Subject: RUC Recommendations

Dear Administrator Oz,

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) submits the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare & Medicaid Services (CMS). These recommendations relate to new and revised codes for *CPT 2028* and to existing services identified by the RUC's Relativity Assessment Workgroup and CMS.

Enclosed are the RUC recommendations for all the CPT codes reviewed at the September 24-26, 2026, RUC meeting.

CPT 2028 New and Revised Codes – October 2026 RUC Submission

The enclosed submission contains RUC recommendations, including those for new and revised CPT codes. **The RUC submits work value and/or practice expense inputs for 13 new/revised/related family CPT codes from the September 2026 meeting, three of which are referrals to CPT Editorial Panel.**

Existing Services Identified by RUC and CMS for Review

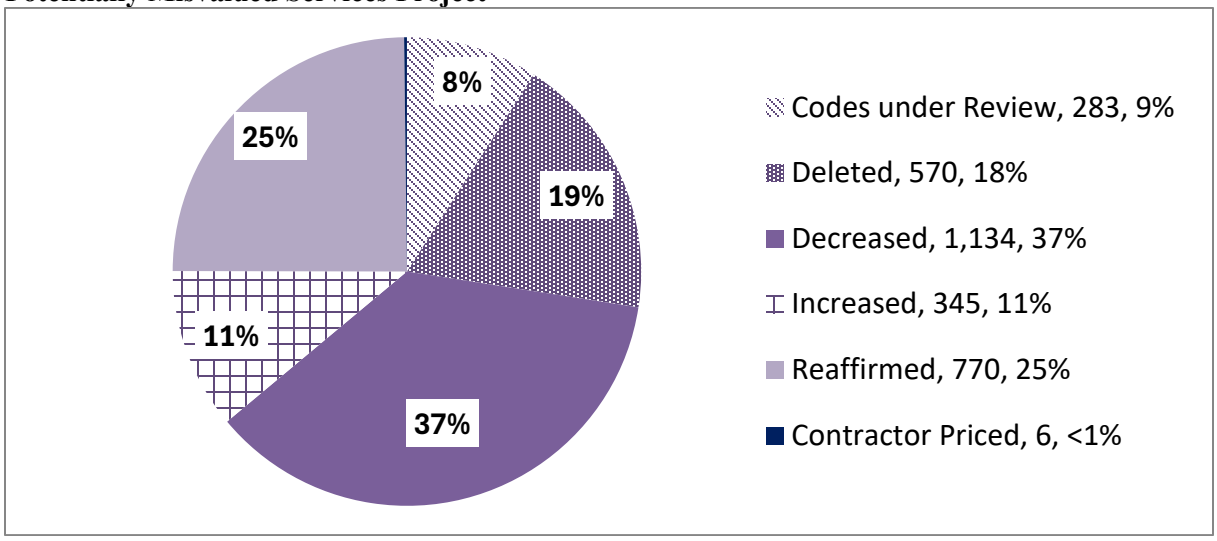
In addition to the new/revised CPT code submission, the RUC submits work value/or practice expense input recommendations for 17 services identified by the RUC or CMS as potentially misvalued and reviewed at the September 2026 RUC meeting.

RUC Progress in Identifying and Reviewing Potentially Misvalued Codes

Since 2006, the RUC has identified 3,108 potentially misvalued services through objective screening criteria and has completed review of 2,825 of these services. The RUC has reviewed approximately 95% of the Medicare Physician Payment Schedule allowed charges. Codes that have not been reviewed are low volume and represent a minimal amount of allowed charges. The RUC has recommended that 60% of the services reviewed be decreased or deleted (Figure 1). The RUC has worked vigorously to identify and address mis-valuations in the RBRVS through the provision of revised physician time data and resource recommendations to CMS. The RUC looks forward to working with CMS in a concerted effort to address potentially misvalued services.

