor Excision of benign tumor or cyst of mandible; requiring intra-oral osteotomy (eg, locally aggressive or destructive lesion[s])

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 9 **% of respondents:** 23.6 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 21.0 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	11%	33%	56%	0%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	56%	44%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	0%	67%	33%
Physical effort required	11%	89%	0%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	67%	11%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Same	Somewhat More	Much More
Overall intensity/complexity	0%	38%	38%	13%	13%

Mental Effort and Judgment	Less	Same	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	50%	25%	25%

Technical Skill/Physical Effort	Less	Same	More
Technical skill required	13%	75%	13%
Physical effort required	38%	38%	25%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	63%	13%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals).

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.

- Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: Prior to survey, the Research Subcommittee approved new vignettes for this entire family of codes, as none existed in the RUC database previously.

Key Reference Codes
The first KRS selected was CPT *21048 Excision of benign tumor or cyst of maxilla; requiring intra-oral osteotomy (eg, locally aggressive or destructive lesion[s])* valued at 14.34 RVUs with an intra time of 117 and a total time of 397. 9 respondents selected this as their primary KRS.

The second KRS selected was CPT *42120 Resection of palate or extensive resection of lesion* valued at 11.56 RVUs with an intra time of 78 and a total time of 304. 8 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the eleven 090 global codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending **a reduction of the existing** work RVU of **11.56 based on a crosswalk to our survey's second KRS code 42120 Resection of palate or extensive resection of lesion and a total time of 302 minutes**.

We are requesting 41 minutes of pre time, 231 minutes of intra time (representing 3 face-to-face visits with the patient and 69 minutes of non-face-to-face lab time), and 30 minutes of post time in accordance with our survey median times, for a total of 302 minutes. Our expert panel felt this value was commensurate with the comparator codes within the fee schedule with similar total times that had been valued by the RUC.

Supporting Codes when Compared to RUC Reviewed 090 Global Codes

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Adjusted Intra-Service Time	Immediate Post Time	Adjusted Total Time	IWPUT
42120	Resection of palate or extensive resection of lesion	090	11.56	30	15	15	78	30	304.00	0.038

33202	Insertion of epicardial electrode(s); open incision (eg, thoracotomy, median sternotomy, subxiphoid approach)	090	12.87	55	15.0	15.0	63.38	30	299.38	0.0964
57540	Excision of cervical stump, abdominal approach;	090	12.96	50			73.13	40	307.13	0.0762
32661	Thoracoscopy, surgical; with excision of pericardial cyst, tumor, or mass	090	13.00	60			117	30	297	0.0682

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21076

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral surgery How often? Rarely

Specialty Dentists How often? Rarely

Specialty Maxillofacial surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 552
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare utilization in the RUC database.

Specialty Oral surgery Frequency 270 Percentage 48.91 %

Specialty 99 Frequency 148 Percentage 26.81 %

Specialty Maxillofacial surgery Frequency 94 Percentage 17.02 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 184
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare utilization from the RUC database

Specialty Oral surgery Frequency 90 Percentage 48.91 %

Specialty Dentist Frequency 33 Percentage 17.93 %

Specialty Maxillofacial surgery Frequency 31 Percentage 16.84 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21076

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:21085 Tracking Number Original Specialty Recommended RVU: **8.28**
Presented Recommended RVU: **5.85**
Global Period: 010 Current Work RVU: **8.77** RUC Recommended RVU: **5.90**

CPT Descriptor: Impression and custom preparation; oral surgical splint

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female is referred for custom preparation of oral surgical splints prior to removal of an odontogenic tumor and reconstruction of the right posterior mandible.

A 16-year-old female with a dental facial deformity is referred for custom preparation of oral surgical splints prior to corrective jaw surgery for a dental facial deformity.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Pre-Service Work: DDS/DMD reviews labs, previous x-rays, photographs and patient medical history. DDS/DMD communicates with the orthodontist, general dentist, and/or primary care physical to discuss need for surgery and surgical splint.

Description of Intra-Service Work: Visit 1 (FTF):
DDS/DMD verifies accuracy of medical history, medications, allergies taken by dental assistant. DDS/DMD discusses procedure with patient. DDS/DMD review prior measurements and notes in EMR. DDS/DMD takes cone beam and reviews/verifies measurements and anatomy. Key CBCT anatomy and measurements that are reviewed for orthognathic surgery affecting splint design include the following:
Anatomy: Skeletal and Facial Morphology, Linear and Angular Measurements, Mandibular Ramus and Condyle, TMJ (Temporomandibular Joint) Assessment, Dental and Alveolar Assessment, Root position, Bone Density, Soft Tissue and Airway Assessment
Key Skeletal Measurements: MD/DMD assess the relationship between the maxilla, mandible and cranial base using specific landmarks:

- Anteroposterior (Front to Back) Position:
  a. SNA Angle: Relates the maxilla to the cranial base.
  b. SNB Angle: Relates the mandible to the cranial base
  c. ANB Angle: Measures the relative difference between the upper and lower jaws.
- Vertical Dimension
  a. Facial Height
  b. Ramus Length
- Transverse (Width) Dimensions:
  a. Maxillary and Mandibular Width
  b. Midline Symmetry

Dental and Soft Tissue Analysis:

These measurements ensure the teeth are properly positioned within the bone and that the final facial profile is aesthetic:

a. Incisal Inclination
b. Occlusal Plane
c. Soft Tissue Profile

Surgical Safety and Anatomical Constraints: Beyone planning movement, CBCT is used to measure critical "danger zones".

a. Inferior Alveolar Nerve (IAN)
b. Bone Thickness
c. Airway Volume
d. Condylar Position

Consents of the diagnostic impressions and wax bite registration are obtained at the beginning of the visit. DDS/DMD verifies that consents are signed. Diagnostic impressions of maxilla and mandible are obtained. Wax bite relations registration are taken. Models are poured in stone to create surgical cast from which trio scans are obtained, Models may be duplicated if multiple piece jaw surgery is planned (and model surgery preformed to predict surgery and evaluate splint for visit 3). Models are evaluated for accuracy compared to photographs and pre-surgical radiographs.

Trio scan taken of the maxilla and mandibular arches and capture the bite and sent for construction of surgical splint. They will convert the image from Trio scan to STL and will have the maxillary and mandibular files 3D printed with the SprintRay printer. Surgical osteotomy sites, design, and specific movements at each maxillary and/or mandibular osteotomy site reviewed.

Non FTF between 1 & 2: DDS/ DMD will call the orthodontist, general dentist, and PCP. The DDS/ DMD will call orthodontist to review with him the results of the surgical plan (typically the patients are in braces) and to discuss the splint as the model must coordinate with what the other providers need to and they must ensure they will be able to carry out their portion of the care. This includes discussions concerning type of final brackets on orthodontic wire for intra surgical positioning.

Verification of adequate space for inter dental osteotomies and feasibility of orthodontic movements needed post surgically as well as long term stability of occlusion.