Figure 1: AMA/Specialty Society RVS Update Committee (RUC) Potentially Misvalued Services Project

Potentially Misvalued Services Project



Source: American Medical Association

Other RAW Related Recommendations

Open Neuroplasty -Arm or Leg and Internal Neurolysis (64708 and 64727)

In September 2026, the RAW reviewed action plans for CPT codes 64708 and 64727 under the high volume growth screen. **The RUC would like to notify CMS's program integrity office about possible misreporting of these services. Ophthalmologists should not be reporting CPT codes 64708 and 64727 and NCCI edits should be created to indicate that these services should not be reported with cataract surgery.** *Please see folder 12 Other RAW Related Recommendations.*

Practice Expense Subcommittee

The attached materials include direct practice expense input (clinical staff, medical supplies and equipment) recommendations for each code reviewed. As a reminder, cost estimates for proposed new clinical staff types, medical supplies and medical equipment (not listed as part of the CMS labor, supply, and equipment lists) are based on provided source(s), such as paid invoices and may not reflect the wholesale prices, quantity, cash discounts, and prices for used equipment or any other factors that may alter the cost estimates. **The RUC shares this information with CMS without making any recommendations on pricing.**

High-Cost Disposable Supplies

At the September 2026 meeting, the RUC considered Tab 06 *Peri-prostatic Implantation Biodegradable Material* which includes the use of existing high-cost supply item SA126 *Biodegradable Material Kit – PeriProstatic* ($4036.22) for CPT codes 55874 and 55XX0. The RUC is disappointed that CMS did not include a proposal to address high-cost disposable supplies in the Proposed Rule for the CY 2027 Medicare Physician Payment Schedule (MFS) as the issue continues to grow in both magnitude and importance.

This year's Proposed Rule includes 96 medical supply items with a purchase price of more than $500 which are currently embedded in codes. Collectively, these high-cost medical supplies represent $1.77 billion in direct costs for the 2027 MFS and 23 percent of all direct practice expense medical supply costs in the non-facility setting. The continued embedding of high-cost disposable supplies within individual service-level PE inputs is increasingly difficult to reconcile with CMS's goals of accurate, transparent, and current resource-based payment. *Please see the analysis of high-cost supplies over $500 in folder 13 Other Practice Expense Related Recommendations.*

For two decades, the RUC has recommended that CMS separately identify and pay for high-cost disposable supplies using appropriate Healthcare Common Procedure Coding System (HCPCS) supply codes and, in February 2025, the CPT Editorial Panel and the RUC submitted a joint recommendation letter to CMS urging the Agency to address the escalating issue of high-cost disposable supplies within the MFS. The joint letter reinforced the long-standing RUC recommendation and strongly encouraged accurate pricing and review of the high-cost supply items. We await a response from CMS on this important issue.

The RUC continues to support its recommendation and urges CMS to address the outsized impact that high-cost disposable supplies have within the current practice expense relative value unit (PE RVU) methodology. The current system not only accounts for a large amount of direct practice expense for these supplies but also allocates a large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. The practice expense methodology derives code-level indirect practice expense in part from code-level direct practice expense inputs, including high-cost disposable supplies. When CPT codes include a high-cost disposable supply, a larger portion of indirect practice expense is allocated to the subset of practices performing the service, which is subsidized by the broader specialty and all other physicians and qualified healthcare professionals. If high-cost supplies were paid separately with appropriate HCPCS codes, the disproportionate indirect expense would no longer be associated with that service. The result would be that indirect PE RVUs would be redistributed throughout the specialty practice expense pool and the practice expense for all other services.

The RUC also emphasizes the importance of accurate pricing of high-cost supplies. It is CMS' responsibility, as required by law, to ensure the accurate pricing of the high-cost supply items. Accurate pricing of the 96 high-cost supplies is critical and should be based on a transparent process. The RUC notes that invoices for high-cost supplies are required at the time of submission but should be reviewed annually to ensure accuracy.

The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies priced more than $500 using appropriate HCPCS codes. The pricing of these supplies should be based on a transparent process whereby items are reviewed and updated on an annual basis.

Practice Expense (PE) RVU Methodology and Professional Liability Insurance (PLI) RVUs – Expected Specialty Overrides for Low Volume Service Codes

The RUC appreciates the CMS policy of using expected specialty overrides for certain low volume services. The CMS list also includes a column specifying if a service that previously had an anticipated specialty override continues to meet the criteria for the override to be applied for 2028. *Please see the Proposed Additions to Specialty Assignment Overrides for Low Volume Services for CY2028 attachment to this letter.*

The RUC performed an analysis to identify all codes that meet the criteria to receive a specialty override under this CMS policy and drafted updated recommendations for 2028. The specialty assignments for these codes are intended to appropriately represent the professional liability risk that is inherent in the code itself and reflected in the professional liability risk of a single specialty. The purpose of assigning a

specialty to these codes is to avoid the major adverse impact on PLI and PE RVUs that result from errors in specialty utilization data magnified in representation by small sample size. Further, the impact of these errors on the performing specialties can be severe due to the true overall code utilization being related to non-Medicare beneficiaries (frequently children). In addition, the proposed specialty overrides are intended to appropriately represent the expected indirect practice expense for each service.

In previous years, CMS has applied the expected specialty override to services with fewer than 100 Medicare claims across a three-year average without adjusting the utilization to interpret any Current Procedural Terminology (CPT®) modifiers. The RUC agrees that the usage of a three-year average continues to be appropriate.

Attached is a list of 62 additional low volume codes with proposed expected specialty overrides. The RUC recommends that CMS append these additional codes, and the RUC recommended specialty overrides to the existing CMS list of anticipated specialty assignment for low volume services.

Office and Hospital Visits Included in Codes with a Surgical Global Period

The RUC strongly believes that the changes in valuation of the office and hospital E/M visits be incorporated into the visits in the surgical global periods. Since CMS did not apply the office E/M visit increases to the visits bundled into global surgery payment, it is disadvantaging specific specialties. An example of the shortcomings of this policy decision became apparent during discussion of CPT code 67141 *Prophylaxis of retinal detachment (eg, retinal break, lattice degeneration) without drainage; cryotherapy, diathermy* (RUC recommended work RVU = 2.53 (w/o efficiency adjustment) and 2-99213 office visits) at the October 2020 RUC meeting. The RUC questioned whether the specialties had considered changing the global period to a 000-day global given that the intensity will be low and the office visits in 2021 will be of a different value. The specialties explained it is routine and typical that the two postoperative visits occur as part of the work within the 10 days after the procedure. The survey code is a good fit for the 010-day global and aligns with the other retinal laser codes and ophthalmic laser codes for other diseases. Relativity is therefore better maintained by keeping as a 010-day global even though the intensity is low. The RUC noted that these codes were being valued too low considering that office visits for the surgical global period were not going to be increased to the 2021 office E/M codes. Considering that the 99213 office visit is valued at 1.30 RVUs two 99213 office visits are valued higher than the 2.53 value of this code (or 2.47 with the efficiency adjustment). Therefore, the CMS policy is disadvantageous to the eye surgeons and an example of shortcomings and rank order abnormalities the flawed policy creates. The Agency's position implies that the physician work for office visits is not the same when performed in a surgical global period, which is an inaccurate assumption.

The RUC recommends that CMS apply the office visit and hospital visit valuation changes uniformly across all services and specialties. CMS should not hold specific specialties to a different standard than others. The RUC urges CMS to apply the office visit and hospital visit changes to the office and hospital visits included in surgical global payment.

Enclosed Recommendations and Supporting Materials:

- RUC Recommendation Status Report for New and Revised Codes for *CPT 2028.*

- RUC Recommendation Progress and Status Report for services identified to date by the Relativity Assessment Workgroup and CMS as potentially misvalued.

- RUC Referrals to the CPT Editorial Panel – both for CPT nomenclature revisions and *CPT Assistant* articles.

- Physician Time File – A list of the physician time data for each of the CPT codes reviewed at the September 2026 RUC meeting.

- Pre-Service and Post-Service Time Packages Definitions – The RUC developed physician pre-service and post-service time packages which have been incorporated into these recommendations. The intent of these packages is to streamline the RUC review process as well as create standard pre-service and post-service time data for all codes reviewed by the RUC.

- Professional Liability Insurance (PLI) Crosswalk Table – The RUC has committed to selecting appropriate PLI crosswalks for new and revised codes and existing codes under review. We have provided a PLI Crosswalk Table listing the reviewed code and its crosswalk code for easy reference. We hope that the provision of this table will assist CMS in reviewing and implementing the RUC recommendations.

- BETOS Assignment Table – The RUC, for each meeting, provides CMS with suggested BETOS classification assignments for new/revised codes. Furthermore, if an existing service is reviewed and the specialty believes the current assignment is incorrect, this table will reflect the desired change.

- Utilization Data Crosswalk – A table estimating the flow of claims data from existing codes to the new/revised codes. This information is used to project the work relative value savings to be included in the 2028 conversion factor increase.

- New Technology List and Timeline – In April 2006, the RUC adopted a process to identify and review codes that represent new technology or services that have the potential to change in value. To date, the RUC has identified 952 of these procedures through the review of new CPT codes. A table of these codes identified as new technology services and the date of review is enclosed, as well as a flow chart providing a detailed description of the process to be utilized to review these services.