Coordination with General Dentist to ensure space, bone quality and positioning post operatively are adequate for post surgical completion and stability of any planned oral dental care.

Visit 2 (FTF):

-DS/DMD tries splint in office. Independently placed on maxillary and mandibular dental arches. Splint adjustments made at visit as needed to ensure splint will fit teeth at time of surgery and position maxilla and mandible into proper post-surgical position. Verification of the relationship of the maxilla to the mandible is evaluated from different angles.

-DS/ DMD verifies accuracy of patient's medical history, medications, and allergies. The DDS/DMD evaluated patient photographs. Final surgical plan is presented to the patient, as well as possible surgical complications and expectations during post-op period. Final consent for surgery obtained.

Description of Post-Service Work: Analysis sent to orthodontist and general dentist. Phone call to orthodontist and general dentist.

Physical effort required	18%	45%	36%

Psychological Stress	Less	Same	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	27%	73%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background: The codes describing the fabrication of maxillofacial protheses were nationally valued in 1996. Before that they were Contractor priced. In 1995, the AAMP and the American Association of Oral and Maxillofacial Surgeons (AAOMS) made recommendations to CMS who developed national pricing for these codes effective in CY 1996. This pricing included physician work Relative Value Units (RVUs), practice expense (PE) RVUs, and malpractice RVUs that were implemented in CY 1996 and published in the Federal Register (60 FR 63124 December 8, 1995).

The methodology CMS used to establish PE RVUs was deeply flawed. CMS stated the following in the Federal Register (Vol.60, No. 236, December 8, 1995, P 63151): "Therefore, we imputed the practice expense and malpractice expense RVUs from the work RVUs based on the practice cost shares provided by the AAOMS. Those shares are 54.7% for practice expense and 4.4% for malpractice expense. Comments in response to this proposal for practice expense RVUs were unanimous in objecting to the proposed methodology. The comments stated that the practice expense and malpractice shares for the subspecialty of maxillofacial prosthetics differed substantially from those of maxillofacial surgery. This was primarily due to the amount of clinical staff time, and expensive materials and supplies used in fabricating the prostheses. Those commenting unanimously agreed that the practice expense RVUs were too low."

However, CMS finalized its proposal without change, in spite of the comments, because it believed that in the absence of charge data, the maxillofacial surgery shares were the best available information upon which to base payment. CMS also said it was "working on a resource-based practice expense study and, as part of this effort, hope to have more definitive data in the future. At that time, we will reevaluate all maxillofacial practice expense RVUs." Such a reevaluation was never done.

In the Proposed Rule for 2026, AAMP nominated the maxillofacial prosthodontic services as potentially misvalued because the current PE inputs are outdated and do not reflect technological advances, resulting in inadequate payments that limit patient access to care.

CMS indicated that because these codes have not been reviewed in the last 30 years, they believe it is appropriate to examine both PE and work inputs. Given the technological advancements the nominator described, there may also be resulting changes in the physician work involved in performing these services, and therefore, a comprehensive review of both practice expense and work values would be appropriate. While they proposed not to nominate these codes as potentially misvalued, they requested public comments and recommendations, including those from the RUC, to better understand these codes, particularly regarding typical direct PE inputs and work values.

The RUC commented that it recognizes that these services are extremely low volume, with several below 100 Medicare claims per year, and performed in relatively few health centers in the United States. It may be extremely difficult to survey these low volume but critically important services. The RUC is willing to review valuation and direct practice expense inputs for these services to support this request. However, CMS may also review the direct practice expense data from the commentor because the necessary inputs were provided in detail and in the correct format to CMS.

In the Final Rule, CMS noted that after consideration of the public comments and their concerns associated with the practice expense inputs, they are finalizing their proposal not to nominate these codes as potentially misvalued. However, reiterate that the RUC expressed willingness to review the valuation and direct PE inputs for maxillofacial prosthetic services and they look forward to reviewing the RUC's recommendations in the future.

The RUC then placed the maxillofacial prosthetic services (CPT codes 21076-21087) on a special Level of Interest (LOI) to review these services at the April 2026 meeting and submit recommendations for the 2028 MFS.

Survey Sample and Process:
A survey request was sent to all U.S. based, practicing members of the AAMP (232 individuals). AAOMS surveyed a targeted, random selection of 270 members with sub-specialty designations or committee designation below. AAOMS / ADA also surveyed 1000 randomly selected members.

- Orthognathic Surgery and Obstructive Sleep Apnea;
- Pathology and Reconstructive Surgery;
- Trauma;
- Pediatric Oral and Craniofacial/Maxillofacial Surgery
- AAOMS Committee on Cleft, Craniofacial, and Pediatric OMS;
- AAOMS Committee on Oral, Head and Neck Oncologic & Reconstructive Surgery

Customized Survey Tool: CPT codes 21076-21088 represent highly specialized, low-volume services that are only done by a small number of specially trained providers in the U.S. The prosthesis that are made during these procedures allow patients who have undergone major surgeries due to head and neck cancer, congenital deformities, or trauma to continue critical activities of daily living like speaking, swallowing, eating, and talking. They require many face-to-face visits with the maxillofacial prosthodontist or oral surgeon to create the model prostheses, fit the prosthesis, and/or revise and reline the prosthesis. In order to survey this family of codes, customized 010 and 090 survey instruments were created and approved by the Research Subcommittee. The survey defined pre, intra, and post time as follows:

- **PRE:** includes the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon services provided before you start the prosthesis fabrication. The following services are not included:
    - Any consultation visits with the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon is separately reported as an evaluation and management service.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing).

- **INTRA:** begins with the visit when the maxillofacial prosthodontist /oral surgeon / oral and maxillofacial surgeon initiates the prosthesis fabrication and extends throughout the global period (10 days) , including all

visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon during the global period (10 days). (Do not count clinical staff time (e.g., technicians) or administrative time (e.g., billing)).

- **POST:** Post work includes any activities by the maxillofacial prosthodontist / oral surgeon / oral and maxillofacial surgeon after all visits (face-to-face and non-face-to-face) have concluded, including:
    - Any final patient communication or phone calls.
    - Any final documentation, reports, or summaries required.
    - Do not count clinical staff time (e.g., technicians) or administrative time (e.g, billing).

Vignettes: The Research Subcommittee approved the use of two vignettes for the survey of this code only, as AAOMS/ADA only surveyed this code within the family. AAMP has surveyed all 12 codes in the family for the April 2026 RUC meeting. The specialty societies felt, and Research agreed, that different vignettes were needed because the typical patient population is extremely different, depending on which specialty is performing the procedure. Both vignettes were found to be typical by survey respondents.

Key Reference Codes
The first KRS selected was CPT *41830 Alveolectomy, including curettage of osteitis or sequestrectomy* valued at 3.36 RVUs with an intra time of 58.50 and a total time of 152.50. 23 respondents selected this as their primary KRS.

The second KRS selected was CPT 31292 *Nasal/sinus endoscopy, surgical, with orbital decompression; medial or inferior wall* valued at 15.50 RVUs with an intra time of 136.50 and a total time of 449.50. 11 respondents selected this as their second KRS.