- RUC Recommendations on Modifications to Visits in the Global Period – This includes changes in work RVUs and time by incorporating the increase of office visits and hospital visits in the surgical global periods.

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at Sherry.Smith@ama-assn.org.

Sincerely,

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee

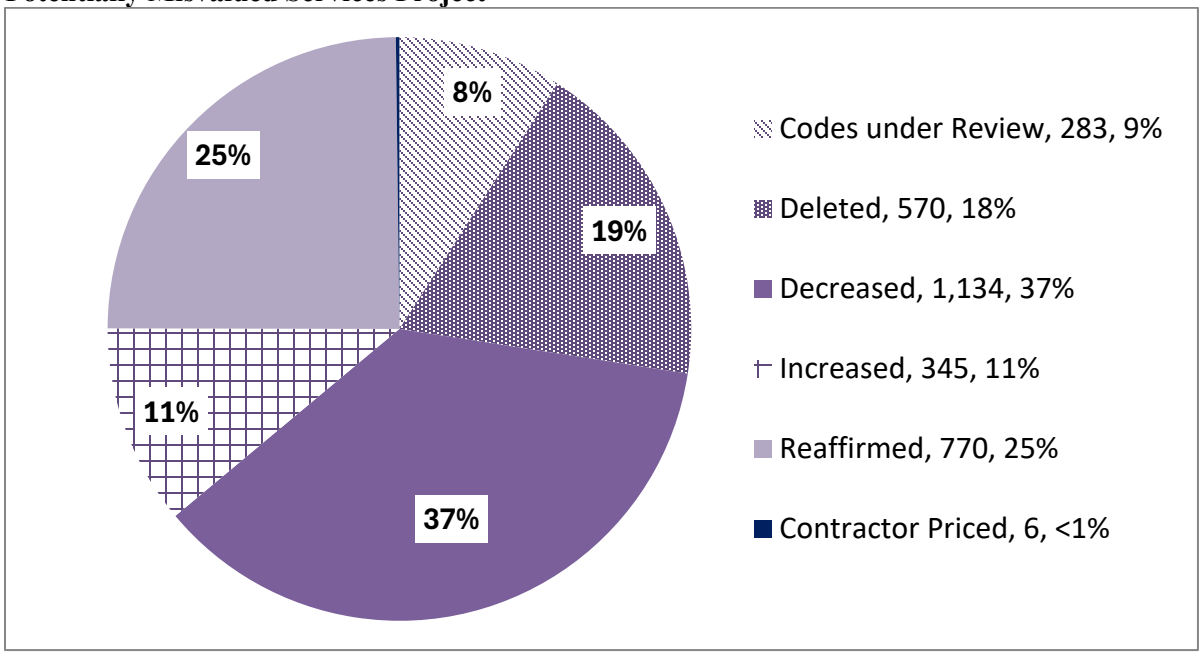
The RUC Relativity Assessment Workgroup Progress Report

In 2006, the AMA/Specialty Society RVS Update Committee (RUC) established the Five-Year Identification Workgroup (now referred to as the Relativity Assessment Workgroup (RAW)) to identify potentially misvalued services using objective mechanisms for reevaluation prior to the next Five-Year Review. Since the inception of the workgroup, the RAW and the Centers for Medicare and Medicaid Services (CMS) have identified more than 3,000 services through over 30 different screening criteria for further review by the RUC. Additionally, the RUC charged the Workgroup with maintaining the "new technology" list of services that will be re-reviewed by the RUC as reporting and cost data become available.

To provide Medicare with reliable data on how physician work has changed over time, the RUC, with more than 300 experts in medicine and research, has examined 3,108 potentially misvalued services. The RUC has reviewed approximately 95% of the Medicare Physician Payment Schedule (MFS) allowed charges. Codes that have not been reviewed are low volume and represent a minimal amount of allowed charges. The RUC, via its potentially misvalued services review, has recommended reductions and deletions to over 1,700 services, redistributing more than $5 billion within the MFS. Below are the outcomes of the committee's review.

Potentially Misvalued Services Project



Source: American Medical Association

The RAW employs objective, data-driven criteria based on growth in services, utilization patterns, operational characteristics, procedural intensity, specialty shifts, site of service anomalies, and stakeholder input to repeatedly identify and reassess potentially misvalued services in Medicare and Medicaid. Criteria and thresholds are updated regularly based on claims data availability, CMS guidance, and evolving coding standards, ensuring robust annual review. The criteria and threshold categories for established screens are outlined on the following pages.

New Technology/New Services
Starting in 2006, the RUC began identifying new technology services that should be re-reviewed, maintaining this of services and forwarding it to CMS. Currently, codes are identified as new technology based on recommendations from the appropriate specialty society and consensus among RUC members at the time of the RUC review for these services. RUC members consider several factors to evaluate potential new technology services, including recent FDA-approval, newness or novelty of the service, use of an existing service in a new or novel way, and migration of the service from a Category III to Category I CPT® code. The RAW maintains and develops all standards and procedures associated with the list, which currently contains 952 services. In September 2010, the re-review cycle began and since then the RUC has recommended 70 services to be re-examined. The remaining services are rarely performed (i.e., less than 500 times per year in the Medicare population) and will not be further examined. The Workgroup will continue to review the remaining 279 services every April after three years of Medicare claims data is available for each service.

Current Ongoing Screens

1. **Site-of-Service Anomalies**
   - **Start:** September 2007
   - **Criteria:** 1) Codes with utilization over 10k performed <50% in inpatient setting, but global period includes inpatient hospital E/M or 2) codes that are typically performed in the inpatient hospital setting, yet only a half discharge day management (99238) is included
   - **Iterations:** Annual since 2015; first iteration of 194 services review took four years to complete
   - **Codes Identified:** 280

2. **Bundled CPT Services (Reported Together ≥75% or ≥95%)**
   - **Start:** 95% screen February 2008; 75% screen in February 2010
   - **Criteria:** Code pairs/groups performed together by same provider ≥95% of the time, then ≥75% of the time. The 75% or more identified codes included only code pairs with total allowed charges of $5 million or more and excluded any code pairs in which one of the codes was either below 1,000 in Medicare claims data and/or contained at least one ZZZ global service.
   - **Iterations:** 10+ separate cycles; annual since 2022
   - **Codes Identified:** 574 Total; 85 (>95% review); 161 (first >75% review); 328 (remaining >75% reviews)

3. **High Volume Growth (Medicare)**
   - **Start:** April 2008
   - **Criteria:** Codes with Medicare utilization >10k, and reported growth of ≥100% over prior six years reference period
   - **Iterations:** Annual; criteria adjusted for each growth period
   - **Codes Identified:** 383

4. **Harvard Valued Codes (Medicare)**
   - **Start:** 2008
   - **Criteria:** Harvard-valued codes above Medicare utilization thresholds (>1M, >100k, >30k)
   - **Iterations:** Variable at each utilization threshold; Annually at >30k Medicare utilization threshold since 2011
   - **Codes Identified:** 245 Total; varies by expansion 21 (initial >1M); 139 (>100k); 85 (>30k)

5. **Specialty Shift (Surveyed by One Specialty, Now Performed by a Different Specialty)**
   - **Start:** October 2009
   - **Criteria:** Current dominant specialties performing code differ from original surveyor, utilization >1,000 (2009 and 2013) or >10k (2019-present)
   - **Iterations:** 2009, 2013, 2019; Annually since 2022 using updated Medicare utilization data
   - **Codes Identified:** 110 (includes codes identified as part of a family of services)

6. **CMS/Other Source Codes (Medicare)**
   - **Start:** April 2011
   - **Criteria:** Codes not part of Harvard/RUC review, gap-filled or crosswalked by CMS or radiology fee schedule; utilization threshold. Medicare utilization >500k; threshold dropped over years to >250k (2013), >100k (2016), >30k (2017), >20k (2019+)
   - **Iterations:** Annual
   - **Codes Identified:** 253 Total; varies by expansion 21 (>500k); 53 (>250k); 41 (>100k), 73 (>30k); 65 (>20k)

7. **Public Comment Requests**
   - **Start:** 2011; CMS ends Five-Year separate review, annual call for nominations
   - **Criteria:** CMS, public, or CMD nominated as potentially misvalued during annual rulemaking
   - **Iterations:** Annual
   - **Codes Identified:** 363 Total (includes associated family codes); 35 (2013), 90 (2014), 26 (2015), 25 (2016), 6 (2018), 9 (2019), 10 (2020), 1 (2022), 23 (2024), 2 (2025), 17 (2026), 31 (2027)