Compelling Evidence:
For two of the codes in the family (21076 and 21085), we are recommending decreases to the existing work RVUs, based on a reduction of total time for the service, indicated by our survey respondents. For one of the codes in this family (21079) we are requesting to maintain existing physician work value. For the other nine codes in the family (21077, 21080, 21081, 21082, 21083, 21084, 21086, 21087, 21088) we are requesting an **increase** in physician work RVUs based on the following compelling evidence arguments:

1. **Changes in technology**: The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, the physician time has changed and/or increased substantially and require revision.

Please note, our summary of recommendations spreadsheet also includes two additional pieces of information. First, a tab that outlines the number of face to face and non face to face visits for each code, based on the responses to our survey; and two, a relativity table which reflects that our recommendations are intended to maintain appropriate rank order within the family, based on the guidance of our expert panel.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **8.28 and a total time of 232 minutes** based on a **crosswalk to code *38570 Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple* which is below existing value of 8.77 RVUs and 241.8 total minutes.**

We are requesting 30 minutes of pre time, 172 minutes of intra time (represent in 3 face-to-face visits with the patient and 75 minutes of non-face-to-face lab time), and 30 minutes of post time in accordance with our survey median times, for a total of 232 minutes. Our expert panel felt this value, which is commensurate with the slight reduction in existing total time (241.8 minutes) indicated by our survey respondents, was an accurate representation of the work and intensity included within this service.

Supporting Codes when Compared to RUC Reviewed 010 Global Codes

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 21085

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Oral Surgery How often? Commonly

Specialty Dentist How often? Commonly

Specialty Maxillofacial Surgery How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 6,039
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is three times the 2024 Medicare volume reported in the RUC database.

Specialty Oral Surgery Frequency 3,442 Percentage 56.99 %

Specialty Dentist Frequency 786 Percentage 13.01 %

Specialty Maxillofacial Surgery Frequency 725 Percentage 12.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,013
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is the 2024 Medicare volume re ported in the RUC database.

Specialty Oral Surgery Frequency 1,147 Percentage 56.97 %

Specialty Dentist Frequency 262 Percentage 13.01 %

Specialty Maxillofacial Surgery Frequency 242 Percentage 12.02 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 21085

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

	SG055	gauze, sterile 4in x 4in	0.19	item	
	SG081	applicator, cotton-tipped, sterile, 6in	0.06	item	
	SJ038	petroleum jelly	0.37	oz	
	SJ061	tongue depressor	0.03	item	
	SJ079	basin, sterile 500cc	3.51	item	
	SJ080	lens cleaner, daily (Allergan)	0.62	ounce	
	SJ081	swab, patient prep, 1.5 ml (chloraprep)	1.09	item	
56	SJ082	paste, registration	18.59	kit	*1= $111.51 can be used 6 times. CMS price $0*
	SJ083	polyurethane sheets (quantity as rolls)	0	roll	
50	SJ084	teeth set	63.91	set	*63.91 for anterior and posterior set, CMS price $0*
43	SJ085	triad tray material	3.67	pack	*30 pack=109.99, CMS price $0*
48	SJ086	wax, baseplate	128.99	item	*128.99 for 1 box, 250 sheets in a box, we use 4 sheets. CMS price $0*
45	SJ087	wax, boxing	25.79	box	*1lb/box = 25.79, Invoice 45, 52 strips per box. 1 strip is used for this prosthesis. CMS price $0*
	SK024	film, dental	1.73	item	
	SK109	paper, articulating	0.06	item	
	SK114	tissue (Kleenex)	1.87	box	
	SL046	dental impression tray	0.48	item	
	SL047	dental stone powder	3.78	lb	*454 grams = 1 lb, 225 grams to pour one impression and 0.44 to invest for flasking*
	SL081	impression material, alginate (dental)	8.96	lb	*It takes 50 grams to pour 1 impression, 454 grams = 1 pound, 50 divided by 454 = 0.11*
	SL082	impression material, dental putty (per bite block)	2.138	item	
	SL094	mold release agent, silicone spray	0.54	oz	
51	SL150	wax, bite registration wafer	0.37	item	
	SL151	xylenes solvent	0.012	ml	

49	SL205	acylic, dental	277	KIT	*277.00 per kit, 16 capsules per kit. 1 capsule per prosthesis. CMS price $0*
47	SL208	alloy framework, laboratory processing	184.9	item	*184.9 total for 1. CMS price $0*
46	SL228	Greenstick compound	1.90	box	*15 sticks /box=28.49. CMS price = $0*
54	SL230	impression material, final	539.99	cartridge	*25 impressions per cartride. $539.99 for 1 cartridge. 21076 does not make a final impression. CMS price $0.*
42	SL236	reline material, Trusoft	96.99	KIT	*10 relines per kit $96.99 is price of kit. 1 kit divided by 10 relines = 0.1 . Per DOW for visit 3 we do 4 relines for this code. CMS price $0.*
55	SL237	silicone	129.95	lb	*$129.95 per lb. CMS price $0.*
	SM021	sanitizing cloth-wipe (patient)	0.07	item	
14	*NEW*	*Tray Adhesive*	*4.13*	*ml*	*10ml bottle = 41.29*
15	*NEW*	*Ball clasps*	*0.44*	*item*	*100/pk = $43.99*
15	*NEW*	*Disposable Mounting Plates*	*4.28*	*item*	*10/pk = 42.79, use 2 plates per prosthesis, invoice 15*
15	*NEW*	*Pumice*	*4.60*	*lb*	*5lb each = 22.99, $4.598 = 1 lb. Use 100 grams per prosthesis. 1 lb = 454 grams. 100 divided by 454 = 0.22*
16	*NEW*	*Tray covers*	*0.03*	*item*	*1000/box=33.75*
17	*NEW*	*Castone White*	*1.75*	*lb*	*25lb each= 43.79, takes 200 grams to mount the models 200 grams divided by 454 grams (1 lb) = 0.44, another 200 grams to invest for flasking*
17	*NEW*	*rope wax*	*0.47*	*item*	*55 strips/box= 25.99*
31	*NEW*	*Saliva ejectors*	*0.23*	*item*	*100/pk = 23.44, use 1 per visit*
37	*NEW*	*Duplicating Material*	*67.50*	*gallon*	*2 gallon pail = 134.99. for 2 gallons = 15 duplicates, 1 gallon = 7.5 duplicates. 1 gallon divided by 7.5 duplicates = 0.13 for duplicate model*
44	*NEW*	*Pressure indicator paste*	*17.70*	*oz*	*4oz = 70.79*
55	*NEW*	*VST-50 silicone elastomer*	*51.95*	*lb*	*Invoice 55 1 lb = 51.95*
55	*NEW*	*VST-50 HD Silicone Elastomer*	*59.95*	*lb*	*Invoice 55 1 lb = 59.95*
38	*NEW*	*Skin prep-wipe*	*15.95*	*item*	*1=15.95*
22	*NEW*	*Flocking kit*	*41.36*	*kit*	*1kit = 41.36*
24	*NEW*	*Functional Intrinsic Coloration, w/ thixo agent*	*575*	*Kit*	*kit = 575.00*
22	*NEW*	*Extrinsic Coloration*	*198.86*	*Kit*	*.9 kg kit = 198.86*
25	*NEW*	*Separating Tin Foil*	*1.05*	*oz*	*16 oz = 16.76*
27	*NEW*	*G-490-0-6 Red Sable Brushes*	*2.33*	*brush*	*pack of 6 14.00*
27	*NEW*	*G-490-00-6 Red Sable Brushes*	*2.33*	*brush*	*pack of 6 14.00*
27	*NEW*	*G-490-000-6 Red Sable Brushes*	*2.33*	*brush*	*pack of 6 14.00*
21	*NEW*	*Acid Brushes Extra large*	*0.33*	*brush*	*box of 144 = 47.95*