8. **Contractor Priced Category I Codes**
   - **Start:** April 2018
   - **Criteria:** Contractor-priced CPT codes >10k Medicare utilization. A contractor-priced code is a service in which CMS has not set a national payment rate, instead the payment is determined on a case-by-case basis by local Medicare Administrative Contractors (MACs)
   - **Iterations:** Annual
   - **Codes Identified:** 12, expanded to 14

9. **High Volume Category III Codes**
   - **Start:** October 2019
   - **Criteria:** Category III CPT codes, Medicare utilization >1,000. Category III codes are temporary codes for emerging technology, services, procedures, and service paradigms. Category III codes allow data collection for these services/procedures
   - **Iterations:** Annual
   - **Codes Identified:** 38

10. **RUC Review >20 Years Ago (Medicare)**
    - **Start:** April 2025
    - **Criteria:** Code that has not been reviewed by the RUC since 2005, Medicare utilization >1M
    - **Iterations:** New screen will continue as data matures
    - **Codes Identified:** 5

11. **Qualified Health Care Professionals Inappropriately Included in Clinical Staff Direct PE Inputs**
    - **Start:** September 2025
    - **Criteria:** QHP included in direct PE as clinical staff inputs and Medicare utilization >1,000. QHPs that may bill Medicare independently work is captured in the work component (i.e., work RVU), not the direct practice expense inputs, thus should not appear in the direct PE inputs
    - **Iterations:** One
    - **Codes Identified:** 26, expanded to 30

12. **000-Day Global Period Typically Inpatient**
    - **Start:** January 2026
    - **Criteria:** Codes with a 000-day global period, occurs >50% in the hospital inpatient setting, has >1,000 Medicare claims, and was reviewed after April 2016. Starting in April 2016, the 000-day global period survey template queried respondents whether post-operative hospital, critical care, discharge management or office visits are typically performed as well asked site of service information where the service is typically performed (hospital, ASC or office), when the patient is typically discharged (same day, overnight stay less than 24 hours or overnight stay more than 24 hours) and of those kept overnight what percent typically perform and E/M service later on the same day.
    - **Iterations:** One
    - **Codes Identified:** 4

13. **Emergency Medicine Global Periods**
    - **Start:** January 2026
    - **Criteria:** Codes with 010/090 day global periods, performed >50% of the time by Emergency Medicine, and >1,000 Medicare claims. Assessing if services typically performed by Emergency Medicine physicians, which have bundled post-operative visits included are typically being performed
    - **Iterations:** One
    - **Codes Identified:** 6, expanded to 10 to include family of services

14. **High Volume Growth (Medicaid)**
    - **Start:** April 2026
    - **Criteria:** Codes with Medicaid utilization >10k, and reported growth of ≥100% over prior six years reference period
    - **Iterations:** Annual; criteria adjusted for each growth period
    - **Codes Identified:** 11, expanded to 19 to include family of services

15. **Harvard Valued Codes (Medicaid)**
    - **Start:** April 2026
    - **Criteria:** Harvard-valued codes with Medicaid utilization >30k
    - **Iterations:** Annual
    - **Codes Identified:** 4

16. **CMS/Other Source Codes (Medicaid)**
    - **Start:** April 2026
    - **Criteria:** Codes not part of Harvard/RUC review, gap-filled or crosswalked by CMS or radiology fee schedule; utilization threshold; Medicaid utilization >20k
    - **Iterations:** Annual
    - **Codes Identified:** 6, expanded to 9 to include family of services

17. **RUC Review >20 Years Ago (Medicaid)**
    - **Start:** April 2026
    - **Criteria:** Code that has not been reviewed by the RUC since 2006, Medicaid utilization >1M
    - **Iterations:** One
    - **Codes Identified:** 5

Completed Screens

18. **CMS Fastest Growing**
    - **Start:** 2008
    - **Criteria:** CMS request; codes showing ≥10% growth per year over three years (2005–2007)
    - **Iterations:** One, the RUC continues this type of screen with the annual high volume growth screen
    - **Codes Identified:** 183 services (114 CMS-identified, RUC added 69 as part of the families of services)

19. **High IWPUT**
    - **Start:** 2008
    - **Criteria:** IWPUT >0.14 and Medicare utilization >1,000. IWPUT is a calculated number from the physician time components measuring the *Intra-service Work Per Unit of Time*. The RUC uses this number as an intensity measure of the intra-service time period of a service. An IWPUT above 0.14 indicates the service is very intense to perform.
    - **Iterations:** Two; initial screen (2008); second screen (September 2025) (newer data, only 9 codes found, all previously reviewed)
    - **Codes Identified:** 32; recent cycle found no new actionable codes

20. **Low Value/Billed in Multiple Units**
    - **Start:** October 2010
    - **Criteria:** CMS request; work RVU ≤0.50, commonly reported in multiples of 5+ units per day
    - **Iterations:** One; completed after initial review
    - **Codes Identified:** 14

21. **Low Value/High Volume**
    - **Start:** October 2010
    - **Criteria:** CMS request; work RVU ≤0.25, Medicare utilization >1 million; RUC expanded to work RVU ≤0.50, Medicare utilization > 1 million
    - **Iterations:** One; completed after initial review
    - **Codes Identified:** 29

22. **Multi-Specialty Points of Comparison (MPC)**
    - **Start:** October 2010
    - **Criteria:** CMS request; CMS prioritized the review of the MPC list to 33 codes, ranking the codes by allowed service units and charges based on CY 2009 claims data as well as those services reviewed by the RUC more than six years ago. The MPC list was created to ensure relativity in the valuation of physician services and serve as a resource in the RBRVS valuation processes. These codes are used to create a framework that links all specialties so that cross specialty relativity can be established. The MPC list reflects codes with accepted values that create a ladder of services within a specialty so that a specialty can accomplish appropriate rank order valuations. This allows for cross specialty reference creating a multispecialty framework

- **Iterations:** Single major cycle, reviewed over 4 years
- **Codes Identified:** Total 188; 33 (initial review), expanded to 188 services to include additional codes as part of a family (over 100 of these codes were part of the review of GI endoscopy codes)

23. Harvard Valued (Medicare Allowed Charges >$10 million)
- **Start:** 2012
- **Criteria:** CMS request; allowed charges >$10M
- **Iterations:** One
- **Codes Identified:** 16, expanded to 33 to include family of services

24. CMS High Expenditure Procedural Codes
- **Start:** 2012 (first iteration), 2016 (second iteration)
- **Criteria:** CMS request; allowed charges >$10M/year, not reviewed recently (in last 6 years)
- **Iterations:** Two
- **Codes Identified:** first iteration 70 codes identified, expanded to 145; second iteration 103 codes identified, expanded to 238

25. Stand-Alone Practice Expense (PE) Procedure Time
- **Start:** June 2012
- **Criteria:** CMS proposed adjustments to services with stand-alone procedure time assumptions used in developing non-facility PE RVUs. These assumptions were not based on physician time assumptions. Non-facility PE ≥5 min, direct equipment ≥$100, annual allowed charges ≥$100k or ≥$50k (2023)
- **Iterations:** Two; first CMS request; second RUC initiated and lowered threshold
- **Codes Identified:** 29 in first cycle; 16 in 2023 cycle

26. Pre-Time Analysis
- **Start:** January 2014
- **Criteria:** Pre-service time outliers for services reviewed prior to creation of pre-service time packages (April 2008); greater than package 4 *Facility - Difficult Patient/Difficult Procedure* (63 min), Medicare utilization >10k
- **Iterations:** One
- **Codes Identified:** 19, expanded to 24 to include family of services

27. Post-Operative Visits (Global Period Outliers)
- **Start:** January 2014
- **Criteria:** 010-day and 090-day global codes with >1.5 (010) or >6 (090) office visits, Medicare utilization >1,000
- **Iterations:** Two; 2014 and 2019
- **Codes Identified:** first iteration: 19 (010-day), expanded to 21; 10 (090-day), expanded to 38; second iteration: 5 (010-day), expanded to 8; 3 (090-day)

28. High-Level E/M in Global Period
- **Start:** October 2015
- **Criteria:** Moderate/high (99214/99215) office visit included in global period, Medicare utilization >10k. Note: no codes with volume > 10k had a 99215 office visits included
- **Iterations:** One; the RUC rigorously questioned level 4 office visits in the global period in recent years prior to this screen and will continue this process going forward
- **Codes Identified:** 7, expanded to 11 to include the family of services