21	NEW	Acid Brushes small	0.15	brush	box of 144 = 21.95
27	NEW	Silicone Wheels	8.99	item	4 pk = 35.95
23	NEW	Sculpturing wax	89.92	lb	1/2lb = 44.96
29	NEW	Artificial Eye	250.00	item	1=250.00
27	NEW	Black Artificial Eyelashes	5.00	set	set 5.00
57	NEW	Daro Hydrobond	17.10	item	2oz = 17.10
38	NEW	Medical Silicone Adhesive A	17.10	oz	1 oz = 17.20
25	NEW	Extrinsic Tri Fluid	2.85	oz	16 oz = 45.56
26	NEW	Secure II Extra Strength Adhesive	24.50	oz	1 oz 24.50
26	NEW	ProBond	8.50	oz	1 oz 8.50
38	NEW	Pros Aide	14.95	item	1=14.95
38	NEW	Daro Extra Strength	17.75	item	1=17.75
58	NEW	Solvent	2.08	0z.	16 oz - $33.26
33	NEW	Edge Adhesive	16.95	item	15gm = 16.95 = 1 tube
32	NEW	Mixing Pads large	15.98	item	2=31.95
28	NEW	Craniofacial Insert X-line magnet	179	item	individual unit = $179, total for all 3 = $537
28	NEW	Craniofacial Titanmagnetics Model Analogue	49	item	individual unit = $49, total for all 3 = $147
28	NEW	Craniofacial Implant Impression Post	49	item	individual unit - $49, total for all 3 $147
28	NEW	Craniofacial Implant epitheses magnet	95	item	individual unit = $95,, total for all 3 = $285
34	NEW	Locator attachments (set of 4)	426.46	kit	One kit per implant. One kit = $92.49 for locator male processing, $85.99 for locator impression coping, $87.99 for locator female analog, $159.99 for locator abutment. One kit = $426.46 individual implant attachment.
35	NEW	Ti Bases Attachment	48	item	48.00 each
36	NEW	Zirconium Framework	97	set	set = $97, 1 set =$69 for bridge +$28 for stain = $97 total for framework (do not use ti bases in invoice, they are listed separately
39	NEW	Orthognathic splint / stent	1891	item	1=1891.00
52	NEW	Sealing Kit	18.24	oz	4 oz = 72.95

21088	Impression and custom preparation; facial prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21076	A 72 year old female is referred for custom preparation of a surgical obturator prosthesis prior to removal of a squamous cell carcinoma of the hard palate.
21077	A 65 year old female is referred for custom preparation of an orbital prosthesis following orbital exenteration due to a squamous cell carcinoma.
21079	A 65 year old male is referred for custom preparation of an interim obturator, following resection of a benign maxillary.
21080	A 65 year old male is referred for custom preparation of fabrication of a definitive obturator, following resection of a benign maxillary tumor.
21081	A 75 year old male is referred for custom preparation of a mandibular resection prosthesis, following resection of a mandibular squamous cell carcinoma.
21082	A 72 year old male who had most of his tongue resected for squamous cell carcinoma is referred for custom preparation of a palatal augmentation prosthesis.
21083	An 80 year old male is referred for custom preparation of a palatal lift prosthesis after a stroke.
21084	A 63 year old male with a repaired cleft palate whose velopharyngeal is insufficient is referred for custom preparation of a speech bulb prosthesis.
21086	A 67 year old male is referred for custom preparation of an auricular prosthesis after his ear was surgically removed due to squamous cell carcinoma.
21087	A 62 year old female is referred for custom preparation of a nasal prosthesis after undergoing a total rhinectomy.
21088	A 68 year old female is referred for custom preparation of a facial prosthesis after undergoing a total rhinectomy and orbital exenteration.

FACILITY DIRECT PE INPUTS **CPT CODE(S):___21076-21088_____**
SPECIALTY SOCIETY(IES):_ AAMP_____
PRESENTER(S):_Betsy Davis, DMD, MS, Mark Chambers, DMD, MS _____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Expert Panel made up of experienced dentists, oral maxillofacial surgeons, and maxillofacial prosthetists.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   No

   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   All codes' facility practice expense inputs for clinical staff activities are going **DOWN** from existing except code 31276. This is due to the change in global period (see question 5 below), however, compelling evidence exists for the entire family of codes.

   1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of ocular, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

There are no changes to the global periods for these codes with the exception of 21076. 21076 was previously valued as a 010 global, however, the expert panel felt this code should have always been a 090 global as it is unlikely to complete the services needed for this type of patient in 10 days.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility for this family of codes. This represents an increase in staff time for 21076 pre time, due to the change in global period.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Pre-Service: 60 minutes Dental Assistant – 090 global standard

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis (prosthesis) with head and neck Surgery Service
- CA002 Coordinate presurgery service (including test results)20 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - Dental assistant verifies appropriate equipment is operational and supplies are ordered. Dental assistant coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
  - Comprehensive review of medical history, including a review of medications and underreported herbal supplements that could interfere with treatments.
  - Coordination of Care – works with the H&N navigator to ensure timely appointments between the surgeons, radiation oncologists, oncologists, SLP, and dietitians to ensure timely appointments and a unified treatment plan to optimize swallowing, speaking, chewing, and nutritional outcomes.
- CA003 Schedule space and equipment in facility 8 minutes
  - Posts surgical order with head and neck Service for OR time for insertion of prosthesis.
  - Works with OR staff verifying that the MFP kit will be available during OR.
- CA004 Provide preservice education/obtain consent 20 minutes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- DA educates patient about procedure format (what to expect), discusses impression/scan
- DA prepares patient and caregivers what to expect.
- DA assesses lifestyle interventions – motivating and assisting patients with smoking and alcohol cessation prior to treatment, which drastically improves recovery and overall outcomes.
- Consents include photographic consent, procedure consent, consent to treat.