29. **CMS 000-Day Global Typically Reported with an E/M**
    - **Start:** July 2016
    - **Criteria:** CMS request; 000-day global codes billed with an E/M ≥50% of the time on the same day of service, same patient, by the same physician, Medicare utilization >20k, and not reviewed in the last 5 years
    - **Iterations:** One
    - **Codes Identified:** Total 22 codes. Initially CMS identified 83 codes. However, based on further RUC analysis, it appeared only 19 services met the criteria for this screen and had not been reviewed to specifically address an E/M performed on the same date. The RUC requested that CMS remove 64 services that did not meet the screen criteria or which have already been valued as typically being reported with an E/M service. In the Final Rule for 2017, CMS finalized the list of 000-day global services reported with an E/M to the 19 services that truly met the criteria, which was expanded to 22 codes total to include the family of services.

30. **Negative IWPUT**
    - **Start:** October 2017
    - **Criteria:** IWPUT < 0, utilization >10k (or >1,000 for Harvard/CMS/Other codes). IWPUT is a calculated number from the physician time components measuring the *Intra-service Work Per Unit of Time*. The RUC uses this number as an intensity measure of the intra-service time period of a service. A negative IWPUT is illogical because it would mean that there is no intensity of work from the actual intra-service time or time performing the service/procedure. This typically occurs when a service requires a short intra-service time, but longer pre- and post-service times.
    - **Iterations:** One; review complete
    - **Codes Identified:** 22, expanded to 56

31. **Modifier-51 Exempt List**
    - **Start:** April 2018
    - **Criteria:** Modifier-51 *Multiple Procedures* exempt, Medicare utilization >10k
    - **Iterations:** One
    - **Codes Identified:** 7

32. **PE Units Screen**
    - **Start:** April 2020
    - **Criteria:** >1 median unit of service reported and a direct practice expense supply item unit cost >$100
    - **Iterations:** One; reviewed the supplies and kits identified to determine if any duplication occurs when reported in multiple units and corrected any duplications
    - **Codes Identified:** 7

33. **Work Neutrality**
    - **Start:** 2012 with the CPT 2009 cycle
    - **Criteria:** Code families with >10% deviation in work RVUs from Specialty Society/RUC projected estimates. For every CPT code recommendation and family, the RUC submits utilization assumptions based on the specialty societies estimate for the next year of Medicare utilization. Starting with CPT 2009, the RAW began assessing all services for work neutrality. In 2012, the RUC confirmed that the RUC and specialty societies work neutrality calculation expectation is a zero change target. However, if actual work RVUs turn out to be 10% or greater than the former work RVUs for the family, the family should undergo review by the RAW
    - **Iterations:** Annual
    - **Codes Identified:** 14 code families

34. Gender Equity

- **Start:** January 2022
- **Criteria:** Equity analysis for male/female specific procedures (urology/gynecology); additional review of preventive services
- **Iterations:** Data review completed; issues resolved via journal article and via pelvic exam add-on code creation
- **Codes Identified:** Not code specific. The RUC analyzed data submitted by the American Urological Association and the American College of Obstetricians and Gynecologists comparing procedures typically performed for females compared to their counter male procedures and determined that there was no marked disparity in the value of services performed on women that have similar male-specific procedures. The RUC requested that the specialty societies work on dissemination of this information through society communication and peer reviewed journal submission. The "Comparison of Work Relative Value Units Assigned to Urological and Gynecological Surgical Procedures" study appeared in the *Urological Practice Journal* in May 2024.

  Separately, the RAW examined the potential misvaluation of preventive care codes (99381-99397) based on gender-related patient care. The RAW indicated that there may be additional resources associated with preventive services when a pelvic examination is performed. The RUC referred this issue to the CPT Editorial Panel. In September 2022, the CPT Editorial Panel created a new add-on code to report a pelvic exam.

CMS Requests and RUC Relativity Assessment Workgroup Code Status (2009-2026)

Total Number of Codes Identified*	**3,108**
Codes Completed	**2,825**
Work and PE Maintained	770
Work Increased	345
Work Decreased	954
Direct Practice Expense Revised (beyond work changes)	180
Deleted from CPT®	543
Requested CMS delete G code	27
Contractor Priced	6
Codes Under Review	**283**
RUC to review for CPT 2028 or 2029	185
Referred to CPT® Editorial Panel or CPT Assistant	38
RUC to review future review after additional data obtained	60

**The total number of codes identified will not equal the number of codes from each screen as some codes have been identified on more than one screen.*