- CA005 Complete pre-procedure phone calls and prescription 7 minutes

  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.
  - DA screens for distress and provides vital emotional support to help patients and families cope with a diagnosis that heavily impacts physical appearance, speech, and eating.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

N/A

c. Post-service period:

N/A

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are dental assistants (DA). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

N/A

ADDITIONAL INFORMATION

19. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

22. For CPT educational purposes, please provide a summary Description of the Procedure/Service in paragraph form.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21076	Impression and custom preparation; surgical obturator prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21076	A 72 year old female is referred for custom preparation of a surgical obturator prosthesis prior to removal of a squamous cell carcinoma of the hard palate.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and lab technicians (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

There are no changes to the global periods for these codes with the exception of 21076. 21076 was previously valued as a 010 global, however, the expert panel felt this code should have always been a 090 global as it is unlikely to complete the services needed for this type of patient in 10 days.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21076_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are requesting the standard 090 pre staff times for both the facility and non-facility for this family of codes. This represents an increase in staff time for 21076 pre time, due to the change in global period.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are three face to face visits with the patient for this code, however, only the first and third visit are counted for purposes of practice expense because the second visit the dental assistant goes to the OR to assist during the procedure, thus it does not occur in the non-facility setting. During the first and third face to face visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit 1 = 3 minute standard + 2 vitals visit 3 = 3 minute standard. **TOTAL 6 minutes for vitals appears on the PE spreadsheet for 21076.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant (DA) – 090 standard pre time

- CA001 Complete pre-service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis with Head & Neck Service
- CA002 Coordinate pre-surgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - Dental assistant verifies appropriate equipment is operational and supplies are ordered. Dental assistant coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include procedure consent and consent to treat.
- CA005 Complete pre-procedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls head and neck nurse letting them know the date that we are seeing them.

- DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

b. Service period (includes pre, intra and post):

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21076:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel								
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21076	3	56	DA in OR for FTF V 2	55					111	120	25					145	256

Total staff time as appears on PE Spreadsheet for 21076:

Pre time = 35 minutes
Intra time = 182 Dental Assistant total, 145 lab technician total

- **Pre intra time** = 22 minutes (11 minutes x 2 FTF visits)
- **Intra time** = 111 minutes for DA, 145 minutes for LT (corresponds to table above)
- **Post intra time** = 49 minutes (26 minutes FTF v 1 + 23 minutes FTF v 3)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (56 minutes survey time)– DA and MD/DMD present

- The DA and MD/DMD work together to obtain cone beam radiograph.
- DA will make the digital scan of the maxillary and mandibular arches using the TRIOS scanner.
- DA will mix dental materials for an impression and for a bite registration.
- DA hands dentist the shade and tooth selection mold guide.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray –2 minute (expert panel time)
  - The DA reviews imaging with doctor and verifies uploading into chart.
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning the intraoral wound / open cavity during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the formatted file and will have the maxillary and mandibular arches files 3D printed with the SprintRay 3D printer.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

- DA verifies OR date with head and neck Scheduler

NFTF between Visit 1 and 2: 120 minutes– corresponds to table above- Lab Tech

After the models have been printed, the LT performs post processing of the 3D printed models including washing with isopropyl alcohol (IPA 99%) to remove excess resin from the model, drying of the model, removal of the printed supports (rafts/scaffolding) on the model, post curing of the model, finishing and quality control. The LT mounts the maxillary and mandibular arches with authorization from the MD/DMD. The LT waxes the immediate surgical prosthesis and shows it to the MD/DMD. The wax up prosthesis is flasked, the wax is boiled out and methyl methacrylate is injected into the flask. The flask is placed through a curing cycle. The LT deflasks the immediate surgical prosthesis, trims and adjusts it and polishes it. The LT shows it to the MD/DMD for evaluation. After the approval of the MD/DMD, the LT disinfects the prosthesis and puts it in a labeled sealed bag for the OR. **The expert Panel recommends 120 minutes for these activities.**

Visit #2 FTF: 0 Minutes

There is no allowed dental assistant time for visit #2 because they are in the OR and staff time is covered by the facility costs / fee.

NFTF between Visit 2 and 3: 25 minutes Lab Tech

The LT consults with MD/DMD about the fit of the surgical prosthesis. The LT boxes up the models and patient's laboratory materials and works with DA to log it into the storage of models for patients. Each state has a law concerning the length of time patient's models must be stored. Typically, it is around 3 years. **Expert Panel recommends 25 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (55 minutes survey time) – DA and MD/DMD present.

- DA disposes of the packing material from the patient's defect appropriately.
- DA mixes dental materials (reline material) under the direction of the MD/DMD.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).

- Oral Management: Use suction hoses, water sprays, and other instruments to keep the patient's mouth clear and dry during treatments.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.
- The DA polishes the prosthesis at the direction of the MD/DMD.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the intraoral wound / open cavity during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants) (L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. f you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, established pack, see below.

CPT CODE(S):__21076_____

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

    Typical useful life for all new equipment is 7 years.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

    No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

We are using a custom "other" formula for all equipment items in this family of codes due to the unique nature of the visits and the fact that multiple spaces are used by clinical staff, during those visits (e.g. imaging room, lab, exam room). All equipment times reflect the time the equipment was used for the single patient and was not available for use for other patients. Any equipment that might be used for multiple patients at once was excluded from direct practice expense inputs. Equipment can be used for these procedures during the face-to-face patient visits or during non-face to face inter-visit lab sessions. Equipment used during the time the patient was in the non-facility setting are labelled "DA" as the dental assistant and/or physician used the equipment. Inter-visit/lab session times are labelled "LT" as the lab technician or the physician used the equipment.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Please note, times below reflect the time PER USE for each piece of equipment. The rationale for the assigned time is reflected in the column to the far-right below. Many pieces of equipment are used during more than one visit; therefore, the time below must be multiplied by the number of visits the equipment is used. **The total time, reflected in the yellow "totals" column in question 20 above, is what is reflected in the practice expense spreadsheet for each piece of equipment.**

		Formula	Time per use Assigned by expert panel	Rationale for Expert Panel Assigned time
IMAGING EQUIPMENT				
ED050	Technologist PACS workstation	TIME USED FOR ONE PATIENT - assigned by expert panel	2	2 minute standard for activity.
NEW	*Planmeca CBCT Imaging*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Have to enter patient data and position patient. Many of the patients have facial disfigurement or facial swelling due to the head and neck tumors so positioning the patient takes extra time due to abnormal anatomy/function or swelling etc.
CLINIC / EXAM EQUIPMENT				
EQ279	handpiece, slow speed, (Midwest)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ278	handpiece, high speed (Kavo)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ276	delivery unit (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF039	light, dental, ceiling mount (Adec)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EF038	chair, dental (Cascade 1040 - Adec), with upholstery	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
EQ138	instrument pack, medium	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	

	($1500 and up)			
NEW	*3shape Trios Intraoral Scanner*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
LAB EQUIPMENT				
EP082	washout and curing unit (Nevin)	TIME USED FOR ONE PATIENT - assigned by expert panel	30	The expert panel agreed to 30 minutes. It takes 20 minutes to boil out the wax and 10 minutes of rinsing with water to clean both parts of the flask.
EP060	dust collecting unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	15	The expert panel recommended 15 minutes of time. This stabilizes air flow and cleaning / clearing microscopic dust from griding on maxillofacial prosthesis. This time is standard based on the US EPA standards which states vacuum measurement should be a 15 minute per adjustment of prosthesis. www3.epa.gov.
EP066	handpiece, laboratory (Ney)	TIME USED FOR ONE PATIENT - assigned by expert panel	35	Expert panel agreed that 35 minutes of time was typical when using the handpiece to adjust the model as well as the prosthesis itself (detail/trimming/framework).
EP065	grinding and polishing unit (Handler)	TIME USED FOR ONE PATIENT - assigned by expert panel	20	For a dental prosthesis, it takes 5 minutes of grinding (rubber wheel) and 15 minutes of polishing.
EP080	trimmer, dental model (Buffalo)	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The average time to trim a dental model is 10 minutes, per the expert panel and the manufacturer's instructions.
EP085	whip mix combo unit (Vac-U-Spat)	TIME USED FOR ONE PATIENT - assigned by expert panel	2	This is the recommended time by the manufacturer.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21076_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

EP079	triad unit	TIME USED FOR ONE PATIENT - assigned by expert panel	10	Recommended total cumulative curing time is a minimum of ten (10) minutes. Half of the curing should be done tissue side up, half completed tissue side down. Manufacturer's instructions.
EP074	steamer, portable (Kerr Lab)	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Per the expert panel, the time is 5 minutes to steam off the prosthesis. The steam cleans the prosthesis during fabrication process.
EP056	articulator (model 96H2 - Hanua)	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Lab Scanner & 3Shape*	TIME USED FOR ONE PATIENT - assigned by expert panel	20	It takes 20 minutes to program the file from the Trios to the 3D printer for a dental model.
NEW	*SprintRay Pro 2 Bundle 3D Printer System*	TIME USED FOR ONE PATIENT - assigned by expert panel	25	Per the expert panel, the time it takes to print a model is typically 25 minutes.
NEW	*Ivobase*	TIME USED FOR ONE PATIENT - assigned by expert panel	55	Typically, labs use acrylic that takes 55 minutes per manufacturer instructions. You start with a flask and place it in cold water, it has to be heated for curing (45 minutes) and then slowly has to be brought down, and the flask is cooled in cold water (10 additional minutes, totaling 55).
NEW	*Facebow*	can only be used for one ptx at a time during their visits/lab sessions	based on survey time	
NEW	*Digital Water Bath New*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Expert panel assigned 5 minutes, this is the time it takes to soften the material so you can shape it or separate the model.

NEW	*Sandstorm2 25/50 & 50/100 mic*	TIME USED FOR ONE PATIENT - assigned by expert panel	10	The expert panel agreed that the sandblaster is used at least 10 minutes in order to remove stone and plaster from the prosthesis during the deflasking. Used to provide rough surface to enhance bonding for implant prosthesis.
NEW	*Retractable Air Gun System*	TIME USED FOR ONE PATIENT - assigned by expert panel	5	Air gun is used for 5 minutes to blow off debris during the fabrication process.

ADDITIONAL INFORMATION

24. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

During the review of this family of codes, existing equipment was carefully reviewed to ensure that no indirect PE pieces of equipment were included in the final recommendations. During that discussion, the PE Subcommittee suggested that the specialties carefully review which specialty they are currently crosswalked to generate indirect PE calculations. Maxillofacial surgery is currently crosswalked to Otolaryngology. As noted in the 1994 Federal Register, maxillofacial prosthodontics has a high overhead which is why we disagree with this crosswalk. We respectfully request that CMS modify this to crosswalk Maxillofacial surgery to Oral Surgery instead within 2028 rulemaking.

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

Meeting Date: September 2026

CPT Code	Long Descriptor	Global Period
21077	Impression and custom preparation; orbital prosthesis	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
21077	A 65 year old female is referred for custom preparation of an orbital prosthesis following orbital exenteration due to a squamous cell carcinoma.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Expert Panel made up of experienced and nationally recognized dentists, oral maxillofacial surgeons, and maxillofacial prosthodontists

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   We are using the current PE inputs as our reference code as there are no codes outside this family that have similar PE inputs
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   These are all low volume services. The typical specialties are oral and maxillofacial surgeons and maxillofacial prosthodontists who are trained as dentists with a fellowship in oral and maxillofacial surgery or maxillofacial prosthodontics.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

These codes were never surveyed or reviewed by the RUC and their inputs are extremely out of date. There is compelling evidence to change and/or add new PE inputs based on the following factors:

1) **Changes in technology.** The supplies and equipment that are the current standard of care did not exist in 1995. Since 1995 there has been complete change in technology including use of Cone beam CT, 3D printing and use of fibula flaps for the prostheses. The patient population has also changed in that the surgery is much more invasive and requires more complex prostheses to result in the ability to speak and swallow. The work takes much longer and there are more visits because the prostheses must fit exactly and, in the case of orbital, nasal, auricular, and facial prostheses, are made to mimic more closely the native body part being replaced. Due to these changes in technology, clinical staff time, supplies, and equipment have all changed and/or increased substantially and require revision.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

Clinical staff type information:

There are two staff involved in all of these services except 21085. The typical clinical staff for these codes are dental assistants (DA) and lab technicians (LT) (L033A). We are using the medical assistant as a proxy for the DA, reflected with clinical staff type (L026A). We considered the typical wages of a DA and believe that the proxy of the medical assistant is appropriate. 21085 only includes the DA.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are requesting the standard 090 pre staff times for both the facility and non-facility

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21077_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

There are **SEVEN** face to face visits with the patient for this code. During these FTF visits, two vitals are taken: blood pressure and weight, thus we are requesting 3 minutes for each FTF patient visit to take vitals. 2 vitals visit = 3 minute standard x 7 FTF visits. **TOTAL 21 minutes for vitals appears on the PE spreadsheet for 21077.**

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Within the custom survey tool for this family of codes the pre-service is defined as: services provided BEFORE you start the prosthesis fabrication.

Pre-Service: 35 minutes Dental Assistant – 090 standard pre time

- CA001 Complete pre-Service diagnostic and referral form 5 minutes
  - DA fills out posting of prosthesis Head & Neck Service
- CA002 Coordinate pre-surgery service (including test results) 10 minutes
  - The staff reviews the type of clinical and laboratory supplies needed in the fabrication process for the prosthesis, verifying safety of equipment and having radiographs on computer screen for the doctor.
  - Dental assistant verifies appropriate equipment is operational and supplies are ordered. Dental assistant coordinates with laboratory re: need of future laboratory supplies and coordination of appointment visits.
- CA004 Provide preservice education/obtain consent 10 minutes
  - DA educates patient about procedure format (what to expect), discusses impression/scan
  - Consents include photographic consent, procedure consent, consent to treat.
- CA005 Complete pre-procedure phone calls and prescription 10 minutes
  - The patient gets a call from DA verifying appointment and any concerns and informing them what to expect. DA calls Head & Neck nurse letting them know the date that we are seeing them.
  - DA asks about antibiotic prophylaxis due to heart valve, knee, shoulder, or ankle replacement.

    b. Service period (includes pre, intra and post):

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21077_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Within the custom survey tool for this family of codes the INTRA service begins with the visit when the fabrication of the prosthesis begins and extends throughout the global period (90 days), including all visits (face-to-face and non-face-to-face) related to the fabrication of the prosthesis and postoperative care during the global period (90 days).

Two clinical staff types perform services during the intra service period, the dental assistant (DA) and the lab technician (LT). The DA is present AT ALL TIMES when the MD/DMD is performing activities during the intra service period, so their time is captured under the "100% assisting MD" category and reflects the intra service times of the survey.

The MD/DMD is not always present when the LT is conducting their activities, so the LT time is captured under the "not related to the MD category" and the time for their activities is based on the recommendations of the expert clinical panel.

No post service time is requested because when the prosthesis is delivered and the registration is completed, the entire service is completed. The visits and inter-visit lab session activities that resemble other codes "post service" captured the DA and LT times as "post intra time".

Visit summary for 21077:

		Face to Face Visits (Dental Asst (DA)) Times from survey								Non face to face lab time (Lab Tech (LT)) Times from expert panel							
Code	# Visits Typical	Visit 1 Median FTF Time	Visit 2 Median FTF Time	Visit 3 Median FTF Time	Visit 4 Median FTF Time	Visit 5 Median FTF Time	Visit 6 Median FTF Time	Visit 7 Median FTF Time	Total FTF Time	NFTF Median Time between V1 and 2	NFTF Median Time between V2 and 3	NFTF Median Time between V3 and 4	NFTF Median Time between V4 and 5	NFTF Median Time between V5 and 6	NFTF Median Time between V6 and 7	Total NFTF Time	Total Intra Time of all Visits
21077	7	60	60	85	85	70	65	70	495	120	120	60	60	60	54	474	969

Total staff time as appears on PE Spreadsheet for 21077:

Pre time = 35 minutes
Intra time = 748 Dental Assistant total, 474 lab technician total

- **Pre intra time** = 77 minutes (11 minutes x 7 FTF visits)
- **Intra time** = 495 minutes for DA, 474 minutes for LT (corresponds to table above)
- **Post intra time** = 176 minutes (26 minutes FTF v 1 + 26 minutes FTF v 2, 3, 4, and 7 + 23 minutes FTF v 5 and 6)

Post time = 0 minutes (see Q10.c)

Staff activities during the intra period are reflected below in detail:

Visit #1 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)

- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (60 minutes survey time) DA and MD/DMD present

- The DA and MD/DMD work together to obtain cone beam radiograph.
- DA Obtains cone beam radiograph and Pro-face imaging
- DA will mix final impression dental materials for an impression.
- DA will monitor Bunsen burner/water bath for safety.
- DA will scan the impression with the Trios scanner.
- Chairside Assistance: Hand instruments and materials (implant components) to the dentist during exam and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (26 minutes w/ imaging)

- CA024 Clean room / equipment by clinical staff (sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– 3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack), 15 minutes (PE standard)
  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray–2 minute (expert panel time)
  - DA reviews imaging with doctor and verifies uploading into chart
- CA029 Check dressing, wounds –1 minute (PE standard)
  - The DA is cleaning extraoral wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - Dental Assistant sends scan from Trios scanner to laboratory scanner. They will convert the image from Trios scan to the file format and will have the maxillary and mandibular arches files 3D printed with the 3D SprintRay printer.
  - Dental assistant scans images into PACS.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.

- DA documents their portion of visit into EMR.
- Before the next appointment, the DA verifies that the custom tray is fabricated.

NFTF between Visit 1 and 2: 120 minutes Lab Tech

With an order from the MD/DMD, the LT boxes and pours the final impression. After setting of the dental stone, the LT separates the model/cast from the impression and trims the master model/stone. The LT fabricates a wax base to outline the extent of prosthesis. The LT customizes the stock globe to match the patient's contralateral eye. The LT consults with MD/DMD for approval. The LT makes a wax base which is what the prosthesis will be built on. The LT consults with MD/DMD about implant framework. The LT fabricates implant framework and shows it to MD/DMD. The LT disinfects the implant framework to be ready for patient's visit. **The expert panel recommends 120 minutes for these activities.**

Visit #2 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (PE standard)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (60 minutes survey time) DA and MD/DMD present

- DA monitors the Bunsen burner for safety.
- DA hands the implant verification framework jig to the MD/DMD.
- DA takes pictures as directed by MD/DMD concerning gaze of globe (eye).
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). The DA assists MD/DMD in measurement of gaze of prosthesis to natural eye.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit
- DA cleans the prosthesis and disinfects the prosthesis after initial removal of the mouth.

Post Intra (26 minutes – w/ imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)

  - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
  - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
  - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the extraoral healed/closed defect or wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
  - DA scans images into PACS.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 2 and 3: 120 minutes Lab Tech

The LT consults with MD/DMD about the gaze and initial setting of the gaze. Both the MD/DMD and LT review photographs or soft tissue imaging (Pro-face) and decide on what areas need to be developed. The LT incorporates the implant framework within the prosthesis. The LT fine tunes the initial wax up of the upper and lower eyelids and the inner canthus wax up with the landmarks that the MD/DMD did during the FTF visit. The LT smooths the wax up. After consulting with MD/DMD, it is decided that the wax up is acceptable for the patient's next visit. The LT will disinfect the wax up and ensure it is ready for the patient's next visit. **The expert panel recommends 120 minutes for these activities.**

Visit #3 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (85 minutes survey time) DA and MD/DMD present

- DA will monitor the Bunsen burner for safety.
- DA will take photos as the MD/DMDs direction. Multiple photographs are made to evaluate the gaze of the globe. The assistant prints out a picture with the wax up in place, places a transparent sheet over it, and measures from the center of the nose to the center of the pupil of the natural eye and then measures from the center of the nose to the center of the pupil of the prosthesis to verify that the globe of the prosthesis is accurate.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. With the approval of the MD/DMD, the dental assistant hands the patient the mirror and the patient evaluates the wax up.

Post Intra (26 minutes – w/ imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the extraoral healed/closed defect or wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
    - DA scans images into PACS.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 3 and 4: 60 minutes Lab Tech

The LT consults with MD/DMD about that the gaze of the globe is finalized. Both the MD/DMD and LT review photographs or soft tissue imaging (Pro-face) and decide on what areas need to be developed. At this stage, the eyelids, inner canthus, and lateral canthus of the eye are initially set. Both the MD/DMD and LT verify that the center portion is acceptable. After consulting with MD/DMD, it is decided that the wax up is acceptable for the patient's next visit. The LT will disinfect the wax up and ensure it is ready for the patient's next visit. **The expert panel recommends 60 minutes for these activities.**

Visit #4 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed process for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (85 minutes survey time) DA and MD/DMD present

- DA will monitor the Bunsen burner for safety.
- DA will take multiple photographs/facial scans during the visit. Multiple photographs are made to evaluate the gaze of the globe and upper and lower eyelid. The assistant prints out a picture with the wax up in place, places a transparent sheet over it, and measures from the center of the nose to the center of the pupil of the natural eye and then measures from the center of the nose to the center of the pupil of the prosthesis to verify that the globe of the prosthesis is accurate. Measurements are taken for the upper and lower eyelids.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). Dental assistant aids MD/DMD in measurement of anatomic landmarks.
- DA hands the MD/DMD the Spectro-match.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hands the patient a mirror to evaluate the wax up.

Post Intra (26 minutes – w/ imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the extraoral healed/closed defect or wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
    - DA scans images into PACS.

- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NFTF between Visit 4 and 5: 60 minutes Lab Tech

The LT consults with MD/DMD that the wax up is completed. The LT sculpts in skin texture and finalizes the margins of the prosthesis. The LT consults with MD/DMD that the wax pattern is ready for investing. With MD/DMD's approval, the LT invests the wax-up in a flask, boils out the wax, , and applies the appropriate separating materials so it is ready for the intrinsic coloration. The LT shows it to the MD/DMD for approval. **The expert panel recommends 60 minutes for these activities.**

Visit #5 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (70 minutes survey time) DA and MD/DMD present

- DA will have all the intrinsic coloration dental material available.
- DA aids MD/DMD the difference in spectromatch shade and custom characterization of color.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry). Dental assistant refills the color palate as needed.
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, DA chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.

- Safety Tracking: Document sterilization logs and maintain strict infection control protocols

- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
  - The DA is cleaning the extraoral healed/closed defect or wound during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
  - The DA puts in the order for the next appointment for the appropriate appointment type and time.
  - DA documents their portion of visit into EMR.

NFTF between Visit 5 and 6: 60 minutes Lab Tech

With the approval of the MD/DMD, the LT injects base shade silicone elastomer into mold with the intrinsic characterization. The MD/DMD reviews the sites which need a softer silicone and the sites which need a harder silicone. The LT puts the flasks under pressure and puts a C-clamp on it. The LT puts mold in oven for curing. After curing, LT breaks out the mold and cleans and trims the prosthesis. Verifies passive fit on model with implants. **The expert panel recommends 60 minutes for these activities.**

Visit #6 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, financial). 1 minute (PE standard)

Intra (65 minutes based on survey time) DA and MD/DMD present

- DA will mix dental materials as needed.
- The DA verifies the safety of the dental materials (extrinsic solvent).
- DA cleans the color palate as the MD/DMD directs.
- DA has all the extrinsic coloration set available and sets up the color palate.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).
- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. The DA, with the approval of the MD/DMD hands the mirror to the patient to evaluate the prosthesis.

Post Intra (23 minutes– no imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning the extraoral healed/closed defect or wound during this time.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

NTFT between Visit 6 and 7: 54 minutes Lab Tech

LT seals prosthesis for appropriate curing and setting of coloration. The LT completes the documentation of dental materials used in the prosthesis to be put into EMR. The shade selection of the base shade is recorded, and the LT keeps small samples of the intrinsic coloration is kept in patient's box. **The expert panel recommends 54 minutes for these activities.**

Visit #7 FTF Dental Assistant

Pre Intra (11 minutes)

- CA009 Greet patient/provide gowning, ensure appropriate medical records are available. The DA does the initial assessment of the medical history, medications, and allergies. 3 minutes (PE standard)
- CA010 Obtain vital signs – take two vitals BP and weight 3 minutes (PE standard)
- CA012 Review requisition, assess for special needs - The staff is reviewing the type of clinical and laboratory supplies needed for the prosthesis, verifying safety of equipment and verifying order for cone beam for the doctor. 2 minutes (expert panel time)
- CA013 Prepare room, equipment, and supplies- The staff cleans and disinfects the room, verify appropriate equipment is working, placement of paper products, and has supplies needed for procedure. 2 minutes (PE standard)
- CA014 Confirm order, protocol exam- The staff verifies protocol for prosthesis type matches order of head and neck surgeon and that all paperwork has been signed by patient (procedural consents, photographic consents, financial). 1 minute (PE standard)

Intra (70 minutes survey time) DA and MD/DMD present

- DA will mix dental materials if needed.
- Chairside Assistance: Hand instruments and materials to the dentist during exams and procedures (often utilizing four-handed dentistry).

- Comfort and Care: Monitor patient comfort, calm anxious individuals, and communicate clearly about what to expect during a visit. DA hand patient the mirror to show the patient the prosthesis.
- The DA verifies home care instructions and answers all of the patient's questions.
- DA reviews places to purchase the adhesive with the patient.
- DA takes final photographs with order from MD/DMD.

Post Intra (26 minutes – w/ imaging)

- CA024 Clean room / equipment by clinical staff sprays room with disinfectant, then wipes down chair, light, cabinetry, dental assistant chair, doctor chair)– –3 minutes (PE standard)
- CA026 Clean equipment (medium instrument pack) –15 minutes (PE standard)
    - Instrument Processing: Clean, sterilize, and disinfect dental instruments, trays, and equipment according to OSHA and CDC standards.
    - PPE Management: Ensure all personal protective equipment (PPE) is properly utilized, stocked, and disposed of appropriately.
    - Safety Tracking: Document sterilization logs and maintain strict infection control protocols
- CA027 Complete post procedure dx forms –2 minutes (expert panel time)
- CA028 Review /read post procedure x ray (Reviews imaging with doctor and verifies uploading into chart) –2 minute
- CA029 Check dressing, wounds (surgical defect) –1 minute (PE standard)
    - The DA is cleaning extraoral healed/closed defect or wound during this time.
- CA032 Scan exam into PACS –1 minute (PE standard)
    - DA scans images into PACS.
- CA035 Reviews home care instructions, coordinates visits, prescriptions - 2 minutes (PE standard)
    - The DA puts in the order for the next appointment for the appropriate appointment type and time.
    - DA documents their portion of visit into EMR.

c. Post-service period:

Post time for this family is defined as any activities after all visits (face-to-face and non-face-to-face) have concluded. There is not any clinical staff work after the prosthesis is delivered to the patient, so we are not requesting any post clinical staff time for the codes in this family.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

See detailed explanation above.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S):__21077_____
SPECIALTY SOCIETY(IES):__ AAMP_____
PRESENTER(S):__Betsy Davis, DMD, MS, Mark Chambers, DMD, MS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

The typical clinical staff for these codes are medical assistants (dental assistants)(L026A) and lab technicians (L033A).

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We are recommending the addition of several supplies for this code. The purpose of the new supplies is detailed in the invoice summary spreadsheet in column J.

The supply table for this code below indicates which visits supplies are used. The yellow column on the far-right indicates the total quantity of each supply which is reflected in the PE spreadsheet.

We also submitted invoices to price several CMS recognized supplies that have $0 assigned to them currently in the database, please refer to the invoice summary spreadsheet for a list of those supplies and information re: the submitted invoices.
